AGENDA

BERKELEY CITY COUNCIL MEETING

Tuesday, November 17, 2026
6:00 PM

SCHOOL DISTRICT BOARD ROOM - 1231 ADDISON STREET, BERKELEY, CA 94702

ADENA ISHII, MAYOR

COUNCILMEMBERS:

DISTRICT 1 – RASHI KESARWANI
DISTRICT 2 – TERRY TAPLIN
DISTRICT 3 – BEN BARTLETT
DISTRICT 4 – IGOR TREGUB
DISTRICT 5 – SHOSHANA O'KEEFE
DISTRICT 6 – BRENT BLACKABY
DISTRICT 7 – CECILIA LUNAPARRA
DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 226 7295**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

Live captioned broadcasts of Council meetings are available on B-TV (Channel 33) and via internet video stream. All Council meetings are recorded.

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

Preliminary Matters

Roll Call:

Land Acknowledgement Statement: *The City of Berkeley recognizes that the community we live in was built on the territory of xučyun (Huchiun (Hooch-yoon)), the ancestral and unceded land of the Chochenyo (Cho-chen-yo)-speaking Ohlone (Oh-low-nee) people, the ancestors and descendants of the sovereign Verona Band of Alameda County. This land was and continues to be of great importance to all of the Ohlone Tribes and descendants of the Verona Band. As we begin our meeting tonight, we acknowledge and honor the original inhabitants of Berkeley, the documented 5,000-year history of a vibrant community at the West Berkeley Shellmound, and the Ohlone people who continue to reside in the East Bay. We recognize that Berkeley's residents have and continue to benefit from the use and occupation of this unceded stolen land since the City of Berkeley's incorporation in 1878. As stewards of the laws regulating the City of Berkeley, it is not only vital that we recognize the history of this land, but also recognize that the Ohlone people are present members of Berkeley and other East Bay communities today. The City of Berkeley will continue to build relationships with the Lisjan Tribe and to create meaningful actions that uphold the intention of this land acknowledgement.*

Ceremonial Matters: *In addition to those items listed on the agenda, the Mayor may add additional ceremonial matters.*

City Manager Comments: *The City Manager may make announcements or provide information to the City Council in the form of an oral report. The Council will not take action on such items but may request the City Manager place a report on a future agenda for discussion.*

Public Comment on Non-Agenda Matters: *Up to ten persons will be selected to address matters not on the Council agenda. If five or fewer persons are identified to provide non-agenda comment, each person selected will be allotted two minutes each. If more than five persons are selected to address matters not on the Council agenda, each person selected will be allotted one minute each.*

In-person attendees wishing to address the Council on matters not on the Council agenda during the initial ten-minute period for such comment, must submit a speaker card to the City Clerk in person at the meeting location and prior to the moment that the Presiding Officer calls for public comment on non-agenda items. Remote attendees must raise their hand in the videoconference application when the Presiding Officer calls for non-agenda speakers. The first five raised hands on the videoconference application will be selected to speak and the first five cards drawn at the meeting will be selected to speak. The number of in-person and remote speakers selected may be adjusted by the Presiding Officer if fewer than five speakers from either format are identified.

The remainder of the speakers wishing to address the Council on non-agenda items will be heard at the end of the agenda.

Public Comment by Employee Unions (first regular meeting of the month): *This period of public comment is reserved for officially designated representatives of City of Berkeley employee unions, with five minutes allocated per union if representatives of three or fewer unions wish to speak and up to three minutes per union if representatives of four or more unions wish to speak.*

Consent Calendar

The Council will first determine whether to move items on the agenda for "Action" or "Information" to the "Consent Calendar", or move "Consent Calendar" items to "Action." Three members of the City Council must agree to pull an item from the Consent Calendar or Information Calendar for it to move to Action. Items that remain on the "Consent Calendar" are voted on in one motion as a group. "Information" items are not discussed or acted upon at the Council meeting unless they are moved to "Action" or "Consent".

No additional items can be moved onto the Consent Calendar once public comment has commenced. At any time during, or immediately after, public comment on Information and Consent items, any Councilmember may move any Information or Consent item to "Action." Following this, the Council will vote on the items remaining on the Consent Calendar in one motion.

For items moved to the Action Calendar from the Consent Calendar or Information Calendar, persons who spoke on the item during the Consent Calendar public comment period may speak again at the time the matter is taken up during the Action Calendar.

Public Comment on Consent Calendar and Information Items Only: *The Council will take public comment on any items that are either on the amended Consent Calendar or the Information Calendar. If ten or fewer persons are interested in speaking on an individual agenda item, each speaker may speak for two minutes. If there are more than ten persons interested in speaking, the Presiding Officer may limit the public comment for all speakers to one minute per speaker. Speakers are permitted to yield their time to one other speaker, however no one speaker shall have more than four minutes. The Presiding Officer may, with the consent of persons representing both sides of an issue, allocate a block of time to each side to present their issue. A speaker may only speak once during the period for public comment on Consent Calendar and Information items.*

Additional information regarding public comment by City of Berkeley employees and interns: Employees and interns of the City of Berkeley, although not required, are encouraged to identify themselves as such, the department in which they work and state whether they are speaking as an individual or in their official capacity when addressing the Council in open session or workshops.

Consent Calendar

1. Ordinance Vacating and Authorizing Transfer of Property Adjacent to the North Berkeley BART TOD Site
From: City Manager
Recommendation: Adopt second reading of Ordinance No. 8,036-N.S. (a) declaring four small pieces of land described in Exhibit A and shown in Exhibit B to the report, adjacent to the North Berkeley BART Transit Oriented Development (TOD), to be exempt surplus land; (b) summarily vacating two of the areas that are presently public right of way; and (c) approving the transfer of all four areas to the San Francisco Bay Area Rapid Transit District (BART).
First Reading Vote: All Ayes.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300, Jordan Klein, Planning and Development, (510) 981-7400

Consent Calendar

2. Companion Report: Proper Space Allocation for Standardizing Compliance with Source Separated Refuse Collection Procedures
From: City Manager
Recommendation: Adopt second reading of Ordinance No. 8,037-N.S. amending Berkeley Municipal Code Chapter 12.32 - Storage, Collection and Disposal of Waste.
First Reading Vote: All Ayes.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300

3. Amendment to Berkeley Municipal Code Chapter 7.18 to Explicitly Require Competitive Procurement for Services to Promote Accountability and Transparency and Refer Development of Regulations to City Manager
From: Councilmember Kesarwani (Author), Mayor Ishii (Co-Sponsor), Councilmember Taplin (Co-Sponsor), Councilmember Bartlett (Co-Sponsor)
Recommendation: Adopt second reading of Ordinance No. 8,038-N.S. amending Berkeley Municipal Code (BMC) Chapter 7.18, Expenditure Limitations, to require procurement through competitive solicitation for all city contracts for professional services and other services greater than $100,000.
First Reading Vote: All Ayes.
Financial Implications: Staff time
Contact: Rashi Kesarwani, Councilmember, District 1, (510) 981-7110

4. Minutes for Approval
From: City Manager
Recommendation: Approve the minutes for the Council meetings of September 1, 2026 (closed), September 14, 2026 (closed), September 15, 2026 (regular), September 29, 2026 (special and regular), October 5, 2026 (closed), October 13 2026 (regular), October 19, 2026 (closed), and October 27, 2026 (regular).
Financial Implications: None.
Contact: Mark Numainville, City Clerk, (510) 981-6900

5. Authorizing the City Manager to Sign the Telegraph Business Improvement District (TBID) Petition and Ballot on Behalf of the City of Berkeley
From: City Manager
Recommendation: Adopt a Resolution: 1. Authorizing the City Manager to approve and sign the “Preliminary Petition to Re-establish the Telegraph Property-Based Business Improvement District (BID)” on behalf of City-owned properties in the proposed Telegraph BID area; and 2. In the event the petition is successful in generating a ballot process to re-establish a Telegraph BID, authorizing the City Manager to vote YES on any ballots on behalf of City-owned properties in the proposed Telegraph BID area.
Financial Implications: See report

Consent Calendar

6. Acceptance of Fiscal Year 2027 Donations from Meals on Wheels of Alameda County (MOWAC) for the Berkeley Meals on Wheels Program
From: City Manager
Recommendation: Adopt a Resolution accepting donations for the Berkeley Meals on Wheels Program in a projected amount of $185,000 from the Meals on Wheels of Alameda County (MOWAC) agency, for Fiscal Year 2027 (FY2027).
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

7. Contracts for Behavioral Health Early Intervention Services
From: City Manager
Recommendation: Adopt five Resolutions authorizing the City Manager or designee to execute Behavioral Health Services Act (BHSA) funded contracts and any amendments, with the following vendors outlined below, for behavioral health early intervention services in an amount not to exceed $1,500,000 ($300,000 per each contract) for the term of December 1, 2026, to June 30, 2029:
1. Village of Love Foundation: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for African Americans;
2. East Bay Sanctuary Covenant: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Latinos/Latinas/Latine;
3. Center for Independent Living: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Older Adults;
4. Pacific Center for Human Growth: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Transition Age Youth in the Lesbian, Gay, Bisexual, Transgender, Queer, Agender, Plus (LGBTQIA+) population; and
5. Youth Spirit Artworks: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Transition Age Youth.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

8. Revenue Contract: 2027 Community Services Block Grant
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or his designee to: 1. Accept the 2027 Community Services Block Grant (CSBG) contract to provide services for low-income people from January 1, 2027, to April 30, 2028; and, 2. Execute any resultant agreements and amendments including amendments that may decrease or increase the contract amount, add discretionary funding, change the contract term, or update contract terms.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

Consent Calendar

9. Contract No. 32300198 Amendment: GoGo Technologies, Inc. for Transportation Services for Berkeley Mental Health Clients
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or designee, to execute an amendment to Contract No. 32300198 with GoGo Technologies, Inc. for a 24/7 concierge call center to arrange rides with Uber and Lyft for the City's Mental Health clients. This amendment will add $50,000 in funding for a total contract amount not to exceed $100,000 and extending the term through June 30, 2028.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

10. Replacing the Project Co-Sponsor for the No Place Like Home Program – Supportive Housing in People's Park from Resources for Community Development to Satellite Affordable Housing Associates
From: City Manager
Recommendation: Adopt a Resolution that: 1. Approves replacing the project Co-Sponsor for the No Place Like Home (NPLH) program – Supportive Housing in People's Park (SHIPP) from Resources for Community Development (RCD) to Satellite Affordable Housing Associates (SAHA) or their affiliate. 2. Authorizes the City Manager, or designee, to negotiate a side agreement with SAHA regarding mutual responsibilities. 3. Authorizes the City Manager, or designee, to execute in the name of Sponsor the NPLH Program Application Package and the NPLH Program Documents as required by the State Department of Housing and Community Development (HCD) for participation in the NPLH program.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

11. Formal Bid Solicitations and Request for Proposals Scheduled for Possible Issuance After Council Approval on November 17, 2026
From: City Manager
Recommendation: Approve the request for proposals or invitation for bids (attached to staff report) that will be, or are planned to be, issued upon final approval by the requesting department or division. All contracts over the City Manager's threshold will be returned to Council for final approval.
Financial Implications: Various Funds - $35,259,550
Contact: Henry Oyekanmi, Finance, (510) 981-7300

Consent Calendar

12. Contract Amendment: Contract No. 32000146 Vestis Services, LLC (formerly Aramark Uniform Services) for Uniforms and Laundering
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute an amendment to Contract No. 32000146 with Vestis Services, LLC (formerly Aramark Uniform Services) to continue to meet the uniform-related needs of City departments through March 2028, increasing the contract amount by $600,000 for a total not-to-exceed amount of $2,117,000.
Financial Implications: See report
Contact: Henry Oyekanmi, Finance, (510) 981-7300

13. Contracts for Recruitment Services
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute a contract and any amendments with WBCP Inc., Berkeley Search Consultants, Bob Murray & Associates, and Mosaic Public Partners to establish an on-call bench of executive recruitment firms for the period of January 1, 2027, through June 30, 2030. Each contract may have an individual not-to-exceed amount of $250,000; however, cumulative expenditures across all four contracts shall not exceed $250,000 during the contract term, subject to the availability of appropriated funds.
Financial Implications: See report
Contact: Janelle Rodrigues, Human Resources, (510) 981-6800

14. Donation from the Rainin Foundation to the Youthworks Program for the Adeline Area Streetscape and Landscape Project Public Process
From: City Manager
Recommendation: Adopt a Resolution accepting a donation of $20,000 from the Rainin Foundation to the Youthworks Program for the Adeline Area Streetscape and Landscape Project Public Process.
Financial Implications: $20,000 (revenue)
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700

15. Grant Application: Statewide Parks Program (SPP) Cycle 5 – West Berkeley Brownfield to Neighborhood Park Project
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or their designee to: submit a grant application in an amount of up to $8 million to the Statewide Parks Program (SPP) Cycle 5 grant program for the West Berkeley Brownfield to Neighborhood Park Project; accept any grants; execute any resulting grant agreements and any amendments; and that Council authorize the implementation of the project and appropriation of funding for related expenses, subject to securing the grant.
Financial Implications: See report
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700

Consent Calendar

16. Environmental Review Procedures
From: City Manager
Recommendation: Adopt a Resolution adopting the Land Use Planning Division's Environmental Review Procedures.
Financial Implications: See report
Contact: Jordan Klein, Planning and Development, (510) 981-7400

17. Grant Application: Caltrans Sustainable Communities Grant for the University Avenue Multimodal Corridor Study
From: City Manager
Recommendation: Adopt a Resolution approving the City's application submitted by the October 9, 2026 deadline for up to $700,000 under the Fiscal Year 2027–28 Caltrans Sustainable Transportation Planning Grants, Sustainable Communities Competitive category, for the University Avenue Transit Priority and Multimodal Corridor Study; authorizing the City Manager or designee to commit $150,000 in City funding to meet the required local match of a minimum of 11.7% of the total project cost; and, if awarded, accept the grant and execute the grant agreement and related amendments, subject to the approved project budget and applicable City requirements.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300

18. Contract No. 32300214 Amendment: Belfor USA Group for On-Call Emergency Restoration, Mitigation and Remediation Services
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute a contract amendment with Belfor USA Group for on-call emergency restoration, mitigation and remediation services related to fire and water damage at the Berkeley Animal Care Services facility and fire damage at the Public Safety Building; authorizing future restoration, mitigation and remediation services to be funded by departmental budgets or other sources such as the Catastrophic Reserve Fund as needs arise and resources allow; and increasing the contract amount by $1,500,000 for a new not-to-exceed amount of $2,050,000.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300

19. Final Map of Tract 8713: 1750 Sacramento Street
From: City Manager
Recommendation: Adopt a Resolution approving the final map of Tract Map 8713 for a parcel merger, re-subdivision and land dedication at the San Francisco Bay Area Rapid Transit (BART) North Berkeley station located at 1750 Sacramento Street.
Financial Implications: None
Contact: Jamie Parks, Public Works, (510) 981-6300

Consent Calendar

20. Renewal of the Elmwood BID for Calendar Year 2027
From: Elmwood Advisory Board
Recommendation: Adopt a Resolution approving the Elmwood Business Improvement District Advisory Board's (hereafter "Elmwood BID Advisory Board" or "the Advisory Board") recommendation that Council 1) approve the 2026 Annual Report and preliminary budget for proposed improvements in the District for calendar year 2027; 2) declare its intent to levy an assessment to finance improvements in the District for calendar year 2027 and 3) direct the City Clerk to schedule a public hearing on the renewal of the Elmwood BID for December 1, 2026.
Financial Implications: See report
Contact: Vincent McCoy, Commission Secretary, (510) 981-7530

21. Officially Naming the Public Plaza at Adeline and Fairview Streets as Delores Cooper Plaza
From: Parks, Recreation and Waterfront Commission
Recommendation: Adopt a Resolution officially naming the public plaza at Adeline and Fairview Streets as Delores Cooper Plaza.
Financial Implications: None
Contact: Roger Miller, Commission Secretary, (510) 981-6700

22. Officially Naming the Gymnasium at the Martin Luther King, Jr. Youth Services Center in honor of Philip Harper-Cotton
From: Parks, Recreation and Waterfront Commission
Recommendation: Adopt a Resolution officially naming the gymnasium at the Martin Luther King, Jr. Youth Services Center (MLK Center) in honor of Philip Harper-Cotton.
Financial Implications: None
Contact: Roger Miller, Commission Secretary, (510) 981-6700

23. Renewal of the Solano Avenue BID for Calendar Year 2027
From: Solano Avenue BID Advisory Board
Recommendation: Adopt a Resolution approving the Solano Avenue Business Improvement District Advisory Board's (hereafter "Solano BID Advisory Board" or "the Advisory Board") recommendation that Council: 1) approve the 2026 Annual Report and preliminary budget for the District for calendar year 2027; 2) declare its intent to levy an assessment for calendar year 2027; and 3) direct the City Clerk to schedule a public hearing on the renewal of the assessment for December 1, 2026.
Financial Implications: See report
Contact: Vincent McCoy, Commission Secretary, (510) 981-7530

Consent Calendar

24. Allocation of $2,294,774 Million Over 2 Years, FY2028 and FY2029, to Reduce Consumption and Health Impacts of Sugar-Sweetened Beverages (SSBs)
From: Sugar Sweetened Beverage Product Panel of Experts
Recommendation: Adopt a Resolution allocating $2,294,774 from the General Fund in Fiscal Year 2028 (July 1, 2027 through June 30, 2028) and Fiscal Year 2029 (July 1, 2028 through June 30, 2029) that shall be invested in a grant program administered and coordinated by the Department of Health, Housing, and Community Services' (HHCS) Public Health Division (HHCS/PHD) consistent with the Sugar-Sweetened Beverage Product Panel of Experts (SSBPPE) Commission's goals to reduce the consumption of sugar sweetened beverages (SSB) in Berkeley and to address the health effects of SSB consumption. The total of $2,294,774 will be distributed in two installments of $1,147,387 for FY2028 and $1,147,387 for FY2029. In each of these years, the funds will be distributed as follows:
a. Direct the City Manager to award up to 42.5% of the allocated funds to Berkeley Unified School District (BUSD) through a grant proposal to reduce the consumption of SSBs through the implementation and enhancement of the BUSD cooking and gardening programs. The BUSD funding process is separate from the RFP process for community-based organizations and shall be guided by the SSBPPE Commission's Criteria for the BUSD Funding Proposal.
b. Direct the City Manager to award at least 42.5% of the allocated funds through an RFP process managed by HHCS/PHD for grants to community- based organizations consistent with the SSBPPE Commission's goals to reduce the consumption of SSBs and to address the effects of SSB consumption. The RFP process for community-based organizations is separate from the BUSD funding process and shall be guided by the SSBPPE Commission's Selection Criteria for Community Agency Grants.
c. Direct the City Manager to allocate up to 15% of the funds to support HHCS/PHD and Finance Department to coordinate and monitor the SSB grant process, develop and maintain a website for SSB grantees, and the public and employees involved in the city's SSB procurement policy, collect organize and synthesize performance measures or evaluation as appropriate, provide technical assistance and learning opportunities for grantees, and report annually to the SSBPPE Commission and the public highlights from the SSB-funded programs.
d. Allocate the carryover of any SSB tax revenue received in excess of $2,294,774 during FY2028 and FY2029 to be awarded for related services in FY2029-FY2031.
e. If the voters approve Ballot Initiative AA in November 2026, increasing Berkeley's SSB sugar sweetened beverage excise tax revenue to 2 cents per ounce, the Commission recommends that the City Council authorize a second allocation of funds for FY2029, commensurate with additional distributor tax revenue collected. These additional revenues generated as a result of Measure AA will supplement the FY 2028 and FY 2029 two-year allocations.
Financial Implications: See report
Contact: Roberto Terrones, Commission Secretary, (510) 981-5100

Council Consent Items

25. Annual Berkeley Holiday Fund: Relinquishment of Council Office Budget Funds to General Fund and Grant of Such Fund
From: Mayor Ishii (Author), Councilmember Blackaby (Co-Sponsor), Councilmember Humbert (Co-Sponsor)
Recommendation: Adopt a Resolution approving the expenditure of an amount not to exceed $500 per Councilmember including $500 from Mayor Ishii, $500 from Councilmember Blackaby and $500 from Councilmember Humbert to the Berkeley Holiday Fund with funds relinquished to the City's general fund for this purpose from the discretionary Council Office Budgets of Mayor Ishii and any other Councilmembers who would like to contribute.
Financial Implications: See report
Contact: Adena Ishii, Mayor, (510) 981-7100

Action Calendar

The public may comment on each item listed on the agenda for action. For items moved to the Action Calendar from the Consent Calendar or Information Calendar, persons who spoke on the item during the Consent Calendar public comment period may speak again during the Action Calendar public comment period on the item

The Presiding Officer will request that persons wishing to speak line up at the podium, or use the "raise hand" function in Zoom, to determine the number of persons interested in speaking at that time. If ten or fewer persons are interested in speaking on an individual agenda item, each speaker may speak for two minutes. If there are more than ten persons interested in speaking, the Presiding Officer may limit the public comment for all speakers to one minute per speaker. Speakers are permitted to yield their time to one other speaker, however no one speaker shall have more than four minutes. The Presiding Officer may, with the consent of persons representing both sides of an issue, allocate a block of time to each side to present their issue.

Action items may be reordered at the discretion of the Chair with the consent of Council.

The Presiding Officer may open and close an additional comment period for Action items on this agenda (excluding any public hearings, appeals, and/or quasi-judicial matters), at the start of the Action Calendar. Those who speak on an item during this comment period may not speak a second time when the item is taken up by Council.

Action Calendar – Public Hearings

Staff shall introduce the public hearing item and present their comments. For certain hearings, this is followed by five-minute presentations each by first the appellant and then the applicant. The Presiding Officer will request that persons wishing to speak line up at the podium, or use the "raise hand" function in Zoom, to be recognized and to determine the number of persons interested in speaking at that time.

If ten or fewer persons are interested in speaking during a public hearing, each speaker may speak for two minutes. If there are more than ten persons interested in speaking, the Presiding Officer may limit the public comment for all speakers to one minute per speaker. Speakers are permitted to yield their time to one other speaker, however no one speaker shall have more than four minutes. The Presiding Officer may with the consent of persons representing both sides of an issue allocate a block of time to each side to present their issue.

When applicable, each member of the City Council shall verbally disclose all ex parte contacts concerning the subject of the hearing. Councilmembers shall also submit a report of such contacts in writing prior to the commencement of the hearing. Written reports shall be available for public review in the office of the City Clerk.

Action Calendar – Public Hearings

26. Berkeley Water Transportation Pier-Ferry Project Environmental Impact Report, Project Approval and Use Permit
From: City Manager
Recommendation: Conduct a public hearing and upon its conclusion:
1. Adopt a Resolution certifying the Berkeley Water Transportation Pier Ferry Project Environmental Impact Report (EIR) (SCH #2025040995) and adopt related California Environmental Quality Act (CEQA) findings, a statement of overriding considerations, mitigation measures, and a mitigation monitoring and reporting program, and
2. Adopt a Resolution Approving the Berkeley Water Transportation Pier-Ferry Project and affirming, as modified to incorporate the CEQA findings and mitigation measures, the decision of the Zoning Adjustments Board to approve Use Permit #ZP2026-0014 to establish transportation via public ferry service as an allowable use at the Berkeley Pier, with certain clarifying modifications.
Financial Implications: None
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700

27. Ashby BART West Lot Transit Oriented Development Objective Design Standards
From: City Manager
Recommendation: Conduct a public hearing and upon conclusion adopt a Resolution approving the Ashby West Lot Transit Oriented Development Objective Design Standards.
Financial Implications: See report

Public Comment – Items Not Listed on the Agenda

Adjournment

NOTICE CONCERNING YOUR LEGAL RIGHTS*: If you object to a decision by the City Council to approve or deny a use permit or variance for a project the following requirements and restrictions apply: 1) No lawsuit challenging a City decision to deny (Code Civ. Proc. §1094.6(b)) or approve (Gov. Code 65009(c)(5)) a use permit or variance may be filed more than 90 days after the date the Notice of Decision of the action of the City Council is mailed. Any lawsuit not filed within that 90-day period will be barred. 2) In any lawsuit that may be filed against a City Council decision to approve or deny a use permit or variance, the issues and evidence will be limited to those raised by you or someone else, orally or in writing, at a public hearing or prior to the close of the last public hearing on the project.*

Archived indexed video streams are available at: berkeleyca.gov/council-agendas.
Channel 33 rebroadcasts the following Wednesday at 9:00 a.m. and Sunday at 9:00 a.m.

Communications to the City Council are public record and will become part of the City's electronic records, which are accessible through the City's website. **Please note: e-mail addresses, names, addresses, and other contact information are not required, but if included in any communication to the City Council, will become part of the public record.** If you do not want your e-mail address or any other contact information to be made public, you may deliver communications via U.S. Postal Service to the City Clerk Department at 2180 Milvia Street. If you do not want your contact information included in the public record, please do not include that information in your communication. Please contact the City Clerk Department for further information.

Any writings or documents provided to a majority of the City Council regarding any item on this agenda will be made available for public inspection at the public counter at the City Clerk Department located on the first floor of City Hall located at 2180 Milvia Street, and through the City's online records portal: https://records.cityofberkeley.info/.

Agendas, agenda reports, and revised/supplemental material may be accessed via the online agenda for this meeting at: berkeleyca.gov/council-agendas
and may be accessed at reference desks at the following locations:

City Clerk Department - 2180 Milvia Street, First Floor
Tel: 510-981-6900, TDD: 510-981-6903, Fax: 510-981-6901
Email: clerk@berkeleyca.gov

Libraries: Main – 2090 Kittredge Street,
Claremont Branch – 2940 Benvenue, West Branch – 1125 University,
North Branch – 1170 The Alameda, Tarea Hall Pittman South Branch – 1901 Russell

COMMUNICATION ACCESS INFORMATION:
This meeting is being held in a wheelchair accessible location.
To request a disability-related accommodation(s) to participate in the meeting, including auxiliary aids or services, please contact the Disability Services specialist at ada@berkeleyca.gov, (510) 981-6418 (V), or (510) 981-6347 (TDD) at least three business days before the meeting date.

Attendees at public meetings are reminded that other attendees may be sensitive to various scents, whether natural or manufactured, in products and materials. Please help the City respect these needs.

Captioning services are provided at the meeting, on B-TV, and on the Internet. In addition, assisted listening devices for the hearing impaired are available from the City Clerk prior to the meeting, and are to be returned before the end of the meeting.

If you have obtained interpretation services for your use during a City Council meeting and would like to request assistance, please contact the City Clerk Department at (510) 981-6900, clerk@berkeleyca.gov, or in-person during the meeting.

Questions regarding public participation may be addressed to the City Clerk Department (510) 981-6900 or by email at clerk@berkeleyca.gov.

~~~~~~
~~~~~~

I hereby certify that the agenda for this meeting of the Berkeley City Council was posted at the display case located near the walkway in front of the Maudelle Shirek Building, 2134 Martin Luther King Jr. Way, as well as on the City's website, on November 5, 2026.

Mark Numainville, City Clerk

Communications

Council rules limit action on Communications to referral to the City Manager and/or Boards and Commissions for investigation and/or recommendations. All communications submitted to Council are public record. Copies of individual communications are available for viewing at the City Clerk Department and through Records Online.

- **Supplemental Communications and Reports 2**
  Available by 5:00 p.m. the day before the meeting.

- **Supplemental Communications and Reports 3**
  Available by 5:00 p.m. two days following the meeting.

01

ORDINANCE NO. 8,036-N.S.

AN ORDINANCE VACATING CERTAIN PUBLIC RIGHTS-OF-WAY AND AUTHORIZING THE CITY MANAGER TO CONVEY CERTAIN PROPERTY INTERESTS TO THE SAN FRANCISCO BAY AREA RAPID TRANSIT DISTRICT

BE IT ORDAINED by the Council of the City of Berkeley as follows:

Section 1. Findings. The City Council finds as follows:

a. The North Berkeley BART Transit-Oriented Development project at 1750 Sacramento Street was approved on December 11, 2024, including Tentative Tract Map No. 8713, which identifies the property and right-of-way configuration proposed for the site.
b. The portions of land described in Exhibit A are small areas located adjacent to the North Berkeley BART station site and are proposed to be vacated and/or transferred in order to implement the parcel configuration shown on Tentative Tract Map No. 8713 and thus to facilitate the project.
c. The portions of the right-of-way described in Exhibit A are excess right-of-way not required for street or highway purposes, pursuant to Streets and Highways Code section 8334(a);
d. The portions of the right-of-way described in Exhibit A do not contain in-place public utility facilities that are in use and would be affected by the vacation, pursuant to Streets and Highways Code section 8334.5;
e. The public benefits of the project are equal to or greater than the de minimis value of the lands to be conveyed;
f. The City Clerk is hereby authorized and directed to cause a certified copy of this ordinance of vacation, attested by him under seal, to be recorded in the Office of the Recorder for Alameda County, California;
g. The portions of land described in Exhibit A are surplus and not necessary for the City's use. The properties described in Exhibit A are being transferred to another state agency, the San Francisco Bay Area Rapid Transit District, and/or are a "former street, right-of-way, or easement," conveyed to an owner of an adjacent property. The properties described in Exhibit A are not necessary for the City's use in light of the affordable housing development proposed to be built at the North Berkeley BART station site and the corresponding changes to the right of way associated with that project.

Section 2. Summary Vacation of Portions of the Right-Of-Way.
That pursuant to Streets and Highways Code Division 9, Part 3, Chapter 4, Sections 8330 to 8336, the City of Berkeley hereby vacates the portions of public right-of-way described in Exhibit A and shown in Exhibit B. From and after the date this ordinance is recorded, the street, highway, or public service easements vacated no longer constitute street, highway, or public service easements.

Section 3. Declaration of Exempt Surplus Land.
Pursuant to Government Code section 54221(b)(1), the City Council hereby declares that the lands described in Exhibit A are exempt surplus land.

Section 4. Conveyance of Property.
That the City Manager and City Clerk are hereby authorized and directed to execute quitclaim deeds, conveying the City's interests in the portions of the right-of-way and other land described in Exhibit A to the San Francisco Bay Area Rapid Transit District and take all additional actions required to effectuate that conveyance.

Section 5. Posting.
Copies of this Ordinance shall be posted for two days prior to adoption in the display case located near the walkway in front of the Maudelle Shirek Building, 2134 Martin Luther King Jr. Way. Within 15 days of adoption, copies of this Ordinance shall be filed at each branch of the Berkeley Public Library and the title shall be published in a newspaper of general circulation.

At a regular meeting of the Council of the City of Berkeley held on October 27, 2026, this Ordinance was passed to print and ordered published by posting by the following vote:

Ayes: Bartlett, Blackaby, Humbert, Kesarwani, Lunaparra, O'Keefe, Taplin, Tregub, and Ishii.

Noes: None.

Absent: None.

Project No. 20230975

EXHIBIT A
LEGAL DESCRIPTION
TRANSFER AREA 1

All that certain real property situate in the City of Berkeley, County of Alameda, State of California, being a portion of Parcel R22-6 and Parcel R22-7 as shown on that certain Map entitled "RECORD MAPS OF RIGHT OF WAY BAY AREA RAPID TRANSIT DISTRICT ALAMEDA COUNTY" filed for record on September 20, 1971, in Book 68 of Maps at Page 122 through 146, inclusive, Records of said County, being more particularly described as follows:

BEGINNING at the northwesterly terminus of that certain course shown as "N15°16'46"W, 20.40'", as shown on said map, thence along the westerly lines of said Parcels R22-6 and R22-7, said westerly lines also being common to the easterly lines of Parcel O-R 382 and Parcel O-R 381 as shown on said map, North 05°25'30" West, 25.92 feet;

Thence leaving said common line, South 46°06'38" East 7.67 feet to a point on the easterly line of said Parcel R22-7, said line being common to the westerly right-of-way line of Sacramento Street as shown on said map;

Thence along said common line, South 05°25'30" East, 7.78 feet;

Thence leaving said common line, South 00°59'15" East, 26.97 feet to a point on said common line of said Parcel R22-6 and said Parcel O-R 382;

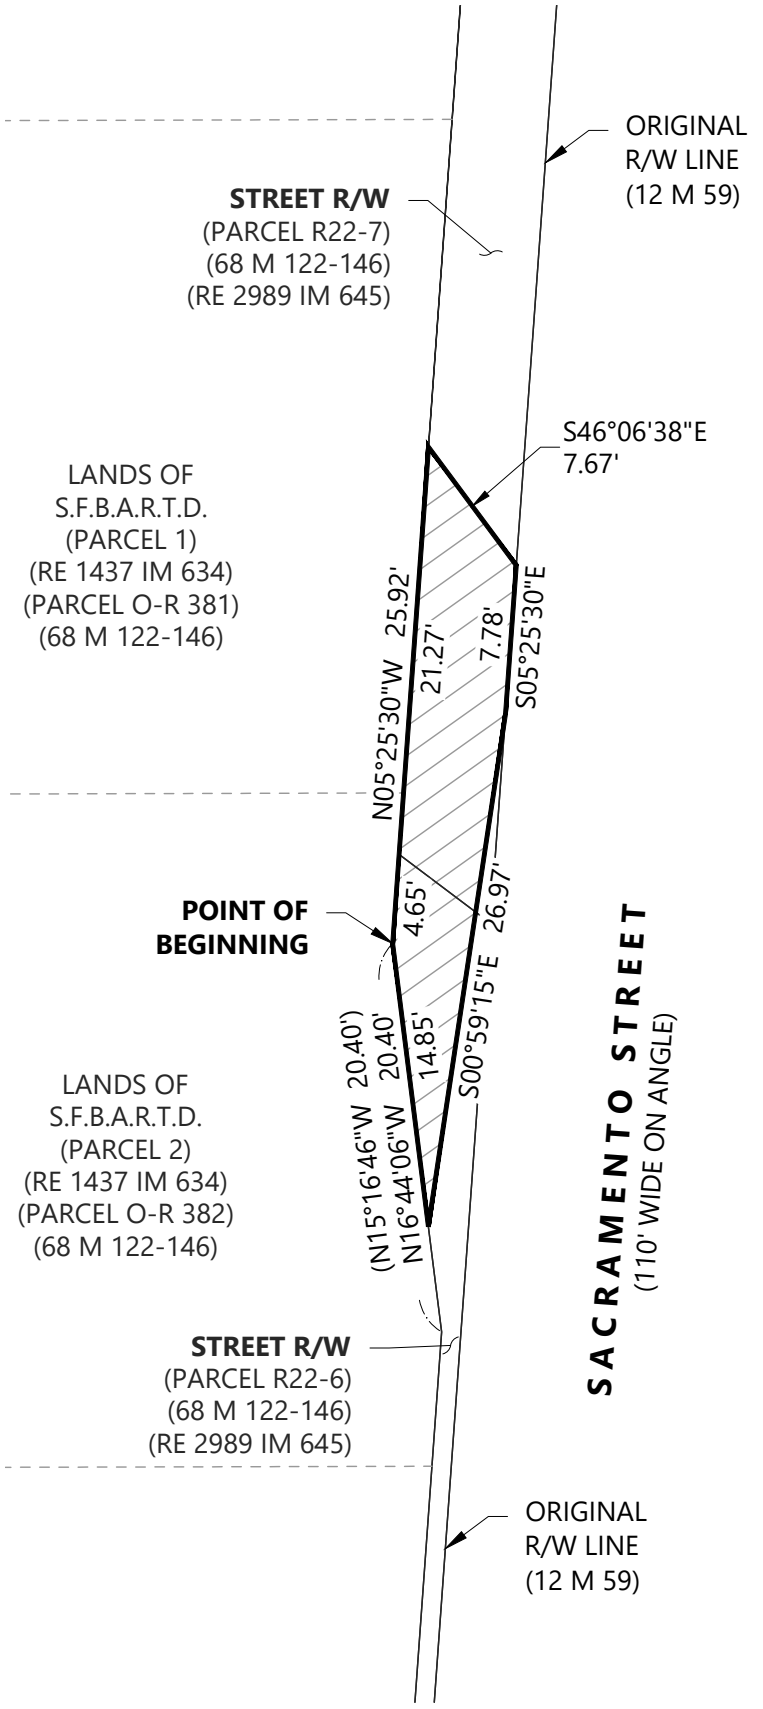
Thence along said common line, North 16°44'06" West, 14.85 feet to the **POINT OF BEGINNING**.

Containing 139 square feet, more or less.

BASIS OF BEARINGS

(a) The bearing of South 05°31'15" East of the easterly right-of-way line of Acton Street as shown on that certain unrecorded map entitled "SKETCH OF PROPOSED RESUBDIVISION OF A PORTION OF THE VISTA DEL MAR TRACT", dated February 1913 by T.J. Allen, C.E. and on file with the City of Berkeley, was taken as the Basis of Bearings.

A plat showing the above-described parcel is attached hereto and made a part hereof as Exhibit B.



This legal description was prepared by me or under my direction in conformance with the requirements of the Professional Land Surveyors' Act.

ORDINANCE NO. 8,037-N.S.

AMENDING BERKELEY MUNICIPAL CODE CHAPTER 12.32 – STORAGE, COLLECTION AND DISPOSAL OF WASTE

BE IT ORDAINED by the Council of the City of Berkeley as follows:

Section 1. That Berkeley Municipal Code Chapter 12.32 is amended to read as follows:

Chapter 12.32
STORAGE, COLLECTION AND DISPOSAL OF WASTE*

Sections:

12.32.010 Definitions.

12.32.020 Accumulation prohibited--Storage requirements--Removal of construction rubbish.

12.32.030 Garbage containers required--Specifications--Use restrictions--Location.

12.32.035 Adequate Space for Collection Containers

12.32.040 Bulk wastes--Over one cubic yard--Over two cubic yards.

12.32.045 Definitions

12.32.050 Garbage collection--Service declared essential--Exclusive collection by City required--Notification by owner--Fees--Time--Districts established--Rubbish collected with garbage.

12.32.055 Adequate Space Requirement

12.32.060 Garbage fees--Payment requirements--Service charges.

12.32.065 Design Standards

12.32.070 Dumping at unauthorized disposal site prohibited.

12.32.075 Stormwater Requirements

12.32.080 Dumps--Use limitations.

12.32.085 Administrative Standards

12.32.090 Refuse burning prohibited--Exceptions.

12.32.095 Liability and Enforcement

12.32.100 Nuisances designated--Abatement authorized when.

12.32.110 Violation--Penalty.

12.32.120 Putrescible waste--Procedure for management--Vermin infestation control--Prima facie presumption of violation.

12.32.130 Collection and disposal--Private hauler requirements.

12.32.140 Collection and disposal--Rules and regulations--Public Works Department authority.

***** For Zero Waste Commission, see Ch. 3.40 of this code.

12.32.010 Definitions.

A. "Garbage" means putrescible animal or vegetable matter, and containers used for the storage thereof. "Garbage" does not include source-separated recyclables or yard waste.

B. "Hazardous waste" means that waste defined in Health and Safety Code Section 25117.

C. "Medical waste" means that waste defined in Health and Safety Code Section 25023.2

D. "Rubbish" means all nonputrescible waste matter, whether combustible or noncombustible, except hazardous waste and medical waste.

E. "Waste" means the useless, unused, unwanted or discarded material resulting from normal community activities, or materials which by their presence may injuriously affect the health, safety and comfort of persons and depreciate property values in the vicinity thereof. "Waste" shall include, but not be limited to garbage, putrescible organic material, rubbish, offal, swill, animal excreta, rubble, plaster or other waste resulting from the demolition, burning, alteration or construction of buildings or structures.

F. "Source-separated recyclables" means non-putrescible materials that are separated by the generator from other waste material for the purpose of reuse or recycling, by placing the recyclables in separate containers, or by binding them separately; the recyclable material is then kept separate from general rubbish by the collector and processor, and is returned to the economic mainstream in the form of raw material for new, reused or reconstituted products which meet the quality standards necessary to be

used in the marketplace. Source separated recyclables contain no more than 20% of material which is disposed of as refuse by the collector or their subcontractors.

G. "Yard waste" means grass, weeds, leaves, tree trimmings, plants, shrubbery prunings, and such other similar materials which are generated in the maintenance of yards, gardens or landscaping, and which are separated by the generator from other solid waste materials for the purpose of recycling or composting, and which are taken by the hauler to a recycling or composting facility. (Ord. 6549-NS § 2, 2000; Ord. 6517-NS § 2, 1999; Ord. 6319-NS § 2 (part), 1996)

H. “Central consolidation location” means internal area generally located on the first floor or in the basement of a multi-story mixed use, commercial or multi-family building that is of adequate size to house waste receptacles that meet minimum service requirements including but not limited to landfill, dual-stream recycling and organics where materials from tenants can be centrally consolidate for collection.

I. “Minimum service requirements” mean all property owners or property managers are required to subscribe to landfill, dual-stream recycling and organics collection services at a minimum of 20 gallons per unit to ensure adequate service is provided to comply with state, county and local zero waste mandates. Waste enclosures or central consolidation locations shall be designed to accommodate the collection receptacles to meet minimum service requirements.

L. Tenant Facing Collection Room: rooms located on each story of a commercial building where tenants have convenient access to do dispose of landfill, dual-stream recycling and organics. If utilizing trash chutes, there must be enough chutes to accommodate all required material collection streams.

J. Staging Area: area where Public Works staff will collect landfill, dual-stream recycling and organic materials for disposal or processing, generally located in the public right of way, at the waste enclosure or at the central consolidation location and shall not be located more than 100 ft from where the collection vehicle will need to park to provide service. If located in the public right of way, curb cuts and red zones must be provided to ensure safe transport and storage of the collection receptacles on the day(s) of service.

K. Valet Waste Service: a third-party service that collects municipal solid waste from outside of tenant's units and properly sorts it for disposal eliminating the need for tenant

facing trash rooms. If utilizing a valet waste service, ensure the service provider has been adequately trained and approved by Public Works Department staff.

L. Waste Enclosure: A stand-alone covered area on a commercial or multi-family property designed to house receptacles for storing solid municipal waste including but not limited to landfill, dual-stream recyclables, and organics.

C. “Universal waste” means universal waste as defined in the California Health and Safety Code Section 25123.8 and California Code of Regulations, Title 22, Division 4.5, Chapter 23. Universal waste includes certain batteries, electronic waste, non-empty aerosols cans, and other special materials designated as universal waste under applicable state law and is subject to the applicable requirements governing its collection, storage, handing, recycling, and disposal.

12.32.020 Accumulation prohibited--Storage requirements--Removal of construction rubbish.

A. No person owning any multiple-family dwelling or possessing any single-family dwelling, or industrial, commercial or business premises or structure shall allow or permit any garbage, rubbish or waste to collect and accumulate upon or in any such premises or structure except as otherwise provided by law. This provision shall not be construed as affecting any authorized waste disposal operation or properly conducted garden composting process carried on by a private individual in their own premises and for their own use and done in a manner consistent with this section.

B. During intervals between collection or disposal, the storage, accumulation, collection, keeping, handling or maintaining of waste on premises where produced shall be performed in such a manner as to prevent the harboring and breeding of rodents, insects and other vermin and as to prevent ready access to the waste by dogs and other small animals; as to prevent objectionable odors in the ambient air; as not to constitute a fire hazard; and as not to result in such unsightliness as to result in the depreciation of the value of adjacent property or the comfortable enjoyment of life thereon.

C. **Construction and Demolition Rubbish and Waste.** During construction, alteration, or demolition activities, combustible debris, rubbish, and waste materials shall be

managed in accordance with California Fire Code Section 3304, as applicable. Combustible debris, rubbish, and waste materials shall not be accumulated within buildings and shall be removed from buildings at the end of each shift of work.

1. Temporary rubbish containers exceeding 5.33 cubic feet (40 gallons) used for combustible debris, rubbish, or waste shall be provided with tight-fitting or self-closing lids and shall be constructed of noncombustible materials or other materials complying with California Fire Code Section 3304.1.3.

2. Materials susceptible to spontaneous ignition, including oily rags, shall be stored in listed disposal containers in accordance with California Fire Code Section 3304.2.

3. Construction and demolition waste containers shall not be located or maintained so as to obstruct required fire apparatus access, means of egress, fire hydrants, fire department connections, or access to required fire protection equipment.

12.32.030 Garbage containers required--Specifications--Use restrictions--Location.

A. Every person owning any premises, where garbage or rubbish is produced or accumulated shall provide and maintain on the premises in a suitable place readily accessible to personnel of the solid waste and environmental health divisions, containers of sufficient capacity and number to store the accumulations of garbage or rubbish during the intervals between collections or disposal. With the written of the owner, nonresidential tenants may contract for garbage collection service independently, either on their own behalf or on the owner’s behalf, if the owner agrees in writing to guaranty payment of the garbage collection charge in the event the tenant does not pay it in a timely fashion.

B. Every contractor or builder engaged in the erection or repair of a building shall provide sufficient containers at or near such building for the deposit and storage of any waste resulting from the erection or repair work.

C. Garbage containers for other than bulk accumulation shall be constructed of metal or other impervious material approved by the managers of environmental health and solid waste with tight-fitting covers. The containers and covers shall be in good repair, leakproof, free from holes, flytight and rodentproof. Containers shall be equipped with handles adequate to lift the weight of a full container without breaking or bending. Such container shall be maintained in a sanitary condition by the owners thereof and covers shall not be removed except for the purpose of placing waste therein or removing waste therefrom.

D. Rubbish except broken glass, rocks, concrete, bricks and similar solid material, plaster or dirt may be deposited in garbage containers. Hazardous waste, human waste and other potentially infectious material shall not be deposited or placed in garbage containers. Liquid garbage shall not be deposited or placed in such containers.

E. No garbage containers or other containers for waste, other than those of the City, shall be placed, kept, stored or located within the right-of-way of a street or alley; provided, however, that the Public Works Department may authorize the location of such containers within the public right-of-way at specified places and times when such location is necessary for the expeditious collection and disposition of garbage by the City. (Ord. 6369-NS § 1 (part), 1997; Ord. 6319-NS § 2 (part), 1996)

12.32.040 Findings and Purpose

A. The purpose of this section is to ensure that new commercial development and substantial renovations provide adequate space for the storage, collection, and processing of solid waste, dual- stream recyclable, and organic materials or construction and demolition materials in a manner that supports public health, operational efficiency, compliance with state and local law, and the City's Zero Waste and climate goals.

12.32.050 Bulk wastes--Over one cubic yard--Over two cubic yards.

A. In any premises where a volume of waste in excess of one cubic yard is allowed to accumulate between intervals of collection or disposal, such waste shall be managed in

the manner specified by the manager of the environmental health division for the sanitary storage, collection or disposal of such waste on the premises.

B. In addition to the requirements of subsection A of this section, dumpsters and containers used for the storage of combustible waste shall comply with California Fire Code Sections 304.3 through 304.3.7, as applicable, including requirements for container construction, lids, location, separation from buildings, and fire protection. Waste storage locations shall not create a fire hazard and shall be subject to approval by the Fire Chief or designee where required by the California Fire Code.**12.32.060 Garbage collection--Service declared essential--Exclusive collection by City required--Notification by owner--Fees--Time--Districts established--Rubbish collected with garbage.**

A. It is found and determined that the periodic collection of garbage from all premises and places in the City in or from which garbage is created, accumulated or produced is essential for the maintenance of the public health and welfare of the City and that the provision by the City of such garbage collection service is a direct benefit to all premises and places in or from which garbage is created, accumulated or produced to the owners thereof.

B. Garbage collection service is provided by the City, and all owners of premises and places in the City in or from which garbage is created, accumulated or produced shall use or cause to be used, and pay the fees charged for, the City's collection service. It is unlawful for any person, other than authorized agents or employees of the City, to collect, remove or dispose of garbage in the City; provided, however, that nothing contained herein shall prevent the use of garbage disposal devices as provided in the City plumbing code.

C. All owners of premises and places in or from which garbage is created, accumulated or produced shall notify the solid waste division of the services department of the City that collection of garbage from such premises or place is required and the frequency of the collection required.

D. Fees for the collection of garbage shall be established by resolution of the City Council. All owners of premises and places in the City from which garbage is collected, or the person with responsibility for those premises, shall pay the garbage collection fees established by the City Council. In the event of nonpayment of the garbage

collection fees, the City, at its option, may discontinue furnishing garbage collection service as set forth in Section 12.32.060, such discontinuance of service to be in addition to any remedies that are available to the City to enforce payment of any unpaid garbage collection fees.

E. Collection of garbage shall be made at least once a week from private residences and as many times per week as the Director of Public Works may order from all other places.

F. The Director of Public Works may establish districts in the City for the purpose of collecting garbage and rubbish.

G. The City will collect and dispose of all rubbish which is deposited in garbage containers as authorized in Section 12.32.030, and to the extent that equipment and personnel are available as determined by the Director of Public Works, the City may collect and dispose of rubbish other than that deposited in garbage containers, provided such rubbish is placed in separate containers approved by the Director of Public Works and provided further that such rubbish is of such size that it can be placed in such separate containers. (Ord. 6369-NS § 1 (part), 1997; Ord. 6340-NS § 1 (part), 1996; Ord. 6319-NS § 2 (part), 1996)

12.32.070 Garbage fees--Payment requirements--Service charges.

A. Fees for garbage and rubbish collection shall be billed and paid periodically as determined by the City. Any fee which is not paid in full on the thirty first day after billing is delinquent, except that fees which are billed semiannually shall be deemed delinquent on December 11th and April 11th. A penalty of ten percent shall be assessed on any delinquent amount. Delinquent amounts greater than one year delinquent shall accrue interest at the rate of one and one-half percent per month. Service on unpaid accounts may be reduced or discontinued thirty days after mailing notice of delinquency.

B. The City may elect to bill for garbage and rubbish collection service as a special assessment on the property taxes and charges collected by the county with property taxes. The City may also elect to bill individual persons or businesses for service provided directly to those persons or businesses; however, because the provision by

the City of garbage collection service is necessary for the public health and a benefit to the public, and necessary to prevent the creation of public nuisances, any amounts billed to persons or businesses are an obligation of both the user of the property who generates the garbage and the owner of the property who benefits from its use by others, and therefore also payable by, and debts of, the owner of the property.

C. The City may employ any method provided by state law for collection of service fees, delinquent amounts, penalties and interest, and all remedies shall be cumulative.

D. No refunds will be made for decreases in service during the billing period in which the decrease occurred.

E. The City may require payment of a deposit in the amount three times the monthly service charge for any City garbage collection service ordered in any case where the owner of the affected property is not ordering the service or the City is legally unable to impose a lien on the property in the event the service charges are not paid by the person or business ordering the service. Such deposits may be credited by the City against an account after one year for residential accounts and two years for non-residential accounts, if there have been no delinquencies during the applicable period. In the event an account is closed while the City has custody of a deposit, the City shall credit the amount of the deposit against the closing bill and refund any amount remaining. (Ord. 6393-NS § 1, 1997; Ord. 6369-NS § 1 (part), 1997; Ord. 6340-NS § 1 (part), 1996; Ord. 6319-NS § 2 (part), 1996)

12.32.080 Adequate Space Requirement

Effective January 1, 2027:

A. All new commercial, development shall conform to the Design Standards in Section 12.32.065.

B. Additions, alterations, or renovations to commercial development requiring discretionary approval or permits where the project affects waste storage areas, collection infrastructure, or collection services, shall conform to the Design Standards in Section 12.32.065.

12.32.090 Design Standards

A. Waste storage and collection areas shall:

1. Provide adequate space for collection containers and related infrastructure sufficient to accommodate all required material streams and meet minimum service requirements including but not limited to:
    a. Landfill disposal.
    b. Recycling of paper and cardboard.
    c. Recycling of glass, metal, and plastic containers.
    d. Organic materials, including food scraps, compostable paper, and plant debris.
2. Be designed to accommodate the size, number, and configuration of containers required for collection service.
3. Provide convenient and equal access to all required material streams.
4. Have signage identifying the types of materials corresponding to each respective waste stream. Signage shall be permanently posted on or painted onto each receptacle. General instructions about how to recycle shall be posted on the walls inside the enclosure. The name and phone number of the person responsible for maintenance of the enclosure shall be included on the sign with general instructions.
5. Provide adequate access for commercial tenants, property owners and managers, facilities staff, third party valet waste service providers or Zero Waste collection staff.
6. Provide sufficient maneuvering area to safely move containers between storage and collection locations.
7. Include pathways, ramps, and access routes that meet applicable accessibility and safety requirements.
8. Reduce incidents of significant slopes
8. Maintain adequate vertical clearance for opening lids and servicing containers.

9. Include sufficient staging space to support collection operations.

11. “Waste storage, collection and staging areas shall be located or constructed in a manner not to obstruct or reduce required fire apparatus access roads, fire lanes, emergency access, means of egress, fire hydrants, fire department connections, or access to other required fire protection equipment.” Be maintained in a manner that supports cleanliness, safety, and proper collection operations.

B. Fire Protection and Life Safety Requirements.

Waste storage areas, rooms, enclosures, and associated waste containers shall comply with the following Fire and Life Safety Requirements:

1. **Fire Protection.** Waste storage areas, rooms, enclosures, and associated waste containers shall comply with California Fire Code (CFC) Sections 304.3.1 through 304.3.7, including applicable requirements for location, construction, and separation. Where automatic sprinkler protection is utilized or other an approved method of compliance, such protection shall be provided in accordance with the applicable provisions of the CFC and applicable National Fire Protection Association (NFPA) standard.

2. **Battery Collection and Storage.** Where waste storage areas, collection rooms, enclosures, or other collection facilities are used for the collection or storage of lithium-ion, lithium-metal, or other batteries, such collection and storage shall comply with CFC Section 320. Damaged, defective, recalled, leaking, swollen, or other compromised batteries shall be handled and stored in accordance with the CFC and hazardous material requirements.

3. **Battery-Powered Equipment and Charging.** Waste storage areas, collection rooms, and waste enclosures shall not be used for the charging of powered micromobility devices or other battery-powered equipment unless specifically approved and permitted by the CFC, including Section 322.

4. **Emerging and Special Fire Hazards.** The collection, storage, handling, or processing of materials presenting special or emerging fire hazards, including lithium-ion, lithium-metal, or other battery technology shall comply with the applicable provisions of the CFC and BFC. Where required by the CFC, such operations shall be subject to review and approval by the Fire Chief or designee.

5. **Use of Waste Storage Areas and Enclosures.** Waste storage areas, rooms, enclosures, and associated containers shall be used and maintained for their approved purpose. Containers shall not be filled beyond their designated capacity and, where lids are required, shall be maintained so that lids can fully close. Waste or other combustible materials shall not be allowed to accumulate outside designated containers or in a manner that creates a fire hazard, obstructs

required means of egress, or obstructs or impairs required Fire Department access or access to fire protection equipment.

a. Combustible storage, hazardous and universal waste or hazardous materials shall not be stored within exit passageways, interior exit enclosures or stairways, under unenclosed exterior exit or exit access stairways.

6. **Fire Department Access.** Waste storage, collection, and staging areas shall be located and maintained so as not to obstruct, reduce, or otherwise interfere with required fire apparatus access roads, fire lanes, emergency access to building exterior doors, openings and roofs required by the California Building Code, California Residential Code and California Fire Code, means of egress, fire hydrants, fire sprinkler system risers, fire department connections, or access to required fire protection system equipment in accordance with applicable provisions of the CFC Sections 503, 504, 507, 509, and 912.

   a. To ensure and maintain compliance, all developments requiring centralized waste, recycling, and/or organic collection shall construct dedicated concrete staging enclaves or recessed storage cutouts. These staging infrastructure elements must be situated entirely outside of the minimum required unobstructed width and vertical clearance of any designated fire apparatus access road, preventing any temporary or permanent container encroachment during stating or servicing.

7. **Wildland-Urban Interface and Fire Hazard Areas.** Where a project is located within an area subject to applicable Berkeley wildland-urban interface, fire hazard severity zone, defensible space, or vegetation management requirements, exterior waste storage areas and enclosures shall be designed, located and constructed of noncombustible materials in accordance with the applicable Berkeley Fire Code (BFC) and other adopted fire-safety requirements. [Berkeley Municipal Code Chapter 19.49]

8. **Maintenance of Fire and Life Safety Features.** Waste containers, storage areas, collection rooms, enclosures, and staging areas shall be maintained so as not to obstruct or reduce required fire apparatus access, emergency access, means of egress, fire hydrants, fire department connections, fire protection system equipment, or other required fire and life safety features in accordance with the CFC.

9. **Fire Protection System Installations and Modifications.** Where compliance with this chapter requires the installation, extension, relocation, or modification of an automatic sprinkler system, fire detection system, or other required fire protection system, such work shall comply with the applicable CFC, BFC, associated NFPA standards, and shall be completed under a Fire Department

Construction Permit in accordance with CFC §105.6.2 and §105.6.7 prior to installation.

12.32.100 Dumping at unauthorized disposal site prohibited.

Except as otherwise provided by law, no person shall deposit or discharge or cause to be deposited or discharged any garbage, rubbish or other waste in any place other than a disposal site or dump which has been approved by the City. (Ord. 6319-NS § 2 (part), 1996)

12.32.110 Stormwater Requirements

Waste Enclosure requirements. The following requirements apply to all waste enclosures:

Waste enclosure structures shall be covered and designed to prevent stormwater runoff from contacting waste materials. The roof canopy should extend sufficiently outward in all directions so that windblown rain will not enter the interior of the storage area. A horizontal or sloped canopy measuring approximately one-half the height of the canopy to the ground is recommended. The waste enclosure shall include walls or other barriers designed to prevent rainfall, stormwater run-on, and stormwater runoff from entering or leaving the enclosure, and to minimize the wind dispersal of litter. Berms, curbs, or other approved containment or diversion measures shall be incorporated, as necessary, to prevent pollutant discharges to the municipal storm drain.

1. Stormwater runoff from the enclosure roof must also drain away from the enclosure towards landscaping and/or stormwater treatment areas.

2. Waste enclosure floors shall be constructed of concrete and designed to prevent the discharge of runoff, wash water, or other liquids to the municipal storm drain. Discharges to the municipal storm drain system are prohibited. Floor drains, where permitted, shall discharge to the sanitary sewer, subject to approval by the applicable sanitary sewer agency.

3. Waste enclosures shall be removed from public right-of-way and block view of waste receptacles from public right-of-way.

4. No storm drains shall be located within the enclosure or in a location where stormwater could flow into or through the enclosure. The surrounding area shall be graded to prevent stormwater run-on. Grease interceptors, grease receptacles, and used cooking oil storage containers shall not be located within the trash enclosure unless specifically designed and permitted for such use. Any grease storage shall be covered, leak-proof, protected from stormwater run-on, and designed to prevent spills or discharges to the municipal storm drain.

12.32.120 Administrative Standards

A. The Director of Public Works or designee may adopt and periodically update administrative guidelines, technical standards, landfill, dual-stream recycling and organics service levels, design criteria, and implementation procedures necessary to administer and enforce this chapter. Where such guidelines, standards, criteria, or procedures affect fire apparatus access, emergency access, means of egress, fire protection equipment or systems, combustible waste storage, fire-resistance-rated construction, waste or recycling chutes, or other matters regulated by the California Fire Code or California Building Code, they shall be developed in consultation with the Fire Department and Building and Safety Division. r.

Such standards may address, but are not limited to:

1. Container sizing and capacity requirements.

2. Waste enclosure and collection room dimensions.

3. Service access and collection vehicle requirements.

4. Staging area requirements.

5. Access pathway and maneuvering requirements.

6. Co-location of material streams.

7. Operational and safety considerations.

8. Stormwater requirements

Public Works Review Authority

The Director of Public Works or designee may require reasonable modifications to waste storage areas, collection access, collection infrastructure, and related facilities necessary to ensure safe, efficient, and compliant collection services.

B. Interdepartmental Coordination. Where administrative guidelines, technical standards, design criteria, or implementation procedures adopted pursuant to this section affect fire apparatus access, emergency access, means of egress, fire protection equipment or systems, combustible or hazardous waste storage, battery collection or storage, fire-resistance-rated construction, waste or recycling chutes, or other matters regulated by the California Fire Code or California Building Code, such standards shall be developed in consultation with the Fire Department and Building and Safety Division.

12.32.130 Liability and Enforcement

1. No building permit shall be issued for a covered project unless the Director of Public Works or designee determines that the project complies with the requirements of this chapter.

2. No Certificate of Occupancy shall be issued for a covered project unless the Director of Public Works or designee determines that all required waste, recycling, and organics collection infrastructure has been installed in substantial conformance with approved plans.

3. Any modification to approved waste storage or collection facilities that materially affects compliance with this chapter shall require review and approval by the Director of Public Works or designee prior to implementation.

4. The remedies provided in this section are cumulative and do not preclude enforcement through any other remedies authorized by the Berkeley Municipal Code.

12.32.140 Dumps--Use limitations.

It is unlawful for any person to deposit at the garbage and rubbish dumps maintained by the City any garbage or rubbish originating in any area outside the City limits; provided, however, that this section shall not apply to dumping permitted under any written agreement authorized by the City Council. (Ord. 6319-NS § 2 (part), 1996)

12.32.085 Administrative Standards

A. The Director of Public Works or designee may adopt and periodically update administrative guidelines, technical standards, service assumptions, design criteria, and implementation procedures necessary to administer and enforce this chapter.

12.32.150 Refuse burning prohibited--Exceptions.

It is unlawful for any person to burn any refuse except as may be permitted pursuant to the provisions of the fire prevention code of the City and Regulation No. 2 of the Bay Area Air Pollution Control District. (Ord. 6319-NS § 2 (part), 1996)

12.32.095 Liability and Enforcement

A. No building permit shall be issued for a covered project unless the Director of Public Works or designee determines that the project complies with the requirements of this chapter.

B. No Certificate of Occupancy shall be issued for a covered project unless the Director of Public Works or designee determines that all required waste, recycling, and organics collection infrastructure has been installed in substantial conformance with approved plans.

C. Any modification to approved waste storage or collection facilities that materially affects compliance with this chapter shall require review and approval by the Director of Public Works or designee prior to implementation.

D. The remedies provided in this section are cumulative and do not preclude enforcement through any other remedies authorized by the Berkeley Municipal Code.

12.32.160 Nuisances designated--Abatement authorized when.

The keeping of garbage in containers other than containers prescribed by this ordinance or the keeping upon premises of garbage or rubbish which is allowed to become offensive and noisome, shall constitute a public nuisance and may be abated in the manner provided by law for the abatement of nuisances. (Ord. 6319-NS § 2 (part), 1996)

12.32.170 Violation--Penalty.

Any person violating any provision or failing to comply with any of the requirements of this chapter shall be deemed guilty of an infraction as set forth in Chapter 1.20 of this code. (Ord. 6319-NS § 2 (part), 1996)

12.32.180 Putrescible waste--Procedure for management--Vermin infestation control--Prima facie presumption of violation.

A. Any person possessing any premises wherein putrescible waste is produced, handled, stored or allowed to accumulate shall manage such putrescible waste in such a manner as to preclude the breeding of flies or other vermin therein.

B. No person in control of putrescible waste shall knowingly allow or permit the same to serve as a breeding medium for flies or other vermin. Upon knowledge of such infestation, or after receiving written notice from the manager of environmental health, said person shall at once proceed and continue in good faith to destroy the flies, larvae or pupae thereof by poisoning, trapping, removal of the material to a disposal site which has been approved by the City, or by any other effective means.

C. In any prosecution charging violation of this chapter, a prima facie presumption of the violation of the provisions of this section shall exist upon proof by the chief of environmental health that an analysis of putrescible organic material controlled by any person charged shows that such material contains living larvae or pupae of domestic flies. (Ord. 6319-NS § 2 (part), 1996)

12.32.190 Collection and disposal--Private hauler requirements.

Waste which is not deposited in garbage containers or separate containers and collected by the City may be collected and disposed of by private haulers who have secured a business license as provided by Section 9.04.176 of this code. All vehicles used to transport rubbish shall be provided with equipment to prevent rubbish from blowing out of, falling from or otherwise escaping from such vehicle. Such rubbish haulers shall comply with all applicable rules and regulations established by the Public Works Department. (Ord. 6319-NS § 2 (part), 1996)

12.32.200 Collection and disposal--Rules and regulations--Public Works Department authority.

The Public Works Department, subject to the approval of the City Manager, shall have the power to establish rules and regulations consistent with the provisions of this title, governing the keeping, collection, removal and disposal of garbage, rubbish and waste, and the use by the public of the garbage, rubbish and waste dumps of the City. (Ord. 6319-NS § 2 (part), 1996)

Section 2. Copies of this Ordinance shall be posted for two days prior to adoption in the display case located near the walkway in front of the Maudelle Shirek Building, 2134 Martin Luther King Jr. Way. Within 15 days of adoption, copies of this Ordinance shall be filed at each branch of the Berkeley Public Library and the title shall be published in a newspaper of general circulation.

At a regular meeting of the Council of the City of Berkeley held on October 27, 2026, this Ordinance was passed to print and ordered published by posting by the following vote:

Ayes: Bartlett, Blackaby, Humbert, Kesarwani, Lunaparra, O'Keefe, Taplin, Tregub, and Ishii.

Noes: None.

Absent: None.

03

ORDINANCE NO. 8,038-N.S.

EXPENDITURE LIMITATIONS; AMENDING BERKELEY MUNICIPAL CODE CHAPTER 7.18

BE IT ORDAINED by the Council of the City of Berkeley as follows:

Section 1. That Berkeley Municipal Code Chapter 7.18 is amended to read as follows:

Chapter 7.18

EXPENDITURE LIMITATIONS

Sections:

7.18.010 Expenditures pursuant to Charter Article XI, Sections 67 and 67.5.
7.18.020 Expenditures pursuant to Charter Article XI, Section 67.4--Emergencies.

7.18.010 Expenditures pursuant to Charter Article XI, Sections 67 and 67.5.

A. Except as otherwise provided in this Title, expenditures pursuant to Article XI, Sections 67 and 67.5 of the Charter of the City of Berkeley, for which the initial amount exceeds the amount of $100,000, inclusive of professional services, other services, supplies, equipment, or materials (excluding leases and real estate agreements),shall require Council approval and shall be procured through competitive solicitation except in the case of emergencies pursuant to Article XI, Section 67.4. The requirement specified in Article XI, Section 67 of the Charter to select the “lowest responsible bidder” only for supplies, equipment, or materials contracts remains. Professional services and other services contracts shall be based on demonstrated competence and qualifications for the types of services to be performed, at fair and reasonable prices to the City. This requirement for professional and other services contracts to be selected via competitive procurement applies to all Charter Officers. Pursuant to Article XVI Section 113, the City Attorney retains the authority to enter into contracts without Council approval after competitive procurement of professional services, other services, supplies, equipment or materials (excluding leases and real estate agreements). The City Attorney is authorized to promulgate regulations to implement this section with respect to City Attorney’s Office contracts. All departments, excluding the City Attorney’s Office, shall follow the City of Berkeley Purchasing Manual guidelines, Section 3, for extensions of contracts and re-bid all contracts under the timeframes specified. The City Attorney’s Office shall follow regulations specific to City Attorney’s Office contracts.

B. Expenditures for specific improvements (public projects), including play area improvements and equipment in public parks which exceed the amount of $200,000 shall require Council approval pursuant to Article XI, Section 67 of the Charter of the City of Berkeley.

C. Expenditures for Community Development Block Grant funded Community Facility Improvement Projects which exceed the amount of $200,000 shall require Council approval pursuant to Article XI, Section 67 of the Charter of the City of Berkeley.

D. Expenditures for the purchase of supplies, equipment, and materials which exceed the amount of $100,000 shall require Council approval.

E. Expenditures for the acquisition and renovation of small multifamily rental properties through the Small Sites Program shall not require Council approval, but shall be approved by the City Manager. Expenditures will comply with the Small Sites Program guidelines, adopted by Resolution.

7.18.020 Expenditures pursuant to Charter Article XI, Section 67.4--Emergencies.

A. Expenditures pursuant to Article XI, Section 67.4 of the Charter of the City which exceed the amount of $100,000 shall require Council approval; and expenditures for public construction projects and playground improvements and equipment which exceed the amount of $200,000 shall require Council approval.

B. Notwithstanding subsection A of this section, in the event of a declared emergency under Chapter 2.88, the expenditure limitation under Article XI, Section 67.4 of the Charter of the City shall be an amount not exceeding the amount appropriated by the Council in the most recent appropriation ordinance for the fund from which an expenditure is made and for the purpose authorized for such fund.

C. Whenever purchases are made pursuant to this section, the City Manager shall promptly inform the Council as to the nature and amount.

Section 2. Copies of this Ordinance shall be posted for two days prior to adoption in the display case located near the walkway in front of the Maudelle Shirek Building, 2134 Martin Luther King Jr. Way. Within 15 days of adoption, copies of this Ordinance shall be filed at each branch of the Berkeley Public Library and the title shall be published in a newspaper of general circulation.

At a regular meeting of the Council of the City of Berkeley held on October 27, 2026, this Ordinance was passed to print and ordered published by posting by the following vote:

Ayes: Bartlett, Blackaby, Humbert, Kesarwani, Lunaparra, O'Keefe, Taplin, Tregub, and Ishii.

Noes: None.

Absent: None.

MINUTES
BERKELEY CITY COUNCIL SPECIAL MEETING
TUESDAY, SEPTEMBER 1, 2026
4:00 P.M.

2180 MILVIA STREET, BERKELEY, CA 94704

ADENA ISHII, MAYOR

Councilmembers:

DISTRICT 1 – RASHI KESARWANI
DISTRICT 2 – TERRY TAPLIN
DISTRICT 3 – BEN BARTLETT
DISTRICT 4 – IGOR TREGUB
DISTRICT 5 – SHOSHANA O'KEEFE
DISTRICT 6 – BRENT BLACKABY
DISTRICT 7 – CECILIA LUNAPARRA
DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 991 2372**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

Preliminary Matters

Roll Call: 4:00 p.m.

Present: Blackaby, Humbert, Lunaparra, O'Keefe, Taplin, Ishii

Absent: Bartlett, Kesarwani, Tregub

Councilmember Tregub present at 4:04 p.m.

Public Comment - Limited to items on this agenda only – 0 speakers.

CLOSED SESSION:

The City Council will convene in closed session to meet concerning the following:

1. **CONFERENCE WITH LEGAL COUNSEL – EXISTING LITIGATION PURSUANT TO GOVERNMENT CODE SECTION 54956.9(d)(1)**

    a. *Berkeley Homeless Union et al. v. City of Berkeley et al.*, Case No. 3:25-cv-01414-EMC (N.D. Cal.)

    Action: M/S/C (Humbert/Blackaby) to authorize the City Attorney to file an appeal in the matter of Berkeley Homeless Union, et al. v. City of Berkeley, et al., 4:25-cv-01414-EMC (N.D. Cal.), and engage in any necessary motion practice to preserve the City's rights.
    Vote: Ayes – Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Kesarwani, Bartlett.

2. **CONFERENCE WITH LEGAL COUNSEL—ANTICIPATED LITIGATION Initiation of litigation pursuant to paragraph (4) of subdivision (d) of Section 54956.9**

    a. Potential litigation challenging federal funding conditions.

    Action: M/S/C (Tregub/Humbert) to authorize the City Attorney to initiate litigation to protect the City's federal funding.
    Vote: Ayes – Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Kesarwani, Bartlett.

OPEN SESSION:

Public Reports of actions taken pursuant to Government Code section 54957.1.

Item 1: The City Council met in closed session on September 1, 2026, and voted to authorize the City Attorney to file an appeal in the matter of Berkeley Homeless Union, et al. v. City of Berkeley, et al., 4:25-cv-01414-EMC (N.D. Cal.), and engage in any necessary motion practice to preserve the City's rights.

Item 2: The City Council met in closed session on September 1, 2026, and took action to authorize the City Attorney to initiate litigation to protect the City's federal funding. This action involves one case. Consistent with Government Code section 54957.1, the name of the case will be disclosed once the action is filed.

Adjournment

Action: M/S/C (Humbert/Tregub) to adjourn the meeting.
Vote: Ayes – Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Kesarwani, Bartlett.

Adjourned at 4:49 p.m.

I hereby certify that the foregoing is a true and correct record of the special closed meeting of September 1, 2026 as approved by the Berkeley City Council.

Councilmember Kesarwani present at 6:03 p.m.

Councilmember Bartlett present at 6:11 p.m.

Land Acknowledgement Statement: *The City of Berkeley recognizes that the community we live in was built on the territory of xučyun (Huchiun (Hooch-yoon)), the ancestral and unceded land of the Chochenyo (Cho-chen-yo)-speaking Ohlone (Oh-low-nee) people, the ancestors and descendants of the sovereign Verona Band of Alameda County. This land was and continues to be of great importance to all of the Ohlone Tribes and descendants of the Verona Band. As we begin our meeting tonight, we acknowledge and honor the original inhabitants of Berkeley, the documented 5,000-year history of a vibrant community at the West Berkeley Shellmound, and the Ohlone people who continue to reside in the East Bay. We recognize that Berkeley's residents have and continue to benefit from the use and occupation of this unceded stolen land since the City of Berkeley's incorporation in 1878. As stewards of the laws regulating the City of Berkeley, it is not only vital that we recognize the history of this land, but also recognize that the Ohlone people are present members of Berkeley and other East Bay communities today. The City of Berkeley will continue to build relationships with the Lisjan Tribe and to create meaningful actions that uphold the intention of this land acknowledgement.*

Ceremonial Matters:

1. Pledge of Allegiance
2. Celebrating Berkeley's Entrepreneurial Spirit
3. Recognition of September 2026 as Hunger Action Month

Vote: All Ayes.

Consent Calendar

Public Comment on Consent Calendar and Information Items Only: 34 speakers.

Action: M/S/C (Tregub/Blackaby) to adopt the Consent Calendar in one motion except as indicated.
Vote: All Ayes.

Urgency Item: Wildfire Resiliency Bills – Request for Governor's Signature
From: Councilmember Blackaby (Author), Mayor Ishii (Co-Sponsor)
Recommendation: On behalf of the City Council, the Mayor will send letters to the Governor requesting his signature on eight (8) high-impact wildfire resiliency bills that passed the California Legislature and are awaiting his signature.
Financial Implications: See report
Contact: Brent Blackaby, Councilmember, District 6, 510-981-7160
Action: Councilmembers O'Keefe and Humbert added as co-sponsors. Approved recommendation.

1. **Grant Application: California Strategic Growth Council, Community Resilience Center (CRC) Planning Grant for Civic Center**
   From: City Manager
   Recommendation: Adopt a Resolution authorizing the City Manager or their designee to: 1. Submit a grant application under the California Strategic Growth Council's Community Resilience Centers (CRC) Program for a Planning Grant for an amount up to $500,000 for planning activities to prepare the two historic buildings in Berkeley's Civic Center, the Maudelle Shirek Building ("MSB" or "Old City Hall") and the Veterans Memorial Building ("VMB") for future structural upgrades including capital improvements and seismic retrofits; 2. Subject to award, accept the grant, execute any resultant revenue agreements and amendments, accept any additional funding allocations from the CRC Program and designate the City Manager or their designee as the applicant's authorized agent.
   Financial Implications: See report
   Contact: Eleanor Hollander, Economic Development, (510) 981-7530
   Action: Adopted Resolution No. 72,419–N.S.

Consent Calendar

2. Contract: Downtown Berkeley Association for Addison Street Catenary Lighting
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to: 1. Enter into a sole source contract and any amendments with the Downtown Berkeley Association (DBA) for the City to provide $150,000 to the DBA for actual incurred costs associated with the Addison Street Catenary Lighting project to support Downtown revitalization and placemaking in the Downtown Addison Street Arts District, and 2. Advance the city's approval to utilize city property as part of this effort (namely the connection/anchor points for the support guide wires for the lighting on the Addison Street side of the Center Street Garage building located at 2025 Center St).
Financial Implications: See report.
Contact: Eleanor Hollander, Economic Development, (510) 981-7530
Action: Adopted Resolution No. 72,420–N.S.

3. Loan Administration Board Dissolution; Repealing BMC Chapter 3.72
From: City Manager
Recommendation:
1. Adopt a Resolution authorizing the City Manager or their designee to assume direct administrative and operational oversight of the Revolving Loan Fund (RLF) program and the RLF Administrative Plan, upon dissolution of the Loan Administration Board (LAB); and
2. Adopt first reading of an ordinance repealing Berkeley Municipal Code Chapter 3.72. Loan Administration Board enabling legislation, thereby dissolving the Loan Administration Board.
Financial Implications: See report
Contact: Eleanor Hollander, Economic Development, (510) 981-7530
Action: Adopted Resolution No. 72,421–N.S. Adopted first reading of Ordinance No. 8,032-N.S. Second reading scheduled for September 29, 2026.

4. Formal Bid Solicitations and Request for Proposals Scheduled for Possible Issuance After Council Approval on September 15, 2026
From: City Manager
Recommendation: Approve the request for proposals or invitation for bids (attached to staff report) that will be, or are planned to be, issued upon final approval by the requesting department or division. All contracts over the City Manager's threshold will be returned to Council for final approval.
Financial Implications: $25,822,884 - Various Funds
Contact: Henry Oyekanmi, Finance, (510) 981-7300

Consent Calendar

5. Contract No. 32200227 Amendment: Fire Aside for Wildfire Resilience Software
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to amend Contract No. 32200227 with Fire Aside, LLC for defensible space inspection and community chipper management software increasing the amount by $150,000 for an amended total amount not to exceed $410,000 and maintaining the same term which ends on May 17, 2028.
Financial Implications: See report
Contact: David Sprague, Fire, (510) 981-3473
Action: Adopted Resolution No. 72,422–N.S.

6. Purchase Orders for Bauer Compressors Inc. for Firefighting Supplies, Equipment, Service and Maintenance
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager, or their designee to execute annual purchase orders using a piggyback contract and any amendments with Bauer Compressors Inc. using the National Purchasing Partners (NPP) contract No. PS26090 in an amount not to exceed $1,579,472 for Firefighting supplies, equipment and related service and maintenance from October 1, 2026 through March 4, 2030, with an option to extend one (1) year to March 4, 2031.
Financial Implications: See report
Contact: David Sprague, Fire, (510) 981-3473
Action: Adopted Resolution No. 72,423–N.S.

7. Purchase Orders: Stryker Sales for Gurneys, Stair Chairs, and Mechanical CPR Units
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or their designee to utilize Sourcewell Contract No. 041823 to issue piggyback purchase orders and any amendments to Stryker Sales LLC for the lease of ten gurneys, ten powered gurney fastener systems (power load system), and ten evacuation chairs (stair chair), and twelve cardiopulmonary resuscitation (CPR) units for Fire Department response vehicles from October 1, 2026 through January 1, 2033 in an amount not to exceed $1,591,355.
Financial Implications: $1,591,355 - Various Funds
Contact: David Sprague, Fire, (510) 981-3473
Action: Adopted Resolution No. 72,424–N.S.

8. Contract No.32300207 Amendment: Easy Does It for Accessible Wheelchair Van Services for Seniors & the Disabled
From: City Manager
Recommendation: Adopt a Resolution rescinding Resolution No. 72,259-N.S and authorizing the City Manager, or designee, to amend Contract No. 32300207 with Easy Does It increasing the amount by $57,000 for the period of July 1, 2026, through June 30, 2027, for a total contract amount not to exceed $307,000. These services support accessible wheelchair van services to customers of the Aging Services Division's Berkeley Rides for Seniors & the Disabled program.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: Adopted Resolution No. 72,425–N.S.

9. Revenue Contract: MARU for Aging Services - Information and Assistance Fiscal Years 2027 - 2030
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or designee to accept grant funding and execute any resultant revenue agreements and amendments with MARU (formally known as Korean Community Center of the East Bay), an East Bay non-profit organization. This funding will support Information and Assistance Services for Berkeley seniors from Fiscal Year 2027 through Fiscal Year 2030 (FY 2027 - FY 2030) in the projected annual amount of $169,347.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: Adopted Resolution No. 72,426–N.S.

10. Revenue Contracts: Aging Services - Nutrition Programs Fiscal Years 2027 - 2030
From: City Manager
Recommendation: Adopt two Resolutions authorizing the City Manager or designee to receive grant funding and execute any resultant revenue agreements and amendments with Alameda County to provide congregate and home-delivered meals for seniors for Fiscal Year 2027 through Fiscal Year 2030 (FY2027-FY2030):
a. Congregate Meals in a projected annual amount of $696,800; and
b. Home Delivered Meals in a projected annual amount of $860,515.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Contact: Terrance Davis, Public Works, (510) 981-6300
Action: Adopted Resolution No. 72,427–N.S. (Congregate Meals), and Resolution No. 72,428–N.S. (Home Delivered Meals).

11. Shattuck Senior Homes Loan Modification Request
From: City Manager
Recommendation: Adopt a Resolution approving the following actions to modify two existing Housing Trust Fund (HTF) loans for Shattuck Senior Homes, located at 2425 Shattuck Avenue, by: 1. Combining the outstanding principal balances of the two existing loans into one new City loan in the amount of $970,603 plus accrued interest. 2. Reducing the interest rate from 6% to 3% simple interest. 3. Extending the loan maturity date by 55 years to September 1, 2082. 4. Waiving the HTF Guidelines requirement to restrict 20% of units at 30% Area Median Income (AMI) and maintaining affordability requirements at 50% and 60% AMI. 5. Extending the Regulatory Agreement so that it is coterminous with the new loan maturity date of September 1, 2082. 6. Authorizing the City Manager or designee to execute all original or amended documents or agreements to effectuate these actions, including amendments to the existing loan agreements.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: Adopted Resolution No. 72,429–N.S.

12. Grant Application: Safe Routes to Transit and Bay Trail Program (SR2TBT)
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or his designee to submit a grant application to the Metropolitan Transportation Commission's Regional Measure 3 Safe Routes to Transit and Bay Trail Program (SR2TBT) for up to $25,000,000 for construction of portions of the landside elements of the Berkeley Water Transportation Pier-Ferry Project.
Financial Implications: $25,000,000 (Revenue)
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700
Action: Adopted Resolution No. 72,430–N.S.

13. Supporting a Neighborhood Decarbonization Pilot Project in Berkeley
From: Environment and Climate Commission
Recommendation: The Berkeley Environment and Climate Commission recommends that the City Council adopt the attached resolution Supporting a Neighborhood Decarbonization Pilot Project in the City of Berkeley, which would: -Express the City's formal support for a neighborhood decarbonization pilot in Berkeley under Senate Bill 1221 (2024), with the goal of modeling equitable whole-home electrification for a neighborhood zone; and -Commit the City to being an active partner in pilot implementation, asking the City Manager to designate at least one staff member to participate in regular coordination meetings and support collaboration across relevant City departments; and -Affirm the City's intent to work collaboratively with PG&E, community organizations, Community Choice Aggregators, public health advocates, workforce development partners, and regional agencies to advance a pilot and help secure resources for its success.
Financial Implications: See report
Contact: Sarah Moore, Commission Secretary, (510) 981-7400
Action: Adopted Resolution No. 72,431–N.S.

Consent Calendar

14. Whistleblower Program Special Report: Evaluation of Workplace Relationship Policies
From: Auditor
Recommendation: We recommend that City Council receive this report and direct the City Manager to implement Recommendations 1 and 2 consistent with Management's Response. We further recommend that City Council refer Recommendation 3 to the Agenda and Rules Committee for consideration of whether to pursue adoption of nepotism and cronyism provisions in the Berkeley Municipal Code.
Financial Implications: See report
Contact: Jenny Wong, Auditor, (510) 981-6750
Action: Approved recommendation.

Council Consent Items

15. District 1 Support for the Gilman District Merchants Association to Promote Longterm Sustainability and Area Improvements: Relinquishment of Council Office Budget Funds to General Fund and Grant of Such Funds
From: Councilmember Kesarwani (Author)
Recommendation: Adopt a resolution approving the expenditure of an amount not to exceed $65,000 from the FY 2026-27 office budget of District 1 Councilmember Rashi Kesarwani to provide a one-time capacity building grant to support the Gilman District Merchants Association (GDMA) to promote economic development, district-wide improvements and long-term sustainability of the Gilman District Street Fair (GDSF).
Distribution of funds should be approved by the Gilman District Coordinating Committee, the representative advisory board established to comply with the fiscal agent, the Berkeley Chamber of Commerce. Use of funds should prioritize: -Salary/stipend for part-time director of the GDMA; Stipends for key volunteers for the Gilman District Street Fair; -Business Administration for the GDMA outside of salaries including: -Publicity, promotion, membership building and website maintenance for the GDMA; -Event planning and execution of GDMA networking and social gatherings; -Public Safety Enhancement Grants to local businesses.
Financial Implications: $65,000
Contact: Rashi Kesarwani, Councilmember, District 1, (510) 981-7110
Action: Councilmember Taplin added as a co-sponsor. Adopted Resolution No. 72,432–N.S.

Council Consent Items

16. Referral for an Information Report Assessing all Housing Related Impact, Development and Local Parcel Tax Fees to Provide Guidance and Better Understand the True and Total Costs of Developing Housing of All Types in the City of Berkeley
From: Councilmember Kesarwani (Author)
Recommendation: Referral to the City Manager to direct Planning staff to prepare a comprehensive housing fee study to be presented to Council as an information report that would:
1. Collect Fee and Parcel Tax Data from Berkeley and other cities to create a housing production comparison matrix. Information should include a summary of categories, amounts, and bases for calculating impact fees, other development fees, and parcel taxes in all cities in the matrix; and
2. Calculate local fee and parcel tax costs for housing development prototypes. Information should include the total fee burden applicable to several multifamily housing prototypes (examples could include fourplex/town homes; 10 unit small multifamily; 8-story midrise; 18-story high-rise) and estimate each selected jurisdiction's approximate applicable amount of impact fee, other development fee, and parcel taxes for the respective prototypes.
Financial Implications: Staff time
Contact: Rashi Kesarwani, Councilmember, District 1, (510) 981-7110
Action: Councilmembers Humbert and Lunaparra added as co-sponsors. Approved recommendation.

17. Zoning Ordinance Modification for Manufacturing Research and Development (M-RD) District
From: Councilmember Kesarwani (Author)
Recommendation: Referral to the City Manager and Planning Commission to amend Berkeley Municipal Code (BMC) Chapter 23.206.020 to allow for a reduced level of discretion for Vehicle Repair and Service in the Manufacturing Research and Development (M-RD) District.
Financial Implications: See report
Contact: Rashi Kesarwani, Councilmember, District 1, (510) 981-7110
Action: Approved recommendation.

Council Consent Items

18. Resolution in Support of AB 1761 (Rogers) — Electricity: Calculation Methodology: Data Disclosure
From: Councilmember Tregub (Author)
Recommendation: Adopt a resolution in strong support of Assembly Bill (AB) 1761 (Rogers), which would improve transparency in the calculation of the Power Charge Indifference Adjustment (PCIA) and other nonbypassable charges, and distribute copies to Governor Gavin Newsom; Senate President pro Tempore Monique Limón, Senate Utilities, Energy, and Communications Committee Chair Benjamin Allen and Senator Jesse Arreguín; Assembly Speaker Robert Rivas, Assembly Utilities and Energy Committee Chair Cottie Petrie-Norris and Assemblymembers Chris Rogers and Buffy Wicks; and Senator Steven Bradford, Chair of the Senate Energy, Utilities and Communications Committee to support its passage.
Financial Implications: Staff time
Contact: Igor Tregub, Councilmember, District 4, (510) 981-7140
Action: Adopted Resolution No. 72,433–N.S.

19. Resolution in opposition to the handling, storage, and transport of coal and petroleum coke in the San Francisco Bay Region, urging stringent regulation of such facilities by the Bay Area Air District, and in support of Assembly Bill (AB) 40
From: Councilmember Tregub (Author), Councilmember Kesarwani (Co-Sponsor), Councilmember Taplin (Co-Sponsor), Mayor Ishii (Co-Sponsor)
Recommendation: Adopt a resolution opposing the handling, storage, and transport of coal and petroleum coke in the San Francisco Bay Region, urging stringent regulation of such facilities by the Bay Area Air District, and in support of Assembly Bill (AB) 40.
Financial Implications: Staff time
Contact: Igor Tregub, Councilmember, District 4, (510) 981-7140
Action: Adopted Resolution No. 72,434–N.S. as revised in Supplemental Communications Packet #1 by Councilmember Tregub.

Council Consent Items

20. Referral to the City Manager: RENAISSANCE (Revitalizing Enterprise and Neighborhoods through Activation, Investment, Safety, Streamlining, Accessibility, Networking, Collaboration, and Equity) – Part 2: Commercial Vacancy Blight Prevention and Mitigation
From: Councilmember Tregub (Author), Councilmember O'Keefe (Co-Sponsor), Councilmember Blackaby (Co-Sponsor)
Recommendation: Commercial Vacancy Blight Prevention and Mitigation
Refer to the City Manager and City Attorney the development of an integrated strategy to prevent and reduce unmitigated ground-floor retail vacancies and blight, increase activation, and support the vitality and resilience of local businesses and other community-serving uses in Berkeley's Commercial Districts.
Recommendations include but are not limited to developing regulations around the following solutions:
1. Subdivision of Larger Storefronts.
Develop policies that encourage the conversion or subdivision of larger storefront commercial spaces to allow for more diverse business and community uses.
2. Flexible Mixed-Use Occupancy.
a. Review Berkeley's existing zoning regulations for live/work, maker, creative, and related uses to identify regulatory barriers to the flexible use of underutilized commercial storefronts and modify the Zoning Ordinance and establish or update performance standards where necessary to address such barriers.
b. Explore performance standards to ensure that live/work, maker, and other creative uses help activate and enhance the vibrancy of the adjacent neighborhood.
3. Financial Assurances Tied to Property Maintenance and Site Conditions.
To the extent permissible under state law, develop regulations requiring, as a condition of applicable development permits, performance bonds or other financial assurances sufficient to ensure appropriate property maintenance and site conditions if an approved development project is substantially delayed, suspended, or abandoned.
4. Cold Shell Prevention.
a. Explore a regulatory framework to prevent premature deactivation of tenant-ready commercial spaces (commonly referred to as "cold shelling") in buildings planned for demolition by considering indicators of project readiness, which could include demonstrated financial capacity, evidence that a portion of project funding is secured, and other relevant factors are considered.
b. Require a permit for the removal or decommissioning of utility hook-ups as part of building safety and habitability standards, to prevent practices that create and perpetuate prolonged vacancy and disinvestment.
5. Warm Shell Development.
Establish requirements and/or incentives to ensure that ground floor retail spaces in new developments are delivered with basic utility connections (commonly referred to as "warm shells"), including utility and electricity hookups, when those services are available and have been connected to the rest of the building.
6. Shared Commercial Facilities.
Explore and, where feasible, facilitate the creation of customer-accessible shared restroom facilities serving multiple ground-floor commercial spaces or buildings,

Council Consent Items

including through zoning allowances, coordinated development standards, and incentives. These should emphasize cost-neutral or revenue-supporting implementation approaches, such as integration into private development projects, public-private partnerships, or maintenance models funded by participating property owners, while ensuring compliance with applicable building, accessibility, and public health requirements.

7. Demonstration of Utility-Related Delays.

Where delays in utility approvals or service connections are cited, require developers to provide reasonable documentation from utility providers demonstrating that such delays are outside of the developer's direct control. Explore opportunities for improved coordination with utility providers and City processes to help mitigate such delays and support the timely delivery of usable ground floor commercial space.

8. Utility Equipment Undergrounding.

Develop regulations requiring large new residential and commercial mixed-use developments to locate transformers and other large utility equipment below grade, to the extent feasible and consistent with applicable utility requirements.

Financial Implications: See report

Contact: Igor Tregub, Councilmember, District 4, (510) 981-7140

Action: Approved recommendation.

Action Calendar – Old Business

21a. Resolution Reinstating the Berkeley Police Department's Ability to Use Tear Gas for Critical Life-Threatening Incidents Only and Lifting the COVID-19 Moratorium on Smoke and Oleoresin Capsicum (OC) Spray *(Continued from July 14, 2026) (Item Contains Supplemental Material) (Reviewed by the Public Safety Policy Committee)*

From: Councilmember Kesarwani (Author)

Recommendation: Adopt a Resolution amending the Berkeley City Council's June 9, 2020 direction regarding smoke, OC spray, and tear gas to allow the Berkeley Police Department (BPD) Special Response Team (SRT) to use tear gas under circumstances in which there is a significant risk of injury or death, maintain the prohibition on the use of tear gas solely for crowd control, and lift the temporary moratorium on the use of smoke and OC spray.

Policy Committee Recommendation: To send the item with a Qualified Positive recommendation to Council that includes:

1. Making the resolution text explicit regarding permissible uses and policy limitations (particularly defining "critical incident" and excluding crowd control use),

2. Clarifying and attaching relevant use policies for public transparency, and

3. Developing an appropriate after-action reporting framework aligned with existing reporting and Transparency Hub practices.

Financial Implications: See report

Contact: Rashi Kesarwani, Councilmember, District 1, (510) 981-7110

Action: 63 speakers. M/S/Failed (Humbert/Taplin) to extend the meeting to 12:00 a.m.

Vote: Ayes – Kesarwani, Taplin, O'Keefe, Blackaby, Humbert; Noes – Bartlett, Tregub, Lunaparra, Ishii.

Action: M/S/Carried (Kesarwani/Humbert) to call a special meeting on September 29, 2026 at 4:00 p.m. to hear Items 21a and 21b.

Vote: Ayes – Kesarwani, Taplin, Bartlett, O'Keefe, Blackaby, Humbert, Ishii; Noes – Tregub, Lunaparra.

Action Calendar – Old Business

21b. Social Justice Implications of Proposed Use of Controlled Weapons and Other Policing Tools *(Continued from July 14, 2026)*
From: Peace and Justice Commission
Recommendation: Adopt a Policy approving the following actions with regard to the appropriateness of certain chemical weapons and other tools:
1. Retain the existing 2020 bans on chemical weapons (CS and OC), and the 1982 bans on police dogs and helicopters.
2. Retain the 1997 requirement for public reporting of each use of pepper spray.
3. Request the City Manager to engage an academic institution such as UC Berkeley, UCSF, or Stanford to study the health impacts of tear gas and other chemical weapons and canine support, potential short-term and long-term impacts on vulnerable populations and possible alternatives to the use of chemical weapons that provide officer safety, suspect safety, and safety to the general public.
Financial Implications: None
Contact: Tasha Tervalon, Commission Secretary, (510) 981-7000
Action: See action on Item 21a.

Public Comment – Items Not Listed on the Agenda – 0 speakers.

Adjournment

Action: M/S/C (Lunaparra/Taplin) to adjourn the meeting.
Vote: All Ayes.

Adjourned at 10:56 p.m.

I hereby certify that the foregoing is a true and correct record of the regular meeting of September 15, 2026 as approved by the Berkeley City Council.

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 269 0912**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

Live captioned broadcasts of Council meetings are available on B-TV (Channel 33) and via internet video stream. All Council meetings are recorded.

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

Preliminary Matters

Roll Call: 4:09 p.m.

Present: Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii

Absent: Taplin, Bartlett

Councilmember Taplin present at 4:20 p.m.

Councilmember Bartlett present at 4:33 p.m.

Councilmember Humbert participated in the meeting remotely under the "just cause" exception in the Brown Act due to illness.

Action Calendar – Old Business

1a. Resolution Reinstating the Berkeley Police Department's Ability to Use Tear Gas for Critical Life-Threatening Incidents Only and Lifting the COVID-19 Moratorium on Smoke and Oleoresin Capsicum (OC) Spray *(Continued from September 15, 2026) (Item Contains Revised and Supplemental Material) (Reviewed by the Public Safety Policy Committee)*

From: Councilmember Kesarwani (Author)

Recommendation: Adopt a Resolution amending the Berkeley City Council's June 9, 2020 direction regarding smoke, OC spray, and tear gas to allow the Berkeley Police Department (BPD) Special Response Team (SRT) to use tear gas under circumstances in which there is a significant risk of injury or death, maintain the prohibition on the use of tear gas solely for crowd control, and lift the temporary moratorium on the use of smoke and OC spray.

Policy Committee Recommendation: To send the item with a Qualified Positive recommendation to Council that includes:

1. Making the resolution text explicit regarding permissible uses and policy limitations (particularly defining "critical incident" and excluding crowd control use),

2. Clarifying and attaching relevant use policies for public transparency, and

3. Developing an appropriate after-action reporting framework aligned with existing reporting and Transparency Hub practices.

Financial Implications: See report

Action: 39 speakers. M/S/Failed (Kesarwani/Blackaby) to adopt a Resolution as revised in the September 15, 2026 material submitted by Councilmember Blackaby and included in the agenda item, and further revised to add a resolved clause to read as follows:

> *BE IT FURTHER RESOLVED that upon the posting of any public summary required under Policy 428 Section 428.14(c) or California Penal Code Section 13652.1, the Berkeley Police Department shall notify the City Manager who shall provide that information to the City Council and to the Police Accountability Board within 10 days of such a notice.*

Vote: Ayes – Kesarwani, O'Keefe, Blackaby, Humbert; Noes – Taplin, Bartlett, Tregub, Lunaparra, Ishii; Abstain – None; Absent – None.

Action Calendar – Old Business

1b. Social Justice Implications of Proposed Use of Controlled Weapons and Other Policing Tools *(Continued from September 15, 2026)*
From: Peace and Justice Commission
Recommendation: Adopt a Policy approving the following actions with regard to the appropriateness of certain chemical weapons and other tools:
1. Retain the existing 2020 bans on chemical weapons (CS and OC), and the 1982 bans on police dogs and helicopters.
2. Retain the 1997 requirement for public reporting of each use of pepper spray.
3. Request the City Manager to engage an academic institution such as UC Berkeley, UCSF, or Stanford to study the health impacts of tear gas and other chemical weapons and canine support, potential short-term and long-term impacts on vulnerable populations and possible alternatives to the use of chemical weapons that provide officer safety, suspect safety, and safety to the general public.
Financial Implications: None
Contact: Tasha Tervalon, Commission Secretary, (510) 981-7000
Action: M/S/C (Lunaparra/Taplin) to take no action on Item 1b.
Vote: All Ayes.

Adjournment

Action: M/S/C (Taplin/Tregub) to adjourn the meeting.
Vote: All Ayes.

Adjourned at 5:26 p.m.

I hereby certify that the foregoing is a true and correct record of the regular meeting of September 29, 2026 as approved by the Berkeley City Council.

DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 269 0912**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

Live captioned broadcasts of Council meetings are available on B-TV (Channel 33) and via internet video stream. All Council meetings are recorded.

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

Preliminary Matters

Roll Call: 6:05 p.m.

Present: Kesarwani, Taplin, Bartlett, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii

Absent: None

Councilmember Humbert participated in the meeting remotely under the "just cause" exception in the Brown Act due to illness.

Councilmember Lunaparra exited the meeting location at 9:44 p.m. and participated in the remainder of the meeting remotely under the "just cause" exception in the Brown Act due to illness.

Land Acknowledgement Statement: *The City of Berkeley recognizes that the community we live in was built on the territory of xučyun (Huchiun (Hooch-yoon)), the ancestral and unceded land of the Chochenyo (Cho-chen-yo)-speaking Ohlone (Oh-low-nee) people, the ancestors and descendants of the sovereign Verona Band of Alameda County. This land was and continues to be of great importance to all of the Ohlone Tribes and descendants of the Verona Band. As we begin our meeting tonight, we acknowledge and honor the original inhabitants of Berkeley, the documented 5,000-year history of a vibrant community at the West Berkeley Shellmound, and the Ohlone people who continue to reside in the East Bay. We recognize that Berkeley's residents have and continue to benefit from the use and occupation of this unceded stolen land since the City of Berkeley's incorporation in 1878. As stewards of the laws regulating the City of Berkeley, it is not only vital that we recognize the history of this land, but also recognize that the Ohlone people are present members of Berkeley and other East Bay communities today. The City of Berkeley will continue to build relationships with the Lisjan Tribe and to create meaningful actions that uphold the intention of this land acknowledgement.*

Ceremonial Matters: Ceremonial Matters:

1. Recognition of John Caner, CEO of the Downtown Berkeley Association, on the occasion of his retirement
2. Adjourned in memory of Gene Nakamura, Berkeley Unified School District Educator and Coach
3. Recognition of Julie Sinai, Assistant to Mayor Ishii, on the occasion of her retirement

City Manager Comments:

The City Manager removed Item 21 regarding a contract for the 1947 Center Street Window Replacement Project from the agenda.

City Auditor Comments:

The City Auditor provided an update on Item 37 regarding the Restaurant Inspections and Item 38 regarding the Comprehensive Domestic Violence Policy to Support City Employees.

Public Comment on Non-Agenda Matters: 10 speakers.

Action: M/S/C (Tregub/Blackaby) to accept two urgency items from Mayor Ishii pursuant to Government Code Section 54954.2(b)(2) entitled:
1. Resolution in Support of Prop 1, The Veterans and Affordable Housing Bond Act of 2026
2. Resolution to Oppose Proposition 43, Limits Voter's Ability to Raise Revenues for Local Government Services
Vote: All Ayes.

Required Verbal Disclosure:
Pursuant to state law the Council is verbally disclosing the action on public agency executive salaries – the Council will vote to adopt a Resolution confirming the appointment of Mary Opler as Director of Police Accountability and approving an employment agreement effective October 5, 2026, at an annual salary of $230,000.

Consent Calendar

Public Comment on Consent Calendar and Information Items Only: 22 speakers.

Action: M/S/C (Taplin/Tregub) to adopt the Consent Calendar in one motion except as indicated.
Vote: All Ayes.

Consent Calendar

Urgency Item: Resolution in Support of Prop 1, The Veterans and Affordable Housing Bond Act of 2026
From: Mayor Adena Ishii (Author), Councilmember Lunaparra (Co-Sponsor), Councilmember Blackaby (Co-Sponsor), Councilmember Tregub (Co-Sponsor)

Recommendation: Adopt a Resolution honoring September as childhood cancer awareness month.
Financial Implications: None
Contact: Brent Blackaby, Councilmember, District 6, (510) 981-7160
Action: Adopted Resolution No. 72,461–N.S.

Council Consent Items

30. United Against Hate Week 2026 Resolution
From: Councilmember Blackaby (Author), Councilmember Bartlett (Co-Sponsor), Councilmember Lunaparra (Co-Sponsor), Mayor Ishii (Co-Sponsor)
Recommendation: Adopt a Resolution declaring October 18 – 24 as United Against Hate Week in Berkeley**.**
Financial Implications: None
Contact: Brent Blackaby, Councilmember, District 6, (510) 981-7160
Action: Adopted Resolution No. 72,462–N.S.

31. Music in the Elmwood Festival: Relinquishment of Council Office Budget Funds to General Fund and Grant of Such Funds
From: Councilmember Humbert (Author)
Recommendation: Adopt a Resolution approving the expenditure of an amount not to exceed $14,000 per Councilmember including $14,000 from Councilmember Humbert to the Elmwood Business Association for the Music in the Elmwood Festival in the years 2027 and 2028, with funds relinquished to the City's General Fund for this purpose from the discretionary Council Office Budgets of Councilmember Humbert and any other Councilmembers who would like to contribute.
Financial Implications: Councilmember's Discretionary Funds - $14,000
Contact: Mark Humbert, Councilmember, District 8, (510) 981-7180
Action: Correction to reflect that the item is from Councilmember Humbert (Author). Mayor Ishii added as a co-sponsor. Adopted Resolution No. 72,463–N.S. revised to include contributions from the following Councilmembers up to the amounts listed: Councilmember Blackaby - $100; Councilmember Tregub - $100; Councilmember O'Keefe - $100; Councilmember Kesarwani - $100; Councilmember Bartlett - $200.

32. Reaffirmation of the Sister City Relationship Between the City of Berkeley and the City of Palma Soriano, Cuba
From: Councilmember Humbert (Author), Councilmember Blackaby (Co-Sponsor), Councilmember Lunaparra (Co-Sponsor), Mayor Ishii (Co-Sponsor)
Recommendation: Adopt a Resolution reaffirming the long-standing Sister City relationship between the City of Berkeley and the City of Palma Soriano, Cuba, and reauthorizing the Berkeley–Palma Soriano Sister City Committee to resume work on clean water, environmental, cultural, and educational projects in partnership with the Palma Soriano community, at no direct or indirect cost to the City of Berkeley.
Financial Implications: None
Contact: Mark Humbert, Councilmember, District 8, (510) 981-7180
Action: Adopted Resolution No. 72,464–N.S.

Action Calendar – Public Hearings

33. California Municipal Finance Authority Bond Financing for Ashby Lofts Project
From: City Manager
Recommendation: Conduct the public hearing on September 29, 2026, under the requirements of Tax and Equity Fiscal Responsibility Act ("TEFRA") and the Internal Revenue Code of 1986, as amended (the "Code"), and upon conclusion:
Adopt a Resolution approving the issuance of the Bonds by the California Municipal Finance Authority ("CMFA") for the benefit of Ashby Lofts LP, a California limited partnership (the "Borrower"), to provide for the financing of Ashby Lofts (the "Project"). The adoption is intended to solely satisfy the requirements of TEFRA, the Code and the California Government Code Section 6500 (and following).
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

Public Testimony: The Mayor opened the public hearing. 2 speakers.
M/S/C (Taplin/Blackaby) to close the public hearing.
Vote: All Ayes.

Action: M/S/C (Bartlett/Tregub) to adopt Resolution No. 72,465–N.S.
Vote: All Ayes.

34. Adoption of San Pablo Avenue Specific Plan
From: City Manager
Recommendation: Conduct a public hearing, and upon conclusion:
1. Adopt a Resolution: a. Considering an Addendum to the 2023-2031 Housing Element Update Environmental Impact Report (EIR) together with the previously certified EIR and finding that none of the conditions described in CEQA Guidelines Section 15162 requiring preparation of a subsequent or supplemental EIR have occurred; b. Adopting the San Pablo Avenue Specific Plan and San Pablo Avenue Specific Plan Design Standards Document; c. Approving and adopting General Plan and University Avenue Strategic Plan map and text amendments to redesignate certain parcels and update certain land use designations to be consistent with the San Pablo Avenue Specific Plan; and d. Rescinding the West Berkeley Plan and San Pablo Avenue Public Improvements Plan; and
2. Adopt the first reading of an Ordinance to amend the Berkeley Municipal Code to create the San Pablo Commercial District (Chapter 23.202.160) and additional conforming amendments to other sections of the Municipal Code.
Financial Implications: See report
Contact: Jordan Klein, Planning and Development, (510) 981-7400

Public Testimony: The Mayor opened the public hearing. 53 speakers.
M/S/C (Taplin/Kesarwani) to close the public hearing.
Vote: All Ayes.

Action: M/S/C (Blackaby/Kesarwani) to suspend the rules and extend the Council meeting to 11:30 p.m.
Vote: All Ayes.

Action Calendar – Public Hearings

Action: M/S/Failed (Blackaby/O'Keefe) to:
1. Adopt a Resolution as revised in Supplemental Communications Packet #1 by the City Manager.
2. Adopt the first reading of an Ordinance as revised in the Supplemental Communications Packet #1 by the City Manager and further revised as follows:

- In Section 9 of the ordinance, amend Table 23.204-45: C-SP Development Standards to amend the Main Building Height Maximum to 55 ft. and 4 stories for non-residential project land use and 55 ft. and 5 stories for residential only or mixed-use project land use.
- Add a Minimum Density Standard of 100 Dwellings Units Per Acre (dua) and amend all references to 145 dua in the Supplemental packet to 100 dua.
- In Section 9 of the ordinance, amend the language in 23.204.160(D)(3)(c); related to Prohibited Uses on the Ground Floor to change "Prohibited Uses" to "Residential Uses."
- In Section 16 of the ordinance, amend 23.206.080(B)(6) to read as follows:
  6. Affordable and Family Housing Opportunity Areas. To increase affordable housing production and expand the supply of family-sized units, the MU-LI district shall include an Affordable and Family Housing Opportunity Area as shown in Figure 23.206-1. Multi-unit and mixed-use residential uses shall be allowed within the Affordable and Family Housing Opportunity Area with a UP(PH), provided that the development project either:
  a) Offers 100 percent of the residential units, excluding any manager's unit, at a rent that is affordable to households earning no more than 120 percent of the Area Median Income (AMI) with at least 50 percent earning no more than 80 percent AMI; or
  b) Provides at least 35 percent of the residential units as either two- or three-bedroom units.

3. Refer to the City Manager consideration of the application, within the context of the San Pablo Area Specific Plan, San Pablo Avenue Specific Plan Design Standards Document, and/or any associated documents, as applicable, of commercial anti-displacement provisions being considered as part of the Commercial Zoning Update and provisions of the RENAISSANCE 1 and RENAISSANCE 2 referrals previously adopted by the Berkeley City Council.
These could include, but not be limited to, the evaluation of a business license tax waiver for businesses displaced by developmental projects; establishment of marketing and promotional programs to boost activity to impacted businesses, facilitated by the Office of Economic Development and community partners; facilitation of meetings between construction project managers and impacted nearby businesses to identify potential accommodations; creation of development standards that include the warm-shelling of new commercial spaces; and identification of additional mitigation measures or policy changes/waivers to support business continuity and relocation.
Vote: Ayes – O'Keefe, Blackaby; Noes – Kesarwani, Taplin, Bartlett, Tregub, Lunaparra, Humbert, Ishii; Abstain – None; Absent – None.

Action Calendar – Public Hearings

Action: M/S/Carried (Kesarwani/Taplin) to:
1. Adopt Resolution No. 72,466–N.S. as revised in Supplemental Communications Packet #1 by the City Manager.
2. Adopt the first reading of Ordinance No. 8,034–N.S. as revised in the Supplemental Communications Packet #1 by the City Manager and further revised as follows:

- In Section 9 of the ordinance, amend Table 23.204-45: C-SP Development Standards to amend the Main Building Height Maximum to 75 ft. and 5 stories for non-residential project land use.
- Add a Minimum Density Standard of 100 Dwellings Units Per Acre (dua) and amend all references to 145 dua in the Supplemental packet to 100 dua.
- In Section 9 of the ordinance amend the language in 23.204.160(D)(3)(c); related to Prohibited Uses on the Ground Floor to change "Prohibited Uses" to "Residential Uses."
- In Section 16 of the ordinance, amend 23.206.080(B)(6) to read as follows:
  6. Affordable and Family Housing Opportunity Areas. To increase affordable housing production and expand the supply of family-sized units, the MU-LI district shall include an Affordable and Family Housing Opportunity Area as shown in Figure 23.206-1. Multi-unit and mixed-use residential uses shall be allowed within the Affordable and Family Housing Opportunity Area with a UP(PH), provided that the development project either:
  a) Offers 100 percent of the residential units, excluding any manager's unit, at a rent that is affordable to households earning no more than 120 percent of the Area Median Income (AMI) with at least 50 percent earning no more than 80 percent AMI; or
  b) Provides at least 35 percent of the residential units as either two- or three-bedroom units.

Second reading scheduled for October 13, 2026.
3. Refer to the City Manager consideration of the application, within the context of the San Pablo Area Specific Plan, San Pablo Avenue Specific Plan Design Standards Document, and/or any associated documents, as applicable, of commercial anti-displacement provisions being considered as part of the Commercial Zoning Update and provisions of the RENAISSANCE 1 and RENAISSANCE 2 referrals previously adopted by the Berkeley City Council.
These could include, but not be limited to, the evaluation of a business license tax waiver for businesses displaced by developmental projects; establishment of marketing and promotional programs to boost activity to impacted businesses, facilitated by the Office of Economic Development and community partners; facilitation of meetings between construction project managers and impacted nearby businesses to identify potential accommodations; creation of development standards that include the warm-shelling of new commercial spaces; and identification of additional mitigation measures or policy changes/waivers to support business continuity and relocation.
Vote: All Ayes.

Action Calendar – New Business

35. Affordable Housing Preference Policy: Pilot Assessment and Policy Update
From: City Manager
Recommendation: Adopt a Resolution rescinding Resolution No. 70,960-N.S. to revise and update the Affordable Housing Preference Policy for new residential housing units created via the Housing Trust Fund (HTF) and Below Market-Rate (BMR) programs.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: M/S/C (Taplin/Barlett) to continue the item to the October 13, 2026 City Council meeting.
Vote: All Ayes.

36. Surveillance Technology Ordinance Submission for Mutual Aid Air Support, Pursuant to Council Action of July 14, 2026
From: City Manager
Recommendation: Adopt a Resolution to accept the Surveillance Acquisition Report and approve the Surveillance Use Policy (BPD Policy 1308) for Mutual Aid Air Support, pursuant to Berkeley Municipal Code (B.M.C.) Chapter 2.99.
Financial Implications: See report
Contact: Jennifer Louis, Police, (510) 981-5900
Action: Moved to Consent Calendar. Adopted Resolution No. 72,467–N.S. and directed the City Manager to insert the Surveillance Technology Ordinance language regarding audits into the Surveillance Use Policy (BPD Policy 1308) for Mutual Aid Air Support.

ADENA ISHII, MAYOR

Councilmembers:

DISTRICT 1 – RASHI KESARWANI
DISTRICT 2 – TERRY TAPLIN
DISTRICT 3 – BEN BARTLETT
DISTRICT 4 – IGOR TREGUB
DISTRICT 5 – SHOSHANA O'KEEFE
DISTRICT 6 – BRENT BLACKABY
DISTRICT 7 – CECILIA LUNAPARRA
DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 144 4518**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

    Vote: Ayes – Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Kesarwani, Bartlett.

OPEN SESSION:

Public Reports of actions taken pursuant to Government Code section 54957.1.

Item 1: The City Council met in closed session on October 5, 2026, pursuant to Government Code section 54956.9(d), and approved settlement of a workers' compensation matter (Claim Nos. BER2100138 and BER2200086; WCAB Case Nos. ADJ16325968 and ADJ16325945) to be finalized through Stipulations with Request for Award followed by a Compromise and Release.

Item 4: The City Council met in closed session on October 5, 2026, pursuant to Government Code Section 54956.9(d) and voted to authorize the initiation of litigation. Consistent with Government Code section 54957.1(a)(2), the particulars shall be disclosed to any person upon inquiry, unless to do so would jeopardize the City's ability to effectuate service of process on one or more unserved parties, or jeopardize the City's ability to conclude existing settlement negotiations to its advantage.

Item 6: The City Council met in closed session on October 5, 2026, pursuant to Govt. Code § 54956.9(d)(1) and voted to take further action in King County et al. v. Turner et al., 2:25-cv-00814-BJR (W.D. Wash.).

Adjournment

Action: M/S/C (Taplin/Humbert) to adjourn the meeting.
Vote: Ayes – Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Kesarwani, Bartlett.

Adjourned at 4:30 p.m.

I hereby certify that the forgoing is a true and correct record of the City Council closed session meeting held on October 5, 2026.

_____
Mark Numainville, City Clerk

NOTICE CONCERNING YOUR LEGAL RIGHTS*: If you object to a decision by the City Council to approve or deny an appeal, the following requirements and restrictions apply: 1) Pursuant to Code of Civil Procedure Section 1094.6 and Government Code Section 65009(c)(1)(E), no lawsuit challenging a City decision to deny or approve a Zoning Adjustments Board decision may be filed and served on the City more than 90 days after the date the Notice of Decision of the action of the City Council is mailed. Any lawsuit not filed within that 90-day period will be barred. 2) In any lawsuit that may be filed against a City Council decision to approve or deny a Zoning Adjustments Board decision, the issues and evidence will be limited to those raised by you or someone else, orally or in writing, at a public hearing or prior to the close of the last public hearing on the project.*

Any writings or documents provided to a majority of the City Council regarding any item on this agenda will be made available for public inspection at the public counter at the City Clerk Department located on the first floor of City Hall located at 2180 Milvia Street, and through the City's online records portal: https://records.cityofberkeley.info/.

COMMUNICATION ACCESS INFORMATION:
This meeting is being held in a wheelchair accessible location.
To request a disability-related accommodation(s) to participate in the meeting, including auxiliary aids or services, please contact the Disability Services specialist at ada@berkeleyca.gov, (510) 981-6418 (V), or (510) 981-6347 (TDD) at least three business days before the meeting date.

Attendees at public meetings are reminded that other attendees may be sensitive to various scents, whether natural or manufactured, in products and materials. Please help the City respect these needs.

If you have obtained interpretation services for your use during a City Council meeting and would like to request assistance, please contact the City Clerk Department at (510) 981-6900, clerk@berkeleyca.gov, or in-person during the meeting.

Questions regarding public participation may be addressed to the City Clerk Department (510) 981-6900 or by email at clerk@berkeleyca.gov.

MINUTES

BERKELEY CITY COUNCIL MEETING

Tuesday, October 13, 2026
6:00 PM

SCHOOL DISTRICT BOARD ROOM - 1231 ADDISON STREET, BERKELEY, CA 94702
TELECONFERENCE LOCATION – 2928 LINDEN AVENUE, BERKELEY, CA 94705

ADENA ISHII, MAYOR

COUNCILMEMBERS:

DISTRICT 1 – RASHI KESARWANI
DISTRICT 2 – TERRY TAPLIN
DISTRICT 3 – BEN BARTLETT
DISTRICT 4 – IGOR TREGUB
DISTRICT 5 – SHOSHANA O'KEEFE
DISTRICT 6 – BRENT BLACKABY
DISTRICT 7 – CECILIA LUNAPARRA
DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 648 5514**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

Live captioned broadcasts of Council meetings are available on B-TV (Channel 33) and via internet video stream. All Council meetings are recorded.

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

Preliminary Matters

Roll Call: 6:06 p.m.

Present: Kesarwani, Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii

Absent: Bartlett

Councilmember Bartlett present at 6:13 p.m.

Land Acknowledgement Statement: *The City of Berkeley recognizes that the community we live in was built on the territory of xučyun (Huchiun (Hooch-yoon)), the ancestral and unceded land of the Chochenyo (Cho-chen-yo)-speaking Ohlone (Oh-low-nee) people, the ancestors and descendants of the sovereign Verona Band of Alameda County. This land was and continues to be of great importance to all of the Ohlone Tribes and descendants of the Verona Band. As we begin our meeting tonight, we acknowledge and honor the original inhabitants of Berkeley, the documented 5,000-year history of a vibrant community at the West Berkeley Shellmound, and the Ohlone people who continue to reside in the East Bay. We recognize that Berkeley's residents have and continue to benefit from the use and occupation of this unceded stolen land since the City of Berkeley's incorporation in 1878. As stewards of the laws regulating the City of Berkeley, it is not only vital that we recognize the history of this land, but also recognize that the Ohlone people are present members of Berkeley and other East Bay communities today. The City of Berkeley will continue to build relationships with the Lisjan Tribe and to create meaningful actions that uphold the intention of this land acknowledgement.*

Ceremonial Matters:

1. Recognition of Outgoing Director of Police Accountability Kathy Lee and Welcoming Remarks from Incoming Director Mary Opler
2. Presentation from BART Board Director Barnali Ghosh
3. Recognition of United Against Hate Week 2026
4. Recognition of Pregnancy and Infant Loss Awareness Month 2026

City Manager Comments: None

City Auditor Comments:

The City Auditor noted the significant progress on the recommendations in the Homeless Response Team Audit Update.

Public Comment on Non-Agenda Matters: 10 speakers.

Public Comment by Employee Unions: 0 speakers.

Consent Calendar

Public Comment on Consent Calendar and Information Items Only: 20 speakers.

Action: M/S/C (Taplin/Kesarwani) to adopt the Consent Calendar in one motion except as indicated.
Vote: All Ayes.

1. Amendment to BMC Chapter 2.99 to Establish Surveillance Technology Vendor Accountability Requirements and to Revise the Annual Surveillance Technology Reporting Schedule
From: City Manager
Recommendation: Adopt the second reading of Ordinance No. 8,033-N.S. amending Berkeley Municipal Code Chapter 2.99 to require enforceable violation, sanction, and termination provisions in agreements with surveillance technology vendors; to change the annual Surveillance Technology Report to a calendar-year reporting period due to the City Council at the first regular meeting in March, beginning with a report in March 2028 covering October 1, 2026 through December 31, 2027; and to conform references to the Police Accountability Board.
First Reading Vote: All Ayes.
Financial Implications: See report
Contact: Jennifer Louis, Police, (510) 981-5900
Action: Adopted second reading of Ordinance No. 8,033–N.S.

2. Adoption of San Pablo Avenue Specific Plan
From: City Manager
Recommendation: Adopt the second reading of Ordinance No. 8,034-N.S. to amend the Berkeley Municipal Code to create the San Pablo Commercial District (Chapter 23.202.160) and additional conforming amendments to other sections of the Municipal Code.
First Reading Vote: All Ayes.
Financial Implications: See report
Contact: Jordan Klein, Planning and Development, (510) 981-7400
Action: Adopted second reading of Ordinance No. 8,034–N.S.

3. Formal Bid Solicitations and Request for Proposals Scheduled for Possible Issuance After Council Approval on October 13, 2026
From: City Manager
Recommendation: Approve the request for proposals or invitation for bids (attached to staff report) that will be, or are planned to be, issued upon final approval by the requesting department or division. All contracts over the City Manager's threshold will be returned to Council for final approval.
Financial Implications: Measure BB Paratransit Fund - $2,240,000
Contact: Henry Oyekanmi, Finance, (510) 981-7300
Action: Approved recommendation.

Consent Calendar

4. Contract No. 31900009 Amendment: Building Opportunities for Self-Sufficiency for McKinley House – 2111 McKinley Avenue, Berkeley, CA 94703
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or designee to execute an amendment to Contract No. 31900009 with Building Opportunities for Self-Sufficiency (BOSS) for property management services at 2111 McKinley Avenue in Berkeley, updating the funding source designation from the Mental Health Services Act (MHSA) to the Behavioral Health Services Act (BHSA) and increasing the contract allocation by $104,474 to a total amount not to exceed $1,015,607.
Financial Implications: Behavioral Health Services Act Fund - $104,474
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: Adopted Resolution No. 72,468–N.S.

5. Cost-Neutral Berkeley Chief Fire Officers Association (BCFOA) Medical Expense Reimbursement Plan (MERP) Side Letter Agreement
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute the Side Letter Agreement between the City of Berkeley and the Berkeley Chief Fire Officers Association (BCFOA) concerning the disposition of eligible unused sick leave conversion value for employees hired before June 30, 2014, and to authorize immediate implementation of the agreement pending Council ratification.
Financial Implications: See report
Contact: Janelle Rodrigues, Human Resources, (510) 981-6800
Action: Adopted Resolution No. 72,469–N.S.

6. Contract No. 31900122-1 Amendment: Rolling Orange, Inc. Website Maintenance and Support
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute an amendment to Contract No. 31900122-1 with Rolling Orange, Inc. for additional website maintenance and support for an amount not-to-exceed $115,000 over two years, and a total contract value not-to-exceed $909,300 from March 1, 2019 to June 30, 2028. The City intends to conduct an RFP at the end of FY2027 to establish a new contract by July 1, 2028.
Financial Implications: IT Cost Allocation Fund - $115,000
Contact: Kevin Fong, Information Technology, (510) 981-6500
Action: Adopted Resolution No. 72,470–N.S.

Consent Calendar

7. Contract No. 32000008 (11012) Amendment: Granicus, Inc. for Video Streaming Services
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to amend Contract No. 32000008 with Granicus, Inc., to continue providing live video streaming, on-demand archival video, podcasting, and web page subscription services, increasing the contract amount by $72,200 for a total not-to-exceed amount of $395,146 from July 1, 2017 to June 30, 2027.
Financial Implications: IT Cost Allocation Fund - $72,000
Contact: Kevin Fong, Information Technology, (510) 981-6500
Action: Adopted Resolution No. 72,471–N.S.

8. Contract: Protiviti Government Services Inc ("Protiviti"): Using General Services Administration ("GSA") Vehicle for Professional Services Purchase Orders
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to issue purchase orders with Protiviti for professional services using GSA purchasing vehicle no. GS35F-0280X for an amount not to exceed $425,000 through June 30, 2027
Financial Implications: IT Cost Allocation Fund - $425,000
Contact: Kevin Fong, Information Technology, (510) 981-6500
Action: Adopted Resolution No. 72,472–N.S.

9. Contract No. 32600093 Amendment: Paymun Building and Development, Inc. for Berkeley Marina K-Dock Restroom Renovation Project
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute an amendment to Contract No. 32600093 with Paymun Building and Development, Inc. for the Berkeley Marina K-Dock Restroom Renovation Project, increasing the amount by $11,000 for an amended total amount not to exceed $451,000.
Financial Implications: Marina Fund - $11,000
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700
Action: Adopted Resolution No. 72,473–N.S.

Council Consent Items

10. BORP Adaptive Sports and Recreation's 50th Anniversary Celebration: Relinquishment of Council Office Budget Funds from General Funds and Grant of Such Funds
From: Councilmember Taplin (Author), Mayor Ishii (Co-Sponsor), Councilmember Bartlett (Co-Sponsor), Councilmember Tregub (Co-Sponsor)
Recommendation: Adopt a resolution approving the expenditure of an amount not to exceed $1,000 per councilmember, including $1,000 from Councilmember Terry Taplin, $100 from Mayor Adena Ishii, and $150 from Councilmember Igor Tregub, to support BORP Adaptive Sports and Recreation's 50th Anniversary Celebration.
Financial Implications: See report
Contact: Terry Taplin, Councilmember, District 2, (510) 981-7120
Action: Adopted Resolution No. 72,474–N.S. revised to include contributions from the following Councilmembers up to the amounts listed: Councilmember Blackaby - $100; Councilmember Bartlett - $250; Councilmember Kesarwani - $100; Councilmember Humbert - $150; Councilmember O'Keefe - $100; Councilmember Lunaparra - $150.

11. Creations Berkeley - Creations Dance Group Road to Hollywood Nov 27th through Nov 30th 2026 / Hip Hop Hollywood Dance Tour - Relinquishment of Council Office Budget Funds to General Fund and Grant of Such Funds
From: Councilmember Bartlett (Author)
Recommendation: Adopt a Resolution approving the expenditure of an amount not to exceed $250 per Councilmember, including $250 from the discretionary Council Office Budget of Councilmember Ben Bartlett, to Creations Berkeley Media & Performing Arts, Inc., to support Creations Dance Group participation in the 2026 Hip Hop Hollywood Dance Tour at Universal Studios Hollywood from November 27-30, 2026. The funds will be allocated to the City's General Fund from the Discretionary Council Office Budget of Councilmember Ben Bartlett and the Discretionary Council Office Budgets of any other Councilmembers who would like to contribute.
Financial Implications: See report
Contact: Ben Bartlett, Councilmember, District 3, (510) 981-7130
Action: Adopted Resolution No. 72,475–N.S. revised to include contributions from the following Councilmembers up to the amounts listed: Councilmember Blackaby - $100; Councilmember Tregub - $150; Councilmember Kesarwani - $100; Councilmember Humbert - $100; Councilmember O'Keefe - $100; Councilmember Lunaparra - $150; Mayor Ishii - $100.

Council Consent Items

12. Resolution in Support of Proposition 4, the California Fair Elections Act of 2026, on the November 3, 2026, General Election Ballot
From: Councilmember Tregub (Author), Mayor Ishii (Co-Sponsor), Councilmember Humbert (Co-Sponsor), Councilmember Lunaparra (Co-Sponsor)
Recommendation: Adopt a resolution in support of Proposition 4, the California Fair Elections Act of 2026, on the November 3, 2026, general election ballot, which would repeal the existing prohibition on public funding of candidate election campaigns and allow state and local governments to establish public campaign financing systems subject to specified requirements.
Financial Implications: Staff time
Contact: Igor Tregub, Councilmember, District 4, (510) 981-7140
Action: Adopted Resolution No. 72,476–N.S.

Action Calendar – Public Hearings

13. Revisions to the Approved Environmental Health Fee Schedule
From: City Manager
Recommendation: Conduct a public hearing and, upon conclusion, adopt a Resolution: 1. Approving revisions to the fee schedule for the Environmental Health Division (EHD) effective October 13, 2026, and, 2. Rescinding Resolution No. 72,308 N.S. effective October 13, 2026.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100

Public Testimony: The Mayor opened the public hearing. 1 speaker.
M/S/C (Blackaby/Tregub) to close the public hearing.
Vote: Ayes – Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Taplin, Bartlett.

Action: M/S/C (Blackaby/Lunaparra) to adopt Resolution No. 72,477–N.S. approving revisions to the fee schedule for the Environmental Health Division (EHD) effective October 13, 2026, and rescinding Resolution No. 72,308 N.S.
Vote: Ayes – Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Taplin, Bartlett.

Action Calendar – Public Hearings

14. Amendments to Berkeley Municipal Code (BMC) Section 23.304.100 (Site Features in Residential Districts) to require undergrounding of electrical transformers on private land
From: City Manager
Recommendation: Conduct a public hearing and upon conclusion adopt the first reading of an Ordinance amending Berkeley Municipal Code (BMC) Section 23.304.100 (Site Features in Residential Districts) to prohibit the above-ground installation of electrical transformers serving new residential, commercial, and mixed-use projects grade on private property, consistent with the Planning Commission's recommendation.
Financial Implications: See report
Contact: Jordan Klein, Planning and Development, (510) 981-7400

Public Testimony: The Mayor opened the public hearing. 7 speakers.
M/S/C (Tregub/Lunaparra) to close the public hearing.
Vote: Ayes – Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Taplin, Bartlett.

Action: M/S/C (Tregub/O'Keefe) to adopt the first reading of Ordinance No. 8,035–N.S. amending Berkeley Municipal Code (BMC) Section 23.304.100. Second reading scheduled for October 27, 2026.
Vote: Ayes – Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Taplin, Bartlett.

Action Calendar – Old Business

15. Affordable Housing Preference Policy: Pilot Assessment and Policy Update
(Continued from September 29, 2026)
From: City Manager
Recommendation: Adopt a Resolution rescinding Resolution No. 70,960-N.S. to revise and update the Affordable Housing Preference Policy for new residential housing units created via the Housing Trust Fund (HTF) and Below Market-Rate (BMR) programs.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: 10 speakers. M/S/C (Lunaparra/Bartlett) to adopt Resolution No. 72,478–N.S. to revise and update the Affordable Housing Preference Policy.
Vote: All Ayes.

Action Calendar – New Business

16. Establish 2027 City Council Meeting Schedule
From: City Manager
Recommendation: Review the proposed modifications to the meeting schedule, including options for a shift in the timing of the summer recess, and adopt a Resolution establishing the City Council regular meeting schedule for calendar year 2027, with starting times of 6:00 p.m.
Financial Implications: None
Contact: Mark Numainville, City Clerk, (510) 981-6900
Action: 2 speakers. M/S/C (Humbert/O'Keefe) to adopt Resolution No. 72,479–N.S. revised to remove the August 31, 2027 regular meeting.
Vote: Ayes – Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Taplin, Bartlett.

Information Reports

17. Homeless Response Team Audit Status Report
From: City Manager
Contact: Peter Radu, City Manager's Office, (510) 981-7000
Action: Received and filed.

DISTRICT 4 – IGOR TREGUB
DISTRICT 5 – SHOSHANA O'KEEFE
DISTRICT 6 – BRENT BLACKABY
DISTRICT 7 – CECILIA LUNAPARRA
DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 585 9561**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

    Vote: Ayes – Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Kesarwani, Taplin, Bartlett.

2. **CONFERENCE WITH LEGAL COUNSEL—ANTICIPATED LITIGATION – Potential litigation pursuant to paragraph (2) of subdivision (d) of Section 54956.9.**

    a. Number of potential cases: one.

    Action: No reportable action taken.

OPEN SESSION:

Public Reports of actions taken pursuant to Government Code section 54957.1.

City Council met in closed session Pursuant to Government Code Section 54956.9(d)(2) and provided direction to outside counsel and approved a stipulated settlement of a transportational van ordered due by the WCAB on 12/26/26 in the amount of $163,901.82, relating to a workers' compensation matter WCAB Case Number: # ADJ12548950.

Adjournment

Action: M/S/C (Tregub/O'Keefe) to adjourn the meeting.
Vote: Ayes – Tregub, O'Keefe, Blackaby, Lunaparra, Humbert; Noes – None; Abstain – None; Absent – Kesarwani, Taplin, Bartlett, Ishii.

Adjourned at 3:47 p.m.

I hereby certify that the foregoing is a true and correct record of the closed session meeting held on October 19, 2026.

_____
Mark Numainville, City Clerk

MINUTES

BERKELEY CITY COUNCIL MEETING

Tuesday, October 27, 2026
6:00 PM

SCHOOL DISTRICT BOARD ROOM - 1231 ADDISON STREET, BERKELEY, CA 94702

ADENA ISHII, MAYOR

COUNCILMEMBERS:

DISTRICT 1 – RASHI KESARWANI
DISTRICT 2 – TERRY TAPLIN
DISTRICT 3 – BEN BARTLETT
DISTRICT 4 – IGOR TREGUB
DISTRICT 5 – SHOSHANA O'KEEFE
DISTRICT 6 – BRENT BLACKABY
DISTRICT 7 – CECILIA LUNAPARRA
DISTRICT 8 – MARK HUMBERT

*This meeting will be conducted in a hybrid model with both in-person and virtual attendance. Attend this meeting remotely using Zoom. To request to speak, use the "raise hand" function in Zoom. To join by phone: Dial **1-669-254-5252 or 1-833-568-8864 (Toll Free)** and enter **Meeting ID: 165 636 2224**. To provide public comment, Press *9 and wait to be recognized by the Chair. To submit a written communication for the public record, email council@berkeleyca.gov.*

Live captioned broadcasts of Council meetings are available on B-TV (Channel 33) and via internet video stream. All Council meetings are recorded.

This meeting will be conducted in accordance with the Brown Act, Government Code Section 54953. Any member of the public may attend this meeting, however, if you are feeling sick, please do not attend the meeting in person. The City Council may take action related to any subject listed on the Agenda.

Pursuant to the City Council Rules of Procedure and State Law, the presiding officer may remove, or cause the removal of, an individual for disrupting the meeting. Prior to removing an individual, the presiding officer shall warn the individual that their behavior is disrupting the meeting and that their failure to cease their behavior may result in their removal. The presiding officer may then remove the individual if they do not promptly cease their disruptive behavior. "Disrupting" means engaging in behavior during a meeting of a legislative body that actually disrupts, disturbs, impedes, or renders infeasible the orderly conduct of the meeting and includes, but is not limited to, a failure to comply with reasonable and lawful regulations adopted by a legislative body, or engaging in behavior that constitutes use of force or a true threat of force.

***Government Code Section 84308 (Levine Act)** - Parties to a proceeding involving a license, permit, or other entitlement for use are required to disclose if they made contributions over $500 within the prior 12 months to any City employee or officer. Parties and participants with a financial interest are prohibited from making more than $500 in contributions to a decisionmaker for the 12 months after the final decision is rendered on the proceeding. The above contribution disclosures and restrictions do not apply when the proceeding is competitively bid, or involves a personnel or labor contract. For more information, see Government Code Section 84308.*

Preliminary Matters

Roll Call: 6:01 p.m.

Present: Taplin, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii

Absent: Kesarwani, Bartlett

Councilmember Bartlett present at 6:04 p.m.

Councilmember Kesarwani present at 6:04 p.m.

Councilmember Kesarwani participated in the meeting remotely under the just cause exception in the Brown Act due to contagious illness.

Land Acknowledgement Statement: *The City of Berkeley recognizes that the community we live in was built on the territory of xučyun (Huchiun (Hooch-yoon)), the ancestral and unceded land of the Chochenyo (Cho-chen-yo)-speaking Ohlone (Oh-low-nee) people, the ancestors and descendants of the sovereign Verona Band of Alameda County. This land was and continues to be of great importance to all of the Ohlone Tribes and descendants of the Verona Band. As we begin our meeting tonight, we acknowledge and honor the original inhabitants of Berkeley, the documented 5,000-year history of a vibrant community at the West Berkeley Shellmound, and the Ohlone people who continue to reside in the East Bay. We recognize that Berkeley's residents have and continue to benefit from the use and occupation of this unceded stolen land since the City of Berkeley's incorporation in 1878. As stewards of the laws regulating the City of Berkeley, it is not only vital that we recognize the history of this land, but also recognize that the Ohlone people are present members of Berkeley and other East Bay communities today. The City of Berkeley will continue to build relationships with the Lisjan Tribe and to create meaningful actions that uphold the intention of this land acknowledgement.*

Ceremonial Matters:

1. Presentation by AVA Community Energy
2. Adjourned in Memory of Nikki Williams, Executive Director Emeritus of Berkeley Youth Alternatives

City Manager Comments:

The City Manager noted that Item 22b regarding special events needs to be removed from the agenda for additional work with stakeholders.

City Auditor Comments:

The Auditor noted support for Item 25 regarding procurement processes and noted the status of the Leases Audit in Item 31.

Public Comment on Non-Agenda Matters: 10 speakers.

Action: M/S/C (Lunaparra/Tregub) to add an urgent item to the agenda titled *Urgency Item: Resolution Opposing the Proposed Rule, "Decennial Census of the Population of Americans; Proposed Residence Criteria and Proposed Regulations for Demographic Questions"* pursuant to Government Code Section 54954(b)(2).
Vote: All Ayes.

Consent Calendar

Public Comment on Consent Calendar and Information Items Only: 18 speakers.

Action: M/S/C (Kesarwani/Blackaby) to adopt the Consent Calendar in one motion except as indicated.
Vote: All Ayes.

Urgency Item: Resolution Opposing the Proposed Rule, "Decennial Census of the Population of Americans; Proposed Residence Criteria and Proposed Regulations for Demographic Questions"
From: Councilmember Lunaparra (Author), Mayor Ishii (Co-sponsor), Councilmember Brent Blackaby (Co-Sponsor)
Recommendation: Pass resolution opposing the proposed rule, "Decennial Census of the Population of Americans; Proposed Residence Criteria and Proposed Regulations for Demographic Questions," and send a letter summarizing the City's position to the United States Department of Commerce and Census Bureau.
Financial Implications: See report
Contact: Cecilia Lunaparra, Councilmember, District 7, (510) 981-7170
Action: Councilmember Tregub added as a co-sponsor. Adopted Resolution No. 72,480-N.S.

1. **Amendments to Berkeley Municipal Code (BMC) Section 23.304.100 (Site Features in Residential Districts) to require undergrounding of electrical transformers on private land**
   From: City Manager
   Recommendation: Adopt second reading of Ordinance No. 8,035-N.S. amending Berkeley Municipal Code (BMC) Section 23.304.100 (Site Features in Residential Districts) to prohibit the above-ground installation of electrical transformers serving new residential, commercial, and mixed-use projects grade on private property, consistent with the Planning Commission's recommendation.
   First Reading Vote: Ayes – Kesarwani, Tregub, O'Keefe, Blackaby, Lunaparra, Humbert, Ishii; Noes – None; Abstain – None; Absent – Taplin, Bartlett.
   Financial Implications: See report
   Contact: Jordan Klein, Planning and Development, (510) 981-7400
   Action: Adopted second reading of Ordinance No. 8,035–N.S.

Consent Calendar

2. Waiver of Sanctuary City Ordinance for Westlaw Contract
From: City Attorney
Recommendation: Adopt a Resolution waiving the contract prohibition of Berkeley Municipal Code Chapter 13.105, Sanctuary City Contracting, in order to enter into a contract with Westlaw.
Financial Implications: None.
Contact: Farimah Brown, City Attorney, (510) 981-6950
Action: Adopted Resolution No. 72,481–N.S.

3. 2026 Annual Commission Attendance and Meeting Frequency Report
From: City Manager
Recommendation: In accordance with Resolution No. 72,097-N.S., review and accept the 2026 Annual Commission Attendance and Meeting Frequency Report.
Financial Implications: None
Contact: Mark Numainville, City Clerk, (510) 981-6900
Action: Approved recommendation.

4. Contract: Adrien Segal Public Artwork Commission for Santa Fe Trackbed to Park Conversion
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute a contract and any necessary amendments with Adrien Segal for an amount not to exceed $150,000 for a public art commission of two unique vertical structures that will serve as habitat boxes for both birds and insects at the Community Garden Park (between Blake and Parker Streets) and the Urban Farm and Education Park (between Derby and Ward Streets).
Financial Implications: $150,000 - Cultural Trust Fund
Contact: Carianna Arredondo, City Manager's Office, (510) 981-7000
Action: Adopted Resolution No. 72,482–N.S.

5. Contract No. 32500002 Amendment: Community Initiatives | Live Free USA for Gun Violence Intervention and Prevention Services
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to amend Contract No. 32500002 with Community Initiatives | Live Free USA for gun violence intervention and prevention services to add $257,548 in Byrne State Crisis Intervention Program (SCIP) grant funding pursuant to a budget modification approved by the California Board of State and Community Corrections (BSCC), bringing the total contract not-to-exceed amount to $2,874,768; extend the contract term through December 31, 2027; and update the scope of services and budget accordingly.
Financial Implications: See report
Contact: Carianna Arredondo, City Manager's Office, (510) 981-7000
Action: Adopted Resolution No. 72,483–N.S.

Consent Calendar

6. Formal Bid Solicitations and Request for Proposals Scheduled for Possible Issuance After Council Approval on October 27, 2026
From: City Manager
Recommendation: Approve the request for proposals or invitation for bids that will be, or are planned to be, issued upon final approval by the requesting department or division. All contracts over the City Manager's threshold will be returned to Council for final approval.
Financial Implications: $750,000 - Various Funds
Contact: Henry Oyekanmi, Finance, (510) 981-7300
Action: Approved recommendation.

7. Contract: Insight Public Sector, Inc. dba Aurelian for Non-Emergency Call-Taking Software
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or their designee to enter into a "piggyback" contract with Insight Public Sector, Inc. dba Aurelian for non-emergency call taking software for the Emergency Communications Center and services using the cooperative purchasing organization Omnia Partners Contract No. 23-6692-03. The contract base period will begin on December 1, 2026, through April 30, 2028, and will not exceed $197,642.
Financial Implications: See report
Contact: David Sprague, Fire, (510) 981-3473
Action: Adopted Resolution No. 72,484–N.S.

8. Contract No. 104289-1 Amendment: Jackson & Coker for Locum Tenens Psychiatrists
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or designee to amend Contract No. 104289-1 to add $400,000 and for a not to exceed amount of $1,814,480. The term of the contract remains the same ending on June 30, 2027.
Financial Implications: See report.
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: Adopted Resolution No. 72,485–N.S.

9. Contracts for Recruitment Services ***Item Removed by City Manager***
From: City Manager
Contact: Janelle Rodrigues, Human Resources, (510) 981-6800

Consent Calendar

10. Donation: Memorial Bench at Berkeley Marina in Memory of Clarence and Loreina Fuller
From: City Manager
Recommendation: Adopt a Resolution accepting a cash donation in the amount of $3,400 for a memorial bench to be placed at the Berkeley Marina in memory of Clarence and Loreina Fuller.
Financial Implications: $3,400 - Donation
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700
Action: Adopted Resolution No. 72,486–N.S.

11. Donation: Memorial Bench at Berkeley Waterfront Park at the Berkeley Marina in Memory of Mary & Bob Rubenstein
From: City Manager
Recommendation: Adopt a Resolution accepting a cash donation in the amount of $3,400 for a memorial bench to be placed at Berkeley Waterfront Park at the Berkeley Marina in memory of Mary & Bob Rubenstein.
Financial Implications: $3,400 (donation)
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700
Action: Adopted Resolution No. 72,487–N.S.

12. Grant Application: The 2026 Surrendered and Abandoned Vessel Exchange (SAVE) Grant Program of the California Division of Boating & Waterways
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or his designee to 1) Submit a grant application to the California Division of Boating and Waterways (DBW) 2025 Surrendered and Abandoned Vessel Exchange (SAVE) grant program for the removal and disposal of anticipated abandoned vessels located at the Berkeley Marina; 2) Accept the grant; 3) Execute any amendments; and 4) Authorize a local match contribution of $5,000.
Financial Implications: $95,000 (revenue)
Contact: Scott Ferris, Parks, Recreation and Waterfront, (510) 981-6700
Action: Adopted Resolution No. 72,488–N.S.

13. Revenue Grant: California Office of Traffic Safety (OTS) for the 2026-2027 "Selective Traffic Enforcement Program (STEP)" Grant
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager or designee to accept the "Selective Traffic Enforcement Program (STEP)" grant and execute any resultant revenue agreements and amendments with the California Office of Traffic Safety. This OTS grant is $200,000 for the period of October 1, 2026, through September 30, 2027, which corresponds to Federal Fiscal Year 2027.
Financial Implications: See report
Contact: Jennifer Louis, Police, (510) 981-5900
Action: Adopted Resolution No. 72,489–N.S.

Consent Calendar

14. Authorizing the City Manager to Submit a Local Highway Safety Improvement Program (HSIP) Cycle-13 Grant Application and to Execute Any Resultant Grant Agreement and Amendments
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to submit an application by November 2, 2026 to the California Department of Transportation (Caltrans) for a Local Highway Safety Improvement Program (HSIP) Cycle-13 grant for safety improvements to thirty (30) signalized intersections along Shattuck Avenue, University Avenue, Bancroft Way, and Oxford Street; accept the funds; and execute any resultant agreements and amendments.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Adopted Resolution No. 72,490–N.S.

15. Authorize the City Manager to Negotiate and Execute a Project Specific Maintenance Agreement Between the California Department of Transportation and City of Berkeley for the San Pablo Avenue Safety Enhancements Project
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to negotiate and execute a Project Specific Maintenance Agreement (PSMA) and any extensions and amendments with the California Department of Transportation (Caltrans) for maintenance of City improvements installed in the state highway during Alameda County Transportation Commission's (ACTC) San Pablo Avenue Safety Enhancements Project.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Adopted Resolution No. 72,491–N.S.

16. Contract No. 32300096 Amendment: SCS Engineers for Landfill Post-Closure Maintenance and Monitoring Services
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute an amendment to Contract No. 32300096 with SCS Engineers for maintenance, monitoring, and compliance services related to the closed landfill, increasing the contract amount by $1,600,000 for a total not to exceed amount of $5,678,022.
Financial Implications: Zero Waste Fund - $1,600,000
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Adopted Resolution No. 72,492–N.S.

Consent Calendar

17. Contract No. 32300167 Amendment: POSM Software LLC for Pipeline Observation System Management Software Maintenance and Technical Support
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute a contract amendment with POSM Software LLC for Pipeline Observation System Management software maintenance and technical support, extend the contract through October 31, 2028, increase the contract amount by $40,000 for a total not to exceed $88,650, and waiving competitive solicitation requirements on a sole-source basis.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Adopted Resolution No. 72,493–N.S.

18. Ordinance Vacating and Authorizing Transfer of Property Adjacent to the North Berkeley BART TOD Site
From: City Manager
Recommendation:
1. Adopt first reading of an Ordinance (a) declaring four small pieces of land described in Exhibit A and shown in Exhibit B to the report, adjacent to the North Berkeley BART Transit Oriented Development (TOD), to be exempt surplus land; (b) summarily vacating two of the areas that are presently public right of way; and (c) approving the transfer of all four areas to the San Francisco Bay Area Rapid Transit District (BART);
2. Upon conclusion of the second reading of the Ordinance, authorize the City Manager to execute quitclaim deeds conveying the four areas described in Exhibit A and shown in Exhibit B to the report.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300, Jordan Klein, Planning and Development, (510) 981-7400
Action: 1. Adopted first reading of Ordinance No. 8,036–N.S. Second reading scheduled for November 17, 2026. 2. Approved recommendation.

19. Purchase Order: Municipal Maintenance Equipment, Inc. for the Purchase and Installation of a CCTV Sewer Inspection System in One City-Owned Electric Van
From: City Manager
Recommendation: Adopt a Resolution authorizing the City Manager to execute a purchase order with Municipal Maintenance Equipment, Inc. for the purchase and installation of a closed-circuit television (CCTV) sewer inspection system in one City-owned electric van in an amount not to exceed $515,636.69.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Adopted Resolution No. 72,494–N.S.

Consent Calendar

20a. Enforcement of Public Right-of-Way Accessibility Guidelines (PROWAG)
(Reviewed by the Facilities, Infrastructure, Transportation, Environment & Sustainability Committee)
From: Commission on Disability
Recommendation: The Berkeley City Council shall refer to the City Attorney the requirement to include, in all City of Berkeley contracts that impact the public right-of-way, a clause that obligates City contractors to comply with the Public Right-of-Way Accessibility Guidelines (PROWAG).
Policy Committee Recommendation: Send the item to Council with a Qualified Positive Recommendation to refer the development of the PROWAG guidelines to the City Manager with the input of the Commission on Disability.
Financial Implications: See report
Contact: Thomas Gregory, Commission Secretary, (510) 981-6300
Action: See action for Item 20b.

20b. Companion Report: Enforcement of Public Right-of-Way Accessibility Guidelines (PROWAG) *(Reviewed by the Facilities, Infrastructure, Transportation, Environment & Sustainability Committee) (Item contains revised material.)*
From: City Manager
Recommendation: Receive this report on Public Works' progress responding to the Commission on Disability's PROWAG referral and concur with the FITES Committee's recommendation to refer development of PROWAG compliance provisions for work in the public right-of-way (construction-zone access guidelines and City contract language, with City Attorney review) to the City Manager, with input from the Commission on Disability (CoD).
Policy Committee Recommendation: Send the item to Council with a Qualified Positive Recommendation to refer the development of the PROWAG guidelines to the City Manager with the input of the Commission on Disability.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Approved recommendation in Item 20b as revised and submitted by the City Manager in the October 27 agenda packet.

21. Re-Name the park at the northern end of the Berkeley Waterfront as Si Se Puede Park
From: Parks, Recreation and Waterfront Commission
Recommendation: Adopt a Resolution re-naming the park at the northern end of the Berkeley Waterfront as Si Se Puede Park.
Financial Implications: See report
Contact: Roger Miller, Commission Secretary, (510) 981-6700
Action: Adopted Resolution No. 72,495–N.S.

Consent Calendar

22a. Adopt Amendments to Ordinances Governing Special Events: Block Parties; Park Events; Street Events
From: Zero Waste Commission
Recommendation: Adopt first reading of an ordinance amending BMC 6.46 (Park Events) and BMC 13.44 (Block Parties and Street Events).
Financial Implications: See report
Contact: Julia Heath, Commission Secretary, (510) 981-6300
Action: Referred to the Agenda & Rules Committee for scheduling.

22b. Companion Report: Adopt Amendments to Ordinances Governing Special Events: Block Parties; Park Events; Street Events
From: City Manager
Recommendation: Adopt first reading of two ordinances, as referred to Council by the Zero Waste Commission's report titled, "Adopt Amendments to Ordinances Governing Special Events: block parties; park events; street events," specifically amending: Berkeley Municipal Code (BMC) Chapter 6.46 (Park Events) and Chapter 13.44 (Block Parties and Street Events).
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Item removed from the agenda by the City Manager.

23a. Enforceable Mechanism for Berkeley Green Code Compliance
From: Zero Waste Commission
Recommendation: Recommend Council to direct the City Manager to refer Public Works Zero Waste staff and Planning, Safety and Building, Energy and Sustainability and Green Building staff work together to develop recommendations to implement a clear path to enforcement for non-compliance with Berkeley Green Code (BMC 19.37) Construction and Demolition (C&D) waste diversion requirements, including the possibility of fines and citations and other mechanisms to increase compliance.
Financial Implications: See report
Contact: Julia Heath, Commission Secretary, (510) 981-6300
Action: See action for Item 23b.

23b. Companion Report: Enforceable Mechanism for Berkeley Green Code Compliance
From: City Manager
Recommendation: Direct the City Manager to assign the Public Works Department, in conjunction with the Planning and Development Department, to: 1. Review and consider research conducted by the Zero Waste Commission and UC Berkeley student researchers on enforcement mechanisms in other jurisdictions; and, 2. Develop a recommendation for City Council to adopt an appropriate enforcement mechanism(s) to strengthen compliance with California Green Building Standards Code by adding to Berkeley Green Code (BMC 19.37).
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Approved recommendation in Item 23b.

Consent Calendar

24a. Research on Proper Space Allocation for Standardizing Compliance with Source Separated Refuse Collection Procedures
From: Zero Waste Commission
Recommendation: Recommend that Council refer the matter to the City Manager with direction to: 1. Instruct the Zero Waste Division, in collaboration with the Planning Department and Fire Department, to study, research, and recommend policies that standardize requirements for: a. Tenant-facing materials collection rooms for refuse, dual-stream recycling, and composting; b. Central collection rooms or enclosures; c. Curbside collection staging areas for all new construction. 2. Develop minimum per-unit service requirements, design parameters, and enforcement mechanisms; pursuant to Chapter 12.32.030 and 12.35 of the Berkeley Municipal Code.
Financial Implications: See report
Contact: Julia Heath, Commission Secretary, (510) 981-6300
Action: See action for Item 24b.

24b. Companion Report: Proper Space Allocation for Standardizing Compliance with Source Separated Refuse Collection Procedures
From: City Manager
Recommendation: Adopt first reading of an Ordinance amending Berkeley Municipal Code Chapter 12.32 - Storage, Collection and Disposal of Waste.
Financial Implications: See report
Contact: Jamie Parks, Public Works, (510) 981-6300
Action: Adopted first reading of Ordinance No. 8,037–N.S. Second reading scheduled for November 17, 2026.

Council Consent Items

25. Amendment to Berkeley Municipal Code Chapter 7.18 to Explicitly Require Competitive Procurement for Services to Promote Accountability and Transparency and Refer Development of Regulations to City Manager
(Reviewed by the Budget & Finance Committee)
From: Councilmember Kesarwani (Author), Mayor Ishii (Co-Sponsor), Councilmember Taplin (Co-Sponsor), Councilmember Bartlett (Co-Sponsor)
Recommendation: Adopt an ordinance amending Berkeley Municipal Code (BMC) Chapter 7.18, Expenditure Limitations, to require procurement through competitive solicitation for all city contracts for professional services and other services greater than $100,000.
Further, for the City Attorney's Office (CAO), require development of an Outside Council Selection Protocol whereby the CAO develops an annual report to Council for its pre-qualified list of outside attorneys and law firms based on respondents to the office's ongoing Request for Qualifications process. When outside counsel is required, senior staff in the CAO would choose from pre-qualified attorneys/firms and identify the best candidate based on expertise, quality of work, and cost. This recommendation would allow for a competitive process using the pre-qualified list, thus accommodating the CAO's need to quickly engage outside counsel while preserving best procurement practices. Additionally, request the CAO report to Council on legal services contracts and amendments to City Council quarterly to increase transparency of spending on legal services contracts.
Refer to the City Manager to promulgate any further regulations that may be needed related to the requirement for competitive solicitation except for emergencies and when market research justifies the business case for a sole-source procurement, in alignment with the existing purchasing manual. Further, refer to the CAO to develop legal services regulations to implement the competitive solicitation process for outside counsel contracts and define circumstances where a sole-source procurement is justified by emergencies, market research, conflicts of interest, or other considerations.
Policy Committee Recommendation: To send the item to Council with a Qualified Positive Recommendation as written and amended during discussion, with additional direction to further consider:
-Specifying the 5-7 year contract rebidding timeframe in the ordinance as well as the purchasing manual
-Authorizing the City Attorney's Office to promulgate legal services procurement regulations and guidelines
-Establishing annual reporting to Council on legal services contracts and amendments
-B.M.C. Section 7.18.010(A) Expenditures pursuant to Charter Article XI, Sections 67 and 67.5 is amended to read as follows:
Except as otherwise provided in this Title, expenditures pursuant to Article XI, Sections 67 and 67.5 of the Charter of the City of Berkeley, for which ~~exceed~~ the initial amount exceeds ~~of~~ $105~~5~~0,000, inclusive only of professional services, other services, supplies, equipment, or materials (excluding leases and real estate agreements), shall require Council approval and shall be procured through competitive solicitation except in the case of emergencies pursuant to Article XI,

Council Consent Items

Section 67.4. The requirement specified in Article XI, Section 67 of the Charter to select the "lowest responsible bidder" only for supplies, equipment, or materials contracts remains. Professional services and other services contracts shall be based on demonstrated competence and qualifications for the types of services to be performed, at fair and reasonable prices to the City. This requirement for professional and other services contracts to be selected via competitive procurement applies to all Charter Officers. Pursuant to Article XVI Section 113, the City Attorney retains the authority to enter into contracts without Council approval after competitive procurement of professional services, other services, supplies, equipment or materials (excluding leases and real estate agreements). The City Attorney is authorized to promulgate regulations to implement this section with respect to City Attorney's Office contracts. All departments, excluding the City Attorney's Office, shall follow the City of Berkeley Purchasing Manual guidelines, Section 3, for extensions of contracts and re-bid all contracts under the timeframes specified. The City Attorney's Office shall follow regulations specific to City Attorney's Office contracts.

Financial Implications: Staff time

Contact: Rashi Kesarwani, Councilmember, District 1, (510) 981-7110

Action: 1) Adopted first reading of Ordinance No. 8,038–N.S. as recommended by the Budget & Finance Committee. Second reading scheduled for November 17, 2026.

2) Approved recommendation including amendments from the policy committee regarding a) Specifying the 5-7 year contract rebidding timeframe in the ordinance as well as the purchasing manual; b) Authorizing the City Attorney's Office to promulgate legal services procurement regulations and guidelines; and c) Establishing annual reporting to Council on legal services contracts and amendments.

26. Berkeley Flea Market End-of-the-Season Fall Festival/Halloween Celebration Event: Relinquishment of Council Office Budget Funds to General Fund and Grant of Such Funds

From: Councilmember Bartlett (Author)

Recommendation: Adopt a Resolution approving the expenditure of funds, including $600 from Councilmember Ben Bartlett, for the End-of-the-Season Fall Festival / Halloween Celebration of the South Berkeley Flea Market at Ashby BART, organized by Community Services United, a 501(c)3, with funds relinquished to the City's General Fund for this purpose from the discretionary council office budget of Councilmember Bartlett and any other Councilmembers who would like to contribute.

Financial Implications: See report

Contact: Ben Bartlett, Councilmember, District 3, (510) 981-7130

30. Ashby BART East Lot Developer Selection for Exclusive Negotiation and Reservation of Predevelopment Funding
From: City Manager
Recommendation: Adopt two Resolutions that enable the City to move forward into negotiation and predevelopment with a selected development team for the Ashby East Lot Transit Oriented Development (TOD) project, located at the intersection of Woolsey St. and Tremont St., directly east of the Ed Roberts Campus, by:
1. Authorizing the City Manager or designee to negotiate and enter into an Exclusive Negotiating Rights Agreement (ENRA) and any required amendments with Satellite Affordable Housing Associates (SAHA), Habitat for Humanity East Bay/Silicon Valley, and Deborah D. Matthews Consulting (collectively, "the SAHA Team").
2. Authorizing the City Manager or designee to negotiate and enter into an ENRA and any required amendments with the alternative developer, Related California and the Kelsey (collectively, "the Related Team"), in the event that the ENRA with the SAHA Team is terminated or if the City does not enter into a ENRA with the SAHA Team. 3. Approving the reservation of $1 million of Affordable Housing Mitigation Fees (Fund 120) to the SAHA Team or their affiliate(s) to support master planning and predevelopment activities related to the development of affordable housing at the Ashby East Lot BART site. 4. Affirming that the City's Housing Trust Fund Guidelines will apply to the use of funds to support master planning and predevelopment activities related to the development of affordable housing at the Ashby East Lot BART site. 5. Authorizing the City Manager or designee to execute all original or amended documents or agreements in accordance with the intent of this Resolution.
Financial Implications: See report
Contact: Scott Gilman, Health, Housing, and Community Services, (510) 981-5100
Action: 3 speakers. M/S/C (Bartlett/Blackaby) to adopt Resolution No. 72,500–N.S. (Approving Development Team) and Resolution No. 72,501–N.S. (Reserving Affordable Housing Mitigation Fees).
Vote: All Ayes.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Eleanor Hollander, Manager, Office of Economic Development

Subject: Authorizing the City Manager to Sign the Telegraph Business Improvement District (TBID) Petition and Ballot on Behalf of the City of Berkeley

RECOMMENDATION

Adopt a Resolution:

1. Authorizing the City Manager to approve and sign the "Preliminary Petition to Re-establish the Telegraph Property-Based Business Improvement District (BID)" on behalf of City-owned properties in the proposed Telegraph BID area; and

2. In the event the petition is successful in generating a ballot process to re-establish a Telegraph BID, authorizing the City Manager to vote YES on any ballots on behalf of City-owned properties in the proposed Telegraph BID area.

SUMMARY

The current Telegraph Property and Business Improvement District (TBID or "the District") is scheduled to expire on December 31, 2027. The TBID provides "clean, safe and beautification" services, communications, marketing, and economic development, and related management to assessed parcels within the District which constitute and convey a special benefit to assessed parcels in the Telegraph area. The Telegraph Property and Business Management Corporation (TPBMC), as the District's Owners' Association, has begun the legal process to renew and reestablish the TBID for a slightly expanded geographic area. The first step of that process requires that petitions representing more than 50% of the total amount of the proposed assessment be submitted to the City Clerk. If petitions representing more than 50% of the total assessment are received, then the City Clerk will send ballots to all of the proposed assessees within the TBID boundaries. If there is no majority protest at the conclusion of the ballot process, City Council may adopt a resolution renewing, and expanding the reestablished TBID.

The City of Berkeley owns one parcel included in the proposed renewed TBID. The new annual assessment will be approximately $95,403.95. This accounts for approximately 5.7% of the TBID's overall assessment budget.

FISCAL IMPACTS OF RECOMMENDATION

Under the provisions of Proposition 218 in the California Constitution, government agencies must pay assessments for the special benefits they receive from Property and Business Improvement District (PBID) activities, maintenance, and improvements. Payment is collected from private property owners through property tax bills typically submitted in November and February of each Fiscal Year (July 1 – June 30). Payments would be due from non-property tax-paying entities such as the City (and the University) at roughly the same time. The City's initial assessment payment in FY 2028 would be $95,403.95. The City's assessment is paid annually through the Off-Street Parking Fund (627-54-622-665-3002-000-474-639990).

The TPBMC Board would have the authority to raise the assessment as much as three percent per year to keep pace with inflation and other program costs.

In addition to assessments, the City will be asked to pay for the "general benefit" portion of the budget. As required by state law, the general benefits of an assessment district must be quantified so that the cost of the activities that are attributed to general benefit can be deducted from the amounts assessed against each specially benefitted parcel. In most California cities where there is a general benefit cost associated with a PBID, the municipality pays that portion of the budget. The engineer's report commissioned for the reestablishment of the TBID calculates that the general benefit for the district will be $24,960. The City already makes an annual grant to TBID, through the Public Commons for Everyone Initiative (PCEI), which exceeds this amount, so there will be no new fiscal impacts related to funding the general benefit in the renewed TBID.

The Public Commons for Everyone Initiative (PCEI) contract, which is funded by the Public Works Department and executed by the Office of Economic Development (OED) has historically paid the costs associated with the TBID's general benefit rate (in FY27, the cost was $30,711 in FY 28 the total cost will be $77,659 - which is composed of $24,960 "general benefit to the public" and $52,699 "general benefit to the parcels"). The annual PCEI contract is $49,139 annually and will cover a great deal of the general benefit cost (including the full 'general benefit to the public' cost) even with the renewed district rates.

Together assessments on City-owned property and general benefit payments (covered by the PCEI contract) will total $143,543 in the first year (FY28) and will continue for the following 10 years.

CURRENT SITUATION AND ITS EFFECTS

The renewal of the Telegraph BID is a Strategic Plan Priority Project, advancing our goals to:

- provide state-of-the-art, well-maintained infrastructure, amenities, and facilities.
- foster a dynamic, sustainable, and locally-based economy.

A property and business improvement district or “PBID” or “BID” is a benefit assessment district formed and renewed by property owners to provide enhanced services within the established boundaries. These services are undertaken in coordination with services provided by local government, are concentrated within a distinct geographic area, and are paid for by means of a special assessment on property within the district’s boundaries. A nonprofit corporation owners’ association representing assessed property owners is responsible for providing these services.

The Telegraph Business Improvement District or “TBID” was formed in 1998, pursuant to California’s “Property and Business Improvement District Law of 1994” and renewed in 2003, 2008 and 2017 by property owners. The TBID is set to expire at the end of calendar fiscal year or “FY” 2027, unless it is reestablished for another term (proposed for 10 years) by Telegraph property owners and the City of Berkeley.

After re-establishment the TBID will continue to deliver enhanced services throughout the Telegraph area. There are two benefit zones that make up the TBID acknowledging the different levels of benefit and services provided to property owners. The map within the attached Management District Plan (Exhibit A) illustrates the TBID boundary and benefit zones.

District Re-establishment Process
As allowed by state law, the existing TBID is working to re-establish itself for another ten-year term, and a fifth term since its initial establishment in 1998. Upon receipt of petitions signed by property owners representing greater than 50% of the District’s budget (Exhibit B), the City of Berkeley will initiate a ballot procedure to officially reestablish the Telegraph BID. The City Clerk will mail ballots to all affected property owners. The majority of ballots returned, as weighted by assessments to be paid, must be in favor of the BID in order for the City Council to consider approval and reestablishment of the Telegraph BID.

Governed by the Telegraph Property & Business Management Corporation (TPBMC) board of directors, the re-established TBID work program would continue to provide both environmental and economic enhancements for parcels in the district. As described in the newly updated and adopted *TBID Management District Plan* (Exhibit A), the proposed TBID would provide funding for enhanced maintenance, hospitality, beautification, placemaking, business support and attraction, event and marketing programs, above and beyond those services provided by the City of Berkeley.

Assessments and Financing Method
Property owners, merchants, and other Telegraph stakeholders have emphasized that an assessment formula for the District needs to be fair, balanced, and commensurate with benefits received. Each property owner will pay based on benefits received. The

variables used for the annual assessment formula are based on parcel size, building size, parcel type, and benefit zone.

The annual assessment on property throughout the renewed TBID is based on the benefit each property receives from the proposed services. Because of the difference in pedestrian and vehicle traffic between the zones, Zone 2 will receive fifty percent (50%) of services provided by the District compared to Zone 1. Thus, the assessment rate for Zone 2 is fifty percent (50%) of the Zone 1 rate. In addition, properties with residential, government and tax-exempt uses will pay an adjusted rate. Annual assessments are based upon an allocation of land use type, program costs, benefit zone, and a calculation of lot square footage plus building square footage.

Levy of assessments upon real property that benefit from improvements and activities is calculated like so:

[Assessment Rates] * [Lot + Building Square Footage]

The initial rates of assessment, by parcel type and zone, are listed in Table 1 below.

Table 1. Initial Assessment Rate

Parcel Type	Zone 1 – Parcel or Lot Size (sq. ft.) + Building Size (sq. ft.)	Zone 2 – Parcel or Lot Size (sq. ft.) + Building Size (sq. ft.)
Commercial	$0.428682	$0.214341
Multi-Family Residential	$0.342945	$0.171473
Private Property Tax-Exempt / Public	$0.154325	$0.077163

Assessment rates may be increased by up to 3% per year to account for inflation and program cost increases, subject to the review and approval of the TPBMC Board of Directors.

General *Benefit Allowance*

An allowance is made for general benefits that the district may provide to either the parcels outside the district boundary or to the public at large. Any PBID services that are found to provide general benefit cannot be paid for with assessment revenue. A certified engineer has estimated that the general benefit from services accounts for $78,000 of the estimated budget, combined with other revenue, results in a total assessment budget for year one of the renewed TBID of $2,000,000 (including property assessments, general benefit and other revenue).

Government-Owned Property

Under “The Right to Vote on Taxes Act” (also known as Proposition 218) all public agencies are required to pay the same assessments for public property that apply to private property unless they can demonstrate by clear and convincing evidence that the public property does not receive a benefit. The Management District Plan provides that the City of Berkeley and other public entities will benefit from and therefore be assessed

for all PBID services. The City owns one property within the district: the Telegraph Channing Garage at 2431 Channing Way. The FY28 assessment for that property under the revised formula will be $94,404, which represents an increase of $39,138 over the FY2027 assessment ($55,266).

Management District Plan and Budget
The Management District Plan outlines the main areas of focus for the TBID:

- Public Realm: Cleaning, Hospitality, Activation;
- Marketing & Events;
- Economic Vitality;
- Leadership & Advocacy; and
- Management and Contingency.

The total anticipated assessment budget is $2,000,000 and the split between the focus areas is outlined in *Table 2: Assessment Budget and Revenues*.

Table 2. Assessment Budget and Revenues		
EXPENDITURES	Budget	% of Budget
Public Realm: Cleaning, Hospitality, Activation	$1,235,000	62%
Marketing & Events	$302,000	15%
Economic Vitality	$180,000	9%
Leadership & Advocacy	127,000	6%
Management and Contingency	$156,000	8%
Total Expenditures	$2,000,000	100%
REVENUES		
PBID Assessments	$1,872,000	94%
General Benefit	$78,000	4%
Other Revenues *	$50,000	2%
Total Revenues	$2,000,000	100%

* Revenues from contract services, events, and other sources

The Management District Plan provides for services above and beyond those currently provided by the City of Berkeley. TBID and its renewal consultant team conducted property owner focus group and individual meetings with property and business owners and developed service priorities based on the information and opinions collected via this outreach and aligned with the TBID's Strategic Plan (Exhibit C). The information from each step of this process was integrated and culminated in the development of the Management District Plan (Exhibit A).

The following are descriptions of District programs:

1. **Public Realm**: Substantially increase direct services and champion a higher standard for the public realm. Including Clean, Safe & Crisis Response, Stewardship & Community Care, and Public Infrastructure including public space activation initiatives and streetscape beautification programs. The budget for the "Public Realm" program is $1,235,000 or 62% of the total assessment budget.

2. **Marketing & Events**: Substantially increase marketing, events, and data to support district businesses. Including Branding and Data to effectively utilize audience data to support district businesses and increase foot traffic. The budget for marketing and events is $302,000 or 15% of the total assessment budget.

3. **Economic Vitality**: Substantially increase economic growth through research, information, and active public spaces and facilities. Including Retail and Business support and responsive public relations support and focused capacity to advance economic development programs. The budget for the economic vitality program is $180,000 or 9% of the total assessment budget.

4. **Public Leadership & Advocacy**: Increase TBID's role as a valued convener, partner, champion, and co-leader. The budget for the public leadership program is $127,000 or 6% of the total assessment budget.

5. **Management & Leadership** (and contingency): Substantially increase presence and impact through board, resources, and visible leadership. The budget for the management program is $156,000 or 8% of the total assessment budget.

City Services
The Office of Economic Development, in consultation with a variety of City departments, has developed a list of baseline services (Exhibit D) that are currently provided within the TBID and will continue through the duration of the renewed District's term.

Collection
TBID assessments appear as a separate line item on the annual Alameda County property tax bills. The TPBMC will directly invoice property owners which are not included in the Alameda County property tax billing systems.

Governance
The TBID will continue to be managed by the Telegraph Property and Business Management Corporation Board of Directors. A majority of the board is composed of property owners and/or their representatives within the TBID. The determination of annual adjustments in assessment rates will be subject to the annual review and approval of the TPBMC Board of Directors.

Duration
The TBID will have a ten (10) year service period beginning January 1, 2028 through December 31, 2037 with collections spanning FYs28-37. Near the end of the term, the petition, ballot, and City Council hearing process must be repeated for the TBID to be renewed.

BACKGROUND

The TBID was initially formed in 1998 for a five-year period, renewed in 2003 for a second five-year period, and renewed in 2008 for a ten-year period and then was expanded and renewed again in 2017 for a ten year period. The TBID finances services and improvements that maintain and improve the streetscape and public areas in the Telegraph District, improves the pedestrian experience for workers, visitors and residents, and attracts new businesses and development. TBID activities are over and beyond baseline services provided by the City. The enabling legislation and service period for the TBID established in 2017 is set to expire on December 31, 2027. This effort would reestablish the TBID for another 10-year term – with collections coinciding with the start of the 2028 Fiscal year (July 1, 2027).

To prepare for the renewal of the TBID, the TBID retained the services of Uncommon Bridges to update the organization's strategic plan. With priorities gained from the TBID's Board of Directors, stakeholder focus groups and responses to a community improvement survey, the adopted *TBID Strategic Plan* (June 2026) and the proposed new TBID *Management District Plan* will offer support for the environmental and economic enhancement services outlined above. As with all Business Improvement Districts, these additional TBID funded services would augment, not replace, the City's existing level of "baseline" services.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

By maintaining and enhancing the district, the TBID creates shopping opportunities for residents and visitors alike while encouraging alternative forms of transportation. The District includes the area immediately south of the University of California, Berkeley campus and therefore provides essential commercial goods and services to the student body. TBID ambassadors and environmental enhancements all contribute to making the Telegraph district a more pleasant destination. Because the District is well served by public transportation and biking infrastructure, these services indirectly support environmental sustainability goals of encouraging alternative transportation choices.

RATIONALE FOR RECOMMENDATION

This private/public partnership will continue the significant resources for the maintenance and economic vitality of the Telegraph area that has had a positive transformational effect on the physical and economic health of Berkeley's Telegraph District and the greater southside area.

ALTERNATIVE ACTIONS CONSIDERED
None.

RESOLUTION NO. ##,###-N.S.

AUTHORIZATION TO SIGN THE TELEGRAPH BUSINESS IMPROVEMENT DISTRICT OR "TBID" PETITION AND BALLOT ON BEHALF OF THE CITY

WHEREAS, under the provisions of Proposition 218 in the California Constitution, government agencies receiving benefit must pay assessments in Property-Based Business Improvement Districts (PBIDs), just like private property owners; and

WHEREAS, the Telegraph Property and Business Management Corporation (TPBMC) undertook a Strategic Planning Process involving input from stakeholders across the District; and

WHEREAS, the District's Strategic Plan (Exhibit C) envisioned increased services to address the cleanliness, safety and economic development in the District; and

WHEREAS, the TPBMC dedicated extensive resources to determine the best method to generate funding to implement their plan and concluded that continuing the property-based business improvement district (BID) in Berkeley's Telegraph District was the best method; and

WHEREAS, the TBID Board developed and approved a District Management District Plan, Assessment Table, and a corresponding Engineer's Report (Exhibit A) and a Baseline City Services Agreement (Exhibit D) and are now moving forward with a petition process to authorize a ballot that would reestablish the TBID for a term of 10 years.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager is authorized to approve and sign the "Preliminary Petition to Re-establish the Telegraph Business Improvement District" document (Exhibit B) on behalf of City-owned property in the proposed Telegraph BID area; and

BE IT FURTHER RESOLVED that in the event the petition is successful in generating a ballot process to reestablish the Telegraph BID for a term of 10 years, the City Manager is authorized to vote YES on any ballots on behalf of City-owned property in the proposed Telegraph BID area.

Telegraph Business Improvement District
Management Plan

DRAFT: October 2026

EXECUTIVE SUMMARY

The Telegraph Property and Business Improvement District (TBID), managed by the Telegraph Property and Business Management Corporation (TPBMC), is a benefit assessment district established in 1998 to provide improvements, maintenance, and activities that provide a special benefit to assessed parcels. Building on three decades of success, Telegraph property and business owners seek to renew the district for an additional 10 years beginning in 2028.

Name

Telegraph Property and Business Improvement District, D.B.A. Telegraph Business Improvement District (TBID).

Primary Services

TBID provides the following improvements and activities to benefit its properties:

- Public Realm: Cleaning, Hospitality, Activation
- Marketing & Events
- Economic Vitality
- Leadership & Advocacy
- Management

General Boundary Description

TBID provides activities and improvements to benefit properties roughly, between Bancroft Way and Dwight Way and between College Avenue and Dana Street, while extending west to Fulton Street between Bancroft Way and Durant Avenue, as well as south along both sides of Telegraph as far as Derby Street.

Term

The term of the reauthorized TBID will be January 1, 2028, through December 31, 2037.

Budget

The total budget for its first year of operations is approximately $2,000,000, with $1,872,000 from TBID assessments, as detailed below.

EXPENDITURES	Budget	% of Budget
Public Realm: Cleaning, Hospitality, Activation	$1,235,000	62%
Marketing & Events	$302,000	15%
Economic Vitality	$180,000	9%
Leadership & Advocacy	127,000	6%
Management and Contingency	$156,000	8%
Total Expenditures	$2,000,000	100%
REVENUES		
PBID Assessments	$1,872,000	94%
General Benefit	78,000	4%
Other Revenues *	$50,000	2%
Total Revenues	$2,000,000	100%

* Revenues from contract services, events, and other sources

THE DISTRICT

Purpose

The Telegraph Property and Business Improvement District (TBID), managed by the Telegraph Property and Business Management Corporation (TPBMC), is a benefit assessment district whose goal is to provide improvements, maintenance, and activities that constitute and convey a special benefit to assessed parcels, first established in 1998 under the California Property and Business Improvement District Law of 1994 (commencing with Section 36600 of the California Streets and Highways Code). The Telegraph Business Improvement District (TBID) encompasses the historic commercial and cultural corridors anchoring the southern edge of the UC Berkeley campus along the iconic Telegraph promenade. To support this vibrant community, the district provides dedicated street cleaning, safety, hospitality, placemaking, and district marketing services.

Building on three decades of success, Telegraph property and business owners seek to renew the district for an additional 10 years beginning in 2028.

Strategic Planning

Between September 2025 and June 2026, TBID worked with Uncommon Bridges to develop a 5-year strategic plan through three phases: assessment, planning, and implementation. The first phase was a thorough assessment of current conditions, based on input from many stakeholders – including business and property owners, residents, TBID board members, UC Berkeley students, and institutional partners – through surveys, focus groups, individual interviews, walking tours, and facilitated discussions.

The assessment highlighted several issues to be addressed toward the district's long-term success:

- Iconic History & Reputation
- Reconciling Transience with Regional Destination Appeal
- Property Owner Disconnection
- Resetting the Bar for Public Safety Perceptions and the Social Crisis
- Transportation and Congestion
- Institutional Advocacy and Development Barriers

It was clear that Telegraph stakeholders and the TBID needed to focus on the following areas for the future success of the Telegraph neighborhood. To introduce and implement this bold new Strategic Plan, designed to preserve the unique soul of Berkeley while aggressively cultivating its future as a bustling, year-round destination, TBID is leaning into the following high-impact strategies.

- Boosting the Public Realm: Shifting from temporary fixes to permanent, high-quality investments that elevate the cleanliness, safety, and visual appeal of our shared spaces. We want our streets bursting with energy and community life day and night.
- Seizing Year-Round Opportunities: Building a resilient, non-stop district calendar that celebrates our eclectic culture, locks in steady foot traffic through academic breaks, and ensures that our economy thrives every single day of the year.
- Championing Economic Vitality: Deepening our commitment to the small business economy by marketing Telegraph's unique character, aggressively reducing vacancies, and attracting diverse commercial investments.
- Bold Leadership and Advocacy: Elevating our role as a trusted convener to cut through bureaucratic red tape, align private and institutional partners, and champion swift, decisive action.

With the 2027 reauthorization of the district approaching, the 2027-2032 TBID Strategic Plan articulates stakeholder consensus around organizational and district priorities. It is the foundation on which to build a consensus-driven Management Plan for a successful reauthorization of the Telegraph Property-based Business Improvement District. As required by California State Law, this Management District Plan has been created to support the renewal of TPBID.

History

Property owners and Berkeley Stakeholders initially approved the formation of the Telegraph Property and Business Improvement District (TPBID) in 1998 for a five-year term to provide needed improvements and activities to assessed property owners. TPBID was successfully renewed for another five-year term in 2003, a ten-year term in 2008, and underwent an expansion and a ten-year renewal in 2017 to set up the reauthorization in 2027.

Since its ten-year renewal in 2017, the Telegraph Property and Business Improvement District (TBID) has driven a profound historical impact by directly reinvesting 100% of its collected assessments back into the corridor. Supported by an annual operating budget of approximately $1 million funded by property owners, the City of Berkeley, and the University of California, the TBID's targeted initiatives have successfully revitalized the neighborhood's economy, safety, and infrastructure.

Economically, its marketing and events have accelerated local business growth, notably funneling over $100,000 directly into 16 neighborhood restaurants during the Fall 2024 and Spring 2025 student orientations and expanding digital reach past the 10,000 Instagram follower milestone.

From an infrastructure and care perspective, the district achieved a major milestone by opening and beautifully wrapping a new 24/7 public restroom in February 2025, alongside driving community-wide beautification. Most critically, the TBID has transformed public safety and community care through its Clean & Safe Ambassador program; by deploying 240 hours of weekly service and equipping ambassadors with specialized Mental Health First Aid, NARCAN, and de-escalation training, the district has humanely elevated crisis response, safely resolved neighborhood conflicts, and provided a more compassionate approach to supporting unhoused residents.

In 2025, a strategic planning process led by the TBID Board of Directors and other community stakeholders determined that the District could expand its services and programming to better meet the neighborhood’s needs.

2027 – 2032 TBID Strategic Plan

Vision:
Telegraph is the soul of Berkeley: a welcoming crossroads where iconic history meets discovery and bold expression.

Mission:
As the gateway to the world gateway to the world's best public university, the Telegraph BID champions the district's unique character and prosperity through advocacy, leadership, and collaborative stewardship.

Values:

- Stewardship: Focused on economic impact.
- Collaboration: Genuine partnership across the community.
- Authenticity: Emphasizing genuine community connection.
- Leadership: Elevating vision while generating value.
- Community Care: A high-priority focus on local support

Goals & Objectives
TBID’s Strategic Plan outlines five priorities for special emphasis in shaping Telegraph’s future in the years ahead.

PUBLIC REALM

Substantially increase direct services and championing of a higher standard

Goal: The Telegraph corridor is a delightful and attractive promenade embodying vitality, safety, and community caring.

Objectives:

A. Substantially reduce the visibility of *garbage* in Telegraph's public areas.
B. Meaningfully upgrade the district's standards for *cleanliness, public safety, and visual appeal*, through direct services and beautification.
C. Conceive, champion, and activate *public gathering spaces* that are attractive to the district's clientele of all ages.
D. Actively champion *transportation and parking* policies and physical infrastructure that ensure the district's easy access and safety, day and night.

E. Actively participate in community partnerships in support of services and community *care for those in need*.

MARKETING & EVENTS

Substantially increase marketing, events, and data

Goal: Telegraph takes its rightful place at the forefront of people's minds as where Berkeley's enviable international reputation began and where it lives.

Objectives:

A. Elevate *Telegraph's brand* to further reflect the soul of Berkeley and define Telegraph as central to the Berkeley experience.
B. Expand *visual markers* of the brand throughout the district, including unique infrastructure, gateway signage, street furniture, and banners.
C. Establish revenue generating *events* that are self-sustaining, expand capacity, and drive visitors to Telegraph and its businesses.
D. Develop and effectively utilize audience *data.*
E. Assess, revise, and maintain a robust and consistent calendar of *marketing campaigns, events, and activations* to draw new and existing visitors to Telegraph, elevating the district's reputation, brand, and small business economy.

ECONOMIC VITALITY

Substantially increase support for economic growth through research, information, and actively managing public spaces and facilities.

Goal: The Telegraph District is a thriving, year-round destination where a vibrant mix of retail, dining and high-quality public spaces naturally attract and serve a broader clientele.

Objectives:

A. Work toward a role in day-to-day *activation and maintenance of key public spaces*, including certain University- and City-owned parks and public areas.
B. Pursue a role in managing the *Telegraph-Channing Garage*, including parking management, retail leasing, and day-to-day operations.
C. Become active in *retail retention, recruitment, and development* through research, data, vision, branding, and curation.
D. Optimize the district's *business atmosphere and cultural relevance* to capture the full economic potential of campus visitors while expanding Telegraph's commercial appeal.

LEADERSHIP

Increase TBID's role as a valued convener, partner, and co-leader

Goal: TBID is a valued convener of businesses, neighbors, the city and university to steward Telegraph's transformation with its evolving soul intact.

Objectives:

A. TBID leverages its partnerships to build a collective narrative about the district's cultural character and future development.
B. TBID is recognized as a meaningful influencer in helping businesses, the city, and university make progress on their shared plans for the Telegraph neighborhood.
C. TBID is known as a primary go-to resource supporting and advocating for business and property owner investments that support the Telegraph vision.
D. TBID reconciles merchant priorities with the district's needs.
E. TBID leads advocacy in support of Telegraph's vision for urban design, transportation, public safety, and real estate development.

ORGANIZATIONAL DEVELOPMENT

Substantially increase TBID presence and impact, with an engaged and high-profile board, more resources, and more visible leadership of the district.

Goal: TBID substantially broadens the organization's impact as a champion, manager, and steward of the public realm for the next 10 years.

Objectives:

A. TBID doubles its collection and analysis of useful data about business, property, and community assets showcasing the

district and the organization's value.

B. The Business Improvement District is renewed with appropriate scope and resources.
C. TBID's board is visible, engaged and impactful, reflecting the organization's leadership role in the district.
D. TBID is a trusted resource with extensive relationships, making connections between public, private and nonprofit interests, and continuously engaging its always changing audience.
E. TBID's non-assessment revenues grow substantially as business, property, government, philanthropic and individual interests recognize TBID's effectiveness.

SUMMARY OF IMPROVEMENTS AND SERVICES

Current Services

Currently, TBID's operating budget of approximately $1 million is funded by district property owners, including the University of California and the City of Berkeley. This supports five core service areas.

- *Clean, Safe, & Crisis Response:* Delivers 240 hours per week of year-round field deployment dedicated to street cleanliness, graffiti mitigation, and specialized crisis de-escalation support.
- *Stewardship & Community Care:* Provides dedicated care, performs district-wide weed abatement, refreshes public fixtures, and offers direct guidance to community members navigating quality-of-life or public-safety issues.
- *Public Infrastructure:* Manages and maintains the 24/7 public restroom facility at Channing Way, installs sidewalk planters and public art projects, and installs holiday lighting and seasonal décor.
- *Events & Marketing:* Drives immediate foot traffic to local merchants through targeted campaigns, including Telegraph Boba Day, Second Sundays, student orientation promotions, and robust district-themed social media growth.
- *Public Leadership & Advocacy:* Conducts routine engagement with local officials to drive funding and infrastructure priorities, represents district interests in public policy groups, and provides strategic stakeholder feedback on neighborhood housing and mixed-use development projects.

Elevating the District

Established almost 30 years ago, TBID is preparing for its first reauthorization in a decade. TBID's next chapter must focus on strengthening the organization to meet Telegraph's changing needs. Its strategic plan provides a foundation for the organization to establish and maintain a higher standard for the public realm and to support meaningful economic growth by attracting a larger and more diverse clientele to the district's businesses and its increasingly outstanding public spaces and facilities.

To operationalize this vision and deliver high-impact results, TBID will implement the following targeted organizational upgrades:

- *Organizational Capacity:* Align operations with industry standards and add strategic program leaders
- *Community Focus:* Elevate board leadership, prioritize business engagement, and heighten district advocacy
- *Program Upgrades:* Negotiate institutional service contracts, upgrade ambassador services, strengthened research and analytics, build event infrastructure, and secure recurring non-assessment revenue

Improvements & Services for 2027 – 2038

The reauthorized TBID will provide the following improvements and services to district property owners:

- *Public Realm:*
  Substantially increase direct services and champion a higher standard for the public realm.
  - *Clean, Safe & Crisis Response:* approximately 400 hours per week of year-round field deployment dedicated to street cleanliness, graffiti mitigation, and specialized crisis de-escalation support. This represents a 75% increase in daily cleaning services and expanded afternoon and evening services.
    - *Target cleaning service levels: Manual cleaning and debris removal (daily); Mechanical sidewalk cleaning (5 days per week); Landscaping and weed abatement (weekly); Graffiti and handbill removal (daily).*
    - *Target Safety & Hospitality services: Walking patrols 3pm – 10pm daily; On-call incident response; Daily business safety check-ins; Special event support and visitor engagement.*
  - *Stewardship & Community Care:* Provides dedicated maintenance and support to foster a welcoming and attractive environment in the District. Daily and routine services include refreshing public fixtures, clearing sidewalk obstructions, addressing disruptive behavior, coordinating public safety efforts, and enhancing social service delivery.
  - *Public Infrastructure:* Implements public space activation initiatives and streetscape beautification programs. Improvements and services include maintenance of the Telegraph-Channing 24/7 public restroom facility, sidewalk planters along the commercial corridor, public art projects, and annual holiday lighting and seasonal décor.
- *Marketing & Events:* Substantially increase marketing, events, and data to support district businesses.
  - *Marketing:* Continue to expand robust district-themed social media platforms to elevate Telegraph's visibility. Provide direct marketing support for businesses with content marketing programs, digital media technical assistance, targeted campaigns, and paid partnerships. Produces and sponsors visitor outreach through digital advertising, the Telegraph Berkeley website, and local promotional platforms.
  - *Events:* Sponsor, coordinate, and produce year-round events, entertainment, and activities to drive foot traffic and

attract visitors. Planned events include public street fairs, sidewalk entertainment, holiday and promotional activities, merchant-led events, and student programming.
    - *Branding:* Elevate Telegraph's brand through media and visual markers throughout the district. Implements place-based branding strategies that build broad appeal for the district as a shopping, dining, and cultural destination.
    - *Data:* Develop and effectively utilize audience data to support district businesses and increase foot traffic.
- *Economic Vitality:* Substantially increase economic growth through research, information, and active public spaces and facilities.
    - *Retail:* Provide research, data, vision, branding, and curation to support retail retention, recruitment, and development.
    - *Business support:* proactive outreach that informs and engages businesses, and hands-on assistance to leverage resources and navigate business challenges. Responsive public relations support and focused capacity to advance economic development programs.
- *Public Leadership & Advocacy:* Increase TBID's role as a valued convener, partner, and co-leader.
    - *Convener:* Expand TBID's role as a go-to resource and convener for business and property owners, advancing a collective vision for the district's growth and prosperity.
    - *Champion:* Actively support Telegraph's vision for urban design, transportation, public safety, and real estate development through information, organizing, and advocacy.
- *Management & Leadership:* Substantially increase presence and impact through board, resources, and visible leadership.
    - *Management:* Continue to efficiently deploy TBID resources to benefit the district's properties and businesses with excellent fiscal oversight, performance measurement, and public reporting.
    - *Non-assessment Revenues:* Leverage TBID assessments by growing non-assessment revenues through direct service contracts, grants, revenue-producing events, and other sources.

Governance and Term

The Telegraph Property and Business Improvement District is formally managed and administered by the Telegraph Property and Business Management Corporation (TPBMC). The TPBMC serves as the designated, private non-profit entity (Owners' Association) legally tasked by the City and the district's property owners with executing day-to-day operations, managing programmatic deployments, and overseeing contract fulfillment. The corporation directly interfaces with operational partners, such as managing the core clean and safe ambassador services contract.

The TPBMC is governed by a dedicated Board of Directors responsible for strategic decision-making, annual budgeting, and approving permitted assessment rate increases.

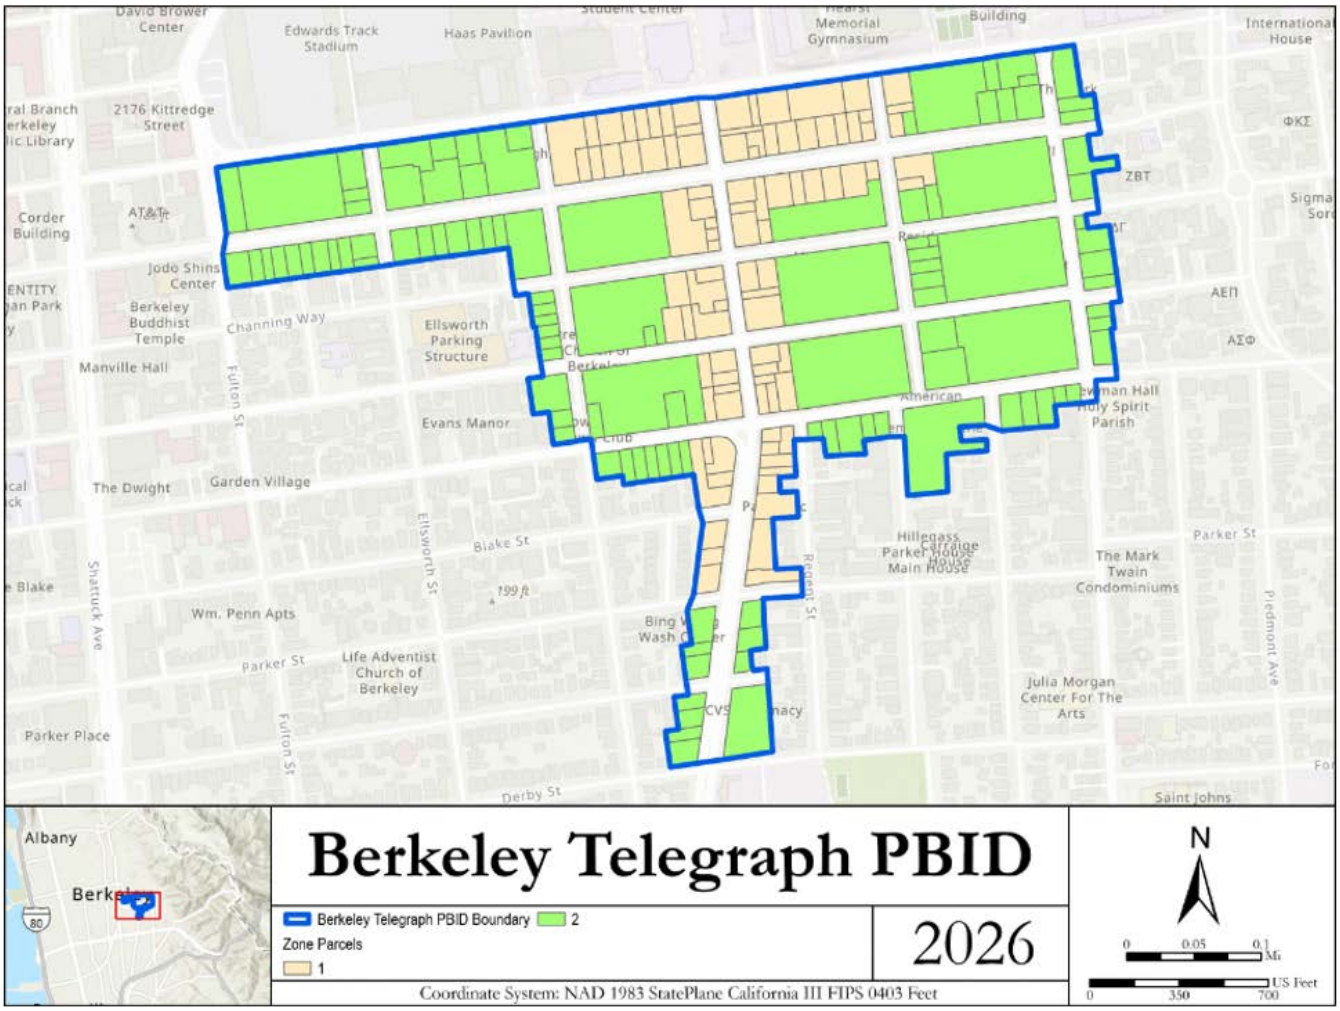
The Telegraph Property and Business Improvement District will be reauthorized for ten additional years (2027 – 2037).

The Telegraph PBID is expected to be renewed by July 2027 for inclusion of parcel assessments on the County of Alameda 2027/28 tax roll with an implementation date of the Management District Plan on January 1, 2028. Consistent with State law, the PBID will have a 10-year life through December 31, 2037.

DISTRICT BOUNDARIES & SERVICE ZONES

Geographical Boundary Description

The TPBID generally includes parcels in the Telegraph area of the City of Berkeley. The service area includes approximately 254 properties with 185 property owners and two zones. The TPBID boundary is illustrated by the map below. A larger map is provided in Appendix 3 and is available on request by calling (916) 437-4300 or (800) 999-7781.



Benefit Zones Matrix

The TBID assessment methodology distinguishes between Benefit Zone 1 and Benefit Zone 2. Both Zone 1 and Zone 2 will receive the same categories of TBID services. Zone 2 parcels will receive a reduced level and frequency of services to reflect lower relative service intensity or special benefit.

Average Weekly Services	Zone 1	Zone 2
Cleaning Ambassadors	163 Hours	82 Hours
Hospitality Ambassadors	100 Hours	50 Hours
Litter removal / sweeping	4 X Daily	2 X Daily

Pressure washing	20 block faces	Daily Spot Washing
Graffiti removal	Daily as needed	Daily as needed
Debris removal	Daily as needed	Daily as needed
Business contacts	100	TBD per shift
Crisis Response & Outreach	Daily	Daily
Reporting/service requests	Daily	Daily
Walking Patrols	72 Hours	36 Hours

District Map

IMPROVEMENTS AND ASSESSMENT BUDGET

2028 PBID Assessment Budget

The following table outlines the estimated operating budget for the initial year and service plan allocation. The budget is an estimate based on the cost to deliver the planned improvements and services. These baseline allocations shall remain generally the same throughout the term of the district. The TPBMC Board of Directors oversees the operating budget to ensure alignment with this plan but may reallocate funds between service categories to account for operational constraints and cost fluctuations.

EXPENDITURES	Budget	% of Budget
Public Realm: Cleaning, Hospitality, Activation	$1,235,000	62%
Marketing & Events	$302,000	15%
Economic Vitality	$180,000	9%
Leadership & Advocacy	127,000	6%
Management and Contingency	$156,000	8%
Total Expenditures	$2,000,000	100%
REVENUES		
PBID Assessments	$1,872,000	94%
General Benefit	78,000	4%
Other Revenues *	$50,000	2%
Total Revenues	$2,000,000	100%

* Revenues from contract services, events, and other sources

Revenue is proposed to come primarily from BID assessments, supplemented by existing contract services, and substantial increases in grants, donations, and event revenue. The improvements and services funded by the PBID assessment will be provided directly and exclusively to assessed parcels, Non-assessment funds may be allocated to specific service categories or special projects by the TPBMC Board of Directors. The annual funding allocations may shift to align with changes in non-assessment revenue. For example, the total Marketing & Events budget may increase or decrease in line with the amount of anticipated event revenue.

Budget Adjustments

The TPBMC Board of Directors shall review and approve the annual operating budget at a public board meeting before the end of each fiscal year on June 30. The PBID Assessment rates will be subject to an annual increase effective at the beginning of the fiscal year by a vote of the Board of Directors of the Telegraph Property and Business Management Corporation. The maximum annual assessment rate increase will reflect the annual change in the Consumer Price Index (CPI) for All Urban Consumers in San Francisco-Oakland-San Jose or 3%, whichever is more. If for any reason the percentage change is negative, the maximum allowable assessment would not be decreased by reason of such negative percentage change and would remain at the amount as computed on the previous fiscal year regardless of any CPI adjustment. The annual assessment cannot exceed the actual costs to operate the Telegraph BID in any given year.

Based upon a maximum possible annual assessment increase of 3%, beginning July 1, 2027, the total annual maximum assessment revenue each year for each of the 10 years is shown in the following table.

EXPENDITURES	Maximum Annual Assessments (3%)
FY 2027/2028	$1,650,000
FY 2028/2029	$1,699,500
FY 2029/2030	$1,750,485
FY 2030/2031	$1,803,000
FY 2031/2032	$1,857,090
FY 2032/2033	$1,912,802
FY 2033/2034	$1,970,186
FY 2034/2035	$2,029,292
FY 2035/2036	$2,090,171

FY 2036/2037	$2,152,876

ASSESSMENT METHODOLOGY

General vs. Special Benefits Resolution:

The improvements, maintenance, and activities to be provided by the District constitute and convey special benefits directly to the assessed parcels, according to California Assessment Law (see *Telegraph PBID Engineer's Report*, September 2026).

Assessment Factors

Each parcel will be assessed based on proportional special benefits received. The variables used for the annual assessment formula are parcel size, building size, parcel type, and benefit zone. These variables are all appropriate measures of the proportional special benefit because the need for services, level of services, and quantity of services are all relative to these variables; thus the special benefit provided to each parcel by the services can be proportionally measured using these variables.

The actual annual rate applied to parcels is as shown below:

Parcel Type	Zone 1 – Parcel Size (sq. ft.) + Building Size (sq. ft.)	Zone 2 – Parcel Size (sq. ft.) + Building Size (sq. ft.)
Commercial	$0.428682	$0.214341
Residential	$0.342945	$0.171473
Private Property Tax-Exempt / Public	$0.154325	$0.077163

Classification of Land Uses

Residential parcels are those parcels containing any number of dwelling units and have no other land use than for residential purposes. Residential parcels will receive and benefit from all of District's improvements, maintenance and activities. Residential parcels in the TPBID typically have a high population density and heavy pedestrian traffic, creating a high benefit from services. These parcels will benefit by being cleaner, safer, and better marketed to potential residents, thus attracting new residents and retaining existing residents.

Private property tax-exempt parcels will receive and benefit from the District's services. However, because they do not have a commercial component, private property tax-exempt parcels (as shown on the County Assessor's records) will be assessed at the rate for the appropriate zone as shown in the table above. These parcels will benefit in that they will be cleaner, safer, and better marketed, but they benefit to a lesser degree than parcels occupied by for profit businesses because they do not enjoy the benefits of increased profits resulting from increased commerce.

Pursuant to Article XIII D of the California Constitution, "parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit." No public agency has made such a demonstration; however, because they do not have a commercial profit-making component, public parcels (as shown on the County Assessor's records) will be assessed at a lower rate commensurate to the benefits received. These parcels will benefit in that they will be cleaner and safer, but they benefit to a lesser degree than parcels occupied by for profit businesses because they do not enjoy the benefits of increased profits resulting from increased commerce. Public parcels within the District include parcels occupied by public schools.

The district is designed to benefit commercial, residential, private property tax-exempt, and public parcels. There are several mixed-use parcels in the District, with commercial and single-family residential components. Consistent with the benefit derived from services, the commercial portion of mixed-use parcels shall be assessed; the residential portion shall be assessed at the residential rate. The assessment for each parcel was determined based upon the portion of the parcel/building that is commercial. Mixed use parcels were identified and apportioned through City parcel data.

Benefit Zones

The Total Assessment was allocated to two benefit zones as shown on the map in Appendix III. The boundaries of each benefit zone were narrowly drawn to include all parcels that receive a direct advantage from the same level of services and improvements. Each benefit zone will receive a different level of services based on the needs and conditions in that zone, and historic service allocations to that zone. The benefit zones ensure that "properties that receive the same proportionate special benefit pay the same assessment." Because the frequency and quantity of services and improvements directly relate to the cost of the services and improvements, in this District "the relative cost of an improvement is a reliable measure of relative benefit conferred." For instance, Zone 1 has higher pedestrian and vehicle traffic than Zone 2 and thus will benefit from more frequent and intense services. Because of the difference in pedestrian and vehicle traffic between the zones, Zone 2 will receive fifty percent (50%) of the cleaning ambassador services provided

by the District compared to Zone 1. Thus, the assessment rate for Zone 2 is fifty percent (50%) of the Zone 1 rate. Similarly, Zone 2 will receive and specially benefit from half of the Communications and Economic Development services and all related administration.

How assessments will be paid, collected, and distributed

As provided by State Law, the TPBID assessment will appear as a separate line item on annual property tax bills prepared by the County of Alameda. Parcels that do not receive property tax bills will be invoiced by the TPBID on behalf of the City. Property tax bills are generally distributed in the fall, and payment is expected by lump sum or installment. The County of Alameda shall distribute funds collected to the City of Berkeley, which shall forward them to the TPBID. Existing laws for enforcement and appeal of property taxes, including penalties and interest, apply to the TPBID assessments.

Assessments appeals process

If any property owner believes the data used to calculate the assessment is inaccurate for any reason, the property owner shall submit, in writing, a request for review to the City. The property owner shall provide documentation to support the request for review. The City or its designated consultant shall review the request and provide a response to the property owner. The property owner must be current in the payment of all assessments when filing the request for review and must remain current during the review process. (Further detail is provided in the *Telegraph PBID Engineer's Report*, September 2026.)

TPBID GOVERNANCE & OPERATIONS

The Owners' Association

The Telegraph Property and Business Improvement District is formally managed and administered by the Telegraph Property and Business Management Corporation (TPBMC). The TPBMC serves as the designated, private non-profit entity (Owners' Association) legally tasked by the City and the district's property owners with executing day-to-day operations, managing programmatic deployments, and overseeing contract fulfillment. The corporation directly interfaces with operational partners, such as managing the core clean and safe ambassador services contract.

Board Composition

The TPBMC is governed by a dedicated Board of Directors responsible for strategic decision-making, annual budgeting, and approving permitted assessment rate increases. To ensure balanced, equitable leadership across the corridor, the board shall adopt governance structures and bylaws that dictate a diverse board composition. Governance structure shall support proportional representation from key district stakeholders, including:

- Large Property Owners (including major institutional entities such as the University of California, Berkeley and City of Berkeley)
- Independent Retailers and Merchants
- Commercial Stakeholders, Non-Profits, and Residents within the district

Public Oversight, Reporting & Compliance

TPBMC operates under transparency rules and public oversight guidelines set by the State of California. The association is legally required to submit a comprehensive Annual Report to the City Council for each fiscal year. This report enforces fiscal and operational transparency by detailing:

- Proposed changes (or confirmation of no changes) to the district boundaries.
- Documentation of the exact service types to be delivered in line with the Management District Plan, including street and sidewalk cleaning, beautification, marketing, promotions, decoration, and public restroom maintenance.
- Itemized operational budgets detailing total revenues, assessment values, and projected expenditures.
- Formal board approvals regarding assessment rate modifications.

TPBMC further operates withing the requirements of the Brown Act (commencing with Section 54950 of the Government Code), and the California Public Records Act (commencing with Section 6250 of the Government Code).

Regular monthly board meetings shall comply with public notice requirements and be held at an open location within the district. The TPBMC shall record and publish reports on board actions, TBID activities, and financial records.

Delinquency and Disestablishment

The district operates under established legal mechanisms pursuant to the California Property and Business Improvement District Law of 1994 to manage non-payment and safeguard property owner rights:

- Delinquency Protocols: Because assessments are collected via the regular county property tax roll, non-payment triggers standard statutory tax lien consequences. Delinquent assessments are subject to the same penalties, interest, and enforcement procedures as regular ad valorem property taxes.
- Disestablishment Procedures: Property owners retain democratic recourse through an established annual 30-day window

(the anniversary of the district's creation). During this statutory period, property owners have the right to submit formal petitions to the City Council to initiate dissolution proceedings for the district, ensuring long-term accountability to those who fund it.

TABLE OF CONTENTS

1. Introduction 1

1.1 TPBID Background 1

1.2 Duration and Renewal 1

1.3 Assessment Law and Legislative Context 1

1.4 Judicial Guidance for Assessments 3

2. Plans and Specifications 5

2.1 Description of the TPBID Boundaries 5

2.2 Description of the Improvements, Services, and Activities 5

3. Estimate of Costs 7

3.1 Clean, Safe and Beautification Cost Estimate 7

3.2 Communications and Economic Development Cost Estimate 7

3.3 Management and Administration Cost Estimate 8

4. Special and General Benefits 9

4.1 Introduction 9

4.2 Identification of Benefit 9

4.3 Separation and Quantification of General Benefit 9

4.4 Special Benefit 15

5. Assessment Methodology 17

5.1 Base Formula 17

5.2 Residential Parcels 19

5.3 Private Property Tax-Exempt / Public Parcels 19

5.4 Public Parcels 19

5.5 Mixed Use Parcels 20

5.6 Benefit Zones 20

5.7 Changes in Data 20

6. Assessment Notice 21

7. Time and Manner for Collecting Assessments 22

7.1 Annual Maximum Assessment Rate Inflation 22

7.2 Future Changes to Parcel Characteristics and Land Use 22

7.3 Data for Annual Assessment Calculations 23

7.4 Appeals 23

7.5 Method of Collection 24

8. Engineer's Letter 25

Appendix I – Maximum Annual Assessment Rates 27

1. Introduction

1.1 TPBID Background

The Telegraph Property and Business Improvement District ("TPBID" or the "District") is a benefit assessment district formed to provide improvements, maintenance, and activities that constitute and convey a special benefit to assessed parcels. TPBID was formed in 1998 and renewed in 2003, 2008, and 2018. This Engineer's Report has been prepared in connection with the proposed renewal of TPBID pursuant to Property and Business Improvement District Law of 1994 (Streets and Highways Code section 36600 et seq.), Article XIII D of the California Constitution, and the Proposition 218 Omnibus Implementation Act.

The TPBID generally includes parcels in the Telegraph area of the City of Berkeley, as detailed in the Appendix III assessment diagram included in this Engineer's Report. The purpose of the District is to provide improvements, maintenance, and activities that constitute and convey special benefits to assessed parcels. The District will provide Clean, Safe, and Beautification services; Communications and Economic Development; and related Management and Administration directly and only to assessed parcels within its boundaries.

1.2 Duration and Renewal

Assessments for the TPBID will be levied upon approval of the District's renewal to fund the TPBID Services and Activities over the next ten years. The first year of levies will be Fiscal Year 2027-2028 and the final year of levies will be Fiscal Year 2036-2037. Renewal of the TPBID requires property owners representing more than fifty percent (50%) of the total proposed assessment to submit petitions in support of the renewal. This is followed by a property owner ballot proceeding, in which more than fifty percent (50%) of the ballots returned, weighted according to the assessment amount, must be in favor of renewal. Near the end of the ten-year term, the petition, ballot, and City Council hearing process must be repeated for the TPBID to be renewed again.

1.3 Assessment Law and Legislative Context

The TPBID was formed and will be renewed pursuant to a state law that took effect in January of 1995. The Property and Business Improvement District Law of 1994, Streets and Highways Code Section 36600 et seq., which was signed into law by Governor Pete Wilson, ushered in a new generation of Property and Business Improvement Districts in California.

Key provisions of the Property and Business Improvement District Law of 1994 include the following:

- Allows a wide variety of services which are tailored to meet specific needs of assessed properties in each individual PBID;
- Requires property owner input and support throughout the renewal process;
- Requires written support on both a petition and ballot from property owners;

- Allows for a designated, private nonprofit corporation to manage funds and implement programs, with oversight from property owners and the City;
- Requires limits for assessment rates to ensure that they do not exceed the amount owners are willing to pay; and
- Requires the PBID be renewed after a certain time period, making it accountable to property owners.

The assessment is also subject to the substantive and procedural requirements described in Section 4, Article XIII D of the California Constitution ("Article XIII D"), and would be assessed and collected by the City of Berkeley. The assessment is authorized pursuant to the Property and Business Improvement District Law of 1994, Article XIII D, and the Proposition 218 Omnibus Implementation Act, commencing with Section 53750 of the California Government Code, collectively referred to herein as the "Assessment Law."

In 1996, California voters adopted Proposition 218, known as the "Right to Vote on Taxes Act," which added Articles XIII C and XIII D to the California Constitution. Article XIII D established substantive and procedural requirements on agencies for levying assessments, being levies on real property by an agency for a special benefit conferred upon the real property. "Special benefit" is defined in Article XIII D as "a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large."

In 1996, California voters adopted Proposition 218, known as the "Right to Vote on Taxes Act," which added Articles XIII C and XIII D to the California Constitution. Article XIII D established new substantive and procedural requirements on agencies for levying assessments, being levies on real property by an agency for a special benefit conferred upon the real property. "Special benefit" is defined in Article XIII D as "a particular and distinct benefit over and above general benefits conferred on a real property located in the district or to the public at large."

Article XIII D imposes five basic substantive requirements on assessments:

(1) All parcels that will have a special benefit conferred upon them and upon which an assessment will be imposed must be identified;
(2) The general benefits must be distinguished from the special benefits conferred on the parcels;
(3) The proportionate special benefit derived by each identified parcel must be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property-related service being provided;
(4) The amount assessed to a parcel must not exceed the reasonable cost of the proportional special benefit conferred on that parcel and must not include any costs attributable to the general benefit; and
(5) Parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by

clear and convincing evidence that those publicly owned parcels in fact receive no special benefit.

Article XIII D also imposes procedural requirements on assessments, which include preparing an engineer's report, providing written notice of the proposed assessment and public hearing to property owners, holding a public hearing, and providing for a protest ballot proceeding. This Engineer's Report has been prepared to support the proposed renewal of the TPBID and the levy of assessments in accordance with the Assessment Law.

1.4 Judicial Guidance for Assessments

Since the initial passage of Proposition 218, several court rulings have helped provide context and direction with respect to the procedures and requirements of Article XIII D for levying assessments. Several of the key concepts from these rulings are summarized below.

1.4.1 GENERAL BENEFIT

Article XIII D requires an agency to separate the general benefits from the special benefits conferred on the identified parcels because only special benefits are assessable.

The Court of Appeal in *Golden Hills Neighborhood Assn., Inc. v. City of San Diego* (2011) ("*Golden Hills"*) clarified this concept by stating, "*Separation and quantification of general and special benefits must be accomplished by apportioning the cost of a service or improvement between the two and assessing property owners only for the portion of the cost representing special benefits*."[1]

The Court of Appeal in *Beutz v. County of Riverside* (2010) ("*Beutz"*) noted that the trial court took judicial notice of the Legislative Analyst's Office pamphlet titled "Understanding Proposition 218" which states an agency must "*estimate the amount of special benefit landowners would receive from the project or service, as well as the amount of 'general benefit.' This step is needed because Proposition 218 allows local government to recoup from assessments only the proportionate share of cost to provide the special benefit.*"[2]

The Court in *Beutz* furthered this idea stating, "*Separating the general from the special benefits of a public improvement project and estimating the quantity of each in relation to the other is essential if an assessment is to be limited to the special benefits*." [3]

The Court of Appeal in *Silicon Valley Taxpayers' Association Incorporated v. Santa Clara County Open Space Authority* (2008) clarified that general benefits are not restricted to benefits conferred only on persons and property outside the assessment district but can include benefits both conferred on real property located in the district or to the public at large. The court defined the "public at large" as comprising all members of the public, including those who live, work, and shop within the district, and not simply transient visitors.[4]

[1] *Golden Hill Neighborhood Assn., Inc. v. City of San Diego (2011) 199 Cal.App.4th 416, 438.*
[2] *Beutz v. County of Riverside (2010) 184 Cal.App.4th 1516, 1532.*
[3] *Beutz v. County of Riverside (2010) 184 Cal.App.4th 1516, 1532.*
[4] *Silicon Valley Taxpayers' Assn., Inc. v. Santa Clara County Open Space Authority (2008) 44 Cal.4th 431, 452.*

The Court of Appeal again reiterated the need to separate, quantify and apportion costs to general benefits from the improvements in *Broad Beach Geologic Hazard Abatement District v 31506 Victoria Point LLC* (2022), stating, *"The District cites no authority, and we are aware of none, suggesting that an agency's subjective intent determines the need to account for general benefits."*[5]

1.4.2 BENEFIT-BASED NOT COST-BASED

In *Town of Tiburon v. Bonander* (2009) ("*Tiburon"*), the Court of Appeal clarified the idea that assessments must be apportioned based upon benefit rather than cost. The Court stated, "*Proportionate special benefit is the basis upon which a project's total assessable costs are apportioned among parcels within an assessment district.*"[6]

The assessment on a particular property cannot be based on the relative cost of the improvements to the property, but rather on the special benefit conferred on such property. The Court in *Tiburon* also stated, "*an assessment represents the entirety of the cost of the improvement or property-related service, less any amount attributable to general benefits (which may not be assessed), allocated to individual properties in proportion to the relative special benefit conferred on the property*."[7]

1.4.3 MEASURING AND APPORTIONING SPECIAL BENEFIT

The Court in *Tiburon* acknowledged the difficulty of trying to precisely assign and measure special benefit, stating, "*Any attempt to classify special benefits conferred on particular properties and to assign relative weights to those benefits will necessarily involve some degree of imprecision.*"[8]

The Court in *Tiburon* went on to say that a formula assigning equal weight to different special benefits *"may be a legally justifiable approach to measuring and apportioning special benefits,* [but] *it is not necessarily the only valid approach. Whichever approach is taken to measuring and apportioning special benefits, however, it must be both defensible and consistently applied*."[9]

2. Plans and Specifications

2.1 Description of the TPBID Boundaries

The TPBID generally includes parcels in the Telegraph area of the City of Berkeley, as detailed in the assessment diagram included in this Engineer's Report. The District is generally bound to the north by Bancroft Way, to the northeast by Fulton Street, to the east by Dana St, to the southeast by Telegraph Ave, to the south by Derby St, to the Southwest by Telegraph Ave, and to the west and northwest by College Ave.

The TPBID boundaries include two zones, identified as "Zone 1" and "Zone 2" on the assessment diagram included in Appendix III.

2.2 Description of the Improvements, Services, and Activities

The renewed TPBID will provide supplemental improvements, services, and activities that are above and beyond those provided by the City and other government agencies. None of the improvements, maintenance, and activities to be provided by the TPBID are provided by the City or other government agencies. The improvements, services, and activities will be provided directly and only to assessed parcels; they will not be provided to parcels that are not assessed. Each and every improvement, service, and activity is unique to the TPBID, thus the benefits provided are particular and distinct to each assessed parcel. Both Zone 1 and Zone 2 will receive the same categories of TPBID services. Zone 2 parcels will receive a reduced level and frequency of Zone 1 services. All TPBID services provided to assessed parcels are above and beyond the baseline services provided by the City of Berkeley as shown in Appendix VI.

2.2.1 CLEAN, SAFE, AND BEAUTIFICATION

During this term, the TPBID will use a multi-faceted approach to planning, design and management of public spaces to maintain a clean, safe, and beautiful district. The clean, safe, and beautification program will focus on continuing to make the TPBID a cleaner and safer place to do business. Programs will include: ambassador services, graffiti and sticker removal, manual sidewalk cleaning and sidewalk pressure washing, hazardous waste cleanup, gutter and storm drain cleaning, street sweeping, litter removal, enhanced landscaping and landscape maintenance, small infrastructure improvements, tree lights, placemaking, seasonal decorations, and other special projects as they relate to "clean, safe, and beautification."

2.2.2 COMMUNICATIONS & ECONOMIC DEVELOPMENT

The Communications and Economic Development program will work closely with property owners to identify and represent their needs and concerns, and keep them informed of the TPBID's efforts on behalf of the assessed parcels. The TPBID will provide a unified voice to represent the best interests of the assessed parcels. The program will represent the parcels' best interests at the local government level, with the City Council, city staff, and various other public agencies whose operations impact the assessed parcels. If needed, the communications and economic development program staff will work with state and federal

agencies whose operations impact the assessed parcels. Additional programs may include but are not limited to: stakeholder communications that support the TPBID's agenda and attract visitors provided via email newsletters, social media, a proactive public relations strategy, and a TPBID website. As Telegraph evolves, communication strategies will evolve to preserve and grow Telegraph's role as a destination in the region. The Telegraph Property and Business Management Corporation ("TPBMC") will continue to be the go-to business organization, playing a strong leadership role to create a forward-thinking, innovative, and business-friendly environment. Marketing and hospitality efforts may be undertaken to raise awareness of the TPBID as a place to dine, shop, and do business. All marketing services will be designed and intended to specially benefit the assessed parcels via increased commerce, occupancy rates, and lease rates. Communications and Economic Development funds shall not be used for lobbying efforts such as attempting to influence legislation or candidates for office.

2.2.3 MANAGEMENT AND ADMINISTRATION

The management and administration portion of the budget will be utilized for administrative costs associated with providing the services. Those costs may include rent, telephone charges, legal fees, accounting fees, postage, administrative staff, insurance, other general office expenses, and City and County administration costs. In addition, the management and administration budget will include a contingency line item to account for uncollected assessments, if any. If there are contingency funds collected, they may be held in a reserve fund or utilized for other programs, administration or renewal costs at the discretion of the TPBMC. Policies relating to contributions to the reserve fund, the target amount of the reserve fund, and expenditure of money from the reserve fund shall be set by the TPBMC. The reserve fund may be used for the costs of renewing the TPBID.

3. Estimate of Costs

The estimated costs of installation, implementation and provision of the TPBID improvements, services, and activities as described in Section 2 are outlined below. Each year, as part of the TPBID assessment levy calculation process, the costs and expenses are reviewed and the annual costs are projected for the following fiscal year.

3.1 Clean, Safe and Beautification Cost Estimate

The estimated Clean, Safe, and Beautification cost budget for the first operating year of the TPBID renewal (July 1, 2027, through June 30, 2028) will be funded by assessment revenues for the assessment-funded special benefit costs, and will be funded by non-assessment revenues for general benefit cost items. The budget is as follows:

Table 1. Clean, Safe, & Beautification Budget and Revenue Summary

Description	Zone 1 Budget	Zone 2 Budget	2027/28 Total Budget
Assessment-funded special benefit costs	$766,029.82	$418,303.41	$1,184,333.24
General benefit costs[1]	0.00	0.00	51,136.76
Total Clean, Safe, and Beautification costs	**$766,029.82**	**$418,303.41**	**$1,235,470.00**

[1]General-benefit costs are funded from sources other than parcel assessments and therefore are shown only in the total column

3.2 Communications and Economic Development Cost Estimate

The estimated Communications and Economic Development cost budget for the first operating year of the TPBID renewal (July 1, 2027, through June 30, 2028) will be funded by assessment revenues for the assessment-funded special benefit costs, and will be funded by non-assessment revenues for general benefit cost items. The budget is as follows:

Table 2. Communications & Economic Development Budget and Revenue Summary

Description	Zone 1 Budget	Zone 2 Budget	2027/28 Total Budget
Assessment-funded special benefit costs	$300,049.81	$163,847.22	$463,897.03
General benefit costs[1]	0.00	0.00	17,226.97
Total Communications and Economic Development costs	**$300,049.81**	**$163,847.22**	**$481,124.00**

[1]General-benefit costs are funded from sources other than parcel assessments and therefore are shown only in the total column

3.3 Management and Administration Cost Estimate

The estimated Management and Administration cost budget for the first operating year of the TPBID renewal (July 1, 2027 through June 30, 2028) will be funded by assessment revenues for the assessment-funded special benefit costs, and will be funded by non-assessment revenues for general benefit cost items. The budget is as follows:

Table 3. Management & Administration Budget and Revenue Summary

Description	Zone 1 Budget	Zone 2 Budget	2027/28 Total Budget
Assessment-funded special benefit costs	$144,955.29	$79,155.26	$224,110.55
General benefit costs[1]	0.00	0.00	9,295.45
Total Management and Administration costs	**$144,955.29**	**$79,155.26**	**$233,406.00**

[1]*General-benefit costs are funded from sources other than parcel assessments and therefore are shown only in the total column*

4. Special and General Benefits

4.1 Introduction

Pursuant to Article XIIID, all parcels that receive a special benefit conferred upon them as a result of the public services shall be identified, and the proportionate special benefit derived by each identified parcel shall be determined in relationship to the entire costs of the project.

4.2 Identification of Benefit

The provisions of services and necessary related administrative expenses incurred in providing and managing the TPBID services will provide benefits to both those properties within the boundary of the TPBID and to the surrounding area. The benefits conferred to property within the boundary of the TPBID from the services are described below. This report does not consider any general enhancement of property value.

4.2.1 ENHANCED CLEANLINESS, SAFETY, AND BEAUTIFICATION

The Clean, Safe, and Beautification program is intended to improve the overall cleanliness, safety, appearance, accessibility, and functionality of the District. Cleaner sidewalks and public-facing areas, visible ambassadors, graffiti and litter removal, enhanced landscaping, and related services create a more welcoming and usable environment. These improved conditions are expected to support pedestrian activity, access, commerce, tenancy, occupancy, and continued investment throughout the District.

4.2.2 ENHANCED ECONOMIC ACTIVITY

Communications, stakeholder coordination, marketing, and economic-development activities are intended to strengthen the District's identity, increase awareness of District businesses and destinations, and support overall economic vitality. These activities help connect stakeholders, communicate District initiatives, attract customers and visitors, and promote continued commerce, tenancy, occupancy, and investment throughout the District.

4.3 Separation and Quantification of General Benefit

Section 4 of Article XIIID of the California Constitution provides that once a local agency which proposes to impose assessments on property has identified those parcels that will have special benefits conferred upon them and upon which an assessment will be imposed, the local agency must next "separate the general benefits from the special benefits conferred," and only the special benefits can be included in the amount of the assessments imposed. A general benefit is an overall and similar benefit to the public at large resulting from the services to be provided by the assessments levied.

4.3.1 GENERAL BENEFIT TO THE PUBLIC-AT-LARGE

The public-at-large within the District will receive general benefits as a result of the improvements, services, and activities being provided directly to parcels. State law[10] indicates that "Activities undertaken for the purpose of conferring special benefits upon property to be assessed inherently produce incidental or collateral effects that benefit property or persons not assessed." However, "the mere fact that special benefits produce incidental or collateral effects that benefit property or persons not assessed does not convert any portion of those special benefits or their incidental or collateral effects into general benefits." Further, "the value of any incidental or collateral effects that arise from the improvements, maintenance or activities of a property-based district and that benefit property or persons not assessed shall not be deducted from the entirety of the cost of any special benefit or affect the proportionate special benefit derived by each identified parcel." Thus, although there may be some incidental benefit to the public using the assessed parcels, that incidental benefit is not considered a general benefit because it is inherently produced by activities that constitute and convey special benefits to the assessed parcels.

The prior TBID Engineer's Report used surveys conducted in other districts have found that on average, approximately 98.72% of pedestrian traffic within TPBID boundaries is engaged in business on assessed parcels within the District, while approximately 1.28% is simply passing through. The calculated 1.28% of traffic passing through does not have any connection to the assessed parcels, and therefore does not represent a special benefit to the assessed parcels. The calculated 1.28% will, however, receive a derivative and indirect general benefit as a result of the improvements, maintenance, and activities being provided in the District that they are passing through. Therefore, it is estimated that 1.28% of the benefit created by the District's improvements, services, and activities is provided to the public-at-large. To ensure that the assessment dollars do not fund general benefits to the public-at-large, that portion of the cost of improvements, maintenance, and activities will be paid for with funds not obtained through assessments. Using the 1.28% figure, based on the 2027 budget, the value of this general benefit to the public-at-large is $24,960, ($1,950,000*.0128).

To ensure that the assessment dollars do not fund general benefits to the public at large, that portion of the cost of improvements, maintenance, and activities attributable to general benefit to the public will be paid for with funds not obtained through assessments. Therefore, based upon intercept surveys, the total value of the general benefit provided to the public at large not utilizing the assessed parcels is 1.28% of the total budget, or $24,960.

4.3.2 GENERAL BENEFIT TO NON-ASSESSED PARCELS

Although they are only provided directly to the assessed parcels, the District's improvements, services, and activities may confer general benefits upon non-assessed parcels within and surrounding the District. One study examining property values in PBID areas found "no evidence of spill-over impacts (either good or bad) on commercial properties located just outside the BID's boundaries;" however, the California Court of Appeals has stated that "services specifically intended for assessed parcels concomitantly confer collateral general benefits to surrounding properties." It is reasonable to conclude that increased cleanliness, safety,

[10] *Cal. Streets & Highways Code § 36601(h)(2)–(4).*

and development, improved beautification, and communications within the District will have an impact on non-assessed parcels immediately adjacent to or within the District boundaries. Although the legislature has indicated that "the value of any incidental or collateral effects that arise from the improvements, maintenance, or activities of a property-based district and that benefit property or persons not assessed shall not be deducted from the entirety of the cost of any special benefit," the California Court of Appeals has noted that "the characterization of a benefit may depend on whether the parcel receives a direct advantage from the improvement…or receives an indirect, derivative advantage resulting from the overall public benefits of the improvement." Those derivative and indirect impacts are considered general benefits and will be quantified and separated. In this Engineer's opinion, because improvements, maintenance, and activities are provided only within the District and on its perimeter, parcels separated from the District by at least one intervening parcel will not receive spill over benefits. Parcels separated by at least one intervening parcel will not benefit because they are physically removed from the actual location of services provided and do not face serviced parcels.

As mentioned above, the total District service budget for 2027 is $1,950,000. After reducing the budget by the general benefit to the public ($24,960), the remaining benefit to parcels is $1,925,040. All parcels within and adjacent to the District have been assigned a benefit factor to mathematically represent the proportional special and general benefit and quantify the value of each. Since all assessed parcels within the District benefit from and receive all of the District's services, they have been assigned a benefit factor of 1.0. Parcels adjacent to the District have been assigned benefit factors as described in detail below. Because the improvements, maintenance, and activities are generally provided along streets within the district, linear frontage is an appropriate measure of the relative general benefit received by adjacent parcels and will be used in the below calculations.

4.3.3 GENERAL BENEFITS: ENHANCED CLEANLINESS, SAFETY, AND BEAUTIFICATION

Section 4.2.1 identifies the overall benefits expected to result from the Clean, Safe, and Beautification program. This section separates and quantifies the portion of those benefits that may be received by non-assessed parcels within or adjacent to the District

"Clean, Safe and Beautification" services will be provided directly and only to assessed parcels. Within the District boundaries, services will be provided along both sides of each street, with parcels along each side receiving 50% of the benefit provided by the service. Along the District perimeter, services will only be provided to the side of the street that fronts assessed parcels within the District boundaries. It is, however, reasonable to conclude that parcels abutting the non-serviced side of the street will receive spill-over benefits.

To determine the amount of general benefit to adjacent parcels (those situated along the non-assessed side of the perimeter), we begin with the 50/50 standard ratio of benefit to each side of the street. Because the non-assessed side of the street will not be serviced, it will receive less than the standard 50% benefit. We estimate that one-half (50%) of the benefit to each side of the street is the services themselves, while the other half (50%) is as-a-result of the services. Further, we estimate that because the perimeter parcels will not be directly serviced, their benefit as a result of the services will be approximately one-half (50%) of that received by serviced parcels. It is therefore our professional estimation that the non-

assessed side of the street will receive twelve and one half percent (12.5%) of the standard benefit created by these services provided to the perimeter of each zone (one-half of the 25% of the benefit as-a-result of the services). The following table calculates the amount of benefit provided to parcels by the District "clean, safe, and beautification" programs and separates that benefit value between special benefits provided to the assessed parcels and general benefits indirectly received by non-assessed parcels.

Table 4. Clean, Safe, & Beautification General Benefit to Parcels

Location & Use	Linear Front Footage[1]	Benefit Factor[2]	Benefit Units[3]	Benefit Percent[4]	Benefit Value[5]	Special Benefit	General Benefit
Inside Commercial	6,117.00	1.000	6,117.00	46.30%	$564,702.35	$564,702.35	$0.00
Inside Residential	1,638.00	1.000	1,638.00	12.40%	151,215.05	151,215.05	0.00
Inside Private Property Tax-Exempt / Public	5,074.00	1.000	5,074.00	38.41%	468,415.84	468,415.84	0.00
Inside Non-Assessed	73.00	0.125	9.13	0.07%	842.39	0.00	842.39
Adjacent Commercial	941.00	0.125	117.63	0.89%	10,858.77	0.00	10,858.77
Adjacent Residential	309.00	0.125	38.63	0.29%	3,565.74	0.00	3,565.74
Adjacent Private Property Tax-Exempt / Public	1,632.00	0.125	204.00	1.54%	18,832.64	0.00	18,832.64
Adjacent Non-Assessed	106.00	0.125	13.25	0.10%	1,223.20	0.00	1,223.20
Subtotal	**15,890.00**		**13,211.63**	**100.00%**	**$1,219,655.98**	**$1,184,333.24**	**$35,322.75**

[1] Linear Front Footage = The total linear footage for each parcel location & use
[2] Benefit Factor = The benefit ratio described in the paragraph above for each parcel location & use
[3] Benefit Units = The linear feet multiplied by the benefit factor for each parcel location & use
[4] Benefit Percentage = The benefit units for each parcel location & use divided by the total benefit units for the District
[5] Benefit Value = The total "Clean, Safe, & Beautification" budget less General Benefit to the Public-at-Large multiplied by the benefit percentage for each parcel location & use

4.3.4 COMMUNICATIONS & ECONOMIC DEVELOPMENT

Unlike "clean, safe and beautification", Communications and Economic Development services are not physically provided within the District. Rather, the Communications and Economic Development program is focused on projects to enhance the overall economic status of the District. Although the programs will only feature assessed parcels, it is reasonable to conclude that there will be a minor, derivative and indirect benefit to non-assessed parcels. Because these services are highly focused, and are not physically provided along streets, it is our estimation that the non-assessed will receive a general benefit equal to ten percent (10%) of the standard benefit. Based on this estimation, non-assessed would have a benefit factor of 0.10 (1.00 x 10%).

Table 5. Communications & Economic Development General Benefit to Parcels

Location & Use	Linear Front Footage[1]	Benefit Factor[2]	Benefit Units[3]	Benefit Percent[4]	Benefit Value[5]	Special Benefit	General Benefit
Inside Commercial	6,117.00	1.000	6,117.00	46.57%	$221,190.90	$221,190.90	$0.00
Inside Residential	1,638.00	1.000	1,638.00	12.47%	59,230.13	59,230.13	0.00

[1] Linear Front Footage = The total linear footage for each parcel location & use.
[2] Benefit Factor = The benefit ratio described in the paragraph above for each parcel location & use.
[3] Benefit Units = The linear feet multiplied by the benefit factor for each parcel location & use.
[4] Benefit Percentage = The benefit units for each parcel location & use divided by the total benefit units for the District.
[5] Benefit Value = The total Communications & Economic Development budget less General Benefit to the Public-at-Large multiplied by the benefit percentage for each parcel location & use.

4.3.5 MANAGEMENT & ADMINISTRATION

The management and administration budget item relates to the improvements, maintenance, and activities to be provided. These costs have been allocated proportionally based upon the special and general benefit provided by each category, as detailed in the table below.

Table 6. Management & Administration General Benefit to Parcels

Service Provided	Special Benefit Value to Parcels	General Benefit Value to Parcels	Total Benefit to Parcels
"Clean, Safe, & Beautification"	$1,184,333.24	$35,322.75	$1,219,655.98
Communications & Economic Development	463,897.03	11,068.59	474,965.61
TOTAL	**$1,648,230.27**	**$46,391.33**	**$1,694,621.60**
% of Benefit to Parcels	97.26%	2.74%	100.00%
Administration Budget	**$224,110.55**	**$6,307.85**	**$230,418.40**

4.3.6 TOTAL GENERAL BENEFIT TO PARCELS

Based upon the above evaluations, the total value of the general benefit provided to non-assessed parcels adjacent to and within the District is shown on the following page.

Table 7. Total General Benefit to Parcels

Service Provided	General Benefit to Parcels
"Clean, Safe, & Beautification"	$35,322.75
Communications & Economic Development	11,068.59
Management & Administration	6,307.85
TOTAL	**$52,699.18**

4.3.7 TOTAL GENERAL BENEFIT

Based upon the foregoing analysis, in this Engineer's professional estimation, the total value of the general benefit provided to the public-at-large, adjacent parcels, and non-assessed parcels within the District is shown below.

Table 8. Total General Benefit

Service Provided	General Benefit to Public	General Benefit to Parcels	Total General Benefit
"Clean, Safe, & Beautification"	$15,814.02	$35,322.75	$51,136.76
Communications & Economic Development	6,158.39	11,068.59	17,226.97
Management & Administration	2,987.60	6,307.85	9,295.45
TOTAL	**$24,960.00**	**$52,699.18**	**$77,659.18**

4.3.8 NON-ASSESSMENT FUNDING

The programs funded by the District receive additional non-assessment funding in the form of grants, corporate sponsorships, event income, and other miscellaneous funds. These funding sources are anticipated to equal or exceed the amount of general benefit conferred annually by the District's improvements, maintenance, and activities, $77,659.18. These non-assessment funds will be used to pay for the general benefit provided by the District's improvements, maintenance, and activities, ensuring that parcel assessments will only be used to provide special benefits and "any additional costs of providing general benefits [are] not included in the amounts assessed."

4.4 Special Benefit

The improvements, maintenance, and activities to be provided by the District constitute and convey special benefits directly to the assessed parcels. Assessment law requires that "the proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided." Further, "no assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel." Special benefit "includes incidental or collateral effects that arise from the improvements, maintenance, or activities of property-based districts even if those incidental or collateral effects benefit property or persons not assessed."

To determine the total special benefit value to be conveyed to the assessed parcels, we deduct the general benefit value ($77,659.18) from the total value of the improvements, maintenance, and activities ($1,950,000.00). The remaining $1,872,340.88 is considered the special benefit to assessed parcels (the "Total Assessment"). The Total Assessment represents the total value of the special benefit to be provided by the improvements, maintenance, and activities. The Total Assessment has been proportionally divided among the assessed parcels so that no assessment exceeds the reasonable cost of the proportional special

benefit conferred on a parcel. The assessment rate has been designed to ensure that "properties that receive the same proportionate special benefit pay the same assessment."

Table 9. Total Special Benefit to Parcels

Service Provided	Total Benefit Value	General Benefit Value	Special Benefit to Assessed Parcels
"Clean, Safe, & Beautification"	$1,235,470.00	$51,136.76	$1,184,333.24
Communications & Economic Development	481,124.00	17,226.97	463,897.03
Management & Administration	233,406.00	9,295.45	224,110.55
TOTAL	**$1,950,000.00**	**$77,659.18**	**$1,872,340.82**

5. Assessment Methodology

5.1 Base Formula

Each parcel will be assessed based on proportional special benefits received. The variables used for the annual assessment formula are parcel size, building size, parcel type, and benefit zone. These variables are all appropriate measures of the proportional special benefit because the need for services, level of services, and quantity of services are all relative to these variables; thus the special benefit provided to each parcel by the services can be proportionally measured using these variables.

5.1.1 DETERMINATION OF ASSESSMENT RATES

“Because not all parcels in the district are identical in size, some will receive more special benefit than others.” Each of the variables used relates directly to the service level and special benefit provided to each parcel. Parcel square footage is the size of the parcel, measured in square feet. Building square footage is the size of any building on the parcel, measured in square feet. Size is an appropriate measure of proportional special benefit because it relates directly to the quantity of services provided to the parcel, the highest and best use of a parcel, and reflects the long-term value implications of the District. The larger a parcel or building, the more services and benefit the parcel will receive.

Because not all parcels in the District are identical in use, some will receive more special benefit than others. For example, a school parcel will benefit to a lesser degree than a commercial parcel, because it will not enjoy the benefits of increased commerce resulting from the services. Further detail on the benefit to each parcel type follows. To determine the assessment rates, the assessed parcels were classified by the estimated benefit each type of parcel receives, the estimated special benefit value of the services provided to each type was determined based on historic cost of service provision, and an assessment rate that is proportional to the estimated benefit received by each parcel type was determined.

To determine the assessment rates needed to fully fund the estimated special benefit budget, the estimated special benefit value for each parcel type in each benefit zone was divided by the corresponding total assessable parcel and building square footage. The resulting rates are shown in the table below.

Table 10. Initial Assessment Rates Calculation

Parcel Group	Initial Size Budget		Parcel + Building Square Footage		Initial Assessment Rate ($/sqft/yr)
Zone 1 Commercial	$1,045,989.84	÷	2,199,767.80	=	$0.47550
Zone 1 Residential	$108,226.49	÷	284,507.00	=	$0.38040
Zone 1 Private Property Tax-Exempt / Public	$56,818.59	÷	331,923.00	=	$0.17118
Zone 2 Commercial	$117,051.52	÷	492,330.14	=	$0.23775
Zone 2 Residential	$198,625.15	÷	1,044,296.00	=	$0.19020
Zone 2 Private Property Tax-Exempt / Public	$345,629.23	÷	4,038,195.48	=	$0.08559

The proposed assessment rates, shown in the table below, are set below the rates needed to fully fund the budget and will result in an initial revenue shortfall. These lower rates reflect anticipated development within the District, which is expected to expand the assessable base and generate additional assessment revenue in future years.

Table 11. Actual Assessment Rates Calculation

Parcel Group	Assessment Total		Parcel + Building Square Footage		Actual Assessment Rate ($/sqft/yr)
Zone 1 Commercial	$943,000.00	÷	2,199,767.80	=	$0.42868
Zone 1 Residential	$97,570.33	÷	284,507.00	=	$0.34295
Zone 1 Private Property Tax-Exempt / Public	$51,224.14	÷	331,923.00	=	$0.15433
Zone 2 Commercial	$105,526.44	÷	492,330.14	=	$0.21434
Zone 2 Residential	$179,068.20	÷	1,044,296.00	=	$0.17147
Zone 2 Private Property Tax-Exempt / Public	$311,598.02	÷	4,038,195.48	=	$0.07716

5.1.2 SUMMARY OF ASSESSMENT RATES

Therefore, the actual annual rate applied to parcels is as shown below. All assessment rates may be subject to an increase of no more than three percent (3%) per year. Maximum annual assessment rates are shown in Appendix 1.

Table 12. Maximum Assessment Rates

Parcel Type	Zone 1 – Parcel Size (sq. ft.) + Building Size (sq. ft.)	Zone 2 – Parcel Size (sq. ft.) + Building Size (sq. ft.)
Commercial	$0.428682	$0.214341
Residential	$0.342945	$0.171473
Private Property Tax-Exempt / Public	$0.154325	$0.077163

5.2 Residential Parcels

Residential parcels are those parcels containing any number of dwelling units and have no other land use than for residential purposes. Residential parcels will receive and benefit from all of District's improvements, maintenance and activities. Residential parcels in the TPBID typically have a high population density and heavy pedestrian traffic, creating a high benefit from services. These parcels will benefit by being cleaner, safer, and better marketed to potential residents, thus attracting new residents and retaining existing residents. Residential parcels are zoned exclusively residential, although they may have a commercial component if their owners aim to profit from tenant rents; however, parcels specifically containing multiple land uses are explained in section 5.5.

5.3 Private Property Tax-Exempt / Public Parcels

Private property tax-exempt parcels will receive and benefit from the District's services. However, because they do not have a commercial component, private property tax-exempt parcels (as shown on the County Assessor's records) will be assessed at the rate for the appropriate zone as shown in the table above. These parcels will benefit in that they will be cleaner, safer, and better marketed, but they benefit to a lesser degree than parcels occupied by for profit businesses because they do not enjoy the benefits of increased profits resulting from increased commerce. Parcels which are partially property tax-exempt will be assessed the property tax-exempt rate on the portion of the parcel that is exempt, and the applicable commercial or residential rate on the remainder. The portion of the parcel that is property tax-exempt was determined by property tax bills.

5.4 Public Parcels

Pursuant to Article XIII D of the California Constitution, "parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit." No public agency has made such a demonstration; however, because they do not have a commercial profit-making component, public parcels (as shown on the County Assessor's records) will be assessed at a lower rate commensurate to the benefits received. These parcels will benefit in that they will

be cleaner and safer, but they benefit to a lesser degree than parcels occupied by for profit businesses because they do not enjoy the benefits of increased profits resulting from increased commerce. Public parcels within the District include parcels occupied by public schools.

5.5 Mixed Use Parcels

The district is designed to benefit commercial, residential, private property tax-exempt, and public parcels. There are several mixed-use parcels in the District, with commercial and single-family residential components. Consistent with the benefit derived from services, the commercial portion of mixed use parcels shall be assessed; the residential portion shall be assessed at the residential rate. The assessment for each parcel was determined based upon the portion of the parcel/building that is commercial. Mixed use parcels were identified and apportioned through City parcel data.

5.6 Benefit Zones

The Total Assessment was allocated to two benefit zones as shown on the map in Appendix III. The boundaries of each benefit zone were narrowly drawn to include all parcels that receive a direct advantage from the same level of services and improvements. Each benefit zone will receive a different level of services based on the needs and conditions in that zone, and historic service allocations to that zone. The benefit zones ensure that “properties that receive the same proportionate special benefit pay the same assessment.” Because the frequency and quantity of services and improvements directly relate to the cost of the services and improvements, in this District “the relative cost of an improvement is a reliable measure of relative benefit conferred.” For instance, Zone 1 has higher pedestrian and vehicle traffic than Zone 2, and thus will benefit from more frequent and intense services. Because of the difference in pedestrian and vehicle traffic between the zones, Zone 2 will receive fifty percent (50%) of the cleaning ambassador services provided by the District compared to Zone 1. Thus, the assessment rate for Zone 2 is fifty percent (50%) of the Zone 1 rate. Similarly, Zone 2 will receive and specially benefit from half of the Communications and Economic Development services and all related administration.

5.7 Changes in Data

It is the intent of this Engineer’s Report that each parcel included in the District may be clearly identified. Every effort has been made to ensure that all parcels included in the District are consistent in the boundary description, the boundary map, and the assessment calculation table. However, if inconsistencies arise, the order of precedence shall be: 1) the assessment calculation table, 2) the boundary map, and 3) the boundary description.

If the ownership, parcel size, building size, or type of a parcel, changes during the term of this District, the assessment calculation may be modified accordingly.

6. Assessment Notice

During the hearing process, an Assessment Notice will be sent to owners of each parcel in the TPBID. The Assessment Notice provides an estimated assessment. The final individual assessment for any particular parcel may change, up or down, if the parcel size, building size, parcel type, and benefit zone differ from those used to calculate the amount found on the Assessment Notice. A list of parcels and the characteristics used to calculate the amount found on the Assessment Notice is provided within Appendix IV.

7. Time and Manner for Collecting Assessments

As provided by State Law, the TPBID assessment will appear as a separate line item on annual property tax bills prepared by the County of Alameda. Parcels that do not receive property tax bills will be invoiced by the TPBID on behalf of the City. Property tax bills are generally distributed in the fall, and payment is expected by lump sum or installment. The County of Alameda shall distribute funds collected to the City of Berkeley, which shall forward them to the TPBID. Existing laws for enforcement and appeal of property taxes, including penalties and interest, apply to the TPBID assessments.

7.1 Annual Maximum Assessment Rate Inflation

Each parcel's maximum assessment for a Service and Activity is determined by multiplying the maximum assessment rate per special benefit point by the parcel's total special benefit points for that particular Service and Activity. If the total special benefit points for all assessable parcels in the District change in future years, the maximum allowable annual assessment rate per special benefit point for each Activity and Service will not be recalculated. The maximum allowable annual assessment rate per special benefit point, plus the annual cost of living inflator, will remain fixed. The actual annual assessment rate per special benefit point will be calculated by dividing the fiscal year's total cost for each Service and Activity to be assessed by the total special benefit points for each Service and Activity, not to exceed the maximum allowable annual assessment rate per special benefit point for each Service and Activity for that fiscal year. The maximum allowable assessment rate per special benefit point is escalated each year on July 1 by the annual change in the February-to-February Consumer Price Index for all Urban Consumers, for the San Francisco-Oakland-Hayward, CA region, not to exceed 3% annually, beginning July 1, 2028.

In any given year, the assessments may be at any rate sufficient to meet the estimated budget and levied without undertaking an assessment ballot proceeding, as long as the actual assessment rate per special benefit point does not exceed the Maximum Assessment Rate per special benefit point for that fiscal year. If the change in CPI effective for any fiscal year is determined to be negative, the maximum assessment rate will remain unchanged from the previous fiscal year. The actual assessment rate may vary from year to year but will be no higher than the maximum rate.

In any given year, the assessments may be levied at any assessment rate sufficient to meet the estimated budget, as long as the actual assessment rate does not exceed the Maximum Assessment Rate for that fiscal year.

7.2 Future Changes to Parcel Characteristics and Land Use

Future changes to any of the parcel characteristics and land use classifications detailed in Section 4 will cause possible changes in the total assessment revenue. The assessment revenue for any given year will be the product of the District's parcel characteristics, land use classification, the resulting special benefit points and the budget in effect for such fiscal year. Development within the District that converts a previously undeveloped parcel to a developed land use, for example, will lead to possible increased assessment revenue, even if the assessment rate per special benefit point is not increased. By way of

example, when a previously undeveloped parcel develops into a single-family residential land use classification, the parcel will no longer be assessed as an undeveloped land use, but rather as a single-family residential parcel with the updated land use classification.

7.3 Data for Annual Assessment Calculations

Each year, as part of the assessment calculation procedures, the City or its designated consultant shall determine the land use and front footage for each parcel based on the County Assessor's use code or other supplementary information made available and deemed reliable. In the event the County Assessor's data is deemed to be unreliable, the City or its designated consultant shall utilize other sources of data including but not limited to City records, County Assessor's parcel maps, GIS data, and online research. Assessment amounts for each parcel may change over time in accordance with changes to parcel characteristics including land use classification and front footage.

7.4 Appeals

If any property owner believes the data used to calculate the assessment is inaccurate for any reason, the property owner shall submit, in writing, a request for review to the City. The property owner shall provide documentation to support the request for review. The City or its designated consultant shall review the request and provide a response to the property owner. The property owner must be current in the payment of all assessments when filing the request for review and must remain current during the review process.

If the review conducted by the City or its designated consultant results in the approval for changes to any parcel characteristics or land use classifications used to compute the assessment, the City or its designated consultant shall recalculate the assessment. When recalculating the assessment, the assessment rates actually applied in such fiscal year shall be used. Only the assessment for the parcel or parcels subject to review shall be recalculated.

If the recalculated assessment for the parcel or parcels being reviewed is less than the amount submitted to the County on the secured property tax roll, the difference shall be credited back to the property owner in a manner approved by the City. This credit shall be limited to the current fiscal year and the prior fiscal year, if applicable. The "fiscal year" shall follow the County's fiscal year for property taxes, from July 1 to June 30. The applicable fiscal year shall be determined by the date the request for review is submitted to the City.

The credit may be provided in the form of a check issued to the property owner, an adjustment to the current year's property tax roll (if possible), or a credit to the succeeding year's assessment thereby reducing the amount placed on the secured property tax roll for such year.

If the recalculated assessment is greater than the amount submitted to the County on the secured property tax roll, the City or its designated consultant shall apply the recalculated assessment to the succeeding year's property tax roll and no adjustments shall be made to the prior or current fiscal years' assessments.

In any dispute over parcel characteristic data used to compute assessments, the City or its designated consultant shall make a conclusive determination and its decision shall be final.

7.5 Method of Collection

The assessments will be collected annually on the Alameda County secured property tax roll. The assessments will be subject to the County's assigned due dates and late penalties. However, the City Manager (or his/her designee) may choose to collect the assessments in an alternate manner (including directly billing the property owner) as may be deemed appropriate or necessary by the City or as allowed by law.

8. Engineer's Letter

Pursuant to the Property and Business Improvement District Law of 1994, Section 36600 of California's Streets and Highways Code (the "1994 Act"), it is proposed that the Telegraph Property-Based Business Improvement District (the "District") be renewed. If renewed, assessments would be collected for up to 10 years (July 1, 2027 – June 30, 2038). Expenditure of those collected assessments can continue for up to six months after the end of the assessment collection period (December 31, 2038), at which point the District would then be terminated, if not further renewed.

This Engineer's Report presents the plans and specifications describing the improvements, services, and activities, an estimate of the costs of the improvements, maintenance, and activities for the District for the 2027/28 Fiscal Year. The Engineer's Report also includes an assessment diagram showing the area and properties to be assessed, and an assessment of the estimated costs of the Services and Activities, assessing the net amount upon all assessable lots and/or parcels within the District in proportion to the special benefit received in accordance with the PBID Law, Article XIIID of the Constitution of the State of California ("Article XIIID") and the Proposition 218 Omnibus Implementation Act ("Implementation Act"), (the PBID Law, Article XIIID, and Implementation Act are collectively referred to as the "Assessment Law").

The following maximum assessment is authorized in order to pay the estimated costs of the District improvements, services and activities to be paid by the assessable real property within the boundaries of the District in proportion to the special benefit received. The annual maximum assessment budget for the first operating year of the District is as follows:

Table 13. Annual Maximum Assessment Budget

Year	"Clean, Safe, & Beautification"	Communications & Economic Development	Management & Administration	Total Assessment	General Benefit (Non-Assessment Funded)	Total Budget	Surplus/Shortfall
2028	$1,235,470.00	$481,124.00	$233,406.00	**$1,687,987.14**	**$77,659.18**	**$1,950,000.00**	**($184,353.68)**
2029	$1,272,534.10	$495,557.72	$240,408.18	**1,738,626.75**	**79,988.95**	**2,008,500.00**	**($189,884.29)**
2030	$1,310,710.12	$510,424.45	$247,620.43	**1,790,785.55**	**82,388.62**	**2,068,755.00**	**($195,580.82)**
2031	$1,350,031.43	$525,737.19	$255,049.04	**1,844,509.12**	**84,860.28**	**2,130,817.65**	**($201,448.25)**
2032	$1,390,532.37	$541,509.30	$262,700.51	**1,899,844.39**	**87,406.09**	**2,194,742.18**	**($207,491.70)**
2033	$1,432,248.34	$557,754.58	$270,581.52	**1,956,839.72**	**90,028.27**	**2,260,584.44**	**($213,716.45)**
2034	$1,475,215.79	$574,487.22	$278,698.97	**2,015,544.92**	**92,729.12**	**2,328,401.98**	**($220,127.94)**
2035	$1,519,472.26	$591,721.83	$287,059.94	**2,076,011.26**	**95,511.00**	**2,398,254.04**	**($226,731.78)**
2036	$1,565,056.43	$609,473.49	$295,671.74	**2,138,291.60**	**98,376.33**	**2,470,201.66**	**($233,533.73)**
2037	$1,612,008.13	$627,757.69	$304,541.89	**2,202,440.35**	**101,327.61**	**2,544,307.71**	**($240,539.74)**
10-Year Total	**$14,163,278.97**	**$5,515,547.47**	**$2,675,738.21**	**$19,350,880.81**	**$104,367.44**	**$19,455,248.25**	**($2,113,408.39)**

The assessment methodology adheres to local and state laws. In making the assessments contained herein pursuant to the Law, Article XIIID of the Constitution of the State of California and the Proposition 218 Omnibus Implementation Act, commencing with Section 53750 of the Government Law (collectively referred to as the "Assessment Law"):

1. I identified all parcels which will have a special benefit conferred upon them from the installation, implementation and maintenance of the improvements, maintenance, and activities described in Section 4 to this Engineer's Report (the "Specially Benefited Parcels"). For particulars as to the identification of said parcels, reference is made to the Proposed Boundary Map, a copy of which is included in Section 8 of this Engineer's Report.
2. I have assessed the costs and expenses to install, implement and maintain the improvements, maintenance, and activities upon the Specially Benefited Parcels. In making such assessment:
    a. The proportionate special benefit derived by each Specially Benefited Parcel from the installation, implementation and maintenance of the improvements, maintenance, and activities was determined in relationship to the entirety of the costs;
    b. No assessment has been imposed on any Specially Benefited Parcel which exceeds the reasonable cost of the proportional special benefit conferred on such parcel from the installation, implementation and maintenance of improvements, maintenance, and activities; and
    c. Any general benefits from the installation, implementation and maintenance of improvements, maintenance, and activities have been quantified and separated from the special benefits and only special benefits have been assessed.

I, the undersigned, respectfully submit the enclosed Engineer's Report and, to the best of my knowledge, information and belief, the Engineer's Report, Assessments, and the Proposed Boundary Map herein have been prepared and computed in accordance with the Assessment Law.

By:_____

John G. Egan

Assessment Engineer

R.C.E. 14853

APPENDIX I – Maximum Annual Assessment Rates

The table below illustrates the maximum annual assessment rate by parcel type with the assumption that the rates will be increased annually by three percent (3%) with approval of the TPBMC Board. The maximum rates listed are a required disclosure and not the anticipated course of action.

Year	Commercial Zone 1	Commercial Zone 2	Residential Zone 1	Residential Zone 2	Nonprofit / Government / School Zone 1	Nonprofit / Government / School Zone 2
2028	$0.42868	$0.21434	$0.34295	$0.17147	$0.15433	$0.07716
2029	$0.44154	$0.22077	$0.35323	$0.17662	$0.15896	$0.07948
2030	$0.45479	$0.22739	$0.36383	$0.18192	$0.16372	$0.08186
2031	$0.46843	$0.23422	$0.37475	$0.18737	$0.16864	$0.08432

APPENDIX II – PBID Law

***** This document is current through the 2016 Supplement *****

(All 2015 legislation)

STREETS AND HIGHWAYS CODE

Division 18. Parking

Part 7. Property and Business Improvement District Law of 1994

Cal Sts & Hy Code Div. 18, Pt. 7 (2016)

CHAPTER 1. General Provisions [36600 - 36617]

ARTICLE 1. Declarations [36600 - 36604]

36600. Citation of part

This part shall be known and may be cited as the "Property and Business Improvement District Law of 1994."

36601. Legislative findings and declarations; Legislative guidance

The Legislature finds and declares all of the following:

(a) Businesses located and operating within business districts in some of this state's communities are economically disadvantaged, are underutilized, and are unable to attract customers due to inadequate facilities, services, and activities in the business districts.

(b) It is in the public interest to promote the economic revitalization and physical maintenance of business districts in order to create jobs, attract new businesses, and prevent the erosion of the business districts.

(c) It is of particular local benefit to allow business districts to fund business related improvements, maintenance, and activities through the levy of assessments upon the businesses or real property that receive benefits from those improvements.

(d) Assessments levied for the purpose of conferring special benefit upon the real property or businesses in a business district are not taxes for the general benefit of a city, even if property or persons not assessed receive incidental or collateral effects that benefit them.

(e) Property and business improvement districts formed throughout this state have conferred special benefits upon properties and businesses within their districts and have made those properties and businesses more useful by providing the following benefits:

(1) Crime reduction. A study by the Rand Corporation has confirmed a 12-percent reduction in the incidence of robbery and an 8-percent reduction in the total incidence of violent crimes within the 30 districts studied.

(2) Job creation.

(3) Business attraction.

(4) Business retention.

(5) Economic growth.

(6) New investments.

(f) With the dissolution of redevelopment agencies throughout the state, property and business improvement districts have become even more important tools with which communities can combat blight, promote economic opportunities, and create a clean and safe environment.

(g) Since the enactment of this act, the people of California have adopted Proposition 218, which added Article XIII D to the Constitution in order to place certain requirements and restrictions on the formation of, and activities, expenditures, and assessments by property-based districts. Article XIII D of the Constitution provides that property-based districts may only levy assessments for special benefits.

(h) The act amending this section is intended to provide the Legislature's guidance with regard to this act, its interaction with the provisions of Article XIII D of the Constitution, and the determination of special benefits in property-based districts.

(1) The lack of legislative guidance has resulted in uncertainty and inconsistent application of this act, which discourages the use of assessments to fund needed improvements, maintenance, and activities in property-based districts, contributing to blight and other underutilization of property.

(2) Activities undertaken for the purpose of conferring special benefits upon property to be assessed inherently produce incidental or collateral effects that benefit property or persons not assessed. Therefore, for special benefits to exist as a separate and distinct category from general benefits, the incidental or collateral effects of those special benefits are inherently part of those special benefits. The mere fact that special benefits produce incidental or collateral effects that benefit property or persons not assessed does not convert any portion of those special benefits or their incidental or collateral effects into general benefits.

(3) It is of the utmost importance that property-based districts created under this act have clarity regarding restrictions on assessments they may levy and the proper determination of special benefits. Legislative clarity with regard to this act will provide districts with clear instructions and courts with legislative intent regarding restrictions on property-based assessments, and the manner in which special benefits should be determined.

36602. Purpose of part

The purpose of this part is to supplement previously enacted provisions of law that authorize cities to levy assessments within property and business improvement districts, to ensure that those assessments conform to all constitutional requirements and are determined and assessed in accordance with the guidance set forth in this act. This part does not affect or limit any other provisions of law authorizing or providing for the furnishing of improvements or activities or the raising of revenue for these purposes.

36603. Preemption of authority or charter city to adopt ordinances levying assessments

Nothing in this part is intended to preempt the authority of a charter city to adopt ordinances providing for a different method of levying assessments for similar or additional purposes from those set forth in this

part. A property and business improvement district created pursuant to this part is expressly exempt from the provisions of the Special Assessment Investigation, Limitation and Majority Protest Act of 1931 (Division 4 (commencing with Section 2800)).

36603.5. Part prevails over conflicting provisions

Any provision of this part that conflicts with any other provision of law shall prevail over the other provision of law, as to districts created under this part.

36604. Severability

This part is intended to be construed liberally and, if any provision is held invalid, the remaining provisions shall remain in full force and effect. Assessments levied under this part are not special taxes.

ARTICLE 2. Definitions [36606 - 36616]

36606. "Activities"

"Activities" means, but is not limited to, all of the following that benefit businesses or real property in the district:

(a) Promotion of public events.

(b) Furnishing of music in any public place.

(c) Promotion of tourism within the district.

(d) Marketing and economic development, including retail retention and recruitment.

(e) Providing security, sanitation, graffiti removal, street and sidewalk cleaning, and other municipal services supplemental to those normally provided by the municipality.

(f) Other services provided for the purpose of conferring special benefit upon assessed businesses and real property located in the district.

36606.5. "Assessment"

"Assessment" means a levy for the purpose of acquiring, constructing, installing, or maintaining improvements and providing activities that will provide certain benefits to properties or businesses located within a property and business improvement district.

36607. "Business"

"Business" means all types of businesses and includes financial institutions and professions.

36608. "City"

"City" means a city, county, city and county, or an agency or entity created pursuant to Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 of Title 1 of the Government Code, the public member agencies of which includes only cities, counties, or a city and county, or the State of California.

36609. "City council"

"City council" means the city council of a city or the board of supervisors of a county, or the agency, commission, or board created pursuant to a joint powers agreement and which is a city within the meaning of this part.

36609.4. "Clerk"

"Clerk" means the clerk of the legislative body.

36609.5. "General benefit"

"General benefit" means, for purposes of a property-based district, any benefit that is not a "special benefit" as defined in Section 36615.5.

36610. "Improvement"

"Improvement" means the acquisition, construction, installation, or maintenance of any tangible property with an estimated useful life of five years or more including, but not limited to, the following:

(a) Parking facilities.

(b) Benches, booths, kiosks, display cases, pedestrian shelters and signs.

(c) Trash receptacles and public restrooms.

(d) Lighting and heating facilities.

(e) Decorations.

(f) Parks.

(g) Fountains.

(h) Planting areas.

(i) Closing, opening, widening, or narrowing of existing streets.

(j) Facilities or equipment, or both, to enhance security of persons and property within the area.

(k) Ramps, sidewalks, plazas, and pedestrian malls.

(l) Rehabilitation or removal of existing structures.

36611. "Management district plan"; "Plan"

"Management district plan" or "plan" means a proposal as defined in Section 36622.

36612. "Owners' association"

"Owners' association" means a private nonprofit entity that is under contract with a city to administer or implement improvements, maintenance, and activities specified in the management district plan. An owners' association may be an existing nonprofit entity or a newly formed nonprofit entity. An owners' association is a private entity and may not be considered a public entity for any purpose, nor may its board members or staff be considered to be public officials for any purpose. Notwithstanding this section, an owners' association shall comply with the Ralph M. Brown Act (Chapter 9 (commencing with Section 54950) of Part 1 of Division 2 of Title 5 of the Government Code), at all times when matters within the subject

matter of the district are heard, discussed, or deliberated, and with the California Public Records Act (Chapter 3.5 (commencing with Section 6250) of Division 7 of Title 1 of the Government Code), for all records relating to activities of the district.

36614. "Property"

"Property" means real property situated within a district.

36614.5. "Property and business improvement district"; "District"

"Property and business improvement district," or "district," means a property and business improvement district established pursuant to this part.

36614.6. "Property-based assessment"

"Property-based assessment" means any assessment made pursuant to this part upon real property.

36614.7. "Property-based district"

"Property-based district" means any district in which a city levies a property-based assessment.

36615. "Property owner"; "Business owner"; "Owner"

"Property owner" means any person shown as the owner of land on the last equalized assessment roll or otherwise known to be the owner of land by the city council. "Business owner" means any person recognized by the city as the owner of the business. "Owner" means either a business owner or a property owner. The city council has no obligation to obtain other information as to the ownership of land or businesses, and its determination of ownership shall be final and conclusive for the purposes of this part. Wherever this part requires the signature of the property owner, the signature of the authorized agent of the property owner shall be sufficient. Wherever this part requires the signature of the business owner, the signature of the authorized agent of the business owner shall be sufficient.

36615.5. "Special benefit"

"Special benefit" means, for purposes of a property-based district, a particular and distinct benefit over and above general benefits conferred on real property located in a district or to the public at large. Special benefit includes incidental or collateral effects that arise from the improvements, maintenance, or activities of property-based districts even if those incidental or collateral effects benefit property or persons not assessed. Special benefit excludes general enhancement of property value.

36616. "Tenant"

"Tenant" means an occupant pursuant to a lease of commercial space or a dwelling unit, other than an owner.

ARTICLE 3. Prior Law [36617- 36617.]

36617. Alternate method of financing certain improvements and activities; Effect on other provision

This part provides an alternative method of financing certain improvements and activities. The provisions of this part shall not affect or limit any other provisions of law authorizing or providing for the furnishing of improvements or activities or the raising of revenue for these purposes. Every improvement area

established pursuant to the Parking and Business Improvement Area Law of 1989 (Part 6 (commencing with Section 36500) of this division) is valid and effective and is unaffected by this part.

CHAPTER 2. Establishment [36620 - 36630]

36620. Establishment of property and business improvement district

A property and business improvement district may be established as provided in this chapter.

36620.5. Requirement of consent of city council

A county may not form a district within the territorial jurisdiction of a city without the consent of the city council of that city. A city may not form a district within the unincorporated territory of a county without the consent of the board of supervisors of that county. A city may not form a district within the territorial jurisdiction of another city without the consent of the city council of the other city.

36621. Initiation of proceeding; Petition of property or business owners in proposed district

(a) Upon the submission of a written petition, signed by the property or business owners in the proposed district who will pay more than 50 percent of the assessments proposed to be levied, the city council may initiate proceedings to form a district by the adoption of a resolution expressing its intention to form a district. The amount of assessment attributable to property or a business owned by the same property or business owner that is in excess of 40 percent of the amount of all assessments proposed to be levied, shall not be included in determining whether the petition is signed by property or business owners who will pay more than 50 percent of the total amount of assessments proposed to be levied.

(b) The petition of property or business owners required under subdivision (a) shall include a summary of the management district plan. That summary shall include all of the following:

(1) A map showing the boundaries of the district.

(2) Information specifying where the complete management district plan can be obtained.

(3) Information specifying that the complete management district plan shall be furnished upon request.

(c) The resolution of intention described in subdivision (a) shall contain all of the following:

(1) A brief description of the proposed improvements, maintenance, and activities, the amount of the proposed assessment, a statement as to whether the assessment will be levied on property or businesses within the district, a statement as to whether bonds will be issued, and a description of the exterior boundaries of the proposed district, which may be made by reference to any plan or map that is on file with the clerk. The descriptions and statements do not need to be detailed and shall be sufficient if they enable an owner to generally identify the nature and extent of the improvements, maintenance, and activities, and the location and extent of the proposed district.

(2) A time and place for a public hearing on the establishment of the property and business improvement district and the levy of assessments, which shall be consistent with the requirements of Section 36623.

36622. Contents of management district plan

The management district plan shall include, but is not limited to, all of the following:

(a) If the assessment will be levied on property, a map of the district in sufficient detail to locate each parcel of property and, if businesses are to be assessed, each business within the district. If the assessment will be levied on businesses, a map that identifies the district boundaries in sufficient detail to allow a business owner to reasonably determine whether a business is located within the district boundaries. If the assessment will be levied on property and businesses, a map of the district in sufficient detail to locate each parcel of property and to allow a business owner to reasonably determine whether a business is located within the district boundaries.

(b) The name of the proposed district.

(c) A description of the boundaries of the district, including the boundaries of benefit zones, proposed for establishment or extension in a manner sufficient to identify the affected property and businesses included, which may be made by reference to any plan or map that is on file with the clerk. The boundaries of a proposed property assessment district shall not overlap with the boundaries of another existing property assessment district created pursuant to this part. This part does not prohibit the boundaries of a district created pursuant to this part to overlap with other assessment districts established pursuant to other provisions of law, including, but not limited to, the Parking and Business Improvement Area Law of 1989 (Part 6 (commencing with Section 36500)). This part does not prohibit the boundaries of a business assessment district created pursuant to this part to overlap with another business assessment district created pursuant to this part. This part does not prohibit the boundaries of a business assessment district created pursuant to this part to overlap with a property assessment district created pursuant to this part.

(d) The improvements, maintenance, and activities proposed for each year of operation of the district and the maximum cost thereof. If the improvements, maintenance, and activities proposed for each year of operation are the same, a description of the first year's proposed improvements, maintenance, and activities and a statement that the same improvements, maintenance, and activities are proposed for subsequent years shall satisfy the requirements of this subdivision.

(e) The total annual amount proposed to be expended for improvements, maintenance, or activities, and debt service in each year of operation of the district. If the assessment is levied on businesses, this amount may be estimated based upon the assessment rate. If the total annual amount proposed to be expended in each year of operation of the district is not significantly different, the amount proposed to be expended in the initial year and a statement that a similar amount applies to subsequent years shall satisfy the requirements of this subdivision.

(f) The proposed source or sources of financing, including the proposed method and basis of levying the assessment in sufficient detail to allow each property or business owner to calculate the amount of the assessment to be levied against his or her property or business. The plan also shall state whether bonds will be issued to finance improvements.

(g) The time and manner of collecting the assessments.

(h) The specific number of years in which assessments will be levied. In a new district, the maximum number of years shall be five. Upon renewal, a district shall have a term not to exceed 10 years. Notwithstanding these limitations, a district created pursuant to this part to finance capital improvements

with bonds may levy assessments until the maximum maturity of the bonds. The management district plan may set forth specific increases in assessments for each year of operation of the district.

(i) The proposed time for implementation and completion of the management district plan.

(j) Any proposed rules and regulations to be applicable to the district.

(k) (1) A list of the properties or businesses to be assessed, including the assessor's parcel numbers for properties to be assessed, and a statement of the method or methods by which the expenses of a district will be imposed upon benefited real property or businesses, in proportion to the benefit received by the property or business, to defray the cost thereof.

(2) In a property-based district, the proportionate special benefit derived by each identified parcel shall be determined exclusively in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the activities. An assessment shall not be imposed on any parcel that exceeds the reasonable cost of the proportional special benefit conferred on that parcel. Only special benefits are assessable, and a property-based district shall separate the general benefits, if any, from the special benefits conferred on a parcel. Parcels within a property-based district that are owned or used by any city, public agency, the State of California, or the United States shall not be exempt from assessment unless the governmental entity can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit. The value of any incidental, secondary, or collateral effects that arise from the improvements, maintenance, or activities of a property-based district and that benefit property or persons not assessed shall not be deducted from the entirety of the cost of any special benefit or affect the proportionate special benefit derived by each identified parcel.

(l) In a property-based district, the total amount of all special benefits to be conferred upon the properties located within the property-based district.

(m) In a property-based district, the total amount of general benefits, if any.

(n) In a property-based district, a detailed engineer's report prepared by a registered professional engineer certified by the State of California supporting all assessments contemplated by the management district plan.

(o) Any other item or matter required to be incorporated therein by the city council.

36623. Procedure to levy assessment

(a) If a city council proposes to levy a new or increased property assessment, the notice and protest and hearing procedure shall comply with Section 53753 of the Government Code.

(b) If a city council proposes to levy a new or increased business assessment, the notice and protest and hearing procedure shall comply with Section 54954.6 of the Government Code, except that notice shall be mailed to the owners of the businesses proposed to be assessed. A protest may be made orally or in writing by any interested person. Every written protest shall be filed with the clerk at or before the time fixed for the public hearing. The city council may waive any irregularity in the form or content of any written protest. A written protest may be withdrawn in writing at any time before the conclusion of the public hearing. Each written protest shall contain a description of the business in which the person subscribing the protest is

interested sufficient to identify the business and, if a person subscribing is not shown on the official records of the city as the owner of the business, the protest shall contain or be accompanied by written evidence that the person subscribing is the owner of the business or the authorized representative. A written protest that does not comply with this section shall not be counted in determining a majority protest. If written protests are received from the owners or authorized representatives of businesses in the proposed district that will pay 50 percent or more of the assessments proposed to be levied and protests are not withdrawn so as to reduce the protests to less than 50 percent, no further proceedings to levy the proposed assessment against such businesses, as contained in the resolution of intention, shall be taken for a period of one year from the date of the finding of a majority protest by the city council.

(c) If a city council proposes to conduct a single proceeding to levy both a new or increased property assessment and a new or increased business assessment, the notice and protest and hearing procedure for the property assessment shall comply with subdivision (a), and the notice and protest and hearing procedure for the business assessment shall comply with subdivision (b). If a majority protest is received from either the property or business owners, that respective portion of the assessment shall not be levied. The remaining portion of the assessment may be levied unless the improvement or other special benefit was proposed to be funded by assessing both property and business owners.

36624. Changes to proposed assessments

At the conclusion of the public hearing to establish the district, the city council may adopt, revise, change, reduce, or modify the proposed assessment or the type or types of improvements, maintenance, and activities to be funded with the revenues from the assessments. Proposed assessments may only be revised by reducing any or all of them. At the public hearing, the city council may only make changes in, to, or from the boundaries of the proposed property and business improvement district that will exclude territory that will not benefit from the proposed improvements, maintenance, and activities. Any modifications, revisions, reductions, or changes to the proposed assessment district shall be reflected in the notice and map recorded pursuant to Section 36627.

36625. Resolution of formation

(a) If the city council, following the public hearing, decides to establish a proposed property and business improvement district, the city council shall adopt a resolution of formation that shall include, but is not limited to, all of the following:

(1) A brief description of the proposed improvements, maintenance, and activities, the amount of the proposed assessment, a statement as to whether the assessment will be levied on property, businesses, or both within the district, a statement on whether bonds will be issued, and a description of the exterior

boundaries of the proposed district, which may be made by reference to any plan or map that is on file with the clerk. The descriptions and statements need not be detailed and shall be sufficient if they enable an owner to generally identify the nature and extent of the improvements, maintenance, and activities and the location and extent of the proposed district.

(2) The number, date of adoption, and title of the resolution of intention.

(3) The time and place where the public hearing was held concerning the establishment of the district.

(4) A determination regarding any protests received. The city shall not establish the district or levy assessments if a majority protest was received.

(5) A statement that the properties, businesses, or properties and businesses in the district established by the resolution shall be subject to any amendments to this part.

(6) A statement that the improvements, maintenance, and activities to be conferred on businesses and properties in the district will be funded by the levy of the assessments. The revenue from the levy of assessments within a district shall not be used to provide improvements, maintenance, or activities outside the district or for any purpose other than the purposes specified in the resolution of intention, as modified by the city council at the hearing concerning establishment of the district.

(7) A finding that the property or businesses within the area of the property and business improvement district will be benefited by the improvements, maintenance, and activities funded by the proposed assessments, and, for a property-based district, that property within the district will receive a special benefit.

(8) In a property-based district, the total amount of all special benefits to be conferred on the properties within the property-based district.

(b) The adoption of the resolution of formation and, if required, recordation of the notice and map pursuant to Section 36627 shall constitute the levy of an assessment in each of the fiscal years referred to in the management district plan.

36626. Resolution establishing district

If the city council, following the public hearing, desires to establish the proposed property and business improvement district, and the city council has not made changes pursuant to Section 36624, or has made changes that do not substantially change the proposed assessment, the city council shall adopt a resolution establishing the district. The resolution shall contain all of the information specified in Section 36625.

36627. Notice and assessment diagram

Following adoption of the resolution establishing district assessments on properties pursuant to Section 36625 or Section 36626, the clerk shall record a notice and an assessment diagram pursuant to Section 3114. No other provision of Division 4.5 (commencing with Section 3100) applies to an assessment district created pursuant to this part.

36628. Establishment of separate benefit zones within district; Categories of businesses

The city council may establish one or more separate benefit zones within the district based upon the degree of benefit derived from the improvements or activities to be provided within the benefit zone and may impose a different assessment within each benefit zone. If the assessment is to be levied on businesses, the city council may also define categories of businesses based upon the degree of benefit that each will derive from the improvements or activities to be provided within the district and may impose a different assessment or rate of assessment on each category of business, or on each category of business within each zone.

36628.5. Assessments on businesses or property owners

The city council may levy assessments on businesses or on property owners, or a combination of the two, pursuant to this part. The city council shall structure the assessments in whatever manner it determines corresponds with the distribution of benefits from the proposed improvements, maintenance, and activities, provided that any property-based assessment conforms with the requirements set forth in paragraph (2) of subdivision (k) of Section 36622.

36629. Provisions and procedures applicable to benefit zones and business categories

All provisions of this part applicable to the establishment, modification, or disestablishment of a property and business improvement district apply to the establishment, modification, or disestablishment of benefit zones or categories of business. The city council shall, to establish, modify, or disestablish a benefit zone or category of business, follow the procedure to establish, modify, or disestablish a property and business improvement district.

36630. Expiration of district; Creation of new district

If a property and business improvement district expires due to the time limit set pursuant to subdivision (h) of Section 36622, a new management district plan may be created and the district may be renewed pursuant to this part.

CHAPTER 3. Assessments [36631 - 36637]

36631. Time and manner of collection of assessment; Delinquent payments

The collection of the assessments levied pursuant to this part shall be made at the time and in the manner set forth by the city council in the resolution levying the assessment. Assessments levied on real property may be collected at the same time and in the same manner as for the ad valorem property tax, and may provide for the same lien priority and penalties for delinquent payment. All delinquent payments for assessments levied pursuant to this part may be charged interest and penalties.

36632. Assessments to be based on estimated benefit; Classification of real property and businesses; Exclusion of

residential and agricultural property

(a) The assessments levied on real property pursuant to this part shall be levied on the basis of the estimated benefit to the real property within the property and business improvement district. The city council may classify properties for purposes of determining the benefit to property of the improvements and activities provided pursuant to this part.

(b) Assessments levied on businesses pursuant to this part shall be levied on the basis of the estimated benefit to the businesses within the property and business improvement district. The city council may classify businesses for purposes of determining the benefit to the businesses of the improvements and activities provided pursuant to this part.

(c) Properties zoned solely for residential use, or that are zoned for agricultural use, are conclusively presumed not to benefit from the improvements and service funded through these assessments, and shall not be subject to any assessment pursuant to this part.

36633. Time for contesting validity of assessment

The validity of an assessment levied under this part shall not be contested in any action or proceeding unless the action or proceeding is commenced within 30 days after the resolution levying the assessment is adopted pursuant to Section 36626. Any appeal from a final judgment in an action or proceeding shall be perfected within 30 days after the entry of judgment.

36634. Service contracts authorized to establish levels of city services

The city council may execute baseline service contracts that would establish levels of city services that would continue after a property and business improvement district has been formed.

36635. Request to modify management district plan

The owners' association may, at any time, request that the city council modify the management district plan. Any modification of the management district plan shall be made pursuant to this chapter.

36636. Modification of plan by resolution after public hearing; Adopting of resolution of intention

(a) Upon the written request of the owners' association, the city council may modify the management district plan after conducting one public hearing on the proposed modifications. The city council may modify the improvements and activities to be funded with the revenue derived from the levy of the assessments by adopting a resolution determining to make the modifications after holding a public hearing on the proposed modifications. If the modification includes the levy of a new or increased assessment, the city council shall comply with Section 36623. Notice of all other public hearings pursuant to this section shall comply with both of the following:

(1) The resolution of intention shall be published in a newspaper of general circulation in the city once at least seven days before the public hearing.

(2) A complete copy of the resolution of intention shall be mailed by first class mail, at least 10 days before the public hearing, to each business owner or property owner affected by the proposed modification.

(b) The city council shall adopt a resolution of intention which states the proposed modification prior to the public hearing required by this section. The public hearing shall be held not more than 90 days after the adoption of the resolution of intention.

36637. Reflection of modification in notices recorded and maps

Any subsequent modification of the resolution shall be reflected in subsequent notices and maps recorded pursuant to Division 4.5 (commencing with Section 3100), in a manner consistent with the provisions of Section 36627.

CHAPTER 3.5. Financing [36640- 36640.]

36640. Bonds authorized; Procedure; Restriction on reduction or termination of assessments

(a)The city council may, by resolution, determine and declare that bonds shall be issued to finance the estimated cost of some or all of the proposed improvements described in the resolution of formation adopted pursuant to Section 36625, if the resolution of formation adopted pursuant to that section

provides for the issuance of bonds, under the Improvement Bond Act of 1915 (Division 10 (commencing with Section 8500)) or in conjunction with Marks-Roos Local Bond Pooling Act of 1985 (Article 4 (commencing with Section 6584) of Chapter 5 of Division 7 of Title 1 of the Government Code). Either act, as the case may be, shall govern the proceedings relating to the issuance of bonds, although proceedings under the Bond Act of 1915 may be modified by the city council as necessary to accommodate assessments levied upon business pursuant to this part.

(b) The resolution adopted pursuant to subdivision (a) shall generally describe the proposed improvements specified in the resolution of formation adopted pursuant to Section 36625, set forth the estimated cost of those improvements, specify the number of annual installments and the fiscal years during which they are to be collected. The amount of debt service to retire the bonds shall not exceed the amount of revenue estimated to be raised from assessments over 30 years.

(c) Notwithstanding any other provision of this part, assessments levied to pay the principal and interest on any bond issued pursuant to this section shall not be reduced or terminated if doing so would interfere with the timely retirement of the debt.

CHAPTER 4. Governance [36650 - 36651]

36650. Report by owners' association; Approval or modification by city council

(a) The owners' association shall cause to be prepared a report for each fiscal year, except the first year, for which assessments are to be levied and collected to pay the costs of the improvements, maintenance, and activities described in the report. The owners' association's first report shall be due after the first year of operation of the district. The report may propose changes, including, but not limited to, the boundaries of the property and business improvement district or any benefit zones within the district, the basis and method of levying the assessments, and any changes in the classification of property, including any categories of business, if a classification is used.

(b) The report shall be filed with the clerk and shall refer to the property and business improvement district by name, specify the fiscal year to which the report applies, and, with respect to that fiscal year, shall contain all of the following information:

(1) Any proposed changes in the boundaries of the property and business improvement district or in any benefit zones or classification of property or businesses within the district.

(2) The improvements, maintenance, and activities to be provided for that fiscal year.

(3) An estimate of the cost of providing the improvements, maintenance, and activities for that fiscal year.

(4) The method and basis of levying the assessment in sufficient detail to allow each real property or business owner, as appropriate, to estimate the amount of the assessment to be levied against his or her property or business for that fiscal year.

(5) The estimated amount of any surplus or deficit revenues to be carried over from a previous fiscal year.

(6) The estimated amount of any contributions to be made from sources other than assessments levied pursuant to this part.

(c) The city council may approve the report as filed by the owners' association or may modify any particular contained in the report and approve it as modified. Any modification shall be made pursuant to Sections 36635 and 36636. The city council shall not approve a change in the basis and method of levying assessments that would impair an authorized or executed contract to be paid from the revenues derived from the levy of assessments, including any commitment to pay principal and interest on any bonds issued on behalf of the district.

36651. Designation of owners' association to provide improvements, maintenance, and activities

The management district plan may, but is not required to, state that an owners' association will provide the improvements, maintenance, and activities described in the management district plan. If the management district plan designates an owners' association, the city shall contract with the designated nonprofit corporation to provide services.

CHAPTER 5. Renewal [36660- 36660.]

36660. Renewal of district; Transfer or refund of remaining revenues; District term limit

(a) Any district previously established whose term has expired, or will expire, may be renewed by following the procedures for establishment as provided in this chapter.

(b) Upon renewal, any remaining revenues derived from the levy of assessments, or any revenues derived from the sale of assets acquired with the revenues, shall be transferred to the renewed district. If the renewed district includes additional parcels or businesses not included in the prior district, the remaining revenues shall be spent to benefit only the parcels or businesses in the prior district. If the renewed district does not include parcels or businesses included in the prior district, the remaining revenues attributable to these parcels shall be refunded to the owners of these parcels or businesses.

(c) Upon renewal, a district shall have a term not to exceed 10 years, or, if the district is authorized to issue bonds, until the maximum maturity of those bonds. There is no requirement that the boundaries, assessments, improvements, or activities of a renewed district be the same as the original or prior district.

CHAPTER 6. Disestablishment [36670 - 36671]

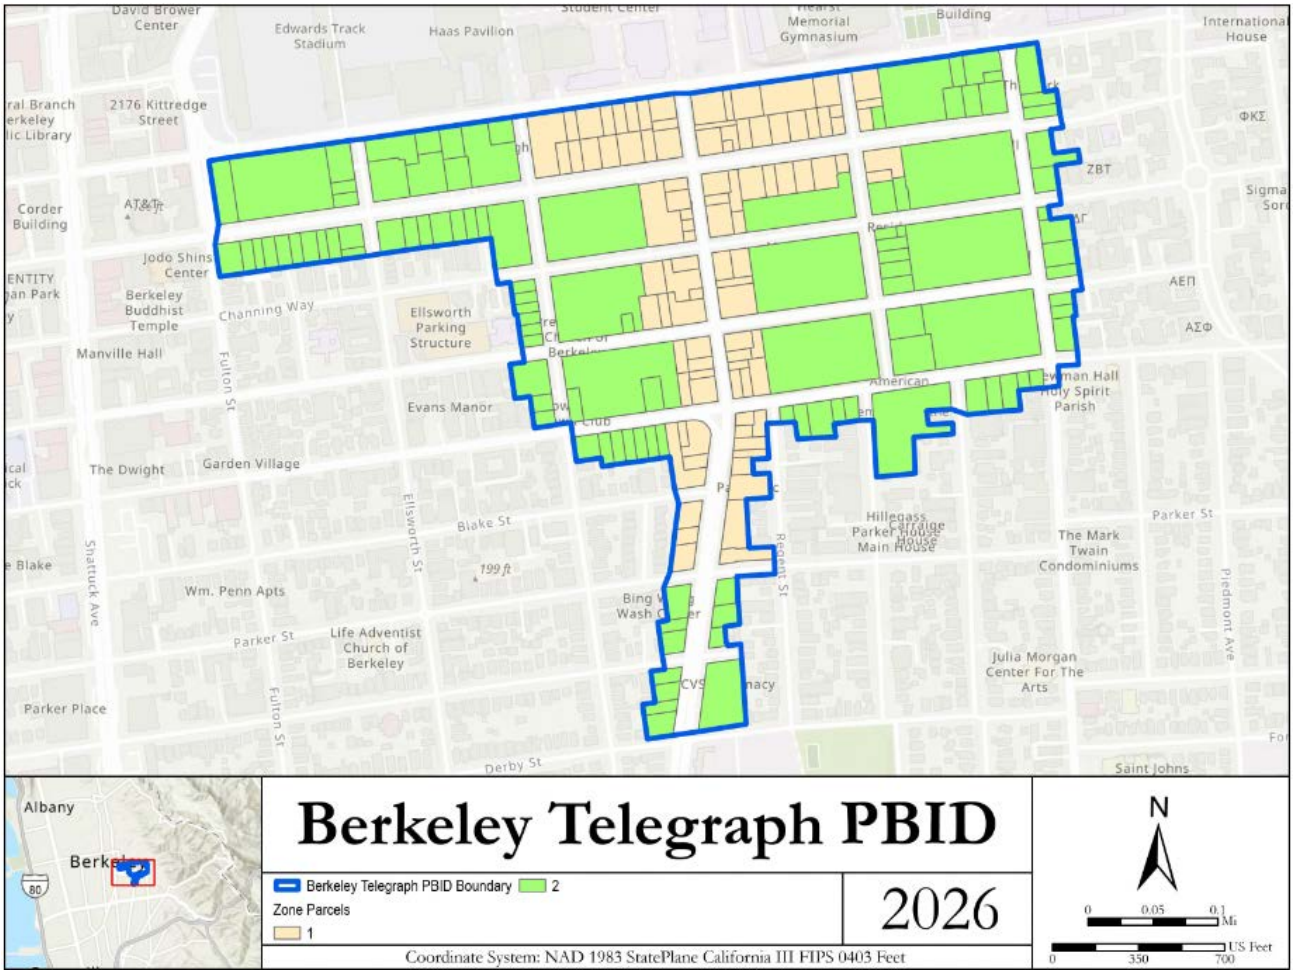
36670. Circumstances permitting disestablishment of district; Procedure

(a) Any district established or extended pursuant to the provisions of this part, where there is no indebtedness, outstanding and unpaid, incurred to accomplish any of the purposes of the district, may be disestablished by resolution by the city council in either of the following circumstances:

(1) If the city council finds there has been misappropriation of funds, malfeasance, or a violation of law in connection with the management of the district, it shall notice a hearing on disestablishment.

(2) During the operation of the district, there shall be a 30-day period each year in which assessees may request disestablishment of the district. The first such period shall begin one year after the date of establishment of the district and shall continue for 30 days. The next such 30-day period shall begin two years after the date of the establishment of the district. Each successive year of operation of the district shall have such a 30-day period. Upon the written petition of the owners or authorized representatives of real property or the owners or authorized representatives of businesses in the area who pay 50 percent or

more of the assessments levied, the city council shall pass a resolution of intention to disestablish the district. The city council shall notice a hearing on disestablishment.



(b) The city council shall adopt a resolution of intention to disestablish the district prior to the public hearing required by this section. The resolution shall state the reason for the disestablishment, shall state the time and place of the public hearing, and shall contain a proposal to dispose of any assets acquired with the revenues of the assessments levied within the property and business improvement district. The notice of the hearing on disestablishment required by this section shall be given by mail to the property owner of each parcel or to the owner of each business subject to assessment in the district, as appropriate. The city shall conduct the public hearing not less than 30 days after mailing the notice to the property or business owners. The public hearing shall be held not more than 60 days after the adoption of the resolution of intention.

36671. Refund of remaining revenues upon disestablishment or expiration without renewal of district; Calculation of refund; Use of outstanding revenue collected after disestablishment of district

(a) Upon the disestablishment or expiration without renewal of a district, any remaining revenues, after all outstanding debts are paid, derived from the levy of assessments, or derived from the sale of assets acquired with the revenues, or from bond reserve or construction funds, shall be refunded to the owners of the property or businesses then located and operating within the district in which assessments were levied by applying the same method and basis that was used to calculate the assessments levied in the fiscal year in which the district is disestablished or expires. All outstanding assessment revenue collected after disestablishment shall be spent on improvements and activities specified in the management district plan.

(b) If the disestablishment occurs before an assessment is levied for the fiscal year, the method and basis that was used to calculate the assessments levied in the immediate prior fiscal year shall be used to calculate the amount of any refund.

APPENDIX III – Boundary Map

APPENDIX IV – Parcel Assessment Calculations

APPENDIX V – Budget by Zone

The table below illustrates the approximate annual assessment expenditures by program and zone, assuming that the budget increases by three percent (3%) per year and that there are no adjustments to the budget allocations.

Year	"Clean, Safe, Beautification" Zone 1	"Clean, Safe, Beautification" Zone 2	Communication & Economic Development Zone 1	Communication & Economic Development Zone 2	Management & Administration Zone 1	Management & Administration Zone 2	Total Zone 1	Total Zone 2
2028	$799,105.22	$436,364.78	$311,192.26	$169,931.74	$150,967.61	$82,438.39	$1,261,265.08	$688,734.92
2029	$823,078.37	$449,455.73	$320,528.02	$175,029.70	$155,496.64	$84,911.54	$1,299,103.03	$709,396.97
2030	$847,770.72	$462,939.40	$330,143.87	$180,280.59	$160,161.54	$87,458.89	$1,338,076.12	$730,678.88
2031	$873,203.84	$476,827.58	$340,048.18	$185,689.00	$164,966.38	$90,082.66	$1,378,218.41	$752,599.24
2032	$899,399.96	$491,132.41	$350,249.63	$191,259.67	$169,915.37	$92,785.14	$1,419,564.96	$775,177.22
2033	$926,381.96	$505,866.38	$360,757.12	$196,997.46	$175,012.84	$95,568.69	$1,462,151.91	$798,432.54
2034	$954,173.42	$521,042.37	$371,579.83	$202,907.39	$180,263.22	$98,435.75	$1,506,016.47	$822,385.51
2035	$982,798.62	$536,673.64	$382,727.22	$208,994.61	$185,671.12	$101,388.82	$1,551,196.96	$847,057.08
2036	$1,012,282.58	$552,773.85	$394,209.04	$215,264.45	$191,241.25	$104,430.49	$1,597,732.87	$872,468.79
2037	$1,042,651.06	$569,357.07	$406,035.31	$221,722.38	$196,978.49	$107,563.40	$1,645,664.86	$898,642.85

DRAFT

APPENDIX VI – Baseline Services

City Of Berkeley Baseline Services in the Telegraph Property-Based Business Improvement District Area

The Baseline Services listed below are provided by the City of Berkeley ("City") in the Telegraph Business Improvement District ("TBID") area. The Telegraph Baseline Services listed below are provided by the City Manager's Office, Department of Public Works, the Police Department, the Department of Parks, Recreation and Waterfront, the Office of Economic Development, and the Department of Health, Housing and Community Services. From time to time, the City may need to adjust the level of Telegraph Baseline Services due to resource constraints and staffing availability. Also, funding for portions of these services comes through non-City grant sources and may be subject to budget pressures outside of City control.

Department of Public Works

PW provides the following services within the Telegraph BID boundaries:

Street Mechanical Sweeping: Mechanical sweeping services are provided once a month in the following areas: Carleton Street, Dana Street, Durant Avenue (Fulton to Dana), and Ellsworth Street.

Additional Sidewalk Sweeping or pressure washing: Staff are assigned to sweep or wash as scheduled as overtime funding becomes available for special events, holiday fairs and football games.

Public Trash Receptacle Maintenance: Public trash receptacles are emptied daily. Repair of trash receptacles are scheduled as needed and generally completed within two weeks.

Street and Traffic Signal Maintenance: Street lights are re-lamped or replaced as needed and via regular preventative maintenance. Traffic signals undergo annual inspection and are repaired and maintained as needed. Reports of maintenance activities can be provided upon request.

Public Graffiti Removal: Public areas for graffiti removal performed by PW staff upon Service Request. Service Requests for graffiti on public property are generally responded to within seven (7) working days upon notification. In the event Public Works lacks sufficient staff to perform graffiti removal, the City will furnish the TBID with the necessary graffiti removal supplies and paint.

Curb Painting and Sign Maintenance: Maintenance of curb and street markings and of traffic, warning, and informational signs will be prioritized and scheduled based on the City Traffic Engineer's professional assessment of condition, visibility, and safety need. Markings are generally evaluated for renewal approximately every eighteen (18) months and service requests are addressed in order of priority as determined by the City Traffic Engineer and or delegate.

Illegal Dumping and Unattended Property Removal: Illegal dumping within the public right of way is either removed by Public Works staff, or the responsible party is located and charged with removing it through the Code Enforcement process. Public Works is generally able to remove illegally dumped items within three business days.

Parking Services: Parking garage operations and maintenance of metered areas (pay stations) within the boundaries of the Telegraph BID.

Sidewalk Repairs: Minor sidewalk repairs such as grinding or patching within 7 business days. Permanent repairs will be made in coordination with Engineering and the property owner. Tree well work will be coordinated with Forestry.

Stormwater System Maintenance: Semi-annual cleaning of stormwater systems in commercial areas including gutters and storm drains.

Sewer Maintenance: Maintenance of sewer infrastructure and 24-hour service response for backups, overflows, emergencies.

Street Signage: Replacement of street signage that is no longer legible or visible, as resources allow.

Protest or Demonstration Assistance: At the request of BPD, PW staff assist with traffic and pedestrian control during large protests and demonstrations. PW staff may also secure public fixtures to prevent damage.

Commercial Business Emergency Board-ups: PW staff will perform emergency board-ups during extreme weather or other emergencies adequate to ensure public safety. Otherwise, private property owners bear the responsibility to make vandalization repairs and secure against breaches. Berkeley Police will notify PW's restoration contractor to assist with private property board ups if needed due to vandalism, fire (or other emergency).

Berkeley Police Department

The TBID area is covered primarily by Police Beat 7.

Community Services Bureau – Bicycle Officers: The Community Services Bureau (CSB) of the Berkeley Police Department is composed of a Lieutenant, Sergeant, and Community Services Officer (CSO). This team serves as a point of contact for both businesses and residents. The CSB focuses on identifying and addressing ongoing public safety concerns using a problem-oriented policing framework that emphasizes collaborative, tailored interventions that serve the community and the individual.

The Bicycle Team's primary responsibility is to provide patrol coverage in the city's business districts and other areas identified as high priority based on community concerns and department data. While their core focus remains in retail districts, this team also functions as the Department's most flexible resource. As such, they regularly support search warrant operations, assist with community events, and fill unstaffed patrol beats. The Bicycle Team applies a problem-solving approach to policing, prioritizing long-term, community-based solutions in locations within the TBID.

The availability of these resources depends on the department's staffing level and the city's overall public safety needs.

Department of Parks, Recreation and Waterfront (Parks Division)

Within the TBID boundaries the Parks Division maintains the landscaping at the median at the intersection of Dwight and Telegraph and over 500 municipal street trees.

Landscape Maintenance Gardener Unit: Staff perform routine and responsive maintenance activities including but not limited to the following:

- As needed graffiti abatement;
- Mowing, edging, and trimming;
- Weed abatement;
- Removal of unattended property; and
- Collection of litter and debris.

Urban Forestry Unit: The unit plants new trees in empty tree wells, and elsewhere in the area (resources permitting), removes dead and diseased trees, prunes trees and roots, responds to emergency calls (e.g., fallen trees and branches), and provides other maintenance as needed.

City Manager's Office

Office of Economic Development (OED) - OED provides a range of services to Telegraph area businesses, cultural institutions, property owners and potential investors. OED staff provide permit assistance, site location assistance, marketing assistance and access to economic data. OED staff also work closely with TBID staff and provide staffing support for the Telegraph PBID Owners' Association Board of Directors.

Neighborhood Services Division-*Homeless Outreach/Homeless Response Team*: Homeless Outreach services are available to persons who are homeless and wanting assistance with securing community resources. These services are designed to assist people who are having difficulty using housing, financial, medical, and social services resources. The Homeless Response Team prioritizes health and safety issues and unavoidable operational impacts when triaging requests for outreach across the City. *Housing and Homeless Services Programs*: The City contracts with community agency partners to provide homeless people in the Telegraph District with a range of services including showers, case management and access to emergency, transitional and permanent housing opportunities. *Code Enforcement Unit*: This unit enforces the Berkeley Municipal Code against a wide range of Municipal Code violations in the Telegraph District, and coordinates with other departments to enforce other code violations (Fire, Building, Zoning, etc.) as needed. The enforcement activities of this unit are typically complaint driven.

Department of Health Housing and Community Services

Homeless Outreach: Homeless Outreach services, provided by community agency partners with whom the Department contracts are available to persons who are homeless and wanting assistance with securing community resources. These services are designed to assist people who are having difficulty using housing, financial, medical, and social services resources.

PETITION TO RENEW THE TELEGRAPH PROPERTY-BASED BUSINESS IMPROVEMENT DISTRICT

(Pursuant to Sec. 36600 et seq. of the Calif. Streets and Highway Code)

This is a petition to initiate special assessment proceedings to renew the Property-based Business Improvement District (PBID) in accordance with the Property and Business Improvement District Law of 1994, California Streets and Highways Code Sections 36600 et seq., for the purpose of undertaking and implementing the Management District Plan, a summary of which is attached.

Legal Owner: City Of Berkeley
Owner % of Total Assessment: 5.67%

APN:	**Parcel Address *(if known)***	**2028 Parcel Assessment**
055- -1879-006-01	2431 Channing Way	$95,403.95
		Annual Total $95,403.95

To complete your Petition please:
1) Check your affirmation YES,
2) Print your name, e-mail and phone number below, and
3) Sign and date below.

☐ YES, I approve of the proposed maximum assessment of $95,403.95 on the parcel(s) identified on this preliminary petition.

(Print) Name and Title of Owner of Record or an Authorized Representative *Email address* *Phone No.*

Signature of Owner of Record or the Representative Legally Authorized and Entitled to Sign this Petition *Date*

Please return this Preliminary Petition signed and dated to:

Telegraph Property & Business Mgmt. Corp.
2437 Durant Ave Suite 206
Berkeley, CA 94704

Telegraph Business Improvement District

Strategic Plan 2027 - 2032

TELEGRAPH BERKELEY 2032

Imagine it's 2032, and you are returning to the Telegraph district after some time away.

You notice many positive changes, including ...

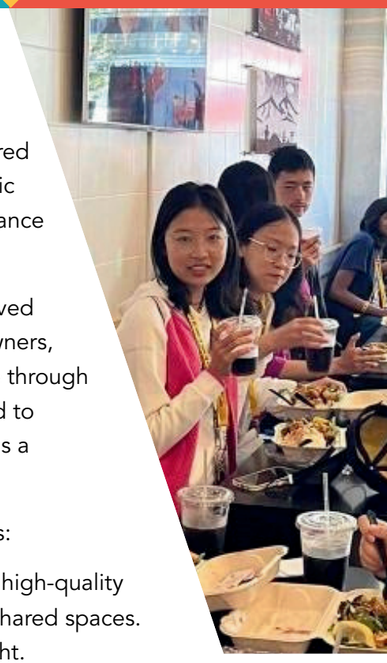
- A dramatic gateway monument on Telegraph Avenue, along with a matching monument rising above the Dwight Triangle and coordinated banners all along Telegraph, Durant, and throughout the district.
    - The Telegraph-Channing garage is fresh, clean, and inviting appearance. Parking availability is clear, and pricing is easy to understand. 2-hour spaces are available on the ground floor, with longer-term parking on upper floors. The parking areas are clean and free of litter or graffiti. The stairways are well-lit stairway, and vibrant businesses line the ground floor arcade.
        - A Berkeley Street Fair boasts multiple branded stages, many bands, and tons of vendors. Everyone seems to be participating.
            - The sidewalks are bustling with people, there are few visible trash cans lining the streets, you don't see much litter or graffiti, most storefronts are open for business, and many have a fresh coat of paint or other signs of pride.
                - The many students frequenting the district are joined by long-term Berkeleyans and tourists.
            - The district feels more like a community and celebrates a spirit that is just as bright as its iconic reputation.
        - Monthly merchant meetings are entertaining events where folks share information and problem solve, with lots of laughter and recognition of striving entrepreneurs.
    - The new People's Park is surrounded by handsome new residential buildings while the park itself is teeming with people. There are people playing ping pong, foosball, checkers, and other games. Musicians perform regularly and sell seasonal treats. Park Concierges keep an eye on everything, encourage play, and make sure things are working smoothly.
- District stalwarts like Moe's Books and Rasputin Music are thriving and joined by newer neighbors who also appear successful.

Dear Neighbors, Merchants, and Friends,

We are standing at a transformative moment for Telegraph. Our district is evolving rapidly, shaped by new housing, a growing resident base, and a shared hunger to see Telegraph thrive. This is our moment to be fiercely opportunistic —capturing this momentum to bust open new possibilities, and radically enhance the quality of life for everyone who steps foot in our district.

The Telegraph Business Improvement District is proud of what we have achieved together. Through close collaboration between small businesses, property owners, the city, and the university, we have effectively managed our commercial core through major transitions. We are now introducing a bold new Strategic Plan designed to preserve the unique soul of Berkeley while aggressively cultivating its future as a bustling, year-round destination.

To turn this vision into reality, we are leaning into these high-impact strategies:



- **Boosting the Public Realm:** Shifting from temporary fixes to permanent, high-quality investments that elevate the cleanliness, safety, and visual appeal of our shared spaces. We want our streets bursting with energy and community life day and night.
- **Seizing Year-Round Opportunities:** Building a resilient, non-stop district calendar that celebrates our eclectic culture, locks in steady foot traffic through academic breaks; ensuring that our economy thrives every single day of the year.
- **Championing Economic Vitality:** Deepening our commitment to the small business economy by marketing Telegraph's unique character, aggressively reducing vacancies, and attracting diverse commercial investments.
- **Bold Leadership and Advocacy:** Elevating our role as a trusted convener to cut through bureaucratic red tape, align private and institutional partners, and champion swift, decisive action.

This plan is more than a road map; it is an active commitment to honor the legacy of Telegraph while seizing every opportunity to build a legendary future. The potential right now is limitless. We invite you to join us in championing the character, culture, and relentless prosperity of our community.

Onward!

Alex Knox
Executive Director

Kevin Gordon
Board President

ABOUT THE ORGANIZATION & STRATEGIC PLANNING PROCESS

The Telegraph Business Improvement District (TBID) encompasses the historic commercial and cultural corridors anchoring the southern edge of the UC Berkeley campus along the iconic Telegraph promenade. To support this vibrant community, the district provides dedicated street cleaning, safety hospitality, and district marketing services.

Between September 2025 and June 2026, TBID worked with Uncommon Bridges, a leading firm in the place-management industry, to develop this strategic plan through three phases: assessment, planning, and implementation.

Phase 1: Assessment
The first phase was a thorough assessment of current conditions, based on input from many stakeholders – including business and property owners, residents, TBID board members, UC Berkeley students, and institutional partners – through surveys, focus groups, individual interviews, walking tours, and facilitated discussions.

The assessment highlighted several issues to be addressed toward the district's long-term success:

- Iconic History & Reputation
- Reconciling Transience with Regional Destination Appeal
- Property Owner Disconnection
- Resetting the Bar for Public Safety Perceptions and the Social Crisis
- Transportation and Congestion
- Institutional Advocacy and Development Barriers

Phase 2: Planning
In response to these findings, TBID revisited and updated its vision, mission, and core values to ensure they accurately reflect the district's current realities and desired future.

A series of planning work sessions with board members and community partners helped align stakeholders on the organization's strategic priorities for emphasis in the years ahead: Leadership, Economic Vitality, the Public Realm, Marketing & Branding, and Organizational Development. The work groups discussed critical issues and defined aspirational goals and measurable objectives in pursuit of the district's vision.

Phase 3: Implementation
In the final phase, TBID staff, board members, and community leaders developed practical implementation actions and critical first steps to make this plan possible. This comprehensive process positions TBID to effectively serve its stakeholders and strengthen Telegraph for years to come.

2027 Reauthorization
With the 2027 reauthorization of the district approaching, this strategic plan articulates stakeholder consensus around organizational and district priorities. It is the foundation on which to build a consensus-driven Management Plan for and successful reauthorization of the Telegraph Property-based Business Improvement District.

TBID STRATEGIC PLAN

VISION

Telegraph is the soul of Berkeley:
a welcoming crossroads where iconic history
meets discovery and bold expression.

MISSION

As the gateway to the world's best public university,
the Telegraph BID champions the district's unique character and
prosperity through advocacy, leadership, and collaborative stewardship.

VALUES

STEWARDSHIP Focused on economic impact.

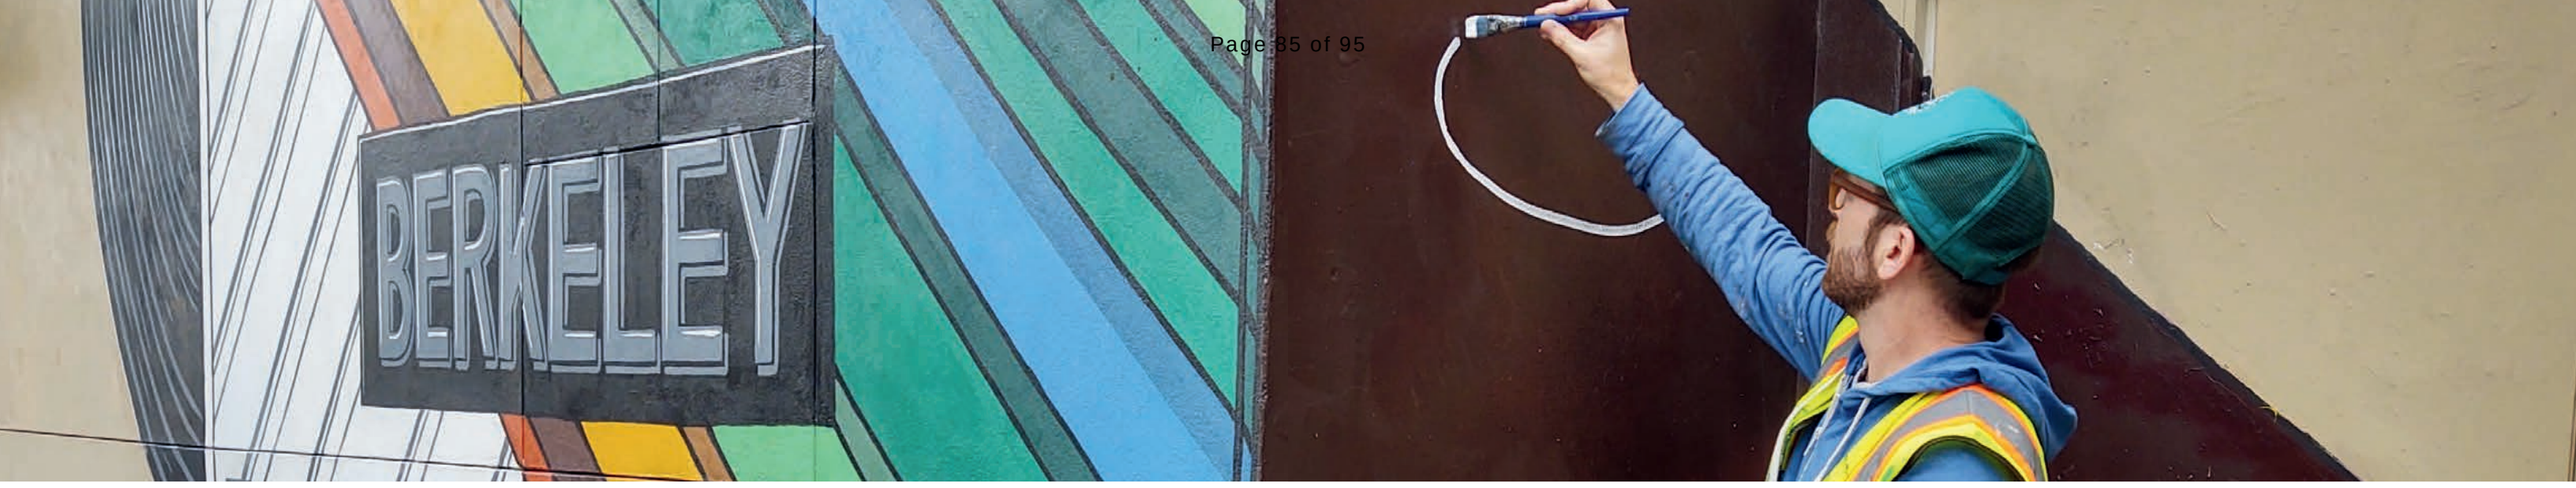
COLLABORATION Genuine partnership across the community.

AUTHENTICITY Emphasizing genuine community connection.

LEADERSHIP Elevating vision while generating value.

COMMUNITY CARE A high-priority focus on local support.

STRATEGIC DIRECTIONS



Increase role as a valued convener, partner, and co-leader

Substantially increase direct services and champion a higher standard

Substantially increase marketing, events, and data

Substantially increase economic growth

Substantially increase presence and impact

GOALS

2027 - 2032

LEADERSHIP

TBID is a valued convener of businesses, neighbors, the city and university to steward Telegraph's transformation with its evolving soul intact.

PUBLIC REALM

The Telegraph corridor is a delightful and attractive promenade embodying vitality, safety, and community caring.

MARKETING & EVENTS

Telegraph takes its rightful place at the forefront of people's minds as where Berkeley's enviable international reputation began and where it lives.

ECONOMIC VITALITY

The Telegraph District is a thriving, year-round destination where a vibrant mix of retail, dining and high-quality public spaces naturally attract and serve a broader clientele.

ORGANIZATIONAL DEVELOPMENT

TBID substantially broadens the organization's impact as a champion, manager, and steward of the public realm for the next 10 years.

LEADERSHIP

Increase role as a valued convener, partner, and co-leader.

Goal

TBID is a valued convener of businesses, neighbors, the city and university to steward Telegraph's transformation with its evolving soul intact.

Objective

A. TBID leverages its partnerships to build a **collective narrative** about the district's cultural character and future development.

B. TBID is recognized as a **meaningful influencer** in helping businesses, the city, and the university make progress on their shared plans for the Telegraph neighborhood.

C. TBID is known as a **primary go-to resource** supporting and advocating for business and property owner investments that support the Telegraph vision.

D. TBID reconciles **merchant priorities** with the **district's needs**.

E. TBID will lead **advocacy** in support of Telegraph's vision for urban design, transportation, public safety, and real estate development.

Metrics

- Public awareness of TBID impact and district priorities
- Advocacy agenda is in place and visibly active
- Demand for advocacy support and public relations assistance

PUBLIC REALM

Substantially increase direct services and champion a higher standard.

Goal

The Telegraph corridor is a delightful and attractive promenade embodying vitality, safety, and community caring.

Objective

A. Substantially reduce the visibility of **garbage** in Telegraph's public areas.

B. Meaningfully upgrade the district's standards for **cleanliness, public safety, and visual appeal** through direct services and beautification.

C. Conceive, champion, and activate **public gathering spaces** that are attractive to the district's clientele of all ages.

D. Actively champion **transportation** and **parking** policies and **physical infrastructure** that ensure the district's easy access and safety, day and night.

E. TBID will actively participate in community partnerships in support of **services** and **community care** for those in need.

Metrics

- Number of waste bins on sidewalks and public areas
- People using gathering spaces
- Number of waste bin infractions

MARKETING & EVENTS

Substantially increase marketing, events, and data.

Goal

Telegraph takes its rightful place at the forefront of people's minds as where Berkeley's enviable international reputation began and where it lives.

Objective

A. Elevate **Telegraph's brand** to further reflect the soul of Berkeley and define Telegraph as central to the Berkeley experience.

B. Expand **visual markers** of the brand throughout the district, including unique infrastructure, gateway signage, street furniture, and banners.

C. Establish **revenue-generating events** that are self-sustaining, expand capacity, and drive visitors to Telegraph and its businesses.

D. Develop and effectively utilize audience **data**.

E. Assess, revise, and maintain a robust and consistent **calendar** of marketing campaigns, events, and activations to draw new and existing visitors to Telegraph, elevating the district's reputation, brand, and small business economy.

Metrics

- Visible brand markers
- Earned media reflecting brand narrative
- Net revenue from TBID run events
- Attendance at all events in the district

ECONOMIC VITALITY

Substantially increase economic growth through research, information, and active management of public spaces.

Goal

The Telegraph District is a thriving, year-round destination where a vibrant mix of retail, dining and high-quality public spaces naturally attract and serve a broader clientele.

Objective

A. TBID will work toward a role in day-to-day activation and maintenance of **key public spaces**, including certain University- and City-owned parks and public areas.

B. TBID will pursue a role in managing the **Telegraph-Channing Garage**, including parking management, retail leasing, and day-to-day operations.

C. TBID will become active in **retail retention**, **recruitment**, and **development** through research, data, vision, branding, and curation.

D. TBID will optimize the district's **business atmosphere** and **cultural relevance** to capture the full economic potential of campus visitors while expanding Telegraph's commercial appeal.

Metrics

- Storefront occupancy and turnover rate
- Number of People in People's Park
- Parking occupancy in the Telegraph-Channing Garage
- Retail occupancy & sales in the Telegraph-Channing Garage

ORGANIZATION

Substantially increase presence and impact, through board engagement, resources, and visible leadership.

Goal

TBID substantially broadens the organization's impact as a champion, manager, and steward of the public realm for the next 10 years.

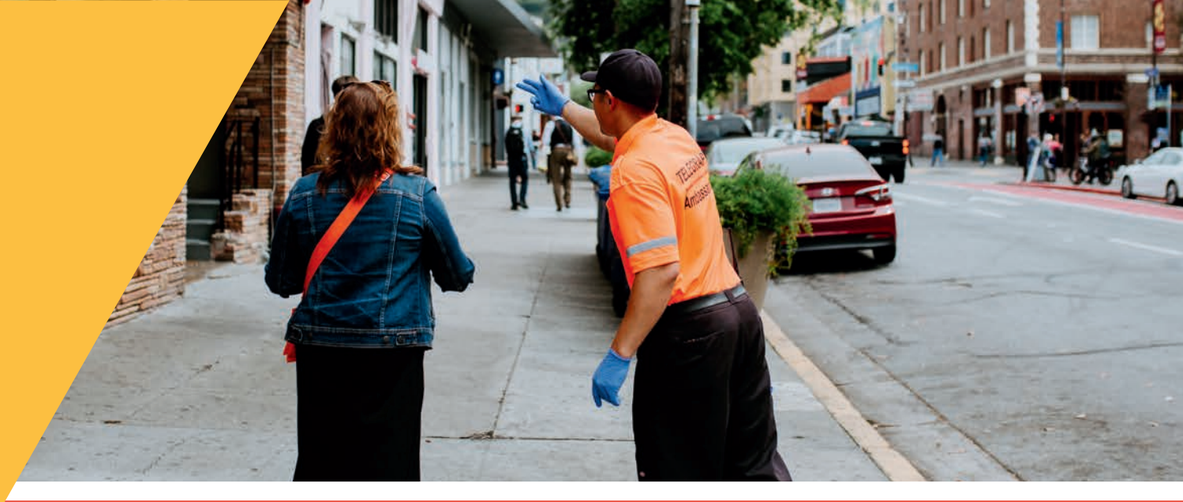
Objective

A.TBID doubles its collection and analysis of useful **data** about business, property, and community assets, showcasing the district and the organization's value.

B.The Business Improvement District is **renewed** with appropriate scope and resources.

C.TBID's **board** is visible, engaged, and impactful, reflecting the organization's leadership role in the district.

D.TBID is a **trusted resource** with extensive relationships, making connections between public, private, and nonprofit interests, and continuously engaging its always-changing audience.



E.TBID's **non-assessment revenues** grow substantially as business, property, government, philanthropic, and individual interests recognize TBID's effectiveness.

Metrics

- District data points tracked
- Votes in favor of TBID renewal
- Total non-assessment revenue

CURRENT OPERATIONS

The Telegraph PBID is a special benefit district in which 100% of collected assessments are reinvested directly into the Telegraph corridor to enhance the district. Currently, it is supported by an annual operating budget of approximately $1 million, which is funded by district property owners, including the University of California, and the City of Berkeley.

The PBID runs five core service areas:

- **Clean, Safe, & Crisis Response:** Delivers 240 hours per week of year-round field deployment dedicated to street cleanliness, graffiti mitigation, and specialized crisis de-escalation support.
- **Stewardship & Community Care:** Provides dedicated care for, performs district-wide weed abatement, refreshes public fixtures, and offers direct guidance to community members navigating quality of life or public safety issues.
- **Public Infrastructure:** Manages and maintains the 24/7 public restroom facility at Channing Way, installs sidewalk planters and public art projects, and installs holiday lighting and seasonal décor.
- **Events & Marketing:** Drives immediate foot traffic to local merchants through targeted campaigns, including Telegraph Boba Day, Second Sundays, student orientation promotions, and robust district-themed social media growth.
- **Public Leadership & Advocacy:** Conducts routine engagement with local officials to drive funding and infrastructure priorities, represents district interests in public policy groups, and provides strategic stakeholder feedback on neighborhood housing and mixed-use development projects.

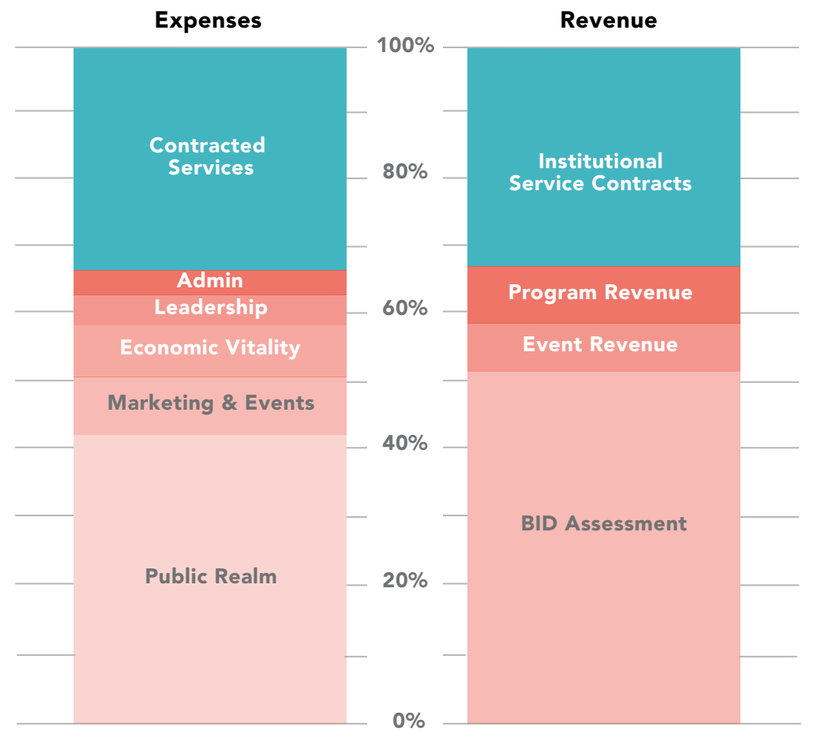
ELEVATING OUR DISTRICT

Established 20 years ago, TBID is preparing for its first reauthorization in a decade. TBID's next chapter must focus on strengthening the organization to meet Telegraph's changing needs. This strategic plan provides a foundation for the organization to establish and maintain a higher standard for the public realm and to support meaningful economic growth by attracting a larger and more diverse clientele to the district's businesses and its increasingly outstanding public spaces and facilities.

IMPLEMENTATION

To operationalize this vision and deliver high-impact results, TBID will implement the following targeted organizational upgrades.

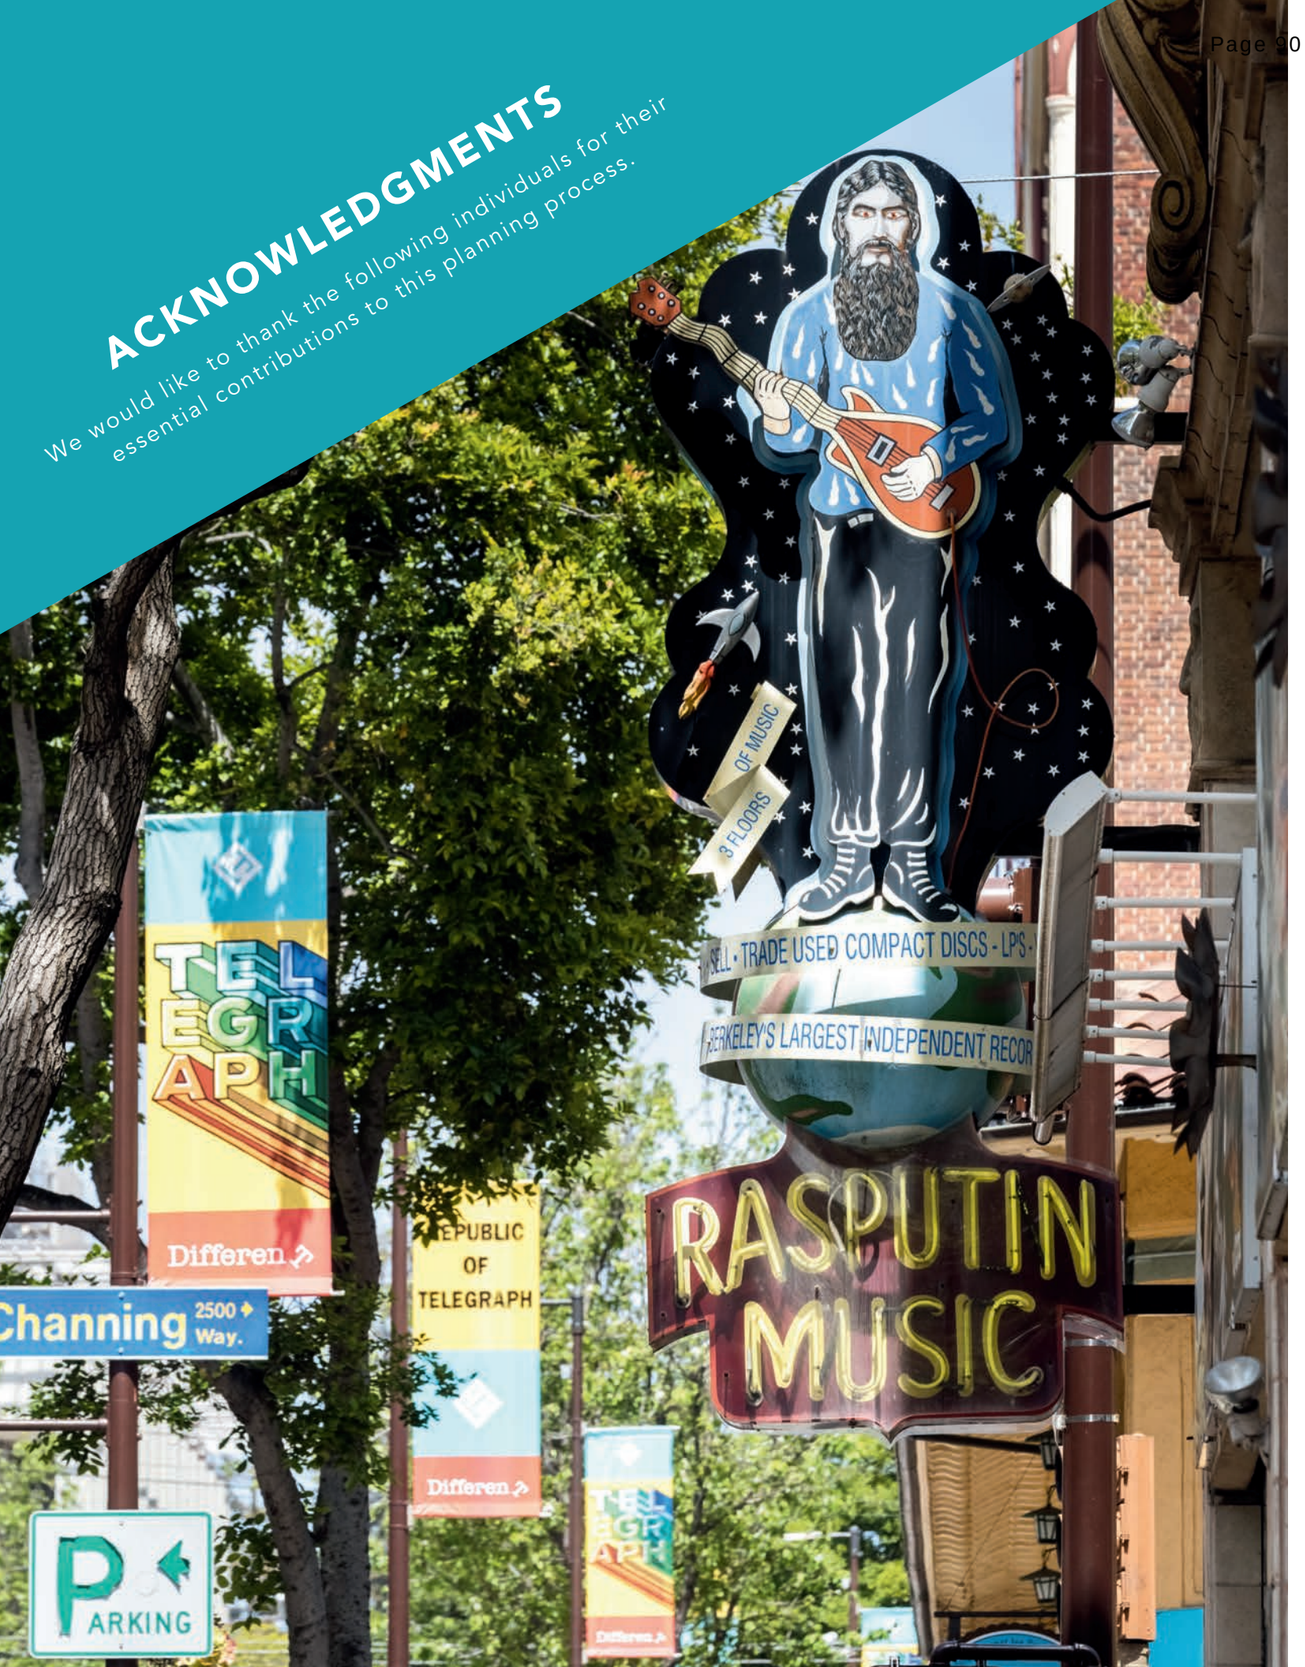
Organizational Capacity:



- Align operations with industry standards
- Add strategic program leaders

Community Focus:

- Elevate board leadership
- Prioritize business engagement
- Heighten district advocacy



Program Upgrades:

- Negotiate institutional service contracts
- Upgrade ambassador services
- Strengthen research & analytics
- Build event infrastructure
- Secure recurring non-assessment revenue

ACKNOWLEDGMENTS

We would like to thank the following individuals for their essential contributions to this planning process.

Telegraph Business Improvement District (TBID) Board of Directors

- Kevin Gordon, Gordon Commercial, TBID President

Telegraph Business Improvement District
Strategic Plan

City Manager's Office

October 14, 2026

Mr. Alex Knox
Executive Director
Telegraph Property & Business Management Corporation
(dba) Telegraph Business Improvement District
2437 Durant Avenue, Suite 206
Berkeley, CA 94704

Dear Mr. Knox:

The City of Berkeley is supportive of The Telegraph Property & Business Management Corporation (TPBMC)'s work to reestablish the Telegraph Property and Business Improvement District (TPBID or TBID) in the Telegraph area. We understand that reestablishing the TBID would ensure the resources available for Telegraph revitalization and build the capacity of the TBID/City partnership in promoting a safe, clean and economically vital campus-adjacent Telegraph Area.

The City has historically provided a set of base-level or "baseline" services in the Telegraph area, as outlined in the attached document. Each relevant City department and division was asked to describe their services and staff is committed to continuing to deliver these services in a consistent and professional way into the future subject to funding availability. As the economy continues to fluctuate there may be times when monetary constraints cause the City to reduce budgets affecting base-level or baseline services.

If you have any questions, please feel free to contact me or David White for further discussion or clarification.

Sincerely,

Paul Buddenhagen
City Manager

CC: David White, Deputy City Manager
Eleanor Hollander, Economic Development Manager

2027

City Of Berkeley Baseline Services in the Telegraph Business Improvement District Area

The Baseline Services listed below are provided by the City of Berkeley ("City") in the Telegraph Business Improvement District ("TBID") area. The Telegraph Baseline Services listed below are provided by the City Manager's Office, Department of Public Works, the Police Department, the Department of Parks, Recreation and Waterfront, the Office of Economic Development, and the Department of Health, Housing and Community Services. From time to time, the City may need to adjust the level of Telegraph Baseline Services due to resource constraints and staffing availability. Also, funding for portions of these services comes through non-City grant sources and may be subject to budget pressures outside of City control.

Department of Public Works (PW)

PW provides the following services within the Telegraph BID boundaries:

Street Mechanical Sweeping: Mechanical sweeping services are provided once a month in the following areas: Carleton Street, Dana Street, Durant Avenue (Fulton to Dana), and Ellsworth Street.

Additional Sidewalk Sweeping or pressure washing: Staff are assigned to sweep or wash as scheduled as overtime funding becomes available for special events, holiday fairs and football games.

Public Trash Receptacle Maintenance: Public trash receptacles are emptied daily. Repair of trash receptacles are scheduled as needed and generally completed within two weeks.

Street and Traffic Signal Maintenance: Street lights are re-lamped or replaced as needed and via regular preventative maintenance. Traffic signals undergo annual inspection and are repaired and maintained as needed. Reports of maintenance activities can be provided upon request.

Public Graffiti Removal: Public areas for graffiti removal performed by PW staff upon Service Request. Service Requests for graffiti on public property are generally responded to within seven (7) working days upon notification. In the event Public Works lacks sufficient staff to perform graffiti removal, the City will furnish the TBID with the necessary graffiti removal supplies and paint.

Curb Painting and Sign Maintenance: Maintenance of curb and street markings and of traffic, warning, and informational signs will be prioritized and scheduled based on the City Traffic Engineer's professional assessment of condition, visibility, and safety need. Markings are generally evaluated for renewal approximately every eighteen (18) months and service requests are addressed in order of priority as determined by the City Traffic Engineer and or delegate.

Illegal Dumping and Unattended Property Removal: Illegal dumping within the public right of way is either removed by Public Works staff, or the responsible party is located and charged with removing it through the Code Enforcement process. Public Works is generally able to remove illegally dumped items within three business days.

Parking Services: Parking garage operations and maintenance of metered areas (pay stations) within the boundaries of the Telegraph BID.

Sidewalk Repairs: Minor sidewalk repairs such as grinding or patching within 7 business days. Permanent repairs will be made in coordination with Engineering and the property owner. Tree well work will be coordinated with Forestry.

Stormwater System Maintenance: Semi-annual cleaning of stormwater systems in commercial areas including gutters and storm drains.

Sewer Maintenance: Maintenance of sewer infrastructure and 24-hour service response for backups, overflows, emergencies.

Street Signage: Replacement of street signage that is no longer legible or visible, as resources allow.

Protest or Demonstration Assistance: At the request of BPD, PW staff assist with traffic and pedestrian control during large protests and demonstrations. PW staff may also secure public fixtures to prevent damage.

Commercial Business Emergency Board-ups: PW staff will perform emergency board-ups during extreme weather or other emergencies adequate to ensure public safety. Otherwise, private property owners bear the responsibility to make vandalization repairs and secure against breaches. Berkeley Police will notify PW's restoration contractor to assist with private property board ups if needed due to vandalism, fire (or other emergency).

Berkeley Police Department (BPD)
The TBID area is covered primarily by Police Beat 7.

Community Services Bureau – Bicycle Officers
The Community Services Bureau (CSB) of the Berkeley Police Department is composed of a Lieutenant, Sergeant, and Community Services Officer (CSO). This team serves as a point of contact for both businesses and residents. The CSB focuses on identifying and addressing ongoing public safety concerns using a problem-oriented policing framework that emphasizes collaborative, tailored interventions that serve the community and the individual.

The Bicycle Team's primary responsibility is to provide patrol coverage in the city's business districts and other areas identified as high priority based on community concerns and department data. While their core focus remains in retail districts, this team also functions as the Department's most flexible resource. As such, they regularly support search warrant operations, assist with community events, and fill unstaffed patrol beats. The Bicycle Team applies a problem-solving approach to policing, prioritizing long-term, community-based solutions in locations within the TBID.

The availability of these resources depends on the department's staffing level and the city's overall public safety needs.

Department of Parks, Recreation and Waterfront (Parks Division)
Within the TBID boundaries the Parks Division maintains the landscaping at the median at the intersection of Dwight and Telegraph and over 500 municipal street trees.

Landscape Maintenance Gardener Unit: Staff perform routine and responsive maintenance activities including but not limited to the following:

- As needed graffiti abatement;
- Mowing, edging, and trimming;
- Weed abatement;
- Removal of unattended property; and
- Collection of litter and debris.

Urban Forestry Unit: The unit plants new trees in empty tree wells, and elsewhere in the area (resources permitting), removes dead and diseased trees, prunes trees and roots, responds to emergency calls (e.g., fallen trees and branches), and provides other maintenance as needed.

City Manager's Office

Office of Economic Development (OED)

OED provides a range of services to Telegraph area businesses, cultural institutions, property owners and potential investors. OED staff provide permit assistance, site location assistance, marketing assistance and access to economic data. OED staff also work closely with TBID staff and provide staffing support for the Telegraph PBID Owners' Association Board of Directors.

Neighborhood Services Division

Homeless Outreach/Homeless Response Team: Homeless Outreach services are available to persons who are homeless and wanting assistance with securing community resources. These services are designed to assist people who are having difficulty using housing, financial, medical, and social services resources. The Homeless Response Team prioritizes health and safety issues and unavoidable operational impacts when triaging requests for outreach across the City.

Housing and Homeless Services Programs: The City contracts with community agency partners to provide homeless people in the Telegraph District with a range of services including showers, case management and access to emergency, transitional and permanent housing opportunities.

Code Enforcement Unit: This unit enforces the Berkeley Municipal Code against a wide range of Municipal Code violations in the Telegraph District, and coordinates with other departments to enforce other code violations (Fire, Building, Zoning, etc.) as needed. The enforcement activities of this unit are typically complaint driven.

Department of Health Housing and Community Services

Homeless Outreach: Homeless Outreach services, provided by community agency partners with whom the Department contracts are available to persons who are homeless and wanting assistance with securing community resources. These services are designed to assist people who are having difficulty using housing, financial, medical, and social services resources.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Gilman, Director, Health, Housing, and Community Services

Subject: Acceptance of Fiscal Year 2027 Donations from Meals on Wheels of Alameda County (MOWAC) for the Berkeley Meals on Wheels Program

RECOMMENDATION

Adopt a Resolution accepting donations for the Berkeley Meals on Wheels Program in a projected amount of $185,000 from the Meals on Wheels of Alameda County (MOWAC) agency, for Fiscal Year 2027 (FY2027).

FISCAL IMPACTS OF RECOMMENDATION

The donations will be received and deposited on a quarterly basis into Fund 111 Fund-Raising Activities and will be appropriated as part of the First Amendment to the FY 2027 Annual Appropriations Ordinance. These donations will support the cost of hourly personnel and operating expenses needed to provide meals to home-bound seniors by the City of Berkeley Meals on Wheels program.

CURRENT SITUATION AND ITS EFFECTS

The Berkeley Meals on Wheels program contributes to the City's Strategic Plan goal to be a customer-focused organization that provides excellent, timely, easily accessible service to the community, particularly serving the older adult, homebound community. The Berkeley Meals on Wheels program provides approximately 50,000 nutritious meals to over 250 seniors each year.

MOWAC is a private, non-profit agency that raises funds for Meals on Wheels programs in Alameda County. MOWAC provides special grant funding and donations to programs to support the delivery of meals to home-bound seniors.

Effective January 1, 2026, local agencies are required to satisfy noticing requirements for certain contracts for services that meet the criteria outlined in Government Code Section 3504.1 as amended by AB 339. This is a revenue contract, and it does not meet the criteria in Government Code Section 3504.1 and is exempt from the noticing requirement.

BACKGROUND

The City of Berkeley Meals on Wheels program is funded by an annual grant contract with the Alameda County Area Agency on Aging, donations by clients and community members and funding from the City's General Fund. Each Meals on Wheels program in the County is expected to support unfunded costs of the program to meet community needs. MOWAC helps programs meet additional needs by conducting its own fundraising efforts for the benefit of all programs countywide.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The Berkeley Meals on Wheels program packages its meals in compostable containers to reduce landfill waste. The program also offers volunteer bicycle delivery routes.

RATIONALE FOR RECOMMENDATION

Donations received from MOWAC will provide the Berkeley Meals on Wheels program with significant financial support that can be directly applied to both personnel and operating expenses for the program.

ALTERNATIVE ACTIONS CONSIDERED

Refusing donations from MOWAC would not be consistent with the City's Strategic Plan goals or its efforts to sustain an Age-Friendly Berkeley and is not recommended.

RESOLUTION NO. ##,###-N.S.

FISCAL YEAR 2027 MEALS ON WHEELS OF ALAMEDA COUNTY DONATIONS FOR THE BERKELEY MEALS ON WHEELS PROGRAM

WHEREAS, the Meals on Wheels of Alameda County (MOWAC) Agency's mission is to raise funds for Meals on Wheels programs in Alameda County, including Berkeley Meals on Wheels; and

WHEREAS, Alameda County distributes these funds on a quarterly and proportional basis to Meals on Wheels programs and special grant requests throughout Alameda County; and

WHEREAS, Berkeley Meals on Wheels provides approximately 50,000 nutritious meals to over 250 seniors each year; and

WHEREAS, MOWAC donations will assist in covering personnel costs or providing meals to homebound seniors; and

WHEREAS, the donations will be deposited into Fund 111 Fund-Raising Activities and will be appropriated as part of the First Amendment to the FY 2027 Annual Appropriations Ordinance; and

WHEREAS, the revenue contract is exempt from the noticing requirements set forth in Government Code Section 3504.1.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or their designee is authorized to accept donations from the Meals on Wheels of Alameda County Agency, estimated at $185,000, including any additional amounts received, to support personnel and operating costs for providing meals to home-bound seniors through the City of Berkeley Meals on Wheels program.

November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Gilman, Director, Health, Housing & Community Services Department

Subject: Contracts for Behavioral Health Early Intervention Services

RECOMMENDATION

Adopt five Resolutions authorizing the City Manager or designee to execute Behavioral Health Services Act (BHSA) funded contracts and any amendments, with the following vendors outlined below, for behavioral health early intervention services in an amount not to exceed $1,500,000 ($300,000 per each contract) for the term of December 1, 2026, to June 30, 2029:

1.) Village of Love Foundation: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for African Americans;
2.) East Bay Sanctuary Covenant: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Latinos/Latinas/Latine;
3.) Center for Independent Living: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Older Adults;
4.) Pacific Center for Human Growth: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Transition Age Youth in the Lesbian, Gay, Bisexual, Transgender, Queer, Agender, Plus (LGBTQIA+) population; and
5.) Youth Spirit Artworks: For $100,000 a year for three years, for an amount not to exceed $300,000, for behavioral health early intervention services for Transition Age Youth.

FISCAL IMPACTS OF RECOMMENDATION

Funding from BHSA revenue received from the State of California in the amount of $500,000 is available in the Fiscal Year 2027 budget in Fund 315 BHSS.

Funding for Fiscal Years 2028 and 2029 ($500,000 a year) will be included in future year budgets.

CURRENT SITUATION AND ITS EFFECTS

On June 16, 2026, by Resolution No. 72,318-N.S., the City of Berkeley BHSA Fiscal Years 2027-2029 Three-Year Integrated Plan (BHSA IP) was approved by City Council. The approved BHSA IP includes funding for behavioral health early intervention services for the following diverse populations: African Americans, Latino/Latina/Latinx (Latine); Lesbian, Gay, Bisexual, Transgender, Queer, Intersex, Agender, Plus (LGBTQIA+), Older Adults, and Transition Age Youth.

In August 2026, through Bid Specification No. 26-11793-C, a Request for Proposal (RFP) was executed to obtain vendors to provide early intervention services for these populations. Following the scoring of proposals by a Review Panel that included City staff and a community member, the proposed vendors were the chosen recommended bidders to provide behavioral health early intervention services to the specified populations.

The RFP process resulted in five proposed vendors to provide services to each of the targeted populations. Two of the proposed vendors (Pacific Center for Human Growth, and Youth Spirit Artworks) will provide services for the Transition Age Youth Population. While it was originally envisioned that one of the populations to receive early intervention services through this RFP process would be the LGBTQIA+ population, the only proposal received for services specific to this population were for Transition Age Youth. The Pacific Center for Human Growth proposal will serve Transition Age Youth who specifically identify as LGBTQIA+. Youth Spirit Artworks will provide services to the larger Transition Age Youth population. Although not originally planned, funding two vendors to serve this youth population is in line with community input received in the planning for the BHSA IP, as services for Transition Age Youth were deemed as the highest rated need in Berkeley.

Effective January 1, 2026, local agencies are required to satisfy noticing requirements for certain contracts for services that meet the criteria outlined in Government Code Section 3504.1 as amended by AB 339. Each contract is subject to the requirements of Government Code Section 3504.1 and the noticing requirements have been satisfied. All five contracts will advance the Strategic Plan goal to champion and demonstrate social and racial equity.

BACKGROUND

On July 1, 2026, the Behavioral Health Services Act (BHSA) became effective. BHSA modernized and replaced the previous Mental Health Services Act (MHSA) State legislation which adds a 1% tax on every dollar of personal income over $1 million. BHSA revenues are allocated to mental health/behavioral health jurisdictions across the state to be utilized on local programming and housing interventions for individuals experiencing significant mental health or behavioral health, and housing needs. BHSA provides funding across three components:

- Full Services Partnerships (FSP): Primarily for treatment services and supports for Severely Mentally Ill Adults and Seriously Emotionally Disturbed Children.

- Behavioral Health Services and Supports (BHSS): For Early Intervention, Mental Health and Behavioral Health Services and Supports; Outreach and Engagement; Workforce Education and Training; Capital Facilities and Technological Needs and Innovative Projects.

- Housing Interventions: For permanent supportive housing, rental subsidies, operating subsidies, capital development, and other housing supports for individuals with serious behavioral health needs who are homeless or at risk of homelessness.

The BHSS component requires 51% of funds to be utilized on behavioral health early intervention services. Early intervention programs prevent mental illnesses and substance use disorders from becoming severe and disabling and reduce disparities in behavioral health outcomes. Each vendor will be providing outreach to the targeted population, access and linkage to services, and Behavioral Health treatment services and supports where appropriate.

In order to utilize BHSA funds, Three-Year Integrated Plans, and Annual Updates that are informed by area stakeholders, and detail the proposed uses of funds, must be locally developed and approved by City Council. Per state legislation, BHSA Plans and Annual Updates must also include all other City of Berkeley Mental Health funding sources. In addition to providing crucial mental health and behavioral health services for individuals in need, BHSA funds will advance the City's Strategic Plan goal of providing housing support services for the most vulnerable community members in Berkeley.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

There are no identifiable environmental effects, climate impacts, or sustainability opportunities associated with the subject of this report.

RATIONALE FOR RECOMMENDATION

Each of the vendors listed were chosen through a Review Panel that scored proposals received and submitted recommendations for funding. Vendors were chosen based on a combination of program methodology, knowledge of, and experience working with the targeted population.

ALTERNATIVE ACTIONS CONSIDERED

Staff recommends contracting with these qualified community-based organizations because their established relationships with the identified populations and specialized service capabilities provide higher levels of service more quickly than any alternative.

RESOLUTION NO. ##,###-N.S.

CONTRACT: VILLAGE OF LOVE FOUNDATION - FOR BEHAVIORAL HEALTH EARLY INTERVENTION SERVICES FOR AFRICAN AMERICANS

WHEREAS, on July 1, 2026, the Behavioral Health Services Act (BHSA) which modernized and replaced the Mental Health Services Act (MHSA), became effective; and

WHEREAS, the BHSA allocates annually recurring funding to mental health jurisdictions across the following state mandated components: Full Services Partnerships (FSP), Behavioral Health Services and Supports (BHSS), and Housing Interventions; and

WHEREAS, the BHSA BHSS component requires 51% of funds to be used for Behavioral Health Early Intervention Services; and

WHEREAS, in order to utilize BHSA funds, Three-Year Integrated Plans and Annual Updates are required to be locally developed, and approved by City Council; and

WHEREAS, on June 16, 2026, by Resolution No. 72,318-N.S., the City of Berkeley BHSA Fiscal Years 2027-2029 Three-Year Integrated Plan was approved by City Council; and

WHEREAS, the approved plan includes funding to implement behavioral health early intervention services for African Americans; and

WHEREAS, per Bid Specification No. 26-11793-C, a Request for Proposal was executed to obtain a contractor to provide behavioral health early intervention Services for African Americans; and

WHEREAS, following the scoring of proposals by a Review Panel that included City staff and a community member, Village of Love Foundation was the chosen bidder to provide behavioral health early intervention services for African Americans, and

WHEREAS, funding is available for this contract in the Fiscal Year 2027 Budget in Fund 315 BHSA in the amount of $100,000, and funding for Fiscal Years 2028 and 2029 ($100,000 a year) will be added to future years budgets.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or designee is authorized to execute a contract and any amendments with Village of Love Foundation for behavioral health early intervention services for African Americans, for $100,000 a year for three years, for a total amount not to exceed $300,000 through June 30, 2029. A record signature copy of said contract and any amendments to be on file in the City Clerk Department.

RESOLUTION NO. ##,###-N.S.

CONTRACT: EAST BAY SANCTUARY COVENANT - FOR BEHAVIORAL HEALTH EARLY INTERVENTION SERVICES FOR LATINOS/LATINAS/LATINX (LATINE)

WHEREAS, on July 1, 2026, the Behavioral Health Services Act (BHSA) which modernized and replaced the Mental Health Services Act (MHSA), became effective; and

WHEREAS, the BHSA allocates annually recurring funding to mental health jurisdictions across the following state mandated components: Full Services Partnerships (FSP), Behavioral Health Services and Supports (BHSS), and Housing Interventions; and

WHEREAS, the BHSS component requires 51% of funds to be used for behavioral health early intervention services; and

WHEREAS, in order to utilize BHSA funds, Three-Year Integrated Plans and Annual Updates are required to be locally developed, and approved by City Council; and

WHEREAS, on June 16, 2026, by Resolution No. 72,318-N.S., the City of Berkeley BHSA Fiscal Years 2027-2029 Three-Year Integrated Plan was approved by City Council; and

WHEREAS, the approved plan includes funding to implement behavioral health early intervention services for Latinos/Latinas/Latinx (Latine); and

WHEREAS, per Bid Specification No. 26-11793-C, a Request for Proposal was executed to obtain a contractor to provide behavioral health early intervention services for Latine; and

WHEREAS, following the scoring of proposals by a Review Panel that included City staff and a community member, East Bay Sanctuary Covenant was the chosen bidder to provide behavioral health early intervention services for Latine, and

WHEREAS, funding is available for this contract in the Fiscal Year 2027 Budget in in Fund 315 BHSA the amount of $100,000, and funding for Fiscal Years 2028 and 2029 ($100,000 a year) will be added to future years budgets.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or designee is authorized to execute a contract and any amendments with East Bay Sanctuary Covenant for behavioral health early intervention services for Latine, for $100,000 a year for three years, for a total amount not to exceed $300,000 through June 30, 2029. A record signature copy of said contract and any amendments to be on file in the City Clerk Department.

RESOLUTION NO. ##,###-N.S.

CONTRACT: CENTER FOR INDEPENDENT LIVING - FOR BEHAVIORAL HEALTH EARLY INTERVENTION SERVICES FOR OLDER ADULTS

WHEREAS, on July 1, 2026, the Behavioral Health Services Act (BHSA) which modernized and replaced the Mental Health Services Act (MHSA), became effective; and

WHEREAS, the BHSA allocates annually recurring funding to mental health jurisdictions across the following state mandated components: Full Services Partnerships (FSP), Behavioral Health Services and Supports (BHSS), and Housing Interventions; and

WHEREAS, the BHSS component requires 51% of funds to be used for behavioral health early intervention services; and

WHEREAS, in order to utilize BHSA funds, Three-Year Integrated Plans and Annual Updates are required to be locally developed, and approved by City Council; and

WHEREAS, on June 16, 2026, by Resolution No. 72,318-N.S., the City of Berkeley BHSA Fiscal Years 2027-2029 Three-Year Integrated Plan was approved by City Council; and

WHEREAS, the approved plan includes funding to implement behavioral health early intervention services Older Adults; and

WHEREAS, per Bid Specification 26-11793-C, a Request for Proposal was executed to obtain a contractor to provide behavioral health early intervention services for Older Adults; and

WHEREAS, following the scoring of proposals by a Review Panel that included City staff and a community member, the Center for Independent Living was the chosen bidder to provide behavioral health early intervention services for Older Adults, and

WHEREAS, funding is available for this contract in the Fiscal Year 2027 Budget in Fund 315 BHSA in the amount of $100,000, and funding for Fiscal Years 2028 and 2029 ($100,000 a year) will be added to future years budgets.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or designee is authorized to execute a contract and any amendments with the Center for independent Living for behavioral health early intervention services for Older Adults, for $100,000 a year for three years, for a total amount not to exceed $300,000 through June 30, 2029. A record signature copy of said contract and any amendments to be on file in the City Clerk Department.

RESOLUTION NO. ##,###-N.S.

CONTRACT: PACIFIC CENTER FOR HUMAN GROWTH - FOR BEHAVIORAL HEALTH EARLY INTERVENTION SERVICES FOR LESBIAN, GAY, BISEXUAL, TRANSGENDER, QUEER, INTERSEX, AGENDER PLUS TRANSITION AGE YOUTH

WHEREAS, the approved plan includes funding to implement behavioral health early intervention services for Transition Age Youth; and

WHEREAS, per Bid Specification No. 26-11793-C, a Request for Proposal was executed to obtain a contractor to provide behavioral health early intervention services for Transition Age Youth; and

WHEREAS, following the scoring of proposals by a Review Panel that included City staff and a community member, Youth Spirit Artworks was the chosen bidder to provide behavioral health early intervention services for Transition Age Youth, and

WHEREAS, funding is available for this contract in the Fiscal Year 2027 Budget in Fund 315 BHSA in the amount of $100,000, and funding for Fiscal Years 2028 and 2029 ($100,000 a year) will be added to future years budgets.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or designee is authorized to execute a contract and any amendments with Youth Spirit Artworks for behavioral health early intervention services for Transition Age Youth, for $100,000 a year for three years, for a total amount not to exceed $300,000 through June 30, 2029. A record signature copy of said contract and any amendments to be on file in the City Clerk Department.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Gilman, Director, Health, Housing and Community Services Department

Subject: Revenue Contract: 2027 Community Services Block Grant

RECOMMENDATION

Adopt a Resolution authorizing the City Manager or his designee to:

1. Accept the 2027 Community Services Block Grant (CSBG) contract to provide services for low-income people from January 1, 2027, to April 30, 2028; and,

2. Execute any resultant agreements and amendments including amendments that may decrease or increase the contract amount, add discretionary funding, change the contract term, or update contract terms.

FISCAL IMPACTS OF RECOMMENDATION

Berkeley's CSBG allocation for Calendar Year 2027 is anticipated to be released in November or December 2026. The exact amount is not yet known. Contract revenues are deposited and expensed out of Fund 334.

The CSBG allocation amount is included in the City's anti-poverty Community Action Fund and supports oversight and management of anti-poverty funds within the Department of Health, Housing and Community Services (HHCS). CSBG funding is distributed annually; however, the contract period extends an additional five months to provide recipients with adequate time to expend funds, complete reports, and submit payment requests.

CURRENT SITUATION AND ITS EFFECTS

The City of Berkeley receives CSBG to support anti-poverty programs because it is a Community Action Agency (CAA). CSBG funds are allocated from the United States Department of Health and Human Services and passed through the California Department of Community Services and Development to local CAAs. The City of Berkeley uses its CSBG entitlement to fund community service programs.

The Human Welfare and Community Action Commission (HWCAC) acts as the federally mandated tri-partite advisory board for CSBG funding. As such, it is responsible for

reviewing performance of funded programs and advising City Council on CSBG funding decisions. The Berkeley City Council is the decision-making body and is thus responsible for all final CSBG funding decisions.

At their September 16, 2026, meeting, the HWCAC voted to recommend approval of the anticipated 2027 CSBG funding as follows: Motion/Second/Carries (Lippman/Sol) Ayes – Gelsinger, Herzer-Baptiste, Huchting, Lippman, and Sol. Noes –None; Abstain – None; Absent –None.

BACKGROUND

CSBG supports the City of Berkeley's anti-poverty efforts. In 2023, the City was awarded $312,302. The award amounts for both 2024 and 2025 were $327,299. In 2026, the award amount increased to $331,214. CSBG funds supplement anti-poverty General Funds which are used for other critical community services, including disability and senior services, medical care, childcare, and additional homeless services. Funding is awarded to activities through the City's Community Agency RFP process.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

There are no identifiable environmental effects or opportunities associated with the subject of this report.

RATIONALE FOR RECOMMENDATION

The CSBG is necessary to support the provision of services for residents living in poverty in Berkeley.

ALTERNATIVE ACTIONS CONSIDERED

No alternative actions were considered. Rejecting CSBG funding would reduce funding for services to low-income Berkeley residents, which would negatively impact low-income services in Berkeley.

RESOLUTION NO. ##,###-N.S.

REVENUE CONTRACT: 2027 COMMUNITY SERVICES BLOCK GRANT (CSBG)

WHEREAS, the City of Berkeley is a Community Action Agency and receives CSBG funds as the Berkeley Community Action Agency to support anti-poverty programs; and

WHEREAS, the Human Welfare and Community Action Commission (HWCAC) acts as an advisory tripartite Board to City Council providing public participation in the governing process; and

WHEREAS, at the September 16, 2026, HWCAC meeting, a motion was passed recommending that the City accept the 2027 Community Service Block Grant Funds; and

WHEREAS, this CSBG revenue contract is for the period of January 1, 2027, to April 30, 2028, with the option to extend the contract period and/or accept amendments that either increase the contract amount and/or update contract terms; and contract revenues are deposited and expensed out of Fund 334; and

WHEREAS, the funds have historically been used to support anti-poverty services and to support City of Berkeley oversight and management of anti-poverty programs.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or designee is authorized to accept Community Service Block Grant funds and execute any resultant agreements and amendments including amendments that may decrease or increase the contract amount or add discretionary funding, or to change the contract term, or to update contract terms, to provide low-income services for Calendar Year 2027, with an extended contract period as amended by the California State Department of Community Services and Development to April 2028. A record signature copy of said agreement and any amendments shall be on file in the office of the City Clerk.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Gilman, Director, Health, Housing, and Community Services

Subject: Contract No. 32300198 Amendment: GoGo Technologies, Inc. for Transportation Services for Berkeley Mental Health Clients

RECOMMENDATION

Adopt a Resolution authorizing the City Manager or designee, to execute an amendment to Contract No. 32300198 with GoGo Technologies, Inc. for a 24/7 concierge call center to arrange rides with Uber and Lyft for the City's Mental Health clients. This amendment will add $50,000 in funding for a total contract amount not to exceed $100,000 and extending the term through June 30, 2028.

FISCAL IMPACT OF RECOMMENDATION

Funding for GoGo Technologies, Inc. contract in the amount of $50,000 is available in Fiscal Year (FY) 2027 budget in Fund 158.

CURRENT SITUATION AND ITS EFFECTS

The City of Berkeley's Mental Health clients continue to demonstrate a need for a supplemental transportation program, obtaining rides to medical appointments and other activities directly related to their treatment goals. GoGo Technologies allows Clinicians to book trips and receive assistance at any time, and riders do not need a smartphone to register or complete rides. Only Mental Health staff can order rides for clients, and each ride is approved directly by Clinicians involved in clients' overall treatment plans.

BACKGROUND

The City's Mental Health staff found that many clients were missing medical appointments or other activities directly related to their treatment goals because of a lack of reliable transportation options. Upon collaborating with other City Departments, GoGo Technologies was identified as a proven partner in obtaining rideshare services for vulnerable members of the community, and a pilot project was completed to test service delivery, resulting in a successful partnership. This amendment aims to extend that agreement to continue service delivery, supporting both Clinicians and clients in achieving treatment objectives.

GoGo transportation services help Berkeley Mental Health clients access needed medical and mental health appointments, particularly those who cannot independently use public transportation. Many clients have complex health needs requiring frequent appointments, and because of high housing costs and limited residential placement options in Berkeley, a significant number live in surrounding cities. In calendar year 2025, we provided 505 rides to approximately 50 different clients. For the first six months of 2026 (January through June), another 324 rides were provided. The most common reasons for rides were medical appointments with primary care and specialty doctors, psychiatry appointments at BMH, court appearances, and trips to the pharmacy for clients to pick up their medications.

Transporting clients to and from appointments can take several hours of clinical staff time. GoGo supplements transportation provided by BMH staff, helping clients get to appointments while reducing the amount of time clinicians spend driving. This allows staff to devote more time to mental health treatment, case management, crisis intervention, and other needed services. The primary benefits are improved access to care and more effective use of limited clinical staffing resources.

The City's Mental Health Division first contracted with GoGo Technologies on February 24, 2023, for a term through June 30, 2024. As provided for under Section 3a of Contract No. 32300198, City Manager may may extend the term of the contract by giving written notice. On May 16, 2024, the term of the contract was extended to June 30, 2026, and on June 12, 2026, the term of the contract was extended to June 30, 2027. All other aspects of the current contract remained the same.

In the coming year, and in collaboration with the Aging Services Division, the Health, Housing, and Community Services Department will issue an RFP for these services. Effective January 1, 2026, local agencies are required to satisfy noticing requirements for certain contracts for services that meet the criteria outlined in Government Code Section 3504.1 as amended by AB 339. This contract does not meet the criteria in Government Code Section 3504.1 and is exempt from the noticing requirement.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

There are no identifiable environmental effects, climate impacts, or sustainability opportunities associated with the subject of this report.

RATIONALE FOR RECOMMENDATION

A contract amendment with GoGo Technologies, Inc. will allow the City's Mental Health Division to continue to provide a seamless, sustainable and cost-effective on demand transportation program for Mental Health clients.

ALTERNATIVE ACTIONS CONSIDERED

Council could decide not to approve this amendment. However, this would negatively impact the transportation options for the City's Mental Health clients.

RESOLUTION NO. ##,###-N.S.

CONTRACT NO. 32300198 AMENDMENT: GOGO TECHNOLOGIES, INC. FOR TRANSPORTATION SERVICES FOR BERKELEY MENTAL HEALTH CLIENTS

WHEREAS, the City of Berkeley's Mental Health Division identified a need for reliable transportation options for Mental Health clients to support their treatment goals; and

WHEREAS, GoGo Technologies, Inc. is a 24/7 concierge call center that arranges rides with Uber and Lyft for vulnerable members of the community; and

WHEREAS, the City executed Contract No. 32300198 with GoGo Technologies, Inc. with a term beginning February 24, 2023, to June 30, 2024, and for a not to exceed amount of $50,000; and

WHEREAS, on May 16, 2024, as provided for under Section 3a of Contract No. 32300198, City Manager extended the term of the contract to June 30, 2026, by giving written notice. All other aspects of the current contract remained the same; and

WHEAREAS, on June 12, 2026, as provided for under Section 3a of Contract No. 32300198, City Manager extended the term of the contract to June 30, 2027. All other aspects of the current contract remained the same; and

WHEREAS, this amendment will only allow Mental Health staff to order rides for clients, and only for activities which directly support their treatment goals; and

WHEREAS, this contract is exempt from the noticing requirements set forth in Government Code Section 3504.1; and

WHEREAS, funding in the amount of $50,000 is available in the Fiscal Year 2027 budget in Fund 158.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager or designee is authorized to amend Contract No. 32300198 with GoGo Technologies, Inc. increasing the amount by $50,000 for a total contract amount not to exceed $100,000 to provide a 24/7 concierge call center to arrange rides with Uber and Lyft for the City of Berkeley's Mental Health clients and extending the term through June 30, 2028. A signed copy of said documents, agreements and any amendments shall be on file in the office of the City Clerk.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Gilman, Director, Health, Housing, and Community Services

Subject: Replacing the Project Co-Sponsor for the No Place Like Home Program – Supportive Housing in People's Park from Resources for Community Development to Satellite Affordable Housing Associates

RECOMMENDATION

Adopt a Resolution that:

1. Approves replacing the project Co-Sponsor for the No Place Like Home (NPLH) program – Supportive Housing in People's Park (SHIPP) from Resources for Community Development (RCD) to Satellite Affordable Housing Associates (SAHA) or their affiliate.

2. Authorizes the City Manager, or designee, to negotiate a side agreement with SAHA regarding mutual responsibilities.

3. Authorizes the City Manager, or designee, to execute in the name of Sponsor the NPLH Program Application Package and the NPLH Program Documents as required by the State Department of Housing and Community Development (HCD) for participation in the NPLH program.

FISCAL IMPACTS OF RECOMMENDATION

There are no new fiscal impacts to revising the resolutions and reauthorizing the City's participation in the NPLH program. On December 14, 2021, City Council authorized the submittal of the project's original NPLH application with Resolution No. 70,139-N.S. and Resolution No. 70,140-N.S. At that time, the City committed to providing mental health supportive services available to all residents of the 46 NPLH units for a twenty-year period, as required by the HCD program. Berkeley Mental Health (BMH) will provide direct support to those NPLH residents qualified for BMH services, and the City will fund services for the remaining NPLH residents through a contract with either SAHA or another community agency. The estimated cost to the City for the services contract is approximately $235,000 per year after the project is completed and occupied. A funding source for this future services contract is not yet identified, but could potentially be funded with the General Fund (Fund 011), Measure U1 (Fund 016), or the City's Permanent Local Housing Allocation (Fund 302). These services could also be funded

through the City's Four-Year Community Agency RFP process. It is estimated these services will begin in FY30.

In 2022, HCD awarded the project $13,926,261 in NPLH capital loan funding and $2,758,957 in grant funding for operating costs. HCD recently increased the operating funding by $3,314,782 for a total award of $20,000,000. The NPLH funds are expected to go to the project directly and not flow through the City.

CURRENT SITUATION AND ITS EFFECTS

HCD requires updated resolutions authorizing the City's participation in the NPLH program with SAHA for its Supportive Housing in People's Park project. The City and the original project sponsor – Resources for Community Development (RCD) – jointly applied for and were awarded $16,685,218 in NPLH funds in 2022.

Supportive Housing in People's Park is a proposed 110-unit project on land owned by the University of California, Berkeley. RCD exited the project after legal challenges caused delays. The University subsequently selected SAHA as the new project sponsor, and SAHA and the City worked with HCD to transfer the award and extend the award reservation for the project, which HCD approved in June 2026.

Since then, HCD announced that they will award the project an additional $3,314,782 in grant funding to support the increased costs and gap funding for the project, bringing the total NPLH award to $20,000,000. For the project to receive the additional State funds, the City is required to enter into the State's Standard Agreement and ancillary documents, and as an awardee, the City shares responsibility with SAHA for completing the affordable housing development.

Staff recommend that the City also enter into a side agreement with SAHA clarifying responsibilities under the NPLH program and mitigating risks to the City. The City entered into similar side agreements with developers for other state funding programs. The attached resolution will provide the City Manager with the authority to negotiate and execute a side agreement with SAHA. The attached resolution also designates SAHA as the Co-Sponsor for the NPLH award.

Supportive Housing in People's Park advances the Strategic Plan goal to create affordable housing and housing support service for our most vulnerable community members.

BACKGROUND

The proposed project, Supportive Housing in People's Park, includes 110 residential units that will be affordable to households earning between 20% - 50% of the area median income (AMI). At least 46 units will be permanent supportive housing, set aside for people who have experienced chronic homeless and/or have a mental illness, and 10 of which are set aside for veterans at risk of homelessness. The City awarded the project $14.4 million in development and operating funding through the 2021 Housing

Trust Fund Request for Proposals (HTF RFP) approved by Council on December 14, 2021, by Resolution No. 70,135-N.S. The City extended its funding reservation in February 2026 as authorized by Resolution No. 72,124-N.S. As a condition of the NPLH award, the City is required to provide tenancy sustaining services for residents in the 46 NPLH units for a period of 20 years. Tenants in NPLH units will be selected through the Countywide Coordinated Entry System (CES) which will prioritize people who are homeless and have a qualifying mental health disability and a Berkeley connection.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

There are no identifiable environmental effects, climate impacts, or sustainability opportunities associated with the subject of this report.

RATIONALE FOR RECOMMENDATION

The University selected SAHA through a competitive RFP to replace RCD as the developer for the SHIPP project, and HCD approved the replacement of the NPLH project Co-Sponsor. This resolution aligns the City with the action of the University and HCD, and authorizes the City to enter into a side agreement with SAHA to protect the City's interests and mitigate risk to the City.

ALTERNATIVE ACTIONS CONSIDERED

No alternative actions were considered.

RESOLUTION NO. XX,XXX-N.S.

REPLACING THE PROJECT CO-SPONSOR FOR THE NO PLACE LIKE HOME PROGRAM – SUPPORTIVE HOUSING IN PEOPLE'S PARK FROM RESOURCES FOR COMMUNITY DEVELOPMENT TO SATELLITE AFFORDABLE HOUSING ASSOCIATES

WHEREAS, on December 14, 2021, as authorized by Resolutions 70,135-N.S. and 72,124-N.S, the City of Berkeley (City) approved a request for predevelopment and development funding of $14,359,593 2021 Housing Trust Fund Request for Proposals (HTF RFP) for Resources for Community Development (RCD) related to the development of Supportive Housing in People's Park project, located at 2556 Haste; and

WHEREAS, in order to pursue funding through the NPLH program, RCD submitted a joint application with the City as authorized on December 14, 2021, with Resolutions 70,139-N.S. and 70,140-N.S.; and

WHEREAS, in 2022, HCD awarded the project $16,685,218 in NPLH grant and loan funds; and

WHEREAS, RCD subsequently exited the project and the University of California, Berkeley selected Satellite Affordable Housing Associates (SAHA) as the new project developer; and

WHEREAS, on February 10, 2026, the Council of the City of Berkeley authorized by Resolution 72,124-N.S. extended the funding reservation of $14,359,593 for Housing Trust Fund Projects; and

WHEREAS, approved the transfer of the NPLH award from RCD to SAHA in June 2026; and

WHEREAS, as project Sponsor, the City may be required to accept a portion of the project's liability as condition of the joint award, though the risk may be mitigated by a side agreement negotiated between the City and SAHA.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that it approves replacing the project Co-Sponsor for the No Place Like Home (NPLH) program for the Supportive Housing in People's Park (SHIPP) project from Resources for Community Development (RCD) to Satellite Affordable Housing Associates (SAHA) or their affiliate.

BE IT FURTHER RESOLVED that the City Manager is authorized to negotiate a side agreement with SAHA regarding mutual responsibilities.

BE IT FURTHER RESOLVED that the City Manager, or designee, is authorized to execute in the name of Sponsor the NPLH Program Application Package and the NPLH Program Documents as required by the Department for participation in the NPLH program;

BE IT FURTHER AND FINALLY RESOLVED that the City Manager, or designee, is hereby authorized to execute all original or amended documents or agreements to effectuate this action; a signed copy of said documents, agreements, and any amendments will be kept on file in the Office of the City Clerk.

	601 616	Zero Waste Clean Storm Water	
Representative Payee Services	315	Mental Health Services Act	$300,000
Total:			**$35,259,550**

CURRENT SITUATION AND ITS EFFECTS

On May 6, 2008, Council adopted Ordinance No. 7,035-N.S. effective June 6, 2008, which increased the City Manager's purchasing authority for services to $50,000. As a result, this required report submitted by the City Manager to Council is now for those purchases in excess of $100,000 for goods; and $200,000 for playgrounds and construction; and $50,000 for services. If Council does not object to these items being sent out for bid or proposal within one week of them appearing on the agenda, and upon final notice to proceed from the requesting department, the IFB (Invitation for Bid) or RFP (Request for Proposal) may be released to the public and notices sent to the potential bidder/respondent list.

BACKGROUND

On May 6, 2008, Council adopted Ordinance No. 7,035-N.S., amending the City Manager's purchasing authority for services

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The Finance Department reviews all formal bid and proposal solicitations to ensure that they include provisions for compliance with the City's environmental policies. For each contract that is subject to City Council authorization, staff will address environmental sustainability considerations in the associated staff report to City Council.

RATIONALE FOR RECOMMENDATION

Need for the goods and/or services.

ALTERNATIVE ACTIONS CONSIDERED

None.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Henry Oyekanmi, Director, Finance Department

Subject: Contract No. 32000146 Amendment: Vestis Services LLC (formerly Aramark Uniform Services) for Uniforms and Laundering

RECOMMENDATION

Adopt a Resolution authorizing the City Manager to execute an amendment to Contract No. 32000146 with Vestis Services, LLC (formerly Aramark Uniform Services) to continue to meet the uniform-related needs of City departments through March 2028, increasing the contract amount by $600,000 for a total not-to-exceed amount of $2,117,000.

FISCAL IMPACTS OF RECOMMENDATION

Funds are available in individual departmental budgets for uniform needs for FY27 and FY28. An additional $600,000 is required to fund the City's uniform needs through the end of the current contract period, March 2028. This brings the total projected expenditure to $2,117,000.

CURRENT SITUATION AND ITS EFFECTS

The City's Contract No. 32000146 with Vestis Services, LLC provides uniforms and other products so city personnel can perform their job duties in a safe manner. The City of Berkeley issued a contract to Vestis Services in 2019 by piggybacking off a City of Fresno contract, which was awarded in response to RFP #011124. In 2025, the City of Fresno issued a second, competitive-procured contract to Vestis Services LLC, which expires in March 2028. The City of Berkeley will use this current contract to procure uniform services through 2028, at which point the City will issue a new contract through a competitive procurement process.

BACKGROUND

The City of Berkeley's rental uniform and laundry need are relatively small for the uniform and laundry industry. Pricing obtained by the City was significantly higher than that of larger cities. The City of Berkeley identified a uniform contract issued by the City of Fresno, which leveraged a much larger workforce to secure better pricing, but with similar uniform and laundry needs. The City of Fresno competed and awarded a multi-year contract to Aramark in 2019, and a follow-on award in 2025. Fresno received strong

pricing based on their account size. The City of Berkeley can receive the same price of the larger contract by piggybacking on the City of Fresno contract. Vestis Services LLC continues to attest to meeting the City of Berkeley's Sweatshop-Free ordinance. The city is satisfied with Vestis Services, LLC product quality and services.

RATIONALE FOR RECOMMENDATION

Several city job classifications within the City of Berkeley require uniforms that meet industry safety standards.

ENVIRONMENTAL SUSTAINABILITY

Vestis Services, LLC is actively undertaking environmental initiatives such as wastewater reduction, fleet management, increasing operational efficiencies, and waste minimization efforts.

1. Resolution

RESOLUTION NO. ,-N.S.

CONTRACT NO. 32000146 AMENDMENT: VESTIS SERVICES, LLC (FORMERLY ARAMARK UNIFORM SERVICES) FOR UNIFORMS AND LAUNDERING

WHEREAS City Council approved Resolution 69,073-N.S. on September 10, 2019, approving the contract for uniforms and laundering with Aramark Uniforms by piggybacking on the City of Fresno's available contract; and

WHEREAS City Council approved Resolution 70,657-N.S. on January 17, 2023, extending the term of the contract through 2025 and increasing the not-to-exceed amount to $1,017,000; and

WHEREAS, in 2024 the city was notified Aramark Uniform Services changed its name to Vestis Services, LLC; and

WHEREAS, in April 2025 the City of Fresno issued a new, competitively awarded contract to Vestis Services LLC which expires in March 2028; and

WHEREAS City Council approved Resolution 71,631-N.S. on January 21, 2025, increasing the not-to-exceed amount to $1,517,000; and

WHEREAS the City Manager extended the contract to March 25, 2028.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager, or designee, is authorized to amend Contract No. 32000146 with Vestis Services LLC (formerly Aramark Uniform Services) increasing the amount by $600,000 for a total contract amount not to exceed $2,117,000 through March 2028. A record signature copy of said contract and any amendments shall be on file in the office of the City Clerk.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Janelle Rodrigues, Director of Human Resources

Subject: Contracts for Recruitment Services

RECOMMENDATION

Adopt a Resolution authorizing the City Manager to execute a contract and any amendments with WBCP Inc., Berkeley Search Consultants, Bob Murray & Associates, and Mosaic Public Partners to establish an on-call bench of executive recruitment firms for the period of January 1, 2027, through June 30, 2030. Each contract may have an individual not-to-exceed amount of $250,000; however, cumulative expenditures across all four contracts shall not exceed $250,000 during the contract term, subject to the availability of appropriated funds.

FISCAL IMPACTS OF RECOMMENDATION

Departments typically fund their own executive recruitments using salary savings or other resources already identified within their operating budgets. These funding sources may include savings generated from vacant positions, operating funds that have been reallocated to support recruitment activities, or other discretionary allocations that departments are authorized to repurpose for personnel-related needs. This funding approach allows departments to initiate executive recruitments as staffing needs arise while ensuring that costs remain within existing budget authority.

CURRENT SITUATION AND ITS EFFECTS

The establishment of contract relationships with these executive recruitment search firms advances the Strategic Plan goal to attract and retain a talented and diverse City government workforce. Executive search firms provide the City with specialized market expertise, broad professional networks, targeted candidate outreach, and comprehensive recruitment support to attract and evaluate highly qualified candidates for critical executive leadership positions or highly specialized technical positions.

On November 6, 2025, the City released Request for Proposal (RFP) Specification No. 26-11750-C seeking qualified firms to provide executive recruitment services. The City received fifteen complete responses from prospective bidders. After a comprehensive

review of the proposals and subsequent interviews, the City's selection committee determined that the four highest-ranking firms, based on the established evaluation criteria, demonstrated the strongest capacity to meet the City's recruitment needs effectively.

Effective January 1, 2026, local agencies are required to satisfy noticing requirements for certain contracts for services that meet the criteria outlined in Government Code Section 3504.1 as amended by AB 339.This project does not meet the criteria in Government Code Section 3504.1 and is exempt from the noticing requirement.

BACKGROUND

The selected firms were chosen based on price, project approach, and demonstrated expertise supported by strong references from prior executive recruitments. Each firm also brings distinct strengths that contribute to the overall quality of the candidate search.

WBCP Inc. specializes in recruiting hard-to-fill, management, and executive-level positions. The firm has recently supported key municipal hires throughout the Bay Area, including several critical placements for the City of Berkeley such as the Director of Human Resources, Director of Police Accountability, Transportation Manager, City Engineer / Manager of Engineering, Public Works Operations Manager, Budget Manager, and Audit Manager / Payroll Manager.

Berkeley Search Consultants offers extensive experience in executive search and public sector recruitment, partnering with cities, counties, and special districts both within California and nationwide. Originating in Berkeley more than 35 years ago, the firm brings a strong history and deep community ties. Their methodology integrates data-driven recruitment strategies with targeted, relationship-based outreach, enabling them to attract a diverse pool of candidates aligned with the City's mission, values, and community expectations.

Bob Murray & Associates has more than 30 years of experience and an expansive network within local government, with over 2,100 successful executive-level placements. Their approach emphasizes a clear understanding of the role, the ideal candidate profile, and organizational fit, allowing them to present proven leaders for positions ranging from city managers to department directors and public safety chiefs.

Mosaic Public Partners leverages modern technology and search methodologies tailored to public sector and civil service requirements while enhancing the speed and thoroughness of the recruitment process. They offer three tiers of service - from assisted outreach to full executive search - providing flexible options based on the level of engagement needed and available funding.

RATIONALE FOR RECOMMENDATION
These vendors were selected based on their capability to perform. The selection was determined by the ranking of its proposal submitted in response to RFP Specification No. 26-11750-C.

Subject: Donation from the Rainin Foundation to the Youthworks Program for the Adeline Area Streetscape and Landscape Project Public Process

RECOMMENDATION
Adopt a Resolution accepting a donation of $20,000 from the Rainin Foundation to the Youthworks Program for the Adeline Area Streetscape and Landscape Project Public Process.

FISCAL IMPACTS OF RECOMMENDATION
This donation in the amount of $20,000 to the Youthworks Program for the Adeline Area Streetscape and Landscape Project Public Process will be deposited into the Playground Camps Fund (125).

CURRENT SITUATION AND ITS EFFECTS
William Rogers, current Rainin Foundation boardmember, wishes to provide a donation of $20,000 from his discretionary funds to cover the cost of interns to perform outreach work for the public process phase of the Adeline Area Streetscape and Landscape Project. The City's Open Governance Ordinance (OGO) requires City Council approval of any gift to the City in excess of $1,000 (BMC Section 2.06.150, Ord. 7,166-N.S.)

BACKGROUND
The Rainin Foundation enhances quality of life by championing the arts, promoting early childhood literacy, and supporting research to cure chronic disease. Through their grantmaking and operations, they recognize and strive to dismantle inequities and the systems that perpetuate them, taking action to create a more inclusive and compassionate world.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE CHANGE
There are no identifiable environmental effects or opportunities associated with the subject of this report.

RATIONALE FOR RECOMMENDATION
This donation will cover the cost of interns to perform outreach work for the public process phase of the Adeline Streetscape and Landscaping Project.

ALTERNATIVE ACTIONS CONSIDERED

November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Ferris, Director, Parks Recreation & Waterfront

Subject: Grant Application: Statewide Parks Program (SPP) Cycle 5 – West Berkeley Brownfield to Neighborhood Park Project

RECOMMENDATION

Adopt a Resolution authorizing the City Manager or their designee to: submit a grant application in an amount of up to $8 million to the Statewide Parks Program (SPP) Cycle 5 grant program for the West Berkeley Brownfield to Neighborhood Park Project; accept any grants; execute any resulting grant agreements and any amendments; and that Council authorize the implementation of the project and appropriation of funding for related expenses, subject to securing the grant.

FINANCIAL IMPLICATIONS

The Statewide Parks Program (SPP) grant program does not require any local match. If the City is awarded grant funds, they will be deposited in the One-time Grant Fund (336). Per the grant contract guidelines, any improvements funded by this grant shall remain in-place for thirty years.

CURRENT SITUATION AND ITS EFFECTS

The Statewide Park Development and Community Revitalization Program (SPP) is a competitive grant program that creates new parks and new recreation opportunities in critically underserved communities across California. Previously, Proposition 84 (2006 Bond Act), Proposition 68 (2018 Bond Act), and 2021/22 and 2023/24 State General Funds supported four rounds of SPP. Proposition 4 (2024 Bond Act), passed on November 5, 2024, continues this program's legacy and will provide $188.5 million statewide for the SPP Round 5 funding cycle. A proposed project must involve either development and/or acquisition to: (1) create a new park, (2) renovate an existing park, or (3) expand an existing park. In addition, the project site within a half-mile radius must have: (1) a ratio of less than three acres of parkland per 1,000 residents, or a median household income that is less than 80% of the California median household income (less than $73,524), or the project is within proximity to a Climate Vulnerability(ies). The grant proposal must include a minimum of five community meetings in order to reach as much of the community as possible, including youth, seniors, and persons with disabilities. City staff evaluated a range of potential sites and determined that the empty

parcel formerly known as the North Lawn Bowling Green on City property just east of the Corporation Yard (1326 Allston Way) would be the City's most competitive project for the grant program. The final scope and budget of the project will be finalized for the grant upon completion of the public outreach process, and the total grant request shall not exceed $8 million.

BACKGROUND

On April 20, 2021, Council authorized staff to submit a California Proposition 68 Statewide Parks Program (SPP) grant application for the Santa Fe Railroad Trackbed to Park Conversion Project and execute the project upon securing the grant. In early 2022, the City was notified of a grant award of $5 million and on March 14, 2022 the grant contract was executed. The full project, including soil remediation and the installation of new park features is expected to be completed in the summer of 2027.

In the Fall of 2026, cycle 5 of the Statewide Parks Program (SPP) grant program was announced, with a submittal deadline of December 17, 2026. City staff evaluated a range of potential sites and determined that the empty parcel formerly known as the North Lawn Bowling Green on City property just east of the Corporation Yard (1326 Allston Way) would be the City's most competitive project for the grant program. The North Green was the original location of the Berkeley Lawn Bowling Club in 1929. In the early 1960's, the Lawn Bowling Club built a new clubhouse and new lawn bowling green on City property at 2270 Acton St via a lease agreement. Since that time, the club no longer had the need for the North Green. The City has looked at several potential uses of the vacant North Green, but the lack of funding and the need to remediate contaminated soils at the site have prevented any new projects from moving forward. If the City is successful in obtaining SPP grant funding for a new park at the North Green, it will be removed from the current lease between the Berkeley Lawn Bowling Club and the City and will be added to the current inventory of City parks. The Lawn Bowling Club fully supports this project.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

This project will help the City promote Strategic Plan Goal 1 – to provide state-of-the-art, well-maintained infrastructure, amenities, and facilities, and Goal 2 of Chapter 3 in the City's Climate Action Plan to increase access to parks and plazas.

RATIONALE FOR RECOMMENDATION

These grant funds will allow the City to complete this project to create new parkland in West Berkeley.

ALTERNATIVE ACTIONS CONSIDERED

The Council could choose not to apply for the funds, in which case the City would not have the resources to address contamination on the property in order to develop this lot as park space.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jordan Klein, Director, Planning and Development Department

Subject: Environmental Review Procedures

RECOMMENDATION
Adopt a Resolution adopting the Land Use Planning Division's Environmental Review Procedures.

FISCAL IMPACTS OF RECOMMENDATION
The Environmental Review Procedures detail processes and requirements already undertaken by City staff to comply with the California Environmental Quality Act (CEQA). Adoption of the Environmental Review Procedures will not result in new staff responsibilities or lead to a demand for new staff or additional resources.

CURRENT SITUATION AND ITS EFFECTS
California Resources Code Section 21082 requires all public agencies to adopt by ordinance, resolution, rule, or regulation, objectives, criteria, and procedures for the evaluation of projects and the preparation of environmental impact reports and negative declarations.

California Code of Regulations Title 14, Section 15022 (State CEQA Guideline § 15022) requires every public agency in California to adopt its own local objectives, criteria, and specific procedures for administering CEQA. Local rules ensure the orderly evaluation of projects and the proper preparation of environmental documents.

The City of Berkeley's Environmental Review Procedures were established by City Council Resolution No. 55,422-N.S. on July 9, 1990 and have not been updated since then. In the past 36 years, there have been expansions of CEQA, including Categorical Exemptions, requirements for online posting and availability of draft documents, tribal consultation, and streamlining laws, which are not included in the current Procedures document. Revised, modernized procedures are necessary to reflect current CEQA processes and requirements, and to codify existing practices. While City staff administer CEQA consistent with the latest legal and administrative requirements, the 1990 Environmental Review Procedures document is out of date. An updated document will provide clear guidance for staff and applicants and serve as a reliable source of information for the public.

BACKGROUND

Each public agency is responsible for complying with the California Environmental Quality Act (CEQA) and with the State CEQA Guidelines (Title 14, Chapter 3 of the California Code of Regulations).

CEQA requires that public agencies document and consider the potential environmental effects of any agency's actions that meet the definition of a "project" under CEQA. A "project" is an action that has the potential to result in direct or indirect physical changes to the environment. This includes the agency's direct activities as well as activities that involve the agency's approvals or funding.

In preparing the revised Environmental Review Procedures, staff reviewed the CEQA Guidelines, as well adopted procedures from other agencies that were prepared within the past five years to understand similar practices and functionality.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The adoption of the Environment Review Procedures document will ensure that the environmental effects of City activities are consistently and predictably analyzed and, if necessary, mitigated.

RATIONALE FOR RECOMMENDATION

The City of Berkeley's adopted Environmental Review Procedures have not been updated since 1990. Revised, modernized procedures are necessary to reflect current CEQA processes and requirements, and to codify existing practices and used as a Standard Operating Procedure for the City

ALTERNATIVE ACTIONS CONSIDERED

None.

ADOPTION OF THE CITY OF BERKELEY ENVIRONMENTAL REVIEW PROCEDURES FOR IMPLEMENTING THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) GUIDELINES

WHEREAS, California Resources Code Section 21082 requires all public agencies to adopt by ordinance, resolution, rule, or regulation, objectives, criteria, and procedures for the evaluation of projects and the preparation of environmental impact reports and negative declarations; and

WHEREAS, California Code of Regulations Title 14, Section 15022 (State CEQA Guideline § 15022) requires every public agency in California to adopt its own local objectives, criteria, and specific procedures for administering CEQA; and

WHEREAS, the City Council of the City of Berkeley in July 1988 adopted Resolution No. 54,388-N.S., adopting City of Berkeley CEQA Guidelines to be used to review potential environmental impacts of public and private projects locate in the City Berkeley; and

WHEREAS, the City Council of the City of Berkeley in July 1990 adopted Resolution No. 55,422-N.S., updating the City of Berkeley CEQA Guidelines and rescinding Resolution No. 54,388-N.S.; and

WHEREAS, CEQA has since been amended to include expanded Categorical Exemptions, online posting and availability requirements, tribal consultation, and streamlining laws which are not contained in the current version of the Environmental Review Procedures.

NOW THEREFORE, BE IT RESOLVED that the Council of the City of Berkeley hereby adopts the Environmental Review Procedures included as Exhibit A of this Resolution.

BE IT FURTHER RESOLVED the Environmental Review Procedures included as Exhibit A of this Resolution supersede and replace the Environmental Review Procedures adopted pursuant to Resolution No. 55,422-N.S, and that Resolution No. 55,422-N.S. is hereby rescinded.

BE IT FURTHER RESOLVED that City staff may implement amendments to the Environmental Review Procedures, without further action by the City Council, as necessary to comply with changes in State law or applicable court decisions.

CHAPTER 10. CITY OF BERKELEY AS A RESPONSIBLE AGENCY 22

LOCAL PROCEDURES FOR IMPLEMENTING THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

State CEQA Guidelines Section 15022(a) requires that each public agency issue local procedures for implementing the *State CEQA Guidelines* in order to ensure the orderly evaluation and preparation of environmental documents. Such procedures shall be revised when needed to be kept current with changes to the *State CEQA Guidelines*; however, *State CEQA Guidelines* shall take precedence even if the local procedures are not updated.

CHAPTER 1. INTENT AND GENERAL PROVISIONS

Section 100. Intent.

These local City CEQA guidelines are established, adopted and intended to meet the requirements of Section 15022(a) the of the State CEQA Guidelines and to provide the public with information on the procedures used by the City in the environmental review process.

Section 101. Applicability. *[State CEQA Guidelines §15022]*

The procedures established in these guidelines are applicable to both public and private projects under the jurisdiction of the City of Berkeley and may be used by districts whose boundaries are coterminous with or are entirely encompassed by the City.

Section 102. Compliance Required Prior to Project Approval. *[State CEQA Guidelines §15004]*

No application for a permit shall be approved nor shall any permit be issued or approval given by any City Official or body until all procedures required by the *State* and *City CEQA Guidelines* have been completed, including if required the preparation and certification of a Final Environmental Impact Report (FEIR) by the appropriate decision-making body. Compliance with CEQA shall be included in the planning process as early as possible in order to allow incorporation of environmental considerations into the design of the project.

Section 103. Public Records. *[Public Records Act]*

(a) All final documents prepared pursuant to these procedures shall be available for public inspection in the Planning & Development Department. Drafts and working papers shall not be considered final documents.

(b) All reports and documents, such as public correspondence, applicant statements, community meeting summaries or other supporting documentation shall be available for public inspection in the Planning & Development Department. This does not include proprietary reports, confidential archaeological and special status species location studies and other confidential information.

Section 104. Use of Consultants.

(a) The City may use consultants to fulfill its obligations under CEQA including, but not limited to, the preparation of technical studies, mitigation monitoring reports, restoration plans, Initial Studies, Negative/Mitigated Negative Declarations, and EIRs.

(b) All consultant-prepared environmental documents, such as Initial Studies, Negative Declarations, and EIRs utilized shall be prepared under contract with the City using the most current version of the City's Professional Services Agreement. Subject to the City's independent judgment, applicant-sponsored technical reports and environmental surveys utilized in the preparation of the application and project design may be utilized by the City.

(c) The project sponsor shall pay the full costs of technical studies and draft and final document preparation including both consultant and City oversight and review costs. A deposit to cover City costs shall be paid at the time of application in conformance with applicable sections of the Master Fee Schedule. The deposit shall be made prior to the City contracting with a consultant and in no case later than thirty (30) days after issuance of the letter from the Planning Director indicating the estimated cost to produce the document(s) involved.

(d) When the Planning Director determines that it is necessary to contract with a consultant to prepare an environmental document or document(s) for a public or private project, the Planning Director may select a consultant through a separate Request for Proposals (RFP) process.

(e) No firm or person having a financial interest in a project shall be employed to prepare environmental documents on that project.

(f) Environmental consultants shall work at the direction of City staff and the City shall accept consultant-prepared work products as final only when the Planning Director determines them to be impartial, technically adequate, and complete. City decision-makers shall confirm that the environmental documents reflect the lead agency's independent judgment and analysis.

(g) The project sponsor may submit technical studies along with their application submittal or at the City's request, but a project sponsor may not contract directly with a consultant for preparation of a complete environmental document including, but not limited to, preparation of an Environmental Impact Report, Negative Declaration or Mitigated Negative Declaration.

Section 105. Notice Generally. *[State CEQA Guidelines §§15072 and 15087]*

(a) The City should make a concerted effort to provide early notice and solicit comments on environmental documents from the public and interested organizations so that a broad range of interests and opinions are available to decision-makers regarding the impacts of projects.

(b) Any required notice shall be deemed given on the date of mailing, the date of posting or the first day of publication, whichever is later.

(c) Errors, irregularities or neglect in the preparation of any required notice shall not in any way affect the validity or legality of the adoption or certification of environmental documents or approval or disapproval of a project unless such error, irregularity or neglect is clearly substantial and prejudicial and that by reason of such error, irregularity or neglect the party complaining suffered substantial injury and that a different result would have been probable if such error, irregularity or neglect had not occurred.

(d) In addition to providing notice to those property owners required to receive notice under State law, planning staff shall endeavor to notice additional property owners and residents who may have an interest in the project.

CHAPTER 2. DEFINITIONS

Section 200. General.

The following definitions which are specific to City of Berkeley are intended to supplement the definitions found in Article 20 of the *State CEQA Guidelines*:

(a) **"City"** means City of Berkeley.

(b) **"City Council"** means the City Council of the City of Berkeley, or when a referral has been received from a District as defined in Section 101.

(c) **"City Official"** means the department head or other City staff member, or, when a referral has been received from an outside agency, agency staff member, responsible for approving the permit under consideration.

(d) **"Days"** means calendar days including City-recognized holidays, unless otherwise stated.

(e) **"Decision-Making Body"** means the City Council, Zoning Adjustments Board, Planning Commission, or City official that has the ultimate responsibility for approving the permit/project under construction.

(f) **"Environmentally Sensitive Area"** means an area containing one or more environmental resources or hazards that may affect or be affected by the specific project involved.

(g) **"General Rule Finding"** means a finding that it can be seen with certainty that there is no possibility the proposed action may have a significant effect on the

environment (i.e. the “Common Sense Exemption”) and therefor CEQA is not applicable. [State CEQA Guidelines §15061(b)(3)]

(h) **“Permit”** means any zoning permit including Administrative Use Permit (AUP), Use Permit Public Hearing (UPPH), Structural Alteration Permit (SAP), Variance, lease, license, certificate or other entitlement for use. A Zoning Certificate is not a permit.

(i) **“Planning Commission”** means the City of Berkeley Planning Commission.

(j) **“Planning & Development Department”** means the Planning and Development Department of the City of Berkeley.

(k) **“Planning Director”** means the Director of Planning & Development for the City of Berkeley or their designee.

(l) **“Zoning Adjustments Board”** means the Zoning Adjustments Board.

(m) **“Zoning Certificate”** means a ministerial approval that confirms that a structure or land use complies with the Zoning Ordinance.

CHAPTER 3. RESPONSIBILITIES

The responsibilities for implementation of CEQA are as follows:

Section 300. Planning Commission.

When the Planning Commission is the decision-making body on a project, the Planning Commission is responsible for certifying the Final EIR, adopting a Negative/Mitigated Negative Declaration, or determining that the project is exempt from environmental review; considering the environmental document prepared prior to taking action on the project; and for making the findings required by *State CEQA Guideline* Sections 15091 (Findings) and 15093 (Statement of Overriding Considerations).

When the Planning Commission is required to make a recommendation on a project to the City Council, the Planning Commission shall hold any hearings required on the proposed environmental documents produced, review all comments made and the responses prepared, and make a recommendation regrading certification of the Final EIR or adoption of the Negative/Mitigated Negative Declaration involved. If the Planning Commission believes that the project is exempt from environmental review, it shall recommend to the City Council to make such a finding.

Section 301. Zoning Officer, Planning Director, or City Official.

When the Zoning Officer (ZO), Planning Director, or other City Official is the decision-maker on a project, they are responsible for certifying the Final EIR, adopting a Negative/Mitigated Negative Declaration or determining that the project is exempt from

environmental review; considering the environmental document prepared prior to taking action on the project and for making the findings require by State CEQA Guidelines Section 15091 (Findings) and 15093 (Statement of Overriding Consideration).

Section 302. Zoning Adjustments Board

When the Zoning Adjustments Board is the decision-making body on a development project, they are responsible for certifying the Final EIR, adopting a Negative/Mitigated Negative Declaration, or determining that the development project is categorically or statutorily exempt from environmental review; considering the environmental document prepared prior to taking action on the project; and for making the findings required by *State CEQA Guideline* Sections 15091 (Findings) and 15093 (Statement of Overriding Considerations), except when otherwise required as described in Chapter 9 (AB 130, SB 131, and Other State CEQA Streamlining Provisions).

Section 303. Planning and Development Department

The Land Use Planning Division and other divisions of the Planning & Development Department are responsible for:

(a) **Environmental Review.** Carrying out environmental reviews undertaken by the City including those requested on behalf of other agencies;

(b) **Agency Comment & Review**. Obtaining comments from other agencies on the expected environmental effects of a project;

(c) **Levels of Significance.** Identify appropriate measures to reduce potentially significant effects of a project to less than significant levels;

(d) **Mitigation Monitoring & Reporting Program (MMRP)**. Prepare Mitigation and Monitoring Programs when required;

(e) **Review of External Agency Environmental Documents**. Review and comment on environmental review documents submitted to the City on behalf of other public agencies;

(f) **Notice Preparation**. Prepare, distribute and file applicable environmental notices, including a Notice of Intent, Notice of Preparation, and Notice of Completion, and those Notices of Exemption and Notices of Determination for projects approved by the City Council, Planning Commission, Zoning Officer, or Planning Director;

(g) **Fish and Game Fees.** Collection of State Fish and Game fees for transmittal to the Alameda County Clerk recorder.

(h) **Implementing Procedures.** Develop, coordinate and implement the City's Environmental Review procedures consistent with the Policy direction provided by the City Council.

(i) **Thresholds of Significance.** Establish informal and propose formal working thresholds of significance.

CHAPTER 4. INITIAL ENVIRONMENTAL REVIEW

Section 400. Project Submittal.

(a) A copy of any application for a permit that requires environmental review shall be promptly forwarded to the Planning & Development Department along with copies of all plans and other associated information.

Section 401.Project Completeness and Acceptance for Filing. *[State CEQA Guidelines §§15101 and 15111]*

(a) No application for a permit shall be deemed complete until:

i. All information required by the Planning Director to complete an Initial Study or make a determination that the underlying project is categorically exempt has been received, or

ii. The Planning Director has determined pursuant to these and the State CEQA Guidelines that the underlying project is not a project under CEQA, is ministerial rather than discretionary in nature, clearly has no potential to have a significant effect on the environment, or is statutorily exempt from environmental review.

a. The Planning Director shall develop, disseminate and update as necessary an Application Completeness Checklist listing the information that is typically required for the typers of permits normally requested.

(b) If the Planning Director determines that adequate information has not been submitted to complete a preliminary environmental review and, if necessary, an Initial Study, the sponsor shall be notified in writing within thirty (30) days of application receipt that the application is incomplete. Any such notification shall state what additional information, including fees must be submitted before the application can be considered complete.

i. Failure to provide the required information within one-hundred twenty (120) days of issuance of a Completeness Determination or thirty (30) days of issuance of a Request for Deposit Submission shall cause the application to be deemed “abandoned” without further notice or action unless the Planning Director gives a written extension to the deadline involved. Once an application is deemed abandoned, no further work shall be

done on the project without submission of a new application and payment of new fees.

(c) Notwithstanding subsection (a), accepting an application as complete does not limit the City's authority to require the applicant to submit additional information needed for environmental evaluation of the project if the applicant makes changes to the project or if there are changes in circumstances that could not be anticipated during the initial review. Failure to provide this information within one hundred twenty (120) days of issuance of a Request for Additional Environmental Information or a Request for Additional Deposit Submission shall be treated in the same manner as failure to provide the information requested in a Completeness Determination (see Section 401(b)(2) above).

Section 402. Project Segmenting. *[State CEQA Guidelines §15378]*

A project is defined as the "whole of an action" and may not be segmented nor divided into smaller parts in an attempt to avoid full consideration of its environmental impacts. Thus, all of the separate permits and approvals for a particular project shall be considered together (along with the underlying activity itself) when determining the project's environmental effects. The environmental review of a project must include an analysis of the environmental effects of future expansion or other action if: (a) such future expansion or other action is a reasonably foreseeable consequence of the initial project; and (b) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects.

When actions are remote or speculative, so that meaningful information regarding their impacts is unavailable, they are not reasonably foreseeable parts of a particular project and therefore need not be considered at the same time.

Section 403. Project Revisions.

Any revised or amended project shall be treated as a new project for purposes of determining the time period within which CEQA processing must be completed and the project approved or denied unless the revision is found by the Planning Director to be minor and/or technical.

Project revisions shall be documented via submission of a Project Revision Statement.

Section 404. Early Consultation. *[State CEQA Guidelines §15063(g)]*

The Planning Department shall distribute a request for comments on the expected environmental effects of the project to all responsible agencies, trustee agencies, and other agencies and organization's that in the opinion of the Planning Director have an interest in the project or applicable special expertise. The request may occur before or

after an application is deemed complete, and may be combined with the request for comments on the project itself. At a minimum, such requests shall include a request to identify potential impacts, possible mitigation measures, and project revisions needed. At the discretion of the Planning Director, submission of a Project Revision Statement by the project applicant may result in additional consultation.

Section 405. Tribal Consultation *[Public Resources Code §§ 21080.3.1–21080.3.2; CEQA Guidelines §§ 15064.5, 15126.4]*

AB 52 requires state and local public agencies to consult with California Native American tribes during the environmental review process for development projects to protect tribal cultural resources.

SB 18 requires state and local public agencies to consult with California Native American tribes before adopting a General Plan or Specific Plan and a General Plan or Specific Plan amendment.

(a) The City shall comply with all applicable consultation requirements regarding Tribal Cultural Resources as set forth in CEQA and State law.

(b) For projects subject to CEQA for which the City is the Lead Agency, the Land Use Planning Division shall conduct consultation with California Native American tribes that have requested notification from the Native American Heritage Commission (NAHC), in accordance with Public Resources Code Sections 21080.3.1 and 21080.3.2, as amended.

(c) Within seven (7) days of determining that an application for a project is complete, or deciding to undertake a project, whichever occurs first, the City shall submit a request to the NAHC for a list of tribes that have requested notification for activities undertaken in the project area;

(d) Within seven (7) days of receiving a list of tribes from the NAHC, the City shall provide formal notification to those tribes pursuant to Public Resources Code Section 21080.3.1(b).

(e) A tribe shall have thirty (30) days from receipt of the notification to request consultation.

(f) Upon receipt of a timely request for consultation, the City shall initiate consultation with the requesting tribe and shall consult in good faith prior to adoption of a Negative Declaration or Mitigated Negative Declaration, or certification of an Environmental Impact Report.

(g) Consultation shall be considered concluded when:

  i. The parties agree to measures to mitigate or avoid a significant impact on Tribal Cultural Resources;

  ii. A party acting in good faith concludes that mutual agreement cannot be reached; or

iii. The tribe fails to engage in the consultation process or otherwise fails to respond after reasonable efforts by the City.

(h) The purpose of consultation shall be to identify Tribal Cultural Resources that may be affected by a project and, where feasible, to develop measures to avoid or substantially lessen significant impacts to such resources.

(i) Information submitted by a tribe during consultation that is confidential, sensitive, or exempt from disclosure under State law shall be maintained as confidential to the extent permitted by law, including Public Resources Code Section 21082.3(c).

(j) Projects eligible for statutory exemptions that require tribal notification or consultation pursuant to State law, including Public Resources Code Section 21080.66 and any successor provisions, shall comply with those requirements prior to approval.

(k) Nothing in this section shall be construed to limit or alter the City's obligations under Health and Safety Code Section 7050.5, Public Resources Code Section 5097.98, or any other applicable federal, state, or local law regarding the treatment of human remains, archaeological resources, or Tribal Cultural Resources.

Section 406. Preliminary Environmental Evaluation. *[State CEQA Guidelines §§15060 and 15061]*

(a) The City shall begin the formal environmental evaluation of a project after determining that an application is complete and that the project is subject to CEQA. Accepting an application as complete does not limit the City’s authority to require the applicant to submit additional information necessary for the environmental evaluation. Requiring additional information after the application is deemed complete does not change the status of the application.

(b) Once an application is deemed complete, the City shall first determine whether the project is subject to CEQA. An activity is not subject to CEQA if:

i. It does not involve the exercise of discretion;

ii. It would not result in a direct or reasonably foreseeable indirect physical change in the environment; or

iii. It is not a project as defined in CEQA Guidelines Section 15378.

(c) Preapplication Consultation: A potential applicant may request a preapplication consultation prior to the filing of a formal application to consider the range of actions, possible environmental effects, potential alternatives and/or mitigation measures for the potential project.

(d) Once the City has determined that the activity is a project subject to CEQA, the City shall determine whether the activity is exempt from CEQA, consistent with CEQA Guidelines Section 15061. Potential exemptions include statutory exemptions, categorical exemptions or activities covered by the “common sense” exemption.

i. After the City determines that a project is exempt, the City may prepare a notice of exemption. The notice shall not be filed with the County Clerk or the State of California until the project is approved.

ii. Once the project is approved, the notice of exemption may be filed by the applicant or the City.

If the Planning Director determines that a proposal is excluded or exempt from review under CEQA, no further environmental review is required and the Planning & Development Department shall document this finding in the record. The Planning & Development Department may also prepare and file a Notice of Exemption.

Section 407. Initial Study Preparation. *[State CEQA Guidelines §§15063 and 15064]*

If a proposed project is not excluded or exempt from review under CEQA, the Planning & Development Department shall prepare an Initial Study to determine whether a Negative/Mitigated Negative Declaration or an EIR is required for the proposed project. If the project may have an unavoidable significant effect on the environment, the Planning & Development Department may proceed with preparation of an EIR without preparing an Initial Study if desired.

If the Initial Study determines, based on substantial evidence considering the whole record, that the project has no potential to have a significant effect on the environment then a negative declaration must be prepared (see Chapter 6). If the project may have one or more significant impacts on the environment, then preparation of an EIR (see Chapter 7) is required. However, if revisions or mitigation measures can be applied to the project that would clearly reduce all impacts to a level of insignificance, AND the applicant agrees to these in writing via submittal of a Project Revision Statement prior to release of the document for public review, then a mitigated negative declaration may be prepared (see Chapter 6).

Section 408. Previous Prepared City Environmental Document. *[State CEQA Guidelines §15162(a)]*

If a previous EIR or Negative/Mitigated Negative Declaration has been certified/adopted by the City and the Planning Director determines that none of the circumstances requiring the preparation of a subsequent environmental document exist, the Planning &

Development Department shall document that determination in the record, and the decision-making body shall utilize the earlier document. Documentation of the Planning Director's determination may take the form of a memorandum or may be based on preparation of an Initial Study if desired.

CHAPTER 5. EXEMPT PROJECTS

Section 500. General.

Projects that are ministerial in nature, meet General Rule findings, are statutorily exempt, are categorically exempt, or are denied do not require the preparation of an Initial Study, an EIR, or a Negative/Mitigated Negative Declaration.

Section 501. Ministerial Projects. *[State CEQA Guidelines §15268]*

Ministerial projects are exempt from the requirements of CEQA. The issuance of building permits, the issuance of business licenses and the approval of Final Subdivision Maps are presumed to be ministerial. The issuance of a Zoning Certificate is a ministerial action. However, when a project involves elements, some of which are ministerial in nature and some of which are discretionary, the overall project will be deemed discretionary and subject to CEQA review.

Section 502. General Rule. *[State CEQA Guidelines §15061(b)(3)]*

CEQA does not apply to a project where it can be seen with certainty that there is no possibility that the activity may have a significant effect on the environment.

Section 503. Statutory Exemptions. *[State CEQA Guidelines §15260]*

Those exemptions granted by the State legislature are listed in State CEQA Guidelines Article 18, and as may be amended.

Section 504. Categorical Exemptions. *[State CEQA Guidelines §15301-15332]*

Those exemptions granted by the State legislature are listed in State CEQA Guidelines Article 19, and as may be amended.

Section 505. Categorical Exemption Use Limitations. *[State CEQA Guidelines §15300.2]* A categorical exemption shall not be used if the conditions in State CEQA Guidelines Section 15300.2 apply.

Section 506. Denial of Projects. *[State CEQA Guidelines §15061(b)(4)]*

Projects that the City rejects or disapproves are not subject to CEQA. This provision, however, does not relieve an applicant from paying the costs for an EIR, Negative/Mitigated Negative Declaration, Initial Study, or preliminary environmental evaluation if prepared.

Section 507. Notice of Exemption. *[State CEQA Guidelines §15062]*

If the Planning & Development Department finds that a project is exempt for CEQA pursuant to this Chapter, a Notice of Exemption (NOE or Notice) may be filed.

The Notice shall be filed with the County Recorder, if at all, after approval of the project and shall include:

(a) A brief description of the project,
(b) The location of the project, by street address,
(c) A finding that the project is exempt from CEQA, including a citation to the State Guidelines section or statute under which it is found to be exempt,
(d) A brief statement of reasons to support the finding, and
(e) The applicant's name, if any.

When the Planning & Development Department approves an applicant's project, either the Planning & Development Department or the applicant may file a NOE. A Notice filed by the applicant is subject to the same posting and time requirements as a Notice filed by a public agency.

When an applicant files the NOE with the County Registrar it shall contain the information required together with a certified document issued by the Planning & Development Department stating that the Planning & Development Department has found the project to be exempt. The certified document may be a certified copy of an existing document or record of the Planning & Development Department.

The filing of a NOE and the posting on the list of notices start a 35-day statute of limitations period on legal challenges to the Planning & Development Department's decision that the project is exempt from CEQA. If a Notice of Exemption is not filed, a 180-day statute of limitations will apply.

CHAPTER 6. NEGATIVE/MITIGATED NEGATIVE DECLARATION PROCESS

The following provisions are added as procedural clarifications of State CEQA Guidelines Sections 15070 - 15075 with respect to Negative/Mitigated Negative Declarations in the County.

Section 600. Negative Declaration. *[State CEQA Guidelines §15070]*

If the Planning Director finds, based on the Initial Study, that there is no substantial evidence, in light of the whole record, that the project may have a significant effect on the environment, the Planning Director shall direct the Planning & Development Department

to prepare a Negative Declaration for consideration by the decision-making body for the permit(s) involved.

Section 601. Mitigated Negative Declaration. *[State CEQA Guidelines §15070]*

If the Planning Director finds, based on the Initial Study that the proposed project may have possible adverse significant impacts on the environment, but through revisions to the project or imposition of mitigation measures, such impacts would be mitigated or avoided so that no significant impacts remain, AND there is no substantial evidence in the record as a whole that significant impacts would result from the revised project; then the Planning Director shall notify the project sponsor(s) and provide them with a copy of the list of proposed mitigation measures that the project could incorporate to avoid all potentially significant effects. If the project sponsor agrees to these or functionally equivalent revisions/mitigation measures by signing a Project Revision Statement so indicating, the Planning & Development Department will then prepare a Mitigated Negative Declaration for public review and consideration by the decision-making body on the permit(s) involved.

Section 602. Contents. *[State CEQA Guidelines §15071]*

The Negative/Mitigated Negative Declaration must contain all items required by State CEQA Guidelines Section 15071.

Section 603. Public Notice and Review. *[State CEQA Guidelines §15072 and 15073]*

A Notice of Intent to Adopt a Negative/Mitigated Negative Declaration shall be provided in accordance with State CEQA Guidelines Section 15072.

(a) The City shall provide such notice in the following manner:

i. Publication at least one time in a newspaper of general circulation in the area potentially impacted;

ii. Mailing of the notice to the owners of all parcels within 300 feet of the boundaries of the parcel(s) on which the project is located plus those parcel owners adjacent to areas to be disturbed by off-site work at their last known address on the latest equalized assessment roll;

iii. Mailing of the notice to responsible agencies, trustee agencies, the State Clearinghouse, and the City Clerk/Recorder; and

iv. Mailing of the notice to organizations and individuals who have requested notice in writing.

(b) If a comment is not received during the public review period from an agency or person, it shall be assumed, absent a request for a specific extension of time that said agency or person has no comment to make.

Section 604. Notice of Determination. *[State CEQA Guidelines §15075]*

(a) Whenever the City Council, Zoning Adjustments Board, Planning Commission, Zoning Officer, or Planning Director approves a permit or authorizes a project for which a Negative/Mitigated Negative Declaration has been prepared, the Planning & Development Department shall file within 5 working days of their action a Notice of Determination with the County Clerk.

(b) In instances where multiple approval actions are required, the Notice of Determination shall be filed after the final decision to approve a project.

(c) If the project requires discretionary approvals from one or more state agencies, the Notice of Determination shall also be filed with the State Office of Planning and Research within this same 5-day period.

(d) Payment of any Fish and Game fees due to the State at the time a Notice of Determination is filed is the responsibility of the project sponsor. Payment must be received by the Planning & Development Department before the decision-making body holds a hearing or decides on the adequacy of the Negative/Mitigated Negative Declaration prepared. The Planning & Development Department shall forward the fee to the County Clerk with a filing fee. The County Clerk in turn forwards the fee to the State.

CHAPTER 7. ENVIRONMENTAL IMPACT REPORT (EIR) PROCESS

The following provisions are added as procedural clarifications of *State CEQA Guidelines* Sections 15080–15097, 15120–15132, and 15140–15154 with respect to the preparation and processing of EIRs in the County.

Section 700. EIR Preparation. *[State CEQA Guidelines §§15081 and 15081.5]*

If the Planning Director finds during preliminary review or based on an Initial Study that there is substantial evidence in the record as a whole that a project may have a significant adverse effect on the environment, or if an EIR is required by statute, the Planning Director shall notify the project sponsor in writing within thirty (30) days that an EIR must be prepared.

Section 701. Contents of an EIR. *[State CEQA Guidelines §15120-15132]*

An EIR produced by/for the City must contain all items required by *State CEQA Guidelines* Sections 15120-15132 and must meet the requirements of *State CEQA Guidelines* Sections 15140-15152 and 15154.

Section 702. Notice of Preparation (NOP). *[State CEQA Guidelines §15082]*

A Notice of Preparation notifying responsible and interested agencies about the project

and soliciting their comments on the scope and content of the EIR shall be prepared by the Planning & Development Department. This notice shall be sent by certified mail to the project sponsor, all responsible and trustee agencies, and all federal agencies involved in approving or funding the project. If State agencies are involved, then the NOP shall also be sent to the State Clearinghouse. A copy of the NOP shall also be delivered to the City Clerk/Recorder for posting for thirty (30) days. A list of agencies that are typically sent the NOP shall be maintained by the Planning & Development Department.

Section 702.1 Scoping. [State CEQA Guidelines §15083]

The scope of the EIR prepared is determined using the following sources: the Initial Study, if one is produced, previous environmental documents, responses to the NOP, consultation with other agencies, and public scoping meetings, if held. A public scoping meeting may be incorporated into the NOP process and is typically held by the consultant preparing the EIR with assistance from the Planning & Development Department.

Section 702.2 Preparation of Administrative Draft EIR.

The pre-circulation draft of an EIR is referred to as the administrative draft. This draft is considered a working document to be circulated among City staff for their comment on its accuracy and adequacy. It is not available for public review and shall be destroyed upon release of the DEIR.

Section 702.3 Public Review of Draft EIR. *[State CEQA Guidelines §§15085, 15087, 15105]*

(a) The Planning Director shall provide public notice of the availability of the Draft EIR for review and comment in the same manner as specified in Section 603(a)-(c) for a Negative Declaration. In addition, a copy of the Draft EIR shall be sent to the nearest branch of the City of Berkeley Library at the same time a Notice of Completion is sent to the State Office of Planning and Research. The contents of the public notice shall be as specified in *State CEQA Guidelines* Section 15087(c).

(b) The normal public review period for a Draft EIR in the City shall be 45 days unless a shorter period of not less than 30 days is approved by the State Clearinghouse. *[State CEQA Guidelines §15105]* In special circumstances, the Planning Director may require a public review period of up to 60 days.

(c) Requests for extensions of time beyond 60 days shall be considered and either granted or denied by the Planning Director. Planning Director decisions regarding requests for extensions of time are not appealable to the City Council

Section 702.4 Final EIR. *[State CEQA Guidelines §15132]*

The Final EIR consists of the text of the Draft EIR revised as necessary to reflect those comments received that require text changes, all comments received on the Draft EIR, the City's responses to said comments, a list of all persons and agencies that commented on the Draft EIR, and any other information added by the City.

Section 702.5 Notice of Determination (NOD). *[State CEQA Guidelines §15094]*

After certification of the Final EIR and approval of the project, the Planning & Development Department or decision-making body shall prepare and file a Notice of Determination with the County Clerk following the same procedure and with the same restrictions as specified in Section 604.

CHAPTER 8. MITIGATION MONITORING AND REPORTING PROGRAM (MMRP)

Section 800. General. *[State CEQA Guidelines §15097]*

Pursuant to Public Resources Code Section 21081.6, all jurisdictions must have a method for monitoring compliance and implementation of adopted mitigation measures. The City's Mitigation Monitoring and Reporting programs (i.e., MMRPs) shall be in conformance with *State CEQA Guidelines* Section 15097 as augmented by the provisions listed below.

Section 801. Adoption. *[State CEQA Guidelines §15097]*

(a) At the time the City makes the required CEQA findings regarding the Mitigated Negative Declaration or EIR being used, the City Council shall adopt a program for monitoring and reporting on the mitigation measures as part of the project. Conformance with this program shall be a condition of project approval.

(b) The resultant adopted MMRP shall be distributed to all agencies, departments, and parties with monitoring or reviewing responsibility thereunder.

Section 802. Contents.

MMRPs shall include at a minimum the following information for each mitigation measure:

(a) identification of the individual, department, agency, or other entity responsible for performing the mitigation measure;

(b) identification of the timing for implementation of the mitigation measure;

(c) identification of the specific results or performance standards that the mitigation is intended to accomplish if not clearly stated in the mitigation measure;

(d) identification of the frequency of inspections or other monitoring activities;

(e) identification of when compliance is completed;

(f) a statement that the project sponsor shall pay all monitoring costs including but not limited to those incurred by the City; and

(g) a signature block for the project sponsor and the property owner (for private projects only).

Section 803. Compliance Assurance Responsibilities.

(a) Overall compliance shall be coordinated by the Planning & Development Department unless otherwise indicated in the adopted MMRP.

(b) The Planning & Development Department may hire an outside consultant where mitigation measure compliance cannot be verified through the planning clearance process, where monitoring requires specialized expertise, or when City staff is unavailable to do the necessary work. The cost of said consultant shall be paid by the project sponsor.

(c) Mitigation measure compliance shall be monitored by the appropriate City Department. The Planning & Development Department and other City departments should review the building plans and the "as built" project for compliance with the mitigation measures imposed.

(d) Other agencies shall monitor the mitigation measures that they request or that are within their area of expertise. The Planning & Development Department shall notify these agencies of the mitigation monitoring required. These agencies shall inform the City in writing when each of their mitigation measures has been complied with completely.

Section 804. Fees. *[State CEQA Guidelines §15045]*

(a) The City shall charge and collect from the project sponsor a fee in an amount equal to the actual costs to the City of implementing the adopted MMRP. This includes the costs associated with use of an outside consultant where the Planning Director finds said use to be either necessary and/or convenient.

(b) An initial deposit in an amount equal to the City's total estimated costs of implementing the adopted MMRP for the first three (3) years shall be submitted to the Planning & Development Department prior to issuance of the first building permit needed to commence work on the project. Any unused portion of this initial deposit that is not needed to pay for permanent or long-term monitoring will be refunded to the project sponsor upon fulfillment of <u>all</u> those MMRP provisions that do not involve such monitoring.

(c) The project sponsor shall replenish the initial deposit every two (2) years so that the balance is high enough to pay for the estimated costs of monitoring compliance for three(3) years for those measures that require long-term or ongoing monitoring.

CHAPTER 9. AB 130, SB 131, AND OTHER STATE CEQA STREAMLINING PROVISIONS

Section 900. Purpose.

The purpose of this chapter is to establish procedures for implementing statutory exemptions, streamlined environmental review provisions, and other CEQA reforms enacted by the California Legislature, including AB 130 (2025), SB 131 (2025), and subsequent amendments thereto.

Assembly Bill 130 (AB 130) is a new law under the California Environmental Quality Act Guidelines (CEQA) that provides a complete statutory exemption for qualifying urban infill housing development projects[1]. The Bill was signed into law and effective on June 30, 2025, and is codified in Public Resources Code (PRC) Section 21080.66.

Senate Bill 131 creates two different CEQA exemption pathways. The law applies to any rezoning that implements the schedule of actions contained in a California Department of Housing and Community Development-approved Housing Element, including any required conforming General Plan amendments. The law also creates a path for “near-miss” projects where a single issue disqualifies a housing development project from a full exemption. The project specific environmental review focuses on the impacts associated with the single issue. SB 131 was signed into law and effective on June 30, 2025, and is codified in Public Resources Code Section 21080.085.

Section 901. Evaluation of Statutory and Categorical Exemptions and Streamlining Provisions.

(a) During preliminary environmental review, the Land Use Planning Division shall evaluate whether a proposed project qualifies for:
   i. Special situations exemption (Article 12);
   ii. A statutory exemption from CEQA (Article 18);
   iii. A categorical exemption from CEQA (Article 19);
   iv. Streamlined environmental review procedures authorized by State law;
   v. Reliance upon a previously certified environmental document;
   vi. Tiering, incorporation by reference, addenda, supplemental environmental documents, or subsequent environmental documents; or
   vii. Other environmental review procedures authorized by CEQA and the State CEQA Guidelines.

[1] As defined in Government Code Section 65589.5(h)(2).

(b) The determination regarding applicability of any exemption or streamlining provision shall be supported by substantial evidence in the administrative record.

Section 902. Urban Infill Housing Development Projects (AB 130).

(a) The City shall evaluate whether a housing development project qualifies for the Urban Infill Housing Development Project Exemption set forth in Public Resources Code Section 21080.66 (AB 130), as amended.
(b) Eligibility determinations shall be based upon the criteria established by State law and supported by substantial evidence in the administrative record.
(c) Projects determined to qualify for the exemption shall be processed in accordance with all applicable requirements of Public Resources Code Section 21080.66, including any tribal notification, consultation, notice filing, conditions of approval, and approval timeline requirements.
(d) Upon approval of an exempt project, the City shall prepare and file any required Notice of Exemption in accordance with CEQA and State law.

Section 903. Housing Element Implementation Rezonings (SB 131).

(a) The City shall evaluate whether a rezoning or zoning amendment, and any required conforming General Plan amendments, qualify for the Housing Element Implementation Rezoning Exemption set forth in Public Resources Code Section 21080.085 (SB 131), as amended.
(b) Where applicable, the City may rely upon this statutory exemption for rezonings and conforming General Plan amendments undertaken to implement the schedule of actions contained in an adopted Housing Element.
(c) The Planning Director shall document the basis for any exemption determination in the administrative record.

Section 904. Housing Development Projects Subject to Limited Environmental Review.

(a) The City shall evaluate whether a housing development project qualifies for limited environmental review pursuant to Public Resources Code Section 21080.1, as amended.
(b) Where applicable, environmental review shall be limited to the environmental effects caused solely by the condition or circumstance that prevents the project from qualifying for an otherwise applicable statutory or categorical exemption.
(c) The scope of environmental review shall be consistent with State law and supported by substantial evidence in the administrative record.

Section 905. Housing Development Projects Subject to AB 1633

AB 1633, which became effective on January 1, 2024, revised a provision in the Housing Accountability Act (HAA, Government Code Section 65589.5) that allows an applicant to file a petition to enforce the HAA's protections where a local agency fails to make a determination that the project is exempt from CEQA when it is eligible for the exemption.

(a) The City shall evaluate housing development projects for applicability of any CEQA exemptions, streamlining provisions, or limited environmental review authorized by State law, including those enacted or amended by AB 1633 (2025) and related legislation.
(b) The Planning Director shall ensure that environmental review for qualifying housing development projects is conducted in accordance with applicable statutory requirements and within any timelines established by State law.
(c) The basis for any determination regarding the applicability of a statutory exemption, streamlined environmental review procedure, or limited environmental review shall be documented in the administrative record.
(d) Nothing in this section shall be construed to alter the City's obligation to exercise independent judgment in determining the appropriate level of environmental review required under CEQA.

Section 906. Additional Statutory Exemptions and Streamlining Provisions.

(a) The City may apply any additional statutory exemption, streamlined environmental review procedure, or alternative compliance pathway authorized by CEQA and State law.
(b) Nothing in this chapter shall limit the City's ability to utilize future statutory exemptions, streamlining provisions, or CEQA reforms enacted by the California Legislature.
(c) The Planning Director may establish administrative procedures, application materials, and guidance documents necessary to implement the provisions of this chapter.

CHAPTER 10. CITY OF BERKELEY AS A RESPONSIBLE AGENCY

[State CEQA Guidelines §§15096 and 15253]

The following provisions are added as procedural clarifications of State CEQA Guidelines Sections 15096 and 15253 for when the City is a responsible agency responding to another Lead Agency's environmental review.

Section 1000. Commenting on a Lead Agency's Environmental Document. *[State CEQA Guidelines §15096]*

(a) The Planning & Development Department shall make every effort to provide written comments on the draft Negative/Mitigated Negative Declaration, Notice of Preparation and/or Draft EIR prepared by a Lead Agency within the time frames specified in the *State CEQA Guidelines*.

(b) The comments provided shall be limited to activities within the City's area(s) of expertise or jurisdiction. They shall at a minimum identify City permit requirements, potentially significant impacts, alternatives to be analyzed, and any mitigation measures to be considered. In addition, a recommendation as to whether a Negative/Mitigated Negative Declaration, or EIR is the appropriate document for the Lead Agency to prepare may be provided. The focus of the comments shall be to assist the Lead Agency in producing a defensible environmental document.

Section 1001. Failure of Lead Agency to Consult With City or Adequately Respond to Comments Provided. *[State CEQA Guidelines §15096]*

(a) If a Lead Agency fails to consult with the City prior to adopting a Negative/Mitigated Negative Declaration or certifying an EIR for a project over which the City has permit authority, the Planning & Development Department will review the document prepared. If the Planning Director finds based on the review that the document is adequate for City purposes, the City shall follow the procedures specified in Sections 1003 and 1004 below. However, if the Planning Director finds that the document is inadequate, then the City may take over the role of Lead Agency. The Planning & Development Department shall in that case follow the procedures specified herein in Chapters 4, 5 and 6 to prepare and process the environmental document needed.

(b) If a Lead Agency fails in the opinion of the Planning Director to adequately respond to the comments provided, the Planning Director shall consult with the City Attorney and jointly recommend a course of action pursuant to CEQA Guidelines Section 15096(e).

Section 1002. Approval of Project By City Acting as a Responsible Agency. *[State CEQA Guidelines §15096]*

(a) In issuing approvals or taking any other discretionary action on a project for which the City is a responsible agency, the City shall certify that it has reviewed and considered the environmental effects of the project as shown in the Negative/Mitigated Negative Declaration or EIR prepared by the Lead Agency.

(b) If an EIR has been produced, the City decision-making body shall adopt findings as set forth in *State CEQA Guidelines* Sections 15091 and 15093, if necessary.

(c) Where the City decision-making body requires the implementation of mitigation measures or other project changes to substantially lessen or avoid significant environmental effects of activities under its statutory control, a MMRP consistent with Chapter 8 of these guidelines covering those changes and measures shall be adopted at the time of project approval.

Section 1003. Limitations on the Power of City as a Responsible Agency to Require Changes in Project.

(a) When the City acts as a responsible agency for a project, it may only require those changes in a project that lessen or avoid the effects, either direct or indirect, of that part of the project that the City will be called upon to carry out or approve.

(b) When the City acts as a responsible agency, it may refuse to approve a project only in order to avoid direct or indirect adverse environmental effects of that part of the project the City must carry out or approve.

Section 1004. Certified Equivalent Program: Use of Environmental Document Prepared In Lieu of a Negative/Mitigated Negative Declaration or EIR. *[State CEQA Guidelines §§15250-15253]*

An environmental analysis document prepared for a project pursuant to a certified equivalent program shall be used by the City as a substitute for an EIR or Negative Declaration/Mitigated Negative Declaration and no additional environmental document shall be required if the conditions in *State CEQA Guideline* Section 15253(b) are met.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jamie Parks, Director, Public Works

Subject: Grant Application: Caltrans Sustainable Communities Grant for the University Avenue Multimodal Corridor Study

RECOMMENDATION

Adopt a Resolution approving the City's application submitted by the October 9, 2026 deadline for up to $700,000 under the Fiscal Year 2027–28 Caltrans Sustainable Transportation Planning Grants, Sustainable Communities Competitive category, for the University Avenue Transit Priority and Multimodal Corridor Study; authorizing the City Manager or designee to commit $150,000 in City funding to meet the required local match of a minimum of 11.7% of the total project cost; and, if awarded, accept the grant and execute the grant agreement and related amendments, subject to the approved project budget and applicable City requirements.

FISCAL IMPACTS OF RECOMMENDATION

The grant request is $700,000, with a City funding contribution of $150,000, for a total project cost of $850,000. The required City match would be provided through the 51 BRT (bus rapid transit) Council referral (GL Code: 011-54-622-662-0000-000-431-612310), which was approved by the City Council on January 16, 2024 in Ordinance No 7,892-N.S.: an amendment to the Annual Appropriations Ordinance No. 7,879-N.S. for Fiscal Year 2024.

CURRENT SITUATION AND ITS EFFECTS

University Avenue connects the UC Berkeley campus, downtown, neighborhoods, commercial areas, and waterfront. The proposed study would extend approximately three miles from Seawall Drive and the Berkeley waterfront to Oxford Street, Downtown Berkeley, and the UC Berkeley campus, including relevant connecting and parallel streets. It would address transit reliability, safety, accessibility, and competing demands for roadway and curb space while improving connections to regional transportation and community destinations.

University Avenue is identified as a High-Injury Street in Berkeley's Vision Zero Action Plan. Its wide crossings, traffic volumes, turning movements, and interactions among buses, automobiles, pedestrians, bicycles, and freight create safety and accessibility

challenges. Substantial housing development along and near the corridor, recurring transit delays, and planned waterfront transportation investments reinforce the need for a coordinated corridor-wide transportation framework.

Planning for access to the proposed ferry terminal creates an opportunity to evaluate these connections together and identify how transit, walking, and bicycling can provide practical alternatives to automobile travel while maintaining necessary vehicle access. The study would also examine connections to Downtown Berkeley BART, Berkeley Amtrak station and Capitol Corridor service, the Bay Trail, and Berkeley Marina.

The proposed scope would include the following work:

- **Existing conditions and access needs.** Assess transit operations, travel patterns, safety, accessibility, bicycle network gaps, and vehicle and curb access from campus to the waterfront. Document existing and planned improvements and evaluate collision patterns, ridership, traffic delay, sidewalks, curb ramps, crossings, accessible transit boarding areas, parking, loading, freight activity, housing trends, and economic conditions. Examine connections to the proposed ferry terminal and existing transit services.
- **Community engagement.** Develop accessible, multilingual outreach through corridor meetings, transit-stop and neighborhood outreach, surveys, and community partnerships. Prioritize transit-dependent residents, tenants, people with disabilities, seniors, students, merchants, and communities facing transportation barriers. The proposed engagement program includes four workshops or open houses, eight corridor pop-ups, six targeted listening sessions, three walking and rolling audits, four intercept-survey periods, and at least five presentations to advisory or governing bodies. Engagement summaries and participant evaluations would document how public input shapes recommendations and help identify gaps in participation.
- **Multimodal alternatives.** Evaluate transit priority and Bus Rapid Transit (BRT) concepts, such as transit lanes, signal priority, and stop access improvements, alongside pedestrian safety, automobile access, and curb management. Consider bicycle connections on Addison Street, Berkeley Way, and/or Hearst Avenue, including connections between those routes, University Avenue, and the waterfront. Alternatives would also address accessibility for people with disabilities, parking and loading, business and freight access, emergency access, and connections across Interstate 80 to the waterfront.
- **Recommendations and implementation planning.** Compare alternatives using safety, accessibility, transit reliability, equity, climate, and feasibility criteria. Prepare a preferred planning framework, conceptual improvements, planning-

level costs, phasing, and potential implementation funding sources for future City consideration.

Public Works would lead the study and coordinate with AC Transit, Caltrans, the Water Emergency Transportation Authority, UC Berkeley, BART, the Alameda County Transportation Commission, and relevant City departments. Partner roles would be documented in the application and scope. The study would address University Avenue and its connections; it would not constitute a complete study of the broader Shattuck corridor.

The University Avenue Transit Priority and Multimodal Corridor Study advances the Strategic Plan goal to create a resilient, safe, connected, and prepared city. It also supports social and racial equity and environmental sustainability by examining transportation barriers and opportunities to improve access without increasing dependence on driving.

BACKGROUND

The September 12, 2023 Council referral, "51B BRT + University/Shattuck Corridor Mobility Improvements," called for feasibility analysis and community engagement on BRT options, interdepartmental and interagency coordination, and consideration of quick-build improvements[1]. It also referred funding proposals for accessibility improvements and corridor studies to future budget processes. The March 25, 2025, City Council Referral Prioritization Results ranked this referral first[2]. The proposed grant would advance its University Avenue component through a defined planning process and dedicated resources.

The City's 1996 University Avenue Strategic Plan established goals for corridor vitality, neighborhood quality, and improved transit, pedestrian, and bicycle circulation[3]. Three decades later, the corridor has experienced substantial housing and commercial development, changing travel patterns, and new transportation and waterfront initiatives. The proposed study would provide an updated transportation framework that accounts for these changes and current housing, accessibility, climate, and equity priorities.

Berkeley's 2023 Transit-First Policy Implementation Plan calls for completing a University Avenue transit corridor plan by the end of 2029. The proposed study would also build on the General Plan Transportation Element, Bicycle Plan, Pedestrian Plan, Vision Zero Action Plan, Housing Element, and Corridors Zoning Update, while supporting regional transit-priority and transit-oriented development policies.

---

[1] https://berkeleyca.gov/sites/default/files/documents/2023-09-12%20Item%2029%2051B%20BRT%20%2B%20University-Shattuck.pdf

[2] https://berkeleyca.gov/sites/default/files/documents/2025-03-25%20Special%20Item%2003%202025%20City%20Council%20Referral%20Prioritization%20Results.pdf

Previous investments include transit signal priority, bus-stop and pedestrian improvements, parallel bicycle facilities, and Bay Trail access. The University West Bus Stops and Safety Project is upgrading stops at Acton and Bonar Streets, and additional bus-stop improvements are funded at Shattuck Avenue, Martin Luther King Jr. Way, and Sacramento Street. The study would coordinate these investments and identify remaining corridor-wide needs and right-of-way tradeoffs.

The California Department of Transportation administers the Sustainable Transportation Planning Grant Program to support local and regional planning that improves transportation access, safety, and connectivity while advancing California's climate and equity goals[3]. Funded projects are expected to benefit the multimodal transportation system while supporting public health, social equity, and environmental justice.

The grant application deadline was October 9, 2026, before this item could be brought to Council for consideration. To preserve the City's opportunity to compete for funding, staff submitted the application pending Council approval of the application and required local match. If Council does not approve these commitments, staff would withdraw the application.

The proposed University Avenue Transit Priority and Multimodal Corridor Study would examine how transit priority, bicycle and pedestrian connections, and coordinated waterfront access could improve travel options between the UC Berkeley campus and the Bay. Community engagement would help identify barriers experienced by corridor residents and users, particularly people who depend on transit or face challenges accessing employment, education, services, and recreation. Evaluating access to the proposed ferry terminal as part of the broader corridor study would also allow the City to consider how a future transportation investment could connect effectively with existing neighborhoods and travel networks.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The study would evaluate opportunities to improve transit reliability and make walking, bicycling, and transit more practical for corridor and waterfront trips. These strategies could reduce vehicle miles traveled and transportation emissions if implemented. The proposed planning effort would not fund construction, final engineering, or project-level environmental documents. Future physical improvements would be subject to applicable environmental review, funding, and City approvals.

RATIONALE FOR RECOMMENDATION

A City-led application advances an established Council priority. Combining transit priority, bicycle and pedestrian connectivity, and waterfront access in one study would allow the City and community to evaluate tradeoffs and develop coordinated recommendations.

---

[3] https://dot.ca.gov/programs/transportation-planning/division-of-transportation-planning/regional-and-community-planning/sustainable-transportation-planning-grants

The Sustainable Communities Competitive category is appropriate for a City-led multimodal planning effort. Providing the local match through staff time would support project oversight, community engagement, and technical coordination while using existing personnel resources. Approval would allow the City to proceed with the submitted application and authorize the local match necessary to receive funding if awarded.

ALTERNATIVE ACTIONS CONSIDERED

The City Council could decline to approve the application and required local match and direct staff to withdraw the City's grant application. This would eliminate the proposed local staff-time match commitment but eliminate the opportunity to secure up to $700,000 for the study. Advancing the University Avenue corridor planning effort would then require another funding source or a reduced scope, potentially delaying progress on this Council priority. Without a funded corridor-wide study, the City would continue to rely on individual projects to address transportation needs, limiting its ability to coordinate transit priority, safety, accessibility, and future growth across the corridor.

RESOLUTION NO. ##,###-N.S.

APPROVING A CALIFORNIA DEPARTMENT OF TRANSPORTATION GRANT APPLICATION AND AUTHORIZING THE CITY MANAGER OR DESIGNEE TO ACCEPT GRANT FUNDS AND EXECUTE A GRANT AGREEMENT AND AMENDMENTS FOR THE UNIVERSITY AVENUE TRANSIT PRIORITY AND MULTIMODAL CORRIDOR STUDY

WHEREAS, the City of Berkeley seeks funding through the Fiscal Year 2027–28 California Department of Transportation (Caltrans) Sustainable Transportation Planning Grants, Sustainable Communities Competitive category, for the University Avenue Transit Priority and Multimodal Corridor Study; and

WHEREAS, the study would evaluate community-informed options for transit priority, bicycle and pedestrian connectivity, accessibility, automobile and business access, and connections to regional transit and the proposed ferry terminal; and

WHEREAS, the study would advance the University Avenue component of the September 12, 2023 Council referral on BRT and corridor mobility improvements, ranked first in the 2025 referral prioritization results; and

WHEREAS, the City intends to satisfy the required local match through $90,693 in eligible City staff time, classified by Caltrans as cash match, and must execute a Restricted Grant Agreement before receiving reimbursement.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the Council approves the City’s application to Caltrans for up to $700,000 for the University Avenue Transit Priority and Multimodal Corridor Study.

BE IT FURTHER RESOLVED that the Council commits $150,000 in eligible City funding, representing the 11.47% minimum match requirement bringing the total project budget to $850,000, to meet the required local match.

BE IT FURTHER RESOLVED that, if awarded, the City Manager or designee is authorized to accept the grant and execute the Grant Agreement, related documents, and amendments with the California Department of Transportation for this project, subject to the approved project budget and applicable City requirements.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jamie Parks, Director, Public Works

Subject: Contract No. 32300214 Amendment: Belfor USA Group for On-Call Emergency Restoration, Mitigation and Remediation Services

RECOMMENDATION

Adopt a Resolution authorizing the City Manager to execute a contract amendment with Belfor USA Group for on-call emergency restoration, mitigation and remediation services related to fire and water damage at the Berkeley Animal Care Services facility and fire damage at the Public Safety Building; authorizing future restoration, mitigation and remediation services to be funded by departmental budgets or other sources such as the Catastrophic Reserve Fund as needs arise and resources allow; and increasing the contract amount by $1,500,000 for a new not-to-exceed amount of $2,050,000.

FISCAL IMPACTS OF RECOMMENDATION

Funds are available in the City's Catastrophic Reserve Fund and will be transferred to the FY2027 Public Works Budget (General Fund 011) for restoration, mitigation and remediation of the Berkeley Animal Care Services facility and the Public Safety Building. The City of Berkeley expects full reimbursement for the cost of emergency Berkeley Animal Care Services and Public Safety Building facility repairs through insurance claims, and reimbursements will be deposited in the Catastrophic Reserve Fund. As such, the recommendation will result in a short-term depletion of the Catastrophic Reserve Fund until the City receives insurance payments, but there is no net fiscal impact. Funding for non-catastrophic events is available in the Sewer Fund 611, Clean Storm Water Fund 616, and additional funding will be appropriated as need arises.

CURRENT SITUATION AND ITS EFFECTS

The Public Works Department requires assistance from restoration companies that can respond to emergency situations 24 hours per day. These may include vandalism, flood response, water damage, smoke or fire damage, sewer flooding incidents, and other unexpected damage to City property. Public Works is responsible for maintaining fifty-four public buildings and 400 miles of sanitary sewer main and laterals, among other infrastructure assets. Immediate restoration services may be necessary for City-owned buildings or private property impacted by City infrastructure failures.

This contract may be accessed by all City departments, including Parks, Recreation and Waterfront and the Library, which are responsible for maintaining public buildings and may require emergency restoration and remediation. The Police Department will also use this contract to support their efforts to secure public and private property that has been vandalized.

An increase in the not-to-exceed amount allowed under this on-call contract is needed to complete the remediation and repairs to the Animal Care Services Building that sustained substantial fire, smoke, and water damage due to arson in July 2026 currently estimated to be $850,000 in repairs, and for the Public Safety Building which also sustained fire, smoke, and water damage on October 21, 2026, with the cause still under investigation and an estimate to address the damage still pending.

Amending this contract is in alignment with the City's Strategic Plan, advancing our goal to provide state-of-the-art, well-maintained infrastructure, amenities, and facilities.

Effective January 1, 2026, local agencies are required to satisfy noticing requirements for certain contracts for services that meet the criteria outlined in Government Code Section 3504.1 as amended by AB 339. This project does not meet the criteria in Government Code Section 3504.1 and is exempt from the noticing requirement.

BACKGROUND

The City issued a Request for Proposals (RFP) on May 27, 2022, Specification # 22-11522-C, for two on-call Emergency Restoration, Mitigation and Remediation Services contracts for a three-year term with the option to extend for two 24-month terms if exercised. On June 14, 2022, the City received two proposals, and the RFP was re-issued on August 9, 2022. On September 8, 2022, the City received six proposals, which were evaluated by a multi-department review panel.

Belfor USA Group, Inc. was chosen as one of the most responsive and qualified companies. Belfor's contract began on March 11, 2023, with an original expiration date of December 30, 2025; this was extended by Council Authorization through March 11, 2028.

Additionally, Belfor USA Group, Inc. is the preferred and pre-approved disaster recovery vendor of the City's insurance providers.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

Restoration, mitigation and remediation services help prevent and remove environmental hazards such as water runoff, sewer waste and building debris. This contract amendment will help the City more quickly respond to and stop potential environmental issues before they begin or escalate.

RATIONALE FOR RECOMMENDATION

Public Works does not have the staffing capacity, expertise or equipment to perform the level of remediation work needed. Belfor was selected through a formal RFP process in 2022 and has performed well under the current contract. Completing a competitive RFP instead of pursuing a contract amendment was not feasible given the emergency nature of the repairs. Additionally, Belfor is the preferred vendor of the City's insurance providers.

ALTERNATIVE ACTIONS CONSIDERED

If not amended, the City will be unable to respond to emergency remediation and restoration needs at the Berkeley Animal Care Facility and the Public Safety Building. This will negatively impact Berkeley, as remediation and restoration needs will not be addressed in a timely manner.

CONTACT PERSON

Joy Brown, Interim Deputy Director, Public Works, 510-981-6629
Aaron Baker, Superintendent, Public Works, 510-981-6452

RESOLUTION NO. ##,###-N.S.

CONTRACT AMENDMENT: CONTRACT NO. 32300214 AMENDMENT: BELFOR USA GROUP FOR ON-CALL EMERGENCY RESTORATION, MITIGATION AND REMEDIATION SERVICES

WHEREAS, the City needs restoration, mitigation and remediation services to respond to emergency situations such as vandalism, flood response, water damage, smoke or fire damage, sewer flooding incidents, and other unexpected damage to City and private property; and

WHEREAS, funding will be transferred from the Catastrophic Reserve Fund to the Public Works' General Fund 011 in amounts equal to the claims; and

WHEREAS, this contract is exempt from the noticing requirements set forth in Government Code Section 3504.1; and

WHEREAS, on May 27, 2022, the City released a Request for Proposals (Specification No. 22-11522-C) for two on-call Emergency Restoration, Mitigation and Remediation Services contracts; and

WHEREAS, on August 9, 2022, the Request for Proposals was re-released, and the City received six submissions, which were reviewed and rated; and

WHEREAS, out of the six proposals, the Belfor USA Group was considered one of the best proposals and best qualified to meet the City's needs; and

WHEREAS, on November 12, 2022, City Council authorized the City Manager to execute a contract with Belfor USA Group for restoration, mitigation and remediation services with a total not-to-exceed amount of $150,000.

WHEREAS, funding is available for non-catastrophic expenses in the Sewer Fund 611, Clean Stormwater Fund 616, and General Fund 011, and funding will be identified and requested for appropriation as need arises;

WHEREAS, additional funding is needed to complete the repairs and remediation to the Animal Care Services Building caused by arson and the Public Safety Building fire damage;

WHEREAS, Belfor is the preferred vendor of the City's Insurance providers.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager is authorized to execute a contract amendment with Belfor USA Group for on-call emergency restoration, mitigation and remediation services related to fire and

water damage at the Berkeley Animal Care Services facility and fire damage at the Public Safety Building; authorizing future restoration, mitigation and remediation services to be funded by departmental budgets or other sources such as the Catastrophic Reserve Fund as needs arise and resources allow; and increasing the contract amount by $1,500,000 for a new not-to-exceed amount of $2,050,000.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jamie Parks, Director, Public Works

Subject: Final Map of Tract 8713: 1750 Sacramento Street

RECOMMENDATION

Adopt a Resolution approving the final map of Tract Map 8713 for a parcel merger, re-subdivision and land dedication at the San Francisco Bay Area Rapid Transit (BART) North Berkeley station located at 1750 Sacramento Street.

FISCAL IMPACTS OF RECOMMENDATION

There is no cost to the City. The applicant (North Berkeley Housing Partners) paid the appropriate fees with the submission of their tract map application.

CURRENT SITUATION AND ITS EFFECTS

The application submitted by the North Berkeley Housing Partners for the North Berkeley BART Transit-Oriented Development project (the Project) pursuant to AB 2011 (Government Code Section 65912) at 1750 Sacramento (PLN2024-0010) was approved on December 11, 2024. Approval of this project included approval of the tentative tract map for the merger and re-subdivision of the parcel for residential, open space, public access, and Bay Area Rapid Transit facilities. In addition, the tentative tract map included four land dedication areas, totaling approximately 3,683 square feet, along Virginia, Sacramento, Delaware, and Acton streets adjacent to the North Berkeley BART property to be transferred from BART to the City.

The tentative map was approved on December 11, 2024, and state law and City Ordinances require that the map is valid for 24 months from the approval date. Prior to expiration of the tentative map, the applicant duly submitted the final map for the Project within the required 24-month timeframe and is now seeking Council approval.

BACKGROUND

Section 21.20.100 of the Berkeley Municipal Code requires City Council approval of all final map subdivisions. In addition, pursuant to Section 66474.1 of Division 2 of the Government Code, a legislative body must approve such a final map if it finds it to be in substantial compliance with the approved tentative map.

All conditions of approval have been completed to the satisfaction of the Public Works Department and the Planning and Development Department. Public Works' Engineering Division staff have examined the final map and determined it to be in substantial compliance with the approved tentative map.

The final map is meant to provide a record of the underlying property survey and does not constitute approval of a proposed or existing structure upon the property. Separate action is required for this approval, which has been obtained by virtue of use permits and building permits.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The environmental impacts from the Project were considered in the Environmental Impact Report (SCH #: 2020110320), which was certified by the City Council on June 2, 2022. In addition, the transfer of ownership resulting from the proposed land dedication does not create significant effect on the environment.

The proposed buildings in the Project comply with the California Green Building Standards Code (CALGreen). CALGreen is California's green building code to improve public health, safety, and general welfare through enhanced design and construction of buildings, utilizing concepts that promote a positive environmental impact and sustainable construction practices.

RATIONALE FOR RECOMMENDATION

Pursuant to Section 66474.1 of Division 2 of the Government Code, the City Council must approve the final map if it finds it to be in substantial compliance with the approved tentative map. Staff have reviewed the map and find it to be in substantial compliance with the tentative map.

ALTERNATIVE ACTIONS CONSIDERED

No other alternative course of action is recommended.

Exhibit A: Tract Map 8713

RESOLUTION NO. ##,###-N.S.

FINAL MAP OF TRACT 8713: 1750 SACRAMENTO STREET

WHEREAS, the Planning and Development Department has established findings and conditions on June 3, 2024 for the tentative map to subdivide the property and construct mixed-use and multi-family residential buildings; and

WHEREAS, the Planning and Development Department has determined that the tentative map of Tract 8713 conforms to the requirements of the City's subdivision Ordinance, and the California Subdivision Map Act, and approved the tentative map of Tract 8713 on December 11, 2024; and

WHEREAS, the Public Works Department and the Planning and Development Department have certified that the final map of Tract 8713 substantially conforms to the conditionally approved tentative map, as required by the California Subdivision Map Act.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the final map of Tract 8713 for a mixed-use transit-oriented development at 1750 Sacramento Street, is hereby approved.

SHEET 8 OF 8

Elmwood BID Advisory Board

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Elmwood Business Improvement District (BID) Advisory Board

Submitted by: Andrew Han, Chair, Elmwood BID Advisory Board

Subject: Renewal of the Elmwood BID for Calendar Year 2027

RECOMMENDATION

Adopt a Resolution approving the Elmwood Business Improvement District Advisory Board's (hereafter "Elmwood BID Advisory Board" or "the Advisory Board") recommendation that Council 1) approve the 2026 Annual Report and preliminary budget for proposed improvements in the District for calendar year 2027; 2) declare its intent to levy an assessment to finance improvements in the District for calendar year 2027 and 3) direct the City Clerk to schedule a public hearing on the renewal of the Elmwood BID for December 1, 2026.

FISCAL IMPACTS OF RECOMMENDATION

Projected BID revenue of approximately $30,000 will be deposited into the Elmwood BID Fund and expensed from budget code 782-21-208-251-0000-000-446-636110. The Elmwood BID not-to-exceed contract amount will be set at $50,000, in the event that BID revenues come in higher than the anticipated amount (the city is obligated to "pass through" all BID funding collected on behalf of the Elmwood BID). The BID constitutes an independent funding source that must be targeted to commercial revitalization efforts that are recommended by the Advisory Board. The City of Berkeley operates a parking lot within the district and will thus be assessed $2,000 for 2027, paid through the Parking Meter Fund 631 (Budget code 631-54-622-665-3009-000-474-639990-). To the extent that the work of the Elmwood BID enhances the development of the Elmwood commercial district and its business climate over the long term, the BID contributes towards improving City revenues through increased sales and property taxes.

CURRENT SITUATION AND ITS EFFECTS

Under the State of California Parking and Business Improvement Area law of 1989 (California Streets and Highways Code section 36500 et. seq.) the City Council must approve an Annual Report prepared by the BID Advisory Board with a proposed budget for the next year as a requirement to levy new assessments. Accordingly, on October 2, 2026, the Elmwood BID Advisory Board recommended that the City Council approve the Annual Report of 2026 and budget for 2027 and adopt a Resolution of Intention to renew the Elmwood BID (M/S/A: Han/Chavez, passed unanimously, Ayes: Han,

Chavez, Berne, Hammond, Abstain: none). The Resolution of Intention also sets a public hearing date for December 1, 2026 where affected Elmwood businesses can express support or opposition to renewal of the BID for 2027. If written and/or oral protests are received from businesses proposed to pay a majority of the assessment prior to or at the public hearing, Council cannot vote to levy assessments for 2027. If no majority protest is received, the Council may renew the assessment.

BACKGROUND

The Elmwood BID was established in November 2013 to provide the Elmwood Business Association with a sustainable, predictable source of funding for its activities to promote, maintain, and beautify the Elmwood commercial district. The Elmwood Business Association has used the funds raised through the BID to implement a variety of activities such as place-based marketing, events, and capital improvements.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

By maintaining and enhancing the district, the Elmwood BID creates shopping opportunities for residents and visitors alike while encouraging alternative forms of transportation. Because the District is well served by public transportation, these services indirectly support environmental sustainability goals of encouraging alternative transportation modes and decreasing carbon emissions.

RATIONALE FOR RECOMMENDATION

State law requires that the City Council annually renew the Elmwood BID by first passing a resolution stating Council's intention to levy an annual assessment and scheduling a public hearing on the proposed renewed assessment for the coming year.

ALTERNATIVE ACTIONS CONSIDERED

None.

CITY MANAGER

The City Manager concurs with the content and recommendations of the Commission’s Report.

RESOLUTION NO. -N.S.

APPROVING THE 2026 ANNUAL REPORT AND PROPOSED BUDGET OF THE ELMWOOD BUSINESS IMPROVEMENT DISTRICT FOR 2027; DECLARING COUNCIL'S INTENTION TO LEVY AN ASSESSMENT IN THE DISTRICT FOR 2027; AND DIRECTING THE CITY CLERK TO SCHEDULE A PUBLIC HEARING FOR DECEMBER 1, 2026 REGARDING LEVYING OF A RENEWED ASSESSMENT FOR 2027

WHEREAS, the Parking and Business Improvement Area Law of 1989 (California Streets and Highway Code section 36500 et seq.) authorizes cities to establish parking and business improvement areas for the purpose of imposing assessments on businesses for certain purposes; and

WHEREAS, on November 19, 2013 the Berkeley City Council established such an area known as the Elmwood Business Improvement District (the "District"); and

WHEREAS, the City Council established the Elmwood Business Improvement District Advisory Board (Advisory Board) to act in compliance with State law to oversee the activities of the District; and

WHEREAS, the Advisory Board has submitted an Annual Report to the Berkeley City Council that outlines the activities of the District proposed for 2027 as required by the California Streets and Highways Code Section 36533; and

WHEREAS, the Annual Report is clear and complete and found to comply with the interests of Elmwood BID assessees; and

WHEREAS, the annual process for levying assessments in Business Improvement Districts requires that cities adopt a Resolution of Intent that declares their intent to levy such an assessment and then set a date for a public hearing where interested parties may be heard on the issue.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley as follows:

Section 1. The City Council hereby approves the Elmwood Business Improvement District Annual Report (Exhibit A) as submitted to the City Clerk by the Elmwood Business Improvement District Advisory Board.

Section 2. Pursuant to the provisions of Section 36500 et seq. of the California Streets and Highways Code (the "Act"), the City Council declares its intent to levy an annual assessment for the parking and business improvement area known as the Elmwood Business Improvement District.

Section 3. The boundaries of the District are set forth in Exhibit A1 to the Elmwood BID Annual Report and Budget which is attached hereto and incorporated herein by reference.

Section 4. The improvements and activities proposed for the District are as described in the Report and Budget (Exhibit A) and appended hereto. Council intends that these funds be used for designated activities and improvements in the Elmwood commercial

area. Council explicitly intends that funds generated through this BID shall not be used to pay for activities routinely paid for by the City.

Section 5. The City Council intends to levy assessments on businesses located within the boundaries of the District shown Exhibit A1 and according to the business classifications and rates set forth in Exhibit A2 which is attached hereto and incorporated herein by reference.

Section 6. A public hearing shall be held before the City Council on December 1, 2026. Following the hearing the Council will consider adoption of a resolution levying an assessment as recommended by the Elmwood Business Improvement Advisory Board. At this hearing the Council will hear all interested persons for or against the levying of such an assessment.

All formal written and oral protests against the levying of the District assessment should contain the following certification: "I certify that I am the owner of the business listed below, and that the business is located or operates within the boundaries of the Elmwood Business Improvement District." Protests should also contain the following information: business name (printed), business address (printed), City Business License Tax Registration number, name of protester (printed), signature of protester, date of protest and the reason(s) the protester is against the levying of the District assessment. Protests will not be considered valid unless signed and submitted by the owner of a business located within the boundaries of the proposed District. Written protests shall be filed with the City Clerk, First Floor, City Hall, at 2180 Milvia Street, Berkeley, California, 94704, at or before 3 pm on December 1, 2026 and shall contain a description of the business sufficient to identify the business, and if the person so protesting is not listed on City records as the owner of the business, the protest shall be accompanied by written evidence that the person subscripting the protest is the owner of the business. Any protest pertaining to the regularity or sufficiency of the proceedings shall be in writing and shall clearly set forth the irregularity or defect to which the objection is made. If written protests are received from the owners of businesses in the District which will pay fifty percent (50%) or more of the assessment proposed to be levied, no further proceedings to levy the assessment shall be taken for a period of one year from the date of the finding of a majority protest by the City Council. If the majority protest is only against the furnishing of a specified type or types of improvements or activities within the District, those types of improvements or activities shall be eliminated.

Section 7. The City Clerk is directed to give notice of said public hearing by publishing the draft of the Resolution of Intention in a newspaper of general circulation.

EXHIBIT A

Annual Report for the Elmwood Business Improvement District for 2026

October 16, 2026

To: Members of the Berkeley City Council
From: The Elmwood Business Improvement District Advisory Board
Re: 2027 Elmwood BID Renewal

We respectfully request that the Elmwood Business Improvement District be renewed for the 2027 calendar year, with the same boundary as the prior year (Exhibit A1). The assessment method and basis remain the same.

The Elmwood BID was established in November 2013 to promote, maintain and beautify the Elmwood commercial district. Revenues of roughly $30,000 per year provide a regular, predictable source of funding for the Elmwood Business Association (EBA) activities, and an additional $5,000 of grant funding and fundraising is also anticipated. The Elmwood BID has allowed the EBA to expand its activities into areas such as maintenance and capital improvements.

The Elmwood Business Association is continuing to be the catalyst for Elmwood Business District's ongoing vitality. Here are some highlights:

- Engaging the merchants in the expanded BID to envision how EBA can assist in supporting their businesses
- Successfully put on the Third Elmwood Music Festival on three stages, partnering with the Berkeley Public Library – Claremont Branch, local food truck vendors, and local craft artists, bringing together the community on May 3, 2026.
- Hosted The Elmwood Beer Crawl on July 18, 2026.
- Hosting the Wine Walk on September 19, 2026
- Secured a funding commitment for the Music in the Elmwood event for two years, 2027 & 2028.
- Represented the interests Elmwood merchants on important issues such as Corridors Upzoning, marketing, and parking management.
- Maintenance of year-round lighting installation on district buildings
- Website: www.shoptheelmwood.com serves as one of the district's main marketing tools – District Events, Introducing New Businesses, and ongoing marketing updates
- Continued maintenance of Welcome to Elmwood banners as well as seasonal banners on light posts and ongoing maintenance
- Quarterly weeding and cleaning of Russell St. parking lot partnering with UC Berkeley
- Maintenance of security camera at Russell St. parking lot
- Maintaining a part-time Administrative Assistant to:

    - Engage the public on social media
    - Manage merchant communications
    - Promote monthly specials among Elmwood Merchants
    - Updating the website to keep it current
    - Project management of events around Elmwood BID
- Sponsored the following events:
    - Spring and Fall Outdoor Movie Nights
    - Spring Elmwood Music Festival
    - Where's Waldo Events
    - Summer Merchant Social to integrate merchants from the expanded BID
    - Fall Live Music Stroll
    - Stop for Berkeley Bicycle Day participants for snacks and water
    - Craft Fair featuring local artists
    - Fall Wine Walk
    - Holiday Season Events
    - Shop Local Promotions
- Members of the board are active in other Berkeley commercial and residential neighborhoods to promote harmony and cooperation

Below is a summary of our current financial position and our proposed budget for 2027 for your review.

2026-2027 Actual and Projected Expenditures

Elmwood Business Association

INCOME	2026 Budget	2027 Budget
Operating Income

Exhibit A1: Elmwood Business Improvement District (BID), Map

Elmwood BID Boundaries

City of Berkeley

Exhibit A2: Elmwood Business Improvement District, Assessment Rates

Business Classifications and Assessment Rates	
Classifications	**Annual Rates**
Retail including jewelers & groceries but not restaurants (Tax Codes R, M and G but without NAICS 722, Food Services & Drinking Places)	
• Gross receipts under $350,000	$250
• Gross receipts $350,000--$999,000	$350
• Gross receipts $1,000,000	$500
Restaurants, including all businesses that prepare and serve food at the request of customers (NAICS 722)	$500
Professionals including offices of real estate brokers (Tax Code P)	
• Gross receipts under $100,000	$300
• Gross receipts over $100,000	$400
Entertainment and Recreation (Tax Code E)	$450
Business, Personal and Repair Services (Tax Code B) except Hair, Nail and Skin Care Services (NAICS 81211)	$200
Hair, Nail and Skin Care Services (NAICS 81211)	$200
Parking lot operators	$2,000
Financial Institutions	$2,500

Any business that is classified as a nonprofit (Tax Code N) for business licenses purposes, shall nevertheless pay the assessment at the rate that corresponds to its North American Standard Industrial Classification if it is engaged in the sale of products or services. Any new business established within the District shall not be required to pay an assessment on application for its business license but only on renewal at the end of the year it was initiated. (Ord. 7317-NS § 3 (part), 2013)

Parks, Recreation and Waterfront Commission

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Parks, Recreation, and Waterfront Commission

Submitted by: Allan Abshez, Chair

Subject: Officially Naming the Public Plaza at Adeline and Fairview Streets as Delores Cooper Plaza

RECOMMENDATION
Adopt a Resolution officially naming the public plaza at Adeline and Fairview Streets as Delores Cooper Plaza.

FINANCIAL IMPLICATIONS
None

CURRENT SITUATION AND ITS EFFECTS
In the Council agenda for April 14, 2026, Councilmember Bartlett made a referral to the Parks, Recreation, and Waterfront Commission as follows: Refer to the Parks, Recreation, and Waterfront Commission to explore naming of the public plaza located at the intersection of Adeline Street and Fairview Street within the Lorin District corridor in South Berkeley as Delores Cooper Plaza; including process and directive of coordinating implementation, historical preservation, such as signage, universal design, and public engagement with community partners to document Delores Cooper's historic contributions to the City of Berkeley (see Attachment 2).

In response to the referral, per the Council Naming Policy procedures, on July 8, 2026, the Parks, Recreation, and Waterfront Commission conducted a public hearing, and on September 9, 2026, the commission took action to recommend that Council name the plaza as Delores Cooper Plaza. (M/S/C: Philip/ Rybczynski/U) Ayes: Abshez; Granzella; Nash; Philip; Rybczynski ; Samelson; Stewart; Noes: none; Absent: Muszynski; Yeo.

BACKGROUND
The City of Berkeley has continuously recognized individuals whose leadership and service have shaped the City's cultural and civic identity. Public space naming is an important tool that honors community legacy by strengthening neighborhood identity and civic pride.

Delores Cooper's legacy as an educator, advocate, and cultural leader spans decades of service to Berkeley residents, particularly Black youth and families. The naming has received unanimous support from the Lorin Business Association of South Berkeley and strong support from numerous members of the broader Berkeley community. A full biography of Delores Cooper and her contributions to Berkeley is provided in Attachment 2 of this report.

CITY MANAGER

Based on the significant contribution Delores Cooper has made to the South Berkeley community, the City Manager concurs with the recommendation contained in this report.

ENVIRONMENTAL SUSTAINABILITY

No negative environmental impacts were identified as a result of this recommendation.

RATIONAL FOR RECOMMENDATION

See body of report.

ALTERNATIVE ACTIONS CONSIDERED

None

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the public plaza at Adeline and Fairview Streets is officially named as Delores Cooper Plaza.

BEN BARTLETT
CITY COUNCILMEMBER, DISTRICT 3

CONSENT CALENDAR

April 14, 2026

To: Honorable Mayor and Members of the City Council

From: Councilmember Ben Bartlett

Subject: Recommendation to Parks and Waterfront Commission to Explore the Naming of a Public Plaza in South Berkeley as Delores Cooper Plaza

RECOMMENDATION

Refer to the Parks, Recreation, and Waterfront Commission to explore naming of the public plaza located at the intersection of Adeline Street and Fairview Street within the Lorin District corridor in South Berkeley as Delores Cooper Plaza; including process and directive of coordinating implementation, historical preservation, such as signage, universal design, and public engagement with community partners to document Delores Cooper's historic contributions to the City of Berkeley.

CURRENT SITUATION

The City of Berkeley has continuously recognized individuals whose leadership and service have shaped the City's cultural and civic identity. Public space naming is an important tool that honors community legacy by strengthening neighborhood identity and civic pride.

Delores Nochi Cooper is a founding board member and Executive Manager of Berkeley Juneteenth Cultural Celebrations, a 35-year-old non-profit organization located in Berkeley, California. A retired peace officer with 25 years of experience, Ms. Cooper's professional background includes legal compliance monitoring, investigations, needs assessments, report writing, and drug intervention education. Ms. Cooper's five years as a departmental training manager provided her with experience in strategic planning, policy development, contract negotiation, and production management. Ms. Cooper holds an MA in Legal Analysis and a BA in History from Lone Mountain College in San Francisco.

Ms. Cooper has used her professional expertise to empower and strengthen the community through events such as Juneteenth and Black History Month. Since taking over the helm of Berkeley Juneteenth as its Production Manager ten years ago, the festival has grown in its scope and influence and is hailed as the longest-running Juneteenth event in California. Ms. Cooper's portfolio includes serving as a historical exhibits curator, Vision magazine editor, and graphic designer in charge of web and social media content,

event images, marketing materials, fundraising and proposal writing, budget management, and as the single point of contact for the City, press, and service providers.

Ms. Cooper played a central role in the successful effort to rename Grove Street as Martin Luther King Jr. Way, serving as a member of the Martin Luther King Ad Hoc Committee. She is an active participant in her community and has volunteered her services as a writing coach at Berkeley and Richmond schools through Writer Coach Connection; as a program consultant with the South Berkeley Legacy Project; and as a Police Review Commissioner with the City of Berkeley. In 2021, Ms. Cooper was appointed to serve on the City of Berkeley's Independent Redistricting Commission. In 2024, she published a collection of poetry, "A Sweating Body That is Cooled By A Sometimey Breeze."

South Berkeley, and specifically the Lorin District corridor, is widely recognized as the historic and contemporary epicenter of culture in Berkeley. As displacement pressures continue, it is increasingly important for the City to preserve and affirm Berkeley's legacy through intentional placemaking and cultural recognition.

The proposed Delores Cooper Plaza, located at the intersection of Adeline Street and Fairview Street within the Lorin District corridor in South Berkeley, reflects Ms. Cooper's deep connection to Berkeley and its ongoing cultural and historical significance. The naming has received unanimous support from the Lorin Business Association of South Berkeley and strong support from numerous members of the broader Berkeley community.

BACKGROUND

Delores Cooper's legacy as an educator, advocate, and cultural leader spans decades of service to Berkeley residents, particularly Black youth and families. Born in Oakland, nurtured in Compton, and raised in Berkeley, she believes art, music, and history can serve as vehicles for channeling creative expression and building self-esteem, ultimately addressing the generational emotional trauma of slavery and systemic racism. Her passion is event programming with a community-healing component that builds community, with "ME and WE" as essential participants in a healthy, diverse community.

Cooper's leadership and her continued involvement in cultural institutions, such as the Berkeley Juneteenth Festival, demonstrate her enduring commitment to building the Berkeley community.

This proposal is further supported by Inter-City Services Inc. (ICS), a Bay Area organization that has served marginalized and underserved communities since 1984, which has formally expressed its support for establishing Delores Cooper Plaza and highlighted the appropriateness of the proposed location.

REVIEW OF EXISTING PLANS, PROGRAMS, POLICIES, AND LAWS

This action is consistent with the Adeline Corridor Specific Plan's placemaking goals, which emphasize improvements to the public realm, corridor identity, and pedestrian-oriented retail and cultural activity.

ENVIRONMENTAL SUSTAINABILITY

No negative impact.

COMMUNITY OUTREACH

Community outreach for this proposal included engagement with the Lorin Business Association, community organizations, and South Berkeley residents. The proposal received unanimous support from the Lorin Business Association and broad endorsement from members of the Berkeley community.

In addition, outreach and consultation were conducted with Kieron Slaughter, former City of Berkeley Office of Economic Development staff member and former Liaison to the Lorin Business Association of South Berkeley. Mr. Slaughter brings extensive experience in public-space renaming and placemaking in Berkeley, as well as several other successful renaming efforts and placemaking installations in Oakland and Richmond. His expertise helped inform the proposed process and community-centered approach for this initiative.

The Commission is asked to review this proposal and, if appropriate, recommend a plan and approval to the City Council.

FISCAL IMPLICATIONS

Costs associated with the fabrication and installation of plaza signage and interpretive elements are anticipated to be modest and may be covered by existing departmental budgets or through partnerships and donations.

Re: Endorsement — Delores Cooper Honoring Project

Dear Mr. Edwards,

This letter confirms that Inter-City Services Inc. (ICS) fully endorses the proposal to honor Ms. Delores Cooper through the establishment of the Proposed Delores Cooper Plaza, located near Alcatraz Avenue and Adeline Street within the Lorin District corridor in the South Berkeley area of the City of Berkeley.

As a longstanding organization dedicated to serving and elevating marginalized and underserved communities in the Bay Area since 1984, ICS expresses its full support for this meaningful project recognizing Ms. Cooper's enduring legacy and contributions to the Berkeley community. The proposed location reflects her deep connection to South Berkeley and its ongoing cultural and historical significance.

Please accept this letter as formal documentation of ICS's endorsement. We look forward to continued collaboration on the next steps in bringing this project to fruition.

Sincerely,

Mansour Id-Deen

Re: Board Approval — Delores Cooper Honoring Project

Dear Mr. Edwards,

This letter confirms that the **Lorin Business Association** met on **October 17, 2025**, and voted to **approve the proposal to honor Ms. Delores Cooper** through the establishment of the **Proposed Delores Cooper Plaza**, located near **Alcatraz Avenue and Adeline Street** within the Lorin District corridor.

The Lorin Business Association expresses its full support for this meaningful project, recognizing Ms. Cooper's enduring legacy and contributions to the Berkeley community. The proposed location reflects her deep connection to the Lorin District and its ongoing cultural and historical significance.

Please accept this letter as formal documentation of the Board's approval. We look forward to continued collaboration on the next steps in bringing this project to fruition.

Sincerely,
Liz Lisle, Co-Chair
Yavette Holts, Co-Chair

Attachment 4:

DELORES NOCHI COOPER

Delores Nochi Cooper is a founding board member and Executive Manager of the day-to-day operation of Berkeley Juneteenth Cultural Celebrations, a 35-year-old non-profit organization located in Berkeley, California.

Her background as a retired peace officer for 25 years, honed her skills in legal compliance monitoring, investigation, needs assessment, report writing, and as a drug intervention educator; her five years as the departmental training manager provided her with experience in strategic planning, policy development, contract negotiation, and production management. Delores has transitioned her professional expertise in pursuit of her overarching commitment to the emotional well-being of her community through events such as Juneteenth and Black History Month that celebrate the African American experience. Probation work taught her the importance of family, community connectedness, and that change is always possible.

Delores believes merely celebrating Juneteenth is not enough. Her passion is event programming with a community healing component that builds community with "ME and WE" as essential participants in a healthy, diverse community. Delores believes art, music and history can be used as a vehicle to channel creative juices and build self-esteem, that can change norms and behaviors, and ultimately address the generational emotional trauma of slavery and systemic racism.

Since taking over the helm of Berkeley Juneteenth as its Production Manager ten years ago, the festival has grown in its scope and influence and is hailed as the longest running Juneteenth event in California. Delores' portfolio includes historical exhibits curator, Vision magazine editor, graphic designer in charge of web and social media content, event images, and marketing materials. To that portfolio, add fundraising and proposal writing, budget management, and the single point of contact for the City, press, and service providers.

Delores is an active participant in her community and has volunteered her services as a writing coach at Berkeley and Richmond schools with Writer Coach Connection; as a program consultant with the South Berkeley Legacy Project; as a member of the Martin Luther King Ad Hoc Committee which successfully renamed a major Berkeley thoroughfare in honor of Martin Luther King, Jr.; and with the City of Berkeley as a Police Review Commissioner. In 2021, Delores was appointed to serve on the City of Berkeley's Independent Redistricting Commission.

In 2024, Delores published a collection of poetry, "A Sweating Body That is Cooled By A Sometimey Breeze." She is currently working on her memoir.

Born in Oakland, nurtured in Compton, and raised in Berkeley, CA, Delores is a daughter, sister, mother, grandmother, aunt, cousin, devoted friend, and a team player with a strong work ethic instilled in her at an early age. She believes in cultivating dreams and ideas to fruition. In her down time, she enjoys, reading, writing, water aerobics, finding treasures at estate sales, sitting in her sacred spot just being and observing, and above all, spending time with loved ones.

Delores received her MA in Legal Analysis and BA in History from Lone Mountain College in San Francisco.

Parks, Recreation and Waterfront Commission

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Parks, Recreation, and Waterfront Commission

Submitted by: Allan Abshez, Chair

Subject: Officially Naming the Gymnasium at the Martin Luther King, Jr. Youth Services Center in honor of Philip Harper-Cotton

RECOMMENDATION
Adopt a Resolution officially naming the gymnasium at the Martin Luther King, Jr. Youth Services Center (MLK Center) in honor of Philip Harper-Cotton.

FINANCIAL IMPLICATIONS
None

CURRENT SITUATION AND ITS EFFECTS
On September 1, 2017, Philip Harper-Cotton retired after 49 years with the Recreation Department, his final 11 years as a recreation program supervisor. His work helped shape Berkeley's youth and family recreation offerings, from sports leagues to youth mentoring to special events, for over three generations of Berkeley residents in South and West Berkeley.

Per the Council Naming Policy procedures, on July 8, 2026, the Parks, Recreation, and Waterfront Commission conducted a public hearing, and on September 9, 2026, the commission took action to recommend that Council name the gymnasium at Martin Luther King, Jr. Youth Services Center in honor of Philip Harper-Cotton (M/S/C: Nash/Stewart/U). Ayes: Abshez; Granzella; Nash; Philip; Rybczynski; Samelson; Stewart; Noes: none; Absent: Muszynski; Yeo.

BACKGROUND
The City of Berkeley has continuously recognized individuals whose leadership and service have shaped the City's cultural and civic identity. Public space naming is an important tool that honors community legacy by strengthening neighborhood identity and civic pride. Philip Harper-Cotton's impact on the City's Recreation Division is without parallel.

Mr. Harper-Cotton grew up in Berkeley, spending much of his youth playing ball at Grove Park. This early connection to the city's parks led him into youth sports and

recreation, eventually earning him a bachelor's degree in recreation from Cal State Hayward (now California State University East Bay).

He joined city staff in 1968 as a playground leader and became a full-time recreation programmer in 1975, initially assigned to San Pablo Park. Over his career, he played many roles at the City, including developing the programming at the Young Adult Project, which was part of the national Model Cities program that was implemented in Berkeley by Maudelle Shirek, Ron Dellums, and many other local civic leaders; coached youth baseball, basketball, and football teams; created numerous mentoring programs for young adults; founded the Greg Brown Memorial Basketball Tournament in 1975 that honored a Berkeley High basketball player who died while playing in a game; launched and expanded numerous community programs in response to local needs, many of which still exist today; and led the Recreation Division through challenging periods, such as the budget cuts after Proposition 13 in 1978. Mr. Harper-Cotton retired in 2017, after almost five decades of dedicated service working with primarily under-served youth in South Berkeley. By the time he retired, he had been working with the grandchildren of the youth he worked with at the start of his career.

CITY MANAGER

Based on the significant contribution Philip Harper-Cotton has made to the South Berkeley community as a dedicated City employee over 49 years, the City Manager concurs with the recommendation contained in this report, and acknowledges the City Council's exception to the City Policy for Naming and Renaming Public facilities section3(B) permitting the City Council to approve the name of a living person with a 2/3 voting majority.

ENVIRONMENTAL SUSTAINABILITY

There are no negative environmental impacts were identified as a result of this recommendation.

RATIONAL FOR RECOMMENDATION

See body of report.

ALTERNATIVE ACTIONS CONSIDERED

RESOLUTION NO. _____ -N.S.

OFFICIALLY NAMING THE GYMNASIUM AT THE MARTIN LUTHER KING, JR. YOUTH SERVICES CENTER IN HONOR OF PHILIP HARPER-COTTON

WHEREAS, the City of Berkeley has continuously recognized individuals whose leadership and service have shaped the City's cultural and civic identity. Public space naming is an important tool that honors community legacy by strengthening neighborhood identity and civic pride; and

WHEREAS, on September 1, 2017, Philip Harper-Cotton retired after 49 years with the Recreation Department, his final 11 years as a recreation program supervisor. His work helped shape Berkeley's youth and family recreation offerings, from sports leagues to youth mentoring to special events, for over three generations of Berkeley residents in South and West Berkeley; and

WHEREAS, Philip Harper-Cotton's impact on the City's Recreation Division is without parallel; and

WHEREAS, per the Council Naming Policy procedures, on July 8, 2026, the PRW Commission conducted a public hearing, and on September 9, 2026, the commission took action to recommend that Council name the gymnasium at Martin Luther King, Jr. Youth Services Center in honor of Philip Harper-Cotton (M/S/C: Nash/Stewart/U). Ayes: Abshez; Granzella; Nash; Philip; Rybczynski; Samelson; Stewart; Noes: none; Absent: Muszynski; Yeo.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the gymnasium at the Martin Luther King, Jr. Youth Services Center is officially named in honor of Philip Harper-Cotton.

Office of the City Manager

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Solano Business Improvement District (BID) Advisory Board

Submitted by: Fern Solomon, Chair, Solano Avenue BID Advisory Board

Subject: Renewal of the Solano Avenue BID for Calendar Year 2027

RECOMMENDATION

Adopt a Resolution approving the Solano Avenue Business Improvement District Advisory Board's (hereafter "Solano BID Advisory Board" or "the Advisory Board") recommendation that Council: 1) approve the 2026 Annual Report and preliminary budget for the District for calendar year 2027; 2) declare its intent to levy an assessment for calendar year 2027; and 3) direct the City Clerk to schedule a public hearing on the renewal of the assessment for December 1, 2026.

FISCAL IMPACTS OF RECOMMENDATION

Projected BID revenue of approximately $30,000 will be deposited into the Solano Avenue BID Fund, revenue budget code 783-21-208-251-0000-000-000-412110- and expensed from budget code 783-21-208-251-0000-000-446-636110. The BID constitutes an independent funding source that must be targeted to commercial revitalization efforts that are recommended by the Solano BID Advisory Board. To the extent that the work of the Solano BID enhances the economic development of Solano Avenue and its business climate over the long term, the BID contributes towards improving City revenues through increased sales and property taxes.

CURRENT SITUATION AND ITS EFFECTS

Renewal of the Solano BID is a Strategic Plan Priority Project, advancing our goal to foster a dynamic, sustainable, and locally-based economy. Under the State of California Parking and Business Improvement Area law of 1989 (California Streets and Highways Code section 36500 et.seq.) the City Council must approve an Annual Report prepared by the Solano BID Advisory Board with a proposed budget for the next year as a requirement to levy new assessments. Accordingly, at its meeting of September 15, 2026, the Solano BID Advisory Board voted to recommend that the City Council approve the Report for the Solano Avenue Business Improvement District for 2026 and adopt a Resolution of Intention to renew the assessment 2027 (M/S/A; Devany/Solomon/Unanimous, Ayes: Devany, Solomon, Noes: None, Abstentions: None). The Resolution of Intention also sets a public hearing date for December 1, 2026 where affected Solano businesses can express support or opposition to renewal of the BID for calendar year 2027. If written and/or oral protests are received from businesses

proposed to pay a majority of the assessment, Council cannot vote to levy assessments for 2027. If no majority protest is received the Council may renew the assessment.

BACKGROUND

Since its revival in May 2012, the Solano BID Advisory Board has used Solano BID revenues to finance three programs: 1) a tree watering contract to ensure the health of 48 young street trees on Solano; 2) installing a program of 40 hanging planter baskets on light poles; and 3) sponsorship of events that attract customers to the district and improvements that enhance the pedestrian experience. In recent years, the BID program has focused on sponsoring activities and improvements intended to market and promote the Solano Avenue business district. In the wintertime, the BID in conjunction with the Solano Avenue Association (which represents both Albany and Berkeley businesses along Solano Avenue) pays a contractor to erect holiday lights and decorations on City streetlight poles. This will continue for the upcoming winter season. Due to expenditures in prior years, the Solano BID will use less of its funds on the holiday décor program, and, instead, explore expanded landscaping services to better maintain existing tree wells and water existing hanging flower baskets. BID expenditures are to be made through an established fiscal agency contract with Telegraph Property and Business Management Corporation (or the “TPBMC”).

ENVIRONMENTAL SUSTAINABILITY

By maintaining and enhancing the district, the Solano BID creates shopping opportunities for residents and visitors alike while encouraging alternative forms of transportation. Environmental enhancements such as the added street trees, hanging planters, parklet, and holiday decorations contribute to making Solano a more pleasant walking destination. Because the District is well served by public transportation and biking infrastructure, these services indirectly support environmental sustainability goals of encouraging alternative transportation modes to decrease carbon emissions.

RATIONALE FOR RECOMMENDATION

State law requires that the City Council annually renew the Solano BID by first passing a resolution stating Council's intention to levy an annual assessment and scheduling a public hearing on the proposed renewed assessment for the coming year.

ALTERNATIVE ACTIONS CONSIDERED

None.

CITY MANAGER

The City Manager concurs with the content and recommendations of the Commission’s Report.

CONTACT PERSON

Vincent McCoy, Secretary to the Solano BID Advisory Board, (510) 981-7043.

- Exhibit A1: Map of the Solano BID
- Exhibit A2: Assessment Rates

RESOLUTION NO. ##,###-N.S.

APPROVING THE ANNUAL REPORT AND PROPOSED BUDGET OF THE SOLANO AVENUE BUSINESS IMPROVEMENT DISTRICT FOR 2026-2027; DECLARING COUNCIL'S INTENTION TO LEVY AN ASSESSMENT IN THE DISTRICT FOR 2027; AND DIRECTING THE CITY CLERK TO SCHEDULE A PUBLIC HEARING FOR DECEMBER 1, 2026 TO CONSIDER LEVYING A RENEWED ASSESSMENT FOR 2027.

WHEREAS, the Parking and Business Improvement Area Law of 1989 (California Streets and Highway Code section 36500 et seq.) authorizes cities to establish parking and business improvement areas for the purpose of imposing assessments on businesses for certain purposes; and

WHEREAS, on December 9, 2003 the Berkeley City Council established such an area known as the Solano Avenue Business Improvement District (the "District"); and

WHEREAS, the City Council established a Solano Avenue Business Improvement District Advisory Board (Advisory Board) to act in compliance with State law to oversee the activities of the District; and

WHEREAS, the Advisory Board has submitted an Annual Report to the Berkeley City Council that outlines the activities of the District proposed for 2027 as required by the California Streets and Highways Code Section 36533; and

WHEREAS, the Annual Report is clear and complete and found to comply with the interests of Solano Avenue assessees; and

WHEREAS, the annual process for levying assessments in Business Improvement Districts requires that cities adopt a Resolution of Intent that declares their intent to levy such an assessment and then set a date for a public hearing where interested parties may be heard on the issue.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley as follows:

Section 1. The City Council hereby approves the Solano Avenue Business Improvement District Annual Report 2026 and Budget for the year 2027 (Exhibit A) as submitted to the City Clerk by the Solano Avenue Business Improvement District Advisory Board.

Section 2. Pursuant to the provisions of Section 36500 et seq. of the California Streets and Highways Code (the "Act"), the City Council declares its intent to levy an annual assessment for the parking and business improvement area known as the Solano Avenue Business Improvement District.

Section 3. The boundaries of the District are set forth in Exhibit A1 to the Annual Report and budget which is attached hereto and incorporated herein by reference.

Section 4. The improvements and activities proposed for the District are as described in the Report and budget (Exhibit A) and appended hereto.

Council intends that these funds be used for designated activities and improvements in the Solano Avenue commercial area. Council explicitly intends that funds generated through this BID shall not be used to pay for activities routinely paid for by the City.

Section 5. The City Council intends to levy assessments on businesses located within the boundaries of the District shown Exhibit A1 and according to the business classifications and rates set forth in Exhibit A2 which is attached hereto and incorporated herein by reference.

Section 6. A public hearing shall be held before the City Council on December 1, 2026. Following the hearing the Council will consider adoption of a resolution levying an assessment as recommended by the Solano Avenue Business Improvement Advisory Board. At this hearing the Council will hear all interested persons for or against the levying of such an assessment.

Formal protests against the levying of the District assessment must be made in writing. All written and oral protests should contain the following certification: "I certify that I am the owner of the business listed below, and that the business is located or operates within the boundaries of the Solano Avenue Business Improvement District." Protests should also contain the following information: business name (printed), business address (printed), City Business License Tax Registration number, name of protester (printed), signature of protester, date of protest and the reason(s) the protester is against the levying of the District assessment. Protests will not be considered valid unless signed and submitted by the owner of a business located within the boundaries of the proposed District. Written protests shall be filed with the City Clerk, First Floor, City Hall, at 2180 Milvia Street, Berkeley, California, 94704, at or before 3 pm on December 1, 2026 and shall contain a description of the business sufficient to identify the business, and if the person so protesting is not listed on City records as the owner of the business, the protest shall be accompanied by written evidence that the person subscripting the protest is the owner of the business. Any protest pertaining to the regularity or sufficiency of the proceedings shall be in writing and shall clearly set forth the irregularity or defect to which the objection is made. If written protests are received from the owners of businesses in the District which will pay fifty percent (50%) or more of the assessment proposed to be levied, no further proceedings to levy the assessment shall be taken for a period of one year from the date of the finding of a majority protest by the City Council. If the majority protest is only against the furnishing of a specified type or types of improvements or activities within the District, those types of improvements or activities shall be eliminated.

Section 7. The City Clerk is directed to give notice of said public hearing by publishing the draft Resolution of Intention in a newspaper of general circulation seven days prior to the public hearing.

Exhibits
A: Report for the Solano Avenue Business Improvement District 2026 & Budget 2027
A1: Map of the Solano BID
A2: Assessment Rates

Exhibit A

Report for the Solano Avenue Business Improvement District for 2026 and Budget for 2027

Background

The first version of the Solano Business Improvement District (BID) operated from 2002-2007, with administration of the BID headed by the Solano Avenue Association (SAA). In 2012, the Council appointed the Solano BID Advisory Board to administer the Solano Avenue BID, to fund physical improvements to the street and dedicate marketing and promotion efforts towards the businesses on the portion of Solano Avenue that lies in Berkeley. This Annual report and budget update the most recent year of operational programs of the Solano BID.

Landscape Program

In 2013, the Solano BID financed a tree watering program for young street trees along upper Solano Avenue. In 2016, per the City of Berkeley arborist, the trees were mature enough to not require additional water services. In early 2016, the board voted to enhance Solano's landscape by installing 41 hanging planter baskets on light poles distributed throughout the district, utilizing the Downtown Berkeley Association's (DBA) services. The DBA watered and maintained the baskets though the end of calendar year 2018. From 2019 to 2021, rainwater alone supported the baskets, and in 2022 the Solano BID entered into a contract with The Peralta Services Corporation to supplement other efforts to clean, weed, and level the tree wells through the district, and to develop an ongoing watering and maintenance system for the hanging flower baskets. Peralta's services began in July of 2022 and, per Peralta, the latest contract is renewed on a quarterly basis with regularly scheduled landscaping in tree wells, including cleaning of porous pavement on a weekly basis. Additional services have been considered and further options and changes will be discussed in the context of the 2027 Work Plan.

Marketing and Promotion of Solano

Marketing and promotion of Solano Avenue constitutes a second priority of the Solano BID. The commission has engaged with Solano Avenue Association for the purpose of increased marketing to member businesses, improved online presence, and higher visibility during events, minor and major, along Solano Avenue. Since 2018, the board approved funding for a new vendor for Christmas decorations under the direction of the SAA, with BID reimbursement to the SAA, which covered more poles and provided greater decoration coordination opportunities with neighboring Albany, all at a lower cost than previous seasons. The BID used the same vendor and process last season and plans to study and perhaps change the decorations for the 2026 season. This partnership underscores the leverage the BID obtains in working with the SAA to provide support for BID priorities for the Berkeley portion of Solano Avenue. In the remainder of 2026, the Advisory Board may again decide to participate in the development of holiday campaigns and activities (e.g., supporting the SAA in producing holiday events). The BID continues using its website directory for the district (www.uppersolano.com) and an advertising budget. The ads run in the Berkeley Times, Berkeleyside and Edible East Bay and direct the public to the Upper Solano directory.

The details of the 2027 Work Plan, are to be developed over the remainder of the year and include engaging with the City of Berkeley regarding traffic safety improvements, increased marketing of the Berkeley portion of Solano Avenue, and improvement programs to deploy merchant fees effectively and equitably.

Commissioner Recruitment

The board is challenged by having two (out of 9 possible) members. The current members have expressed that they are both ready to leave their positions. Ongoing recruitment is a focus for the remainder of 2026 and 2027. Merchant owners are often busy operating, and sometimes expanding, their businesses. The Advisory Board reminds merchants that they can assign a proxy, from inside or outside their organization, to represent them on the Board. City of Berkeley residence is not required for Board membership. To date, there are no candidates for seats on the board.

Solano BID Administration

The Solano BID has contracted with a fiscal agent, the Telegraph Property and Business Management Corporation (Telegraph PBMC), which charges a 5% fiscal agent fee on new BID revenue annually. For example, the anticipated new Solano BID revenue for 2027 is $30,000 so the fiscal agent fee is estimated to be $1,500.

FINANCIAL STATUS OF THE SOLANO BID, AUGUST 2026	
Solano BID Balance, as of 8/31/2026	$35,455
Accounts Receivable - Remaining Carryover	$25,400
Less fall and winter payments remaining for Solano Ave Assn Contract, for 2026-27 holiday-related events	-$10,000
Less payments for holiday decor installation, removal and storage, Nov. 2026 to Jan 2027	-$5,471
Allocated Expenditures	-$15,400
Unallocated as of 8/31/2026	**$29,984**

BUDGET FOR THE SOLANO BID FOR 2027 (Calendar Year)	
Estimated new revenue 2027	$29,984
Carryover from 2026 (estimated)	$6,000
Estimated SAA Events Payments	-$15,000
Estimated Holiday Decorations Payments	-$5,600
Estimated Peralta Svcs Corp sidewalk Cleaning/tree well maintenance	-$6,200
Less fiscal agent fee to Telegraph PBMC (5%) - of estimated new revenue	-$1,500
Total additional available for expenditure in 2027	**$7,684**

RECOMMENDATIONS

The Advisory Board recommends that Council:

- Approve the 2026 Annual Report and 2027 Budget.
- Make no changes in the boundaries of the Solano Business Improvement District in the two Benefit Zones, A & B, as shown in Exhibit A1.
- Make no changes in the method and basis for merchant assessments, as shown in Exhibit A2.
- Carry over to 2027 the estimated surplus revenues from 2026, as stated in the 2027 Budget.

Sugar-Sweetened Beverage
Product Panel of Experts Commission

CONSENT CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Sugar-Sweetened Beverage Product Panel of Experts Commission

Submitted by: Peace Esonwune, Chairperson, SSBPPE Commission

Subject: Allocation of $2,294,774 Over 2 Years, FY2028 and FY2029, to Reduce Consumption and Health Impacts of Sugar-Sweetened Beverages (SSBs).

RECOMMENDATION

Adopt a Resolution allocating $2,294,774 from the General Fund in Fiscal Year 2028 (July 1, 2027 through June 30, 2028) and Fiscal Year 2029 (July 1, 2028 through June 30, 2029) that shall be invested in a grant program administered and coordinated by the Department of Health, Housing, and Community Services' (HHCS) Public Health Division (HHCS/PHD) consistent with the Sugar-Sweetened Beverage Product Panel of Experts (SSBPPE) Commission's goals to reduce the consumption of sugar sweetened beverages (SSB) in Berkeley and to address the health effects of SSB consumption. The total of $2,294,774 will be distributed in two installments of $1,147,387 for FY2028 and $1,147,387 for FY2029. In each of these years, the funds will be distributed as follows:

a. Direct the City Manager to award up to 42.5% of the allocated funds to Berkeley Unified School District (BUSD) through a grant proposal to reduce the consumption of SSBs through the implementation and enhancement of the BUSD cooking and gardening programs. The BUSD funding process is separate from the RFP process for community-based organizations and shall be guided by the SSBPPE Commission's Criteria for the BUSD Funding Proposal (Exhibit A).
b. Direct the City Manager to award at least 42.5% of the allocated funds through an RFP process managed by HHCS/PHD for grants to community- based organizations consistent with the SSBPPE Commission's goals to reduce the consumption of SSBs and to address the effects of SSB consumption. The RFP process for community-based organizations is separate from the BUSD funding process and shall be guided by the SSBPPE Commission's Selection Criteria for Community Agency Grants (Exhibit B).
c. Direct the City Manager to allocate up to 15% of the funds to support HHCS/PHD and Finance Department to coordinate and monitor the SSB grant process, develop and maintain a website for SSB grantees, and the public and employees involved in the city's SSB procurement policy, collect organize and synthesize performance measures or evaluation as appropriate, provide technical

assistance and learning opportunities for grantees, and report annually to the SSBPPE Commission and the public highlights from the SSB-funded programs.

d. Allocate the carryover of any SSB tax revenue received in excess of $2,294,774 during FY2028 and FY2029 to be awarded for related services in FY2029-FY2031.
e. If the voters approve Ballot Initiative AA in November 2026, increasing Berkeley's SSB sugar sweetened beverage excise tax revenue to 2 cents per ounce, the Commission recommends that the City Council authorize a second allocation of funds for FY2029, commensurate with additional distributor tax revenue collected. These additional revenues generated as a result of Measure AA will supplement the FY 2028 and FY 2029 two-year allocations.

SUMMARY

In November 2014, Berkeley voters passed a measure to require the collection of a 1 cent per ounce tax on the distribution of sugary drinks in the City of Berkeley and the convening of a Panel of Experts (the Sugar-Sweetened Beverage Products Panel of Experts--SSBPPE) to recommend investments to reduce the consumption and health consequences of sugary drinks. There has been overwhelming support for this tax. Voters renewed this measure in November 2024 and in 2026, gathered enough signatures to add a new 2 cent per ounce tax to the ballot in November 2026.

The SSBPPE recommends that Berkeley City Council adopt a resolution allocating a total of $2,294,774 from the General Fund ($1,147,387 for FY2028 and $1,147,387 for FY2029), to invest in grant programs that serve Berkeley residents most impacted by sugary drink consequences. The resolution shall direct the City Manager to:

1) Award up to 42.5% of the allocated funds to BUSD through a grant proposal.
2) Award at least 42.5% of the allocated funds through an RFP process managed by the HHCS/PHD for grants to community-based organizations.
3) Allocate up to 15% of the funds to HHCS/PHD and the Finance Department for administrative activities related to the implementation of the SSB grants program.
4) Allocate the carryover of any SSB tax revenue received in excess of $2,294,774 during FY2028 and FY2029 to be awarded for related services in FY2029-FY2031.
5) If voters approve Ballot Initiative AA in November 2026, increasing Berkeley's sugar-sweetened beverage excise tax to 2 cents per ounce, authorize an additional allocation of funds for FY2029, commensurate with the additional distributor tax revenues collected. These additional revenues, generated as a result of Measure AA, would supplement the existing FY2028 and FY2029 two-year allocation.

These two-year grants support comprehensive strategies to: 1) reduce access to SSBs, 2) improve access to water, 3) limit marketing of SSBs to children, and 4) implement education and awareness campaigns. The grant awards indicate the City of Berkeley's

commitment to reducing the consumption of SSBs and improving the health of Berkeley residents, particularly those most impacted by obesity, diabetes, tooth decay, and heart disease.

FISCAL IMPACTS OF RECOMMENDATION

Measure D, passed in November of 2014, and renewed through the passage of Measure Z in November of 2024, established two provisions, namely: a) a 1 cent per ounce tax on sugary drinks distributed in Berkeley and b) creation of a Panel of Experts Commission. The collection of this tax commenced in May of 2015 and is being deposited into the City's General Fund. The SSBPPE Commission's recommendation to Council for allocation of $2,294,774 for FY2028 and FY2029 is independent of the amount of tax revenue collected from the distribution of SSB in Berkeley. This request will create a total liability of $2,294,774 for the City's General Fund in FY2028 and FY2029.

CURRENT SITUATION AND ITS EFFECTS

On August 20, 2026, the SSBPPE Commission approved the recommendation to the Berkeley City Council for allocation of $2,294,774 for the period FY2028 and FY2029, to be made available to invest in grant programs to reduce the consumption of sugar sweetened beverages (SSBs), address the health consequences of the SSB consumption, and moved to adopt their recommendation to Council as follows:

Key elements of the resolution include:

1) Direct the City Manager to award up to 42.5% of the allocated funds to BUSD through a grant proposal to reduce the consumption of SSBs.
2) Direct the City Manager to award at least 42.5% of the allocated funds through an RFP process managed by the HHCS/PHD for grants to community-based organizations consistent with the SSBPPE Commission's goals.
3) Direct the City Manager to allocate up to 15% of the funds to support HHCS/PHD and Finance Department to:
    a. Coordinate and monitor the SSB grant process;
    b. Develop and maintain an interactive website for SSB grantees, the public, and employees involved in the city's SSB procurement policy;
    c. Collect, organize and synthesize performance measures or evaluation as appropriate;
    d. Provide technical assistance and learning opportunities for grantees;
    e. Report annually to the SSBPPE Commission.
4) Direct the City Manager to authorize an additional allocation of funds for FY2029, commensurate with the additional distributor tax revenues collected, if Ballot Initiative AA is approved by voters in November 2026.

Action: M/S/C (Commissioner Morales/Commissioner Kao) to update the SSBPPE Commission City Council recommendation from November 21st, 2024: 1) dates, 2) background as needed, 3) recommendations, and 4) recommending the City Manager

allocate up to 15% of the funds to support the HHCS/PHD and Finance Department for activities related to the SSB Tax.

Votes: Ayes – Morales, Rodriguez, Scheider, Kao, Lopez, Crawford, Esonwune, Hecht; Noes – None; Abstain – None; Absent – None.

In November of 2026, Berkeley voters will vote on Measure AA, which would increase the current sugary beverage tax from 1 cent per ounce to 2 cents per ounce. If approved, Measure AA would result in additional tax revenues.

BACKGROUND

In November of 2014, the Berkeley voters passed Measure D, which requires both the collection of a 1 cent per ounce tax on the distribution of sugary drinks in the City of Berkeley AND the convening of a Panel of Experts (the Sugar Sweetened Beverage Products Panel of Experts--SSBPPE) to recommend investments to both reduce the consumption of sugary drinks as well as to address the health consequences of the consumption of sugary drinks. Voters have since renewed this measure, through the passage of Measure Z in November of 2024.

Our nation, our state, and our community face a major public health crisis. Diabetes, obesity, and tooth decay have been on the rise for decades. Although no group has escaped these epidemics, children, as well as low-income communities and communities of color have been and continue to be disproportionately affected. While there is no single cause for the rise in diabetes, obesity, and tooth decay, there is overwhelming evidence of the link between the consumption of sugary drinks and the incidence of diabetes, obesity, heart disease, and tooth decay.

Sugary drinks such as soft drinks, energy drinks, sweetened teas, and sport drinks offer little or no nutritional value, but contribute massive quantities of added sugar. A single 20-ounce bottle of soda, for instance, typically contains the equivalent of approximately 16 teaspoons of sugar. Before the 1950s, the standard soft-drink bottle was 6.5 ounces. In the 1950s, larger size containers were introduced, including the 12-ounce can, which became widely available in 1960. By the early 1990s, 20-ounce plastic bottles had become the norm. At the same time, hundreds of millions of dollars have been spent in an ongoing massive marketing campaign, which particularly targets children and people of color. In 2006 alone, nearly $600 million was spent in advertising to children under 18. African American and Latinx children are also aggressively targeted with advertisements to promote sugar-laden drinks.

The resulting impact on consumption should not be surprising. The average American now drinks nearly 40 gallons of sugary drinks a year. In the past 20 years, the prevalence of obesity in adults increased from 30.5% to 42.4%, and the prevalence of severe obesity increased from 4.7% to 9.2%. During this time, the prevalence of obesity among youth (aged 2–19 years) increased from 13.9% to 19.3%, and the prevalence of severe obesity increased from 3.6% to 6.1%. The problem is especially acute with

children in California. From 1989 to 2008, the percentage of children consuming sugary drinks increased from 79% to 91% and the percentage of total calories obtained from sugary drinks increased by 60% in children ages 6 to 11. This level of consumption has had tragic impacts on community health. Type 2 Diabetes –previously only seen among adults –is now increasing among children. If the current obesity trends are not reversed, it is predicted that one in three children and nearly one-half of Latinx and African American children born in the year 2000 will develop type 2 diabetes in their lifetimes.

Our community has not been immune to the challenge of unhealthy weight gain and obesity. According to the 2018 City of Berkeley Health Status Report, over a quarter of Berkeley's 5th and 7th grade students (all race/ethnicities) are overweight or obese. Berkeley has a lower proportion of 5th and 7th grade children who are overweight or obese (29.4%) compared to children in Alameda County (35.3%) but has a higher proportion compared to California (26.8%). However, a higher proportion of African-American children are overweight or obese in Berkeley compared to Alameda County or California.

Tooth decay has meaningful impact on health, especially for children. In fact, tooth decay is the most common childhood disease, experienced by over 70% of California's 3rd graders. Children who frequently or excessively consume beverages high in sugar are at increased risk for dental cavities. Dental problems are a major cause of missed school days and poor school performance as well as pain, infection, and tooth loss in California.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

When sugary drink consumption decreases due to the direct investments in programs and activities, the SSBPPE Commission expects that there will be a reduction to the City's waste stream.

RATIONALE FOR RECOMMENDATION

This two-year grant period supports comprehensive strategies to: 1) reduce access to SSBs, 2) improve access to water, 3) limit marketing of SSBs to children, and 4) implement education and awareness campaigns with specific populations. The two-year grant period will also indicate the City of Berkeley's commitment to reducing the consumption of SSBs and improving the health of Berkeley residents, particularly those most impacted by obesity, diabetes, tooth decay, and heart disease. The funding will allow grantees to develop interventions that include education, policy, systems and environmental changes with measurable outcome data and evaluation to show the rise in public awareness about the harmful impacts of SSBs, reduce consumption of SSBs over time, and decrease the health risks among residents of Berkeley.

To have the greatest impact, the SSBPPE Commission recommends that the following populations be prioritized:

a. Children and their families with a particular emphasis on young children who are in the process of forming lifelong habits,

b. Children and young adults living in households with limited resources,
c. Groups exhibiting higher than average population levels of type 2 diabetes, obesity, heart disease, and tooth decay rates,
d. Groups that are disproportionately targeted by the beverage industry marketing,
e. Pregnant women,
f. Berkeley-based organizations that serve any or all of the above populations.

ALTERNATIVE ACTIONS CONSIDERED
The Commission did not identify an alternative action.

CITY MANAGER
The City Manager takes no position with the content and recommendations of the Commission's Report. Council does not need to act on FY 29 and FY 30 at this time, pending the results of the election. The FY 28 guidance presented in this report will be useful to help budget formulation.

Exhibit B: SSBPPE Commission's Selection Criteria for Community Agency Funding

RESOLUTION NO. ##,###-N.S.

ALLOCATION: $2,294,774 TOTAL FOR SUGAR-SWEETENED BEVERAGE CONSUMPTION AND REDUCTION GRANT PROGRAM IN FY2028 AND FY2029

WHEREAS, the consumption of sugar-sweetened beverages (“SSB”) in Berkeley is impacting the health of the people in Berkeley; and

WHEREAS, in FY2026 and FY2027, the City Council awarded a total of $2,294,774 upon the recommendation of the SSBPPE Commission to demonstrate the City’s long-term commitment to decreasing the consumption of SSB and mitigate the harmful impacts of SSB on the population of Berkeley; and

WHEREAS, many studies demonstrate that high intake of SSB is associated with risk of Type 2 Diabetes, obesity, tooth decay, and coronary heart disease; and

WHEREAS, the above conditions are all demonstrated to increase both the severity of COVID19 related illness and risk of death; and

WHEREAS Latinx and Black communities are disproportionately affected by COVID-19; and

WHEREAS, hundreds of millions of dollars have been spent in an ongoing massive marketing campaign, which particularly targets children and people of color; and

WHEREAS, an African American resident of Berkeley is 14 times more likely than a White resident to be hospitalized for diabetes; and

WHEREAS, 40% of 9th graders in Berkeley High School are either overweight or obese; and

WHEREAS, tooth decay is the most common childhood disease, experienced by over 70% of California’s 3rd graders; and

WHEREAS, in 2012, a U.S. national research team estimated levying a penny-per-ounce tax on sweetened beverages would prevent nearly 100,000 cases of heart disease, 8,000 strokes, and 26,000 deaths over the next decade and 240,000 cases of diabetes per year nationwide.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the City Manager is hereby authorized to allocate $2,294,774 from the General Fund to be disbursed in two (2) installments of $1,147,387 for FY2028 and $1,147,387 for FY2029 and distributed as follows:

1. Award up to 42.5% of the allocated funds to Berkeley Unified School District (BUSD) through a grant proposal to reduce the consumption of sugar-sweetened beverages (SSBs) through the implementation and enhancement of the BUSD cooking and gardening programs.

2. Award at least 42.5% of the allocated funds through a RFP process managed by the Health, Housing, and Community Services/Public Health Division (HHCS/PHD) for grants to community- based organizations consistent with the SSBPPE Commission's goals to reduce the consumption of SSBs and to address the effects of SSB consumption.

3. Allocate up to 15% of the allocated funds to support the HHCS/PHD and Finance Department to coordinate and monitor the SSB grant process, develop and maintain an interactive website for SSB grantees and the public and employees involved in the city's SSB procurement policy, collect organize and synthesize performance measures or evaluation as appropriate, provide technical assistance and learning opportunities for grantees, and report annually to the SSBPPE Commission and the public highlights from the SSB-funded programs.

4. Allocate the carryover of any sugary drink tax revenue received in excess of $2,294,774 during FY2028 and FY2029 to be awarded for related services in FY2029 – FY2031.

5. If voters approve Ballot Initiative AA in November 2026, increasing Berkeley's sugar-sweetened beverage excise tax to 2 cents per ounce, authorize an additional allocation of funds for FY2029, commensurate with the additional distributor tax revenues collected. These additional revenues, generated as a result of Measure AA, would supplement the existing FY2028 and FY2029 two-year allocation.

A records signature copy of the said agreement and any amendments shall be on file in the Office of the City Clerk.

Exhibits
A: SSBPPE Commission's Criteria for the BUSD Funding Proposal
B: SSBPPE Commission's Selection Criteria for Community Agency Funding

Exhibit A

SSBPPE Commission's Criteria for the BUSD Funding Proposal

Required components for BUSD proposal:

List specific activities for how the BUSD proposed project will meet the following:

1. Decrease access to SSBs and/or improve access to drinking water.
2. Increase or strengthen SSB policies in school and outside of school.
3. Support the annual administration of the Berkeley adapted Youth Risk Behavior Survey (YRBS) or California Healthy Kids Survey (CHKS) to evaluate student's SSB knowledge, consumption, access, and policy perceptions.
4. Increase and strengthen the garden program through nutrition education curriculum, the ways the curriculum addresses SSB consumption, and communication of SSB education and policy efforts to parents
5. If there is a plan to work with partners, who are they and how do you anticipate they will collaborate with BUSD staff? Identify which grade levels will be associated with each partnership.

Anticipated obstacles: What obstacles do you anticipate? How will you try to address them?

Project Measures: Describe the ways in which you will measure outcomes, including the way you will administer the YRBS or CHKS survey and for which students, measures for the garden and cooking program, and other measures to understand if your program is working.

Sustainability Plan: Please describe how your organization will sustain the proposed project/ program activities beyond the funding period.

Communications Plan: Describe how you will meet communication requirements. Include what type of communication product(s) will be produced and what information will be shared.

Agreement to participate in the three meetings per year (1-2 sentence statement of agreement): Grantees are expected to do a presentation at one commission meeting, host one site visit for commissioners, and will attend one resource sharing meeting with other grantees.

Additional Requirements for BUSD:

Please confirm with a yes to each of the following requirements:

1. Proposal reflects approval from the BUSD School Board: Yes/No
2. BUSD will not sell or serve sugar-sweetened beverages (as defined by the SSB tax) at any BUSD schools or campuses: Yes/No
3. Awarded funding will not supplant BUSD FY26 and FY27 General Fund allocations: Yes/No

4. Funded projects will publicly reflect support from Healthy Berkeley Program: Yes/No
5. Funded projects and programs will include evaluation of their process and outcomes: Yes/No

Exhibit B

SSBPPE Commission's Selection Criteria for Community Agency Funding

Required components of project proposals from community-based organizations:

Proposed Project and Activities:

1. Briefly describe the goal of the program or project you would like to see funded.
2. Identify which strategies you intend to use in your program.
3. Identify the kinds of activities you will use in your program.
4. How many people do you expect to reach with your project?
5. Do you plan to work with partners? If so, who are they?

Applicants who have previously received funding should describe how they will build on past accomplishments, reach new participants, and whether there is deeper engagement with the same community members in new ways that reinforce and build upon previous funding.

Anticipated obstacles: What obstacles do you anticipate? How will you try to address them?

Project Measures: Describe all the things that you will measure to know if your program is working.

Sustainability Plan: Please describe how your organization will sustain the proposed project/program activities beyond the funding period.

Communications Plan: Include what type of communication product(s) will be produced and what information will be shared.

Agreement to participate in the three meetings per year (1-2 sentence statement of agreement): Grantees are expected to do a presentation at one commission meeting, host one site visit for commissioners, and will attend one resource sharing meeting with other grantees. (See Section II.D. above.)

Scoring criteria:

1. The proposed project aims to decrease consumption of sugary drinks, increase access to drinking water, and/or address health effects from consumption of sugary drinks. (25%)
2. The proposed project indicates how people and communities in the priority populations will be reached. (20%)
3. Describes both strategies and activities that will be used to reach their goals (30%)
4. The proposal includes a plan for sustaining their efforts and communicating activities, and successes to the larger Berkeley community. (15%)
5. Proposal budget matches the work plan and is appropriate. (10%)

25

ADENA ISHII
MAYOR OF BERKELEY

CONSENT CALENDAR
November 17, 2026

To: Honorable Members of the City Council

From: Mayor Adena Ishii (Author), Councilmember Brent Blackaby (Co-Sponsor), Councilmember Mark Humbert (Co-Sponsor)

Subject: Annual Berkeley Holiday Fund: Relinquishment of Council Office Budget Funds to General Fund and Grant of Such Fund

RECOMMENDATION

Adopt a Resolution approving the expenditure of an amount not to exceed $500 per Councilmember including $500 from Mayor Ishii, $500 from Councilmember Blackaby and $500 from Councilmember Humbert to the Berkeley Holiday Fund with funds relinquished to the City's general fund for this purpose from the discretionary Council Office Budgets of Mayor Ishii and any other Councilmembers who would like to contribute.

BACKGROUND

Founded over a hundred years ago, in 1912, the Berkeley Holiday Fund, embodies the "the Berkeley Spirit" by providing aid to residents in Berkeley during the holiday season. Sending cash cards to almost 1,111 individuals and families in 2025, totalling over $132,000. The Holiday Fund is completely donation based and volunteer staffed.

For 113 years, the Fund has solicited donations from the Berkeley community and now 26 local service agencies to identify Berkeley residents in need of help during the holidays. This list of partner agencies include Berkeley Youth Alternatives, East Bay Community Law Center, LifeLong Medical Care, Multicultural Institute, and more.

While the Berkeley Holiday Fund addresses every request it receives, the number of requests from agencies varies year-to-year. The organization can only send one cash card to individuals and families recommended by multiple agencies.

From the outset the Berkeley Holiday Fund has traditionally been supported by the Berkeley Mayor and members of the Berkeley City Council. With the Berkeley Mayor

often serving as the Honorary Chair and for more than thirty years the Mayor's office has provided a small grant to support the mailing of cash cards to the people referred by the Holiday Fund.

FINANCIAL IMPLICATIONS

No General Fund impact; $500 is available from Mayor Ishii's, Councilmember Blackaby's and Councilmember Humbert's budget discretionary accounts.

ENVIRONMENTAL SUSTAINABILITY

There are no environmental impacts associated with the recommendations in this report.

CONTACT PERSON

Mayor Adena Ishii
510-981-7100

Attachments: 1: Resolution for Council Expenditures

RESOLUTION NO. ##,###-N.S.

AUTHORIZING THE EXPENDITURE OF DISCRETIONARY FUNDS FROM THE OFFICE EXPENSE ACCOUNTS OF THE MAYOR AND COUNCILMEMBERS FOR A GRANT TO PROVIDE PUBLIC SERVICES FOR A MUNICIPAL PUBLIC PURPOSE

WHEREAS, Mayor Adena Ishii has funds in her office discretionary account; and

WHEREAS, a California non-profit tax-exempt corporation, the Berkeley Holiday Fund, seeks funds in the amount of $500 to provide the following service of offering aid to residents in need in Berkeley during the holiday season; and

WHEREAS, the Berkeley Holiday Fund, founded in 1912, is completely donation-based & volunteer-staffed and sent cash cards to almost 1,111 individuals and families in 2025, totaling over $132,000; and

WHEREAS, the Berkeley Holiday Fund embodies the “the Berkeley Spirit” by providing aid to residents in Berkeley during the holiday season; and

WHEREAS, historically the Berkeley City Council has generously supported and contributed small grants to the Berkeley Holiday Fund.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that funds relinquished by the Mayor and Councilmembers from their Council Office Budget up to $500 per office shall be granted to the Berkeley Holiday Fund to fund the following service of offering aid to residents in need in Berkeley during the holiday season.

26

Office of the City Manager

PUBLIC HEARING
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Scott Ferris, Director, Parks, Recreation & Waterfront Department

Subject: Berkeley Water Transportation Pier-Ferry Project Environmental Impact Report, Project Approval, and Use Permit

RECOMMENDATION

Conduct a public hearing and upon its conclusion:

(1) Adopt a Resolution certifying the Berkeley Water Transportation Pier Ferry Project Environmental Impact Report (EIR) (SCH #2025040995) and adopt related California Environmental Quality Act (CEQA) findings, a statement of overriding considerations, mitigation measures, and a mitigation monitoring and reporting program (Attachment 1), and

(2) Adopt a Resolution Approving the Berkeley Water Transportation Pier-Ferry Project and affirming, as modified to incorporate the CEQA findings and mitigation measures, the decision of the Zoning Adjustments Board to approve Use Permit #ZP2026-0014 to establish transportation via public ferry service as an allowable use at the Berkeley Pier (Attachment 2), with certain clarifying modifications.

SUMMARY

The Berkeley Water Transportation Pier-Ferry Project (Project) would replace a portion of the Berkeley Municipal Pier (approximately 1,080 ft), which has been closed to the public since 2015, with a new dual-purpose public pier and breakwater that support both public recreation and zero-emission public ferry service between Berkeley and San Francisco, operated by the San Francisco Bay Area Water Emergency Transportation Authority (WETA). In addition to the pier, breakwater and ferry terminal infrastructure (including dredging), the Project also includes a new public plaza with public amenities, improvements to University Avenue and Seawall Drive (including a raised cycle track and expanded AC Transit bus facilities), renovation of the Seawall Drive parking lot, a segment of the planned Bay Trail Extension, and shoreline erosion repair.

As lead agency under CEQA, the City prepared an EIR to evaluate the potentially significant environmental effects of the Project. The Draft EIR was circulated for a 60-day public review period from February 27, 2026 to April 28, 2026, and the Final EIR,

which includes responses to all comments on environmental issues received, was published on November 5, 2026. The EIR concludes that all of the Project's significant environmental effects can be reduced to less-than-significant levels through mitigation, except for construction noise associated with pile driving and the Project's contribution to cumulative noise, and the land use and recreation impacts resulting from that noise, which would remain significant and unavoidable.

The Berkeley Waterfront is zoned Unclassified (U); therefore, a Use Permit is required to establish any new use. The Planning Commission reviewed the Use Permit application on January 21, 2026 and adopted a resolution recommending approval (6-0-0-3), and the Zoning Adjustments Board (ZAB) approved Use Permit #ZP2026-0014 on February 26, 2026 (5-0-3). Under the Berkeley Municipal Code (BMC), the ZAB's decision is not effective until the City Council acts, and the Council may affirm, reverse, or modify it. This is not an appeal; Council action is required for all Use Permits in U districts. Staff recommend that the Council affirm the ZAB decision, modified to incorporate the Final EIR, the CEQA Findings, and the mitigation measures, and to make minor technical corrections (Attachment 2, Exhibit A).

This report asks the City Council to take two sequential actions with distinct legal standards. First, the Council would consider whether to certify the Final EIR as a complete and adequate environmental document and adopt the related CEQA Findings, Statement of Overriding Considerations, mitigation measures, and Mitigation Monitoring and Reporting Program (MMRP) (Attachment 1). Certification requires findings that the EIR was completed in compliance with CEQA, was reviewed and considered by the Council, and reflects the City's independent judgment (CEQA Guidelines Section 15090). The CEQA Findings and Statement of Overriding Considerations address each significant impact and state the reasons the Project may be approved notwithstanding its significant and unavoidable impacts (CEQA Guidelines Sections 15091 and 15093).

Second, the Council would consider a resolution approving the Project and affirming, as modified, the ZAB's decision to approve the Use Permit (Attachment 2), in reliance on the certified EIR and the CEQA Findings, Statement of Overriding Considerations, and MMRP adopted in the first resolution. This sequence is consistent with the process described in Sections 1.1.4 and 1.5 of the Draft EIR.

FISCAL IMPACTS OF RECOMMENDATION

None. Certification of the EIR, adoption of the CEQA Findings, Statement of Overriding Considerations, mitigation measures, and MMRP, approval of the Project, affirmation of the ZAB decision and issuance of the Use Permit would have no direct fiscal impact and does not commit the City to expenditure of construction funds.

CURRENT SITUATION AND ITS EFFECTS

The Berkeley Water Transportation Pier-Ferry Project advances the City's Strategic Plan goals to:

- Provide state-of-the-art, well-maintained infrastructure, amenities, and facilities.

- Create a resilient, safe, connected, and prepared city.
- Be a global leader in addressing climate change, advancing environmental justice, and protecting the environment.

Project Description

The Berkeley Water Transportation Pier Ferry EIR evaluates the following Project components:

- Demolition of portions of the closed Berkeley Pier;
- A new 1,080-foot-long public pier at the location of the closed pier, with pedestrian access and recreational amenities including interpretive and educational signage, public seating, a shade canopy, and a fish cleaning station;
- A new breakwater perpendicular to and connected to the pier, providing a safe harbor for ferry berthing as well as pedestrian access and recreational amenities (400 feet in length in the proposed project as analyzed in the Draft EIR; approximately 300 feet in length under Alternative 2, as discussed below);
- Ferry infrastructure, including charging and boarding float(s), landing(s), gangway(s), and a security entrance. The EIR also evaluates a second ferry berth to provide CEQA coverage for future expansion; initial construction is anticipated to include a single berth, and any future second berth would be subject to City and other agency permitting;
- One-time dredging along the existing U.S. Army Corps of Engineers federal navigation channel that parallels the closed pier, as well as at a turning basin at the ferry landing(s);
- A new public plaza with a public restroom, seating, bicycle parking, landscaping, and stormwater treatment;
- University Avenue improvements between the Marina Boulevard roundabout and Seawall Drive, including repaving and restriping, a raised cycle track, new sidewalks, a passenger drop-off zone, relocation of an existing AC Transit bus stop, and new bus loading facilities;
- Seawall Drive realignment, repaving, and restriping, landscaping, picnic sites, stormwater treatment, and construction of a segment of the planned Bay Trail Extension;
- Renovation of the Seawall Drive parking lot, including new paving, striping, lighting, electric vehicle charging, stormwater treatment, and replacement of existing stormwater outfalls;
- Repair of approximately 300 feet of eroding shoreline on the eastern side of the Seawall peninsula with rock riprap slope protection;
- New landscaping, tree removal and replacement, wayfinding signage, lighting, and utility connections, including electrical infrastructure to charge ferry vessels; and

- Operation of zero-emission electric passenger ferry service between the Berkeley ferry terminal and San Francisco.

The EIR also evaluates solar panels on raised canopies over the renovated Seawall Drive parking lot as an optional improvement.

Environmental Review

The EIR was made available for review on the City's website and the Project website, and at 2180 Milvia Street, Berkeley, CA 94704. The environmental review process for the Project has included:

- **April 18, 2025.** A Notice of Preparation (NOP) of a Draft EIR was circulated to public agencies, organizations, and interested parties for a 31-day comment period ending May 19, 2025.
- **May 5, 2025.** The City held an EIR scoping meeting, at which 12 members of the public provided verbal comments. The City also received written scoping comments from 6 agencies, 3 Native American tribes, 7 organizations, and 17 individuals.
- **February 27, 2026.** A Notice of Availability (NOA) and Notice of Completion (NOC) of the Draft EIR was distributed and the Draft EIR was published for a 45-day public review period.
- **March 16, 2026.** The City held an online public meeting on the Draft EIR, at which 23 individuals provided verbal comments.
- **April 1, 2026.** The City issued a revised NOA extending the public review period by 15 days.
- **April 28, 2026.** The public comment period closed, for a total public review period of 60 days. The City received 102 written comment letters and emails on the Draft EIR.
- **November 5, 2026.** The Final EIR, consisting of the Draft EIR, Responses to Comments, and revisions to the Draft EIR (Errata), was published. Proposed written responses were provided to public agencies that commented on the Draft EIR at least 10 days prior to certification.

City Council certification that the EIR was prepared in compliance with CEQA is required to complete the environmental review of the Project.

Tribal Consultation (AB 52)

Pursuant to Assembly Bill 52 (Public Resources Code Section 21080.3.1), the City notified California Native American tribes that are traditionally and culturally affiliated with the Project area and conducted consultation with the tribes that requested it. The goal of tribal consultation is to avoid significant effects on tribal cultural resources or to develop mutually agreed upon mitigation measures. The mitigation measures identified in the EIR for tribal cultural resources (Mitigation Measures TCR-1 through TCR-5),

which address cultural sensitivity training, signage acknowledging Native American history, Native American monitoring during construction, evaluation and treatment of discovered tribal cultural resources, and respectful treatment of Native American human remains, reflect the outcome of this consultation. On November 14, 2025 and January 21, 2026 the City concluded consultation with the two Native American Tribes that consulted on the Project.

Draft EIR

Potentially Significant Impacts Identified in the Draft EIR

All environmental impacts and mitigation measures are summarized in the CEQA Findings and Statement of Overriding Considerations (Attachment 1, Exhibit B). Other than the impacts discussed below, all of the environmental effects of the Project can be reduced to less-than-significant levels through implementation of the mitigation measures identified in the EIR.

The Draft EIR[1] identified significant and unavoidable impacts related to noise at both the project level and the cumulative level. At the project level, the impact is related to construction noise. At the cumulative level, the impact is related to both construction noise due to potential overlapping construction periods and operational noise due to vehicle traffic. Although most project-related construction noise impacts (Impact NOI-1) would be reduced to less-than-significant levels through implementation of a Construction Noise Management Plan (Mitigation Measure NOI-1), noise from daytime and nighttime pile installation and demolition would continue to exceed City noise standards at Shorebird Park and at some live-aboard boats in the Marina. These same construction noise levels would be inconsistent with the noise standards of the Berkeley Municipal Code, and would result from construction of the Project's recreational facilities. For that reason, the Draft EIR also identified related significant and unavoidable impacts to Land Use and Planning (Impact LU-2) and Recreation (Impact REC-2). These land use and recreation impacts are not independent physical effects. They result directly from the same underlying construction noise.

The Draft EIR also found that the Project would make a cumulatively considerable contribution to significant and unavoidable cumulative impacts related to Noise, Land Use and Planning, and Recreation. These cumulative impacts result from potentially overlapping construction of other planned projects at the Berkeley Waterfront and cumulative operational vehicle noise on portions of University Avenue. As with project-level impacts, the cumulative land use and recreation impacts are directly attributable to the underlying cumulative noise impacts. The Findings include a Statement of Overriding Considerations that provides the reasons the Project may be approved notwithstanding their project-level and cumulative significant and unavoidable impacts.

Alternatives

As required by the CEQA Guidelines, an EIR must examine a range of reasonable alternatives to the proposed project that would feasibly attain most of the basic project objectives and avoid or substantially lessen the project's significant environmental impacts. The Draft EIR evaluated the following alternatives (see Draft EIR Chapter 5, including Table 5-2, which compares the impacts of each alternative to the proposed project):

- **Alternative 1: No Project Alternative.** None of the Project improvements would occur. The deteriorated pier would remain closed, no ferry service would be established, and existing conditions would continue. This alternative would avoid construction impacts but would result in greater long-term impacts related to aesthetics, air quality, greenhouse gas emissions, land use, and transportation, and would not meet any of the Project objectives.
- **Alternative 2: Shortened Breakwater Alternative.** All Project components would be constructed as proposed, but with a breakwater of approximately 300 feet rather than 400 feet. The Project's coastal study found that a 300-foot breakwater would provide sufficient sheltering for ferry operations, with only marginal additional benefit from a 400-foot breakwater. This alternative would reduce construction intensity, Bay fill, and pile installation, and associated impacts to air quality, biological resources, hydrology and water quality, and noise, while meeting most Project objectives with slightly reduced public access.
- **Alternative 3: Shortened Pier Alternative.** The pier would be shortened from approximately 1,080 feet to approximately 675 feet and would terminate at the breakwater. This alternative would reduce construction impacts but would substantially reduce public access and recreational opportunities.
- **Alternative 4: Reduced Landside Facilities Alternative.** The pier, breakwater, and ferry infrastructure would be constructed, but most landside improvements (the public plaza, cycle track, Bay Trail Extension, parking lot upgrades, electric vehicle charging, and bus facilities) would be eliminated. This alternative would reduce certain construction impacts but could increase long-term impacts related to air quality, greenhouse gas emissions, land use, and transportation, and would meet the Project objectives to a much lesser extent.

None of the alternatives other than the No Project Alternative would avoid the Project's significant and unavoidable construction noise impacts, because pile driving would still be required.

Environmentally Superior Alternative. CEQA requires identification of the environmentally superior alternative among those studied. Because the No Project Alternative would not meet any Project objectives, the EIR identifies Alternative 4 as the environmentally superior alternative among the action alternatives, as it would reduce the greatest number of construction-related impacts. However, Alternative 4 would eliminate key Project elements and would achieve the Project objectives to a

substantially lesser extent than both the project as proposed in the Draft EIR and the preferred alternative (Alternative 2).

Preferred Alternative. The CEQA Findings identify Alternative 2, the Shortened Breakwater Alternative, as the preferred alternative and the proposed Project, because it reduces construction-related environmental impacts associated with Bay fill, pile installation, and construction intensity while continuing to achieve the Project objectives to a greater extent than the other alternatives. The Findings find Alternatives 1, 3, and 4 infeasible for the specific social, economic, and environmental reasons described in Attachment 1, Exhibit B. Approval of the Project will be considered by the City Council as a separate resolution.

Final EIR

The Final EIR consists of the Draft EIR, Responses to Comments on the Draft EIR, and revisions to the Draft EIR (Errata), all of which are attached. The City received written and oral comments on the Draft EIR during the public comment period (February 27, 2026 through April 28, 2026). All written comments are reproduced in their entirety in the Final EIR, and responses are provided to all comments on the Draft EIR that pertain to environmental issues and include revisions to the Draft EIR text that correct errors or omissions or clarify information presented in the Draft EIR. The Final EIR was made available for review through the City's website at https://berkeleyca.gov/your-government/our-work/capital-projects/berkeley-pier-ferry-access-project and at the Parks, Recreation & Waterfront Department at 2180 Milvia Street (3rd Floor).

In no case do the revisions in the Final EIR result in a new significant impact or a substantial increase in the severity of an impact identified in the Draft EIR such that recirculation of the Draft EIR would be required.

Mitigation Monitoring and Reporting Program (MMRP)

The EIR identifies 20 mitigation measures that will be implemented to reduce the Project's impacts, addressing aesthetics, air quality, biological resources, cultural resources, geology and soils (paleontological resources), hydrology and water quality, noise, and tribal cultural resources. For public agency projects, mitigation measures are adopted and incorporated into the project at the time of approval. CEQA requires the lead agency to adopt a mitigation, monitoring and reporting program for monitoring and reporting on compliance with the adopted mitigation measures. The MMRP (Attachment 1, Exhibit A) identifies, for each measure, the action required, the timing and frequency for implementing the action, the entity responsible for implementing the action, and the agency or department responsible for verifying compliance. The City of Berkeley and its contractors will implement most measures; WETA is identified as a potential implementing entity for measures associated with dredging.

CEQA Findings and Statement of Overriding Considerations

For each significant impact identified in an EIR, CEQA requires that the lead agency make one or more of the following findings:

1. Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect;
2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that agency; or
3. Specific economic, legal, social, technological, or other considerations make infeasible the mitigation measures or project alternatives identified in the EIR.

The CEQA Findings (Attachment 1, Exhibit B) find that implementation of the mitigation measures identified in the MMRP will reduce all significant impacts of the Project to less-than-significant levels, except for the noise impacts and related land use and recreation impacts described above, for which no additional feasible mitigation has been identified.

CEQA Guidelines Section 15093(b) provides that when a public agency's decision results in significant impacts that are not avoided or substantially lessened, the agency must state in writing the reasons to support its action. The Statement of Overriding Considerations is a formal statement by the City that, having balanced the economic, legal, social, technological, and other benefits of the Project, including region-wide and statewide environmental benefits, against its significant and unavoidable environmental impacts, the benefits of the Project outweigh its unavoidable adverse effects. In this balancing, the Statement considers that the significant and unavoidable project-level impacts would be temporary, limited to waterside construction activities involving pile driving (an estimated 80 to 90 days), while the Project would provide benefits over a design life of at least 50 years. As relates to cumulative impacts, the Statement considers the project contribution compared to the cumulative contribution, and that finding is based on a conservative assumption of the maximum buildout scenario in a draft, un-adopted Waterfront Specific Plan document. The Statement of Overriding Considerations identifies the following benefits:

- **Recreational benefits.** The Project would restore public access to the Bay by replacing the pier that has been closed since 2015 due to disrepair with a new public pier, breakwater, and ADA-accessible public plaza, and would construct a segment of the Bay Trail at the Berkeley Waterfront, which MTC's Bay Trail Gap Closure Implementation Plan designates as a Tier 1 (higher priority, lower cost) gap closure.
- **Transportation benefits.** The Project would provide new transbay public ferry service, improving regional connectivity and access to jobs and education for East Bay residents, including West Berkeley, an area with relatively limited regional transit access. The ferry terminal, including the portion of pier used to access the terminal, is designed as an essential facility to support WETA's

emergency water transportation mandate when other transportation systems are disrupted.

- **Sustainability benefits.** Operation of zero-emission electric ferries and multimodal access improvements would result in an annual net reduction of approximately 2,368 metric tons of carbon dioxide equivalent ($MTCO_2e$) and a net reduction of approximately 22,435 $MTCO_2e$ over 30 years after accounting for construction emissions compared to the status quo if the Project is not approved. The Project also incorporates sea level rise adaptation and shoreline protection.
- **Social benefits.** The Project would invest in safe bicycle and pedestrian infrastructure and accessible facilities and would generate economic benefits through increased Waterfront visitation and support for existing local businesses. Increased visitation also contributes to the improvement in the perception of and actual safety at the Waterfront.

Use Permit #ZP2026-0014

The Berkeley Waterfront is a single parcel (APN 60-2545-1) designated Waterfront/Marina in the General Plan and zoned Unclassified (U). In the U district, all uses not prohibited by law are permitted, but a Use Permit is required to establish any use (BMC Section 23.208.020(B)). Existing uses at the Waterfront are authorized by Use Permit #5567, issued in January 1965 in accordance with the Berkeley Marina Master Plan. Repair and replacement of existing infrastructure serving existing uses, including replacement of the existing Berkeley Pier, trails, streets, parking areas, and public spaces, does not require a new Use Permit.

Use Permit #ZP2026-0014 establishes a new use, transportation, specifically public zero-emission electric ferry service, at the Berkeley Pier. Notably, all existing uses, such as recreation, fishing, and parking, would continue as previously authorized. The ferry terminal facilities that accommodate this new use are in-water infrastructure: charging and boarding float(s), ferry gate and landing, gangway(s), and a breakwater. These facilities would be designed to essential facility standards so that the ferry can serve as a disaster response and recovery resource following a significant seismic event. WETA would operate the ferry service. Prior to initiation of service, the City and WETA would execute a Memorandum of Understanding or similar agreement, subject to Council approval, authorizing WETA's use of portions of the Berkeley Pier for ferry operations, maintenance, and capital improvements.

BMC Section 23.208.020(C) establishes the review process for Use Permits in the U district:

- The application is first submitted to the Planning Commission, which makes a report to the ZAB;

- ZAB then acts to approve, conditionally approve, or deny the application. The ZAB's decision is not effective until after action by the City Council, and ZAB decisions may not be appealed; and

- The City Council reviews and acts on the application, and may affirm, reverse, or modify the ZAB decision.

The development standards for a project in the U district are set forth in the Use Permit itself (BMC Section 23.208.020(D)), and ZAB, Planning Commission, and City Council must all make the findings for approval in BMC Section 23.406.030(F) (BMC Section 23.208.020(E)).

Planning Commission Review

On January 21, 2026, the Planning Commission reviewed the Use Permit application and recommended that the ZAB and City Council approve the Use Permit, including findings pursuant to BMC Section 23.208.020(E) (Ayes: Marthinsen, Vincent, Oatfield, Twu, Hauser, and Wang; Noes: None; Abstain: None; Absent: Owens, Kahn, and Merker (6-0-0-3)). Commissioners discussed, among other topics, the Commission's role in the Use Permit approval, future transportation needs of the area, other uses on the Pier and in the Marina, the importance of the ferry as an emergency transportation option, connections to San Francisco to support tourism and Berkeley businesses, connections with BART and AC Transit, and reinvigoration of the Waterfront and Marina. Five members of the public commented (Attachment 4).

Zoning Adjustments Board Action

Following a notice posted on February 11, 2026 pursuant to BMC Section 23.404.050 and emailed to a broad stakeholder list (there are no private properties within the 0.5-mile notice radius), the ZAB held a public hearing on February 26, 2026 and approved Use Permit #ZP2026-0014 pursuant to the findings for approval and subject to Standard and Project-Specific Conditions of Approval, by a vote of 5-0-3 (Attachment 5). The Project-Specific Conditions require City Council approval, require the City to obtain permits from all other agencies with jurisdiction prior to construction, and provide that the mitigation measures in the Council-adopted MMRP are Conditions of Approval. Staff determined that design review of the ferry terminal facilities will occur at the staff level pursuant to BMC Section 23.406.070(D). Because the ZAB acted before the Draft EIR was published, the ZAB added the following condition: "The ZAB's decision to approve the use permit was made prior to the publishing of the Draft Environmental Impact Report (EIR) and the associated Mitigation Monitoring and Reporting Program (MMRP)."

Findings for Approval

The Planning Commission and the ZAB each found that the proposed use would not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working in the area, and would not be detrimental or injurious to property and

improvements of adjacent properties, the surrounding area, or the general welfare of the City. Staff recommends that the Council make the same findings (Attachment 2, Exhibit A), for the following reasons:

- The Berkeley Waterfront is a single City-owned property, and the nearest residential zoning district is more than one mile from the ferry terminal. The nearest neighbors within 0.1 mile are a restaurant, a park, boats docked at the Marina (including some live-aboard boats), and a public parking lot;

- The use would establish a new transportation option for commuting, recreational, and personal travel to San Francisco, benefiting persons working, residing, or visiting in the area, including Marina live-aboard and floating home residents;

- Water transit facilities are expressly contemplated by the General Plan Waterfront/Marina designation, and the use is consistent with General Plan Policies T-2 (Public Transportation Improvements), T-9 (Ferry Service), and S-12 (Utility and Transportation Systems), and with the Public Trust Doctrine's requirement that public tidelands be devoted to water-dependent uses such as navigation;

- Ferry service is identified as a High Priority Action in the City's Local Hazard Mitigation Plan and as a goal of the City's Climate Action Plan, and is included in Plan Bay Area 2050+ and the WETA 2050 Service Vision;

- The City's Parking and Transportation Demand Management Plan demonstrates that ferry rider parking can be accommodated in under-utilized Waterfront parking areas without impacting recreation parking; and

- The mitigation measures in the MMRP are Conditions of Approval, and the Project would result in a net reduction in vehicle miles traveled and greenhouse gas emissions.

Recommended Modifications to the ZAB Decision

Staff recommends that the Council affirm the ZAB decision with modifications that incorporate the Final EIR, the CEQA Findings, and the mitigation measures, and make minor technical corrections, as noted in Attachment 2, Exhibit A. In summary, the modifications would:

- Replace the ZAB's added condition regarding the timing of its decision related to the timing of publication of the Draft EIR with a reference to the certified Final EIR;

- Reference the Final EIR in the Project approval condition and the development standards;

- Provide that where the City's Standard Condition of Approval with respect to Tribal and Cultural Resources and the MMRP mitigation measures addressing Tribal and Cultural Resources conflict, the mitigation measure governs;

- Clarify that exceptions to the standard construction hours may be granted for activities analyzed in the Final EIR, including nighttime in-water pile installation, subject to MMRP Mitigation Measure NOI-1;

- Note that the square footages in the ZAB staff report are approximate, with final square footages based on final permitted plans, consistent with the Final EIR; and

- Make technical corrections, including completing the approval date in Standard Condition 5 and correcting the Project Liaison telephone number.

Senate Bill 149 Status

On September 16, 2026, California Governor Gavin Newsom certified the Berkeley Water Transportation Pier Ferry Project as a transportation project qualifying for judicial streamlining under SB 149. SB 149 requires the City to make certain public notices within 10 days of the certification (Public Resources Code Section 21189.87). This notification was fully completed by September 26, 2026 with the required notice posted in the newspaper of record and emails sent to all agencies, organizations and individuals who have commented on the project. The notice was also posted on the City's Project website. Consistent with SB 149, the City will certify the record of proceedings within 5 days of approval of the Project.

Project Cost

The current design and environmental phase of the Project is funded through a combination of City, WETA, and grant funding, including $2,960,900 from the State Coastal Conservancy (Resolution No. 70,629-N.S.), $5,139,000 from the Alameda County Transportation Commission (Resolution No. 70,950-N.S.), and WETA contributions under the City-WETA Memorandum of Understanding (Resolution No. 71,325-N.S.).

The current total construction phase cost estimate for the Project is $139 million. This estimate for the construction phase escalates the construction cost estimate provided by design engineers in 2026 based on the 60% design to Spring 2028, and includes additional estimated costs for contingency, design adjustments, construction management, project management, and special inspections. This estimate does not include the cost of electric vessels. Construction funding has not yet been identified. The City anticipates that construction will be funded primarily through future grant awards from regional, state, and federal sources, and that the Project may be constructed in phases as funding becomes available. The City will not award construction contracts until construction funding has been secured, and future actions to

accept grant funds and award construction contracts will be brought to the City Council for consideration. The cost of implementing the mitigation measures in the MMRP are incorporated into the Project's construction costs.

BACKGROUND

The Berkeley Municipal Pier was originally constructed in 1926 by the Golden Gate Ferry Company as an automobile causeway to a ferry terminal, and was acquired by the City and operated as a recreational pier after ferry service ended in 1937. In July 2015, the pier was closed indefinitely due to structural safety issues. A structural assessment completed in 2021 identified options to repair the pier; since that time, the pier has continued to degrade, and the Project's structural engineers have concluded that repair is no longer feasible.

WETA has identified ferry service in Berkeley as a system priority for more than 20 years. Berkeley ferry service is included in Plan Bay Area 2050 and the Plan Bay Area 2050+ Final Transportation Project List, and WETA published its Berkeley Ferry Service Business Plan in 2022. In March 2019, the City Council authorized a Memorandum of Understanding (MOU) with WETA to jointly fund a feasibility study for rebuilding the pier for ferry service and recreational access (Resolution No. 68,782-N.S.). The findings of the feasibility study and a preferred concept, developed with community input, were presented to the City Council at a work session on December 7, 2021. In May 2024, the City and WETA amended the MOU to cover the current design and environmental phase (Resolution No. 71,325-N.S.).

The design and environmental phase began in 2023, is currently ongoing, and includes detailed engineering, environmental analysis and documentation under CEQA and the National Environmental Policy Act, public outreach, permitting, and preparation of bid-ready plans and specifications. The Project will require permits and/or approvals from agencies with jurisdiction over portions of the Project, including the California State Lands Commission, the San Francisco Bay Conservation and Development Commission, the U.S. Army Corps of Engineers, the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, CDFW, and the San Francisco Bay Regional Water Quality Control Board. Certification of the EIR is necessary for these agencies to rely on it in issuing their permits.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The environmental effects of the Project, including greenhouse gas emissions and energy, air quality, transportation, and hydrology and water quality, are disclosed and analyzed in the EIR (Attachment 3). The Project would provide zero-emission electric ferry service and multimodal access improvements, including a raised cycle track on University Avenue, Bay Trail improvements, secure bicycle parking, improved bus facilities, and electric vehicle charging, that would shift transbay trips away from single-occupancy vehicles and result in a net reduction in vehicle miles traveled. As described above, the Project would result in an annual net reduction of approximately 2,368 metric

tons of carbon dioxide equivalent ($MTCO_2e$) and a reduction of approximately 19,000 miles driven per day. The pier and plaza are designed to accommodate projected sea level rise through the 2075 planning horizon, consistent with the 2024 California Ocean Protection Council Sea Level Rise Guidance. The Project advances the goals of the City's Climate Action Plan and Climate Emergency declaration.

RATIONALE FOR RECOMMENDATION

The EIR has been prepared in compliance with CEQA Guidelines and reflects the independent judgment and analysis of the City. Certification of the EIR and adoption of the CEQA Findings, Statement of Overriding Considerations, mitigation measures, and MMRP are required before the City Council may consider approval of the Project. Certification will also allow the City to complete permitting with state and federal agencies and position the Project to compete for construction grant funding, which typically requires completed environmental review.

The Project site is in the Unclassified (U) zoning district. In this district, BMC Section 23.208.020(C) requires City Council action on all Use Permits. The Planning Commission reviewed the Use Permit application on January 21, 2026 and recommended approval. The ZAB then approved Use Permit #ZP2026-0014 on February 26, 2026. The ZAB's decision was made before the Draft EIR and associated MMRP were published. The recommended modifications to the Findings and Conditions of Approval conform the Use Permit to the Final EIR and MMRP. Affirming the ZAB decision as modified and approving the Project as Alternative 2 (Shortened Breakwater Alternative) completes the City's local land use approval for the Project.

ALTERNATIVE ACTIONS CONSIDERED

The City Council could decline to certify the EIR, or could direct staff to conduct additional environmental analysis. In that case, the City Council could not consider approval of the Project, and depending on the nature of any additional analysis, the EIR could require revision and recirculation for public review. This would delay Project permitting and the City's ability to pursue construction funding, and could affect the Project's existing grant funding timelines.

Pursuant to BMC Section 23.208.020(C)(5), the City Council may affirm, reverse, or modify the ZAB's decision on Use Permit #ZP2026-0014. The Council could also certify the EIR but decline to approve the Project, approve a different alternative analyzed in the EIR, or continue its consideration of the Project and Use Permit to a future meeting. Any of these actions would delay the Project.

RESOLUTION NO. ##,###-N.S.

CERTIFYING THE ENVIRONMENTAL IMPACT REPORT FOR THE BERKELEY WATER TRANSPORTATION PIER-FERRY PROJECT (SCH NO. 2025040995) AND ADOPTING CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) FINDINGS, A STATEMENT OF OVERRIDING CONSIDERATIONS, MITIGATION MEASURES AND A MITIGATION MONITORING AND REPORTING PROGRAM

WHEREAS, on March 12, 2019, the City Council authorized a Memorandum of Understanding with the San Francisco Bay Area Water Emergency Transportation Authority ("WETA") to jointly study the feasibility of rebuilding the Berkeley Pier for ferry service and recreational access (Resolution No. 68,782-N.S.), and on May 14, 2024, authorized an amendment to that Memorandum of Understanding for the design and environmental phase (Resolution No. 71,325-N.S.); and

WHEREAS, the Berkeley Water Transportation Pier-Ferry Project ("Project") would demolish portions of the closed pier; construct a new public pier and breakwater with recreational amenities and ferry infrastructure; conduct one-time dredging of the existing federal navigation channel and turning basin; construct a new public plaza and University Avenue and Seawall Drive improvements, construct a segment of the Bay Trail Extension and implement Seawall Drive parking lot renovations with a possible solar panel canopy; implement shoreline erosion repair; and support operation of zero-emission ferry service between Berkeley and San Francisco; and

WHEREAS, pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA") and the State CEQA Guidelines (California Code of Regulations, Title 14, Section 15000 et seq.) ("CEQA Guidelines"), the City, as lead agency, prepared an Environmental Impact Report for the Project (SCH No. 2025040995) ("EIR"); and

WHEREAS, on April 18, 2025, the City issued a Notice of Preparation of a Draft EIR for a 31-day comment period ending May 19, 2025, and on May 5, 2025, the City held a public meeting to receive comments on the scope and content of the EIR; and

WHEREAS, pursuant to Public Resources Code Section 21080.3.1, the City notified and consulted with California Native American tribes traditionally and culturally affiliated with the Project area, and concluded consultation on November 14, 2025 and January 21, 2026, and mitigation measures addressing tribal cultural resources are included in the EIR; and

WHEREAS, on February 27, 2026, the City issued a Notice of Availability and Notice of Completion of the Draft EIR and published the Draft EIR for public review and comment, and on April 1, 2026, issued a revised Notice of Availability extending the public review period, which closed on April 28, 2026, for a total review period of 60 days; and

WHEREAS, on March 16, 2026, the City held a public meeting to receive comments on the Draft EIR; and

WHEREAS, on November 5, 2026, the City published the Final EIR, consisting of the February 2026 Draft EIR and the November 2026 Responses to Comments and revisions to the Draft EIR (Errata); and

WHEREAS, at least 10 days prior to certification of the EIR, the City provided proposed written responses to each public agency that commented on the Draft EIR, pursuant to Public Resources Code Section 21092.5; and

WHEREAS, the City Council will consider approval of the Project and action on Use Permit #ZP2026-0014 by separate resolution following adoption of this Resolution, and this Resolution does not approve the Project; and

WHEREAS, on November 17, 2026, the City Council held a duly noticed public hearing and received public comment; and

WHEREAS, the City Council has reviewed and considered the information contained in the Final EIR, the CEQA Findings and Statement of Overriding Considerations, the Mitigation Monitoring and Reporting Program, the staff report, and all oral and written comments received; and

WHEREAS, all documents constituting the record of proceedings are and shall be retained by the City of Berkeley Parks, Recreation & Waterfront Department, and are and shall be available for public review on a Project website.

NOW, THEREFORE, BE IT RESOLVED that the Council of the City of Berkeley, as the decision-making body for the lead agency, hereby certifies that the Final EIR has been completed in compliance with CEQA, that the Final EIR was presented to the City Council and that the City Council reviewed and considered the information contained in the Final EIR prior to taking action on the Project, and that the Final EIR reflects the independent judgment and analysis of the City.

BE IT FURTHER RESOLVED that no recirculation of the EIR is required.

BE IT FURTHER RESOLVED that the City Council hereby incorporates by reference into this Resolution and adopts the CEQA Findings and Statement of Overriding Considerations (Exhibit B) with regard to the significant environmental effects of the Project.

BE IT FURTHER RESOLVED that the City Council adopts and incorporates into the Project all of the mitigation measures that are within the responsibility and jurisdiction of the City that are identified in the CEQA Findings.

BE IT FURTHER RESOLVED that the City Council incorporates by reference into this Resolution and adopts the Mitigation Monitoring and Reporting Program (Exhibit A).

BE IT FURTHER RESOLVED that City staff are directed to certify the record of proceedings for the Project within five days after the City Council’s approval of the Project, as required by Public Resources Code Section 21189.86.

BE IT FURTHER RESOLVED that nothing in this Resolution approves the Project, which the City Council will consider by separate resolution.

BE IT FURTHER RESOLVED that nothing in this Resolution shall be interpreted or applied so as to create a requirement, power, or duty in conflict with any federal or State law.

Mitigation Monitoring and Reporting Program

CEQA requires that a reporting or monitoring program be adopted when mitigation measures are required to mitigate or avoid significant effects on the environment and are adopted and incorporated into the project (Public Resources Code 21081.6). This mitigation monitoring and reporting program (MMRP) is intended to track and ensure compliance with adopted mitigation measures during project implementation. To ensure that the mitigation measures are properly implemented, this MMRP identifies the timing and responsibility for implementing and monitoring implementation of each mitigation measure. Accordingly, for each mitigation measure, this MMRP identifies the action required, the timing and frequency for implementing the action, the entity that will implement the action, and the agency or department responsible for verifying compliance.

This page intentionally left blank.

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
Aesthetics					
AES-1 Reduce Night Lighting During Construction of Facilities					
Night lighting for construction activities, staging areas and other areas used for construction shall be the minimum necessary to ensure safety and security for nighttime activities and operations. As part of planning and project implementation, the City or its contractor(s) shall ensure nighttime lighting used for construction is shielded and oriented downwards toward the work area(s) to reduce off-site light spill during nighttime construction activities. Lighting at the project site shall consist of light-emitting diode lights in all areas where nighttime construction activities will occur and be either motion-activated or use timers to ensure safety and security and reduce the impact of nighttime light pollution. Furthermore, all lighting would be designed in compliance with Illuminating Engineering Society (IES) and DarkSky recommendations. The City of Berkeley shall verify that this mitigation measure is included in the project's final construction specifications prior to the initiation of construction activities.	Incorporate all nighttime lighting requirements into final construction plans and specifications. Minimize night lighting used for activities related to construction and staging to the extent practicable while maintaining safety and security. Night lighting shall be shielded and directed downward toward work areas, shall utilize LED fixtures, shall be motion-activated or timer-controlled where feasible, and shall be designed consistent with IES and DarkSky recommendations.	Once prior to issuance of grading and/or construction permits, verify that DarkSky recommendations and nighttime lighting requirements are incorporated into final design, construction plans, and specifications. Periodically during construction, verify that nighttime lighting for construction is implemented consistent with Mitigation Measure AES-1. Air Quality					
AQ-1 Implement Construction Emissions Reduction Measures During Construction					
Prior to issuance of grading and construction permits, the City or its contractor(s) shall include the following measures on all construction plans, and these measures shall be implemented during construction: • All mobile off-road equipment (wheeled or tracked) greater than 50 horsepower used during construction activities shall meet the USEPA Tier 4 final standards. Tier 4 certification can be for the original equipment or equipment that is retrofitted to meet the Tier 4 final standards. • Alternative Fuel (natural gas, propane, electric, etc.) construction equipment shall be incorporated where available. These requirements shall be incorporated into the contract agreement with the construction contractor. A copy of the equipment's certification or model year specifications shall be available upon request for all equipment on-site. • Electricity shall be supplied to the site from the existing power grid to support the electric construction equipment. If connection to the grid is determined to be infeasible for portions of the project, a non-diesel fueled generator shall be used. • The project would comply with the CARB Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than five minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation; compliance with these would minimize emissions of TACs during construction. In addition, the City shall require the proposed project to comply with the following current Bay Area Air District's basic control measures for reducing construction emissions of PM_{10}[1]: • All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day. • All haul trucks transporting soil, sand, or other loose material off-site shall be covered. • All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • All vehicle speeds on unpaved roads shall be limited to 15 mph. • All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. • Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.	Verify that all Mitigation Measure AQ-1 construction emissions reduction measures have been incorporated into final construction plans, specifications, and construction contracts. Implement required emissions reduction measures, equipment requirements, idling restrictions, and fugitive dust control measures throughout construction.	Once prior to issuance of grading and construction permits, verify the incorporation of construction emissions reduction measures. Periodically throughout construction, verify implementation of required emissions reduction measures.	City of Berkeley Contractor(s)	City of Berkeley Parks, Recreation, and Waterfront Department

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
• All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. • Post a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.					
Biological Resources					
BIO-1(a) Implement Worker Environmental Awareness Program Prior to and During Construction					
Prior to initiation of all construction activities (including staging and mobilization), all personnel associated with project construction shall attend a Worker Environmental Awareness Program training, conducted by a City-approved qualified biologist, to aid workers in recognizing special-status biological resources that may occur in the project site. This training will include information about northwestern pond turtle, special-status fish, marine mammals, and nesting birds potentially occurring in the project site. The specifics of this program shall include identification of special-status species and habitats, a description of the regulatory status and general ecological characteristics of special-status resources, and review of the limits of construction and measures required to avoid and minimize impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared for distribution to all contractors, their employees, and other personnel involved with construction of the project. All employees shall sign a form provided by the trainer documenting they have attended the Worker Environmental Awareness Program and understand the information presented to them. The crew foreman shall be responsible for ensuring crew members adhere to the guidelines and restrictions designed to avoid impacts to special-status species.	Incorporate WEAP training requirements into final construction specifications. Retain a City-approved qualified biologist to prepare and conduct WEAP training for all construction personnel Maintain training attendance documentation and signed acknowledgement forms for provision to the City.	Once prior to construction, including staging and mobilization, retain a qualified biologist and verify completion of WEAP training. As needed throughout construction, conduct additional WEAP training for new personnel. Maintain and provide WEAP training attendance documentation shall occur prior to and throughout construction as applicable.	City of Berkeley Contractor(s), City-approved qualified biologist	City of Berkeley Parks, Recreation, and Waterfront Department	
BIO-1(b) Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction					
No less than seven days prior to the start of any construction activities within 500 feet of Strawberry Creek (including staging and mobilization), a City-approved qualified biologist will conduct a preconstruction survey for northwestern pond turtle within suitable habitat on the project site as feasible. If any northwestern pond turtle are identified within the work area, they will be allowed to leave the work site on their own. CNDDB Field Survey Forms will be submitted to the CDFW for all special-status animal species observed. If any northwestern pond turtles are observed by construction personnel within or adjacent to (within 50 feet) the project site, all work within the vicinity of the observation will be halted and the City will contact CDFW immediately for guidance. Only a CDFW-approved biologist will capture and relocate wildlife. Construction personnel are not permitted to handle said animals. If northwestern pond turtles become federally listed at the time of construction, no individuals shall be handled without approval from USFWS. A report of all pre-construction survey efforts will be submitted to the City within 30 days of completion of the survey effort to document compliance. The report will include the dates, times, weather conditions, and personnel involved in the surveys and monitoring. The report will also include for each captured special-status animal, the Universal Transverse Mercator (UTM) coordinates and habitat descriptions of the capture and release sites (in UTM coordinates), the length of time between capture and release, and the general health of the individual(s). This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.	Incorporate pre-construction survey requirements into final construction specifications. Retain a City-approved qualified biologist to conduct preconstruction surveys for northwestern pond turtle within suitable habitat for construction activities occurring within 500 feet of Strawberry Creek. Submit survey documentation and monitoring reports to the City to demonstrate compliance.	Once within seven days prior to initiation of construction activities within 500 feet of Strawberry Creek, complete preconstruction surveys for northwestern pond turtle. Periodically throughout construction, and upon observation of northwestern pond turtle, verify implementation of measures specified by Mitigation Measure BIO-1(b). Submit documentation within 30 days of survey completion.	City of Berkeley Contractor(s), City-approved qualified biologist	City of Berkeley Parks, Recreation, and Waterfront Department	

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
BIO-1(c) Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction					
Burrowing Owl Prior to project construction, a qualified biologist will conduct a habitat assessment to determine if potential habitat for burrowing owl is present in or near the project site. If potential habitat is present in or within 500 feet of the project site, a qualified biologist will conduct a pre-construction survey of the project site (plus a 500-foot buffer as access allows) for the presence of burrowing owl. The survey will be conducted no more than 14 days prior to ground disturbing activities and will conform to CDFW guidelines for burrowing owl Take Avoidance Surveys as described in Appendix D of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.[2] A report of pre-construction survey efforts and results will be submitted to the City within 30 days of completion of the survey. The report will include the dates, times, weather conditions, and personnel involved in the survey. Depending on survey results, the report will also include observations of burrowing owl or potential burrows, and the location and habitat description of the observations. If burrowing owl, active burrows, or their sign (i.e., tracks or pellets) are not observed in the project site, no additional measures related to impact avoidance and minimization of the absent species are recommended. If burrowing owl, active burrows, or their sign are observed within the project site, CDFW will be notified and the following measures will be implemented: • A qualified biological monitor will be present during landside construction on the project site to document burrowing owl observations, burrow statuses, and require that construction activities do not negatively affect burrowing owl. The duration and frequency of monitoring will be determined at the discretion of the qualified biologist and a monitoring report detailing monitoring results will be submitted to the City within 30 days of the completion of project activities or breeding season (February 1 to August 31), if applicable. • The biological monitor will visually inspect any pipes, debris piles, culverts, or similar structures for burrowing owl before the material is moved, buried, or capped. Open holes and trenches within the project site will be inspected at the beginning and end of each landside construction workday and immediately prior to backfilling. At the end of each such workday, trenches and holes will be ramped so that any animals that may have become trapped in the trench or hole can climb out. The ramp may be constructed of dirt fill or wood planking or other suitable material at an angle no greater than 30-45 degrees. If a burrowing owl is trapped in a trench or hole, work will stop and the qualified biologist will be notified immediately. The burrowing owl will be allowed to escape unimpeded. • If active burrows are observed on the project site, a non-disturbance buffer will be established restricting all ground-disturbing activities from occurring within the buffer and a qualified biological monitor will be present at the initiation of project activities. The buffer will be established by a qualified biologist and range from 330 ft. to 1,500 ft. depending on project activity, line of sight, and local topography during the breeding season. During the non-breeding season (September 1 to January 31), the buffer will range from 165 ft. to 330 ft. The buffer will be demarcated using brightly colored flagging and may only be reduced at the discretion of a qualified biologist based on the factors listed above and potential use of sound and visual barriers (i.e., hay bales). Removal of the buffer will only occur if a qualified biologist determines burrowing owl are not present in the vicinity and any potential burrows are inactive. • If active burrow avoidance is infeasible during the non-breeding season or during the breeding season, where resident owls have not yet begun egg laying or incubation, or where the juveniles are foraging independently and capable of independent survival, the City in coordination with a qualified biologist will consult with CDFW to prepare, authorize, and implement a passive relocation program consistent with Appendix E of the 2012 CDFW Staff Report on Burrowing Owl Mitigation. • A habitat mitigation plan will be developed in coordination with the City and CDFW for loss of active burrowing owl burrow sites if implementation of a passive relocation plan is necessary and/or burrowing owl are documented to nest on site or within 500 feet of the project site. This would be based upon the portion of the project site that overlaps	Incorporate pre-construction survey requirements into final construction specifications. Retain a qualified biologist to conduct preconstruction surveys for burrowing owl and nesting birds, as applicable. Submit survey reports, monitoring documentation, avoidance buffer information, and any required habitat mitigation or passive relocation plans to the City for review and approval.	Once prior to initiation of applicable construction activities, complete burrowing owl and nesting bird surveys. Periodically throughout construction occurring during nesting season, where biological monitoring is required, and/or where burrowing owl habitat is present, verify implementation of avoidance and minimization measures.	City of Berkeley Contractor(s), Qualified biologist/biological monitor	City of Berkeley Parks, Recreation, and Waterfront Department	

[2] California Department of Fish and Game (CDFG). 2012. Staff Report on Burrowing Owl Mitigation. Department of Fish and Game. March 7, 2012. Available at: http://www.dfg.ca.gov/wildlife/nongame/docs/BUOWStaffReport.pdf2 (accessed July 2026).

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
with the primary foraging area around the burrow site (approximately 500-foot buffer) to be replaced at a minimum 1:1 ratio. **Nesting Birds** Project construction activities, including but not limited to vegetation removal and ground disturbance that result in noise or disturbance affecting potential nesting bird habitat, should commence outside of the nesting season (February 1 through September 15), if feasible. If construction begins outside the nesting season, a nesting bird survey is not required. If ground disturbing project activities begin within the nesting season (February 1 through September 15), then no more than seven days prior to the initiation of project activities, a nesting bird pre-construction survey shall be conducted by a City-approved qualified biologist within the disturbance footprint, plus a 300-foot buffer for passerines and a 1,000-foot buffer for raptors. During construction within the nesting season, an additional focused survey shall be conducted prior to tree removal to identify active nests with the subject tree(s). If no active nests are observed, no further action would be required. Ground-disturbing project activities that are initiated outside of the nesting season may continue into the nesting season without requiring new nesting bird surveys. Pre-construction nesting bird surveys shall be conducted by a qualified biologist during the time of day when birds are most active and should be of sufficient duration to reliably conclude presence or absence of nesting birds on the project site and within the designated buffer. A report of the nesting bird surveys results shall be submitted to the City for review and approval prior to clearance for mobilizing equipment. If nests are found, their locations shall be flagged (if possible) and recorded with the use of a GPS unit. Avoidance buffers shall be established around active nests. Depending upon the species, suitable minimum buffers may be 50 feet for non-raptor species and 300 feet for raptor species, or as determined by the qualified biologist in consultation with CDFW based on species sensitivity, construction activities, and other factors. If active nests are present, all project work shall be conducted outside the established avoidance buffer zone from the nest until it is no longer active. No staging of large equipment shall occur within the avoidance buffer until the qualified biologist confirms that breeding/nesting is complete and all the young have fledged. If buffer zones are determined to be infeasible, a City-approved qualified biological monitor shall be on site to monitor project activities within the avoidance buffer zones to ensure active nests and nesting birds are not impacted. Nesting bird surveys are not required for project activities that occur between September 16 and January 31. A report of all survey results and any proposed avoidance buffers shall be submitted to the City for review and approval. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.					
BIO-1(d) Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction					
In-water work, including pile driving and dredging, shall be limited to the window of June 1 through November 30. The soft-start, ramp-up, exclusion-zone and sound attenuation procedures described below apply to pile-driving and pile-extraction activities. A "soft-start" technique will be used to allow fish and marine mammals to vacate the area before the pile driver reaches full power. For vibratory hammers, the contractor will initiate the driving for 15 seconds at reduced energy, followed by a 1-minute waiting period when there has been downtime of 30 minutes or more. This procedure shall be repeated two additional times before continuous driving is started. This procedure would also apply to vibratory pile extraction. For impact driving, an initial set of three strikes would be made by the hammer at 40 percent energy, followed by a 1-minute waiting period, then two subsequent three-strike sets before initiating continuous driving. Pile-driving activity shall not begin at any location if any marine mammal is observed within the applicable safe-zone distance for its hearing group, as defined for the specific pile-driving method (e.g., pile diameter, vibratory or impact installation, and number of piles installed per day). Safe-zone distances shall follow the most current NMFS-approved guidance and the Marine Mammal Monitoring Plan prepared pursuant to Mitigation Measure BIO-1(E). In all cases, a minimum exclusion distance of no less than 10 meters shall be maintained around the pile-driving location. If a marine mammal moves within the safe zone after pile driving has begun, the contractor shall implement the appropriate delay or shutdown as	Require that in-water construction activities such as pile driving and dredging occur only within the approved work window. Verify that required pile-driving avoidance and minimization measures are implemented, including soft-start procedures, ramp-up procedures, establishment of marine mammal exclusion zones, shutdown requirements, and use of hydroacoustic attenuation measures where feasible. Verify that construction activities are suspended and appropriate avoidance measures are implemented when marine mammals are observed within applicable exclusion or shutdown zones.	Prior to initiation of in-water construction activities, verify that work is scheduled within the approved in-water work window (between June 1 and November 30). Periodically during all pile-driving and pile-extraction activities, and continuously during pile-driving operations as applicable, verify implementation of actions required by Mitigation Measure BIO-1(d).	City of Berkeley and/or WETA Contractor(s)	City of Berkeley Parks, Recreation, and Waterfront Department	

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
described in Mitigation Measure BIO-1(E). A sound curtain, or bubble curtain, shall be employed during impact pile driving to break up sound waves, as feasible. The sound curtain would consist of a perforated hose laid in a circle to release air bubbles around the pile and diesel impact hammer. Jetting methods using pressurized water and/or wood cushion block methods shall also be employed as feasible to minimize impacts. If the intensity of the pile-driving activity needs to be increased or a marine mammal is within the safe zone buffer for the activity, pile driving shall be "ramped-up", which is a slow increase in the intensity of pile-driving. At the start of pile-driving for each pile at all locations, the pile shall be struck once with the hammer and the second pile strike delayed long enough to permit adequate time for any marine mammals within the safe zone to leave the area prior to the start of sustained pile-driving activities. This measure, including the technique and the size of the safe zone, may be modified or supplemented by permit conditions from applicable regulatory agencies.					
BIO-1(e) Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction					
Prior to construction, the City shall prepare a Marine Mammal Monitoring Plan (MMMP) to avoid and minimize potential adverse impacts on marine mammals during pile driving and tug operations. The MMMP shall implement general guidelines set forth in the MMPA and incorporate the hydroacoustic modeling results developed for the project to define site-specific protection zones and avoid exposure of marine mammals to underwater sound levels exceeding the most up to date Level A (injury) thresholds identified by NOAA Fisheries. The MMMP shall include the following: • **Protection and Monitoring Zones:** Using the hydroacoustic modeling results, the MMMP shall define shutdown and disturbance zones for each marine mammal hearing group. These zones will be tailored to the pile type, size, and driving method and will correspond to the Level A and Level B effect distances developed for the project. The plan will describe how these protection zones will be verified and monitored in the field, integrating them with the soft-start and observation procedures described in Mitigation Measure BIO-1(d). • **Vessel Operation Protocols:** The MMMP shall include vessel-operation measures consistent with the MMPA. Construction vessels under power shall remain at least 300 feet from whales and 150 feet from dolphins, porpoises, seals, and sea lions. When marine mammals are encountered, vessel operators shall reduce speed to no-wake, shift to neutral, and allow the animals to pass safely before resuming operations. • **On-Site Monitoring and Response**: A qualified biologist shall be present on site, either observing from the pier or aboard a vessel, during all pile-driving and tug operations. The biologist shall document all marine-mammal observations, note behavioral responses, and immediately alert project personnel if a whale enters the modeled harassment distance or comes within 300 feet, or if any other marine mammal enters the modeled harassment distance or comes within 150 feet, whichever is greater. Upon such an observation, the contractor shall implement the appropriate delay or shutdown procedures identified in the MMMP. • **Adaptive Management and Coordination**: The MMMP shall outline communication and reporting protocols, including stop-work notification procedures and coordination with NMFS Protected Species Division. Results from daily monitoring will be used to assess the effectiveness of the protection zones and adjust them, if needed, in consultation with NMFS. • **Nighttime Pile Driving**: Nighttime pile driving shall be limited to situations where safety concerns or significant schedule delays require that pile driving started during daytime hours extend beyond typical work hours. For instances where nighttime pile driving is required, the MMMP shall include non-visual monitoring protocols, such as passive acoustic monitoring, thermal/infrared cameras, and night vision optics, as well as larger nighttime exclusion/shutdown zones, extended soft start procedures, and the most effective feasible hydroacoustic attenuation. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.	Verify that a Marine Mammal Monitoring Plan (MMMP) has been prepared and approved prior to initiation of construction. Verify that the MMMP includes protection and monitoring zones, vessel operation protocols, on-site biological monitoring, adaptive management procedures, communication and reporting protocols, and nighttime pile-driving monitoring procedures. Verify that qualified biological monitors are retained and that all MMMP requirements, including marine mammal observation, shutdown procedures, agency coordination, monitoring documentation, and nighttime monitoring measures, are implemented during pile-driving and tug operations.	Once prior to initiation of construction, verify preparation and approval of the MMMP. Continuously during all pile-driving and tug operations, verify implementation of all MMMP requirements. As needed during nighttime pile-driving activities, verify implementation of nighttime monitoring and avoidance measures identified in the MMMP.	City of Berkeley Contractor(s), Qualified biologist/biological monitor	City of Berkeley Parks, Recreation, and Waterfront Department	

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
BIO-1(f) Implement CDFW-Requested Measure for Crotch's Bumble Bee Prior to Construction					
A formal habitat assessment of the project site landside project disturbance areas shall be performed by a qualified biologist prior to initiating ground disturbing activities to determine if suitable nesting or foraging habitat is present within the project site. The assessment shall include: • Review of occurrence record data • Analysis of foraging, nesting, and overwintering resources • Documentation of plant species observed (including what is blooming at the time of the survey and percent cover) The locations of nesting resources, including rodent burrows, cavities, thatched grasses, brush, rock piles, fallen logs, and manmade structures, shall be mapped during the assessment. Areas adjacent (within 50 feet) to the project site shall also be considered, if accessible, to determine if there is suitable nesting or foraging habitat. If suitable nesting and foraging resources are detected during the habitat assessment, they will be avoided by a minimum 50-foot buffer, where possible. If avoidance is not possible, protocol-surveys following the CDFW *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species* (CDFW 2023) will be conducted to determine if Crotch's bumble bee is present within the project site. A minimum of three visits will be conducted during the colony active season (April – August) and will be spaced 2-4 weeks apart. Surveys will be conducted each year that construction activities occur within suitable nesting habitat, because bumble bees move their nests each year. If no Crotch's bumble bees are detected on the project site, no further mitigation actions will be required. If Crotch's bumble bees are detected, consultation with CDFW will be initiated to determine the most appropriate strategy to avoid impacts to bumble bees on the project site. If full take avoidance is not feasible, the City will apply to CDFW for take authorization under an Incidental Take Permit.	Retain a qualified biologist to conduct a habitat assessment for Crotch's bumble bee prior to ground-disturbing activities, including documentation of occurrence records, nesting and foraging resources, and plant communities. Require the establishment of avoidance buffers of a minimum of 50-feet where applicable and feasible. Where avoidance is not feasible, conduct protocol-level surveys in accordance with CDFW guidance. If Crotch's bumble bee is detected, complete CDFW consultation and verify that any resulting avoidance, minimization, or other measures required by CDFW have been implemented. Verify that habitat assessment and survey documentation has been submitted to the City.	Once prior to initiation of ground-disturbing activities, complete the habitat assessment and any required protocol surveys. Periodically throughout construction in the circumstances specified by Mitigation Measure BIO-1(f), verify implementation of applicable avoidance, minimization, monitoring, and consultation requirements. If Crotch's bumble bee is identified, verify completion of CDFW consultation and implementation of any resulting measures.	City of Berkeley Contractor(s), Qualified biologist	City of Berkeley Parks, Recreation, and Waterfront Department	
BIO-2 Implement Invasive Species Prevention During Construction					
The following practices shall be required for on-site construction activities: • Any in-water fill materials shall be new or not salvaged from areas outside of San Francisco Bay. • Any pumps or in-water construction equipment that may be needed during construction shall be cleaned and dried for at least 72 hours prior to being used on the project site. • Tug boats shall not discharge untreated ballast water from outside the San Francisco Bay. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.	Verify that invasive species prevention measures have been incorporated into construction specifications. Verify compliance with applicable regulatory requirements and permit conditions.	Once prior to initiation of in-water construction activities, verify incorporation of measures into specifications. Periodically throughout construction activities involving in-water work, verify implementation of measures.	City of Berkeley Contractor(s)	City of Berkeley Parks, Recreation, and Waterfront Department	
BIO-3 Avoid Net Loss of Jurisdictional Waters Prior to Operation					
The City shall avoid a net loss of jurisdictional waters due to project implementation by demolishing additional portions of the existing pier to offset net increase in fill and overwater cover. Removal of existing pier decking and associated piles shall be required at a minimum 1:1 ratio for net increase in fill and overwater cover impacts on tidal waters of the San Francisco Bay to achieve no net increase in Bay fill. Removal of existing structures shall be implemented prior to or concurrently with construction of the new pier. The City shall develop a plan documenting the existing pier footprint, the proposed pier footprint, and the required additional demolition needed to demonstrate that no net increase in Bay fill or overwater cover would occur. This plan shall be developed by a qualified regulatory specialist prior to project construction and submitted to the appropriate agencies for review and approval during permitting. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.	Verify that a no-net-loss plan has been prepared and approved. Verify that required demolition of existing pier structures has been completed and that no net increase in Bay fill or overwater cover would occur.	Once during permit review and prior to issuance of permits for in-water work, verify preparation and approval of no-net-loss plan. Periodically during demolition and construction activities, verify that required demolition is implemented to offset new fill and overwater cover. Upon completion of demolition activities, verify no net increase in Bay fill or overwater cover.	City of Berkeley Contractor(s), Qualified regulatory specialist	City of Berkeley Parks, Recreation, and Waterfront Department	

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
Cultural Resources					
CR-1 Stop Work and Prepare and Implement a Data Recovery Plan if Unanticipated Archaeological Resources are Encountered During Construction.					
In the event that archaeological resources are unexpectedly encountered during ground-disturbing activities, work within 100 feet of the find shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology shall be contacted immediately to evaluate the resource.[3] If the resource is determined by the qualified archaeologist to be precontact, then a Native American representative shall also be contacted to participate in the evaluation of the resource. If the resource is identified in the waterside improvements area, then a qualified marine archaeologist shall assist in the treatment and evaluation of the resource. Any waterside discoveries that are removed from their submerged environment shall be kept fully submerged in a container of freshwater for storage until the archaeologist can examine the find. If the qualified archaeologist and/or Native American representative determines it to be appropriate, archaeological testing for CRHR eligibility shall be completed. If the resource proves to be eligible for the CRHR and significant impacts to the resource cannot be avoided by means of changes in the design of the project, a qualified archaeologist shall prepare a data recovery plan tailored to the physical nature and characteristics of the resource, pursuant to the requirements of the California Code of Regulations, CEQA Guidelines Section 15126.4(b)(3)(C). The data recovery plan shall identify data recovery excavation methods, measurable objectives, and data thresholds to reduce any significant impacts to cultural resources related to the resource. Pursuant to the data recovery plan, the qualified archaeologist and Native American representative, as appropriate, shall recover and document the scientifically consequential information that justifies the resource's significance. The City shall review and approve the data recovery plan and archaeological testing as appropriate, and the resulting documentation shall be submitted to the regional repository of the California Historical Resources Information System, pursuant to California Code of Regulations, CEQA Guidelines Section 15126.4(b)(3)(C).	If archaeological resources are encountered during construction, halt work within 100 feet of the find and retain a qualified archaeologist, Native American representative, and/or marine archaeologist, as appropriate, to evaluate the discovery. Where applicable, complete archaeological testing for CRHR eligibility. If a resource is determined eligible for the CRHR and impacts cannot be avoided, prepare a resource-specific data recovery plan for City review and approval and implement approved treatment measures. Submit required documentation to the California Historical Resources Information System upon completion of archaeological investigations and data recovery activities.	As needed upon discovery of a potential archaeological resource during construction, halt work and initiate discovery evaluation. Prior to resuming work in the discovery area, complete required treatment measures as needed. Periodically during implementation of any required treatment measures, verify compliance with approved procedures and requirements.	City of Berkeley and/or WETA Contractor(s), Qualified archaeologist, Native American representative, and/or qualified marine archaeologist, as applicable	City of Berkeley Parks, Recreation, and Waterfront Department	
Geology and Soils					
GEO-1 Implement Paleontological Worker Environmental Awareness Program During Construction					
Prior to the start of construction, a Qualified Professional Paleontologist, defined as a paleontologist who meets the Society of Vertebrate Paleontology standards, or his or her designee shall conduct a paleontological Worker Environmental Awareness Program training for all construction personnel participating in subsurface dredging regarding unanticipated discoveries and the procedures for notifying paleontological staff should fossils be discovered by construction staff. A training acknowledgment form shall be signed by all workers who receive the training, and a copy of the signed training acknowledgement form shall be retained by the project contractor and provided to the City.	Incorporate WEAP training requirements into final construction specifications. Retain a Qualified Professional Paleontologist to conduct WEAP training for construction personnel participating in subsurface dredging activities. Verify that training acknowledgement forms have been completed and provided to the City.	Once prior to initiation of dredging and other applicable subsurface construction activities, verify completion of paleontological WEAP training and receipt of training acknowledgement forms.	City of Berkeley and/or WETA Contractor(s), Qualified Professional Paleontologist or designee	City of Berkeley Parks, Recreation, and Waterfront Department	
GEO-2 Stop Work Upon Unanticipated Discovery of Paleontological Resources and Implement Recommendations During Construction					
The City shall require the following mitigation measure for dredging activities. If a potential fossil is discovered during dredging, construction activity within 50 feet of the find shall cease until the discovery is examined by a Qualified Professional Paleontologist as defined by the Society of Vertebrate Paleontology.[4] If the find is determined to be scientifically significant, the Qualified Professional Paleontologist shall direct all mitigation measures related to paleontological resources consistent with the SVP (2010) standards, which shall include fossil salvage, laboratory preparation, curation in a paleontological repository, and a paleontological monitoring report. Additionally, the Qualified Professional Paleontologist and City shall decide if full- or part-time monitoring shall be instated for further project-related dredging. A Qualified Professional Paleontologist, is defined by the SVP (2010) as an individual with: • A graduate degree in paleontology or geology, and/or a publication record in peer reviewed journals; and demonstrated competence in field techniques, preparation, identification, curation, and reporting in the state or geologic province in which the	If paleontological resources are encountered during dredging activities, work shall be halted within 50 feet of the discovery and a Qualified Professional Paleontologist shall evaluate the find. If the resource is determined to be scientifically significant, implement paleontological resource mitigation measures.	As needed upon discovery of potential paleontological resources during dredging activities, halt work and initiate discovery evaluation. Periodically during implementation of any required paleontological mitigation measures, verify compliance with applicable recommendations and requirements.	City of Berkeley and/or WETA Contractor(s), Qualified Professional Paleontologist	City of Berkeley Parks, Recreation, and Waterfront Department

Berkeley Water Transportation Pier Ferry Project

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
project occurs. An advanced degree is less important than demonstrated competence and regional experience. • At least two full years professional experience as assistant to a Project Paleontologist with administration and project management experience; supported by a list of projects and referral contacts. • Proficiency in recognizing fossils in the field and determining their significance. • Expertise in local geology, stratigraphy, and biostratigraphy. • Experience collecting vertebrate fossils in the field.					
Hydrology and Water Quality					
HYD-1 Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition					
In compliance with the requirements of the Construction Stormwater General Permit, prior to construction the construction contractor shall prepare a Stormwater Pollution Prevention Plan (SWPPP) and implement the SWPPP during construction. The SWPPP shall be submitted to the Berkeley Public Works Department and the State Water Resources Control Board (via the Stormwater Multiple Application and Report Tracking System [SMARTS]) for review and approval at least 60 days prior to start of construction. In addition to standard Erosion Control, Sediment Control, and Good Housekeeping Best Management Practices, the following Best Management Practices shall be included in the SWPPP and implemented during pier demolition: • Site washout areas shall be located at least 100 feet from a storm drain, open ditch or surface water and ensure that runoff flows from such activities do not enter receiving water bodies, unless otherwise approved by the RWQCB. • All re-fueling, cleaning, and maintenance of equipment shall occur at least 100 feet from storm drain, open ditch or surface water and/or within secondary containment, unless otherwise approved by the RWQCB. • Particular care shall be exercised to prevent foreign materials (e.g., construction scraps, wood preservatives, other chemicals and debris, etc.) from entering the San Francisco Bay during pier demolition. • If wood preservatives must be applied to cut-wood surfaces, the materials, whenever feasible, shall be treated at an onshore location to preclude the possibility of spills into State waters. • A containment boom shall be placed around all active portions of a construction site where wood scraps or other floatable debris could enter the water. • The containment boom and net shall be cleared daily or as often as necessary to prevent accumulation of debris. • Tarps and basins shall be used above deck to contain debris and materials. • Dipnets shall be on-site and can be used to retrieve debris if it accidentally falls into the water. • A 50-foot-long spill containment boom as well as absorbent pads shall be kept on-site and shall be deployed in the event that there is a release of fluids into the water. • Contractors shall make mandatory that work crews are carefully briefed on the importance of observing the appropriate precautions and reporting any accidental spills. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.	Verify that a SWPPP has been prepared and approved by the appropriate agencies. Verify that required erosion control, sediment control, good housekeeping measures, and project-specific BMPs for pier demolition have been incorporated into the SWPPP. Implement measures identified in the SWPPP during construction and demolition activities.	Once prior to initiation of construction and pier demolition activities, review and approve SWPPP. As needed throughout construction and demolition activities, verify implementation of SWPPP requirements.	City of Berkeley Contractor(s)	City of Berkeley Parks, Recreation, and Waterfront Department	
Noise					
NOI-1 Prepare and Implement Construction Noise Management Plan Prior to and During Construction					
Prior to the start of construction activities, a Construction Noise Management Plan shall be submitted to and approved by the City's Public Works Department. The Construction Noise Management Plan shall include the following: • Prior to the initiation of construction activities at the project site, the contractor shall install temporary noise barriers/blankets between the construction boundary and nearby sensitive receptors. The temporary barriers/blankets shall have a minimum height of 12 feet to block the line of sight between operating construction equipment and adjacent sensitive receptors. Barriers shall be constructed with a solid material that has a density	Prepare and submit a Construction Noise Management Plan to the City of Berkeley Public Works Department for approval. Implement noise reduction measures identified in the Construction Noise Management Plan during construction.	Once prior to initiation of construction activities, verify preparation and approval of Construction Noise Management Plan. Periodically throughout construction activities, verify	City of Berkeley Contractor(s), City-approved noise consultant, as needed	City of Berkeley Parks, Recreation, and Waterfront Department City of Berkeley Public Works Department	

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
of at least one pound per square foot with no gaps from the ground to the top of the barrier and be lined on the construction side with acoustical blanket, curtain, or equivalent absorptive material rated STC 32 or higher. The temporary barriers/blankets shall be installed as follows: o For landside construction activities occurring near the pier entrance/public plaza, temporary noise barriers/blankets shall be installed around the construction boundaries between the construction work areas and the Skates on the Bay Restaurant and Horseshoe Park located to the north and Shorebird Park located to the east. o For construction activities occurring at/near the Seawall Drive parking lot, temporary noise barriers/blankets shall be installed between the construction boundary and Shorebird Park to the north. o For construction activities occurring along University Avenue, temporary noise barriers/blankets shall be installed between the construction work areas and the live-aboard boats in the Marina to the north and Shorebird Park and Adventure Playground to the south. • With approval of the project structural engineer, landside pile holes shall be pre-drilled to minimize the number of impacts necessary to seat the pile, where feasible. • Pile driving shall be scheduled to have the least impact on nearby live-aboards or houseboats. • Applicable pile-driving noise control devices shall be integrated to the extent feasible to conduct both landside and in-water pile driving. These may include, but are not limited to, shrouding the pile hammer point of impact, by placing resilient padding directly on top of the pile cap, and/or by reducing exhaust noise with a sound-absorbing muffler. • Alternatives to impact hammers, such as oscillating or rotating pile installation systems, shall be used where possible for landside pile driving. • At least 10 days prior to the start of construction activities, a sign shall be posted at the construction site, or other conspicuous location, that includes a telephone number, website and email for project information, and a procedure in which a construction manager shall respond to and investigate noise complaints and take corrective action, if necessary, in a timely manner. • At least 21 days prior to the start of construction activities, businesses and residents (including occupied live-aboard boats) within 500 feet of the project site shall be notified of the planned construction activities. The notification shall include a brief description of the project, the activities that would occur, the hours when construction would occur, and the overall duration of the construction period. The notification shall include the telephone numbers and email addresses of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise complaint. • If a construction noise complaint is registered and if City code enforcement is not available to make noise measurements, the City shall retain a City-approved noise consultant to conduct noise measurements at the properties that registered the complaint. The noise measurements shall be conducted for a minimum of one hour. The consultant shall prepare a letter report for code enforcement summarizing the measurements, calculation data used in determining impacts, and potential measures to reduce noise levels to the maximum extent feasible. • Prior to the start of and for the duration of construction, the contractor shall properly maintain and tune all construction equipment in accordance with the manufacturer's recommendations to minimize noise emissions. • Prior to use of any construction equipment, the contractor shall fit all equipment with properly operating mufflers, air intake silencers, and engine shrouds no less effective than as originally equipped by the manufacturer. • Material hauling and deliveries shall be coordinated by the construction contractor to reduce the potential of trucks waiting to unload for protracted periods of time. • To the extent feasible, hydraulic equipment shall be used instead of pneumatic impact tools, and electric-powered equipment shall be used instead of diesel-powered equipment.		implementation of noise control measures.			

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
• Stationary noise sources (e.g., generators) shall be located as far from sensitive receptors as practicable, and they shall be muffled and enclosed within temporary sheds, or insulation barriers with a minimum STC rating of 32. • The use of bells, whistles, alarms, and horns shall be restricted to safety warning purposes only. • Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than five minutes. The construction manager shall be responsible for enforcing this.					
Tribal Cultural Resources					
TCR-1 Conduct Cultural Resources Sensitivity Training Prior to Construction					
Prior to the start of any ground disturbing activities, including excavation on land and dredging in water, the City of Berkeley (City) or its contractor(s) shall provide all construction personnel conducting ground disturbing activities, with cultural resources sensitivity training. The training will be conducted in person, or via a video meeting, to be viewed by all construction personnel involved in ground disturbing activities prior to the start of construction. The training will be developed and conducted in coordination with locally affiliated California Native American Tribe(s) that have participated in consultation with the City for the project (referred to hereafter as "Consulting Tribes"). Cultural resources sensitivity training will include relevant information regarding sensitive tribal cultural resources, applicable regulations including consequences of violation, and protocols for unanticipated discoveries and avoidance. The training will emphasize the requirement of confidentiality and culturally appropriate treatment of any finds of significance to Native Americans.	Develop and conduct cultural resources sensitivity training in coordination with locally affiliated Consulting Tribes for all construction personnel involved in ground-disturbing activities. Verify that construction personnel have completed the required training prior to conducting ground-disturbing activities.	Once prior to initiation of ground-disturbing activities, verify completion of cultural resources sensitivity training for construction personnel. As needed throughout construction, verify training completion for new personnel.	City of Berkeley and/or WETA Contractor(s) Consulting Tribes	City of Berkeley Parks, Recreation, and Waterfront Department	
TCR-2 Provide Signage Acknowledging Native American History Prior to Operation					
Prior to operation, the City shall provide signage at the project site that acknowledges Native American history and importance of the area. Language and design for the signage shall be developed in consultation with Consulting Tribes, including the Muwekma Ohlone Tribe. The location of the signage shall be thoughtfully integrated into the project design and shall be respectful of Native American culture and values. Photographs of human remains shall not be depicted on the signage. The City or its contractor(s) shall incorporate the location and content of the signage prior to Final Design. Consulting Tribes shall be given the opportunity to comment on the signage prior to the Final Design being approved by the City.	Develop Native American history acknowledgement signage in coordination with Consulting Tribes. Provide Consulting Tribes with opportunity to comment on the signage prior to final design approval. Verify that the location and content of the signage are incorporated into final design plans and specifications.	Once during final design and prior to project operation, verify that signage has been developed with appropriate coordination and that signage is incorporated into final plans and specifications.	City of Berkeley Contractor(s) Consulting Tribes	City of Berkeley Parks, Recreation, and Waterfront Department	
TCR-3 Conduct Native American Monitoring During Construction					
Prior to the start of any ground disturbing activities, including excavation and grading on land not previously covered by fill and any dredging in water, the City or its contractor(s) shall retain a Native American monitor(s) from a Consulting Tribe(s) for purposes of construction monitoring. If multiple Consulting Tribes request to monitor, the City will establish a rotating schedule to include all tribes requesting monitoring. The City shall provide monitors with at least 48 hours' notice prior to the start of any ground disturbing activity that requires monitoring. Native American monitors shall observe project-related ground disturbing activities located in previously undisturbed areas (i.e., areas not consisting of fill) and provide daily monitoring logs to the City detailing construction observed and results at minimum (confidential information can be redacted at the monitor's discretion). Monitors shall have the authority to temporarily halt work in the event of discovery or a potential Tribal Cultural Resource. If suspected Tribal Cultural Resources are encountered at any point during ground disturbing activities, work within a 100-foot radius shall halt and the find shall be evaluated for significance as required by Mitigation Measure TCR-4. The 100-foot radius may be reduced or expanded as appropriate by the monitor if conditions, such as expanded boundaries or increased sensitivity, warrant the reduction or expansion. Native American monitoring may be reduced to spot-checking or eliminated at the discretion of the monitor, in coordination with the City, as warranted by conditions such as encountering fill soils, bedrock, or negative findings during the first 60 percent of grading. If monitoring is reduced to spot-checking, spot-checking shall occur, at minimum, when ground-disturbance moves to a new location within the project site and when ground disturbance	Retain Native American monitor(s) from the Consulting Tribe(s) and notify monitors prior to ground disturbance. Monitor ground disturbing activities located in previously undisturbed areas and complete daily monitoring logs to be provided to the City. If a potential Tribal Cultural Resource is encountered, temporarily halt work within an area determined by the monitor and City and implement Mitigation Measure TCR-4.	Once prior to initiation of ground-disturbing activities, verify that Native American monitor(s) have been retained. As needed throughout construction, provide monitor(s) with a minimum of 48 hours' notice prior to ground-disturbing activities requiring monitoring. As needed throughout construction, verify monitoring of applicable ground-disturbing activities and that daily monitoring logs are provided to the City.	City of Berkeley and/or WETA Contractor(s) Native American monitor(s) from Consulting Tribes	City of Berkeley Parks, Recreation, and Waterfront Department	

Mitigation Measure/Condition of Approval	Action Required	Implementation Timing and Frequency	Implementing Entity	Agency Responsible for Compliance Verification	Compliance Verification (Initial, Date, Comments)
will extend to depths not previously reached (unless those depths are within bedrock). Ground disturbing activities shall not be contingent on the presence or availability of a Native American monitor, and ground disturbing may proceed regardless of whether or not a monitor is present on site.					
TCR-4 Evaluate Discovered Tribal Cultural Resources and Implement Resulting Recommendations During Construction					
If suspected Tribal Cultural Resources are encountered at any point during ground disturbing activities, work within a 100-foot radius shall halt and Consulting Tribes shall evaluate the suspected resource for significance as a Tribal Cultural Resource. If the find is archaeological in nature, then the City or its contractor(s) shall also retain a qualified archaeologist to respond and evaluate significance as required by Mitigation Measure CR-1. The City shall review the significance evaluation of the Tribal Cultural Resource and determine whether the find meets the criteria in California PCR Section 21074. If a discovered Tribal Cultural Resource is determined by the City to meet the criteria in California PRC Section 21074, avoidance and preservation in place shall be the preferred method of mitigating impacts and the City shall first consider the measures in California PRC Section 21084.3(b) in consultation with Consulting Tribes. If significant impacts to the resource cannot be avoided via project redesign, then the City shall work with Consulting Tribes to develop other appropriate measures to mitigate impacts. This could include, but would not be limited to, data recovery, installation of a permanent plaque or mural to inform the public, interpretive and/or educational elements, and/or landscaping to include native plants. Work in the area may resume following the determination by the City and completion of any applicable measures mitigating impacts to the Tribal Cultural Resource, if any.	If a potential Tribal Cultural Resource is encountered, halt work within a 100-foot radius of the discovery for evaluation by the Consulting Tribe(s). If applicable, retain a qualified archaeologist to evaluate significance of the discovery as required by Mitigation Measure CR-1. Review the significance of the discovery pursuant to California PRC Section 21074 criteria. Develop and implement avoidance, preservation in place, treatment, or other mitigation measures developed in coordination with Consulting Tribes as appropriate prior to resumption of work.	As needed upon discovery of a suspected Tribal Cultural Resource during construction, halt work and initiate discovery evaluation. Prior to resuming work in the discovery area, verify completion of any required significance evaluation and implementation of applicable measures.	City of Berkeley and/or WETA Contractor(s), Qualified archaeologist, as applicable Consulting Tribes	City of Berkeley Parks, Recreation, and Waterfront Department	
TCR-5 Provide Respectful Treatment of Native American Human Remains Upon Unanticipated Discovery and Implement Recommendations During Construction					
In addition to adherence to the California Health and Safety Code Sections 7050.5, should human remains be identified during construction, no photographs shall be taken without express permission from the on-site Native American Monitor, and no invasive scientific testing shall be completed without consultation with the NAHC appointed Most Likely Descendent. Any bone that cannot be identified as faunal shall be treated as human remains until positively identified as being non-human by the coroner and/or a qualified archaeologist, as appropriate. The Most Likely Descendant shall provide recommendations for reburial, and human remains and associated funerary items shall be reburied by Tribal representatives in a location agreed upon between the Tribe and the City. Any reburial location shall be accessible to Tribal members in perpetuity, not be subject to further disturbance, and kept confidential.	If human remains are encountered during construction, verify compliance with applicable State regulations and consultation requirements. If human remains are encountered during construction, contact Native American monitor(s), the Most Likely Descendant, and other appropriate parties for guidance and recommendations. Implement recommendations regarding treatment and reburial of Native American human remains and associated funerary items.	As needed upon discovery of human remains during construction, verify compliance with applicable requirements and implementation of applicable recommendations.	City of Berkeley and/or WETA Contractor(s) Native American monitor(s) Most Likely Descendant Consulting Tribes, as applicable	City of Berkeley Parks, Recreation, and Waterfront Department

CEQA Findings and Statement of Overriding Considerations

for the

City of Berkeley Water Transportation Pier Ferry Project Environmental Impact Report

pursuant to CEQA Guidelines Sections 15091 and 15093 and Public Resources Code Section 21081

The Environmental Impact Report (EIR) prepared by the City of Berkeley (City) for the Berkeley Water Transportation Pier Ferry Project ("the project") consists of the February 2026 Draft EIR and the October 2026 Final EIR including Responses to Comments on the Draft EIR. The EIR identifies significant environmental impacts that would result from implementation of the project. The City finds that the adoption of mitigation measures identified in the EIR as part of project approval will reduce all but the following significant environmental impacts to levels that are less than significant:

- Project-level and cumulative temporary construction noise impacts and associated land use/ planning and recreation impacts related to construction noise.
- Cumulatively considerable contribution to a significant cumulative operational roadway noise impact on University Avenue between Seawall Drive and Marina Boulevard, and associated land use/ planning and recreation impacts related to operational roadway noise.

No feasible mitigation measures have been identified to reduce these impacts to a less-than-significant level; therefore, the impacts will remain significant and unavoidable impacts of the project. Construction noise levels would exceed applicable thresholds even with implementation of identified feasible mitigation measures. For those impacts, mitigation measures have been identified and will be adopted and incorporated into the project, but will not reduce impacts to a less-than-significant level. Therefore, these impacts will remain significant and unavoidable impacts of the project. These findings contain a statement of overriding considerations in Section 6, below, that explains why the benefits of the proposed project outweigh these temporary unavoidable adverse environmental effects and are, therefore, acceptable.

As required by the California Environmental Quality Act, Public Resources Code Section 21000 *et seq*. (CEQA) and the State CEQA Guidelines, California Code of Regulations, Title 14, Section 15000 *et seq*. (CEQA Guidelines), the City, in addition to adopting these CEQA Findings and Statement of Overriding Considerations, also adopts a Mitigation Monitoring and Reporting Program (MMRP) for the project. In adopting the MMRP, the City finds that it meets the requirements of Public Resources Code Section 21081.6 by providing for the implementation and monitoring of measures intended to mitigate potentially significant environmental effects of the project.

In accordance with CEQA and the CEQA Guidelines, the City adopts these findings as part of the project approval. Pursuant to Public Resources Code Section 21082.1(c)(3), the City also finds that the Final EIR reflects the City's independent judgment as the lead agency for the project.

SECTION 1: INTRODUCTION

Statutory Requirements for Findings

CEQA Guidelines § 15091 states that:

> (a) No public agency shall approve or carry out a project for which an EIR has been certified which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are:
>
> (1) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.
>
> (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.
>
> (3) Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR.

In short, CEQA requires that the lead agency adopt mitigation measures or alternatives, where feasible, to avoid or mitigate significant environmental effects (impacts) that will otherwise occur with implementation of the project. Mitigation measures or project alternatives are not required, however, where they are infeasible or where modifying the project or adopting mitigation is within the responsibility and jurisdiction of another agency.[1]

For significant impacts that cannot be mitigated to a less-than-significant level, the public agency is required to find that specific overriding economic, legal, social, technological, or other benefits of the project outweigh the significant effects on the environment.[2] CEQA Guidelines §15093(a) states that:

> If the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposed project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered 'acceptable.'"

SECTION 2: PROJECT DESCRIPTION: BERKELEY WATER TRANSPORTATION PIER FERRY PROJECT

This section provides a brief description of the project and lists the objectives of the proposed project.

2.1 Project Description

The Berkeley Pier was closed in July 2015 due to visually observed structural problems on the underside of the concrete decking and pilings. The proposed project aims to revitalize the Berkeley Waterfront by developing a new dual-purpose pier and ancillary uses that support both public recreation and zero-emission public ferry service. Specifically, the project would include the following components:

- Demolish portions of the closed pier;
- Construct a new 1,080-foot-long public pier at the same location as the closed pier with pedestrian access and recreational amenities;
- Construct a new 400-foot-long breakwater perpendicular to and connected to the new pier, providing pedestrian access and recreational amenities;

1 CEQA Guidelines Section 15091(a)(2) and (3).

2 Public Resources Code Section 21081(b).

- Provide recreational amenities on the pier and breakwater for walking, sightseeing, and fishing, including interpretive and educational signs, benches, shade canopy, seats, and a fish cleaning station;
- Provide ferry infrastructure including but not limited to universal charging and boarding float(s), landing(s), gangway(s), and security entrance;
- One-time dredging along the existing 100-foot wide United States Army Corps of Engineers federal navigation channel that parallels the closed pier, as well as at a turning basin at the ferry landing(s);
- Construct a new public plaza with stormwater treatment and amenities such as a public restroom, public seating, bicycle lanes, public bicycle parking, and landscaping;
- Implement improvements to University Avenue, including repaving and restriping between the round-about intersection with Marina Boulevard and the intersection with Seawall Drive, stormwater treatment and a new raised bicycle track, passenger drop off zone, and public bus infrastructure, including the relocation of an existing AC Transit bus stop, installation of new bus passenger loading islands, and dedicated bus loading and unloading facilities; Implement improvements to Seawall Drive, including re-alignment, repaving, stormwater treatment, and restriping;
- Develop a portion of the planned Bay Trail Extension, south of the pier and along Seawall Drive;
- Renovate the parking lot off Seawall Drive with new pavement, surfacing, striping, lighting, stormwater treatment, and replacement of existing stormwater outfalls;
- Repair 300 feet of a stretch of shoreline located on the eastern side Seawall Peninsula, just north of the 199 Seawall Drive structure in the form of rock rip rap slope protection;
- Provide new landscaping as well as tree removal and replacement;
- Provide new way-finding signage and replacement lighting;
- Install new electric infrastructure to charge ferry vessels;
- Install new water connections for a restroom and hose bibs;
- Install new wastewater connections for a restroom; and
- Operate new zero-emission electric passenger ferry service, connecting the Berkeley ferry terminal to San Francisco.

In addition to the project components listed above, the City is considering adding solar panels to the renovated parking lot as an optional improvement. The City is in the process of deciding whether this feature will be incorporated into the project. The potential environmental impact from installing solar panels is analyzed in the EIR. The EIR also analyzes alternatives to the project as described in SECTION 5:, below.

2.2 Project Objectives

Pursuant to *CEQA Guidelines* Section 15124(b), the EIR project description must include "[a] statement of objectives sought by the proposed project… The statement of objectives should include the underlying purpose of the project." The Berkeley Water Transportation Pier Ferry Project is intended to achieve the following project objectives:

- Enhance public access and recreational opportunities at the Berkeley Waterfront that:
  - Develop or enhance public pier facilities at the City of Berkeley Waterfront.
  - Provide sufficient public access and recreational opportunities at the Berkeley Waterfront that meet regional needs, consistent with BCDC Bay Plan Policies maximizing access to the Bay.
  - Minimize environmental impacts by considering existing infrastructure and sea level rise projections.
  - Encourage the use of public transit, bicycle, and other forms of active transportation and sustainable travel to access the site.

- Provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco that:
  - Improves regional connectivity and resiliency with enhanced public transportation choices for East Bay residents, including for accessing jobs in San Francisco and other locations along the Bay for commerce and recreational purposes, and to address existing deficiencies in the Transbay transportation network.
  - Reduces the use of single-occupancy vehicles for Transbay trips, thereby reducing greenhouse gas and air quality emissions and decreasing congestion on the regional roadway system, consistent with regional and Statewide goals.
  - Provides travel times and costs that are competitive with other Transbay modes of travel.
  - Provides public transit facilities that are compatible with operations and recreational activities at the Berkeley Waterfront.
  - Provides navigable conditions for safe and efficient operation of ferry vessels.
  - Provides options for emergency response and transportation services in case of an emergency, such as natural or human-caused event that disables roads, other transit, bridges, and/or tunnels.

SECTION 3: ENVIRONMENTAL REVIEW PROCESS

Pursuant to the California Environmental Quality Act (CEQA), lead agencies are required to consult with public agencies having jurisdiction over a proposed project and to provide the general public with an opportunity to comment on the Draft EIR.

On April 18, 2025, the City of Berkeley issued a Notice of Preparation (NOP) for a 31-day comment period until May 19, 2025, to receive input on the scope and content of the EIR and help identify the types of impacts that could result from the project as well as potential areas of controversy. The NOP was filed with the County Clerk, published in a local newspaper, and mailed to public agencies (including the State Clearinghouse), organizations, and individuals considered likely to be interested in the project and its potential impacts. The City received written responses to the NOP regarding the scope and content of the EIR. The City also held an EIR scoping meeting May 5, 2025, at which 12 members of the public provided verbal comments. In addition to the verbal comments received during the EIR scoping meeting, the City received written scoping comment letters from 6 agencies, 3 Native American Tribes, 7 organizations, and 17 individuals in response to the NOP during the public review period.

The Draft EIR was made available for public review and comment on February 27, 2026. The Notice of Availability of a Draft EIR was posted with the Alameda County Clerk, filed with the State Clearinghouse for distribution to State agencies, published in a local newspaper, and mailed to local agencies and interested organizations. A Notice of Completion was also filed with the State Clearinghouse. The Draft EIR and an announcement of its availability were posted electronically on the City's website. The original public review and comment period was established as a 45-day review period, ending on April 13, 2026. On April 1, 2026, the City issued a revised Notice of Availability, notified the State Clearinghouse and project distribution list, and extended the public review and comment period by an additional 15 days. As a result, the Draft EIR was circulated for a total of 60 days, and the public comment period closed on April 28, 2026. The City received 102 written comment letters on the Draft EIR. The City also held a Draft EIR public meeting on March 16, 2026, to receive public comments on the environmental analysis during which 23 individual persons provided verbal comments on the Draft EIR.

SECTION 4: FINDINGS

These findings summarize the environmental determinations of the EIR about project impacts before and after mitigation, and do not attempt to repeat the full analysis of each environmental impact contained in the EIR. Instead, these findings provide a summary description of and basis for impacts in the EIR, describe the applicable mitigation measures identified in the EIR, and state the City’s findings and rationale regarding the significance of impacts with the implementation of identified mitigation measures. A full explanation of these

environmental findings and conclusions can be found in the EIR, and these findings hereby incorporate by reference the discussion and analysis in the EIR supporting the EIR's determinations regarding mitigation measures and the project's impacts.

4.1 SIGNIFICANT EFFECTS THAT CANNOT BE MITIGATED TO A LESS-THAN-SIGNIFICANT LEVEL

The Draft EIR identifies the following significant and unavoidable adverse project-level impacts associated with the approval of the project, some of which can be reduced, although not to a less-than-significant level, through implementation of mitigation measures identified in the Final EIR (Public Resources Code § 21081(a)(1)). To the extent that these mitigation measures will not mitigate or avoid all significant effects on the environment, it is hereby determined that any remaining significant and unavoidable adverse impacts are acceptable for the reasons specified in SECTION 6:, below (Public Resources Code § 21081(a)(3)). The findings in this section are based on the Draft EIR, the discussion and analysis in which is hereby incorporated in full by this reference.

The Draft EIR also identified significant and unavoidable cumulative impacts, which are addressed in Section 4.4.

4.1.1 Noise

Impact NOI-1: Operational Impacts: Mobile and stationary operational noise impacts would be less than significant. Construction Impacts: Most project construction noise impacts would be less than significant with mitigation; however, construction noise levels at Shorebird Park and some live-aboard boats, including for demolition and daytime and nighttime pile installation, would still exceed City thresholds and, thus, overall construction noise impacts would be significant and unavoidable.

Mitigation Measure NOI-1: ***Prepare and Implement Construction Noise Management Plan Prior to and During Construction****. Prior to the start of construction activities, a Construction Noise Management Plan shall be submitted to and approved by the City's Public Works Department. The Construction Noise Management Plan shall include the following:*

- *Prior to the initiation of construction activities at the project site, the contractor shall install temporary noise barriers/blankets between the construction boundary and nearby sensitive receptors. The temporary barriers/blankets shall have a minimum height of 12 feet to block the line of sight between operating construction equipment and adjacent sensitive receptors. Barriers shall be constructed with a solid material that has a density of at least one pound per square foot with no gaps from the ground to the top of the barrier and be lined on the construction side with acoustical blanket, curtain, or equivalent absorptive material rated STC 32 or higher. The temporary barriers/blankets shall be installed as follows:*
  - *For landside construction activities occurring near the pier entrance/public plaza, temporary noise barriers/blankets shall be installed around the construction boundaries between the construction work areas and the Skates on the Bay Restaurant and Horseshoe Park located to the north and Shorebird Park located to the east.*
  - *For construction activities occurring at/near the Seawall Drive parking lot, temporary noise barriers/blankets shall be installed between the construction boundary and Shorebird Park to the north.*
  - *For construction activities occurring along University Avenue, temporary noise barriers/blankets shall be installed between the construction work areas and the live-aboard boats in the Marina to the north and Shorebird Park and Adventure Playground to the south.*
- *With approval of the project structural engineer, landside pile holes shall be pre-drilled to minimize the number of impacts necessary to seat the pile, where feasible.*
- *Pile driving shall be scheduled to have the least impact on nearby live-aboards or houseboats.*

- *Applicable pile driving noise control devices shall be integrated to the extent feasible to conduct both landside and in-water pile driving. These may include, but are not limited to, shrouding the pile hammer point of impact, by placing resilient padding directly on top of the pile cap, and/or by reducing exhaust noise with a sound-absorbing muffler.*
- *Alternatives to impact hammers, such as oscillating or rotating pile installation systems, shall be used where possible for landside pile driving.*
- *At least 10 days prior to the start of construction activities, a sign shall be posted at the construction site, or other conspicuous location, that includes a telephone number, website and email for project information, and a procedure in which a construction manager shall respond to and investigate noise complaints and take corrective action, if necessary, in a timely manner.*
- *At least 21 days prior to the start of construction activities, businesses and residents (including occupied live-aboard boats) within 500 feet of the project site shall be notified of the planned construction activities. The notification shall include a brief description of the project, the activities that would occur, the hours when construction would occur, and the overall duration of the construction period. The notification shall include the telephone numbers and email addresses of the City's and contractor's authorized representatives that are assigned to respond in the event of a noise complaint.*
- *If a construction noise complaint is registered and if City code enforcement is not available to make noise measurements, the City shall retain a City-approved noise consultant to conduct noise measurements at the properties that registered the complaint. The noise measurements shall be conducted for a minimum of one hour. The consultant shall prepare a letter report for code enforcement summarizing the measurements, calculation data used in determining impacts, and potential measures to reduce noise levels to the maximum extent feasible.*
- *Prior to the start of and for the duration of construction, the contractor shall properly maintain and tune all construction equipment in accordance with the manufacturer's recommendations to minimize noise emissions.*
- *Prior to use of any construction equipment, the contractor shall fit all equipment with properly operating mufflers, air intake silencers, and engine shrouds no less effective than as originally equipped by the manufacturer.*
- *Material hauling and deliveries shall be coordinated by the construction contractor to reduce the potential of trucks waiting to unload for protracted periods of time.*
- *To the extent feasible, hydraulic equipment shall be used instead of pneumatic impact tools, and electric-powered equipment shall be used instead of diesel-powered equipment.*
- *Stationary noise sources (e.g., generators) shall be located as far from sensitive receptors as practicable, and they shall be muffled and enclosed within temporary sheds, or insulation barriers with a minimum STC rating of 32.*
- *The use of bells, whistles, alarms, and horns shall be restricted to safety warning purposes only.*
- *Signs shall be posted at the job site entrance(s), within the on-site construction zones, and along queueing lanes (if any) to reinforce the prohibition of unnecessary engine idling. All other equipment shall be turned off if not in use for more than five minutes. The construction manager shall be responsible for enforcing this.*

Finding: The City finds that implementation of Mitigation Measure NOI-1, which is hereby adopted and incorporated into the project, would reduce construction noise impacts to the maximum extent feasible. However, even with implementation of this mitigation measure, construction noise impacts would remain significant and unavoidable. Specifically, daytime pile-driving activities and nighttime pile-driving activities would continue to exceed applicable City noise standards at nearby sensitive receptors. No additional feasible mitigation measures have been identified that would reduce these pile-driving impacts to a less-than-significant level. The City further finds that although this impact would be significant and unavoidable, the temporary impact is acceptable when weighed against the overriding social, economic, and other considerations set forth in the Statement of Overriding Considerations (see SECTION 6: of this document).

Facts in Support of Finding: Implementation of Mitigation Measure NOI-1 would reduce construction noise levels through the use of temporary noise barriers, pile-driving noise attenuation measures, equipment controls, construction notifications, and other feasible construction noise reduction measures. However, due to the nature of pile-driving activities required for construction of the pier and ferry facilities, noise levels would nonetheless temporarily exceed applicable City standards at nearby sensitive receptors, including Shorebird Park and live-aboard boats within the Marina, during both daytime and nighttime construction. No additional feasible mitigation measures have been identified that would reduce construction noise levels to a less-than-significant level. Therefore, construction noise impacts associated with pile-driving would remain significant and unavoidable.

4.1.2 Land Use and Planning

Impact LU-2: Construction of the proposed project would not be consistent with policies related to noise in the Berkeley Municipal Code, and impacts would be significant and unavoidable.

Mitigation Measure NOI-1: ***Prepare and Implement Construction Noise Management Plan Prior to and During Construction.*** *Refer to Impact NOI-1 in Section 4.1.1 of these Findings.*

Finding: The City finds that implementation of Mitigation Measure NOI-1, which is hereby adopted and incorporated into the project, would reduce construction noise impacts to the maximum extent feasible. However, temporary construction noise impacts would remain significant and unavoidable with respect to consistency with applicable land use plans, policies, and regulations. Specifically, construction noise impacts would not be consistent with the noise standards established in the Berkeley Municipal Code. While implementation of other mitigation measures identified in the Draft EIR would also be required for Impact LU-2 and are addressed elsewhere in Section 4.2, EFFECTS DETERMINED TO BE MITIGATED TO LESS-THAN-SIGNIFICANT LEVELS, of these Findings, Mitigation Measure NOI-1 is the mitigation measure relevant to the residual land use and planning impact associated with construction noise. No additional feasible mitigation measures have been identified that would reduce this impact to a less-than-significant level. The City further finds that although this impact would be significant and unavoidable, the temporary impact is acceptable when weighed against the overriding social, economic, and other considerations set forth in the Statement of Overriding Considerations (see SECTION 6: of this document).

Facts in Support of Finding: The Draft EIR concluded that the proposed project would be generally consistent with applicable regional and local plans, including the Berkeley General Plan, Berkeley Marina Master Plan, Bay Area Clean Air Plan, Plan Bay Area 2050, Berkeley Climate Action Plan, Berkeley Local Hazard Mitigation Plan, Berkeley Measure L, and the BCDC San Francisco Bay Plan. However, as discussed in Section 3.10, *Noise*, of the Draft EIR, daytime and nighttime pile-driving activities would nonetheless temporarily exceed applicable noise standards in the Berkeley Municipal Code even with implementation of Mitigation Measure NOI-1. Because the project would remain inconsistent with a regulation adopted for the purpose of avoiding or mitigating an environmental effect, construction noise and related land use compatibility impacts would remain significant and unavoidable.

4.1.3 Recreation

Impact REC-2: The project includes the construction of recreational facilities, the potential environmental impacts of which are identified and evaluated throughout this Environmental Impact Report. This impact would be significant and unavoidable.

Mitigation Measure NOI-1: ***Prepare and Implement Construction Noise Management Plan Prior to and During Construction.*** *Refer to Impact NOI-1 in Section 4.1.1 of these Findings.*

Finding: The City finds that implementation of Mitigation Measure NOI-1, which is hereby adopted and incorporated into the project, would reduce construction noise impacts to the maximum extent feasible. However, temporary construction noise associated with construction of the proposed recreational facilities would remain significant and unavoidable. Specifically, construction noise would exceed noise thresholds established in the Berkeley Municipal Code. Implementation of other mitigation measures

identified in the Draft EIR would also be required for Impact REC-2, which are addressed in Section 4.2, EFFECTS DETERMINED TO BE MITIGATED TO LESS-THAN-SIGNIFICANT LEVELS of these Findings as appropriate. However, Mitigation Measure NOI-1 is the mitigation measure relevant to the residual recreation impact because construction noise associated with construction of the proposed recreational facilities would nonetheless temporarily exceed applicable City noise standards even with implementation of Mitigation Measure NOI-1. No additional feasible mitigation measures have been identified that would reduce this impact to a less-than-significant level. The City further finds that although this impact would be significant and unavoidable, the temporary impact is acceptable when weighed against the overriding social, economic, and other considerations set forth in the Statement of Overriding Considerations (see SECTION 6: of this document).

Facts in Support of Finding: Construction of the recreational facilities included in the project would result in a significant and unavoidable temporary impact related to construction noise. Implementation of project Mitigation Measure NOI-1 would reduce this impact but not to a level of less-than-significant. As discussed in Section 3.10, *Noise*, of the Draft EIR, construction of the pier and breakwater would require pile-driving activities that would continue to exceed applicable City noise standards even with implementation of Mitigation Measure NOI-1. Because construction noise impacts would remain significant and unavoidable, the physical impact on the environment associated with construction of the proposed recreational facilities would also remain significant and unavoidable.

4.2 EFFECTS DETERMINED TO BE MITIGATED TO LESS-THAN-SIGNIFICANT LEVELS

The Draft EIR identified certain potentially significant effects that could result from the project. However, the City finds for each of the significant or potentially significant impacts identified in this section (Section 4.2) that, based upon substantial evidence in the record, changes or alterations have been required or incorporated into the project which avoid or substantially lessen the significant effects as identified in the Final EIR (CEQA Guidelines Section 15091) and, thus, that adoption of the mitigation measures set forth below will reduce these significant or potentially significant effects to less-than-significant levels. These measures will be required of the project as part of the City review and approval process where applicable.

4.2.1 Aesthetics

Impact AES-4. Construction lighting from the proposed project would affect nearby houseboat residents or occupants. This impact would be less than significant with mitigation. Operation of the Proposed project would result in sources of light and glare from overhead light fixtures and safety and wayfinding lighting. However, operational levels of light and glare would be minor, similar to existing conditions, and all lighting associated with the project would be designed with DarkSky approved fixtures, resulting in a less than significant impact during operations.

Mitigation Measure AES-1: ***Reduce Night Lighting During Construction of Facilities****. Night lighting for construction activities, staging areas and other areas used for construction shall be the minimum necessary to ensure safety and security for nighttime activities and operations. As part of planning and project implementation, the City or its contractor(s) shall ensure nighttime lighting used for construction is shielded and oriented downwards toward the work area(s) to reduce off-site light spill during nighttime construction activities. Lighting at the project site shall consist of light-emitting diode lights in all areas where nighttime construction activities will occur and be either motion-activated or use timers to ensure safety and security and reduce the impact of nighttime light pollution. Furthermore, all lighting would be designed in compliance with Illuminating Engineering Society (IES) and DarkSky recommendations. The City of Berkeley shall verify that this mitigation measure is included in the project's final construction specifications prior to the initiation of construction activities.*

Finding: The City finds that implementation of Mitigation Measure AES-1, which is hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Implementation of Mitigation Measure AES-1 would require nighttime construction lighting to be limited to the minimum necessary for safety and security, shielded and directed downward and inward toward work areas, and designed consistent with IES and DarkSky recommendations. Therefore, impacts related to light and glare would be reduced to a less-than-significant level with implementation of Mitigation Measure AES-1.

4.2.2 Air Quality

Impact AQ-2. The project would result in a cumulatively considerable net increase of criteria pollutants (specifically NOx) for which the project region is in non-attainment under an applicable federal or state air quality standard, prior to mitigation. With implementation of Mitigation, NOx would be reduced to below regulatory thresholds. Impacts would be less than significant with mitigation.

Mitigation Measure AQ-1: ***Implement Construction Emissions Reduction Measures During Construction****. Prior to issuance of grading and construction permits, the City or its contractor(s) shall include the following measures on all construction plans, and these measures shall be implemented during construction:*

- *All mobile off-road equipment (wheeled or tracked) greater than 50 horsepower used during construction activities shall meet the USEPA Tier 4 final standards. Tier 4 certification can be for the original equipment or equipment that is retrofitted to meet the Tier 4 final standards.*
- *Alternative Fuel (natural gas, propane, electric, etc.) construction equipment shall be incorporated where available. These requirements shall be incorporated into the contract agreement with the construction contractor. A copy of the equipment's certification or model year specifications shall be available upon request for all equipment on-site.*
- *Electricity shall be supplied to the site from the existing power grid to support the electric construction equipment. If connection to the grid is determined to be infeasible for portions of the project, a non-diesel fueled generator shall be used.*
- *The project would comply with the CARB Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than five minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation; compliance with these would minimize emissions of TACs during construction.*

In addition, the City shall require the proposed project to comply with the following current Bay Area Air District's basic control measures for reducing construction emissions of PM_{10}[3] :

- *All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.*
- *All haul trucks transporting soil, sand, or other loose material off-site shall be covered.*
- *All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.*
- *All vehicle speeds on unpaved roads shall be limited to 15 mph.*
- *All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.*
- *Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.*
- *All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.*

[3] Bay Area Air District. 2017. California Environmental Quality Act Air Quality Guidelines, Table 8-2. Available: https://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en (accessed October 2025).

- *Post a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.*

Finding: The City finds that implementation of Mitigation Measure AQ-1, which is hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Implementation of Mitigation Measure AQ-1 would require the use of Tier 4 Final or alternatively fueled construction equipment, compliance with CARB idling requirements, and implementation of Bay Area Air District construction dust-control measures. Without mitigation, project construction would exceed the Bay Area Air District threshold for NOX emissions. However, implementation of Mitigation Measure AQ-1 would reduce NOX emissions below applicable Bay Area Air District significance thresholds. Therefore, impacts related to construction criteria air pollutant emissions would be less than significant with implementation of Mitigation Measure AQ-1.

Impact AQ-3. The project would not increase carbon monoxide concentrations such that it would create carbon monoxide hotspots, and construction of the project would not result in emissions of TACs sufficient to exceed applicable health risk criteria with implementation of mitigation. Impacts would be less than significant with mitigation.

Mitigation Measure AQ-1: ***Implement Construction Emissions Reduction Measures During Construction.*** *Refer to Impact AQ-2 above.*

Finding: The City finds that implementation of Mitigation Measure AQ-1, which is hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Implementation of Mitigation Measure AQ-1 would require the use of Tier 4 Final or alternatively fueled construction equipment, compliance with CARB idling requirements, and other construction emissions reduction measures that would minimize emissions of toxic air contaminants during construction. With implementation of Mitigation Measure AQ-1, construction-related health risks related to exposure of sensitive receptors to TACs would not exceed applicable significance thresholds. In addition, project-related roadway vehicle volumes would not increase roadway vehicle volumes at affected intersections to levels associated with carbon monoxide hotspots, and therefore operational carbon monoxide hotspot impacts would be less than significant without mitigation. Therefore, with implementation of Mitigation Measure AQ-1 to reduce construction-related toxic air contaminant health risks, the project would not expose sensitive receptors to substantial pollutant concentrations, including toxic air contaminant emissions and carbon monoxide hotspots, and impacts would be less than significant with mitigation.

4.2.3 Biological Resources

Impact BIO-1: Construction of the project would result in direct or indirect impacts to special-status species or their associated habitats including impacts to migratory bird nest sites. Impacts would be less than significant with mitigation.

Crotch's bumblebee has a low likelihood to be present in undeveloped portions of the project site. Based on the low likelihood for this species to occur, the low quality of habitat in the project site, and the distance from the known occurrence of this species, potential impacts to Crotch's bumblebee are less than significant. Nonetheless, the City would implement Mitigation Measure 1(f), as recommended by CDFW. Implementation of this mitigation, however, does not change the conclusion that impacts to this species is less than significant without mitigation.

Mitigation Measure BIO-1(a): ***Implement Worker Environmental Awareness Program Prior to and During Construction.*** *Prior to initiation of all construction activities (including staging and mobilization), all personnel associated with project construction shall attend a Worker Environmental Awareness Program training, conducted by a City-approved qualified biologist, to aid workers in recognizing special-*

status biological resources that may occur in the project area. This training will include information about northwestern pond turtle, special-status fish, marine mammals, and nesting birds potentially occurring in the project site.

The specifics of this program shall include identification of special-status species and habitats, a description of the regulatory status and general ecological characteristics of special-status resources, and review of the limits of construction and measures required to avoid and minimize impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared for distribution to all contractors, their employees, and other personnel involved with construction of the project. All employees shall sign a form provided by the trainer documenting they have attended the Worker Environmental Awareness Program and understand the information presented to them. The crew foreman shall be responsible for ensuring crew members adhere to the guidelines and restrictions designed to avoid impacts to special-status species.

Mitigation Measure BIO-1(b): ***Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction.*** *No less than seven days prior to the start of any construction activities within 500 feet of Strawberry Creek (including staging and mobilization), a City-approved qualified biologist will conduct a preconstruction survey for northwestern pond turtle within suitable habitat on the project site as feasible. If any northwestern pond turtle are identified within the work area, they will be allowed to leave the work site on their own. CNDDB Field Survey Forms will be submitted to the CDFW for all special-status animal species observed.*

If any northwestern pond turtles are observed by construction personnel within or adjacent to (within 50 feet) the project site, all work within the vicinity of the observation will be halted and the City will contact CDFW immediately for guidance. Only a CDFW-approved biologist will capture and relocate wildlife. Construction personnel are not permitted to handle said animals. If northwestern pond turtles become federally listed at the time of construction, no individuals shall be handled without approval from USFWS.

A report of all pre-construction survey efforts will be submitted to the City within 30 days of completion of the survey effort to document compliance. The report will include the dates, times, weather conditions, and personnel involved in the surveys and monitoring. The report will also include for each captured special-status animal, the Universal Transverse Mercator (UTM) coordinates and habitat descriptions of the capture and release sites (in UTM coordinates), the length of time between capture and release, and the general health of the individual(s).

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Mitigation Measure BIO-1(c): ***Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction.***

Burrowing Owl

Prior to project construction, a qualified biologist will conduct a habitat assessment to determine if potential habitat for burrowing owl is present in or near the project site. If potential habitat is present in or within 500 feet of the project site, a qualified biologist will conduct a pre-construction survey of the project area (plus a 500-foot buffer as access allows) for the presence of burrowing owl. The survey will be conducted no more than 14 days prior to ground disturbing activities and will conform to CDFW guidelines for burrowing owl Take Avoidance Surveys as described in Appendix D of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.[4] A report of pre-construction survey efforts and results will be submitted to the City within 30 days of completion of the survey. The report will include the dates, times, weather conditions, and personnel involved in the survey. Depending on survey results, the report will also include observations of burrowing owl or potential burrows, and the location and habitat description of the observations. If burrowing owl, active burrows, or their sign (i.e., tracks or pellets) are not observed in the project area, no additional measures related to impact avoidance and minimization of the absent

[4] California Department of Fish and Game (CDFG). 2012. Staff Report on Burrowing Owl Mitigation. Department of Fish and Game. March 7, 2012. Available at: http://www.dfg.ca.gov/wildlife/nongame/docs/BUOWStaffReport.pdf2 (accessed July 2026).

species are recommended. If burrowing owl, active burrows, or their sign are observed within the project site, CDFW will be notified and the following measures will be implemented:

- *A qualified biological monitor will be present during landside construction on the project site to document burrowing owl observations, burrow statuses, and require that construction activities do not negatively affect burrowing owl. The duration and frequency of monitoring will be determined at the discretion of the qualified biologist and a monitoring report detailing monitoring results will be submitted to the City within 30 days of the completion of project activities or breeding season (February 1 to August 31), if applicable.*
- *The biological monitor will visually inspect any pipes, debris piles, culverts, or similar structures for burrowing owl before the material is moved, buried, or capped. Open holes and trenches within the project site will be inspected at the beginning and end of each landside construction workday and immediately prior to backfilling. At the end of each such workday, trenches and holes will be ramped so that any animals that may have become trapped in the trench or hole can climb out. The ramp may be constructed of dirt fill or wood planking or other suitable material at an angle no greater than 30-45 degrees. If a burrowing owl is trapped in a trench or hole, work will stop and the qualified biologist will be notified immediately. The burrowing owl will be allowed to escape unimpeded.*
- *If active burrows are observed on the project site, a non-disturbance buffer will be established restricting all ground-disturbing activities from occurring within the buffer and a qualified biological monitor will be present at the initiation of project activities. The buffer will be established by a qualified biologist and range from 330 ft. to 1,500 ft. depending on project activity, line of sight, and local topography during the breeding season. During the non-breeding season (September 1 to January 31), the buffer will range from 165 ft. to 330 ft. The buffer will be demarcated using brightly colored flagging and may only be reduced at the discretion of a qualified biologist based on the factors listed above and potential use of sound and visual barriers (i.e., hay bales). Removal of the buffer will only occur if a qualified biologist determines burrowing owl are not present in the vicinity and any potential burrows are inactive.*
- *If active burrow avoidance is infeasible during the non-breeding season or during the breeding season, where resident owls have not yet begun egg laying or incubation, or where the juveniles are foraging independently and capable of independent survival, the City in coordination with a qualified biologist will consult with CDFW to prepare, authorize, and implement a passive relocation program consistent with Appendix E of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.*
- *A habitat mitigation plan will be developed in coordination with the City and CDFW for loss of active burrowing owl burrow sites if implementation of a passive relocation plan is necessary and/or burrowing owl are documented to nest on site or within 500 feet of the project site. This would be based upon the portion of the project site that overlaps with the primary foraging area around the burrow site (approximately 500-foot buffer) to be replaced at a minimum 1:1 ratio.*

Nesting Birds

Project construction activities, including but not limited to vegetation removal and ground disturbance that result in noise or disturbance affecting potential nesting bird habitat, should commence outside of the nesting season (February 1 through September 15), if feasible. If construction begins outside the nesting season, a nesting bird survey is not required.

If ground disturbing project activities begin within the nesting season (February 1 through September 15), then no more than seven days prior to the initiation of project activities, a nesting bird pre-construction survey shall be conducted by a City-approved qualified biologist within the disturbance footprint, plus a 300-foot buffer for passerines and a 1,000-foot buffer for raptors. During construction within the nesting season, an additional focused survey shall be conducted prior to tree removal to identify active nests with the subject tree(s). If no active nests are observed, no further action would be required. Ground-disturbing project activities that are initiated outside of the nesting season may continue into the nesting season without requiring new nesting bird surveys.

Pre-construction nesting bird surveys shall be conducted by a qualified biologist during the time of day when birds are most active and should be of sufficient duration to reliably conclude presence or absence of nesting birds on the project site and within the designated buffer. A report of the nesting bird surveys results shall be submitted to the City for review and approval prior to clearance for mobilizing equipment. If nests are found, their locations shall be flagged (if possible) and recorded with the use of a GPS unit. Avoidance buffers shall be established around active nests. Depending upon the species, suitable minimum buffers may be 50 feet for non-raptor species and 300 feet for raptor species, or as determined by the qualified biologist in consultation with CDFW based on species sensitivity, construction activities, and other factors.

If active nests are present, all project work shall be conducted outside the established avoidance buffer zone from the nest until it is no longer active. No staging of large equipment shall occur within the avoidance buffer until the qualified biologist confirms that breeding/nesting is complete and all the young have fledged. If buffer zones are determined to be infeasible, a City-approved qualified biological monitor shall be on site to monitor project activities within the avoidance buffer zones to ensure active nests and nesting birds are not impacted. Nesting bird surveys are not required for project activities that occur between September 16 and January 31. A report of all survey results and any proposed avoidance buffers shall be submitted to the City for review and approval.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Mitigation Measure BIO-1(d): ***Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction.*** *In-water work, including pile driving and dredging, shall be limited to the window of June 1 through November 30. The soft-start, ramp-up, exclusion-zone and sound attenuation procedures described below apply to pile-driving and pile-extraction activities. A "soft start" technique will be used to allow fish and marine mammals to vacate the area before the pile driver reaches full power. For vibratory hammers, the contractor will initiate the driving for 15 seconds at reduced energy, followed by a 1-minute waiting period when there has been downtime of 30 minutes or more. This procedure shall be repeated two additional times before continuous driving is started. This procedure would also apply to vibratory pile extraction. For impact driving, an initial set of three strikes would be made by the hammer at 40 percent energy, followed by a 1-minute waiting period, then two subsequent three-strike sets before initiating continuous driving. Pile-driving activity shall not begin at any location if any marine mammal is observed within the applicable safe-zone distance for its hearing group, as defined for the specific pile-driving method (e.g., pile diameter, vibratory or impact installation, and number of piles installed per day). Safe-zone distances shall follow the most current NMFS-approved guidance and the Marine Mammal Monitoring Plan prepared pursuant to Mitigation Measure BIO-1(E). In all cases, a minimum exclusion distance of no less than 10 meters shall be maintained around the pile-driving location. If a marine mammal moves within the safe zone after pile driving has begun, the contractor shall implement the appropriate delay or shutdown as described in Mitigation Measure BIO-1(E). A sound curtain, or bubble curtain, shall be employed during impact pile driving to break up sound waves, as feasible. The sound curtain would consist of a perforated hose laid in a circle to release air bubbles around the pile and diesel impact hammer. Jetting methods using pressurized water and/or wood cushion block methods shall also be employed as feasible to minimize impacts.*

If the intensity of the pile-driving activity needs to be increased or a marine mammal is within the safe zone buffer for the activity, pile-driving shall be "ramped-up", which is a slow increase in the intensity of pile-driving. At the start of pile-driving for each pile at all locations, the pile shall be struck once with the hammer and the second pile strike delayed long enough to permit adequate time for any marine mammals within the safe zone to leave the area prior to the start of sustained pile-driving activities.

This measure, including the technique and the size of the safe zone, may be modified or supplemented by permit conditions from applicable regulatory agencies.

Mitigation Measure BIO-1(e): ***Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction.*** *Prior to construction, the City shall prepare a Marine Mammal Monitoring Plan (MMMP) to avoid and minimize potential adverse impacts on marine*

mammals during pile driving and tug operations. The MMMP shall implement general guidelines set forth in the MMPA and incorporate the hydroacoustic modeling results developed for the project to define site-specific protection zones and avoid exposure of marine mammals to underwater sound levels exceeding the most up to date Level A (injury) thresholds identified by NOAA Fisheries. The MMMP shall include the following:

- ***Protection and Monitoring Zones****: Using the hydroacoustic modeling results, the MMMP shall define shutdown and disturbance zones for each marine mammal hearing group. These zones will be tailored to the pile type, size, and driving method and will correspond to the Level A and Level B effect distances developed for the project. The plan will describe how these protection zones will be verified and monitored in the field, integrating them with the soft-start and observation procedures described in Mitigation Measure BIO-1(d).*
- ***Vessel Operation Protocols****: The MMMP shall include vessel-operation measures consistent with the MMPA. Construction vessels under power shall remain at least 300 feet from whales and 150 feet from dolphins, porpoises, seals, and sea lions. When marine mammals are encountered, vessel operators shall reduce speed to no-wake, shift to neutral, and allow the animals to pass safely before resuming operations.*
- ***On-Site Monitoring and Response****: A qualified biologist shall be present on site, either observing from the pier or aboard a vessel, during all pile-driving and tug operations. The biologist shall document all marine-mammal observations, note behavioral responses, and immediately alert project personnel if a whale enters the modeled harassment distance or comes within 300 feet, or if any other marine mammal enters the modeled harassment distance or comes within 150 feet, whichever is greater. Upon such an observation, the contractor shall implement the appropriate delay or shutdown procedures identified in the MMMP.*
- ***Adaptive Management and Coordination****: The MMMP shall outline communication and reporting protocols, including stop-work notification procedures and coordination with NMFS Protected Species Division. Results from daily monitoring will be used to assess the effectiveness of the protection zones and adjust them, if needed, in consultation with NMFS.*
- ***Nighttime Pile Driving****: Nighttime pile driving shall be limited to situations where safety concerns or significant schedule delays require that pile driving started during daytime hours extend beyond typical work hours. For instances where nighttime pile driving is required, the MMMP shall include non-visual monitoring protocols, such as passive acoustic monitoring, thermal/infrared cameras, and night vision optics, as well as larger nighttime exclusion/shutdown zones, extended soft start procedures, and the most effective feasible hydroacoustic attenuation.*

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Mitigation Measure BIO-1(f): ***Implement CDFW-Requested Measure for Crotch's Bumble Bee Prior to Construction.[5]*** *A formal habitat assessment of the project site landside project disturbance areas shall be performed by a qualified biologist prior to initiating ground disturbing activities to determine if suitable nesting or foraging habitat is present within the project site. The assessment shall include:*

- *Review of occurrence record data*
- *Analysis of foraging, nesting, and overwintering resources*

[5] During the Draft EIR public review period, CDFW requested implementation of additional measures related to Crotch's bumble bee, a State candidate endangered species. As discussed in Draft EIR Section 3.3, *Biological Resources*, the project site contains limited, low-quality habitat for Crotch's bumble bee and the species has a low potential to occur within the project site, and accordingly, as further discussed in Chapter 2, *Responses to Comments*, and clarified in Chapter 3, *Errata*, of the Final EIR, impacts to Crotch's bumble bee were determined to be less than significant without mitigation. In response to CDFW's comment, the City added Mitigation Measure BIO-1(f) to the Final EIR and Mitigation Monitoring and Reporting Program to provide for habitat assessment, preconstruction surveys, and CDFW consultation if the species is detected. However, Mitigation Measure BIO-1(f) is not required to reduce a significant environmental impact, and its addition to the Final EIR or implementation thereafter does not alter the significance conclusion that impacts to Crotch's bumble bee would be less than significant without mitigation. Accordingly, Mitigation Measure BIO-1(f) is not relied upon as the basis for this finding.

- *Documentation of plant species observed (including what is blooming at the time of the survey and percent cover)*

The locations of nesting resources, including rodent burrows, cavities, thatched grasses, brush, rock piles, fallen logs, and manmade structures, shall be mapped during the assessment. Areas adjacent (within 50 feet) to the project site shall also be considered, if accessible, to determine if there is suitable nesting or foraging habitat.

If suitable nesting and foraging resources are detected during the habitat assessment, they will be avoided by a minimum 50-foot buffer, where possible. If avoidance is not possible, protocol-surveys following the CDFW Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species (CDFW 2023) will be conducted to determine if Crotch's bumble bee is present within the project site. A minimum of three visits will be conducted during the colony active season (April – August) and will be spaced 2-4 weeks apart. Surveys will be conducted each year that construction activities occur within suitable nesting habitat because bumble bees move their nests each year. If no Crotch's bumble bees are detected on the project site, no further mitigation actions will be required. If Crotch's bumble bees are detected, consultation with CDFW will be initiated to determine the most appropriate strategy to avoid impacts to bumble bees on the project site. If full take avoidance is not feasible, the City will apply to CDFW for take authorization under an Incidental Take Permit.

Mitigation Measure HYD-1: ***Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition.*** *Refer to Impact HYD-1 in Section 4.2.6 of these Findings.*

Mitigation Measure AES-1: ***Reduce Night Lighting During Construction of Facilities.*** *Refer to Impact AES-4 in Section 4.2.1 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures BIO-1(a) through BIO-1(e), HYD-1, and AES-1, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Implementation of Mitigation Measures BIO-1(a) through BIO-1(e) would require a Worker Environmental Awareness Program; preconstruction surveys, avoidance measures, monitoring, and agency coordination for northwestern pond turtle, burrowing owl, nesting birds, and marine mammals; and implementation of a Marine Mammal Monitoring Plan and pile-driving avoidance measures. In addition, Mitigation Measure HYD-1 would reduce water quality impacts during in-water construction work and Mitigation Measure AES-1 would reduce construction lighting effects on biological resources. These measures would avoid or minimize impacts to special-status species and their habitats during construction and operation of the project. Therefore, impacts to special-status species and other biological resources would be less than significant with mitigation.

Impact BIO-2: Construction of the project would have a substantial adverse effect on sensitive natural communities identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service. Impacts would be less than significant with mitigation incorporated.

Mitigation Measure BIO-1(a): ***Implement Worker Environmental Awareness Program Prior to and During Construction.*** *Refer to Impact BIO-1 above.*

Mitigation Measure BIO-2: ***Implement Invasive Species Prevention During Construction.*** *The following practices shall be required for on-site construction activities:*

- *Any in-water fill materials shall be new or not salvaged from areas outside of San Francisco Bay.*
- *Any pumps or in-water construction equipment that may be needed during construction shall be cleaned and dried for at least 72 hours prior to being used on the project site.*
- *Tug boats shall not discharge untreated ballast water from outside the San Francisco Bay.*

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Mitigation Measure HYD-1: ***Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition.*** *Refer to Impact HYD-1 in Section 4.2.6 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures BIO-1(a), HYD-1, and AES-1, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a level below the applicable threshold of significance.

Facts in Support of Finding: Implementation of Mitigation Measure BIO-1(a) would provide worker environmental awareness training regarding sensitive biological resources, Mitigation Measure BIO-2 would require invasive species prevention measures during construction, and Mitigation Measure HYD-1 would require implementation of additional water quality protection measures during in-water work. These measures would avoid or minimize impacts to Essential Fish Habitat, Habitat Areas of Particular Concern, critical habitat, and other sensitive marine habitats by reducing the potential for water quality degradation and the introduction or spread of invasive species during construction. Therefore, impacts to sensitive natural communities would be less than significant with mitigation.

Impact BIO-3: Construction and operation of the project would have a substantial adverse effect on state- or federally protected wetlands or Waters. Impacts would be less than significant with mitigation incorporated.

Mitigation Measure BIO-3: ***Avoid Net Loss of Jurisdictional Waters Prior to Operation.*** *The City shall avoid a net loss of jurisdictional waters due to project implementation by demolishing additional portions of the existing pier to offset net increase in fill and overwater cover. Removal of existing pier decking and associated piles shall be required at a minimum 1:1 ratio for net increase in fill and overwater cover impacts on tidal waters of the San Francisco Bay, to achieve no net increase in Bay fill. Removal of existing structures shall be implemented prior to or concurrently with construction of the new pier.*

The City shall develop a plan documenting the existing pier footprint, the proposed pier footprint, and the required additional demolition needed to demonstrate that no net increase in Bay fill or overwater cover would occur. This plan shall be developed by a qualified regulatory specialist prior to project construction and submitted to the appropriate agencies for review and approval during permitting.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Mitigation Measure HYD-1: ***Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition.*** *Refer to Impact HYD-1 in Section 4.2.6 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures BIO-3 and HYD-1, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less than significant level.

Facts in Support of Finding: Implementation of Mitigation Measure BIO-3 would require demolition of additional portions of the existing pier to offset net increase in fill and overwater cover associated with the project, resulting in no net increase in Bay fill or overwater cover within jurisdictional waters. Mitigation Measure HYD-1 would require implementation of additional water quality protection measures during in-water construction activities. In addition, the project would be subject to permitting and approval by the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and San Francisco Bay Conservation and Development Commission, which will include avoidance, minimization and mitigation requirements to achieve no net loss of jurisdictional waters. Implementation of Mitigation Measures BIO-3, HYD-1, and any additional permitting requirements would avoid or minimize impacts to jurisdictional waters and would ensure that no net loss of jurisdictional waters would occur. Therefore, impacts to State and federally protected waters would be less than significant with mitigation.

Impact BIO-5: Construction and operation of the project would be subject to the City's policies and ordinances protecting biological resources, including protected trees, and therefore would not conflict with them. Regarding consistency with policies in the BCDC Bay Plan related to protecting biological resources, impacts would be less than significant with mitigation.

Mitigation Measure BIO-1(a): ***Implement Worker Environmental Awareness Program Prior to and During Construction.*** *Refer to Impact BIO-1 above.*

Mitigation Measure BIO-1(b): ***Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction.*** *Refer to Impact BIO-1 above.*

Mitigation Measure BIO-1(c): ***Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction.*** *Refer to Impact BIO-1 above.*

Mitigation Measure BIO-1(d): ***Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction.*** *Refer to Impact BIO-1 above.*

Mitigation Measure BIO-1(e): ***Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction.*** *Refer to Impact BIO-1 above.*

Mitigation Measure BIO-2: ***Implement Invasive Species Prevention During Construction.*** *Refer to Impact BIO-2 above.*

Mitigation Measure BIO-3: ***Avoid Net Loss of Jurisdictional Waters Prior to Operation.*** *Refer to Impact BIO-3 above.*

Mitigation Measure AES-1: ***Reduce Night Lighting During Construction of Facilities.*** *Refer to Impact AES-4 in Section 4.2.1 of these Findings.*

Mitigation Measure HYD-1: ***Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition.*** *Refer to Impact HYD-1 in Section 4.2.6 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures BIO-1(a) through BIO-1(e), BIO-2, BIO-3, AES-1, and HYD-1, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less than significant level.

Facts in Support of Finding: The project would be required to comply with applicable local regulations and BCDC Bay Plan policies protecting biological resources, including the City's tree protection requirements. Implementation of Mitigation Measures BIO-1(a) through BIO-1(e), BIO-2, BIO-3, AES-1, and HYD-1 would require surveys, avoidance and minimization measures, biological monitoring, invasive species prevention, protection of jurisdictional waters, water quality protection measures, and limitations on construction lighting that could affect biological resources. These measures would ensure consistency with applicable local policies and ordinances protecting biological resources. Therefore, impacts related to conflicts with local policies or ordinances protecting biological resources would be less than significant with mitigation.

4.2.4 Cultural Resources

Impact CR-2: The proposed land and water disturbances during construction would adversely affect unidentified archaeological resources. This impact would be less than significant with mitigation for potential unknown archaeological resources.

Mitigation Measure CR-1: ***Stop Work and Prepare and Implement a Data Recovery Plan if Unanticipated Archaeological Resources are Encountered During Construction.*** *In the event that archaeological resources are unexpectedly encountered during ground-disturbing activities, work within 100 feet of the find shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology shall be contacted immediately to evaluate the resource.2 If the resource is determined by the qualified archaeologist to be precontact, then a Native American representative shall also be contacted to participate in the evaluation of the resource. If the resource is identified in the waterside improvements area, then a qualified marine archaeologist shall assist in the*

treatment and evaluation of the resource. Any waterside discoveries that are removed from their submerged environment shall be kept fully submerged in a container of freshwater for storage until the archaeologist can examine the find. If the qualified archaeologist and/or Native American representative determines it to be appropriate, archaeological testing for CRHR eligibility shall be completed. If the resource proves to be eligible for the CRHR and significant impacts to the resource cannot be avoided by means of changes in the design of the project, a qualified archaeologist shall prepare a data recovery plan tailored to the physical nature and characteristics of the resource, pursuant to the requirements of the California Code of Regulations, CEQA Guidelines Section 15126.4(b)(3)(C). The data recovery plan shall identify data recovery excavation methods, measurable objectives, and data thresholds to reduce any significant impacts to cultural resources related to the resource. Pursuant to the data recovery plan, the qualified archaeologist and Native American representative, as appropriate, shall recover and document the scientifically consequential information that justifies the resource's significance. The City shall review and approve the data recovery plan and archaeological testing as appropriate, and the resulting documentation shall be submitted to the regional repository of the California Historical Resources Information System, pursuant to California Code of Regulations, CEQA Guidelines Section 15126.4(b)(3)(C).

Finding: The City finds that implementation of Mitigation Measure CR-1, which is hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less than significant level.

Facts in Support of Finding: Implementation of Mitigation Measure CR-1 would require work stoppage if archaeological resources are discovered, evaluation by a qualified archaeologist, participation by a Native American representative and/or qualified marine archaeologist where appropriate, archaeological testing for CRHR eligibility when warranted, and preparation and implementation of a resource-specific data recovery plan if an eligible archaeological resource cannot be avoided. Therefore, impacts related to archaeological resources would be less than significant with mitigation.

4.2.5 Geology and Soils

Impact GEO-7: Construction activities such as dredging have the potential to impact paleontological resources. Impacts would be less than significant with mitigation incorporated.

Mitigation Measure GEO-1: ***Implement Paleontological Worker Environmental Awareness Program During Construction.*** *Prior to the start of construction, a Qualified Professional Paleontologist, defined as a paleontologist who meets the Society of Vertebrate Paleontology standards, or his or her designee shall conduct a paleontological Worker Environmental Awareness Program training for all construction personnel participating in subsurface dredging regarding unanticipated discoveries and the procedures for notifying paleontological staff should fossils be discovered by construction staff. A training acknowledgment form shall be signed by all workers who receive the training, and a copy of the signed training acknowledgement form shall be retained by the project contractor and provided to the City.*

Mitigation Measure GEO-2: ***Stop Work Upon Unanticipated Discovery of Paleontological Resources and Implement Recommendations During Construction.*** *The City shall require the following mitigation measure for dredging activities. If a potential fossil is discovered during dredging, construction activity within 50 feet of the find shall cease until the discovery is examined by a Qualified Professional Paleontologist as defined by the Society of Vertebrate Paleontology.[6] If the find is determined to be scientifically significant, the Qualified Professional Paleontologist shall direct all mitigation measures related to paleontological resources consistent with the SVP (2010) standards, which shall include fossil salvage, laboratory preparation, curation in a paleontological repository, and a paleontological monitoring report. Additionally, the Qualified Professional Paleontologist and City shall decide if full- or part-time monitoring shall be instated for further project-related dredging. A Qualified Professional Paleontologist, is defined by the SVP (2010) as an individual with:*

[6] Society of Vertebrate Paleontology. 2010. Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources. Society of Vertebrate Paleontology Impact Mitigation Guidelines Revision Committee.

- *A graduate degree in paleontology or geology, and/or a publication record in peer reviewed journals; and demonstrated competence in field techniques, preparation, identification, curation, and reporting in the state or geologic province in which the project occurs. An advanced degree is less important than demonstrated competence and regional experience.*
- *At least two full years professional experience as assistant to a Project Paleontologist with administration and project management experience; supported by a list of projects and referral contacts.*
- *Proficiency in recognizing fossils in the field and determining their significance.*
- *Expertise in local geology, stratigraphy, and biostratigraphy.*
- *Experience collecting vertebrate fossils in the field.*

Finding: The City finds that implementation of Mitigation Measures GEO-1 and GEO-2, set forth above, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Implementation of Mitigation Measure GEO-1 would ensure construction staff are trained to identify paleontological resources, and Mitigation Measure GEO-2 would ensure that construction work would stop if a paleontological resource is discovered and procedures are in place that would be followed to avoid destruction of paleontological resources. Therefore, impacts would be less than significant with mitigation.

4.2.6 Hydrology and Water Quality

Impact HYD-1: Due to the focused and limited construction elements and short duration of project construction, the proposed project would not substantially degrade surface or groundwater quality, contribute meaningfully to existing water quality impairments, or result in exceedances of applicable water quality objectives or waste discharge requirements. Water quality impacts related to pier demolition would be less than significant with mitigation.

Mitigation Measure HYD-1: ***Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition.*** *In compliance with the requirements of the Construction Stormwater General Permit, prior to construction the construction contractor shall prepare a Stormwater Pollution Prevention Plan (SWPPP) and implement the SWPPP during construction. The SWPPP shall be submitted to the Berkeley Public Works Department and the State Water Resources Control Board (via the Stormwater Multiple Application and Report Tracking System [SMARTS]) for review and approval at least 60 days prior to start of construction. In addition to standard Erosion Control, Sediment Control, and Good Housekeeping Best Management Practices, the following Best Management Practices shall be included in the SWPPP and implemented during pier demolition:*

- *Site washout areas shall be located at least 100 feet from a storm drain, open ditch or surface water and ensure that runoff flows from such activities do not enter receiving water bodies, unless otherwise approved by the RWQCB.*
- *All re-fueling, cleaning, and maintenance of equipment shall occur at least 100 feet from storm drain, open ditch or surface water and/or within secondary containment, unless otherwise approved by the RWQCB.*
- *Particular care shall be exercised to prevent foreign materials (e.g., construction scraps, wood preservatives, other chemicals and debris, etc.) from entering the San Francisco Bay during pier demolition.*
- *If wood preservatives must be applied to cut-wood surfaces, the materials, whenever feasible, shall be treated at an onshore location to preclude the possibility of spills into State waters.*
- *A containment boom shall be placed around all active portions of a construction site where wood scraps or other floatable debris could enter the water.*
- *The containment boom and net shall be cleared daily or as often as necessary to prevent accumulation of debris.*

- *Tarps and basins shall be used above deck to contain debris and materials.*
- *Dipnets shall be on-site and can be used to retrieve debris if it accidentally falls into the water.*
- *A 50-foot-long spill containment boom as well as absorbent pads shall be kept on-site and shall be deployed in the event that there is a release of fluids into the water.*
- *Contractors shall make mandatory that work crews are carefully briefed on the importance of observing the appropriate precautions and reporting any accidental spills.*

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Finding: The City finds that implementation of Mitigation Measure HYD-1, set forth above, which is hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less than significant level.

Facts in Support of Finding: Construction activities associated with dredging, pier demolition, pile installation, and other in-water work could temporarily affect water quality through sediment disturbance, turbidity, or the accidental release of debris and pollutants. Mitigation Measure HYD-1 would require preparation and implementation of a Stormwater Pollution Prevention Plan and additional project-specific best management practices in accordance with the SWRCB Stormwater Construction General Permit, including debris containment, spill prevention and response measures, equipment maintenance requirements, and protection of Bay waters during demolition activities. Project construction would also be required to comply with the conditions of a Regional Water Quality Control Board Section 401 Water Quality Certification for work within the San Francisco Bay, which would include water quality protection measures intended to help protect water quality during construction activities in surface waters and reduce the potential for construction to result in water quality exceedances or impair beneficial uses. Compliance with applicable permit requirements and implementation of Mitigation Measure HYD-1 would avoid or minimize water quality impacts and reduce impacts to a less-than-significant level.

4.2.7 Land Use and Planning

Impact LU-2: Operation and construction of the proposed project would be consistent with the goals and policies of the Berkeley General Plan, Bay Area Clean Air Plan, ABAG/MTC Plan Bay Area 2050, Berkeley Marina Master Plan, Berkeley Local Hazard Mitigation Plan, Berkeley Climate Action Plan, and Berkeley Measure L, and impacts would be less than significant. Operation and construction of the proposed project would be consistent with the goals and policies of the BCDC San Francisco Bay Plan with implementation of mitigation.

Mitigation Measure AES-1: ***Reduce Night Lighting During Construction of Facilities.*** *Refer to Impact AES-4 in Section 4.2.1 of these Findings.*

Mitigation Measure AQ-1: ***Implement Construction Emissions Reduction Measures During Construction.*** *Refer to Impact AQ-2 in Section 4.2.2 of these Findings.*

Mitigation Measure BIO-1(a): ***Implement Worker Environmental Awareness Program Prior to and During Construction.*** *Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-1(b): ***Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction.*** *Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-1(c): ***Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction.*** *Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-1(d): ***Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction.*** *Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-1(e): ***Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction.*** *Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-2: **Implement Invasive Species Prevention During Construction.** Refer to Impact BIO-2 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-3: **Avoid Net Loss of Jurisdictional Waters Prior to Operation.** Refer to Impact BIO-3 in Section 4.2.3 of these Findings.*

*Mitigation Measure HYD-1: **Implement Construction Emissions Reduction Measures During Construction.** Refer to Impact HYD-1 in Section 4.2.6 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures AES-1, AQ-1, BIO-1(a) through BIO-1(e), BIO-2, BIO-3, and HYD-1, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the potentially significant environmental effects relevant to consistency with the BCDC San Francisco Bay Plan to a less-than-significant level. Specifically, these mitigation measures would reduce impacts to biological resources, jurisdictional waters, and water quality that could otherwise result in inconsistencies with applicable Bay Plan policies. While Impact LU-2 also includes a significant and unavoidable construction noise component that analyzed in Section 3.10, *Noise* of the EIR and further discussed in Section 4.1, SIGNIFICANT EFFECTS THAT CANNOT BE MITIGATED TO A LESS-THAN-SIGNIFICANT LEVEL, the mitigation measures identified above are the mitigation measures relevant to the less-than-significant-with-mitigation land use and planning impacts associated with Bay Plan consistency.

Facts in Support of Finding: The Draft EIR concluded that the proposed project would be generally consistent with applicable regional and local plans, including the Berkeley General Plan, Berkeley Marina Master Plan, Bay Area Clean Air Plan, Plan Bay Area 2050, Berkeley Climate Action Plan, Berkeley Local Hazard Mitigation Plan, Berkeley Measure L, and the BCDC San Francisco Bay Plan. As discussed in Draft EIR Section 3.9, *Land Use and Planning*, implementation of Mitigation Measures BIO-1(a) through BIO-1(e), BIO-2, BIO-3, and HYD-1 would avoid, minimize, or compensate for impacts to Bay natural resources, including special-status species, aquatic habitat, jurisdictional waters, invasive species, and water quality. Mitigation Measures AES-1 and AQ-1 would further reduce potentially significant construction-related effects addressed by applicable plans and policies. With implementation of these mitigation measures, the proposed project would be consistent with applicable policies of the BCDC San Francisco Bay Plan and related land use and planning impacts would be less-than-significant-with-mitigation. The remaining significant and unavoidable noise impact associated with construction noise exceeding Berkeley Municipal Code standards is addressed separately in Section 4.1 of this document.

4.2.8 Recreation

Impact REC-2: The project includes the construction of recreational facilities, the potential environmental impacts of which are identified and evaluated throughout this Environmental Impact Report. Potential environmental impacts related to aesthetics, air quality, biological resources, cultural resources, hydrology and water quality, and tribal cultural resources would be less than significant with incorporation of mitigation.

*Mitigation Measure AES-1: **Reduce Night Lighting During Construction of Facilities.** Refer to Impact AES-4 in Section 4.2.1 of these Findings.*

*Mitigation Measure AQ-1: **Implement Construction Emissions Reduction Measures During Construction.** Refer to Impact AQ-2 in Section 4.2.2 of these Findings.*

*Mitigation Measure BIO-1(a): **Implement Worker Environmental Awareness Program Prior to and During Construction.** Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-1(b): **Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction.** Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-1(c): **Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction.** Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-1(d): **Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction.** Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-1(e): **Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction.** Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-2: **Implement Invasive Species Prevention During Construction.** Refer to Impact BIO-2 in Section 4.2.3 of these Findings.*

*Mitigation Measure BIO-3: **Avoid Net Loss of Jurisdictional Waters Prior to Operation.** Refer to Impact BIO-3 in Section 4.2.3 of these Findings.*

*Mitigation Measure CR-1: **Stop Work and Prepare and Implement a Data Recovery Plan if Unanticipated Archaeological Resources are Encountered During Construction.** Refer to Impact CR-2 in Section 4.2.4 of these Findings.*

*Mitigation Measure HYD-1: **Implement Construction Emissions Reduction Measures During Construction.** Refer to Impact HYD-1 in Section 4.2.6 of these Findings.*

*Mitigation Measure TCR-1: **Conduct Cultural Resources Sensitivity Training Prior to Construction.** Refer to Impact TCR -1 in Section 4.2.9 of these Findings.*

*Mitigation Measure TCR-2: **Provide Signage Acknowledging Native American History Prior to Operation.** Refer to Impact TCR -1 in Section 4.2.9 of these Findings.*

*Mitigation Measure TCR-3: **Conduct Native American Monitoring During Construction.** Refer to Impact TCR -1 in Section 4.2.9 of these Findings.*

*Mitigation Measure TCR-4: **Evaluate Discovered Tribal Cultural Resources and Implement Resulting Recommendations During Construction.** Refer to Impact TCR -1 in Section 4.2.9 of these Findings.*

*Mitigation Measure TCR-5: **Provide Respectful Treatment of Native American Human Remains Upon Unanticipated Discovery and Implement Recommendations During Construction.** Refer to Impact TCR -1 in Section 4.2.9 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures AES-1, AQ-1, BIO-1(a) through BIO-1(e), BIO-2, BIO-3, CR-1, HYD-1, and TCR-1 through TCR-5, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the potentially significant environmental effects associated with construction and operation of the proposed recreational facilities to less-than-significant levels with respect to aesthetics, air quality, biological resources, cultural resources, hydrology and water quality, and tribal cultural resources. While Impact REC-2 also includes a significant and unavoidable construction noise component that is analyzed in Section 3.10, *Noise* of the EIR and further discussed in Section 4.1, SIGNIFICANT EFFECTS THAT CANNOT BE MITIGATED TO A LESS-THAN-SIGNIFICANT LEVEL, the mitigation measures identified above are the mitigation measures relevant to the less-than-significant-with-mitigation environmental impacts associated with construction of the proposed recreational facilities.

Facts in Support of Finding: As discussed in Section 3.11, *Recreation*, construction of the proposed recreational facilities, including the pier, breakwater, public plaza, cycle track, Bay Trail Extension, and associated recreational amenities, could result in potentially significant environmental effects related to aesthetics, air quality, biological resources, cultural resources, hydrology and water quality, and tribal cultural resources. Implementation of Mitigation Measure AES-1 would reduce lighting impacts; Mitigation Measure AQ-1 would reduce construction-related air quality impacts; Mitigation Measures BIO-1(a) through BIO-1(e), BIO-2, and BIO-3 would reduce impacts to biological resources and jurisdictional waters; Mitigation Measure CR-1 would address potential impacts to archaeological resources; Mitigation Measure HYD-1 would protect water quality; and Mitigation Measures TCR-1 through TCR-5 would reduce impacts to tribal cultural resources. With implementation of these mitigation measures, the environmental impacts associated with construction and operation of the proposed recreational facilities would be reduced to less-than-significant levels. The remaining significant and unavoidable noise impact

associated with construction of recreational facilities is addressed separately in Section 4.1 of this document.

4.2.9 Tribal Cultural Resources

Impact TCR-1: The proposed disturbances due to construction on the non-fill ground and seabed would adversely affect Tribal Cultural Resources. With adherence to mitigation measures agreed upon through AB 52 consultation, impacts to tribal cultural resources would be less than significant with mitigation.

*Mitigation Measure TCR-1: **Conduct Cultural Resources Sensitivity Training Prior to Construction.** Prior to the start of any ground disturbing activities, including excavation on land and dredging in water, the City of Berkeley (City) or its contractor(s) shall provide all construction personnel conducting ground disturbing activities, with cultural resources sensitivity training. The training will be conducted in person, or via a video meeting, to be viewed by all construction personnel involved in ground disturbing activities prior to the start of construction. The training will be developed and conducted in coordination with locally affiliated California Native American Tribe(s) that have participated in consultation with the City for the project (referred to hereafter as "Consulting Tribes"). Cultural resources sensitivity training will include relevant information regarding sensitive tribal cultural resources, applicable regulations including consequences of violation, and protocols for unanticipated discoveries and avoidance. The training will emphasize the requirement of confidentiality and culturally appropriate treatment of any finds of significance to Native Americans.*

*Mitigation Measure TCR-2: **Provide Signage Acknowledging Native American History Prior to Operation.** Prior to operation, the City shall provide signage at the project site that acknowledges Native American history and importance of the area. Language and design for the signage shall be developed in consultation with Consulting Tribes, including the Muwekma Ohlone Tribe. The location of the signage shall be thoughtfully integrated into the project design and shall be respectful of Native American culture and values. Photographs of human remains shall not be depicted on the signage. The City or its contractor(s) shall incorporate the location and content of the signage prior to Final Design. Consulting Tribes shall be given the opportunity to comment on the signage prior to the Final Design being approved by the City.*

*Mitigation Measure TCR-3: **Conduct Native American Monitoring During Construction.** Prior to the start of any ground disturbing activities, including excavation and grading on land not previously covered by fill and any dredging in water, the City or its contractor(s) shall retain a Native American monitor(s) from a Consulting Tribe(s) for purposes of construction monitoring. If multiple Consulting Tribes request to monitor, the City will establish a rotating schedule to include all tribes requesting monitoring. The City shall provide monitors with at least 48 hours' notice prior to the start of any ground disturbing activity that requires monitoring. Native American monitors shall observe project-related ground disturbing activities located in previously undisturbed areas (i.e., areas not consisting of fill) and provide daily monitoring logs to the City detailing construction observed and results at minimum (confidential information can be redacted at the monitor's discretion). Monitors shall have the authority to temporarily halt work in the event of discovery or a potential Tribal Cultural Resource.*

If suspected Tribal Cultural Resources are encountered at any point during ground disturbing activities, work within a 100-foot radius shall halt and the find shall be evaluated for significance as required by Mitigation Measure TCR-4. The 100-foot radius may be reduced or expanded as appropriate by the monitor if conditions, such as expanded boundaries or increased sensitivity, warrant the reduction or expansion. Native American monitoring may be reduced to spot-checking or eliminated at the discretion of the monitor, in coordination with the City, as warranted by conditions such as encountering fill soils, bedrock, or negative findings during the first 60 percent of grading. If monitoring is reduced to spot-checking, spot-checking shall occur, at minimum, when ground-disturbance moves to a new location within the project site and when ground disturbance will extend to depths not previously reached (unless those depths are within bedrock). Ground disturbing activities shall not be contingent on the presence or availability of a Native American monitor, and ground disturbing may proceed regardless of whether or not a monitor is present on site.

*Mitigation Measure TCR-4: **Evaluate Discovered Tribal Cultural Resources and Implement Resulting Recommendations During Construction.** If suspected Tribal Cultural Resources are encountered at any point during ground disturbing activities, work within a 100-foot radius shall halt and Consulting Tribes shall evaluate the suspected resource for significance as a Tribal Cultural Resource. If the find is archaeological in nature, then the City or its contractor(s) shall also retain a qualified archaeologist to respond and evaluate significance as required by Mitigation Measure CUL-1. The City shall review the significance evaluation of the Tribal Cultural Resource and determine whether the find meets the criteria in California PCR Section 21074. If a discovered Tribal Cultural Resource is determined by the City to meet the criteria in California PRC Section 21074, avoidance and preservation in place shall be the preferred method of mitigating impacts and the City shall first consider the measures in California PRC Section 21084.3(b) in consultation with Consulting Tribes. If significant impacts to the resource cannot be avoided via project redesign, then the City shall work with Consulting Tribes to develop other appropriate measures to mitigate impacts. This could include, but would not be limited to, data recovery, installation of a permanent plaque or mural to inform the public, interpretive and/or educational elements, and/or landscaping to include native plants. Work in the area may resume following the determination by the City and completion of any applicable measures mitigating impacts to the Tribal Cultural Resource, if any.*

*Mitigation Measure TCR-5: **Provide Respectful Treatment of Native American Human Remains Upon Unanticipated Discovery and Implement Recommendations During Construction.** In addition to adherence to the California Health and Safety Code Sections 7050.5, should human remains be identified during construction, no photographs shall be taken without express permission from the on-site Native American Monitor, and no invasive scientific testing shall be completed without consultation with the NAHC appointed Most Likely Descendent. Any bone that cannot be identified as faunal shall be treated as human remains until positively identified as being non-human by the coroner and/or a qualified archaeologist, as appropriate. The Most Likely Descendant shall provide recommendations for reburial, and human remains and associated funerary items shall be reburied by Tribal representatives in a location agreed upon between the Tribe and the City. Any reburial location shall be accessible to Tribal members in perpetuity, not be subject to further disturbance, and kept confidential.*

Finding: The City finds that implementation of Mitigation Measures TCR-1 through TCR-5, set forth above, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Mitigation Measures TCR-1 through TCR-5, developed through consultation conducted pursuant to Assembly Bill 52, would require cultural resources sensitivity training, Native American monitoring of construction activities in designated areas, evaluation and treatment of any discovered tribal cultural resources, interpretive signage acknowledging Native American history, and procedures for the respectful treatment of Native American human remains. Implementation of these measures would avoid or minimize impacts to tribal cultural resources and reduce impacts to a less-than-significant level.

4.2.10 Utilities and Service Systems

Impact UTIL-1: Construction of the proposed project would require utility service and connections for water supply, wastewater conveyance, and stormwater conveyance, as well as telecommunications and electricity. Existing utility systems for water, wastewater, stormwater, electric power, and telecommunications facilities in Berkeley have sufficient capacity to serve the Project. Adequate wastewater capacity exists to serve the Project's projected demand in addition to the provider's existing commitments. Utility connections from the proposed project would result in less than significant impacts on air quality, biological resources, cultural resources, noise, and tribal cultural resources, after mitigation. Impacts would be less than significant with mitigation.

*Mitigation Measure AQ-1: **Implement Construction Emissions Reduction Measures During Construction**. Refer to Impact AQ-2 in Section 4.2.2 of these Findings.*

*Mitigation Measure BIO-1(a): **Implement Worker Environmental Awareness Program Prior to and During Construction**. Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-1(b): ***Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction****. Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-1(c): ***Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction****. Refer to Impact BIO-1 in Section 4.2.3 of these Findings.*

Mitigation Measure BIO-2: ***Implement Invasive Species Prevention During Construction****. Refer to Impact BIO-2 in Section 4.2.3 of these Findings.*

Mitigation Measure CR-1: ***Stop Work and Prepare and Implement a Data Recovery Plan if Unanticipated Archaeological Resources are Encountered During Construction****. Refer to Impact CR-1 in Section 4.2.4 of these Findings.*

Mitigation Measure NOI-1: ***Prepare and Implement Construction Noise Management Plan Prior to and During Construction****. Refer to Impact NOI-1 in Section 4.1.1 of these Findings.*

Mitigation Measure TCR-1: ***Conduct Cultural Resources Sensitivity Training Prior to Construction****. Refer to Impact TCR-1 in Section 4.2.9 of these Findings.*

Mitigation Measure TCR-2: ***Provide Signage Acknowledging Native American History Prior to Operation****. Refer to Impact TCR-2 in Section 4.2.9 of these Findings.*

Mitigation Measure TCR-3: ***Conduct Native American Monitoring During Construction****. Refer to Impact TCR-3 in Section 4.2.9 of these Findings.*

Mitigation Measure TCR-4: ***Evaluate Discovered Tribal Cultural Resources and Implement Resulting Recommendations During Construction****. Refer to Impact TCR-4 in Section 4.2.9 of these Findings.*

Mitigation Measure TCR-5: ***Provide Respectful Treatment of Native American Human Remains Upon Unanticipated Discovery and Implement Recommendations During Construction****. Refer to Impact TCR-5 in Section 4.2.9 of these Findings.*

Finding: The City finds that implementation of Mitigation Measures AQ-1, BIO-1(a) through BIO-1(c), BIO-2, CR-1, NOI-1, and TCR-1 through TCR-5, which are hereby adopted and incorporated into the project, would avoid or substantially reduce the significant environmental effect identified in the Final EIR to a less-than-significant level.

Facts in Support of Finding: Construction of utility connections and related infrastructure has the potential to result in temporary impacts associated with air quality, biological resources, cultural resources, noise, and tribal cultural resources. Mitigation Measures AQ-1, BIO-1(a) through BIO-1(c), BIO-2, CR-1, NOI-1, and TCR-1 through TCR-5 would require construction emissions controls, biological resource protection measures, cultural and tribal resource protection measures, and construction noise reduction measures. In addition, the EIR concluded that existing water, wastewater, stormwater, electrical, and telecommunications systems have sufficient capacity to serve the project and that adequate wastewater treatment capacity exists to accommodate projected demand. Therefore, impacts associated with utility connections and service infrastructure would be reduced to a less-than-significant level with mitigation.

4.3 EFFECTS DETERMINED TO BE LESS THAN SIGNIFICANT OR NOT SIGNIFICANT

The City finds that, based upon substantial evidence in the record, as discussed below, the following impacts associated with the project are not significant or are less than significant. The Draft EIR identifies the following as less than significant impacts or as having no impact. Mitigation to further reduce less than significant impacts is not required by CEQA. The findings in this section are based on the Draft EIR, the discussion and analysis in which is hereby incorporated in full by this reference.

4.3.1 Aesthetics

Impact AES-1. The proposed project would have a relatively low profile compared to scenic views and vistas in the vicinity, and compliance with policies of the Berkeley General Plan, Berkeley Marina Master Plan, and

San Francisco Bay Plan would protect scenic vistas to ensure that development of the project would not adversely affect public views. This impact would be less than significant.

Impact AES-2. The proposed project would not be located within, or visible from, a designated State scenic highway. The project would not result in damage to scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway. No impact would occur.

Impact AES-3. The proposed project would not conflict with applicable zoning and other regulations governing scenic quality, and would be subject to design review. The existing visual character of the area would be altered by the introduction of modernized infrastructure, but not degraded. The proposed project would be implemented in accordance with the requirements of the Berkeley General Plan, Berkeley Marina Master Plan, Berkeley Municipal Code, and the San Francisco Bay Plan. Therefore, impacts would be less than significant.

4.3.2 Agricultural and Forest Resources

There are no agricultural lands, including Important Farmlands; Williamson Act lands; or areas zoned for agricultural use, forestry land, or timberland on the project site or adjacent to the project site. Therefore, no construction or operational impacts related to loss of agricultural lands or timberland, conversion of such lands to non-agricultural or non-forestry use, or consistency with Williamson Act contracts or zoning would occur.

4.3.3 Air Quality

Impact AQ-1. The project would not conflict with or obstruct the implementation of the applicable air quality plan. Impacts would be less than significant.

Impact AQ-4. The project would not generate odors adversely affecting a substantial number of people during construction or operation. Impacts would be less than significant.

4.3.4 Biological Resources

Impact BIO-4. The project would not substantially impede wildlife movement areas or native wildlife nursery sites. Impacts would be less than significant.

Impact BIO-6. The project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. There would be no impact.

4.3.5 Cultural Resources

Impact CR-1. The proposed project would not cause a substantial adverse change in the significance of a historical resource, and no impact would occur.

Impact CR-3. The proposed land and water disturbances during construction could adversely affect unidentified human remains. This impact would be less than significant with required adherence to existing regulations.

4.3.6 Geology and Soils

Impact GEO-1. The proposed project would not directly or indirectly cause potential substantial adverse effects including the risk of loss, injury, or death involving rupture of a known earthquake fault as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map as it is not located within an Alquist-Priolo Earthquake fault zone. No impact would occur.

Impact GEO-2. The proposed project would not directly or indirectly cause potential substantial adverse effects including the risk of loss, injury, or death involving strong seismic ground shaking. Impacts would be less than significant.

Impact GEO-3. The proposed project is located within a liquefaction zone. However, compliance with engineering recommendations would reduce potential impacts related to liquefaction to less than significant.

Impact GEO-4. The project would not result in substantial erosion or the loss of topsoil, and impacts would be less than significant.

Impact GEO-5. The landside project components of the proposed project would potentially be located within expansive soils. Compliance with the California Building Code and Geotechnical Report recommendations would result in impacts that are less than significant.

Impact GEO-6. The proposed project would occur within an urbanized site that is currently served by existing sanitation infrastructure. The proposed project would not include septic systems or alternative wastewater disposal systems. No impact would occur.

4.3.7 Greenhouse Gas (GHG) Emissions and Energy

Impact GHG-1. The proposed project would generate temporary construction-related increases in GHG emissions but would result in a long-term overall decrease in GHG emissions. The proposed project would not conflict with the Bay Area Air District 2022 CEQA GHG Guidelines nor State, regional, or local GHG reduction plans. This impact would be less than significant.

Impact GHG-2. The proposed project would not result in wasteful or unnecessary energy consumption during project construction and operation, and impacts would be less than significant.

Impact GHG-3. The proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Therefore, impacts would be less than significant.

4.3.8 Hazards and Hazardous Materials

Impact HAZ-1. Construction and Operation of the project could result in an increase in the overall routine transport, use, and disposal of hazardous materials in Berkeley. Nonetheless, required compliance with applicable regulations related to hazardous materials would minimize the risk of releases and exposure to these materials. Impacts would be less than significant.

Impact HAZ-2. The project site is not located within 0.25 mile of an existing or proposed school. The proposed project would, therefore, have no impact related to emitting hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school.

Impact HAZ-3. The proposed project would not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. As a result, the proposed project would not create a significant hazard to the public or the environment from being located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. No impact would occur.

Impact HAZ-4. The proposed project would not be located within an airport land use plan or within two miles of a public airport or public use airport, and would not result in a safety hazard or excessive noise related to airport operation for people residing or working in the project area. No impact would occur.

Impact HAZ-5. The proposed project would not result in physical changes that could interfere with or impair emergency response or evacuation. Therefore, the project would not result in interference with these types of adopted plans. this impact would be less than significant.

Impact HAZ-6. The project is not within or near a wildland area. The proposed project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires. Impacts would be less than significant.

4.3.9 Hydrology and Water Quality

Impact HYD-2. Project construction would require localized dewatering but would not substantially decrease groundwater supplies or interfere with groundwater recharge. The project would decrease impervious area and enhance infiltration and localized recharge but would not conflict with the sustainable management of the groundwater basin. Impacts would be less than significant.

Impact HYD-3. Project construction would temporarily disturb soils and increase the potential for erosion, siltation, and contaminant release, and suspend sediments in San Francisco Bay. The project would place a new pier and breakwater within a flood hazard area. However, with compliance with existing regulations and implementation of required BMPs, impacts related to erosion, siltation, runoff, and flooding would be less than significant.

Impact HYD-4. Project construction in tidal and coastal flood areas could temporarily increase the risk of inundation and pollutant release. operation would also occur within the 100-year floodplain and tsunami inundation zone. However, with climate-adaptive design elevations, watertight storage, battery safety systems, and implementation of required BMPs, impacts related to pollutant release or water quality degradation due to flooding, tsunami, or seiche would be less than significant.

Impact HYD-5. Project construction could result in temporary, localized resuspension of sediments and short-term increases in turbidity. These effects would be limited in duration and extent and would not result in long-term degradation of water quality. The project would remain consistent with SFBRWQCB Basin Plan objectives and beneficial uses, as well as the goals of the East Bay Subbasin Groundwater Sustainability Plan. Therefore, impacts related to sediment resuspension and turbidity would be less than significant.

4.3.10 Land Use and Planning

Impact LU-1. The proposed project would not physically divide an established community and no impact would occur.

4.3.11 Mineral Resources

The project site is not designated as a significant mineral resources zone and is not delineated in any local plan as a locally important mineral resource recovery site. Therefore, no construction or operational impacts related to loss of availability of mineral resources would occur.

4.3.12 Noise

Impact NOI-2. Construction activities associated with the proposed project would generate temporary levels of groundborne vibration in the project area; however, vibration levels would not exceed applicable thresholds at nearby sensitive receptors and construction vibration impacts would be less than significant. The project would not generate substantial levels of vibration during operation; therefore, operational vibration impacts would be less than significant.

Impact NOI-3. The project site is not located within the noise contours of an airport land use plan or within two miles of a public or public use airport. Therefore, people residing and working in the project area would not be exposed to excessive airport-related noise, and no airport activity noise impact would occur.

4.3.13 Population and Housing

The proposed project would not induce substantial unplanned population growth and would not displace substantial numbers of existing people or housing. Therefore, impacts related to population growth and housing displacement would be less than significant.

4.3.14 Public Services

The proposed project would not generate demand for new or physically altered fire protection, police protection, school, library, or other governmental facilities that could result in significant environmental impacts. Therefore, impacts related to public services would be less than significant.

4.3.15 Recreation

Impact REC-1. The Project will create a net increase in recreational facilities that do not currently exist in the form of a restored pier, new Bay Trail, and a new dedicated cycle track. The project would not induce population growth but would increase the number of visitors to the Berkeley Waterfront area that may increase the use of on-site and nearby existing recreational facilities. However, given that the project would provide

additional recreational opportunities and facilities, impacts related to a substantial physical deterioration of existing recreational facilities and substantial adverse physical impacts on the environment from the need of a new park would be less than significant.

4.3.16 Transportation

Impact TRA-1. The proposed project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. This impact would be less than significant.

Impact TRA-2. The proposed project would not conflict or be inconsistent with *CEQA Guidelines* Section 15064.3, subdivision (b), and the project would contribute to a net reduction in roadway vehicle-based VMT. No impact would occur.

Impact TRA-3. The proposed project would not substantially increase roadway hazards because of a geometric design feature or incompatible use. Impacts would be less than significant.

Impact TRA-4. Implementation of the proposed project would not have the potential to result in inadequate emergency access. No Impact would occur.

4.3.17 Utilities and Service Systems

Impact UTIL-2. The proposed project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. This impact would be less than significant.

Impact UTIL-3. The proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure. The project would not impair the attainment of solid waste reduction goals and would comply with federal, State, and local statutes and regulations related to solid waste. Impacts would be less than significant.

4.3.18 Wildfire

The project site is not located in or near a State Responsibility Area or a Very High Fire Hazard Severity Zone. Therefore, no construction or operational impacts related to exacerbating wildfire risk within or near such designated land areas would occur.

4.4 CUMULATIVE IMPACTS

An EIR is required to discuss the cumulative impacts of a project when the project's incremental effect is cumulatively considerable. CEQA Guidelines §15130(a). "Cumulatively considerable" means that the incremental effects of the project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects. CEQA Guidelines § 15065(a)(3); Pub. Resources Code § 21083(b)(2). The cumulative impacts of the project, in combination with reasonably foreseeable probable future projects, are analyzed throughout Chapter 3, *Environmental Impact Analysis*, of the Draft EIR. The findings in this section are based on the Draft EIR, the discussion and analysis in which is hereby incorporated in full by this reference.

The City finds that the proposed project would result in cumulatively considerable contributions to significant cumulative impacts related to Noise, Land Use and Planning, and Recreation.

As discussed in Section 3.10, *Noise*, of the Draft EIR, construction of the proposed project would require demolition of portions of the existing Berkeley Pier, dredging, pile installation, and construction of new waterside and landside facilities. Construction activities, particularly waterside pile driving and limited nighttime construction activities, would generate noise levels that exceed applicable City thresholds at nearby sensitive receptors. Although Mitigation Measure NOI-1 would require implementation of a Construction Noise Management Plan and a variety of feasible noise-reduction measures, some construction noise impacts would remain significant and unavoidable. In addition, multiple cumulative projects are planned within the Berkeley Waterfront area, several of which are located within 1,000 feet of the project site and could generate

construction noise during overlapping construction periods. Concurrent construction of these projects could increase noise levels experienced by nearby sensitive receptors, including live-aboard boats and recreational users. The Draft EIR also concludes that cumulative operational mobile noise associated with increased roadway vehicle volumes on portions of University Avenue could exceed applicable significance thresholds. Accordingly, cumulative noise impacts would be significant and unavoidable, and the project's contribution would be cumulatively considerable.

With respect to cumulative construction noise, Mitigation Measure NOI-1 has been adopted and incorporated into the project and will substantially lessen the project's contribution to this cumulative impact, but will not reduce it to a less-than-significant level. With respect to cumulative operational roadway noise, the City finds that no feasible mitigation has been identified to reduce the project's contribution to a less-than-significant level. Construction of a soundwall along this segment of University Avenue would introduce new environmental impacts, change the character of adjacent parks, and conflict with General Plan Policy OS-12, which directs that land adjacent to parks be sensitively developed so that safe access is maintained and views are not significantly reduced. A soundwall is therefore infeasible. As discussed in Section 5, none of the alternatives analyzed in the EIR would avoid this impact while meeting the basic project objectives. This significant and unavoidable cumulative impact is acceptable for the reasons set forth in the Statement of Overriding Considerations in Section 6.

As discussed in Section 3.9, *Land Use and Planning*, of the Draft EIR, the proposed project would generally be consistent with the Berkeley General Plan, Berkeley Marina Master Plan, Plan Bay Area 2050, Bay Area Clean Air Plan, Climate Action Plan, Berkeley Local Hazard Mitigation Plan, Measure L, and the policies of the San Francisco Bay Plan with implementation of mitigation measures. However, the Draft EIR concludes that cumulative construction noise and cumulative operational mobile noise impacts would result in inconsistencies with Berkeley Municipal Code noise standards adopted for the purpose of avoiding environmental effects. Because cumulative noise impacts would remain significant and unavoidable, cumulative land use and planning impacts would also remain significant and unavoidable, and the project's contribution would be cumulatively considerable. Because these cumulative impacts result from the same underlying cumulative noise impacts, no additional feasible mitigation is available beyond that described above, and the City's finding with respect to cumulative noise applies equally to this impact.

As discussed in Section 3.11, *Recreation*, of the Draft EIR, the proposed project would provide substantial recreational benefits through construction of a new public pier, breakwater, public plaza, Bay Trail improvements, cycle track, and related public access amenities. The Draft EIR concludes that cumulative growth would not create a deficiency in park acreage or require construction of additional recreational facilities to maintain service standards. However, cumulative impacts associated with the construction and operation of recreational facilities are addressed through the environmental analyses contained throughout the Draft EIR. Because cumulative construction-related noise and cumulative operational mobile noise impacts would remain significant and unavoidable, cumulative recreation impacts would also remain significant and unavoidable. Accordingly, the project's contribution to cumulative recreation impacts would be cumulatively considerable. Because these cumulative impacts result from the same underlying cumulative noise impacts, no additional feasible mitigation is available beyond that described above, and the City's finding with respect to cumulative noise applies equally to this impact.

The City finds that cumulative impacts related to Air Quality and Geology and Soils would be less than significant with implementation of mitigation measures and compliance with applicable regulations. As discussed in Sections 3.2, *Air Quality*; and 3.5, *Geology and Soils*, of the Draft EIR, the proposed project's incremental contribution to cumulative impacts in these resource areas would not be cumulatively considerable because identified mitigation measures and regulatory requirements would reduce impacts to a less-than-significant level. Accordingly, cumulative impacts in these resource areas would be less than significant with mitigation incorporated. The City further finds that cumulative impacts associated with all other environmental resource topics analyzed in the Draft EIR would be less than significant or would not result in a cumulatively considerable contribution to a significant cumulative impact. Accordingly, no significant unavoidable cumulative impacts have been identified for those resource areas.

4.5 GROWTH INDUCING IMPACTS

An EIR is required to discuss growth inducing impacts, which consist of the ways in which the project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. *CEQA Guidelines* § 15126.2(e); Public Resources Code § 21100(b)(5). Direct growth inducement would result, for example, if a project involves the construction of substantial new housing that would support increased population in a community or establishes substantial new permanent employment opportunities. This additional population could, in turn, increase demands for public utilities, public services, roads, and other infrastructure. Indirect growth inducement would result if a project stimulates economic activity that requires physical development or removes an obstacle to growth and development (e.g., increasing infrastructure capacity that would enable new or additional development). It must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment (*CEQA Guidelines* § 15126.2(e)).

Section 4, *Other CEQA Required Sections*, of the Draft EIR analyzes the growth inducing impacts of the project; the discussion and analysis in which is hereby incorporated in full by this reference.

The proposed project would replace the closed Berkeley Pier with a new publicly accessible pier, breakwater, and ferry terminal that would support zero-emission ferry service between Berkeley and San Francisco while improving recreational access to the Berkeley Waterfront. The project would not include residential, commercial, office, or industrial development and would not directly generate population growth or substantial new employment opportunities. The project would also not alter the planned location, distribution, density, or growth rate of population in Berkeley or the surrounding region. Rather, the project would provide a new transportation option and recreational amenities that are consistent with regional and local planning assumptions, including those reflected in Plan Bay Area 2050 and the City's land use planning framework. Accordingly, the project would not directly or indirectly induce substantial unplanned population or employment growth.

Although certain transportation projects can indirectly induce growth by providing substantial new capacity that removes constraints on future development, the proposed project is not capacity-enhancing. Rather, the proposed ferry service, bicycle facilities, pedestrian improvements, and transit enhancements are intended to serve existing transportation demand, improve regional connectivity, and provide an environmentally friendly alternative to single-occupancy vehicle travel between the East Bay and San Francisco. The project would not extend transportation or utility infrastructure into undeveloped areas, increase infrastructure capacity beyond what is needed to serve the project, or otherwise enable new development that could not occur under existing conditions. Future development in the Berkeley Waterfront area would continue to require separate discretionary approvals from the City and would be governed by applicable planning documents, including the Berkeley General Plan and future Waterfront planning efforts. Any growth that may occur in the vicinity of the project site would therefore be planned, independently reviewed, and subject to its own environmental analysis, rather than induced by the Berkeley Water Transportation Pier Ferry Project.

Therefore, the City finds that the project would not induce substantial unplanned population growth and would not remove an obstacle to growth that could result in significant environmental effects beyond those analyzed in the Draft EIR.

SECTION 5: FEASIBILITY OF PROJECT ALTERNATIVES

5.1 Project Alternatives

The Draft EIR analyzed four EIR alternatives, examining the environmental impacts and feasibility of each EIR alternative, as well as the ability of the EIR alternatives to meet project objectives. The project objectives are listed in Chapter 2, *Project Description,* of the Draft EIR; the potentially significant environmental effects of the project, including feasible mitigation measures identified to avoid these impacts, are analyzed throughout Chapter 3, *Environmental Impact Analysis,* of the Draft EIR; and the alternatives are described in detail in Chapter 5, *Alternatives,* of the Draft EIR. Comparative information regarding the EIR alternatives, including their distinguishing features and relative environmental impacts, is provided in Draft EIR Table 5-1, *Alternatives*

Summary (Draft EIR page 5-3), and Table 5-2, *Summary of Alternatives' Impacts and Comparison to Proposed Project* (Draft EIR page 5-29). Brief summaries of the alternatives are provided below. A brief discussion of the Environmentally Superior Alternative follows the summaries of the alternatives. The findings in this section are based on the Draft EIR, the discussion and analysis in which is hereby incorporated in full by this reference.

Based on the project objectives and anticipated environmental consequences, and pursuant to *CEQA Guidelines* Section 15126.6, the following EIR alternatives were selected for environmental analysis:

- **Alternative 1: No Project Alternative.** CEQA requires analysis of a No Project Alternative. *CEQA Guidelines* § 15126.6(e)(2). Under Alternative 1, none of the improvements associated with the proposed project would occur and the current uses would remain. The deteriorated pier would remain closed, no new ferry service from Berkeley would be established, vehicle trips across the Bay would continue at their current rate, no new public plaza would be installed, none of the improvements along University Avenue or Seawall Drive would be installed, and the Seawall Drive East Parking lot would remain in its current condition. Alternative 1 would result in avoided construction impacts compared to the proposed project but would generate greater long-term impacts to aesthetics due to the lack of improvements, as well as to air quality, greenhouse gas emissions, transportation, and land use and planning due to the lack of circulation improvements and fewer reductions in criteria pollutants as a result of continued reliance on single-occupancy vehicle travel. In addition, Alternative 1 would not fulfill any of the project objectives.
- **Alternative 2: Shortened Breakwater Alternative.** Alternative 2 would retain all components of the proposed project, with a reduced-length breakwater. Construction of a shortened breakwater would result in a decrease to construction-related impacts compared to the proposed project and would maintain similar operational impacts to that of the proposed project while fulfilling most project objectives, though with somewhat reduced public access.
- **Alternative 3: Shortened Pier Alternative.** Alternative 3 would implement the proposed project as planned but would reduce the length of the pier such that it would not extend beyond the breakwater. A shortened pier would result in reductions to construction impacts compared to the proposed project while maintaining ferry service, and operational impacts would remain similar to the proposed project. However, public access and recreational opportunities would be limited, and therefore, Alternative 3 would meet the project objectives to a lesser extent than the proposed project**.**
- **Alternative 4: Reduced Landside Facilities Alternative.** Alternative 4 would involve the construction of the full pier and breakwater but would eliminate landside improvements such as the public plaza, cycle track, Bay Trail Extension, parking lot upgrades, and bus facilities. Minimal landside construction would still be required under Alternative 4 to complete and ensure emergency access to the proposed Pier including the Pier Abutment itself (including deep soil mixing to create a seismically stable landing for the abutment) and retaining wall and fill in the area to create vehicle and accessible connections between the existing sidewalk/Seawall Drive and the new pier. Several construction-related impacts would be reduced compared to the proposed project as a result, however, impacts to air quality, greenhouse gas emissions, and transportation would increase long-term due to fewer multimodal access opportunities and continued reliance on single-occupancy vehicle travel to access the new pier. In addition, Alternative 4 would provide substantially fewer public access opportunities and recreational benefits and, therefore, would not fulfill all project objectives.

The City hereby concludes that the Final EIR sets forth a reasonable range of EIR alternatives to the Berkeley Water Transportation Pier Ferry Project that address the significant environmental impacts of constructing and operating the project, so as to foster informed public participation and informed decision making. The City finds that the alternatives identified and described in the Final EIR were considered and further finds the No Project Alternative (EIR Alternative 1), the Shortened Pier Alternative (EIR Alternative 3), and the Reduced Landside Facilities Alternative (EIR Alternative 4) infeasible for the specific economic, social, or other considerations set forth below pursuant to Public Resources Code section 21081(b). The City further finds that the Shortened Breakwater Alternative EIR (Alternative 2) is feasible and would reduce certain construction-related environmental impacts compared to the proposed project while still achieving most of the basic project objectives, and is, therefore, adopted.

5.1.1 EIR Alternative 1 - No Project Alternative

Under the No Project Alternative (Alternative 1), none of the improvements associated with the Berkeley Water Transportation Pier Ferry Project would be implemented. The existing Berkeley Pier would remain closed and continue to deteriorate, no new ferry service would be established between Berkeley and San Francisco, no public plaza, Bay Trail Extension, cycle track, bus improvements, or parking lot improvements would be constructed. Existing transportation patterns, including transbay automobile travel, would continue under existing conditions.

Findings: This alternative would result in reduced impacts with respect to biological resources, cultural resources, geology and soils, hydrology and water quality, noise, tribal cultural resources, and utilities and service systems because it would avoid construction-related environmental impacts. However, impacts relating to aesthetics, air quality, greenhouse gas emissions and energy, land use and planning, and transportation would be greater than under the selected project because Alternative 1 would not provide the long-term benefits associated with zero-emission ferry service, reductions in vehicle miles traveled, improved multimodal transportation infrastructure, or revitalization of the Berkeley Waterfront. In addition, Alternative 1 would not eliminate the existing deterioration of the Berkeley Pier or provide the climate resilience, emergency response, recreational, and regional connectivity benefits associated with the project. Specifically, Alternative 1 would not replace the existing Berkeley Pier with a new seismically safe structure designed to meet Risk Category IV (Essential Facility) standards, account for projected sea level rise and improve emergency response capabilities. Nor would Alternative 1 repair an actively eroding section of shoreline or remove outdated infrastructure that may contain hazardous materials such as creosote-treated pier piles. Furthermore, Alternative 1 would not fulfill either of the project's basic objectives because it would neither enhance public access and recreational opportunities at the Berkeley Waterfront nor provide efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco (see Section 5.5, *No Project Alternative*, of the Draft EIR). Accordingly, Alternative 1 would also forego the economic benefits associated with ferry service revenue, enhanced regional connectivity facilitating improved access to educational and employment opportunities throughout the Bay Area, and increased opportunities for recreation and tourism at the Waterfront.

The City finds that Alternative 1 is infeasible for social, economic, and environmental reasons. The No Project Alternative would eliminate the environmental impacts associated with project construction, but would also forego the substantial long-term public benefits associated with restoring public access to the Berkeley Waterfront, providing zero-emission ferry service, improving multimodal transportation connections, enhancing recreational opportunities, supporting regional mobility, increasing transportation resiliency, and reducing reliance on single-occupancy vehicle travel. In addition, Alternative 1 would allow the Berkeley Pier to remain closed and continue to deteriorate, thereby denying the public recreational, educational, transportation, and access benefits that the project is intended to provide. Furthermore, because the No Project Alternative would forego the project's anticipated benefits related to regional mobility and increased Waterfront visitation, it would also forego the associated economic benefits of improved access between Berkeley and San Francisco, increased visitation to the Berkeley Waterfront and nearby businesses, and enhanced access to existing jobs, commerce, and recreational destinations throughout the Bay Area. The City finds that these lost public benefits would not be socially or economically acceptable and that Alternative 1 would not advance the environmental benefits associated with reduced vehicle miles traveled, reduced greenhouse gas emissions, and expanded sustainable transportation opportunities. Therefore, consistent with CEQA Guidelines Section 15091(a)(3), the City finds that specific social, economic, and environmental considerations make Alternative 1 infeasible.

Alternative 1 is hereby rejected because it would not meet the project objectives and, consistent with CEQA Guidelines Section 15091(a)(3), specific social, economic, and environmental considerations make Alternative 1 infeasible.

5.1.2 EIR Alternative 2 – Shortened Breakwater Alternative

Alternative 2 would implement the project substantially as proposed, but with a shortened breakwater of approximately 300 feet rather than the 400-foot breakwater evaluated as part of the proposed project. The purpose of the breakwater is to provide a safe harbor for ferry operations while also providing public access

and recreational opportunities. Under Alternative 2, all other major project components, including the ferry service, public pier, public plaza, Bay Trail Extension, cycle track, parking lot improvements, and multimodal transportation facilities, would be constructed as proposed.

Findings: This alternative would result in reduced impacts with respect to air quality, biological resources, greenhouse gas emissions, hydrology and water quality, and noise because the shortened breakwater would reduce construction intensity, Bay fill, and pile installation requirements. Impacts related to aesthetics, cultural resources, geology and soils, hazards and hazardous materials, land use and planning, recreation, transportation, tribal cultural resources, and utilities and service systems would generally remain similar to those of the proposed project. However, Alternative 2 would not eliminate any of the significant and unavoidable impacts identified for the project. Accordingly, significant and unavoidable impacts related to construction noise, as well as related land use and planning and recreational impacts, would remain (refer to Section 5.6, *Alternative 2: Shortened Breakwater Alternative*, of the Draft EIR).

The City finds that Alternative 2 is technologically feasible. The Coastal Study prepared for the project evaluated 250-foot, 300-foot, and 400-foot breakwater configurations and concluded that a 300-foot breakwater would provide sufficient sheltering for ferry operations, minimize wave exposure at the berths, and achieve nearly the same reduction in operational downtime as the 400-foot configuration.[7] The Coastal Study specifically concludes that increasing the breakwater from 300 feet to 400 feet would provide only marginal improvements in wave disturbance and operational downtime and supports the selection of the 300-foot breakwater as the recommended design option (refer to Coastal Study, Executive Summary, pages 5 through 7).[8] Additionally, the City finds that Alternative 2 is economically feasible because the reduction in breakwater length would require less construction and accordingly fewer materials, less Bay fill, and fewer piles than the proposed project, thereby reducing construction costs while still achieving the primary operational purpose of the breakwater. As described above, Alternative 2 would also result in reduced construction-related impacts to air quality, biological resources, greenhouse gas emissions, hydrology and water quality, and noise due to the reduction in construction intensity and Bay fill. However, Alternative 2 would not eliminate any of the significant and unavoidable impacts identified for the project, and accordingly, significant and unavoidable impacts for construction noise, as well as related land use and planning and recreational impacts, would remain (refer to Section 5.5, *Alternative 2: Shortened Breakwater Alternative*, of the Draft EIR). Nevertheless, the City finds that Alternative 2 is environmentally feasible due to the reduction in construction-related and Bay fill impacts. The City further finds that Alternative 2 is socially feasible. Although the shortened breakwater would slightly reduce public access and recreational opportunities compared to the proposed project, the primary purpose of the breakwater is to provide a safe harbor for ferry vessels, while improved public access is a secondary benefit (refer to pages 5-9 and 5-10 of the Draft EIR). The evidence in the record demonstrates the social feasibility of a reduction in the proposed breakwater length, because a 300-foot breakwater can achieve the safe harbor function while still providing substantial public access and recreational opportunities. The City accordingly finds that the modest reduction in public access associated with a shorter breakwater is acceptable considering the reduction in environmental impacts, reduced construction intensity, and reduced cost associated with Alternative 2.

Alternative 2 is hereby identified as the preferred alternative and the proposed Project, and the City further finds that, consistent with CEQA Guidelines Section 15091 (a)(1), changes or alterations have been made in preferred Alternative 2 which substantially lessen significant construction-related environmental effects, including those associated with air quality, biological resources, greenhouse gas emissions, hydrology and water quality, and noise, as identified in the final EIR. Alternative 2 would meet the primary purpose and most of the basic project objectives of the project by providing efficient and environmentally friendly zero emission ferry service and enhanced public access and recreational opportunities. However, due to the shortened

[7] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study. Prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed August 2026).

[8] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study. Prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed August 2026).

breakwater, Alternative 2 would provide slightly less public access and fewer recreational opportunities, and would therefore meet the project objectives to a slightly lesser extent than the project evaluated in the Draft EIR.

5.1.3 EIR Alternative 3 – Shortened Pier Alternative

Alternative 3 would implement the proposed project as planned, but would reduce the length of the pier from approximately 1,080 feet to approximately 675 feet. Under this alternative, the pier would terminate at the point where the pier and breakwater intersect and would not extend beyond the breakwater. Ferry service, the breakwater, and landside improvements would remain substantially the same as under the approved project.

Findings: This alternative would result in reduced impacts with respect to air quality, biological resources, greenhouse gas emissions and energy, hydrology and water quality, and noise due to the reduction in the length of the pier and associated reduction in construction duration, Bay fill, and pile installation requirements. Impacts related to aesthetics, cultural resources, geology and soils, hazards and hazardous materials, land use and planning, recreation, transportation, tribal cultural resources, and utilities and service systems would generally remain similar to those of the approved project. However, Alternative 3 would not eliminate any of the significant and unavoidable impacts identified for the approved project. Significant and unavoidable impacts related to construction noise, recreation, and land use and planning would remain because pile driving and other construction activities would still occur under Alternative 3 (refer to Section 5.7, *Alternative 3: Shortened Pier Alternative*, of the Draft EIR).

Although Alternative 3 would result in a slight reduction of construction-related impacts compared to the proposed project, the City finds that Alternative 3 is socially infeasible. A primary purpose of the project is to restore the Berkeley Pier as an important recreational and public access feature of the Berkeley Waterfront (refer to Section 2.3, *Project Objectives*, of the Draft EIR). Unlike the breakwater, whose primary function is to provide a safe harbor for ferry operations, the portion of the pier extending beyond the breakwater is intended primarily to provide enhanced public access and recreational opportunities. As described in the Draft EIR, reducing the length of the pier by approximately 405 feet would diminish public access to the Bay and reduce the recreational benefits provided to the Berkeley community and the region (refer to page 5-19 of the Draft EIR). Accordingly, Alternative 3 would fulfill most project objectives by providing ferry service and some enhanced public access and recreational opportunities, however it would do so to a substantially lesser extent compared to the proposed project and Alternative 2. Furthermore, while Alternative 3 would slightly reduce certain temporary construction-related impacts, it would not eliminate any of the project's significant and unavoidable impacts, and the limited reduction in temporary impacts does not justify the corresponding reduction in the long-term public access and recreational benefits that a longer pier would provide. Therefore, the City finds that the reduction in public access and recreational opportunity associated with Alternative 3 would not be socially beneficial when weighed against the limited environmental benefit provided by the alternative.

Alternative 3 is hereby rejected because it would not eliminate any of the significant and unavoidable impacts of the proposed project and, consistent with CEQA Guidelines Section 15091(a)(3), specific social and environmental considerations make Alternative 3 infeasible.

5.1.4 EIR Alternative 4 – Reduced Landside Facilities Alternative.

Alternative 4 would implement the waterside components of the project, including the pier, breakwater, and ferry infrastructure, but would eliminate landside improvements such as the public plaza, cycle track, Bay Trail Extension, parking lot upgrades, electric vehicle charging facilities, and bus facilities. Limited landside construction would still occur to provide utility connections, emergency vehicle access, the pier abutment, retaining walls, and other infrastructure necessary to support operation of the pier and ferry facilities.

Findings: This alternative would result in reduced impacts with respect to aesthetics, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, recreation, tribal cultural resources, and utilities and service systems due to the reduced landside footprint and corresponding reduction in landside construction activities. However, Alternative 4 could result in greater impacts related to air quality, greenhouse gas emissions and energy, land use and planning, and

transportation because it would eliminate multimodal transportation improvements, electric vehicle charging facilities, and active transportation amenities that support reductions in vehicle miles traveled and greenhouse gas emissions. The Draft EIR concludes that significant and unavoidable impacts related to construction noise, recreation, and land use and planning would remain under Alternative 4, because pile driving and other waterside construction activities would still occur. Therefore, Alternative 4 would not eliminate any of the project's significant and unavoidable impacts (refer to Section 5.8, *Alternative 4: Reduced Landside Facilities Alternative*, of the Draft EIR).

The City finds that Alternative 4 is infeasible for social and environmental reasons. Although Alternative 4 would reduce certain temporary construction-related impacts, it would do so by eliminating important public recreational amenities and multimodal transportation improvements that are fundamental components of the project. Specifically, Alternative 4 would eliminate the Bay Trail Extension, public plaza, cycle track, bus facilities, parking lot improvements, and electric vehicle charging facilities that are intended to improve public access, recreation, bicycle and pedestrian connectivity, transit access, and sustainable transportation opportunities at the Berkeley Waterfront. As described in the Draft EIR, these facilities are important components of the project's objectives to enhance public access and recreational opportunities and to encourage public transit, bicycle, and other active transportation modes. Alternative 4 would therefore fulfill the project's objectives to a much lesser extent than the approved project (refer to page 5-25 of the Draft EIR). Furthermore, the elimination of these facilities would not be consistent with broader City and regional multimodal transportation goals described in Draft EIR Section 3.9, *Land Use and Planning*, including policies encouraging bicycle, pedestrian, and transit access to the Berkeley Waterfront. While Alternative 4 would reduce certain temporary construction-related impacts, it would not eliminate any of the project's significant and unavoidable impacts, and the limited reduction in temporary impacts does not justify the corresponding loss of long-term transportation, recreation, sustainability, and public access benefits associated with the approved project. Therefore, the City finds that the reduction in facilities and associated public benefits under Alternative 4 would not be socially acceptable when weighed against the limited environmental benefits provided by the alternative.

Alternative 4 is hereby rejected because it would not eliminate any of the significant and unavoidable impacts of the proposed project and, consistent with CEQA Guidelines Section 15091(a)(3), specific social and environmental considerations make Alternative 3 infeasible.

5.2 Environmentally Superior Alternative

Section 15126.6(e)(2) of the CEQA Guidelines requires that an environmentally superior alternative be identified from among the alternatives evaluated in the EIR. In accordance with *CEQA Guidelines* Section 15126.6(e)(2), if the environmentally superior alternative is the No Project alternative, the EIR shall also identify an environmentally superior alternative from among the other alternatives.

The No Project Alternative would avoid most construction-related environmental impacts associated with the project. However, the No Project Alternative would not achieve any of the project's basic objectives because it would neither enhance public access and recreational opportunities at the Berkeley Waterfront nor provide efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco. Therefore, the No Project Alternative is not identified as the environmentally superior alternative.

Among the action alternatives evaluated in the Draft EIR, Alternative 4, the Reduced Landside Facilities Alternative, is identified as the environmentally superior alternative. As discussed in Section 5.10.2, *Identification of Environmentally Superior Alternative*, of the Draft EIR, Alternative 4 would reduce a greater number of construction-related impacts than the proposed project and the other action alternatives, including impacts related to aesthetics, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, noise, recreation, tribal cultural resources, and utilities and service systems due to the reduced extent of landside construction. However, Alternative 4 would achieve the project's objectives to a substantially lesser extent than Alternative 2 because it would eliminate key project elements, including the public plaza, cycle track, Bay Trail Extension, bus facilities, parking lot improvements, and electric vehicle charging facilities. The Draft EIR concludes that Alternative 4 could also result in greater long-term impacts related to air quality, greenhouse gas emissions, land use and planning, and transportation

due to reduced multimodal access opportunities and a potential reduction in the use of ferry service. In addition, Alternative 4 would not eliminate any of the significant and unavoidable impacts identified for the project (refer to pages 5-29 through 5-31 of the Draft EIR).

Although EIR Alternative 4 is identified as the environmentally superior alternative, the City finds that EIR Alternative 2, the Shortened Breakwater Alternative, is the preferred alternative and the proposed project (see Section 5.1.2, above), because it reduces construction-related environmental impacts associated with Bay fill, pile installation, and construction intensity while continuing to achieve the project's objectives to a greater extent than the other analyzed alternatives. Specifically, EIR Alternative 2 would provide substantially greater public access, recreational, multimodal transportation, sustainability, and public benefit improvements than EIR Alternative 4 while still reducing environmental impacts relative to the proposed project. Accordingly, while Alternative 4 is identified as the environmentally superior alternative, the City finds that EIR Alternative 2 represents the superior balance of environmental protection and achievement of project objectives and is, therefore, the preferred alternative and the proposed Project.

SECTION 6: STATEMENT OF OVERRIDING CONSIDERATIONS

CEQA requires the decision-making agency to balance the benefits of a project against its significant unavoidable impacts when determining whether to approve a project. If the benefits of the project outweigh its unavoidable adverse environmental effects, those effects may be considered acceptable. CEQA requires the agency to state in writing the specific reasons for considering a project’s significant and unavoidable impacts to be acceptable. Those reasons must be based on substantial evidence in the Final EIR or elsewhere in the administrative record. *CEQA Guidelines* §15093(b); see also Public Resources Code Section 21081(b).

As set forth above, the City has found that the proposed project will result in project-level and cumulative significant adverse environmental impacts related primarily to construction noise associated with waterside pile driving and nighttime construction activities, and a cumulatively considerable contribution to a significant cumulative operational roadway noise impact on University Avenue between Seawall Drive and Marina Boulevard. As discussed in Draft EIR Sections 3.9, *Land Use and Planning*, 3.10, Noise, 3.11, *Recreation*, and 4.1, *Significant Environmental Effects that Cannot Be Avoided*, the project's significant and unavoidable Land Use and Planning and Recreation impacts are not independent physical environmental effects, but instead result from the same underlying significant and unavoidable construction noise impacts (refer to Impact LU-2, Impact REC-2, and Draft EIR page 4-1). Similarly, the cumulative Land Use and Planning and Recreation impacts are attributable to the project’s cumulatively considerable contribution to cumulative construction and operational noise impacts. These significant impacts cannot be avoided following adoption, incorporation into the project, and implementation of mitigation measures described in the EIR. The City has also considered the range of alternatives analyzed in Draft EIR Chapter 5. As discussed in SECTION 5: of this document, the City has identified the Shortened Breakwater Alternative (EIR Alternative 2) as the preferred alternative and the proposed Project, because it would reduce certain environmental impacts related to Bay fill and the intensity of construction activities, while still being technologically and socially feasible. However, significant and unavoidable project-level and cumulative impacts related to construction noise and by extension land use and planning and recreation would remain.

As required by CEQA Guidelines §15093(b) and Public Resources Code Section 21081(b), the City has balanced the economic, legal, social, technological or other benefits of the proposed project, including region-wide or Statewide environmental benefits, against its significant and unavoidable environmental impacts, the finds that the benefits of the proposed project outweigh its unavoidable adverse environmental effects, and that the adverse environmental effects are therefore acceptable.

In its balancing of the benefits associated with the project against its significant and unavoidable environmental impacts, the City considered the duration of benefits and certain impacts. Specifically, the City considered that the significant and unavoidable impacts associated with project construction would be temporary (up to an estimated 80 to 90 days), would cease after construction of the project is completed, and would be limited to

only some project construction activities (i.e., waterside construction activities involving pile driving, including the demolition and pile-installation phases).

In addition, for the significant and unavoidable cumulative impact related to operational noise from increased roadway vehicles, the City considered the severity of the impact. The EIR found that when roadway vehicle volumes from the proposed project and another cumulative project (the Draft Waterfront Specific Plan) are combined, there is an increase in noise levels of 5.5 dBA Community Noise Equivalent Level (CNEL) (without consideration of proposed project Transportation Demand Management [TDM]) and 5.4 dBA CNEL (when accounting for proposed project TDM) along the stretch of University Avenue between Seawall Drive and Marina Boulevard. This noise level would be greater than the threshold of 5 dBA CNEL (page 3.10-18 of the Draft EIR, subheading *Mobile Operational Noise* identifies the applicability of this threshold). In making its decision, the City considered that the cumulative impact is only 0.4 dBA CNEL above the threshold. The City also considered the contribution of noise from the proposed project, compared to the contribution of noise from the Waterfront Specific Plan. The increase in noise without the project [i.e., considering only the Waterfront Specific Plan contribution] is estimated to be 4.5 dBA CNEL, whereas the increase in noise due to only the proposed project is estimated to be 0.9 to 1.0 dBA CNEL. Furthermore, the City also considered the conservative nature of the analysis presented in the EIR. The analysis presented in the EIR represents the conservative scenario of implementing the maximum development potential of the Draft Waterfront Specific Plan. There is the potential that the cumulative development scenario may be lower as the Draft Waterfront Specific Plan proposed details are refined. The Draft Waterfront Specific Plan has not been adopted by the Berkeley City Council, and the associated development scenario that is adopted by the Berkeley City Council may be lower than what is presented in the EIR.

The City also considered that the benefits associated with the project would provide long-term benefits (i.e., the lifetime of pier and ferry service is estimated at a minimum of 50 years) that would far exceed the duration of construction activities that could result in significant and unavoidable impacts.

The following statement identifies the reasons why, in the City's judgment, specific benefits of the project outweigh the significant and unavoidable effects. The substantial evidence supporting the benefits of the project can be found in the preceding sections of these Findings, in the project itself, and in the record of proceedings as defined in SECTION 9:, below. The City further finds that each of the project benefits discussed below is a separate and independent basis for these findings. The reasons set forth below are based on the Final EIR and other information in the administrative record.

The City further finds that these significant and unavoidable impacts are outweighed by the benefits of the project, each of which, independently of the others, constitutes overriding consideration warranting approval of the project. Those benefits, and additional considerations related to this finding, are as follows:

- Recreational Benefits
  - The project will restore public recreational access to the Berkeley Waterfront and San Francisco Bay by replacing the deteriorated Berkeley Municipal Pier, which has been closed to the public since 2015, with a new publicly accessible pier and breakwater that will provide opportunities for walking, sightseeing, fishing, environmental education, and shoreline access for current and future generations. The project has a design life of 50 years, meaning that the City of Berkeley would benefit from this important recreational amenity for at least 50 years.
  - The project will substantially enhance recreational opportunities at the Berkeley Waterfront through construction of a new pier, breakwater, public plaza, Bay Trail extension, bicycle facilities, interpretive signage, seating areas, fish-cleaning stations, landscaping, and accompanying public amenities that expand access to and support enjoyment of the Bay.
  - The project will implement a portion of the planned Bay Trail Extension along Seawall Drive and directly support the recreational goals of the San Francisco Bay Trail and the MTC Bay Trail Gap

Closure Implementation Plan.[9] The Draft EIR identifies the Berkeley Waterfront gap as Segment ID 4151, which is designated as a Tier 1 (Higher Priority and Lower Cost) project and ranked third among Tier 1 Bay Trail gap-closure segments[10] (refer to Draft EIR Page 3.11-11). By constructing a portion of this planned trail segment and improving bicycle and pedestrian access to the Waterfront, the project will help advance the long-term regional goal of completing a continuous shoreline trail around San Francisco Bay and improving public access to the Bay.

- The project will replace the existing deteriorated pier entrance area with a new ADA-accessible public recreational plaza containing seating, landscaping, bicycle facilities, interpretive signage, and a public restroom. The plaza is intended to function as a new, publicly accessible recreational space and may accommodate future public events, educational programming, recreational activities, and other community gatherings and public uses that promote community engagement and improve public enjoyment of the Berkeley Waterfront (refer to Draft EIR Section 2.5.2, *Landside*).
- The project will advance longstanding City and regional recreational goals and policies relating to waterfront access, recreation, multimodal transportation, and enhancement of the Berkeley Waterfront area as established by the adopted plans and policies such as the BCDC Bay Plan, ABAG/MTC Plan Bay Area 2050, the Berkeley General Plan, the Berkeley Waterfront Master Plan, the Berkeley Marina Master Plan (refer to Draft EIR Section 3.9, *Land Use and Planning*, Impact LU-2).

- Transportation Benefits

  - The project will provide new ferry service connecting Berkeley with San Francisco, improving regional transportation connectivity and resilience for East Bay residents, workers, students, and visitors. The Water Emergency Transportation Authority (WETA) Berkeley Ferry Service Business Plan identifies the Berkeley ferry service as a long-planned component of the regional ferry network which will provide approximately 1,910 average weekday ferry trips during the first year of service and approximately 2,110 weekday trips by 2040, and concludes that the proposed ferry service would expand regional mobility options, support existing and future activities at the Berkeley Waterfront, and provide a meaningful new transbay transportation connection (refer to Section 1 of the Business Plan).[11]
  - The project will improve transportation access to existing employment, education, housing, services, and recreational opportunities throughout the Bay Area by providing a reliable and accessible transbay transit option that strengthens regional mobility and will facilitate access between East Bay communities and major employment centers, including higher-paying job centers located in San Francisco. As described in the WETA Berkeley Ferry Service Business Plan, West Berkeley is an area with relatively limited regional transit access and reduced accessibility to jobs compared to other areas within Berkeley and the broader region. Within the region, areas such as San Francisco and San Mateo Counties have a greater number of jobs which provide average salaries approximately 21 percent higher than comparable jobs in Alameda County. Implementation of the proposed ferry service would provide East Bay residents with a new connection to higher-paying job centers across the Bay while also improving access to jobs, educational opportunities, and destinations within Berkeley, and would therefore expand access to economic opportunities for West Berkeley residents as well as the broader region (refer to Section 6 of the WETA Business Plan).[12]

[12] WETA. 2022. WETA Berkeley Ferry Service Business Plan, Version 1.0. March 17, 2022. Available: https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf (accessed: August 2026).

- The project will help reduce reliance on single-occupancy vehicle travel by providing a high-quality public transit transportation alternative to automobile transbay travel, thereby reducing regional vehicle miles traveled (VMT), roadway congestion, and associated environmental impacts. As discussed in Draft EIR Section 3.12, *Transportation*, the project would provide new ferry connection between Berkeley and San Francisco that would replace longer automobile commute trips with shorter trips to the Berkeley Waterfront. The project would also implement multimodal access improvements, including a raised cycle track along University Avenue, Bay Trail improvements, bicycle lockers and racks, improved bus facilities, pedestrian improvements, electric vehicle charging stations, and transportation demand management measures designed to encourage the use of transit and active transportation rather than single-occupancy vehicles. By reducing automobile travel demand and supporting shifts to other travel modes through implementation of these proposed project components, the project would result in a net decrease in VMT and associated environmental impacts (refer to Impact GHG-1, Impact TRA-1, and Impact TRA-2). For further discussion of VMT and associated environmental impacts, refer to the discussion below regarding Sustainability Benefits.
- The project will enhance regional emergency transportation preparedness and resilience. WETA has a legislative mandate to operate and coordinate emergency water transit when regional transportation systems are disrupted due to disaster or other events.[13] The new pier is designed as an essential facility to support emergency water transportation services in the event that natural disasters or other emergencies disrupt existing transportation infrastructure, thereby expanding WETA's ability to provide emergency transportation for first responders, disaster service workers, and the general public (refer to Draft EIR Section 2.8, *Emergency Operation Options*).

- Sustainability (Including region-wide or Statewide environmental benefits)
  - The project will advance State, regional, and local sustainability goals through operation of zero-emission electric ferry vessels, installation of ferry charging infrastructure, provision of electric vehicle charging facilities for Waterfront visitors, and implementation of multimodal transportation improvements that encourage transit use and bicycle and pedestrian travel.
  - The project will result in long-term greenhouse gas emissions reductions, including an annual net reduction of 2,368 metric tons of carbon dioxide equivalent emissions, and support California's transition to a low-carbon, sustainable transportation system through mode shift from automobile travel to electric ferry service. The Greenhouse Gas Analysis Memorandum prepared for the project's SB 149 Infrastructure Project Application[14] further concludes that the project would remain net-negative for greenhouse gas emissions even after accounting for all construction and operational emissions, resulting in a net reduction of approximately 22,435 metric tons of carbon dioxide equivalent emissions over the evaluated 30-year analysis period and thereby providing a long-term regional climate benefit consistent with the goals and policies of adopted greenhouse gas reduction plans (refer to Draft EIR Section 3.6, *Greenhouse Gas Emissions and Energy*, and Draft EIR Appendix B, *Air Quality and Greenhouse Gas Emissions Information*).
  - The project incorporates substantial climate adaptation and coastal resilience measures, including design features that account for and protect against projected sea level rise, physical shoreline protection improvements, resilient infrastructure, adaptable water transportation facilities, and long-term protection of public access to the waterfront.

- Social Benefits
  - The project incorporates social investments in bicycle and pedestrian infrastructure, including a new raised cycle track along University Avenue, Bay Trail improvements, bicycle parking facilities, and enhanced pedestrian areas and transit connections, accompanied by ADA-accessible facilities,

[13] WETA. 2024. Emergency Response. Available: https://sanfranciscobayferry.com/emergency-response/ (accessed September 2025)

[14] Berkeley, City of. 2026. Final SB 149 Infrastructure Project Application. Prepared for California Governor's Office of Land Use and Climate Innovation. June 25, 2026.

improved lighting and wayfinding, and design features to reduce conflicts among transportation modes, thereby improving the safety and accessibility of multimodal travel and active recreational opportunities.

- The project will generate social and economic benefits through construction expenditures, increased visitation to the Berkeley Waterfront, support for existing local businesses, increased access to recreation, education, and employment opportunities, and enhancement of the Waterfront as a regional destination.
- The project represents a substantial social public investment with respect to recreation, public access, sustainable transportation, and climate resilience infrastructure that will provide long-term benefits at the local, regional, and Statewide level.

On balance, the City finds that there are specific economic, legal, social, technological, or other benefits of the Berkeley Water Transportation Pier Ferry Project that serve to override and outweigh the significant unavoidable effects of the project. Therefore, pursuant to *CEQA Guidelines* Section 15093(b), the City finds that these significant adverse environmental effects are considered acceptable.

SECTION 7: INCORPORATION BY REFERENCE

These findings incorporate the text of the Final Environmental Impact Report for the Berkeley Water Transportation Pier Ferry Project by reference and in its entirety. Without limitation, this incorporation is intended to elaborate on the scope and nature of mitigation measures, the basis for determining the significance of impacts, the comparative analysis of alternatives, the determination of the environmentally superior alternative, and the reasons for approving the project in spite of the potential for associated significant and unavoidable adverse impacts.

The City also incorporates by reference the Final Program Environmental Impact Report for the Expansion of Ferry Transit Service in the San Francisco Bay Area (State Clearinghouse No. 2001112048), certified by the WETA Board of Directors in June 2003. The WETA Program EIR evaluated expansion of ferry service throughout the San Francisco Bay Area, including ferry service between Berkeley and San Francisco, and analyzed environmental topics including dredging, navigation, wake effects, water resources, biological resources, air quality, land use, aesthetics, cultural resources, geology, noise, transportation, energy, and growth-inducing impacts. The environmental setting information, environmental analyses, and mitigation measures contained in the WETA Program EIR, including mitigation measures adopted by WETA for ferry operations and ferry service expansion, are incorporated by reference into these findings to the extent relevant to the proposed project. As described in Section 1.1.3 of the Berkeley Water Transportation Pier Ferry Project EIR, the relevant portions of the WETA Program EIR are summarized and incorporated into the environmental analysis contained in Section 3.3, *Biological Resources*, and Section 3.7, *Hazards and Hazardous Materials*, and are part of the evidentiary basis supporting these findings.

SECTION 8: RECIRCULATION NOT REQUIRED

No significant new information was added to the Draft EIR or the Final EIR as a result of the public review and comment process. The Final EIR responds to comments, and clarifies, amplifies, and makes insignificant modifications to the Draft EIR. It does not identify any new significant effects on the environment or a substantial increase in the severity of an environmental impact requiring major revisions to the Draft EIR. Similarly, the revised project would not result in new or substantially more severe significant impacts than disclosed previously in the Draft EIR. Therefore, recirculation of the EIR is not required.

SECTION 9: RECORD OF PROCEEDINGS

Various documents and other materials related to the project constitute the record of proceedings upon which the City bases its findings and decisions contained herein. The record of proceedings is available for public review online on the following website: https://berkeleypierferryproject.com/.

SECTION 10: SUMMARY

A. Based on the foregoing Findings and the information contained in the record, the City has made one or more of the following Findings with respect to each of the significant effects of the project:
   1. Changes or alterations have been required in, or incorporated into, the project that avoid or substantially lessen the significant environmental effects identified in the EIR.
   2. Those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other public agency.
   3. Specific economic, legal, social, technological, or other considerations, make infeasible the mitigation measures or alternatives identified in the EIR that would otherwise avoid or substantially lessen the identified significant environmental effects of the project.

B. Based on the foregoing Findings and the information contained in the record, the City determines that:
   1. Significant effects on the environment that would occur due to the approval of the project have been eliminated or substantially lessened where feasible.
   2. Remaining significant effects on the environment found to be unavoidable are acceptable due to the factors described in the Statement of Overriding Considerations in SECTION 6:, above.

RESOLUTION NO. ##,###-N.S.

APPROVING THE BERKELEY WATER TRANSPORTATION PIER-FERRY PROJECT AND AFFIRMING, AS MODIFIED, THE DECISION OF THE ZONING ADJUSTMENTS BOARD TO APPROVE USE PERMIT #ZP2026-0014 TO ESTABLISH TRANSPORTATION VIA PUBLIC FERRY SERVICE AS AN ALLOWABLE USE AT THE BERKELEY PIER

WHEREAS, on January 12, 2026, the City of Berkeley Parks, Recreation & Waterfront Department filed an application for Use Permit #ZP2026-0014 to establish transportation via public ferry service as an allowable use at the Berkeley Pier ("Use Permit"), with project plans received January 13, 2026; and

WHEREAS, on January 21, 2026, pursuant to Berkeley Municipal Code ("BMC") Section 23.208.020(C)(1), the Planning Commission reviewed the Use Permit application and recommended that the Zoning Adjustments Board ("ZAB") and City Council approve the Use Permit, and making the findings required by BMC Section 23.208.020(E); and

WHEREAS, on February 11, 2026, notice of the ZAB public hearing was posted pursuant to BMC Section 23.404.050 and emailed to a broad stakeholder list, there being no private properties within the 0.5-mile notice radius; and

WHEREAS, on February 26, 2026, the ZAB held a public hearing and, pursuant to BMC Section 23.208.020(C)(2), approved the Use Permit by a vote of 5-0-3, subject to findings and conditions, and an added condition noting that its decision was made prior to publication of the Draft Environmental Impact Report; and

WHEREAS, pursuant to BMC Section 23.208.020(C)(2) and (C)(5), the ZAB's decision is not effective until after action by the City Council, and the City Council may affirm, reverse, or modify the ZAB's decision; and

WHEREAS, pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 et seq.) ("CEQA"), the City, as lead agency, prepared an Environmental Impact Report (SCH No. 2025040995) ("EIR") for the Berkeley Water Transportation Pier-Ferry Project ("Project"), which includes the ferry use and ferry terminal facilities authorized by the Use Permit; and

WHEREAS, on November 5, 2026, notice of the City Council public hearing was published and posted; and

WHEREAS, on November 17, 2026, prior to consideration of this Resolution, the City Council adopted Resolution No. ##,###-N.S. certifying the Final EIR and adopting CEQA Findings and a Statement of Overriding Considerations, mitigation measures, and a Mitigation Monitoring and Reporting Program for the Project, which CEQA Findings identify the Shortened Breakwater Alternative (EIR Alternative 2) as the preferred alternative and the proposed Project; and

WHEREAS, the City Council desires to modify the ZAB decision to incorporate the certified Final EIR, the CEQA Findings, and the mitigation measures, and to make minor technical corrections; and

WHEREAS, on November 17, 2026, the City Council held a public hearing to consider the ZAB's decision, and, in the opinion of this Council, the facts stated in, or ascertainable from the public record, including comments made at the public hearing, warrant approving the Project and affirming the ZAB's decision, as modified.

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that, in approving the Project, the City Council relies on and incorporates by reference the CEQA Findings and Statement of Overriding Considerations, mitigation measures, and Mitigation Monitoring and Reporting Program adopted by Resolution No. ##,###-N.S., and the mitigation measures within the responsibility and jurisdiction of the City are hereby incorporated into the Project and shall be Conditions of Approval of Use Permit #ZP2026-0014.

BE IT FURTHER RESOLVED that the City Council hereby approves the Project, consisting of the Shortened Breakwater Alternative (EIR Alternative 2) as described in the Final EIR and the CEQA Findings.

BE IT FURTHER RESOLVED that, pursuant to BMC Sections 23.208.020(C)(5) and 23.208.020(E), the City Council hereby affirms, as modified, the decision of the ZAB to approve Use Permit #ZP2026-0014 establishing transportation, specifically public ferry service, as an allowed use at the Berkeley Pier, based on the findings for approval set forth in BMC Section 23.406.030(F) and subject to the conditions of approval, both as set forth in and modified by Exhibit A, for the project depicted in Exhibit B and described in the Final EIR.

Zoning Adjustments Board Findings

App #ZP2026-0014 Use Permit to Establish Transportation Use (ferry service) at Berkeley Pier

February 26, 2026

Project Facts	Project Description:
Applicant: City of Berkeley Department of Parks, Recreation, and Waterfront Property Owner: City of Berkeley Project Address: 201 University Avenue GP Land Use: Waterfront / Marina (W) Zoning: Unclassified District (U) Council Authority: ZAB decision is not effective until after action by the City Council (BMC Section 23.208.020(C)) CEQA: NOP Published ~~May~~ April 2025. Draft EIR to be published on February 27, 2026. Project Planner: Singeh Saliki Prepared by: Liza McNulty, Parks, Recreation and Waterfront Department	The applicant is seeking approval to establish transportation via public ferry service as an allowable use at the Berkeley Pier. Constructed elements associated with the new use include a universal charging float (5,700 square feet), ferry gate and landing (750 square feet), gangway (1,200 square feet) and breakwater (4,300 square feet). The square footages listed are approximate and describe the initial single-berth configuration. Final square footages will be based on final permitted plans, consistent with the Final EIR. **Zoning Permits Requested:** 1. New Use. Use Permit under BMC Section 23.208.020(B), "Unclassified District Allowed Uses" to establish transportation use at the Berkeley Pier. **Staff Recommendation** Staff recommends that ZAB approve ZP2026-0014 pursuant to BMC Section 23.406.040 (E) "Findings for Approval" and subject to the attached Findings and Conditions of Approval. Because an approval by ZAB is not effective until Council action pursuant to BMC Section 23.208.020(C) "Unclassified District Use Permit Procedures", ZAB is not required to make a CEQA determination at this time. Rather, Council will make a CEQA determination before or concurrent with final action on this permit pursuant to BMC Section 23.208.020(C).

CEQA

The City published a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the Pier-Ferry Project in ~~May~~ April 2025. A Draft EIR for the Project is expected to be published for public review in late February 2026. ZAB is not required to make a CEQA determination concurrent with this permit approval because the permit is not effective until Council action pursuant to BMC Section 23.208.020 (C) "Unclassified District Use Permit Procedures". Council, as the decision maker, will make a CEQA determination before or concurrent with final action on this permit pursuant to BMC Section 23.208.020.

FINDINGS FOR APPROVAL

As required by BMC Section 23.406.040 (E) (1-4) "Findings for Approval," the following findings shall be made:

1. To approve a Use Permit, the ZAB shall find that the proposed project or use:
   (a) Will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or visiting in the area or neighborhood of the proposed use; and

   Evidence: The project will not be detrimental to the health, safety, peace, morals, comfort or general welfare of persons residing or visiting in the area because the proposed use will establish a new transportation option for commuting, recreational or personal travel to San Francsico, which is a benefit to persons working, residing or visiting the area. The project will not be detrimental to the general welfare of persons who use the Berkeley Waterfront because the City has conducted an analysis of parking that demonstrates that there is sufficient parking available to accommodate this use.

   (b) Will not be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood, or to the general welfare of the City.

   Evidence: The project will not be detrimental or injurious to property and improvements of the adjacent properties because the Berkeley Waterfront is a single property, owned and managed by the City of Berkeley and because the use of a public ferry is a water-related use consistent with the Public Trust Doctrine governing Berkeley waterfront land use. The project will not be detrimental to the general welfare of the City because establishing ferry service in Berkeley has been identified as a goal in multiple City and regional planning documents to improve the general welfare of the City by reducing greenhouse gases, improving transportation access and providing emergency response and disaster recovery. In addition, the findings for required discretionary permits are satisfied per the Evidence in 2 and 3 below.

2. To approve the Use Permit, the ZAB must also make any other Use Permit findings specifically required by the Zoning Ordinance for the proposed project.

   Evidence: N/A

3. When taking action on a Use Permit, the ZAB shall consider in its findings:

   (a) The proposed land use; and

   Evidence: The project is consistent with the proposed land use because all uses not prohibited by law are permitted in the U District pursuant to BMC Section 23.208.020 (B) "Allowed Uses" and because the project is consistent with the general plan policies and designated Waterfront / Marina land use which includes water transit facilities.

   (b) The structure or addition that accommodates the use.

   Evidence: The structure that accommodates the use is in-water ferry infrastructure, including a breakwater, gate and landing/boarding platform, gangway and float. This infrastructure is consistent with the allowable uses governing the site.

4. Required findings shall be made based on the circumstances existing at the time a decision is made on the application.

   Evidence: The required findings are satisfied because the project has been determined to be fully compliant with all applicable regulations based on the project plans submitted on January 13, 2026 and evaluated based on the existing conditions of the subject site and surrounding neighborhood at the time of decision.

5. The Zoning Officer shall deny an AUP application if unable to make any of the required findings.

   Evidence: N/A

STANDARD CONDITIONS OF APPROVAL
APPLICABILITY

Use Permits approved through the City of Berkeley are subject to Standard Conditions of Approval (Standard COAs). The City of Berkeley has established Standard COAs that identify requirements for the construction and operation of the approved project or use. This includes general administrative conditions, permitting requirements, project construction and the regulation of on-going, on-site uses. Compliance requirements with the Berkeley Municipal Code, building permit review and issuance process, construction, final inspection requirements, certificate of occupancy, and on-going operations of the approved use are included in this document.

The Standard COAs may vary based on site size, location, environmental settings, topography, historic alteration or approved uses. Variations in the application of the Standard COAs may occur based on the project scope and site-specific characteristics including but not limited to parcel size, location, topography, and use.

Conditions which have specified thresholds due to size, uses, and other characteristics are identified.

Part I. Administrative Conditions
- A. General Project Conditions
- B. Project Specific Conditions

Part II. Prior to Issuance of Demolition Permit

Part III. At the Time of Building Permit Submittal

Part IV. Prior to Issuance of Building Permit
- A. Toxics

Part V. During Demolition/Construction
- A. Building & Safety
- B. Land Use Planning
- C. Public Works

Part VI. Fees

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1.	Project Approval. This Project approval is for Berkeley Pier-Ferry (201 University Avenue), as substantially shown and described on the Project plans dated January 13, 2026, except as required to be modified by Conditions of Approval herein and plans as presented to the Zoning Adjustments Board on February 26, 2026 ("Approval Date"). For any Condition herein that requires preparation of a Final Plan where the project applicant has submitted a conceptual plan, the Project applicant shall submit final plan(s) in substantial conformance with the conceptual plan and incorporate any required modifications.	City of Berkeley	On-Going	Land Use Planning
2.	Approval Limited to Proposed Project and Replacement of Existing Uses. This Use Permit authorizes only the Proposed Project described in the application. This project approval does not authorize other uses, structures or activities not included in the Project Description. When the City approves a new use that replaces an existing use, any prior approval of the existing use becomes null and void when permits for the new use are exercised (e.g., building permit or business license issued). To reestablish the previously existing use, an applicant must obtain all permits required by the Zoning Ordinance for the use. (BMC Sections 23.404.060.B.1 and 2)	City of Berkeley BMC Sections 23.404.060	On-Going	Land Use Planning
3.	Compliance Required. All land uses and structures in the City of Berkeley must comply with the Zoning Ordinance and all applicable City ordinances and regulations.	City of Berkeley BMC Section 23.102.050(B)	On-Going	Land Use Planning
4.	Other Regulations. Compliance with the Zoning Ordinance does not relieve an applicant from requirements to comply with other federal, state, and City regulations that also apply to the property.	City of Berkeley BMC Section 23.102.050 (E)		

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
5.	Conformance with Approved Plans. All work performed under an approved Use Permit shall follow the approved plans as presented to ZAB on February 26, 2026 and any Conditions of Approval.	City of Berkeley BMC Section 23.404.060 (B)(4)	On-Going	Land Use Planning
6.	Permit Modifications. No change in the use or structure for which this Permit is issued is permitted unless the Permit is modified by the Zoning Adjustments Board. The Zoning Officer may approve changes to plans approved by the Board which reduce the size of the Project, consistent with the Board's policy adopted on May 24, 1978.	City of Berkeley BMC Section 23.404.070	On-Going	Land Use Planning
7.	Permit Revocation. The City may revoke or modify a discretionary permit for completed projects due to: 1) Violations of permit requirements; 2) Changes to the approved project; and/or 3) Vacancy for one year or more. No lawful residential use can lapse, regardless of the length of time of the vacancy. Proceedings to revoke or modify a permit may be initiated by the Zoning Officer, Zoning Adjustments Board, or City Council referral.	City of Berkeley BMC Section 23.404.080	On-Going	Land Use Planning

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
8.	Permit Remains Effective for Vacant Property. Once a permit for a use is exercised and the use is established, the permit authorizing the use remains effective even if the property becomes vacant. The same use as allowed by the original permit may be re-established without obtaining a new permit, except as set forth in Standard COA #5 above.	City of Berkeley BMC Section 23.404.060	On-Going	Land Use Planning
9.	Exercise and Expiration of Permits A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. A. A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. B. A permit authorizing construction is exercised when both a valid City building permit (if required) is issued and construction has lawfully begun. C. The Zoning Officer may declare a permit lapsed if it is not exercised within one year of its issuance, except if the applicant has applied for a building permit or has made a substantial good faith effort to obtain a building permit and begin construction. The Zoning Officer may declare a permit lapsed only after 14 days written notice to the applicant. A determination that a permit has lapsed may be appealed to the Zoning Adjustments Board in accordance with Chapter 23.410 (Appeals and Certification).	City of Berkeley BMC Section 23.404.060 (C)	On-Going	Land Use Planning

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
	D. A permit declared lapsed shall be void and of no further force and effect. To establish the use or structure authorized by the lapsed permit, an applicant must apply for and receive City approval of a new permit.			
10.	Compliance with Conditions of Approval and Environmental Mitigations. The Building Permit application is subject to verification of compliance of these Conditions of Approval and any applicable Mitigation Measures. The applicant shall be responsible for demonstrating compliance with all Conditions of Approval per the timeline set forth by this Permit.	City of Berkeley	On-Going	Land Use Planning
11.	Demolition. Demolition of the existing structures cannot commence until a complete building permit application is submitted for the project. All plans presented to the City to obtain a building permit to allow the demolition are subject to these Conditions of Approval.	City of Berkeley	On-Going	Building & Safety/ Land Use Planning

I. Administrative Conditions B. Project Specific Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	Pursuant to BMC 23.404.050(H), the Zoning Adjustments Board attaches the following additional Conditions of Approval to this Permit: A. City Council approval pursuant to BMC Section 23.208.020. B. City shall acquire permits from all other jurisdictions with authority over the project, including but not limited to the San Francisco Bay Conservation and Development Commission, prior to start of construction of the project. C. Implementation of mitigation measures contained within a City Council Adopted Mitigation Monitoring and Reporting Program (MMRP) shall be considered Conditions of Approval. Where a Standard Condition of Approval and a mitigation measure in the MMRP regarding Tribal and Cultural Resources address the same subject, the mitigation measure shall govern. D. This Use Permit shall be implemented consistent with the Final Environmental Impact Report for the Berkeley Water Transportation Pier-Ferry Project (SCH #2025040995), certified by the City Council on November 17, 2026, and the associated MMRP.	City of Berkeley BMC Section 23.404.050	N/A	N/A

II. Prior to Issuance of Demolition Permit		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	Conditions of Approval Included in Building Permit Plan Submittal A. Use Permit. The Conditions of Approval for this Permit shall be printed on the second sheet of each plan set submitted for a building permit pursuant to this Permit, under the title 'Use Permit Conditions.' Additional sheets may also be used if the second sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; (8-1/2" by 11" sheets are not acceptable)	City of Berkeley	Prior to Demolition Permit Issuance	Building & Safety/Land Use Planning
2.	Project Liaison. The applicant shall include in all building permit plans and post onsite the name, e-mail address, and telephone number of an individual empowered to manage construction-related complaints generated from the Project. The individual's name, telephone number, and responsibility for the Project shall be posted at the project site for the duration of the Project in a location easily visible to the public. The individual shall record all complaints received and actions taken in response, and submit written reports of such complaints and actions to the project planner on a weekly basis. Please designate the name of this individual below: ☐ Project Liaison Liza McNulty ~~510-543-4131~~ 510-981-6700 Name Phone #	City of Berkeley	Prior to Demolition Permit Issuance	Building & Safety/Land Use Planning

II. Prior to Issuance of Demolition Permit		Regulation Source	Timing/Implementation	Enforcement/Monitoring
3.	Construction Noise Management - Public Notice Required. At least two weeks prior to initiating any construction activities at the site, the applicant shall provide notice to businesses and residents within 500 feet of the project site. This notice shall at a minimum provide the following: (1) Project Description, (2) description of construction activities during extended work hours and reason for extended hours, (3) daily construction schedule (i.e., time of day) and expected duration (number of months), (4) the name, e-mail, and phone number of the Project Liaison for the Project that is responsible for responding to any local complaints, and (5) that construction work is about to commence. The liaison would determine the cause of all construction-related complaints (e.g., starting too early, bad muffler, worker parking, etc.) and institute reasonable measures to correct the problem. A copy of such notice and methodology for distributing the notice shall be provided in advance to the City for review and approval.	City of Berkeley	Prior to Demolition Permit Issuance (At least Two Weeks Prior to Construction Commencement)	Building & Safety Division
4.	Construction Phases. The applicant shall provide the Zoning Officer with a schedule of major construction phases with start dates and expected duration, a description of the activities and anticipated noise levels of each phase, and the name(s) and phone number(s) of the individual(s) directly supervising each phase. The Zoning Officer or their designee shall have the authority to require an on-site meeting with these individuals as necessary to ensure compliance with these Conditions of Approval. The applicant shall notify the Zoning Officer of any changes to this schedule as soon as possible.	City of Berkeley	Prior to Demolition Permit Issuance	Building & Safety/Land Use Planning

IV. Prior to Issuance of Building Permit: A. Toxics		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1.	Demolitions & Renovations – Building Materials Survey. A hazardous materials survey shall be prepared by qualified professionals and submitted to the Toxics Management Division (TMD) prior to issuance of the building permit. The survey shall identify building materials, plans for hazardous materials, hazardous waste removal and disposal, the identification of all materials to be disturbed for lead-based paints, PCB containing equipment and caulking, hydraulic fluids, refrigerants, treated wood, and mercury containing devices (including fluorescent light bulbs and mercury switches), asbestos and other hazardous materials and chemicals. The report to the TMD shall include, in addition to the survey, plans on hazardous materials and hazardous waste removal and disposal that comply with State and Federal codes including California Code of Regulations (CCR) 66260 et seq.	City of Berkeley	Prior to Issuance of Building Permit	Toxics Management Division

V. During Demolition/Construction A. Building & Safety		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1	Construction Hours. Construction activity shall be limited to between the hours of 7:00 AM and 6:00 PM on Monday through Friday, and between 9:00 AM and 4:00 PM on Saturday. No construction-related activity shall occur on Sunday or any Federal holiday.	City of Berkeley BMC 13.40.070 (B) (7)	During Demolition/Construction	Building & Safety

V. During Demolition/Construction A. Building & Safety		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
2.	Construction Hours Exceptions. Prior to initiating any activity that might require a longer period, the applicant shall notify the Zoning Officer in writing and request an exception for a specific period of time. Exceptions may be granted for construction activities outside these hours that are analyzed in the Final EIR, including nighttime in-water pile installation, subject to Mitigation Measure NOI-1 of the adopted Mitigation Monitoring and Reporting Program. If an exception is approved, then the applicant shall notify businesses and residents within 500 feet of the Project site describing the expanded construction hours two weeks prior to the expanded schedule start.	City of Berkeley	During Demolition/Construction	Environmental Health & Land Use Planning
3.	Project Construction Website. The applicant shall establish a project construction website with the following information clearly accessible and updated monthly or more frequently as changes warrant: • Contact information (i.e. "hotline" phone number, and email address) for the Project construction manager • Calendar and schedule of daily/weekly/monthly construction activities • The final Conditions of Approval, Mitigation Monitoring and Reporting Program, Transportation Construction Plan, Construction Noise Reduction Program, and any other reports or programs related to construction noise, air quality, and traffic.	City of Berkeley	During Demolition/Construction	Building & Safety
4.	Construction / No Parking Permits. If "Construction/No Parking Permits" are required, the applicant shall contact the Permit Service Center for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). The Zoning Officer and/or Traffic Engineer may	City of Berkeley	During Demolition/Construction	Building & Safety

	limit off-site parking of construction-related vehicles if necessary to protect the health or safety of the surrounding neighborhood.			

V. During Demolition/Construction: B. Land Use Planning		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1.	Avoid Disturbance of Nesting Birds. Initial site disturbance activities, including vegetation and concrete removal, shall be prohibited during the general avian nesting season (February 1 to August 30), if feasible. If nesting season avoidance is not feasible, the applicant shall retain a qualified biologist to conduct a preconstruction nesting bird survey to determine the presence/absence, location, and activity status of any active nests on or adjacent to the Project site. The extent of the survey buffer area surrounding the site shall be established by the qualified biologist to ensure that direct and indirect effects to nesting birds are avoided. To avoid the destruction of active nests and to protect the reproductive success of birds protected by the Migratory Bird Treaty Act and the California Fish & Game Code, nesting bird surveys shall be performed not more than 14 days prior to scheduled vegetation and concrete removal. In the event that active nests are discovered, a suitable buffer (typically a minimum buffer of 50 feet for passerines and a minimum buffer of 250 feet for raptors) shall be established around such active nests and no construction shall be allowed inside the buffer areas until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer	Federal Government State of California	During Demolition/Construction	Land Use Planning

	reliant on the nest). No ground-disturbing activities shall occur within this buffer until the qualified biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Nesting bird surveys are not required for construction activities occurring between August 31 and January 31.			
2.	Unanticipated Discovery of Paleontological Resources. In the event of an unanticipated discovery of a paleontological resource during construction, excavations within 50 feet of the find shall be temporarily halted or diverted until the discovery is examined by a qualified archeologist (per Secretary of Professional Qualification Standards National Park Service 1983). The qualified paleontologist shall document the discovery as needed, evaluate the potential resource, and assess the significance of the find. The archeologist shall notify the appropriate agencies to determine procedures that would be followed before construction is allowed to resume at the location of the find. If the City determines that avoidance is not feasible, the archeologist shall prepare an excavation plan for mitigating the effect of the Project on the qualities that make the resource important, and such plan shall be implemented. The plan shall be submitted to the City for review and approval.	City of Berkeley	During Demolition/Construction	Land Use Planning
3.	Unanticipated Discovery of Tribal Cultural Resources. In the event that Tribal Cultural Resources are identified during construction, all work within 50 feet of the discovery shall be redirected. The Project applicant and Project construction contractor shall notify the Land Use Planning Division within 24 hours. The City will contact any tribes who have requested consultation under AB 52 (if applicable), as well as contact a qualified archaeologist, to evaluate the resources and situation and provide recommendations. If it is determined that the resource is	City of Berkeley	During Demolition/Construction	Land Use Planning

	a Tribal Cultural Resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with State guidelines and in consultation with Native American groups. If the resource cannot be avoided, additional measures to avoid or reduce impacts to the resource and to address tribal concerns may be required.			
4.	Unanticipated Discovery of Archeological Resources. Pursuant to CEQA Guidelines section 15064.5(f), "provisions for historical or unique paleontological resources accidentally discovered during construction" should be instituted. Therefore: A. In the event that any prehistoric or historic subsurface cultural resources are discovered during ground disturbing activities, all work within a minimum of 50 feet of the resources shall be halted and the Project applicant and/or lead agency shall consult with a Registered Professional Archeologist or paleontologist, and the culturally-affiliated California Native American Tribe ("Tribe") to assess the significance of the find. B. If any find is determined to be significant, representatives of the Project proponent and/or the lead agency and the Tribe shall meet to determine the appropriate avoidance measures or other appropriate measures to mitigate impacts to the Tribal Cultural Resource., C. In considering any suggested measure proposed by the Registered Professional Archeologist, the Tribe and the lead agency shall confer and such consultation will be considered concluded when either of the following occurs: (1) the parties agree to mitigation measures to mitigate or avoid a significant effect, if a significant effect exists, on a Tribal Cultural Resource or (2) A party, acting in good faith after reasonable effort, concludes that mutual agreement cannot be	City of Berkeley	During Demolition/Construction	Land Use Planning

	reached. D. If avoidance is unnecessary or infeasible, other appropriate measures such as removal and reburial of the Tribal Cultural Resource in an alternate location with tribal cultural monitor such as removal and reburial of the Tribal Cultural Resource in an alternate location with tribal cultural monitors may be instituted. Work may proceed on other parts of the Project site while mitigation measures for cultural resources is carried out. E. If significant materials are recovered, the Registered Professional Archeologist shall prepare a report on the findings for submittal to the Northwest Information Center.			
5.	Discovery of Human Remains. In the event that human skeletal remains are uncovered at the Project site during ground-disturbing activities, all work shall immediately halt and the Alameda County Coroner shall be contacted to evaluate the remains, and following the procedures and protocols pursuant to Section 15064.5 (e)(1) of the CEQA Guidelines Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this section, with the most likely descendants regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment.	City of Berkeley	During Demolition/Construction	Land Use Planning

CONDITIONS OF APPROVAL

Property Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

V. During Demolition/Construction: B. Land Use Planning		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
	A. The descendants' preferences for treatment may include the following: i. The nondestructive removal and analysis of human remains and items associated with Native American human remains. ii. Preservation of Native American human remains and associated items in place. iii. Relinquishment of Native American human remains and associated items to the descendants for treatment. iv. Other culturally appropriate treatment. B. The parties may also mutually agree to extend discussions, taking into account the possibility that additional or multiple Native American human remains, as defined in this section, are located in the Project area providing a basis for additional treatment measures. C. For the purposes of this section, "conferral" or "discuss and confer" means the meaningful and timely discussion and careful consideration of the views of each party, in a manner that is cognizant of all parties' cultural values, and where feasible, seeking agreement. Each party shall recognize the other's needs and concerns for confidentiality of information provided to the other. i. Human remains of a Native American may be an inhumation or cremation, and in any state of decomposition or skeletal completeness. ii. Any items associated with human remains that are placed or buried with Native American human remains are to be treated in the same manner as the remains, but do not by themselves constitute human remains.

V. During Demolition/Construction: B. Land Use Planning		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
	D. Whenever the commission is unable to identify a descendant, or the descendants identified fail to make a recommendation, or the landowner or his or her authorized representative rejects the recommendation of the descendants and the mediation provided for in subdivision (k) of Public Resources Code Section 5097.94. if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the property in a location not subject to further and future subsurface disturbance. To protect these sites, that landowner shall do one or more of the following: i. Record the site with the commission or the appropriate Information Center. ii. Utilize an open-space or conservation zoning designation or easement. ii. Record a document with the county in which the property is located. F. Upon the discovery of multiple Native American human remains during a ground disturbing land development activity, the landowner may agree that additional conferral with descendants is necessary to consider culturally appropriate treatment of multiple Native American human remains. Culturally appropriate treatment of such a discovery may be ascertained from review of the site utilizing cultural and archaeological standards. Where the parties are unable to agree on the appropriate treatment measures the human remains and buried with Native American human remains shall be reinterred with appropriate dignity, pursuant to subdivision (e). G. Per State law, any action taken to implement an agreement developed pursuant to this Condition of Approval shall be exempt from the CEQA.

Table 2 1 Draft EIR Comment Letters Summary 2-1
Table 2 2 Topical Responses to Comments Titles Summary 2-5

1 Introduction

In accordance with the California Environmental Quality Act (CEQA) Guidelines Section 15088, the City of Berkeley has evaluated the comments received on the Berkeley Water Transportation Pier Ferry Draft Environmental Impact Report (EIR). The responses to the comments and errata, which are included in this document—together with the Draft EIR and appendices as well as the Mitigation Monitoring and Reporting Program (MMRP)—form the Final EIR for use by the City of Berkeley in its review, consideration, and decision-making.

This document is organized into three chapters:

- **Chapter 1 – Introduction.** Discusses the purpose and organization of this document and summarizes the environmental review process for the project.
- **Chapter 2 – Responses to Comments.** Provides a list of the agencies, organizations, and persons who provided Draft EIR written comments as well as verbal comments during the March 16, 2026, Draft EIR public meeting. Copies of all Draft EIR comment letters received as well as the Draft EIR public meeting transcript are included and bracketed/labeled. Corresponding responses to these comments are also included in this section.
- **Chapter 3 – Errata.** Lists refinements to and clarifications to Draft EIR text, tables, and figures.

The Final EIR includes the following contents:

- Final EIR introduction (Chapter 1 of this document)
- Draft EIR comments received and responses to comments (Chapter 2 of this document)
- Errata (Chapter 3 of this document)
- Draft EIR and appendices (provided under separate cover)
- MMRP (provided under separate cover)

1.1 Environmental Review Process

Pursuant to CEQA, lead agencies are required to consult with public agencies having jurisdiction over a proposed project and to provide the general public with an opportunity to comment on the Draft EIR.

The City of Berkeley distributed a Notice of Preparation (NOP) of the EIR for a 31-day agency and public review period commencing April 18, 2025, and public comment closed on May 19, 2025. In addition, the City of Berkeley held a virtual Scoping Meeting on May 5, 2025. The meeting was aimed at providing information about the proposed project to members of public agencies, interested parties and residents/community members, and at receiving comments on the scope and content of the EIR.

The Draft EIR was made available for public review for a 60-day comment period that began on February 27, 2026, and ended on April 28, 2026. Please note that the comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. A public meeting was held virtually on Monday, March 16, 2026. The Notice of Availability of a Draft EIR was posted with the County Clerk, sent to the State Clearinghouse, posted on the City's website, and distributed via e-mail.

1.2 Draft EIR Comments Received Summary

The City received written comment letters on the Draft EIR from 4 agencies, 10 organizations, and 88 comment letters from 69 persons.[1] The City also received comments during a public meeting held on March 16, 2026, from 23 individuals, two of which were representatives of organizations. Copies of written comments are included in Chapter 3 of this document.

[1] While the City received 88 comment letters, many were from the same person.

2 Response to Comments

2.1 Comments Received on the Draft EIR

This Section includes comments received during the circulation of the Draft Environmental Impact Report (EIR) prepared for the City of Berkeley Water Transportation Pier Ferry Project, as well as responses to such comments.

The Draft EIR was circulated for a 60-day public review period that began on February 27, 2026, and ended on April 28, 2026. The City of Berkeley received 102 comment letters and 23 verbal comments on the Draft EIR. Agency letters that were received are labeled with an "A" and numbered in the order they were received. Comment letters received from organizations are labeled with an "O" and numbered in the order they were received. Comment letters received from individual persons are labeled with a "P" and numbered in the order they were received. Verbal comments received at the Draft EIR Public Meeting held on March 16, 2026, are labeled with "TR" and numbered in the order in which commenters spoke. The comment letter identification label, as well comment letter author name/association and their corresponding starting page number, are listed in Table 2-1 below.

Table 2-1 Draft EIR Comment Letters Summary

Comment Letter ID and Author Name/Association		Page Number
Agency Letters		
A1	Brian K. Wines, San Francisco Bay Regional Water Quality Control Board (SFBRWQCB)	2-63
A2	Craig Shuman, California Department of Fish and Wildlife (CDFW)	2-75
A3	Lindsay Martien, San Francisco Bay Conservation and Development Commission (BCDC)	2-103
A4	Yungsheng Luo, California Department of Transportation (Caltrans) District 4	2-144
Organization Letters		
O1	Shreyas Chand, Cal Sailing Club	2-149
O2	Geoffrey Lomax, Within Our Means Berkeley	2-151
O3	Arthur Feinstein and Norman La Force, Citizens for East Shore Parks	2-159
O4	Allan Abshez, Parks, Recreation, and Waterfront Commission	2-167
O5	John Bauters, Sierra Club San Francisco Bay Chapter	2-178
O6	David Lewis, Save the Bay	2-229
O7	Carin High, Citizens Committee to Complete the Refuge	2-236
O8	Memo Gunay, Cal Sailing Club	2-256
O9	Glen Phillips, Golden Gate Bird Alliance	2-262
O10	Camille Antorini, Berkeley Waterfront Community Coalition	2-271

TR1.20	Carol Valk	2-993
TR1.21	Charley Paffenbarger	2-995
TR1.22	Doug Yamamoto	2-996
TR1.23	Madeleine King	2-997

The comment letters and responses follow. The comment letters have been numbered sequentially, and each separate issue raised by the commentator has been assigned a number. The responses to each comment identify first the number of the comment letter, and then the number assigned to each issue (Response A1-1, for example, indicates that the response is for the first issue raised in comment Letter A1).

In some cases, specific changes to the text of the Draft EIR have been made in response to comments received. In no case do these revisions result in a greater number of impacts or impacts of a substantially greater severity than those set forth in the Draft EIR. Where revisions to the Draft EIR text are called for, the page is set forth, followed by the appropriate revision. Added text is indicated with <u>underlined</u> and deleted text is indicated with strikeout. Page numbers correspond to the page numbers of the Draft EIR.

2.2 Topical Responses to Comments

This Section summarizes common themes and content of comments received on the Draft EIR, as well as responses to such comments. The titles of each topical response, as well as their corresponding starting page number, are listed in Table 2-2 below.

Table 2-2 Topical Responses to Comments Titles Summary

Topical Responses to Comments Titles	Page Number
2003 WETA EIR Applicability	2-6
Alternatives	2-8
BCDC Jurisdiction, Planning Consistency, and Permit Compliance	2-11
Biological/Underwater Noise	2-15
CEQA Adequacy	2-17
CEQA Baseline/Baseline Recreation Users	2-17
CEQA Process	2-19
Construction & Operation Noise at Nearby Parks	2-19
Cumulative Impacts	2-25
Electric Ferry	2-27
Ferry Operations	2-28
In-Marina Ferry Terminal	2-29
Land Use/Plan Consistency	2-31
Loss of Ferry Vessel Control	2-32
Maintenance Dredging	2-37
Measure L	2-39
Mitigation Measure Requirements	2-40
Nighttime Lighting/ALAN[1]	2-42
Ordinance (Prohibited Recreational Activities)	2-45
Parking	2-47
Potential Impacts on Existing Recreational Water Access	2-49
Project Cost/Financial Feasibility	2-50
Sea Level Rise	2-51
Seawall Drive/View Access	2-53
Siltation/Wave Climate	2-53
Vessel Aesthetics	2-55
VMT	2-56
Whale Strike	2-57
Wind	2-59

[1] ALAN is the abbreviation of “Artificial Light at Night.”

2.2.1 Topical Response: 2003 WETA EIR Applicability

For clarification, the City notes that the State Clearinghouse number for the 2003 WETA EIR was omitted from Draft EIR Section 1.1.3, Incorporation by Reference. Accordingly, the following clarification text change has been made to Draft EIR Section 1.1.3, Incorporation by Reference (page 1-2):

> This EIR hereby incorporates by reference the Final Program EIR for the Expansion of Ferry Transit Service in the San Francisco Bay Area (State Clearinghouse Number 2001112048; WETA Program EIR).

This revision is clarifying in nature and does not alter the analysis, conclusions, or reliance on the 2003 WETA EIR as described in the Draft EIR.

CEQA Guidelines Section 15150 allows for an EIR to "incorporate by reference all or portions of another document", allowing for such incorporated language to be considered part of an EIR, thereby reducing duplication and focusing analysis on what is new or relevant. As stated on Draft EIR Section 1.1.3, *Incorporation by Reference* (page 1-2), the 2003 WETA EIR is incorporated into the proposed project Draft EIR. The 2003 WETA EIR specifically analyzed dredging; navigation; wake analysis; water resources; biology; air quality; land use and community issues; aesthetics; cultural resources; geology; noise; transportation; energy; and growth inducing impacts. As stated on Page 1-2, the Draft EIR incorporates by reference the analyses of all potential environmental impact topics, including background information regarding the environmental setting and adopted mitigation measures. The 2003 WETA EIR is incorporated by reference into the Draft EIR, but it does not tier from the 2003 WETA EIR. Tiering, as defined in CEQA Guidelines Section 15152, refers to using information or analysis from a broader EIR to concentrate the focus of a future project-level EIR. The 2003 WETA EIR is a programmatic analysis of ferry service expansion in the San Francisco Bay Area, while the 2026 proposed project Draft EIR is a project-level analysis for a specific and separate Berkeley pier ferry project not tiered from the 2003 WETA EIR.

Though the Draft EIR does incorporate select information from the older 2003 WETA EIR, the project-level Draft EIR prepared for the proposed project provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This approach allows information from the 2003 WETA EIR to complement the information contained in the Draft EIR. The mitigation measures outlined in the 2003 WETA EIR are implemented by WETA on all applicable projects, including the proposed project, and are considered a part of the regulatory baseline for this Draft EIR.

While the Draft EIR independently analyzes all the potential impacts of the project, it relies on some information from the 2003 WETA EIR. Specifically, it incorporates by reference mitigation measures that are now part of the regulatory context (as well as relevant underlying analysis) with respect to whale strikes, hazards, accidental spills, and water quality, because these potential impacts are consistent with and attributable to the expansion of ferry service Bay-wide. With respect to site-specific impacts such as dredging, nearshore conditions, and terminal construction and operation, the Draft EIR provides independent project-level analysis and does not rely on any part of the 2003 WETA EIR.

The Draft EIR independently analyzes site-specific dredging impacts and does not rely on the 2003 WETA EIR. Instead, dredging associated with the project is fully evaluated in Section 3.3, *Biological Resources*; Section 3.4, *Cultural Resources*; Section 3.5, *Geology and Soils*; Section 3.7, *Hazards and Hazardous Materials*; Section 3.8, *Hydrology and Water Quality*; Section 3.9, *Land Use and Planning*; Section 3.10, *Noise*; Section 3.13, *Tribal Cultural Resources*; and Section 3.14, *Utilities and Service Systems*. Similarly, the 2003 WETA EIR evaluated general ferry routes between San Francisco and the East Bay, including Berkeley. However, the Draft EIR does not rely on the 2003 WETA EIR for terminal siting or nearshore route conditions. The specific Berkeley pier terminal location and approach routes were determined through project feasibility and design analyses and are accordingly evaluated independently in the Draft EIR.

Draft EIR Section 3.7, *Hazards and Hazardous Materials*, Section 3.7.3, *Regulatory Framework* states that the analysis of potential impacts on water resources from accidental spills due to ferry operation, as well as mitigation measures intended to minimize the potential for accidental spills and impacted water quality from ferry operations found in the 2003 WETA EIR are incorporated by reference and have been and would continue to be implemented by WETA as part of service expansions, including for the proposed project (Page 3.7-19). As discussed, under Draft EIR Impact HAZ-1 (pages 3.7-24 through 3.7-30) incorporation and implementation of 2003 WETA EIR Mitigation Measures W-3.1 through W-3.3 as part of the proposed project will require implementation of spill prevention planning, contingency planning, and operational controls, including training and response preparedness, to minimize the potential for accidental discharges and related water quality impacts from ferry operations. As described in the Draft EIR, potential operational discharges would be limited to minor onboard sources such as lubricants, hydraulic fluids, or sewage, and WETA continues to implement these safety and contingency planning measures across its ferry system (refer to Draft EIR Page 3.7-29). Accordingly, implementation of 2003 WETA EIR Mitigation Measures W-3.1 through W-3.3, which is an existing regulatory baseline condition, would minimize the potential for operational spill hazards resulting in a less-than-significant impact with regard to potential operational spill hazards and potential related water quality impacts. The Draft EIR independently evaluates construction-related spill risk in Section 3.8, *Hydrology and Water Quality*, and incorporates project-specific mitigation, which requires the incorporation of BMPs in the Stormwater Pollution Prevention Plan prior to and during construction (refer to Impact HYD-1, pages 3.8-27 through 3.8-35).

Concerning whale strikes, the Draft EIR incorporates by reference mitigation measures from the 2003 WETA EIR (*see* Section 3.3.3) but further analyzes the potential for whale strikes with updated information. Refer to Section 2.2.28, *Topical Response: Whale Strike*, for a discussion specific to potential whale strikes. As discussed, under Draft EIR Impact BIO-1 (pages 3.3-42 through 3.3-56), implementation of 2003 WETA EIR Mitigation Measures B-15.1 and B-15.2, which are existing adopted WETA requirements would require implementation of a whale sighting awareness and reporting program, including crew training and real-time communication of whale locations among ferry operators and coordination with U.S. Coast Guard sighting reports, and use of onboard whale detection technologies to identify marine mammals and avoid vessel strikes, resulting in a less-than-significant impact with regard to potential operational whale strike impacts (refer to Draft EIR page 3.3-53).

As discussed, under Draft EIR Impact BIO-1 (pages 3.3-42 through 3.3-56) the Draft EIR incorporates by reference WETA Mitigation Measure NOI-4.1 from the 2003 WETA EIR, which requires coordination with federal and state resource agencies regarding ferry routes and site-specific evaluation of potential impacts to sensitive marine mammal haul-out areas to address potential impacts from operational noise. However, because the proposed project is a site-specific project with defined terminal location and approach routes and uses an electric rather than a diesel ferry, the Draft EIR does not rely on the 2003 WETA EIR for mitigation of in-water noise impacts. Instead, the Draft EIR provides updated project-level analysis and mitigation tailored to the project setting. Specifically, Mitigation Measure BIO-1(d) requires implementation of sound attenuation measures during pile driving, and Mitigation Measure BIO-1(e) requires preparation and implementation of a Marine Mammal Monitoring Plan, including establishment of shutdown zones, vessel operation protocols, and real-time monitoring by qualified biologists. These project-specific measures, which are consistent with 2003 WETA EIR findings and reflect current NOAA Fisheries guidance and NMFS-approved marine mammal protection practices, would result in a less-than-significant impact with regard to aquatic resources impacts associated with operational in-water noise. refer to Section 2.2.10, *Topical Response: Electric Ferry,* for further discussion regarding the 2003 WETA EIR and impacts to aquatic species from operational ferry noise. Section 3.3, Biological Resources, evaluates potential operational impacts, including underwater noise and vessel interactions with aquatic species (pages 3.3-39 through 3.3-66), while Section 3.8, Hydrology and Water Quality, considers in-water infrastructure components and the reduced potential for fuel-related spill risks associated with electrification (pages 3.8-25 through 3.8-42). Section 3.7, Hazards and Hazardous Materials, evaluates safety considerations related to battery storage systems and electrical infrastructure (pages 3.7-22

through 3.7-37), and Section 3.10, Noise, addresses construction and operational noise generated by ferry vessels and associated electrical equipment (pages 3.10-12 through 3.10-34).

Aside from the clarifying text revision described above, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to these comments.

2.2.2 Topical Response: Alternatives

Alternative Assumptions or Requirements

Pursuant to CEQA Guidelines Section 15126.6(a) and 15126.6(f), an EIR must evaluate a reasonable range of potentially feasible alternatives that would attain most of the project objectives and permit a meaningful comparison of environmental impacts. Consistent with CEQA Guidelines Sections 15125, 15126.6(d), and 15151, analysis may rely on reasonable assumptions, supported by available data and professional evaluation, to describe baseline conditions, future conditions, and the comparative environmental effects of the proposed project and alternatives.

Draft EIR Chapter 5, *Alternatives*, Sections 5.3 through 5.6 (pages 5-3 through 5-24) describe the project objectives, screening criteria, and definitions of the alternatives analyzed, including Alternative 1 (No Project Alternative), Alternative 2 (Shortened Breakwater Alternative), Alternative 3 (Shortened Pier Alternative), and Alternative 4 (Reduced Landside Facilities Alternative). These sections identify the assumptions used to define each alternative, including construction methods, operational characteristics, and physical design characteristics such as pier length, breakwater extent, and recreational amenities. The Draft EIR relies on a combination of engineering and environmental analyses to establish consistent assumptions across alternatives, including engineering design inputs prepared by project engineers to estimate construction duration, dredging quantities, pile driving activity, and footprints for each alternative; environmental resource-specific quantitative and qualitative analyses, including transportation and operational assumptions, which apply consistent methodologies to facilitate comparison between the proposed project and all analyzed alternatives. As described in Draft EIR Chapter 5, key differences between analyzed alternatives include reductions in Bay fill, differences in pier and breakwater extent, provision of recreational amenities, and variations in construction intensity and duration. These physical differences form the basis for quantitative comparisons across alternatives (refer to Table 5-2, page 5-31).

These assumptions are necessary to ensure that the alternatives analysis provides a logical and comparative framework for evaluating environmental impacts. CEQA recognizes that analysis of future conditions necessarily involves forecasts and does not require absolute certainty, provided that assumptions are reasonable and supported by substantial evidence in the record (CEQA Guidelines Section 15144). The Draft EIR applies appropriate and consistent assumptions based on available data and professional judgement throughout the analysis, including in defining and evaluating alternatives, consistent with CEQA requirements for establishing an environmental baseline and reasonably foreseeable future conditions (CEQA Guidelines Sections 15125 and 15126.6(e)). Accordingly, the assumptions and requirements used to develop and evaluate alternatives, including baseline conditions, No Project conditions, and design parameters, are appropriate and consistent with CEQA. Environmental impacts associated with the proposed project and evaluated alternatives are addressed throughout the Draft EIR using a consistent framework, and mitigation measures are identified as appropriate.

With respect to the No Project Alternative, the Draft EIR evaluates reasonably foreseeable future conditions in the absence of the project, consistent with CEQA Guidelines 15126.6(e)(2). This includes consideration of planned and expected changes in travel patterns, population, and regional growth that would occur regardless of project approval. As described in the Draft EIR (refer to Section 3.12, *Transportation*; Chapter 5, *Alternatives*; and Appendix F, *Transportation Impact Analysis*), these conditions include continued reliance on existing travel modes, which are expected to result in greater regional vehicle travel compared to conditions with the proposed project in place. The analysis is based on available regional and project-specific data, including observed travel behavior and ridership

assumptions, and reflects a reasonable projection of future conditions rather than a speculative or outcome-driven scenario. As a result, the No Project Alternative reflects a reasonable forecast of future environmental conditions, including transportation patterns, in the absence of the project. The comparative analysis appropriately uses this scenario to evaluate differences in environmental impacts, including vehicle miles traveled and associated effects (refer to Draft EIR Chapter 5, *Alternatives*, Table 5-2 on page 5-31).

In conclusion, the Draft EIR alternatives analysis and associated assumptions are adequate under CEQA. Therefore, no changes to the Draft EIR alternatives-related analyses or conclusions are necessary in response to these comments.

Project Objectives

CEQA requires evaluation of a reasonable range of alternatives capable of feasibly attaining most of the basic project objectives but avoiding or substantially lessening any of the significant impacts of the project (CEQA Guidelines §15126.6(a)), and does not require consideration of alternatives that are infeasible or that do not meet most of those objectives (CEQA Guidelines §15126.6(c)). Consistent with these requirements, Chapter 5, *Alternatives*, evaluates options that could feasibly attain most of the project's objectives while avoiding or reducing significant environmental effects associated with the project.

The project objectives "should include the underlying purpose of the project and may discuss project benefits." CEQA Guidelines § 15124(b). The specific formulation of project objectives is a policy decision of the lead agency. Lead agencies have discretion to define project objectives and to eliminate from detailed consideration alternatives that do not reasonably achieve those objectives. Accordingly, alternatives that would not meet most of the project's fundamental purposes may be appropriately screened from detailed analysis.

The City clearly defines the basic project objectives in Section 5.3 of the Draft EIR as follows: "(1) enhance public access and recreational opportunities at the Berkeley Waterfront and (2) provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco." The City's choice to include ferry service as part of its basic project objectives is not an overly narrow definition of the project objectives and rather reflects a long-standing and well-documented interagency effort to establish ferry service at the Berkeley Waterfront. As documented on the City's project website[1], the City has been coordinating with WETA since 2018 to evaluate and advance a dual-purpose pier that would support both public access and ferry service, including execution of a Memorandum of Understanding to fund and complete feasibility studies, followed by subsequent amendments and funding agreements to advance design, environmental review, and permitting. These efforts build upon WETA's 2016 Strategic Plan identifying Berkeley as a priority location for expanded ferry service and reflect a multi-year planning and funding partnership between the City and WETA.[2] Accordingly, establishing ferry service at the Berkeley Waterfront is a fundamental and longstanding objective of the project.

The basic project objectives used by the City have not precluded the analysis of a reasonable range of alternatives, as evidenced by the analyses of four alternatives (including the No Project Alternative). Furthermore, several of the alternatives that were considered but rejected were rejected because they were infeasible, not because they did not meet the basic project objectives. For example, several off-site alternatives, as well as alternatives involving increasing BART capacity were rejected for being infeasible,

[1] Berkeley, City of. 2026. Berkeley Pier with Ferry Access Project. https://berkeleyca.gov/your-government/our-work/capital-projects/berkeley-pier-ferry-access-project (accessed June 2026).

[2] Berkeley, City of. 2024. Resolution No. 71,325-N.S. Amending the Memorandum of Understanding Between the City of Berkeley and Water Emergency Transportation Authority. https://berkeleyca.gov/sites/default/files/documents/5_14_2024%3B%20CLK%20-%20Resolution%3B%20City%20Council%3B%2071325%3B%20%3B%20AMENDING%20THE%20MEMORANDUM%20OF%20UNDERSTANDING%20BETWEEN%20CITY%20OF%20BERKELEY%20AND%20WATER%20EMERGENCY%20TRANSPORTATION%20AUTHORITY.pdf (accessed June 2026).

given that they were outside the City's jurisdiction. As discussed further in Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*, the alternative within the Berkeley Marina was rejected for not being operationally feasible, in addition to not meeting the basic project objectives and for not avoiding or substantially lessening any of the significant effects of the project. This demonstrates that the project objectives did not constrain the analysis of reasonable alternatives.

The City identified fundamentally different approaches in the Draft EIR, such as different locations, different scales, and different transit projects, but ultimately rejected them, consistent with CEQA Guidelines § 15126.6(c) because they either were infeasible, did not avoid or substantially lessen a significant environmental effect, or did not attain most of the basic project objectives (refer to Section 5.9 of the Draft EIR). CEQA requires the EIR "set forth only those alternatives necessary to permit a reasoned choice" and informed decision-making. CEQA Guidelines § 15126.6(f). Here, the City provided three different action alternatives, in addition to the No Project Alternative, to provide a meaningful comparison to the proposed project. The three EIR Alternatives provided sufficient variation to allow for meaningful decision-making. Two of the alternatives included in the Draft EIR include a reduction in Bay fill (from a shortened pier and a shortened breakwater), while reducing public access to the Bay. These alternatives allow decision makers to weigh the environmental benefits of reduced fill with the consequence of reduced public access to the Bay. One of the alternatives included in the Draft EIR reduces the amenities associated with the proposed project. Specifically, it eliminates the cycle track; renovations to University Avenue and Seawall Drive; bus facilities; public plaza; Bay Trail Extension; and renovated parking lot off Seawall Drive, including no installation of EV charging for parking stalls. This alternative offers a very different and reduced design compared to the proposed project. This alternative allows decision makers to weigh the environmental benefits of reduced construction with the consequence of reduced facilities for public use.

The Draft EIR provides sufficient and appropriate objectives to support the environmental review process, including an adequate evaluation of a reasonable range of alternatives consistent with project objectives and, thus, is consistent with CEQA requirements. Therefore, no changes to the Draft EIR project objectives or the project- or alternatives-related analyses and conclusions are necessary in response to these comments.

Alternatives Dismissed

Pursuant to CEQA Guidelines Section 15126.6(a), an EIR is required to consider and analyze a range of reasonable project alternatives that would feasibly attain most of the basic objectives but would avoid or substantially lessen significant impacts of the project. Whether or not alternative sites should be included as potential alternatives depends on the particular facts of the case, with the question focusing on whether the range of analyzed alternatives is reasonable. Draft EIR Chapter 5, *Alternatives*, contains a comparative impact assessment of four alternatives to the proposed project, a discussion of alternatives considered but rejected, and a determination of the environmentally superior alternative. Therefore, Draft EIR Chapter 5, *Alternatives*, adequately evaluates alternatives that could feasibly attain most of the project objectives while avoiding or reducing significant environmental effects associated with the project.

CEQA Guidelines Section 15126.6(c) states that an EIR should identify any alternatives that were rejected during the scoping process and explain why they were rejected. The reasons for rejection may include failure to meet project objectives, infeasibility, or the inability to avoid significant environmental impacts. As discussed in Draft EIR Section 5.9, *Alternatives Considered but Rejected*, (pages 5-25 through 5-28), the City considered 11 alternatives, some with several variations, that were ultimately rejected. Specific reasons for rejection include increased environmental impact; no reduction in environmental impacts when compared to the project; infeasibility, including jurisdiction issues; and failure to meet most of the basic objectives of the project.

In this case, the EIR considered a range of alternatives and rejected those that were unreasonable or infeasible including off-site alternatives. The EIR is not required to select an offsite alternative for analysis. Alternatives located entirely outside of the City's jurisdiction, such as the Golden Gate Fields and

Emeryville Marina locations identified by comments, are infeasible for the City to construct or approve, as the City has no authority to permit or implement a project outside of its own jurisdictional boundaries. In addition to jurisdictional feasibility, the Draft EIR evaluated each of these dismissed alternatives against its ability to meet the project objectives and to eliminate or reduce significant impacts. It compared each of these dismissed alternatives to the proposed project and the no-project alternative, evaluated the extent to which each alternative would avoid or reduce the significance of environmental impacts associated with the proposed project. As required, the EIR provided information about each dismissed alternative including the major characteristics and significant environmental effects of each one. CEQA Guidelines Section 151226.6(a) and (d) supports this approach.

Several of the specific alternative locations considered in the 2008 EIS/EIR and referenced by comments were similarly evaluated and rejected. An alternative near the Berkeley Fishing Pier was not considered further because it was substantially similar in concept to the proposed project. An alternative off Gilman Street was rejected because it would increase, rather than decrease, environmental impacts (page 5-26). Given the geography of the shoreline, no alternative location near the foot of Gilman Street would avoid siting the alternative within Eastshore State Park, an area more ecologically sensitive than the proposed project site. Locating a ferry terminal within an established state park also presents a feasibility concern independent of environmental impacts: the project is expected to be funded in part by federal Department of Transportation funds, which would trigger Section 4(f) requirements under the US Department of Transportation Act. Under Section 4(f), agencies must select an alternative that completely avoids the use of protected public parks, historic sites, or wildlife refuges unless that alternative is deemed infeasible or imprudent. Because other alternative sites have been found to be feasible and prudent (i.e., the proposed project site), an alternative off Gilman Street is not expected to be feasible, pursuant to Section 4(f) requirements. More generally, the purpose of Draft EIR Section 5.9 is to identify the principal reasons certain alternatives were not carried forward for detailed analysis, not to provide a project-level environmental impact analysis of each conceptual alternative considered during early planning. The Draft EIR therefore provides an adequate description of the alternatives screening process and the basis for the City's determinations.

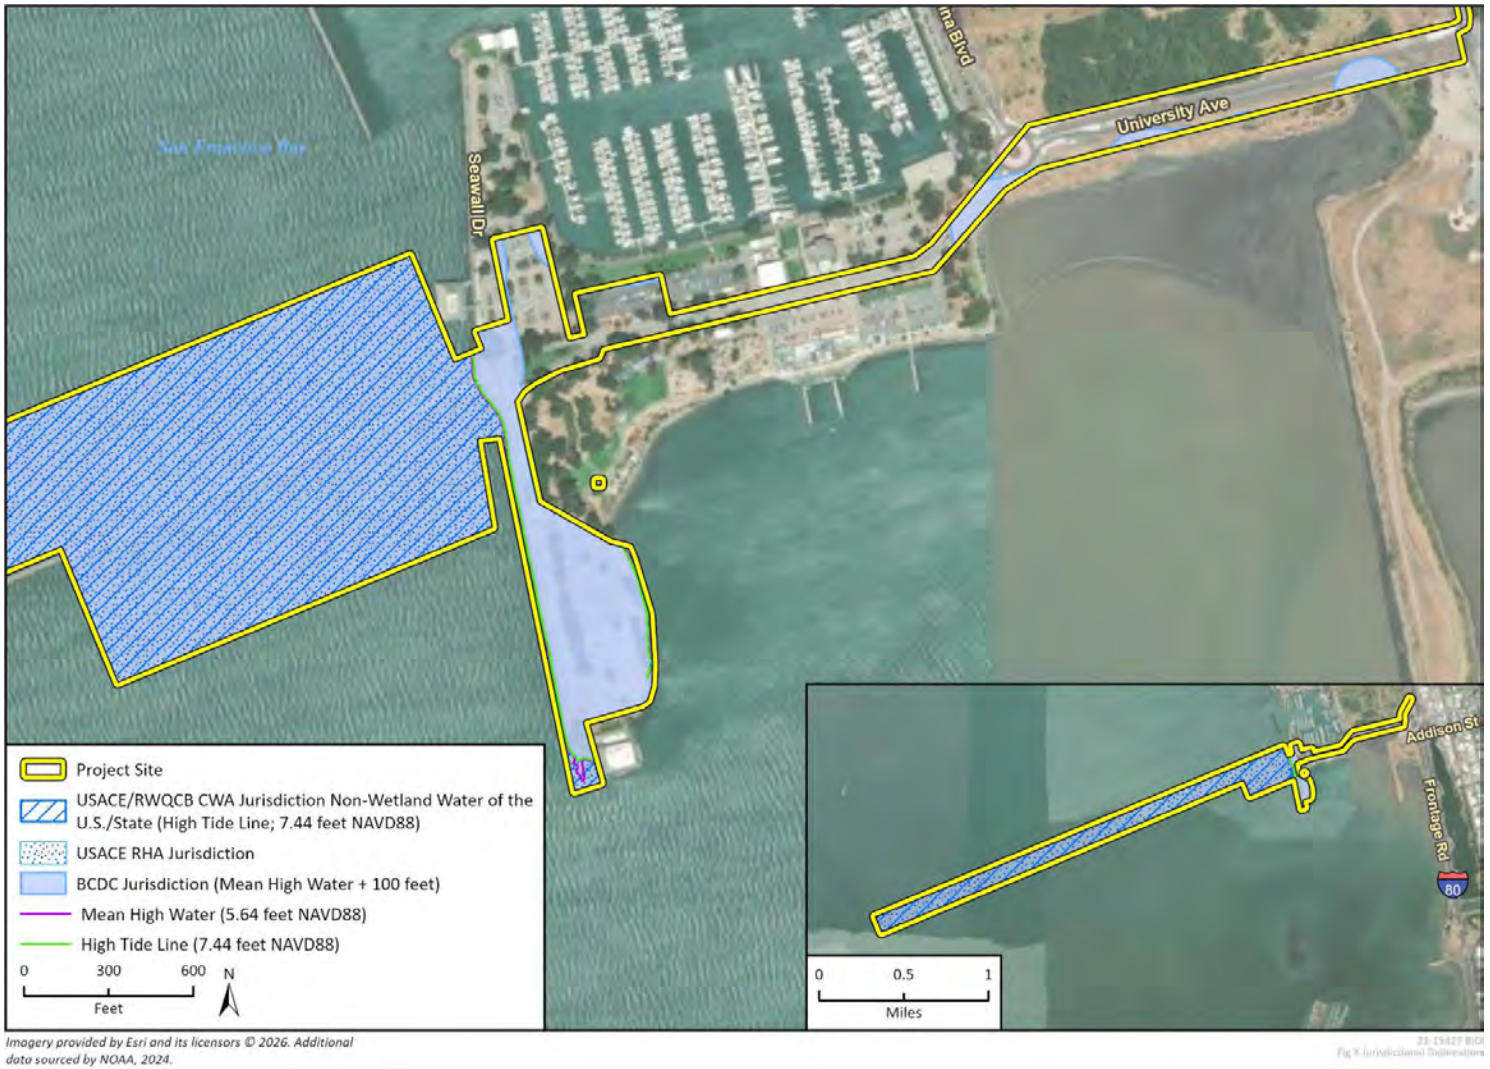
The City considered the alternatives identified by the comments in Draft EIR Chapter 5, *Alternatives*, but ultimately determined that they were either infeasible, would not attain the basic objectives of the proposed project, or would not provide reduced significant environmental impacts. Accordingly, the EIR satisfies the CEQA requirement to evaluate a reasonable range of alternatives.

Therefore, no changes to the Draft EIR conclusions or analysis are necessary in response to these comments.

2.2.3 Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance

BCDC Jurisdiction

Following publication of the Draft EIR, the City coordinated with BCDC to confirm jurisdictional boundaries applicable to the project site. Section 3.3, *Biological Resources* of the Draft EIR, Figure 3.3-3 has been updated accordingly to reflect BCDC jurisdictional boundaries for purposes of environmental analysis and permitting. The jurisdictional boundaries reflected in the revised figure were approved by BCDC staff on April 9, 2026.[3] However, BCDC may modify these limits if new information becomes available. Figure 3.3-3 on page 3.3-16 of the Draft EIR has been revised and the updated Figure 2, below, is included in the Final EIR. The modifications were very minor: specifically, they indicate that an additional portion of approximately 20,930 square feet on the eastern side of Seawall Drive at and just north of University



[3] Ilsley, Olivia. 2026. Shoreline Development Analyst, San Francisco Bay Conservation and Development Commission (BCDC). Personal communication via email regarding BCDC jurisdictional boundaries in the project site vicinity with Liza McNulty, City of Berkeley. April 9, 2026.

Avenue is subject to BCDC jurisdiction. As discussed below, this inclusion does not raise any significant environmental issues.

As explained on page 3.3-35 of the Draft EIR, under the McAteer-Petris Act, BCDC jurisdiction includes (1) "Bay jurisdiction," which generally includes areas subject to tidal action such as submerged lands and tidelands, and (2) the "Shoreline Band," which extends inland from the Bay shoreline (generally up to 100 feet landward) where development is also subject to BCDC review. The BCDC Jurisdiction shown on revised Figure 3.3-3 below includes both of these areas. Based on the jurisdictional limits approved by BCDC, the existing Seawall Drive parking lot and all portions of Seawall Drive within the project site are located within BCDC's jurisdiction. In the northern portion of the project site, portions of the parking lot across from Skate's Restaurant are also located within BCDC's Shoreline Band jurisdiction. Most of University Avenue is located outside of BCDC jurisdiction except for some portions, which overlap with BCDC Shoreline Band jurisdiction. Notably, this jurisdictional understanding was reflected in the Draft EIR and the updated boundary is only slightly changed adjacent to Seawall Drive at and north of the University Avenue intersection, as a result of revision of Figure 3.3-3.

All project components of the pier, breakwater, ferry terminal, pier gate, and shoreline revetment area would be located entirely within BCDC's Bay jurisdiction. The proposed Plaza, Bay Trail Extension, and Seawall Drive Parking Lot would be located in both BCDC Bay and Shoreline Band jurisdictions. The proposed restroom would be located entirely within BCDC Shoreline Band jurisdiction. The proposed Bus Stop/ Loading Platform, Raised Cycle Track, and other University Avenue improvements would be located partially within BCDC's Shoreline Band jurisdiction. Notably, this jurisdictional understanding was reflected in the Draft EIR and only slightly change adjacent to Seawall Drive at and north of the University Avenue intersection, as a result of revision of Figure 3.3-3.

Figure 3.3-3 BCDC Jurisdiction Limits (Revised)[56]

[56] Figure 3.3-3 ~~shows the City's current understanding of~~ has been revised to reflect updated BCDC jurisdictional boundaries, ~~based on available information~~ as confirmed by BCDC staff on April 9, 2026. The revision incorporates an updated project footprint and adjusts the mapped BCDC Shoreline Band jurisdiction near Seawall Drive and University Avenue, including approximately 20,930 square feet east of Seawall Drive.

BCDC Planning Consistency and Permit Compliance

Consistency with applicable Bay Plan policies, including those related to circulation, public access, and parking for recreational users, are addressed in Section 3.9, *Land Use and Planning*, Impact LU-2 (pages 3.12 through 3.9-36), which evaluates whether the project would conflict with plans and policies adopted to avoid or mitigate environmental effects. Project consistency with Bay Plan policies is specifically addressed in pages 3.9-12 through 3.9-23 (including Table 3.9-1). As shown in Table 3.9-1, the project incorporates specific design features and operational strategies for consistency with Bay Plan policies related to circulation, public access, and parking. With respect to public access (Public Access Policies 9 and 11), the project restores and expands shoreline access through provision of a publicly accessible pier, Bay Trail Extension, and new shoreline amenities, which enhance both physical and visual access to the Bay and provide for safe and convenient movement along the shoreline.

With respect to circulation (Transportation Policy 4 and Public Access Policy 11), the project includes multimodal circulation improvements such as the raised cycle track, improved transit stops, Bay Trail connections, and defined pedestrian pathways that maintain safe, efficient, and clearly organized circulation for all user groups and improve access to and along the shoreline.

Circulation conflicts among user groups are primarily a social consideration rather than a physical environmental impact under CEQA and therefore is not analyzed in this EIR; however, the topic is addressed through the City's compliance with the BCDC Bay Plan, including Transportation Policy 4 and Public Access Policy 11, which require that transportation and shoreline improvements maintain and enhance safe, physical access to and along the Bay shoreline for all users. To that end, the City has designed the project to reduce potential conflicts between ferry commuters and recreational users. Mapping circulation routes under different time-based scenarios is not necessary to identify or address these conflicts. The project incorporates dedicated infrastructure designed to safely accommodate both user groups, including a new Class IV cycle track on University Avenue, raised table-top (i.e., flat top) style crosswalks, a widened sidewalk connecting the AC Trans bus stop to the proposed plaza, wayfinding signage for pedestrians, bicyclists and vehicles and improved shoreline pathways. Therefore, at any point in time and under any plausible scenario, all user groups will be accommodated.

With respect to parking (Recreation Policy 9), Table 3.9-1 explains that the City would implement a parking strategy to balance shared-use parking for ferry patrons and recreational users, thereby minimizing the shoreline area dedicated to parking while maintaining access for existing recreational users and avoiding displacement of park and marina parking. The analysis therein concludes that the project would not conflict with the Bay Plan policies related to parking. For further discussion of compliance with Recreation Policy 9 refer to Section 2.2.20, *Topical Response: Parking*.

The City presented its circulation, parking and public access approach to the BCDC Design Review Board (DRB), an advisory body composed of design and planning professionals that advises the BCDC Commission on the adequacy of public access proposed as part of projects within BCDC's jurisdiction, including the project's effects on circulation, access, and use by different user groups. At its May 11, 2026 meeting, the DRB reviewed the project's trail network, circulation, and parking design, including the balance between recreational and ferry-commuter use of the site, and did not identify a need for further modification to the circulation approach presented. The DRB concluded that the project would not need to return for further DRB review.[4] Although the Draft EIR concludes that the project would not conflict with Bay Plan policies, BCDC independently evaluates consistency as part of its discretionary permit review process. Accordingly, final determination of consistency with Bay Plan policies, including policies related to shared parking and protection of recreational access, will be made by BCDC during the permit review process, and may result in project refinements or conditions of approval. The City will continue to

[4] San Francisco Bay Development and Conservation Commission (BCDC). 2026. Draft Summary of May 11, 2026, BCDC Design Review Board Meeting. https://www.bcdc.ca.gov/wp-content/uploads/sites/354/2025/12/2026.05.11_DraftMeetingSummary.pdf (accessed July 2026).

coordinate with BCDC through the permitting process to ensure final project design achieves consistency with applicable Bay Plan policies, including those addressing circulation and shoreline access.

Regarding the issue of concerns related to parking for recreational users, refer to Section 2.2.20, *Topical Response: Parking*.

In summary, the Draft EIR evaluates parking, circulation, and recreational public access in accordance with CEQA, focusing on physical environmental impacts, and concludes that impacts would be less than significant. Issues related to allocation of parking among user groups and detailed compliance with Bay Plan policies are addressed through the BCDC permitting process. Therefore, the analysis and significance conclusions related to BCDC plan consistency remain valid.

2.2.4 Topical Response: Biological/Underwater Noise

The Draft EIR's conclusion that operational underwater noise impacts on marine mammals would be less than significant is supported by substantial evidence and remains valid.

As explained in Draft EIR Section 3.3.4, Impact BIO-1 (page 3.3-52), underwater noise measurements of comparable hybrid-electric and conventional diesel ferry vessels demonstrate that electric propulsion generates less underwater noise than diesel propulsion. Specifically, a report by the Swedish Environmental Research Institute, directly compared a ferry retrofitted with electric motors, generators, and batteries (Tellus) to its conventionally diesel-powered sister vessel (Neptunus) - vessels of identical hull and propeller design, and similar in size to anticipated WETA electric ferry vessels - and found that the electric vessel radiated up to 10 dB less underwater noise, a difference the report characterizes as equivalent to a halving of noise.[5] This finding provides direct, vessel-comparable evidence that electrification reduces, rather than increases or maintains, underwater noise output relative to conventional diesel vessels.

Several comments cite two additional studies for the proposition that electric propulsion may generate underwater noise levels of concern: Smith et al. (2026)[6] and Gaggero et al. (2024).[7] Neither study undermines the Draft EIR's conclusion.

Smith et al. (2026) found that high-frequency tonal noise from electric propulsion "arise[s] from the pulse width modulation (PWM) used to control the motor," but also found that such noise can be minimized through "optimi[z]ed PWM switching frequencies that minimi[z]e harmonics in sensitive frequency ranges" and "electromagnetic interference filters in the drive circuits." This finding directly supports the Draft EIR's conclusion: it confirms that high-frequency tonal noise is a design-dependent characteristic of electric propulsion, not an inherent or unavoidable one, and identifies the specific engineering measures that address it. Since publication of the Draft EIR, WETA has advanced the design-build contract for the project's electric ferry vessels, which incorporates measures consistent with those identified in Smith et al.: propulsion motors mounted inboard in enclosed Propulsion Rooms with water-cooled, resilient-mounted configurations, acoustic insulation and sound-damping coatings on propulsion equipment spaces, and third-party acoustic measurement and verification during construction. These design specifications reflect current WETA engineering commitments and constitute substantial evidence that the noise-reduction findings in Smith et al. are applicable to, and consistent with, the vessels that will be deployed for this project.

Smith et al. (2026) separately measured underwater noise from matched electric and conventionally powered vessels across a speed range of 4 to 20 knots, finding that while the electric vessel remained

[5] Silent@Sea. 2024. Noise from ships powered by LNG or electricity and its effects: a cross-domain investigation Final report of the Silent@Sea project. Swedish Environmental Research Institute.

[6] Smith, Findlay, Grech La Rosa & Wu (2026), "A comparative study of underwater radiated noise from electric and conventional boats," *J. Acoust. Soc. Am.* 159(3): 2388–2397.

[7] Gaggero, T., Armelloni, E., Codarin, A., & Borghini, D. (2024). Electric boat underwater radiated noise and its potential impact on species of conservation interest. Marine Pollution Bulletin, 199, 115886

quieter than the conventional vessel throughout, the magnitude of the difference narrowed as speed increased (from a 43 dB difference at 4 knots to a 10 dB difference at 20 knots) as propeller cavitation, rather than motor or PWM noise, became the dominant noise source for both vessel types. This finding does not undermine the Draft EIR's conclusion. Because cavitation-driven noise increases similarly for electric and conventional vessels at higher speeds, this finding confirms that the project's electric ferry vessels would not generate greater underwater noise than the conventional diesel vessels they replace, consistent with the Draft EIR's determination.

Gaggero et al. (2024) measured underwater noise from a small 8-meter recreational electric vessel with outboard motors, finding that while the vessel generated less broadband noise than a comparable gasoline outboard boat, its motor controller produced a high-frequency tonal component exceeding 130 dB re 1 µPa m that could affect species with sensitive high-frequency hearing, such as bottlenose dolphins. This finding does not translate to the project's ferry vessels. Smith et al. (2026), evaluating a similarly configured electric outboard vessel, measured comparable tonal noise at only 83 dB re 1 µPa m (roughly 50 dB lower than reported by Gaggero et al.) and attributed this difference to motor placement and propulsion architecture: the vessel in Gaggero et al. used a motor mounted within the propeller hub, whereas the vessel in Smith et al. used an above-waterline motor connected by an L-drive, a configuration that further isolates the motor from the water. WETA's electric ferry vessels use an even more isolated configuration, with motors mounted inboard within enclosed Propulsion Rooms, well removed from the hull and waterline. Given that propulsion architecture and motor placement are established drivers of high-frequency tonal noise output, Gaggero et al.'s findings, based on a hub-mounted motor configuration not used in the project's vessels, do not indicate that the project's ferries would generate comparable high-frequency tonal noise.

For these reasons, the studies cited in comments do not undermine the Draft EIR's finding, based on direct ferry-to-ferry underwater noise measurements, that this project's electric ferry vessels will generate less underwater noise than conventional diesel vessels. For further clarification, Draft EIR Section 3.3, *Biological Resources*, page 3.3-52 has been revised as follows:

> While the electric ferry vessels would introduce a new noise source, they would generate significantly less noise, especially at lower frequency sounds, than traditional diesel engines. Underwater noise measurements made of various hybrid electric and conventional ferry vessels indicate that a ship retrofitted with electric motors, generators, and batteries (Tellus) radiated less underwater noise than a ship with a conventional diesel propulsion system (Neptunus). A report from 2024 prepared by Silent@Sea notes the following: "according to our measurements, Tellus radiates less underwater noise than Neptunus, with up to 10 dB [difference]." A 10dB difference is a halving of noise, as if a wall or barrier has been put in place. The report states: "This is an indication that retrofitting ships with modern hybrid propulsion is a potential way to reduce their noise radiation."[94] Additionally, recent research evaluating underwater noise generated by electric vessels indicates that while certain electric vessel configurations may generate high-frequency tonal noise associated with electric propulsion components, underwater noise characteristics vary substantially depending on vessel design, propulsion architecture, and motor installation. In particular, Smith et al. (2026) found that electric vessels remained quieter than a comparable conventionally powered vessel across the full range of operating speeds evaluated and found that such tonal noise can be reduced through engineering measures including optimization of motor controller switching frequencies and electromagnetic interference filtering.[95] Similarly, Gaggero et al. (2024) found that although electric vessels may generate high-frequency tonal noise, propulsion architecture and motor placement are important factors influencing underwater noise generation.[96] Accordingly, following publication of the Draft EIR, WETA has advanced the design-build contract for the proposed electric ferry vessels to incorporate features consistent with those identified in the recent literature, including propulsion motors mounted inboard in enclosed Propulsion Rooms with water-cooled, resilient-mounted configurations, acoustic insulation and sound-damping coatings on propulsion equipment spaces, and third-party acoustic measurement and verification during construction. These design features would minimize the potential for the proposed electric ferry vessels to generate underwater noise

that could adversely affect marine mammals. Therefore, in-water noise impacts on marine mammals due to operation of ferry vessels would be less than significant.

[94] Silent@Sea. 2024. Noise from ships powered by LNG or electricity and its effects: a cross-domain investigation Final report of the Silent@Sea project. Swedish Environmental Research Institute.

[95] Smith, Findlay, Grech La Rosa & Wu (2026), "A comparative study of underwater radiated noise from electric and conventional boats," *J. Acoust. Soc. Am.* 159(3): 2388–2397.

[96] Gaggero, T., Armelloni, E., Codarin, A., & Borghini, D. (2024). Electric boat underwater radiated noise and its potential impact on species of conservation interest. Marine Pollution Bulletin, 199, 115886.

The Draft EIR's less-than-significant conclusion for operational underwater noise impacts on marine mammals remains valid and is adequately supported by substantial evidence. No further revisions beyond the clarification above are required.

Regarding potential impacts on marine mammals from vessel strikes, refer to Section 2.2.28, *Topical Response: Whale Strike,* for a discussion specific to potential whale strikes.

2.2.5 Topical Response: CEQA Adequacy

Draft EIR Section 1.3.2, *Content Adequacy*, (page 1-13) discusses the adequacy of the content of the EIR by explaining the standards for adequacy of an EIR identified in CEQA Guidelines Section 15151, and states that the analysis in EIRs "need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible." EIRs must provide substantial evidence, reasoned explanations of environmental impacts, and disclose areas of disagreement among experts consistent with CEQA requirements. Taken as a whole, the Draft EIR contains sufficient detail and analysis to support informed decision-making and meaningful public participation, consistent with standards for adequacy in CEQA Guidelines Section 15151. The Draft EIR conclusions are supported by substantial evidence, which is defined in CEQA Guidelines Section 15384 as "facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts." Accordingly, the Draft EIR provides sufficient information to fulfill the CEQA core purposes of disclosing potential environmental impacts of the proposed project and informing both decision makers and the public, in accordance with CEQA Guidelines Sections 15003 and 15151. The City has reviewed the public comments received on the Draft EIR and has confirmed that the conclusions in the Draft EIR are supported by substantial evidence and that the EIR meets the regulatory standards of adequacy. For responses to specific issues raised by comments related to the adequacy of the EIR please refer to those individual responses. No changes to the Draft EIR conclusions or analysis are necessary in response to these comments.

2.2.6 Topical Response: CEQA Baseline/Baseline Recreation Users

With respect to City's analysis on baseline recreation users, the Draft EIR assesses the thresholds in CEQA Guidelines Appendix G, Sections XV and XVI, which provide that there is the potential for a significant impact if: (1) a project would increase the use of existing facilities such that substantial physical impacts would occur; (2) a project would include recreational facilities or require the expansion of existing facilities resulting in a physical effect on the environment; or (3) a project would result in new or altered parks to maintain acceptable service ratios for parks, the construction of which would cause significant physical or environmental impacts.

To assess these factors, the Draft EIR (in Section 3.11, *Recreation*) describes the existing recreational sites and facilities within and adjacent to the project site, including both publicly administered recreational facilities and other shoreline- and water-oriented recreational activities occurring throughout the Berkeley Waterfront. The Draft EIR also describes recreational use at the Berkeley Waterfront by identifying the existing range of user groups and activities, as well as their primary locations. These groups or activities include pedestrians, bicyclists, shoreline visitors, boaters, anglers, and passive recreation users, as well as water-oriented uses such as sailing, kayaking, swimming, wind sports, and

other marina-related activities occurring throughout the Berkeley Waterfront area. The Draft EIR also identifies the specific locations where these activities occur, including the Bay Trail, Marina Basin, Marina Mall, Horseshoe Park, the formerly named César E. Chávez Park, McLaughlin Eastshore State Park, South Sailing Basin, un-improved shoreline access, San Francisco Bay, and additional nearby facilities (refer to Pages 3.11-1 through 3.11-7).

In response to the comments, Page 3.11-6 of the Draft EIR (Section 3.11.2, *Environmental Setting*) has been revised to incorporate the following clarifying text:

> The San Francisco Bay is a tidal estuary that provides a variety of natural resource and open space opportunities (refer to Figure 3.11-2). According to the BCDC San Francisco Bay Plan, the San Francisco Bay is the most important open space in the Bay region, and it provides a variety of unique recreational opportunities. Primary recreation activities occurring throughout the San Francisco Bay include sailing, kayaking, paddle-boarding, swimming, windsurfing, kitesurfing, canoeing and dragon boat canoeing. Additional recreation activities on the Bay include wildlife viewing, fishing and boating via public ferry, private and charter boats. <u>These water-based recreational activities often involve specialized equipment and access points to the shoreline and marina facilities, and are an integral component of the recreational setting at the Berkeley Waterfront.</u>

This clarifying text emphasizes that water-based recreational activities, including those requiring equipment and direct water access, are explicitly recognized as part of the existing recreational baseline evaluated in the Draft EIR.

As described in the Draft EIR, the total area of parks and open space within the City is approximately 4,430 acres, which results in a park acres-to-persons ratio of approximately 34.5 acres per 1,000 people. This ratio provides relevant context for evaluating recreational service capacity citywide, as discussed further below and in Impact REC-1. In addition, there are several park and recreational areas proximate to the project site that would remain accessible during project construction, such as the South Sailing docks and Marina basin (refer to Draft EIR Page 3.11-17). With respect to changes in recreational demand, the Draft EIR evaluates reasonably foreseeable conditions associated with project operation, including increased visitation associated with ferry riders accessing the terminal and new recreation use of the pier for activities such as walking, fishing and sightseeing (refer to Draft EIR Page 3.11-9, Proposed Recreational Amenities). Impact REC-1 analyzes the impact of increased visitation, finding that the project would increase the number of visitors to the Berkeley Waterfront area in a manner that may increase the use of on-site and nearby recreational facilities (Draft EIR page 3.11-16). However, because the project concurrently creates a net increase in recreational facilities and opportunities (a restored pier, new Bay Trail and new dedicated cycle track), the Draft EIR concludes that resulting impacts related to physical deterioration of existing recreational facilities, and the need for new or altered parks to maintain acceptable service ratios, would be less than significant (refer to Impact REC-1, Draft EIR Pages 3.11-16 through 3.11-20). This conclusion is based on the project's new contribution of new recreational capacity commensurate with the increased visitation it would generate, not on an assumption that visitation would remain unchanged. Therefore, no quantified or more detailed baseline usage data is necessary to determine whether the project would physically degrade recreational resources or require construction of new facilities. Accordingly, the Draft EIR sufficiently describes the baseline for recreational uses and describes the project's changes due to increased recreational use based on substantial evidence.

Further, inclusion of additional quantitative visitation data or estimates of displaced users would not alter the impact analysis or significance conclusions, which are based primarily on physical capacity, access, and facility conditions. With respect to access and parking during operation, refer to Section 2.2.20, *Topical Response: Parking.* With respect to recreational access during operation, the project would be expected to improve recreational opportunities by providing new and improved amenities.

In summary, the Draft EIR fully described the baseline consisting of existing recreational uses, their locations, and user groups at the Berkeley Waterfront; evaluates reasonably foreseeable changes associated with ferry operations; and demonstrates that construction and operation of the project would not result in physical degradation of or the need for expanded recreational facilities (Impact REC-1).

Therefore, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to these comments.

2.2.7 Topical Response: CEQA Process

After reviewing comments received on the Draft EIR, the City has concluded that recirculation of the Draft EIR, per CEQA Guidelines Section 15088.5, is not warranted. Under CEQA Guidelines Section 15088.5, recirculation is required only when significant new information is added that reveals a new significant impact, substantially increases the severity of an identified impact, or otherwise deprives the public of a meaningful opportunity to comment. The information provided by the comments do not identify a new significant impact or an increase in the severity of any previously disclosed impact. In response to other comments, certain specific clarifying edits have been made to the EIR to provide additional context related to the existing conditions, methodology, and/or impact analysis. However, none of these clarifying changes affect the impact conclusions or mitigation measures identified in the Draft EIR in a substantive manner. Accordingly, recirculation of the Draft EIR is not required.

2.2.8 Topical Response: Construction & Operation Noise at Nearby Parks

The Draft EIR impact analysis with respect to noise did not analyze impacts at the formerly named César E. Chávez Park, Horseshoe Park, Marina Mall, Adventure Playground, or the Bay Trail corridor because they are located further away than the closest sensitive receptor park (i.e., Shorebird Park) (refer to Draft EIR Section 3.10, *Noise,* page 3.10-5), which is the closest park to the primary construction area where the noisiest activity associated with construction (pile driving) would occur. For Shorebird Park, the impact analysis generally represents a worst-case scenario and was modeled and analyzed with respect to project-related noise (refer to Impact NOI-1 on pages 3.10-19 to 3.10-32 of the Draft EIR). Noise levels at other parks that are located further away would generally be less than these worst-case estimates for Shorebird Park.

Nonetheless, in response to these comments and for information purposes, Draft EIR Section 3.10, *Noise*, Table 3.10-14 (page 3.10-23), has been revised to present both unmitigated and mitigated construction noise levels at nearby parks during all phases of landside construction, and Table 3.10-16 (page 3.10-26), has been revised to present both unmitigated and mitigated construction noise levels at nearby parks during all phases of waterside construction. Revisions to both tables are shown in underlined text below.

Table 3.10-14 Comparison of Landside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated and Mitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA)		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With Mitigation[1]		
Demolition	10	At pier entrance	Skates on the Bay Restaurant[3]	70	50	70	No
			Nearest live-aboard boat[4]	61	41	65	No
			Shorebird Park[5]	67	47	60	No

			César E. Chávez Park[5]	54	34	60	No

dBA = A-weighted decibels; MM = Mitigation Measure

[1] All noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for general construction activities.

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA)		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With Mitigation[1]		

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime multi-family residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime multi-family residential and commercial limits are 65 dBA and 70 dBA, respectively.

[3] While commercial uses (e.g., restaurants and offices) are not typically considered to be noise-sensitive receptors, these uses were included as sensitive receptors in the analysis as the City defines construction noise limits for commercial uses.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. This analysis conservatively assumes that the nearest live-aboard boat is situated at a location within the Marina that is nearest to proposed construction activity during each phase of construction.

[5] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

Source: See Appendix E for construction noise modeling results

Table 3.10-16 Comparison of Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated and Mitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA)		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With Mitigation[1]

			César E. Chávez Park[5]	47	27	60	No

dBA = A-weighted decibels; MM = Mitigation Measure

[1] All noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for phases consisting of general construction activities (i.e., dredging, deck, float, and gangway construction, and amenities installation) and 10 dBA of noise reduction for phases consisting of pile driving activities (i.e., demolition and pile installation).

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

Source: See Appendix E for construction noise modeling results.

The following clarification text changes have also been made to Draft EIR Impact NOI-1, page 3.10-30, to address operational noise generated at the nearest parks resulting from operation of ferry vessels at the terminal:

Noise from Operation of Ferry Vessels

Ferry vessels would operate at the north end of the pier, as close as approximately 400 feet from the nearest sensitive receptor (i.e., the Skates on the Bay Restaurant located to the northeast). At this distance, operation of the ferry vessels would generate noise levels up to 52 dBA at the Skates on the Bay Restaurant, which would not exceed the City's daytime or nighttime exterior noise limits of 65 and 60 dBA, respectively, at commercial land uses. Additionally, ferry vessels would operate approximately 430 feet from the nearest portion of the proposed Bay Trail corridor and approximately 550 feet from Shorebird Park. At these distances, operation of ferry vessels would generate noise levels up to 51 and 49 dBA at the Bay Trail corridor and Shorebird Park, respectively, which would not exceed the City's daytime exterior noise limit of 55 dBA for low-density single-family residential uses, which is the threshold also used for outdoor recreation spaces due to a similar level of noise sensitivity. Note that noise levels would continue to decrease as distance from the ferry terminal increases, therefore noise levels at all other parks located farther away (e.g., César E. Chávez Park, Horseshoe Park, Marina Mall, and Adventure Playground) would also not exceed the City's applicable daytime exterior noise limit. Therefore, operational noise impacts associated with the ferry vessels would be less than significant. For the noise impact associated with operation of ferry vessels as it

relates to potential impacts related to biological resources discussion, see Impact BIO-1 in Section 3.3, Biological Resources.

The table and text changes above are clarifying in nature and do not alter the substance of the impact analysis or the resulting significance determination. Therefore, the analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid.

2.2.9 Topical Response: Cumulative Impacts

As discussed in Draft EIR Chapter 3.0, *Environmental Impact Analysis*, the Draft EIR includes a cumulative impact analysis consistent with CEQA Guidelines Section 15130, which requires evaluation of the incremental effects of the proposed project when combined with past, present, and reasonably foreseeable probable future projects. The Draft EIR cumulative analysis identifies geographic scopes (e.g., the radius area where other projects could interact with resource area impacts) appropriate to each resource topic and analyzes a combination of past, present, and probable future projects listed in Draft EIR Table 3-1 (pages 3-9 to 3-10). Table 3-1 includes 25 projects considered as cumulative projects. As documented in the sources cited in Table 3-1, the list of cumulative projects was compiled based on publicly available information published by the City of Berkeley, East Bay Regional Parks District, and the Metropolitan Transportation Commission/Association of Bay Area Governments. The analysis evaluates whether the proposed project's incremental contribution to each identified cumulative impact would be considerable. Where significant cumulative impacts were identified, the Draft EIR discloses whether the proposed project would make a cumulatively considerable contribution and, where applicable, identifies mitigation measures to reduce the project's incremental contribution. In some cases, even with mitigation, cumulative impacts may remain significant and unavoidable due to broader regional conditions or factors beyond the control of the project (e.g., cumulative waterside construction noise associated with pile driving and nighttime construction and cumulative operational mobile [i.e., roadway vehicle] noise).

Several comments identify the reopening of a restaurant at 199 Seawall Drive (formerly Hs. Lordship Restaurant)[8] as a cumulative project. This cumulative project is already included in the Draft EIR. Refer to Draft EIR Chapter 3, Footnote 1 and Table 3-1, which includes the description of the Berkeley Draft Waterfront Specific Plan (listed as Project 1 in Table 3-1), and explicitly states that the re-opening of the restaurant at 199 Seawall Drive is included in the Draft Waterfront Specific Plan.

Several comments also discuss the Draft Waterfront Specific Plan. The Draft Waterfront Specific Plan is discussed in the Draft EIR cumulative analysis (refer to Draft EIR Chapter 3 Table 3-1), which explains that the proposed project and the Waterfront Specific Plan are separate projects that are not interdependent. (See *Relationship with Draft Waterfront Specific Plan* Section of Chapter 3, *Environmental Impact Analysis.)* First, the Waterfront Specific Plan is a long-range planning document, while the proposed project is an infrastructure project. Next, while the Waterfront Specific Plan would change the zoning designations at the Waterfront, the Pier-Ferry project can obtain permits pursuant to the existing zoning designations – the proposed project is in no way reliant on the passage of the Waterfront Specific Plan and would be pursued regardless. Similarly, the Waterfront Specific Plan, which is still being developed at the staff level, would proceed regardless of whether or not the proposed project is approved. As discussed further in the Draft EIR, because the proposed project and the Draft Waterfront Specific Plan are not interdependent, environmental review of each can proceed independently.

Several comments also refer to a cumulative scenario with 26 ferry terminals in the Bay.[9] This information cited in comments regarding the establishment of 26 ferry terminals in the region is not an

[8] The currently vacant restaurant building at 199 Seawall Drive was formerly occupied by the Hs. Lordship restaurant, and is often referred to in public comments as the "Hs Lordship Restaurant" or similar variations thereof. For consistency, this document generally refers to this property as "199 Seawall Drive," except when directly quoting comments or historical documents.

[9] Fehr & Peers 2023. 2050 Service Vision & Business Plan Service Vision Evaluation Memo. Available online at: 2050 Service Vision & Business Plan - San Francisco Bay Ferry. Accessed June 2026.

adopted vision of WETA. A memorandum from WETA dated April 12, 2023, with the subject "WETA Business Plan Evaluation" includes the following text in the Introduction:

"This memo details the technical analyses completed to evaluate three new network concepts to expand WETA service over the next 25 years. Based on this evaluation and stakeholder input, WETA will define a 2050 service vision to include in its Business Plan to be developed later this year. The service vision will inform how WETA operates in the future and what strategies and actions will be included in the Business Plan. This memorandum presents the technical evaluation of three potential 2050 networks compared to the existing network in 2050. The content in this memorandum represents an updated [sic] of the slide deck presented to stakeholder groups in the first quarter of 2023 based on final evaluation results."[10]

The memorandum does include a concept titled "Coverage Network" with 26 ferry terminals but as described in the Introduction of the memorandum, this is a network concept for consideration. After the memo was prepared (April 12, 2023), the WETA Board adopted a 2050 Service Vision and Expansion Policy at its May 9, 2024, Board Meeting that is substantially different from this concept.[11] As described in WETA's adopted Service Vision, 4 new tier 1 ferry projects are included (Mission Bay and Treasure Island to the San Francisco Ferry Building, Berkeley to San Francisco, and Oakland to Redwood City), for a total of 14 ferry terminals. The concept of 26 ferry terminals was a network concept only and was not adopted as part of WETA's vision; therefore, a scenario that includes 26 ferry terminals is not reasonably foreseeable and the City's decision not to analyze it is supported by substantial evidence. Page 3-6 of the Draft EIR identifies what would constitute a cumulative project, and is included here for context:

"Reasonably foreseeable projects are future projects (including those currently proposed) that are likely or probable, rather than those that are merely possible. Generally, projects are reasonably foreseeable if they meet any one or more of the following conditions:

- The project is a foreseeable future phase of an existing project.
- Applications for project entitlements or construction are pending with a government agency (these projects may have been analyzed in a recent environmental document).
- The project is included in regional transportation plans; regional transportation improvement programs; local long-range transportation plans; local land use, general, and specific plans; or an agency's budget or capital improvement program."

The network concept of 26 ferry terminals does not meet this criteria. Therefore, it is not considered a reasonably foreseeable cumulative project.

The 2003 WETA EIR evaluates ferry service expansion at a regional, programmatic scale, including analysis of vessel operations over defined routes throughout the Bay and their potential effects on biological resources and hydrology and water quality under a systemwide operational scenario. In contrast, the Draft EIR for the proposed project evaluates project-specific and proximate environmental effects associated with ferry operations at the Berkeley Waterfront using representative operational assumptions (refer to Chapter 2, Section 2.7). These analyses focus on nearshore and localized conditions, including terminal approach and docking, vessel presence within the project viewshed, and project-related contributions to vessel traffic in the immediate vicinity. As described in Section 3.3, *Biological Resources*, and 3.8, *Hydrology and Water Quality*, the Draft EIR concludes that operational impacts associated with ferries, including vessel traffic, underwater noise, wake, and water quality effects would be less than significant or less than significant with mitigation (refer to Sections 3.3.4 and 3.3.5), and that the project would not result in a cumulatively considerable contribution to regional Bay-wide impacts previously evaluated at the programmatic level in the 2003 WETA EIR (refer to Sections 3.3.5 and

[10] WETA. 2023. WETA Business Plan Evaluation Memorandum. From Daniel Jacobson and Nate Conable, Fehr & Peers. To Michael Gougherty, Kevin Connolly, and Gabriel Chan, WETA. April 12. Available: https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240919065530/b041723aFULL.pdf. (accessed June 2026).

[11] WETA. 2024. Board of Director Meetings Agenda, May 9, 2024, Item 11: Adopt 2050 Service Vision and Expansion Policy. Available: https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20251125001105/b050924aFULL.pdf. (accessed June 2026).

2.8.5). Accordingly, the Draft EIR remains consistent with prior regional analysis, while providing a more detailed evaluation of site-specific conditions and impacts in accordance with CEQA Guidelines.

In summary, the cumulative projects identified in public comments are either already included in the list of cumulative projects in Draft EIR Table 3-1, or do not meet the definition of a reasonably foreseeable project. Furthermore, the comments do not provide substantial evidence demonstrating that the cumulative analysis is inadequate or inconsistent with CEQA requirements. Therefore, the Draft EIR cumulative analysis and conclusions remain valid as written, and no revisions to the EIR are necessary in response to these comments.

2.2.10 Topical Response: Electric Ferry

As described in Draft EIR Chapter 2, *Project Description*, (pages 2-4, 2-10, and 2-11) the proposed project assumes operation of electric ferry service consistent with WETA plans as well as regional and State efforts to reduce greenhouse gas emissions through actions such as increasing access to sustainable transportation modes. The use of electric ferry vessels is explicitly included in the project description. Neither the City nor WETA are planning to operate diesel ferry vessels as part of the proposed project, and the only kind of ferry vessels being environmentally reviewed and cleared as part of the EIR are electric ferry vessels. Under CEQA, an EIR must evaluate reasonably foreseeable environmental impacts based on available data and reasonable assumptions supported by substantial evidence. CEQA does not require that all project components be fully finalized at the time of analysis, nor does it require evaluation of speculative or hypothetical alternatives, such as analysis of alternative fuel technologies or the use of diesel vessels, that are not part of the proposed project or reasonably foreseeable conditions.

Regarding questions about the infrastructure for electric ferry vessels, Draft EIR Chapter 2, *Project Description,* includes a description of the infrastructure required for electric ferry vessels, including the Universal Charging Floats or UCFs (refer to Section 2.5.1, *Proposed Ferry Vessel Infrastructure* Subsection, pages 2-10 through 2-11), as well as the electrical distribution utilities that would be required for the proposed project (refer to Section 2.5.4, *Electrical Distribution* subsection, pages 2-23 through 2-24). As described therein, the UCF system includes electrical infrastructure such as switchgear, transformers, converters, and battery storage to support charging of zero-emission ferry vessels and is designed with redundancy and safety features to address reliability and operational needs.

Environmental impacts associated with the installation and operation of electrical infrastructure required to support electric ferry service are evaluated in the Draft EIR. As described in Section 3.14, *Utilities and Service Systems*, implementation of the project would require electrical connections and infrastructure, and the environmental effects of constructing these improvements are analyzed under Impact UTIL-1. The Draft EIR concludes that construction-related impacts would be less than significant with mitigation, and that operation would not require new or expanded electrical facilities beyond those described in Chapter 2, *Project Description* (refer to Section 3.14, pages 3.14-26 through 3.14-30). In addition to the utilities analysis, the Draft EIR evaluates the environmental effects of electric ferry infrastructure using discipline-specific methodologies across all relevant resource areas. Section 3.2, *Air Quality*, and Section 3.6, *Greenhouse Gas Emissions and Energy*, analyze emissions and energy demand associated with electric ferry operations and charging systems (pages 3.2-21 through 3.2-35 and pages 3.6-30 through 3.6-47). Section 3.3, *Biological Resources*, evaluates potential operational impacts, including underwater noise and vessel interactions with aquatic species (pages 3.3-39 through 3.3-66), while Section 3.8, *Hydrology and Water Quality*, considers in-water infrastructure components and the reduced potential for fuel-related spill risks associated with electrification (pages 3.8-25 through 3.8-42). Section 3.7, *Hazards and Hazardous Materials*, evaluates safety considerations related to battery storage systems and electrical infrastructure (pages 3.7-22 through 3.7-37), and Section 3.10, *Noise*, addresses construction and operational noise generated by ferry vessels and associated electrical equipment (pages 3.10-12 through 3.10-34).

With respect to emergency operations and reliability, Draft EIR Chapter 2, *Project Description*, also addresses emergency conditions under which ferry service may be used. As described in Section 2.8, *Emergency Operation Options* subsection, WETA has a legislative mandate to provide emergency water

transportation following major incidents, and the project is designed to accommodate such use. In the event of power disruptions, emergency operations may include use of a power generation barge connected to the UCF system to maintain vessel charging capabilities (refer to Section 2.8, pages 2-32 through 2-33).

To the extent that uncertainty exists regarding the timing or availability of specific electric ferry models, the analysis in the Draft EIR is based on a defined project "envelope" or set of reasonable operational components described in Chapter 2, *Project Description*. These assumptions include a vessel capacity of approximately 250 passengers per vessel, dimensions of supporting infrastructure, and operating characteristics, including trip frequency, ridership, and service patterns (refer to Subsection 2.7, *Operational Details*). These parameters form the basis of the environmental analysis. Consistent with CEQA Guidelines Section 15162, if future vessel types or operations were to be materially different from this defined envelope and result in the potential for new or more severe environmental impacts, additional environmental review would be required at that time; however, that would not alter the adequacy of the environmental analysis presented in the Draft EIR. The environmental impacts specific to electric ferry operations and charging infrastructure at the proposed Berkeley terminal are analyzed directly and at the project level in this Draft EIR (refer to Chapter 3, *Environmental Impacts Analysis*).

In summary, the Draft EIR analysis of ferry operations and associated infrastructure is adequate and consistent with CEQA Guidelines. Therefore, the project description regarding electric ferry operation and associated analysis and conclusions presented in the Draft EIR remain valid, and no changes to the EIR are necessary in response to these comments.

2.2.11 Topical Response: Ferry Operations

As described in Draft EIR Chapter 2, *Project Description*, the proposed project includes representative operational assumptions developed by WETA sufficient to support environmental review. These assumptions include anticipated service frequency, general routing, and operational characteristics. Specifically, the Draft EIR evaluates a representative weekday and weekend service scenario that includes regular commute-period service and off-peak service, with ferry trips operating along established WETA routes. While exact schedules may vary, this scenario reflects the maximum reasonably foreseeable level of service for purposes of impact analysis (refer to Chapter 2, *Project Description*, Section 2.7, pages 2-30 through 2-33). Vessel speeds are not specified as fixed values in the Draft EIR; however, vessels are assumed to operate at a maximum of 29 to 41 mph, consistent with the typical speeds for existing WETA ferry service within San Francisco Bay and, consistent with current routes and navigation practices.[12,13] Speed during terminal approach and docking would be reduced (refer to Chapter 2, *Project Description,* page 2-31) to provide safe maneuvering and compliance with applicable navigation practices. Given the need for the ferry vessel to execute a multi-point turn in order to dock for passenger loading, the need to reduce speeds during terminal approach is not an operational choice but a physical constraint.

Pursuant to the CEQA Guidelines, an EIR must evaluate reasonably foreseeable environmental impacts based on available data and reasonable assumptions. However, CEQA does not require that all operational details, such as final service schedules, vessel speeds under all conditions, or exact trip frequencies, be fully finalized at the time of analysis (CEQA Guidelines Sections 15124 and 15144). Rather, the analysis is appropriately based on representative operating conditions and planning-level assumptions that allow for meaningful evaluation of potential environmental effects. Consistent with the CEQA Guidelines Sections 15124 and 15144, Chapter 2, *Project Description* of the Draft EIR provides sufficient information regarding ferry operations, including projected ridership, service frequency, and general operational characteristics to evaluate environmental impacts (refer to Section 2.7, pages 2-30 through 2-33, including Table 2-4. As described in EIR Section 1.1.3, *Incorporation by Reference*, the analysis also incorporates by reference the certified 2003 WETA EIR, which evaluated ferry system

[12] San Francisco Bay Ferry (WETA) typically travel at service speeds ranging from 23 to 36 knots (about 26 to 41 mph) depending on the vessel class.

[13] WETA. 2026. Vessel Classes. Available: https://sanfranciscobayferry.com/meet-our-fleet/. (accessed June 2026)

operations at a programmatic level (refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion specific to the 2003 WETA EIR)

Environmental impacts associated with ferry operations are evaluated throughout Draft EIR Chapter 3, *Environmental Impacts Analysis*, using the representative operational assumptions described above. This includes but is not limited to transportation impacts evaluated in Section 3.12, *Transportation* (pages 3.12-15 through 3.12-25), air quality impacts in Section 3.2, *Air Quality* (pages 3.2-21 through 3.2-35), noise impacts in Section 3.10, *Noise* (pages 3.10-12 through 3.10-34), and biological and underwater noise effects in Section 3.3, *Biological Resources* (pages 3.3-39 through 3.3-66). Water quality and hydrodynamic effects associated with vessel operations are evaluated in Section 3.8, *Hydrology and Water Quality* (pages 3.8-25 through 3.8-42).

As discussed in these sections, the Draft EIR evaluates potential operational effects such as vessel traffic, emissions and noise, and vessel interaction with aquatic species based on the maximum reasonably foreseeable service scenario. Topics such as vessel strike and underwater noise are specifically addressed in Section 3.3 (refer also to Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion specific to underwater noise).

Operational details may be refined during subsequent project design, implementation, and coordination with WETA, and would be subject to applicable regulatory review requirements, including U.S. Coast Guard navigation and safety requirements, Bay Conservation and Development Commission (BCDC) permitting, and other applicable approvals. No additional CEQA review is anticipated unless substantial changes to the project involving new or substantially more severe significant impacts would occur, consistent with CEQA Guidelines Sections 15162, 15163 and 15164.

Accordingly, the Draft EIR evaluates ferry operations at a level of detail sufficient to support a reasonable analysis of environmental impacts consistent with CEQA Guidelines. The analysis and conclusions presented in Chapter 3, *Environmental Impacts Analysis*, of the Draft EIR remain valid as written, and no further revisions to the EIR are necessary.

2.2.12 Topical Response: In-Marina Ferry Terminal Alternative

CEQA Standard for Alternatives Analysis

Under CEQA Guidelines Section 15126.6, an EIR is required to evaluate a reasonable range of alternatives that could feasibly attain most of the basic project objectives while avoiding or substantially reducing significant environmental effects. An EIR need not consider every conceivable alternative, and alternatives that fail to meet most of the basic project objectives are infeasible, or would not reduce significant environmental effects may properly be rejected from detailed analysis. The Draft EIR at Section 5.9 identifies and explains the reasons for rejecting the Berkeley Marina Basin alternative from detailed analysis. This response supplements that explanation with additional technical analysis supporting the same conclusion.

The Alternative Does Not Meet Any Basic Project Objectives

As set forth in the Draft EIR at Section 5.3, the two basic project objectives are: (1) enhance public access and recreational opportunities at the Berkeley Waterfront; and (2) provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco. An alternative must meet both objectives to qualify for detailed analysis. The In-Marina Alternative fails to meet both.

With respect to the first objective, siting the ferry terminal inside the marina would leave the Berkeley Pier closed and continuing to deteriorate. The new pier, public plaza, Bay Trail Extension, cycle track, and associated waterfront improvements, which are the primary mechanisms by which the project enhances public access and recreational opportunities are all tied to the pier location. While these improvements would not be precluded by an In-Marina ferry terminal, none of them would be part of the In-Marina ferry terminal project alternative because the need to implement multi-mode TDM measures along University

Avenue and Seawall Drive would not exist. Furthermore, as noted in the Draft EIR at Section 5.9, construction of a new ferry terminal inside the marina would require removal of existing marina docks (at least 8 slips would be lost per the 2008 Berkeley/Albany Ferry Terminal Study Draft EIR/EIR prepared by URS), thereby directly reducing rather than enhancing recreational opportunities at the Berkeley Waterfront.

With respect to the second objective, siting the ferry terminal inside the marina would impose considerable operational constraints on ferry service safety, efficiency and reliability. As documented in the Draft EIR at Section 5.9, based on communications with WETA's Project Manager, ferry vessels operating inside the marina would face additional maneuvering constraints, increased docking and departure times, wake and safety concerns and operational conflicts with recreational users. Passenger access would also be constrained, potentially creating queuing conflicts. These factors would extend overall travel times by an estimated 5-10 minutes, reduce service reliability and on-time performance, and diminish the competitiveness of the Berkeley–San Francisco ferry route compared to other Transbay modes of travel. An In-Marina terminal is not considered operationally feasible by WETA.

The Alternative Provides No Environmental Benefit

The In-Marina alternative would not reduce environmental impacts and would not avoid any significant environmental impacts. With respect to in-Bay fill: the proposed project is designed to achieve no net increase in Bay fill through removal of existing pier piles and decking at a minimum 1:1 ratio for the net increase in fill and cover, per Mitigation Measure BIO-3. Under an In-Marina terminal alternative, there would be no project-driven rationale to remove the deteriorated pier. Portions of the old pier are being removed under the proposed project because the new pier replaces it. Without a new pier at that location, the old pier piles would remain as existing in-Bay fill, and new fill would be added for the marina terminal infrastructure. Prior to mitigation the In-Marina alternative would therefore result in a net increase in Bay fill compared to the proposed project, not a reduction. If mitigation required removal of the derelict pier at a 1:1 ratio, there would be the same no net fill as the proposed project.

With respect to dredging: the proposed project requires dredging of the approach channel and turning basin to provide safe navigable depths for ferry vessels. An In-Marina terminal alternative would not eliminate this dredging requirement. Ferry vessels require a navigable approach channel regardless of terminal location. The area dredged for a turning basin would still be required in similar location and scale to allow WETA vessels to safely navigate around marina traffic at the constrained entrance to the marina. This would take the form of a widened maneuvering area outside the marina breakwater near the narrower marina entrance channel. Therefore, the dredging requirement under the In-Marina alternative is not significantly changed from the proposed project.

With respect to impacts on existing marina users: under the proposed project, ferry vessels travel and dock in open Bay waters north of the pier, entirely outside the marina entrance. As described in the Draft EIR at Section 3.11, *Recreation*, boats entering or exiting the marina would continue to navigate around ferry infrastructure in a manner similar to how they currently navigate the existing pier and other Bay vessels. An In-Marina terminal would require ferry vessels to travel through the marina entrance channel and operate within the marina interior, introducing a large commercial vessel operating on a regular schedule into a confined water body shared by recreational boaters, liveaboards, and commercial operators. This would create new and notable operational conflicts with existing marina users that do not exist under the proposed project. Finally, as noted in the Draft EIR the construction of a ferry terminal in the marina would result in the loss of berths (at least 8 slips would be lost per the 2008 Berkeley/Albany Ferry Terminal Study Draft EIR/EIR prepared by URS). Under CEQA, the displacement of recreational boat berths would constitute a direct adverse impact on recreational resources. The Berkeley Marina Basin is the largest public recreational marina in northern California, with approximately 1,000 berths; the loss of even a small number of those berths diminishes the supply of recreational boating opportunities that the Waterfront currently provides to the public, which would run counter to the project's core objective of enhancing, rather than reducing, recreational access at the Berkeley Waterfront.

The loss of eight or more berths would not only reduce public recreation opportunities but also indirectly negatively impact public recreation opportunities in the City of Berkeley. The City relies on slip fees as its primary source of revenue to operate and maintain the Berkeley Marina and its approximately 1,000 recreational berths; each berth removed represents a permanent reduction in the Marina's revenue base, revenue that funds dock maintenance, dredging, harbormaster operations, and other public recreational amenities across the entire Waterfront.

Summary

As described in Section 5.9 of the Draft EIR (see pages 5.9-25 to 5.9-26), the in-marina terminal alternative: (1) fails to meet either of the two basic project objectives; (2) provides no environmental benefit with respect to in-Bay fill; (3) provides no environmental benefit with respect to dredging requirements; and (4) creates new and notable conflicts with existing marina users, including the displacement of recreational berths (at least 8 slips would be lost per the 2008 Berkeley/Albany Ferry Terminal Study Draft EIR/EIR prepared by URS), that do not exist under the proposed project. The Draft EIR's rejection of this alternative from detailed analysis is fully supported by CEQA Guidelines Section 15126.6, which requires only that a range of potentially feasible alternatives be evaluated, not every alternative suggested in comments. Because the In-Marina option does not meet any of the basic project objectives nor provides any meaningful avoidance or reduction of environmental effects the City's alternatives analysis is adequate and no revision to the Draft EIR is warranted on this basis.

2.2.13 Topical Response: Land Use/Plan Consistency

Consistent with CEQA Guidelines Section 15125(d), which requires an EIR to disclose inconsistencies between a proposed project and applicable land use plans and policies, Draft EIR Section 3.9, *Land Use and Planning*, Impact LU-2 and respective Tables 3.9-1 through 3.9-4 (pages 3.9-12 through 3.9-35) summarize local and regional policies applicable to the project and evaluates the project's consistency with those plans. Pursuant to CEQA Guidelines Sections 15064, 15360, and 15382, CEQA defines an environmental impact as a physical change in the environment. CEQA Guidelines Section 15382 defines a significant effect related to the environment as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project," and further states that "[a]n economic or social change by itself shall not be considered a physical effect on the environment." CEQA Guidelines Section 15360 similarly defines the "environment" as the physical conditions that exist within the area affected by a project. Consistent with these provisions, a conflict with an applicable land use plan, policy, or regulation does not, in itself, constitute a significant environmental impact. This framework is reflected in CEQA Guidelines Appendix G Land Use/Planning Significance Criterion b, which asks whether a project would "cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect." Specifically, the Draft EIR analyzed land use consistency impacts with respect to the physical environment for the following plans and policies: BCDC San Francisco Bay Plan, ABAG/MTC Plan Bay Area 2050, Bay Area Clean Air Plan, Berkeley Climate Action Plan, Berkeley General Plan, Berkeley Municipal Code, Berkeley Waterfront Master Plan, Berkeley Marina Master Plan, Berkeley Local Hazard Mitigation Plan, and Berkeley Measure L.

As concluded in Draft EIR Section 3.9, *Land Use and Planning*, Impact LU-2 (pages 3.9-12 through 3.9-35), the proposed project would be generally consistent with the goals and policies identified in applicable plans; however, because the project would generate noise that even after mitigated would exceed thresholds established in the Berkeley Municipal Code, impacts would be significant and unavoidable (due to noise impacts).

Furthermore, to the extent that an inconsistency with a land use plan or policy would result in a physical environmental effect, such effects are evaluated throughout the Draft EIR, and mitigation measures are identified as appropriate. Therefore, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to these comments.

2.2.14 Topical Response: Loss of Ferry Vessel Control

The proposed project has been designed to incorporate standard marine safety features, operational protocols, and emergency response procedures consistent with applicable regulatory requirements and industry practices. Specifically, the Draft EIR includes the following:

- Draft EIR Chapter 2, *Project Description* describes vessel approach, berthing conditions, and associated ferry infrastructure (see Section 2.5, pages 2-6 through 2-11); and
- Section 3.12, *Transportation* evaluates ferry navigation and vessel maneuverability (see Impact TRA-3, pages 3.12-23 and 3.12-24).

Potential risks associated with vessel operation, including low-probability incident scenarios such as loss of control during approach or docking, are addressed through design features, vessel specifications, and operational procedures implemented by WETA and subject to oversight by applicable regulatory agencies, including the U.S. Coast Guard and other maritime safety authorities [see Draft EIR Section 2.9, Discretionary Actions and Required Approvals (refer to page 2-33)]. Consistent with CEQA Guidelines, the Draft EIR evaluates reasonably foreseeable environmental impacts and relies on compliance with applicable safety regulations, engineering standards, and operational protocols to address potential accident scenarios. Specifically, Draft EIR Section 3.12, *Transportation*, addresses vessel navigation, maneuverability, and safety considerations and concludes that the operation of ferry vessels would not increase transportation safety hazards, as the vessels would be designed with multiple layers of redundancy to prevent loss of propulsion risk, crew training to respond to loss of propulsion scenarios, and monitoring of U.S. Coast Guard advisories (refer to Impact TRA-3, pages 3.12-23 and 3.12-24). Speculative accident scenarios that are not supported by substantial evidence are not required to be analyzed in an EIR under CEQA, which focuses on reasonably foreseeable environmental impacts.

Notwithstanding that conclusion, since publication of the Draft EIR, the project design has been further refined to include installation of fender piles[14] near the Skates on the Bay Restaurant and donut fenders[15] near the breakwater and floats. These project components would provide an additional passive safety measure by helping to absorb or deflect vessel movement in the unlikely event of a loss of control during approach or docking. This project design feature is consistent with standard marine engineering practices to enhance docking safety and does not introduce new or more severe construction- or operational-related environmental impacts beyond those already analyzed in the Draft EIR.

The following text changes have been made to Draft EIR Chapter 2, *Project Description*, page 2-10:

> The proposed ferry vessel infrastructure would include up to two 120-foot-long and 10-foot-wide gangways[89] that would bring passengers from the pier to the two proposed boarding floats[910], which would measure approximately 135 feet in length and 42 feet in width. Each float would include 4 to 6 steel guide piles to moor the floats in place. In addition, there would be a total of 6 donut fenders (2 at the end of each float and 2 near the breakwater), each of which would be 6-feet in diameter and would require a 3-foot pile. Since publication of the Draft EIR, the project design has been refined to include additional fender piles and donut fenders (steel protection piles, 36-inches in diameter) located adjacent to the ferry berthing area and around portions of the breakwater and turning basin. These protection piles would function as passive marine safety features and would supplement the guide piles and donut fender system associated with the proposed ferry facilities. The protection piles are intended to provide additional protection for waterside infrastructure during vessel approach and docking operations, including in the unlikely event of a vessel loss-of-control incident (see Section 3.12, *Transportation*).

[14] Fender piles are marine protective structures designed to absorb or deflect vessel impact and help prevent contact with adjacent facilities.

[15] Donut fenders are circular energy-absorbing devices installed around piles or other marine structures to cushion vessel contact and reduce the transfer of impact forces during docking maneuvers or other low-speed vessel movements.

[9.] Gangway is defined as a raised platform or walkway that provides a passage. For the proposed project, the gangway would provide passage from the pier to the float.

[10.] Floats are defined as structures buoyant in water.

[11.] Fender piles are marine protective structures designed to absorb or deflect vessel impact and help prevent contact with adjacent facilities.

[12.] Donut fenders are circular energy-absorbing devices installed around piles or other marine structures to cushion vessel contact and reduce the transfer of impact forces during docking maneuvers or other low-speed vessel movements.

The following text changes have been made to Draft EIR Chapter 2, *Project Description*, page 2-27:

The landside retaining wall would be a mechanically stabilized earth (MSE) with a pre-case concrete panel face. Following the completion of the shoreline retaining wall and landside concrete abutment, the new pier would be constructed from the shoreline heading westward likely using a combination of a floating crane barge and shore-based cranes operating from the progressive extension of the newly constructed concrete abutment and pier. The 1,080-foot pier would be constructed using 24-inch octagonal precast concrete piles (24-inch concrete piles). Two 24-inch concrete piles would be installed approximately every 25 feet using a combination of jetting and impact pile driving. At the landside interface approximately 2 steel piles will be driven through the existing rock dike using a crane and a combination of vibratory and impact hammers. The construction of the pier would progress westward to include construction of the landing floats using 24-inch concrete vertical piles and eventually construction of loading ramps, and adjacent donut fender piles and fender piles using 36-inch steel pipe piles as support guide piles. The 36-inch steel pipe piles anchoring the UCFs and donut fenders would be installed using a combination of vibratory and impact pile driving hammers. To complete the project and to help protect the ferry boarding areas and reduce wave energy, a concrete sheet pile breakwater perpendicular to the new pier would be constructed using 24-inch concrete batter piles and interlocking 48-inch x 14-inch prestressed concrete sheet piles (sheet piles) using a combination of jetting and impact pile driving hammers for the 24-inch concrete batter piles and sheet piles. Four 12-inch Precast Prestressed Concrete Marker Piles would be installed along the dredged channel to identify the limits of the dredged channel. Table 2-1 provides a summary of the kinds of piles and the number of piles that are proposed.

Table 2-1 Summary of Proposed Piles [~~2~~1]

Location	Pile Type	Number of Piles
Landside/Shoreline Retaining Wall	24-inch Steel Pipe Pile [2]	~~46~~ 4
UCF Guide and Donut Piles and Fender Piles	36-inch Steel Pipe Pile	~~18~~ 28
Pier, Landing Platform, and Breakwater	24-inch Octagonal Prestressed Concrete Pile	~~227~~ 128
Breakwater	48-inch x 14-inch Concrete Sheet Pile	~~125~~ 75
Dredged Channel	12-inch Precast Prestressed Concrete Marker Piles	4

[1] The overall number of piles presented in Table 2-1 ~~is based on the current design of the Project and may be reduced in the future~~ has been reduced from the Draft EIR to the Final EIR, based on the updated project design. ~~The number of piles in Table 2-1 is a conservative estimate. For example, the retaining wall may be MSE and would not require the number of piles identified.~~

[2] Two of these piles have a 54-inch diameter sleeve. The purpose of the steel pile sleeve is to isolate the inner steel piles from riprap slope movement during earthquakes.

The following text changes have been made to Section 3.3, *Biological Resources* (Page 3.3-60):

Table 3.3-4 Proposed Project Estimated Cover Area

Structure	Pile Type	Cover Area (square feet)
Existing Pier	20" Concrete Piles	28,160
New Build		
New Pier, Gangway and Platform, and Breakwater	24" Octagonal Piles	33,525
	48"x14" Prestressed Concrete Sheet Pile (for breakwater)	
Universal Charging Float Guide and Donut Piles	36" Steel Guide Pipe Piles	11,685
	36" Steel Donut Fender Pipe Piles	
Total New Build		**45,210**
Net Change		**17,050**

Notes: As noted in Table 2-1 of Chapter 2, *Project Description*, design updates (since the Draft EIR was published) have resulted in an overall reduction in the number of piles proposed for installation. Given that final calculations will be conducted as the City obtains regulatory permits, the values in this table have not been changed. They continue to represent conservative values for the purposes of CEQA analysis.

The following text changes have been made to Section 3.10, *Noise* (Pages 3.10-25 and 3.10-26):

Table 3.10-15 Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA)	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
…							
Pile Installation	49	Along pier	Shorebird Park[3]	150	79	60	**Yes**
			Skates on the Bay Restaurant[4]	~~230~~ 170	~~75~~ 78	70	**Yes**
			Nearest live-aboard boat[45]	670	66	65	**Yes**
…							

dBA = A-weighted decibels

[1] All equipment in each waterside construction phase was conservatively assumed to operate near the pier entrance, as this represents the closest location where construction activity may occur relative to nearby sensitive receptors for extended periods of time.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

[4] Note that restaurants are not typically considered to be noise-sensitive receptors; however, due to the close proximity of this land use to project construction and locations where pile driving would occur, this restaurant is conservatively included as a sensitive receptor.

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA)	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?

[4] [5] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

Source: See Appendix E for construction noise modeling results.

Table 3.10-16 Comparison of Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated and Mitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA)		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With Mitigation[1]		
…							
Pile Installation	49	Along pier	Shorebird Park[3]	79	69	60	**Yes**
			Skates on the Bay Restaurant	~~75~~ 78	~~65~~ 68	70	No
			Nearest live-aboard boat[4]	66	56	65	No
…							

dBA = A-weighted decibels; MM = Mitigation Measure

[1] All noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for phases consisting of general construction activities (i.e., dredging, deck, float, and gangway construction, and amenities installation) and 10 dBA of noise reduction for phases consisting of pile driving activities (i.e., demolition and pile installation).

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

Source: See Appendix E for construction noise modeling results.

The following text changes have been made to Section 3.12, *Transportation* (Page 3.12-24):

It should be noted that other marine vessels regularly operate near the project site, given that the project site is next to an active Marina. Similar to other vessels, ferry vessels would operate safely. For example, when approaching the ferry floats, ferry vessels would slow down significantly and adhere to speed limits and docking safety procedures. Additionally, the project design has been refined to include additional fender piles and donut fenders located adjacent to the proposed ferry berthing area and around portions of the breakwater and turning basin. These fender piles and donut fenders would function as passive marine safety features and are intended to supplement the guide piles and donut fender system associated with the ferry terminal described in Chapter 2, *Project*

> *Description*. The fender piles and donut fenders would provide an additional layer of protection for ferry terminal infrastructure during vessel approach and docking operations, including in the unlikely event of a vessel loss-of-control incident. The addition of these fender piles and donut fenders is consistent with standard marine engineering and navigational safety practices and would further reduce the potential for collisions involving ferry terminal facilities. The fender piles and donut fenders do not alter ferry operations, navigation routes, vessel maneuvering requirements, or the conclusions of this analysis regarding transportation safety.

As described above, these refinements are within the scope of the project analyzed in the Draft EIR and do not result in new or more severe environmental impacts than those originally disclosed. As such, the conclusions of the Draft EIR remain unchanged.

In addition to the above text change describing the inclusion of fender piles and donut fenders, to further clarify the regulatory framework governing ferry navigation and vessel safety, the following clarification text changes, a new paragraph, has been made to Draft EIR Section 3.12, *Transportation* (Page 3.12-15):

> *Expansion of Ferry Transit Service in the San Francisco Bay Area Program EIR*
>
> The Water Emergency Transportation Authority (WETA) – also known as San Francisco Bay Ferry – prepared the Expansion of Ferry Transit Service in the San Francisco Bay Area Program EIR in 2003 (2003 WETA EIR). The Navigation Section of the 2003 WETA EIR, which the City incorporates by reference herein, included a program-level analysis of ferry vessel navigation and operational safety within the San Francisco Bay. The 2003 WETA EIR describes the regulatory context governing ferry navigation, including federal, state, and regional regulations, as well as coordination with and oversight by applicable maritime authorities. The 2003 WETA EIR accordingly evaluates potential navigation-related impacts associated with expanded ferry service and identifies standard operating procedures and mitigation measures to maintain safe vessel operation and minimize navigation conflicts, including the potential for vessel loss of control incidents (refer to 2003 WETA EIR Section 3.2.1.5, *Regulatory Setting*, and Section 3.2.2, *Impacts and Mitigation*). This information on the regulatory context as well as these mitigation measures are incorporated by reference and provide a broader regulatory and operational framework for ferry navigation evaluated at the project level in this Draft EIR.

To improve clarity regarding the incorporation of the 2003 WETA EIR with respect to the above revision to Section 3.12, Transportation, additional clarifying text has been added to Section 1.1.3, Incorporation by Reference (Page 1-2):

> This EIR includes a summary of the relevant parts of the WETA Program EIR. Please refer to Section 3.3, *Biological Resources*, ~~and~~ Section 3.7, *Hazards and Hazardous Materials*, and Section 3.12, *Transportation*, for a summary of the analysis in the WETA Program EIR, as it pertains to the proposed project.

This clarification does not result in new or more severe impacts, nor does it alter the analysis presented under Impact TRA-3. Therefore, the analysis and significance conclusion presented under Impact TRA-3 in the Draft EIR remain valid as written.

Section 3.11, *Recreation*, of the Draft EIR evaluates water-based recreation and Section 3.12, *Transportation*, evaluates navigation and vessel operations. These analyses conclude that recreational uses would remain compatible with ferry operations. However, page 3.11-19 of the Draft EIR has been revised to incorporate clarifying text as follows:

> Operation of the ferry vessels would not interfere with recreational uses of the Berkeley Waterfront area. While the project would introduce ferry vessel operations within the approach channel and berthing area, these activities would be limited to defined navigation corridors. Recreational sailing areas in the Marina and adjacent waters would remain available.

Operational compatibility with water-based recreation is addressed in Draft EIR Section 3.11, *Recreation*, which explains that ferry vessels would not interfere with water-based recreation (Impact REC-1, pages 3.11-16 through 3.11-20).

Page 3.11-20 has been revised to incorporate clarifying text as follows:

> Ferry operations would comply with speed restrictions and navigation protocols, resulting in wake conditions consistent with existing vessel traffic. Recreational users, including swimmers and non-motorized watercraft users, are not typically present within the proposed ferry terminal location, north of the Pier, due to the existing traffic of sailboats and charter boats entering and exiting the Marina. Ferry boats would be regulated near the ferry terminal and be restricted to a travel speed maximum of 8 knots.[29] More specifically, at 0.33 nautical miles, or approximately 2,000 feet from the terminal, ferry boats would begin to slow speed to reduce the effects of the vessel's wake. At 0.25 nautical miles, or approximately 1,500 feet from the terminal, the vessels would be brought to neutral for transferring and qualifying controls at the wing station for docking.[30] Consistent with existing WETA practices, ferry operations would be subject to U.S. Coast Guard navigation and safety requirements and would incorporate standard operational protocols, including defined approach routes, speed controls, and coordination with marina traffic, to ensure safe coexistence with recreational water users (refer to Section 3.12, *Transportation*). In addition to compliance with speed restrictions and navigation protocols, recreational users, including swimmers and non-motorized watercraft users, are not typically present within the proposed ferry terminal location north of the Pier due to the existing traffic of sailboats and charter boats entering and exiting the Marina. There are no designated launch points within the immediate vicinity of the ferry terminal. Ferry operations would occur within areas already characterized by vessel activity and would not affect primary recreational launch areas located elsewhere within the Berkeley Waterfront. Therefore, the associated ferry wake would not be noticeable within the context of the Berkeley Waterfront area and existing sailboat, motorized boats, and other recreational craft use. Recreation in the South Sailing Basin would not be impacted by operation of the proposed project, given the ferry boats would not traverse that area.
>
> [29.] 8 knots is equal to approximately 9.2 miles per hour.
>
> [30.] Gerrity, Brian. 2025. Project Manager, Capital Planning, San Francisco Bay Ferry. Personal communication regarding ferry speed in the Berkeley Waterfront area with Leo Mena, Senior Environmental Planner, Rincon Consultants. December 4, 2025.

In summary, the potential for loss of control incidents is adequately addressed through regulatory compliance, project design, and WETA's standard operational practices for vessel navigation and safety as described in Draft EIR Chapter 2, *Project Description*, and Section 3.12, *Transportation*. No significant environmental impacts related to such potential events have been identified with respect to these EIR topical areas. Therefore, the Draft EIR conclusions and mitigation measures remain valid.

2.2.15 Topical Response: Maintenance Dredging

Page 2-36 of Section 2.6.1, *Construction Details*, within Chapter 2, *Project Description*, of the Draft EIR describes the extent, location, and volume of dredging required for the project. As later described on Page 3.3-14 in Section 3.3, *Biological Resources*, of the Draft EIR, dredging activities at the project site are subject to oversight and permitting by USACE, with additional coordination with agencies such as the Regional Water Quality Control Board and the Dredged Material Management Office. The City of Berkeley or WETA would be responsible for implementing project-related dredging, subject to these regulatory approvals. Future maintenance dredging within the navigation channel or turning basin would be required to obtain applicable environmental clearances and regulatory permits and approvals.

In response to these comments, the following clarification text changes have been made to Draft EIR Section 2.6.1, *Construction Activities and Equipment*, page 2-28 as follows:

> Dredged materials and demolition debris would all be transported via barge that have a capacity of between 3,000 and 6,000 cubic yards. The location for disposal of dredged materials would depend

on the sampling results of the dredged materials, as well as permitting requirements. However, based on the recently completed Berkeley Marina Dredging Project of 2024 to 2025, it is expected that disposal would occur at Montezuma Wetland Restoration Project (Beneficial Reuse), Alcatraz Disposal Site, or another disposal site in the San Francisco Bay. The dredging described above represents one-time, project-specific dredging required to establish navigable depths for ferry operations. This dredging would be conducted on behalf of the City of Berkeley and/or WETA, subject to all applicable permits and approvals from the United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), San Francisco Bay Conservation and Development Commission (BCDC), and the Dredged Material Management Office (DMMO). Although dredging would occur within the alignment of an existing USACE-designated federal navigation channel, this portion of the channel has not been maintained by USACE in recent decades and is not currently included in an active federal maintenance dredging program. Accordingly, dredging at this location would constitute new work dredging, and the proposed project does not assume that USACE would conduct or be responsible for this initial dredging.

The above clarifications do not change the project description as analyzed throughout the Draft EIR. The environmental analysis conservatively evaluates the maximum dredging extent and all impacts associated with project-related dredging were assessed assuming project implementation by the City under applicable regulatory oversight.

Regarding maintenance dredging, the need for, timing of, and extent of future maintenance dredging cannot be determined with certainty at this time. Refer to the 2025 Coastal Study prepared for the project.16 As discussed therein, a hydrodynamic and sediment transport model was developed to evaluate sediment deposition within the proposed dredged areas and estimate long-term maintenance requirements. The study concluded that average annual sedimentation rates are approximately 0.20 feet per year within the approach channel and approximately 0.09 feet per year within the berth pockets. Based on these modeled sedimentation rates, the study estimated that maintenance dredging may not be required for approximately 10 to 15 years within the approach channel and approximately 22 to 33 years within the berth pockets, depending on the operational depths ultimately maintained. The study also notes that these estimates are subject to uncertainty and are based on modeling assumptions, available calibration data, and future conditions that may change over time (refer to Coastal Study, Executive Summary, pages 7-8; and Sections 6-7, pages 64-67). Accordingly, there is currently no project-specific maintenance dredging program, schedule, dredging volume, disposal plan, or operational commitment that can be analyzed. Whether maintenance dredging will ultimately occur, when it may occur, the amount of material that may require removal, the technologies available at that time, applicable regulatory requirements, and environmental conditions present when such dredging may become necessary are presently unknown.

CEQA does not require the analysis of impacts that are too speculative for meaningful evaluation. CEQA Guidelines Section 15145 provides that where a lead agency determines, after thorough investigation, that a particular impact is too speculative for evaluation, the agency may conclude its discussion of that impact. Given that potential maintenance dredging, if needed, is not anticipated for at least 10 years and potentially more than 30 years depending on location and operating conditions, and because the timing, extent, methods, and environmental setting associated with any future maintenance dredging are presently unknown, detailed environmental analysis of future maintenance dredging would be speculative. Should maintenance dredging be proposed in the future, such activities would be subject to applicable permitting requirements and any environmental review required under then-applicable federal, state, and local regulations.

To provide additional clarification, the following text has been added to Draft EIR Section 2.6, *Construction Details*, within the discussion of dredging (page 2-28):

[16] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf

> Sediment transport modeling prepared for the project estimates that maintenance dredging, if required, would occur infrequently. Based on modeled sedimentation rates, maintenance dredging within the approach channel may not be needed for approximately 10 to 15 years, while maintenance dredging within berth pockets may not be needed for approximately 22 to 33 years, depending on operational depth requirements.[23] Because the timing, extent, volume, methods, and regulatory requirements associated with any future maintenance dredging are presently unknown, no maintenance dredging program is proposed as part of the project at this time. Any future maintenance dredging activities would be evaluated and permitted, as required, based on the circumstances existing at that time.
>
> [23] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf

This revision is clarifying in nature and does not alter the impact analysis, significance determinations, or mitigation measures presented in the Draft EIR.

Furthermore, it should be noted that any potential cumulative impacts associated with maintenance dredging, including potential cumulative impacts from the proposed project one-time dredging event, future unknown maintenance dredging for the proposed project, or any other dredging nearby would be addressed through applicable permitting requirements. Dredging in the Bay is highly regulated by the Dredged Material Management Office. CEQA Guidelines Section 15130(c) states the following: “With some projects, the only feasible mitigation for cumulative impacts may involve the adoption of ordinances or regulations rather than the imposition of conditions on a project-by-project basis.” In the case of dredging impacts in the Bay, the Dredged Material Management Office has imposed regulations that address any potential cumulative impacts related to dredging.

The Draft EIR's analysis and conclusions related to dredging impact remain valid as written. No further revisions to the EIR are necessary.

2.2.16 Topical Response: Measure L

Measure L was passed by City of Berkeley residents through a citywide vote in the November 1986 election. The initiative was placed on the ballot to ensure public oversight and protection of the city's parks and open spaces. As stated in the Section 3.9, *Land Use and Planning* (See 3.9-33) of the Draft EIR, Measure L provides that:

> "No public parks or public open space owned or controlled or leased by the City or agency thereof, shall be used for any other purpose than public parks and open space, without the Berkeley City Council first having submitted such use to the citizens for approval by a majority of registered Berkeley voters voting at the next general election; except that such voter approval is not required for temporary use of public parks or public open space for other purposes, if a state of emergency has been declared..."
>
> (BMC Section 6.42.010)

"Public parks" are defined as City of Berkeley parks, public school playgrounds, or lands held in trust by a public entity that have been formally dedicated to permanent recreational use by the City of Berkeley and funded for recreational use by City of Berkeley public funds. "Public open space" is defined as all City of Berkeley parks, public school playgrounds, and vacant public land, whether formally dedicated to park use or being used de facto as open space with recreational use or potential use on or after January 1, 1985 (BMC Section 6.42.030).

As discussed in the Draft EIR, the proposed project is consistent with Measure L. The analysis proceeds component by component.

Landside Improvements

None of the proposed landside improvements would take place within a public park, with the limited exception of the installation of a new wayfinding sign in Shorebird Park. The installation of this sign would not change the purpose or alter the use of Shorebird Park but rather is consistent with its park use. The remaining landside improvements do not implicate Measure L because they are not occurring in a public park. Even if Measure L applied, the improvements are consistent with Measure L as described below.

- The parking lot improvements consist of renovation of an existing parking lot. This renovation would include removing a landscaped strip bordered on one side by Seawall Drive and the Parking Lot on another side. This median is not accessible to the public (there are no cross-walks or paths leading to it or amenities connected to it). Therefore, the Project would not result in a change of use.
- The public plaza improvements consist of enhancements to an existing paved plaza area, adding amenities such as seating, a public restroom, and bicycle parking. These amenities do not amount to a change in use. Rather, these improvements are intended to promote the space as a public gathering space, which is consistent with and supportive of the existing recreational use.
- The Bay Trail Extension and cycle track would be constructed in an area currently occupied by parking stalls and a dilapidated pathway. The use of this area is moving from parking to landscaped green space and multi-use trail for recreational use by bicyclists and pedestrians.
- The cycle track improvements and bus facilities would be built in the public right-of-way, which is not parkland or open space subject to Measure L. In any event, they do not change the character of the area, but rather facilitate use of the space for recreational purposes, consistent with Measure L.

Pier Improvements

The waterside improvements include building a new pier in the same location as the existing, deteriorated pier. The pier would not be built in a public park or in public open space as defined by Measure L. Even if the areas upon which the pier is built were subject to Measure L, these improvements are Measure L compliant, because the new pier would not change the purpose or alter the use of these areas - it replaces the existing pier and maintains the recreational use of the area. In fact, the new pier expands recreational use because the current pier has been inaccessible to the public since its closure in 2015.

Ferry Terminal, Charging Infrastructure, and Breakwater

The ferry facility, ferry charging infrastructure, and breakwater would be installed in open Bay waters. Open Bay waters are navigable waters of the State, subject to the public trust doctrine and the regulatory jurisdiction of the San Francisco Bay Conservation and Development Commission and the State Lands Commission, not “public parks” or “public open space”. Therefore, Measure L is not triggered.

For these reasons, as stated in the Draft EIR, the proposed project would not conflict with Measure L. No revision to the Draft EIR is warranted on this basis.

2.2.17 Topical Response: Mitigation Measure Requirements

CEQA Guidelines Section 15126.4 requires that an EIR identify feasible mitigation measures for potentially significant impacts and provides that the development of mitigation measures shall not be deferred to a future time but also states that specific details of a mitigation measure may be developed after project approval, where it is impractical to finalize those details during environmental review. CEQA Guidelines Section 15126.4(a)(1)(B) states:

“Where several measures are available to mitigate an impact, each should be discussed and the basis for selecting a particular measure should be identified. Formulation of mitigation measures shall not be deferred until some future time. The specific details of a mitigation measure, however, may be developed after project approval when it is impractical or infeasible to include those details during the project’s

environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will considered, analyzed, and potentially incorporated in the mitigation measure. Compliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards."

The comments identified three mitigation measures that the comments refer to as deferred. Each is addressed below.

First, Draft EIR Mitigation Measure BIO-3 (which requires removal of additional portions of the existing pier) does not constitute deferred mitigation. Mitigation for impacts to waters of the United States and waters of the State is typically determined through the regulatory permitting process, in coordination with the U.S. Army Corps of Engineers and Regional Water Quality Control Board. As part of this process, project impacts must first be avoided, then minimized to the maximum extent practicable, after which the permitting agencies establish the appropriate type, location, and amount of mitigation based on site-specific conditions, resource functions and values, and applicable regulatory standards. The final mitigation requirements, including mitigation ratios, performance standards, and monitoring requirements, are formalized through permit conditions (e.g., Section 404 and Section 401 authorizations). Mitigation Measure BIO-3 commits the project to providing mitigation consistent with these regulatory requirements and ensures that impacts to jurisdictional waters will be fully offset in accordance with federal and state standards.

Consistent with CEQA Guidelines Section 15126.4, the Draft EIR commits to the mitigation measures identified throughout the document and will further commit to these measures by adopting and implementing a Mitigation Monitoring and Reporting Program (MMRP). In addition, the mitigation measure establishes performance standards that the measure must achieve (i.e., 1:1 mitigation ratio) and identifies the types of actions that will be implemented to meet those standards (i.e., the removal of existing pier piles and decking). To the extent that negotiations with regulatory agencies may result in a higher mitigation ratio than the 1:1 minimum specified in Mitigation Measure BIO-3, the City states that Mitigation Measure BIO-3 expressly establishes a floor, not a ceiling, and provides that the measure "may be modified or supplemented by permit conditions from applicable regulatory agencies." Therefore, adoption and incorporation into the project of Mitigation Measure BIO-3 will commit the City to mitigation that includes specific performance standards and identifies the types of potential activities to achieve these standards, consistent with CEQA Guidelines Section 15126.4(a)(1)(B). Accordingly, Mitigation Measure BIO-3 is not deferred mitigation, but rather is structured in a manner which allows the City to finalize implementation details, including removal ratio, at a later stage so long as enforceable standards and commitments are met. Because the Draft EIR discloses the mitigation framework, performance criteria, and anticipated methods of compliance, the public has been provided with a meaningful opportunity to review and comment on the effectiveness and feasibility of the proposed mitigation measures. Therefore, the Draft EIR complies with CEQA Guidelines Section 15126.4 and does not impermissibly defer mitigation.

Second, the City has not deferred mitigation by not providing a parking management plan. Parking supply is not an impact under CEQA so no mitigation measure was identified to prepare a parking management plan. Refer to the Section 2.2.20, *Topical Response: Parking,* for more information on this topic.

Third, the implementation of mitigation from the 2003 WETA EIR is not deferred mitigation. As identified in Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* the 2003 WETA EIR is not relied upon for the discussion of land use impacts or recreational access amenities. For a discussion of recreational access amenities, refer to Section 2.5 Proposed Project Components, Chapter 2 *Project Description*, pages 2-6 through 2-22 which describes the recreational amenities on the waterside and landside for the proposed project along with figures and plan views of the key components of the project that are intended to provide an enhanced recreational amenity throughout the waterfront area. For the proposed project land use impacts, please refer to Section 3.9, *Land Use and Planning* of the Draft EIR.

For questions raised by comments about specific mitigation measures, additional information about why the measure is compliant with CEQA Guidelines Section 15126.4 is provided in the responses to comments raising this issue. In summary, the Draft EIR significance conclusions and associated mitigation measures remain valid, and no changes are necessary in response to these comments.

2.2.18 Topical Response: Nighttime Lighting/ALAN[17]

The baseline conditions of existing lighting and glare in the project vicinity are described in Draft EIR Section 3.1.2, *Light and Glare*, which considers temporary, mobile, and permanent sources of lighting and glare in the project vicinity.

The following clarifying text, underlined below, has been added to Draft EIR Section 3.1.2, *Light and Glare*, on page 3.1-8*:*

> *Primary stationary sources of light at the project site include streetlights, parking lot and safety* lighting, pier lighting, and exterior building lights. Automobile headlights also create temporary, mobile sources of light along proximate roadways and within on-site and nearby parking lots. Refer to Figure 3.1-2, Photograph 1 for a representative photograph of the existing lighting on the pier. Refer to Figure 3.1-2, Photograph 2 for a photograph of the Berkeley Waterfront, which shows the nighttime lighting on the pier, as well as the Seawall Drive Parking lot (refer to the middle of the photograph, to the peninsula located to the left of the pier).
>
> As described in Chapter 2, *Project Description*, existing lighting is present on the closed pier (28 lights spaced approximately 110 feet apart from each other on the north side of the closed pier), as well as the existing Seawall Drive parking lot (eight lights in parking islands).

As described in the Draft EIR Chapter 2, *Project Description*, and Section 3.1, *Aesthetics*, the proposed project would require temporary nighttime lighting during construction and includes permanent lighting fixtures to be used once the project is operational. As discussed in Section 3.1, *Aesthetics* under Impact AES-4 (pages 3.1-33 through 3.1-34), nighttime construction lighting would be temporary and limited, and operational lighting (i.e., permanent fixtures) would be similar in nature to existing conditions while remaining compliant with local safety and design requirements. As required by Draft EIR Mitigation Measure AES-1 and in compliance with BCDC and local guidelines, project lighting would consist of shielded, downward, project-facing lighting, and all fixtures would be compliant with Illuminating Engineering Society (IES) and DarkSky recommendations to control and minimize glare, avoid light pollution, and minimize light trespass. Discussion of impacts to biological resources associated with proposed project lighting, including Artificial Light at Night (ALAN) are addressed in Draft EIR Section 3.3, *Biological Resources.* Impact BIO-1 (pages 3.3-42 through 3.3-56) determined less-than-significant impacts to biological resources as a result of proposed project lighting with implementation of Mitigation Measures AES-1.

The following clarifying text, underlined below, is added to Draft EIR Section 3.1.3, *Regulatory Framework*, page 3.1-16*:*

> San Francisco Bay Conservation and Development Commission
>
> **San Francisco Bay Plan**
>
> The San Francisco Bay Plan[8] developed by the San Francisco Bay Conservation and Development Commission (BCDC) aims to maintain and enhance the Bay as a body of water that affords scenic enjoyment. Key aesthetics objectives in the form of findings and policies applicable to the proposed project include the following:
>
> …

[17] ALAN is the abbreviation of "Artificial Light at Night."

- Transportation Policies
  - Policy 4. Transportation projects on the Bay shoreline and bridges over the Bay or certain waterways should include pedestrian and bicycle paths that will either be a part of the Bay Trail or connect the Bay Trail with other regional and community trails. Transportation projects should be designed to maintain and enhance visual and physical access to the Bay and along the Bay shoreline.

Public Access Design Guidelines for Shoreline Spaces[9]

The BCDC Public Access Design Guidelines for Shoreline Spaces (BCDC 2005) provides guidelines for shoreline design. Guidelines related to visual resources are listed below.

- Taking advantage of existing site characteristics and opportunities, such as fishing, viewing, picnicking, swimming or boating.
- Locating buildings, structures, parking lots and landscaping of new shoreline projects such that they enhance and dramatize views of the Bay and the shoreline from public thoroughfares and other public spaces.
- Organizing shoreline development to allow Bay views and access between buildings.
- In hilly areas, designing and locating shoreline buildings to allow for upland views down to the Bay and to Bay access areas.
- In hilly areas, employing split-level roads to increase viewing and landscaping potential.
- Designing towers, bridges or other structures as landmarks that suggest the location of the waterfront, even when the Bay itself is not visible.
- Providing visual interest and architectural variety in massing and height to new buildings along the shoreline.
- Using building footprints to create a diversity of public spaces along the Bay.
- Articulating shoreline building facades with human-scale elements.
- Using forms, materials, colors and textures that are compatible with the Bay and adjacent development.
- Locating service areas, such as garbage facilities and loading docks, away from the shoreline or screen them with suitable fencing or landscaping.
- Utilizing the shoreline for Bay-related land uses as much as possible; uses that do not complement the Bay should be set back from and not impact the shoreline.
- Orienting the development to Bay views and providing physical connections to the Bay at every opportunity.
- Orienting public access areas and improvements to take advantage of views of opposite shores, landmarks (such as islands and bridges) and adjacent maritime activities such as boat launching, gas docks, ferry landings or other marine-related uses.
- Utilizing the shoreline for Bay-related uses. Uses that do not orient to the Bay should be set well back from the Bay and be sited, designed and managed so as to not impact the shoreline.
- Provide buffers between roadways and public access areas, such as planting, low berms or roadside parking, and maintain views to the Bay.
- Provide parking for shoreline access areas where appropriate, but keep parking areas reasonably sized, away from the Bay and adequately screened.
- Provide small bayside parking areas or pull-offs for limited in-car Bay viewing, where compatible with existing roads and adjacent uses.
- Provide elevated places for viewing the Bay.
- Use site furnishings, such as benches, trash containers and lighting, to provide visual cues that the shoreline space is available for public use.

- Use lighting to extend the hours of shoreline use.
- Locate night lighting away from sensitive habitat areas.
- Provide enough lighting to create a sense of safety, but designing to control intensity, glare, and spillover.

[8] BCDC. 1969. San Francisco Bay Plan. Available: https://bcdc.ca.gov/resources/plans/san-francisco-bay-plan/#introduction. (accessed September 2024).

[9] BCDC. 2005. Shoreline Spaces: Public Access Design Guidelines for the San Francisco Bay. Available at: https://www.bcdc.ca.gov/wp-content/uploads/sites/354/2023/09/Public-Access-Design-Guidelines-Shoreline-Spaces-PDF.pdf. Accessed June 2026.

The following clarifying text, underlined below, is added to the Draft EIR discussion under Impact AES-4 (page 3.1-33):

Operation

The BCDC Public Access Design Guidelines for Shoreline Spaces (BCDC 2005) provides guidelines for shoreline design. Guidelines related to lighting include:

- Using site furnishings, such as benches, trash containers and lighting, to provide visual cues that the shoreline space is available for public use;
- Using lighting to extend the hours of shoreline use;
- Locating night lighting away from sensitive habitat areas; and
- Providing enough lighting to create a sense of safety, but designing to control intensity, glare, and spillover.

The proposed project would include the following lighting features:

- Wayfinding signage lighting along University Avenue, Seawall Drive, and the proposed Bay Trail Extension
- Lighting at the Seawall Drive parking lot
- Lighting on the new pier, breakwater, gangways, and floats
- Lighting at the new public plaza

Down-cast LED lights would be placed approximately every 50-feet along the Pier and Breakwater on 16-foot tall poles. The pier canopy structure would be fitted with LED linear downlights attached to the roof and wall sconces attached to the columns. Stainless steel guardrails on the pier would contain LED handrail point lighting aimed at the deck, which would also to be used for emergency egress lighting. A solar-powered marine signal light would be installed on the float. Emergency LED path of egress lighting would also be installed on the central inverter. The proposed project lighting is required to support safe nighttime use of University Avenue, Seawall Drive, the proposed Bay Trail Extension, Seawall Drive parking lot, and pier by providing adequate visibility for pedestrian circulation, wayfinding, vehicle maneuvering, and hazard avoidance during hours of darkness, as required by the BCDC. ~~Furthermore, lighting~~ All project light fixtures would be photocell-controlled area lighting in compliance with Illuminating Engineering Society (IES) and DarkSky recommendation to minimize glare, reduce light trespass, and avoid light pollution. With utilization of DarkSky approved light fixtures, operational impacts related to new sources of light would be less than significant.

Vehicular traffic from the proposed project would result in an increase in mobile light sources (i.e., vehicle headlights) in the project vicinity. The existing visual setting is characterized by developed land uses, established roadway infrastructure, and ongoing vehicular activity that already introduces

intermittent headlight illumination and associated glare during nighttime hours; thus, the baseline environment includes regular exposure to such light sources. As described in Section 3.12, Transportation, and Appendix F, the Project is estimated to generate 1,127 daily vehicle trips; however, it is anticipated that most of these trips are not new trips, and were originally headed to San Francisco by driving across the Bay Bridge. Project-generated traffic would incrementally increase the number of vehicles on nearby roadways, increasing the frequency of headlight visibility within the viewshed. However, this increase would be minor and dispersed, occurring within existing roadway corridors and parking areas already defined by vehicular movement and associated lighting. Vehicle headlights are inherently transient, directional, and mobile, producing short-duration illumination rather than static or concentrated light sources. Accordingly, the project would not substantially increase ambient nighttime illumination or introduce new patterns of light spill or glare beyond existing conditions. This impact would be less than significant.

It is not anticipated that significant operational daytime glare would occur from proposed project structures (e.g. pier, breakwater, ferry infrastructure), given the lack of reflective materials in the proposed facility. While the surface of water is reflective, this would not be a change from existing conditions and, thus, would not introduce new sources of daytime glare. Potential glare resulting from Bay water would appear similar in character to existing, surrounding Bay water at the project site. Therefore, operational glare impacts related to new sources of glare would be less than significant.

Discussion of project impacts to biological resources associated with proposed project lighting is included in Section 3.3, *Biological Resources*.

Environmental impact analysis associated with light and glare evaluated in Draft EIR Section 3.1, *Aesthetics*, is based on the lighting infrastructure and design assumptions described in Draft EIR Chapter 2, *Project Description*, (pages 2-22 through 2-23) and implementation of required Mitigation Measure AES-1. The light and glare impact (Impact AES-4, refer topages 3.1-33 through 3.1-34) was determined to be less-than-significant-with mitigation. For the following reasons, modelling future lighting is not reasonable or required for assessment of environmental impacts related to the proposed project:

- Project lighting would occur within an already developed area along already developed roadways, trails, paths, piers, and other public uses;
- Project lighting would primarily replace or enhance existing lighting;
- Project lighting would be primarily to provide for safe use of the waterfront and to extend the public hours of such use; and
- Project lighting would be designed to avoid glare and in conformance with DarkSky recommendations.

The text changes above are clarifying in nature and do not alter the substance of the impact analysis or the resulting significance determination. Therefore, the analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid.

2.2.19 Topical Response: Ordinance (Prohibited Recreational Activities)

The Marina Boundary

BMC Chapter 6.20 governs the Berkeley Marina. As defined in BMC Section 6.20.010(A), the "Berkeley Marina" is the area owned or controlled by the City, including the municipal fishing pier, the breakwater, the sea walls and the extensions thereof, located on the Berkeley waterfront, bounded on the west by a north-south line through the end of the Municipal Fishing Pier. The pier footprint and adjacent Bay waters fall within the defined boundaries of the Berkeley Marina as established by BMC 6.20.010(A). BMC Chapter 6.20, including its prohibited activities provisions, therefore applies to the project's waterside area.

Section 6.20.180(A): Swimming, Bathing, Wading, and Windsurfing.

Section 6.20.180(A) states that it is unlawful for any person to swim, bathe, wade, or windsurf in any portion of the marina except at Shorebird Park and in the South Sailing Basin. As established by the Marina boundary definition above, this prohibition applies within the project site. The Draft EIR correctly states that swimming, bathing, windsurfing, and wading are prohibited within City jurisdictional waters in the Marina except at the South Sailing Basin (including Shorebird Park Beach and the sailing docks). This is an accurate statement of existing law. The project does not create this prohibition which predates the project and reflects the existing regulatory baseline.

Section 6.20.180(B): Personal Watercraft

Section 6.20.180(B) is a separate and distinct provision from Section 6.20.180(A). Section B prohibits the operation of jet skis and personal watercraft within 1,500 feet of the Berkeley shoreline or Berkeley Fishing Pier, except within a designated access corridor.

"Personal watercraft" as defined in BMC Section 6.20.010(H) means vessels propelled by a water-jet pump or other machinery as their primary source of motor propulsion - in common parlance, jet skis. Windsurfing boards, kiteboarding equipment, kayaks, paddleboards, and similar wind- or human-powered craft do not fall within this definition. The City agrees that the 1,500-foot personal watercraft restriction in Section 6.20.180(B) does not apply to wind- or human-powered watercraft. However, the activities at issue (swimming, windsurfing, wading, and bathing) are addressed not by Section B but by Section A, which applies Marina-wide. The comments' focus on the legislative history of Section B is, therefore, not relevant to the applicability of Section A.

The following clarifications are added to pages 3.11-18 and 3.11-19 of the Draft EIR:

> For construction occurring in the water, swimming, bathing, wading, and wind surfing~~, sailing, and kayaking~~ are prohibited at the existing and new pier areas, pursuant to Berkeley Municipal Code Section 6.20.180(A), Prohibited activities. Although Berkeley Municipal Code Section 6.20.180(B) also prohibits the use of jet skis and other motorized watercrafts in this vicinity, sailboats, kayaks, paddleboards, and other non-motorized recreational watercraft may continue to use waters in the pier area. Boats already navigate around the existing pier and other vessels in the Bay and Marina, and they would similarly be able to navigate around in-water construction activities. Boats entering or exiting the Marina would also be able to maneuver around the work area, as construction would be staged to maintain adequate space for vessel passage. Therefore, water-work would not directly impact water-based recreation. ~~Therefore, p~~Project construction also would not substantially increase the use of existing park and recreational ~~reactional~~ facilities, including access to the the San Francisco Bay for recreation use, such that there would be substantial physical deterioration of existing parks and recreational facilities and result in need for new or physically altered park facilities.
>
> …
>
> Operation of the ferry vessels would not interfere with recreational uses of the Berkeley Waterfront area. While the project would introduce ferry vessel operations within the approach channel and berthing area, these activities would be limited to defined navigation corridors. Recreational sailing areas in the Marina and adjacent waters would remain available. Proposed ferry vessels would travel and dock in Bay waters north of the pier, in an area where swimming, bathing, wading, and windsurfing~~/sailing~~ ~~is~~ are prohibited by the Berkeley Municipal Code Section 6.20.180(A), Prohibited activities. These restrictions represent existing municipal regulations applicable to localized areas of the Marina and are part of the existing baseline conditions; the proposed project would not modify or expand the geographic extent of these regulated areas. However, other types of recreational boats are permitted to use this area. Sailboats, kayaks, paddleboards, and other non-motorized personal watercraft are not prohibited by either Section 6.20.180(A) or Section 6.20.180(B) and may continue to use the area accordingly. At present, permitted recreational boats already navigate around the existing pier and other vessels using the Bay and Marina, and they would similarly be able to navigate around the proposed ferry infrastructure and ferry vessels.

The Project Does Not Create or Expand the Prohibition

The proposed project does not impose any new restrictions on water-based recreation. The prohibitions in BMC Section 6.20.180 are existing law applicable to the project site regardless of whether this project is built. The project does not propose new enforcement of those restrictions, nor does it physically preclude access to areas that are currently available for wind- or human-powered watercraft. As described in the Draft EIR at Section 3.11, the primary launch points for swimmers, windsurfers, kayakers, and paddleboarders at the Berkeley Waterfront (the South Sailing Basin docks and Shorebird Beach) are located outside of the project site and would not be affected by the project. The un-improved rocky shoreline at the southernmost point of the 199 Seawall peninsula, used by some water recreators, is likewise south of the project site and not permanently impacted by the project; refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access.*

CEQA Baseline

Several comments state that the DEIR improperly uses BMC 6.20.180 to define the CEQA baseline. However, under CEQA Guidelines Section 15125, an EIR must describe the physical environmental conditions and existing regulatory environment at the time the NOP is published. Impacts to recreational uses, including those activities that may occur informally in the project site, are also analyzed in Section 3.11, Recreation, of the Draft EIR.

For these reasons, the Draft EIR's description of BMC Section 6.20 is correct and no revision to the Draft EIR is warranted.

2.2.20 Topical Response: Parking

Parking Is Not an Environmental Impact Under CEQA

Issues related to parking are addressed in Draft EIR Chapter 3, *Environmental Impact Analysis* (refer to page 3-11). As explained therein, the Draft EIR evaluates potential secondary environmental effects associated with parking conditions through the relevant environmental resource topics. To the extent comments concern the allocation, management, or availability of parking, such comments do not raise significant environmental issues requiring further response pursuant to CEQA Guidelines Section 15088.

The Project is Consistent with Bay Plan Recreation Policy 9

Bay Plan Recreation Policy 9 requires that parking facilities not be usurped by ferry patrons and that shared parking arrangements be provided to minimize the shoreline area needed for parking.

Even assuming inconsistency with the Bay Plan constituted an environmental impact, the DEIR demonstrates that the proposed project is consistent with the Bay Plan, including Recreation Policy 9, and would not usurp recreational parking. As the Draft EIR at Section 3.9 makes clear, the project's Parking and Transportation Demand Management (TDM) Plan demonstrates the Berkeley Waterfront's capacity to accommodate both ferry patrons and recreational users while ensuring meaningful parking access for each. Therefore, the proposed project is consistent with Recreation Policy 9 and there is no conflict with the Bay Plan.

While some comments provided their own estimates of parking demand and availability and concerns regarding the methodology used in the Parking and TDM plan, CEQA does not require the City to adopt or respond point-by-point to such lay calculations or critiques where, as here, the City's analysis is grounded in empirical data and professional methodology prepared by qualified traffic and transportation engineers. The City's conclusions regarding parking sufficiency are based on the Parking and TDM Plan, prepared by Kittelson & Associates, which constitutes substantial evidence supporting the Draft EIR's analysis. Furthermore, the project will require a permit from BCDC, which will independently assess and confirm the project's consistency with its laws and policies including the Bay Plan. During the permitting

process, BCDC may impose special conditions or project changes as necessary to ensure consistency with its laws or policies.

The Project Includes a Robust Parking and TDM Strategy

The City has prepared a Parking and Transportation Demand Management (TDM) Plan for the project. The Parking and TDM Plan establishes parking availability at various parking lots in the project vicinity, estimates ferry-rider parking demand, identifies TDM measures that have been incorporated into the project or could be implemented in the future, and provides recommendations related to shared parking management and allocation. A subsequent Parking Management Implementation Plan will set forth the operational strategies for shared parking, consistent with the recommendations of the Parking and TDM Plan. The Parking and TDM Plan demonstrates that the Berkeley Waterfront has the capacity to accommodate both ferry patrons and recreational users while ensuring meaningful, shared parking access for each, consistent with BCDC Bay Plan Recreation Policy 9.

The Project Ensures Adequate Parking Supply

The existing Seawall Drive parking lot includes approximately 320 parking spaces, and the parking area west of Seawall Drive adjacent to the Bay includes approximately 84 parking spaces, for a total of approximately 404 existing parking spaces across the project site. The proposed project would replace all existing parking spaces with 400 to 450 new parking spaces (pending final design), including ADA-accessible and EV parking spaces. The project therefore maintains approximately the same overall number of parking spaces at the project site and may result in a net increase in parking spaces. The reconfiguration of parking is designed to support shared use consistent with BCDC Bay Plan Recreation Policy 9, which requires that parking facilities not be usurped by ferry patrons and that shared parking arrangements be provided to minimize the shoreline area needed for parking. Further, as discussed above, the Parking and TDM Plan analyzes parking demand based on observed usage patterns at the Berkeley Waterfront and WETA ridership projections and demonstrates that with implementation of Parking and TDM strategies such as well-designed and convenient loading zones for family drop-off and rideshare vehicles, enhanced bicycle and pedestrian access and improved secure bike parking, the Waterfront will have sufficient spaces to accommodate all users.

Parking Availability Does Not Create Secondary Environmental Impacts

CEQA does require analysis of secondary physical impacts if a parking deficiency causes them. This includes increased vehicle travel (including vehicle miles traveled [VMT]) or safety impacts from degraded circulation. The Draft EIR evaluates parking and circulation to determine whether changes in parking supply or management could result in such secondary environmental effects, consistent with CEQA Guidelines Section 15064.3.

As documented in Draft EIR Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Assessment,* the project would generate vehicle trips that can be accommodated within the existing transportation network without creating unsafe conditions or substantially degrading circulation (refer to Section 3.12.4, Impact Analysis, on Pages 3.12-15 through 3.12-25). The analysis concludes that project-related traffic would result in minor increases in delay and queuing and would not introduce a new circulation deficiency or substantially worsen existing conditions (refer to Section 3.12.4, Impact TRA-1, on pages 3.12-17 through 3.12-19; Appendix F, Operational Analysis sections).

With respect to secondary effects related to parking, including potential spillover, increased circulation from drivers searching for parking, or increases in VMT, the Draft EIR and the supporting Parking and TDM Plan demonstrate that the Berkeley Waterfront parking supply is sufficient to accommodate project ferry parking demand without requiring drivers to circulate between lots or generate additional vehicle travel. Where sufficient parking supply exists to meet demand, the conditions that would trigger secondary circulation and VMT effects (namely, drivers unable to find parking) do not arise. Accordingly,

the project would not result in secondary environmental impacts from parking-related circulation of VMT increases

Concerns Regarding the Equity of Parking Fees Do Not State Environmental Impacts

Some comments raise concerns that changes to parking, including the introduction of parking fees, would disproportionately affect lower-income and non-white recreational users who currently access the Berkeley Waterfront at no cost. The City acknowledges this concern. The imposition of parking fees, however, does not impose an environmental impact that need be analyzed in this EIR.

Bay Views Are Preserved

As described in the Draft EIR, the reconfiguration of Seawall Drive to allow for the construction of the Bay Trail includes retention of parking on the western side of Seawall Drive where feasible, with approximately 20 pull-in stalls and 13 parallel stalls retained. While this represents a reduction from the approximately 84 existing spaces west of Seawall Drive, the project expands access to Bay views for pedestrians, cyclists, and visitors using the new Bay Trail Extension, seating areas, and picnic tables. Also refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*.

For these reasons, the Draft EIR's treatment of parking-related impacts is consistent with all applicable laws and regulations, and no revision to the Draft EIR is warranted on this basis.

2.2.21 Topical Response: Potential Impacts on Existing Recreational Water Access

Existing Conditions Are Adequately Discussed in the EIR

As described in the Draft EIR at Section 3.11, Recreation, the Berkeley Waterfront provides multiple launch points for water-based recreation. The public docks in the South Sailing Basin and Shorebird Beach are the primary launch locations for swimmers, windsurfers, kayakers, and paddleboarders. The Draft EIR acknowledges that the un-improved rocky shoreline at the southernmost point of the 199 Seawall peninsula is used by water recreators, including when low tides make launching from the South Sailing docks undesirable due to shallow water and exposed mudflats. This existing use is reflected in the baseline conditions described in the EIR. Refer to 3.11.2, *Environmental Setting*, San Francisco Bay in Chapter 3.11, Recreation, on page 3.11-7 of the Draft EIR:

> Windsurfers, wingers, swimmers, paddleboarders, and kayakers launch from the South Sailing docks or Shorebird Beach for access throughout the South Sailing Cove and beyond. An un-improved rocky shoreline at the southernmost point of the 199 Seawall peninsula is used by some swimmers and windsurfers/wingers, primarily when low tides make launching from the South Cove undesirable due to shallow water and exposed mudflats.

BMC Section 6.20.180 Clarifies the Permitted Launch Points, Which Are Separate from the Area Where Ferries Will Operate

The 199 Seawall launch point is considered by the City to be within the South Sailing Basin / South Cove area. Launching from this area is permitted because users can travel south and/or east directly into the South Cove, consistent with the provisions of BMC Section 6.20.180, refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*. While some users may navigate into the Marina waters as defined by BMC Section 6.20.010(A), these users rarely travel north of the pier. When they do, they must navigate around the extensive boat traffic that characterizes the Berkeley Marina as well as any other watercraft in the San Francisco Bay. The ferry terminal and ferry operations are located north of the pier, in an area geographically and operationally separate from the recreational uses at the 199 Seawall launch point and the South Sailing Basin.

The Project Does Not Eliminate the 199 Seawall Launch Point, It Improves It

The proposed project does not include any construction or physical alteration at the 199 Seawall launch point itself. The shoreline repair work included in the project is located on the eastern side of the Seawall Peninsula, north and east of the 199 Seawall Drive structure, not at the informal launch area on the Bay-facing south-western tip of the peninsula. Furthermore, the proposed project includes new amenities on the shoreline in the vicinity of the 199 Seawall launch point, including seating, a small laydown area, picnic tables, and rinse stations, specifically to support existing land and water based recreational uses at this location. The project therefore not only preserves access to the 199 Seawall launch point but actively enhances the recreational experience there.

Further, the project does not change low-tide access conditions at that location. To the extent that low-tide access to Bay waters for informal water recreators is a concern, that concern exists independently of this project and is not caused or worsened by project implementation.

Parking and Access

As discussed in the Draft EIR Section 3.12, *Transportation*, and as further addressed in Section 2.2.20, *Topical Response: Parking*, access to parking for recreational use is a social impact rather than an environmental impact under CEQA. Scarcity of parking is considered a potential secondary CEQA impact only where it results in a physical impact on the environment, such as a significant increase in VMT. As the Draft EIR concludes, and as further addressed in Section 2.2.27, *Topical Response: VMT*, the project results in an overall net reduction in VMT, and any VMT increases attributable to parking scarcity are expected to be nominal. Therefore, no secondary VMT impact results from parking conditions associated with the project.

Bay Plan Policy 15 and Marina Master Plan

Bay Plan Map No. 4 Policy 15 calls for preserving "windsurfing access" at the Berkeley Waterfront. As discussed in the Draft EIR at Section 3.9, Land Use Planning (Table 3.9-1), the project is consistent with Bay Plan Map No. 4 Policy 15 because it does not affect existing windsurfing access at the South Sailing Basin or at the 199 Seawall launch point, both of which are preserved and the latter of which is enhanced by the project. The Marina Master Plan similarly identifies windsurfing access as a recreational value to be preserved and enhanced at the waterfront. While this project does not propose implementing the specific improvement conceptualized in the Marina Master Plan for enhancing windsurfer activity at this location, the project's proposed amenities (seating, a laydown area, picnic tables, and rinse stations) are supportive of and consistent with that goal. Furthermore, this project does not preclude the City from implementing improvements proposed in the Marina Master Plan in the future.

Conclusion

The Draft EIR's recreation analysis at Section 3.11 addresses potential impacts to recreational uses from both project construction and operation. The project does not physically alter the 199 Seawall launch point, adds amenities to support its continued recreational use, and operates ferry service entirely north of the pier in an area geographically separate from the recreational uses at issue. The EIR's treatment of recreational impacts in this regard is adequate and no revision is warranted.

For these reasons, the Draft EIR adequately identifies and analyzes potential impacts to water-based recreational access at the Berkeley Waterfront and no revision to the Draft EIR is warranted.

2.2.22 Topical Response: Project Cost/Financial Feasibility

Under CEQA, the purpose of an EIR is to evaluate and disclose a project’s potential physical environmental impacts and identify feasible mitigation measures. Pursuant to CEQA Guidelines Sections 15131(a), 15064(e), and 15064(f)(6), economic merits or considerations, funding availability, and financial feasibility are not environmental issues subject to analysis under CEQA unless they would result in a

reasonably foreseeable physical environmental impact. The environmental topics evaluated in the Draft EIR are based on CEQA Guidelines Appendix G, which does not identify economic or financial feasibility as an environmental issue. Accordingly, the Draft EIR appropriately focuses on potential environmental impacts consistent with CEQA and CEQA Guidelines requirements and does not evaluate project cost or financial feasibility.

The comments do not identify any specific deficiency in the environmental analysis presented in the Draft EIR. Therefore, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to these comments.

2.2.23 Topical Response: Sea Level Rise

Several comments discuss the project's sea level rise analysis, stating: (1) the project was designed only for the Intermediate sea level rise scenario (1.6 feet by 2075) and does not adequately address more severe scenarios including the High scenario (6.6 to 7 feet by 2100); (2) the EIR fails to address operational adaptation for sea level rise beyond the project's 50-year design life; and (3) the project's sea level rise analysis should conform to California Coastal Commission Sea Level Rise Policy Guidance. As an initial matter, these comments address the adequacy of the project design in response to future environmental conditions - that is, the impact of the environment on the project, rather than the impact of the project on the environment. CEQA requires analysis of a project's effects on the environment, not an assessment of whether the project itself is adequately designed to withstand future environmental conditions. Nonetheless, the City provides the following response to address the substance of these comments.

Design Basis and Updated SLR Scenario

The project's coastal engineering analysis was conducted by COWI North America, licensed professional coastal engineers, and is documented in the Berkeley Water Transportation Pier Ferry Project Coastal Study (COWI, December 2025) ("Coastal Study"). The Coastal Study established design parameters for water levels, wave conditions, wind, and currents specific to the Berkeley Ferry Terminal site, using NOAA tidal datums, AECOM's 2016 updated extreme tide elevations for San Francisco Bay, and the 2024 California Sea Level Rise Guidance.

The initial Coastal Study adopted the Intermediate sea level rise scenario with a 50-year project design life, resulting in a sea level rise allowance of 1.6 feet and a design still water level of 11.9 feet (Berkeley MLLW). However, as part of the BCDC Engineering Criteria Review Board (ECRB) review process described below, the project team has formally updated the governing design condition from the Intermediate scenario to the Intermediate-High scenario, resulting in a sea level rise allowance of 3.0 feet and a design still water level of 13.3 feet (Berkeley MLLW). This update was confirmed in the COWI response to ECRB questions dated April 10, 2026. To clarify how SLR was considered in the project design process within the Draft EIR, Section 2.5.1, *Proposed Project Components* (*Waterside*, page 2-10) has been revised as follows:

Draft EIR Page 2-10:

> In accordance with standards as set by the American Society of Civil Engineers (ASCE), the proposed pier would comply with ASCE Risk Category IV requirements and base design loads. The project design ~~takes into account projected sea level rise~~ incorporates sea level rise adaptation considerations through the design of the pier, breakwater, ferry infrastructure, and related facilities.[7] Design elevations and structural elements were developed to account for projected increases in surface water levels and coastal flood conditions over the life of the project, while floating ferry facilities and gangway connections have been designed to accommodate a range of future tidal and water surface elevations. Refer to Section 3.8, *Hydrology and Water Quality*, for an evaluation of the project with respect to future flooding and sea level rise. The City prepared a Coastal Study, including a project-specific sea level rise risk assessment, consistent with applicable BCDC permit requirements.[8]

7. COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study. Prepared for City of Berkeley. December.

8. COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed July 2026).

This revision is clarifying in nature and does not alter the impact analysis, significance determinations, or mitigation measures presented in the Draft EIR. The concern that the project was designed only for the Intermediate scenario is, therefore, addressed by this update.

SLR Vulnerability Assessment

A Sea Level rise vulnerability assessment was conducted by the coastal engineers, following the requirements of the updated 2024 California Sea Level Rise Guidance. The assessment confirms that all project structures maintain full functionality and public safety under Intermediate-High conditions through 2100, with only minor overtopping and splash impacts. All components retain structural integrity under all evaluated scenarios, including the High scenario referenced in comments, and the breakwater continues to provide substantial coastal protection even under the most extreme conditions evaluated.

Adaptation

Adaptation options for future sea level rise conditions are documented in the COWI SLR Risk Assessment (Appendix to the Coastal Study, December 2025) and include conversion of the pier and breakwater perimeter handrails to solid barriers to prevent wave overtopping from reaching the deck surface. The pier and breakwater have been purposely designed in concrete specifically to be resilient to future wave overtopping, should it occur. These design decisions reflect a forward-looking approach to long-term resilience within the physical constraints of the site.

California Coastal Commission Sea Level Rise Policy Guidance

The California Coastal Commission does not have jurisdiction over the Berkeley Waterfront or the proposed project; therefore, its Sea Level Rise Policy Guidance is not the applicable standard for the project. The California Coastal Act expressly excludes San Francisco Bay from the California Coastal Commission's jurisdiction. BCDC is the state agency with planning and regulatory authority over San Francisco Bay, the Bay's shoreline band, and the Suisun Marsh. The project is subject to BCDC's permitting jurisdiction under the McAteer-Petris Act and the San Francisco Bay Plan, not to the California Coastal Act or California Coastal Commission policy guidance. The California Coastal Commission's Sea Level Rise Policy Guidance, while a useful reference document for projects under CCC jurisdiction, does not apply to this project.

BCDC ECRB Review

Although not part of the CEQA analysis, the structural and coastal engineering aspects of the project, including the SLR analysis, have been subject to rigorous independent engineering criteria review by the BCDC Engineering Criteria Review Board (ECRB), an advisory board composed of eminent structural, coastal, and geotechnical engineers that assists BCDC in evaluating the engineering aspects of projects requiring BCDC permits. The project has been presented to the ECRB on two occasions. The first meeting, held February 25, 2026, generated detailed technical questions on datums, seismic codes, wave climate methodology, wave loadings, SLR scenarios, elevation constraints, and structural details. The COWI response to those questions, dated April 10, 2026, addressed each item in full, including the formal upgrade to the Intermediate-High SLR scenario. Following the second ECRB meeting, the ECRB determined that a further return presentation is not required, with outstanding technical items to be resolved through the ongoing BCDC permitting process. The adequacy of the project's SLR and coastal

engineering design is therefore subject to ongoing independent engineering criteria review as a condition of project permitting.

For these reasons, the project's sea level rise analysis is thorough, grounded in current state agency guidance, has been updated to reflect the Intermediate-High scenario, and has been subject to rigorous independent engineering criteria review. No revision to the Draft EIR is warranted on this basis.

2.2.24 Topical Response: Seawall Drive/View Access

These comments are related to accessing scenic Bay views from in-car viewing locations at the Seawall Drive parking area (i.e., policy and recreational opportunity aspects), not aesthetics impacts related to the public view from the shoreline itself, which would not be significantly impacted by the proposed project. Access to Bay views are policy issues, which are addressed in Draft EIR Section 3.9, *Land Use and Planning*, Table 3.9-1 (refer to Appearance, Design, and Scenic Views Policy 4). While impacts to views, such as scenic vistas (e.g., blocking a scenic view) is considered a physical impact on the environment and is subject to CEQA, access to those views from a parked vehicle would be considered a social impact, not a physical impact on the environment, and would not be subject to CEQA. Refer to Draft EIR Section 3.1.4, *Aesthetics Impacts Analysis*, Impact AES-1 (pages 3.1-20 through 3.1-27) for a discussion of impacts on scenic vistas. Thus, the comments do not relate to nor necessitate changes to Draft EIR conclusions or mitigation measures. Nonetheless, the City has provided the following response that indicates how access to views of the Bay would be maintained and enhanced by the proposed project.

As described in Draft EIR Chapter 2, *Project Description*, and shown in Figures 2-11, 2-12 and 2-13, the proposed project would include the reconfiguration of Bayside parking along the length of Seawall Drive south of University Avenue and the parking lot at its terminus in order to accommodate between 400 and 450 total vehicles. Approximately 20 pull-in stalls and 13 parallel stalls would be retained for in-car Bay viewing. In addition, the proposed project expands access to Bay views to additional non-vehicular viewer groups in the vicinity, such as bicyclists, pedestrians, and other recreational users by providing infrastructure (i.e., pathways, benches, picnic tables), while maintaining the availability of in-car viewing. As reflected in Draft EIR Chapter 3.11, *Recreation*, with these improvements, the proposed project would add new recreational facilities that currently do not exist, thereby creating a net increase in recreational facilities. By expanding availability of public Bay views to a wider range of viewer groups, the proposed project would support the goals, policies, and regulations of the Berkeley General Plan, Berkeley Marina Master Plan, Berkeley Municipal Code, and the San Francisco Bay Plan related to maintaining and enhancing public viewer access to scenic views of the Bay and expanding shoreline recreational opportunities and resources.

2.2.25 Topical Response: Siltation/Wave Climate

Comments on this topic fall into three general categories: (1) sedimentation and siltation resulting from dredging and the installation of the new breakwater; (2) changes to wave energy, wave fields, and sediment transport patterns resulting from the breakwater; and (3) adequacy of bathymetric and sedimentation data. The City addresses each category below.

Sedimentation Analysis -Technical Basis

The Draft EIR's sedimentation analysis is supported by the Berkeley Water Transportation Pier Ferry Project Coastal Study (COWI, December 2025) ("Coastal Study"), prepared by licensed professional coastal engineers at COWI North America. As part of the project design process, COWI carried out hydrodynamic and sedimentation modeling using a two-dimensional hydrodynamic and sediment transport model to assess currents, wave-driven transport, and long-term sediment deposition within the dredged areas. The model was calibrated against historical survey data from the Berkeley Marina. The modeling effort accounts for wind conditions, tidal forcing, regional hydrodynamic conditions, and site-specific bathymetry.

Existing Sedimentation Rates and Bathymetric Data

As documented in the Coastal Study and reflected in the Draft EIR at Section 3.9 (Table 3.9-1, Bay Plan Policy 5 consistency), sedimentation rates at the project site are currently low. Survey data from the 2020–2023 period indicate sedimentation of less than 0.05 feet over that period. Long-term historical rates in the Berkeley Marina Channel average approximately 0.07 feet per year, consistent with historical USACE surveys of the channel, as documented in the COWI Sediment Transport Study (Appendix D to the Coastal Study, December 2025).

A site-specific bathymetric survey was conducted by eTrac in July 2024, covering the project site, and was used as the basis for the hydrodynamic and sedimentation modeling. This survey was supplemented by United States Geological Survey regional bathymetric data. The Coastal Study's model bathymetry was developed from these datasets at a 2-meter grid resolution, providing a detailed and accurate representation of existing Bay floor conditions within the project site.

Post-Project Sedimentation Rates and Maintenance Dredging

The Coastal Study's six-year simulation modeled sedimentation within the dredged areas under post-project conditions with the breakwater installed and the channel and turning basin dredged to -12 feet (Berkeley MLLW). Results show that sedimentation is highest in the first year following dredging (0.32 feet overall across the full dredged area) and then stabilizes over subsequent years. The average annual sedimentation rate across the full dredged area is 0.15 feet per year, with the approach channel experiencing a higher average rate of 0.20 feet per year and the turning basin a lower rate of 0.09 feet per year. The lower turning basin sedimentation rate reflects the sheltering effect of the breakwater, which reduces wave-driven sediment transport into the more protected turning basin area.

These modeled rates are consistent with post-dredge survey data collected at the Berkeley Marina in December 2024 and June 2025 (six months after dredging operations were completed) which recorded mean sediment accumulation of approximately 0.3 feet during that initial post-dredge period, closely aligning with the model's first-year prediction for the BWTPF channel. This real-world validation provides confidence in the modeling results.

Based on these rates, the Coastal Study estimates maintenance dredging of the approach channel would be required approximately every 10 to 15 years depending on the to-be-determined vessel operational depth, and maintenance dredging of the turning basin every 22 to 33 years. These dredging intervals are consistent with typical maintenance dredging cycles for similar Bay ferry terminals. The assumptions regarding future maintenance dredging are further clarified in Section 2.2.15, *Topical Response: Maintenance Dredging*, which explains that maintenance dredging would be subject to separate permitting and regulatory review, and is not included as part of the proposed project.

The sediment transport analysis was carried out for a 400-foot breakwater configuration. As documented in the Coastal Study, the 100-foot reduction in breakwater length does not meaningfully change sedimentation patterns in the navigation channel, and modeled sedimentation within the turning basin remains minimal.

As described in the Draft EIR Section 3.3, Biological Resources, the project includes removal of existing pier piles and decking to offset new net fill and cover. Mitigation Measure BIO-3 requires mitigation for impacts on tidal waters of San Francisco Bay to achieve no net increase in Bay fill, provided at a minimum 1:1 ratio by square foot of impact through removal of existing pier piles and decking for net increase in fill and cover, to be approved by the regulatory agencies. Some comments have requested that a higher mitigation ratio (such as 3:1) be required. The EIR commits to no net increase in fill as a minimum standard. Whether a higher ratio is appropriate is a matter to be negotiated with the relevant permitting agencies, including BCDC and USACE, through the project permitting process. The EIR does not preclude a higher ratio being required through permitting. Pile removal is not characterized in the EIR as mitigation for dredging-related sedimentation impacts; it is mitigation for biological resources impacts associated with in-Bay fill.

Wave Climate and Breakwater Effects

The Coastal Study's wave diffraction modeling assessed the wave climate effects of the breakwater. COWI used a wave diffraction model to simulate wave transformation processes (including diffraction, partial reflection, and nonlinear wave interactions) within the terminal area for multiple breakwater configurations (250-foot, 300-foot, and 400-foot lengths) and multiple wave directions and periods. Wave disturbance coefficients were calculated at key locations including the ferry berths, pier, and plaza. This analysis was specifically designed to quantify how the breakwater reduces wave agitation at the ferry berths and shoreline.

The modeling results confirm that a minimum 300-foot breakwater configuration provides sufficient sheltering for both ferry berths, minimizes wave exposure, and achieves nearly the same reduction in wave-induced downtime as the longer 400-foot alternative. Without a breakwater, the terminal would experience notable wave-induced operational downtime, particularly during late spring and summer months when southwesterly winds generate higher wave activity. With the 300-foot breakwater, monthly average downtime remains below 2 percent for all months throughout the year, including the most energetic wave periods.

With respect to effects on wave conditions beyond the project site, including the South Sailing Basin to the south and nearby parks and shoreline areas, the wave disturbance coefficient maps presented in Appendix C of the Coastal Study confirm that the breakwater's sheltering influence is confined to the immediate project site. Wave disturbance coefficients at the outer limits of the geographic area evaluated in the wave diffraction analysis approach 1.0, indicate that ambient wave conditions are unaffected by the breakwater at those locations. The South Sailing Basin is located approximately 1,500 feet east of the project, separated by the Seawall peninsula and well beyond any meaningful influence of the breakwater. Likewise, the formerly named César E. Chávez Park is located 1,900 feet north of the project site, McLaughlin Eastshore State Park State Seashore is located 3,900 feet east of the project site, Emeryville Crescent is located more than 8,000 feet south of the project site, and Albany Mudflats is located more than 9,000 feet north of the project site, well beyond any meaningful influence of the breakwater. There is no technical basis to conclude that the breakwater would measurably alter wave conditions or sediment transport patterns in the South Sailing Basin or other coastal or water areas of the Bay.

2.2.26 Topical Response: Vessel Aesthetics

The presence of ferry vessels and vessels within the project viewshed is considered part of the environmental baseline for aesthetics, given the project site’s proximity to the Berkeley Marina Basin and presence of multiple boat types including large Hornblower dinner cruise ships, traversing into and out of the Marina. The proposed project would introduce an additional ferry service, and vessel; however, the presence and operation of the proposed vessel would be similar in size and function to similar vessels present in the vicinity, and would, thereby, be consistent with the visual character of the viewshed. Nonetheless, the following clarifying text has been added to Draft EIR Impact AES-3 (page 3.1-30):

> As shown in Figure 3.1-4 and Figure 3.1-5, the proposed ferry infrastructure would introduce a series of linear horizontal and vertical features and planes which would be visually consistent with the proposed pier infrastructure, but would be contrasted against the surrounding water in the Bay. These features would be most visually prominent on the north side of the proposed pier; when viewed from the south (Figure 3.1-5), views of the proposed ferry infrastructure would be interrupted and partially obscured by the sequence of evenly-spaced pier pilings. When viewed from a distance (Figure 3.1-6 and Figure 3.1-8), the proposed ferry infrastructure would not present as a prominent visual feature, and would not exceed the height of the proposed pier infrastructure in a manner that would result in the degradation of surrounding views. Individual ferry vessel(s) would also be similar in size, and perform similar functions, to those already present in the vicinity; and thus, would integrate with existing boat traffic.
>
> As described in Chapter 2, *Project Description*, ferry operations are evaluated using a representative weekday and weekend service scenario that reflects the maximum reasonably foreseeable level of

service for purposes of environmental review (refer to Section 2.7, pages 2-30 through 2-33). While specific schedules, frequencies, and operational details may vary over time, the analysis evaluates vessel presence and activity within the viewshed based on these planning-level assumptions.

While the visual character of the proposed ferry infrastructure would introduce new materials and massing, and additional vessels would be intermittently present in the viewshed, these components would be consistent with visual character of the surrounding infrastructure and development. Impacts would be less than significant.

As determined under Impact AES-3 (page 3.1-28 through 3.1-33) of the Draft EIR, impacts related to visual character would be less than significant.

The text changes above are clarifying in nature and do not alter the substance of the impact analysis or the resulting significance determination. Therefore, the analysis and significance conclusions presented in the Draft EIR remain valid.

2.2.27 Topical Response: VMT

Several comments include questions about mode shift assumptions, potential diversion from other transit services, and the basis for concluding that ferry service would reduce vehicle trips across the Bay. Note that this response is specifically related to the project effect on regional travel patterns (i.e., between East Bay and San Francisco). For a discussion of local traffic circulation as relates to parking, please refer to Section 2.2.20, *Topical Response: Parking*.

Pursuant to California SB 743, transportation impacts in CEQA documents are evaluated using vehicle miles traveled (VMT) rather than roadway congestion measures such as Level of Service (LOS). The project is expected to increase traffic volumes on certain roadways leading to the terminal because additional users would travel to the Waterfront to access the ferry. However, existing roadway segments, including University Avenue between Frontage Road and Marina Boulevard, would continue to operate within acceptable capacity conditions (LOS A). At the same time, many ferry users would replace longer automobile trips with ferry travel. As a result, the overall amount of driving per person is reduced, leading to a decrease in VMT on a per capita basis.

Section 3.12, *Transportation*, of the Draft EIR evaluates transportation impacts using VMT consistent with CEQA Guidelines Section 15064.3 (refer to Section 3.12.4, Impact TRA-2, on Pages 3.12-20 and 3.12-21). Although the project is estimated to generate 1,127 daily vehicle trips, most of these trips represent the redistribution of existing travel demand rather than the creation of new trips. As described on Page 3.12-20 of the Draft EIR, many of these trips are expected to substitute for longer-distance travel that would otherwise occur by automobile across the Bay Bridge or access to regional transit services. Because transbay commute trips are relatively long-distance compared to local access trips to a ferry terminal, this substitution results in a net reduction in VMT even where some riders access the terminal by automobile.

The conclusion that ferry service would capture trips that might otherwise occur on the Bay Bridge or other transbay corridors is supported by regional travel patterns and empirical data from existing ferry operations. WETA most recently conducted onboard surveys in 2025, which indicate that a substantial share of riders choose ferry service to avoid roadway congestion, and approximately two-thirds of riders reported that they would otherwise use an automobile-based mode if the ferry were not available, including a substantial portion who would drive alone.[18] While some respondents indicated that they would otherwise use public transit, a greater share identified automobile travel as their alternative, and a portion of riders reported having no viable alternative. This pattern indicates that ferry service primarily captures trips that would otherwise be made by automobile and thereby reduces demand on regional

[18] WETA. 2025. 2025 Onboard Ferry Survey Summary Report. https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20260407225430/WETA-onboard-2025-Report-Finalv2-1.pdf (accessed June 2026).

roadway facilities. Consistent with the VMT framework under CEQA, replacing longer-distance automobile trips with shorter local access trips results in a net reduction in VMT.

With respect to proposed project trips potential diversion from BART or other transit services, the Draft EIR, page 3.12-20, acknowledges that some of the ferry ridership will include people switching from existing transit services. Even if only a relatively small share of travelers who currently drive choose to switch to the ferry, each of those trips contributes to a measurable reduction in VMT. Because every diverted automobile trip removes vehicle travel from the roadway system, the cumulative effect of even modest mode shift from driving to ferry service will reduce overall VMT. The project site serves the West Berkeley area, encompassing 9,000 jobs and 10,000 residents, an area less directly served by high-quality transit than other parts of the East Bay[19], further supporting the conclusion that a substantial portion of riders would otherwise rely on automobile travel.

With regard to mode split assumptions, the analysis in Section 3.12, Transportation, and Appendix F, Transportation Impact Assessment, is grounded in observed data from comparable ferry operations, including systemwide rider surveys and documented access and egress patterns. These data indicate that while a portion of riders access ferry terminals by automobile, these trips are short and local in nature and are offset by the elimination of longer regional automobile trips. In addition, a substantial share of riders access the ferry by walking, bicycling, or transit, particularly at urban terminals.[20] The assumptions applied in the Draft EIR are therefore consistent with observed behavior and are conservative, as they do not fully account for reductions associated with Transportation Demand Management (TDM) strategies, multimodal access improvements, and parking management measures described in Chapter 2, *Project Description*, which are designed to further reduce vehicle use and encourage alternative modes of access.

With respect to proposed project, induced travel or new trip generation, Appendix F demonstrates that the project would primarily serve existing regional travel demand rather than induce new long-distance trips. Localized increases in traffic volumes associated with terminal access do not correspond to an increase in VMT, which is the applicable CEQA metric. As a regional transit improvement in a constrained corridor, the project would provide an alternative to automobile travel and reduce reliance on longer-distance vehicle trips, resulting in a net reduction in VMT, consistent with State guidance on transit projects.

The comments have not provided substantial evidence demonstrating that the methodology or assumptions are inconsistent with CEQA Guidelines or State guidance. Because the project would reduce VMT even under conservative assumptions, it would not result in a transportation impact under CEQA. Accordingly, the analysis and conclusions in Section 3.12 of the Draft EIR remain valid as written, and no further response is required,

2.2.28 Topical Response: Whale Strike

Draft EIR Section 3.3, *Biological Resources* (pages 3.3-37 through 4.4-41), evaluates the potential for impacts from construction and operation, including ferry operation, of the proposed project on marine mammals, including gray whales, humpback whales, and other species. The Draft EIR states that marine mammals, including gray whales, have been observed in San Francisco Bay in recent years and are, thus, considered in the impact analysis. Accordingly, Table 3.3-2 (page 3.3-39) identifies special-status marine mammals with potential to occur in the project vicinity, including gray whale (*Eschrichtius robustus*) and humpback whale (*Megaptera novaeangliae*).

The Draft EIR describes and, where appropriate, incorporates by reference the 2003 WETA EIR, Implementation and Operations Plan, Mitigation and Monitoring Plan, and the Marine Mammal Protection & Whale Avoidance Memorandum (refer to page 3.3-38), which establish operational protocols intended

[19] WETA. 2022. WETA Berkeley Ferry Service Business Plan, Version 1.0. Prepared by Economic Planning Systems, Inc. March 17. https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf (accessed June 2026).

[20] WETA. 2025. 2025 Onboard Ferry Survey Summary Report. https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20260407225430/WETA-onboard-2025-Report-Finalv2-1.pdf (accessed June 2026).

to minimize the risk of vessel strikes. The Draft EIR further states that WETA implements an adaptive marine mammal protection program for ferry operations in San Francisco Bay, which was developed in coordination with the Marine Mammal Center and informed by current scientific literature and applicable guidance from the National Oceanic and Atmospheric Administration (NOAA) (refer to Page 3.3-38). These protocols in WETA's marine mammal protection program include, but are not limited to, vessel operator training, monitoring and reporting procedures, speed awareness and reductions in speed when marine mammals are observed or reported, communication with resource agencies, and ongoing refinement of practices as new information becomes available. The program is designed to incorporate evolving scientific understanding, including recent observations regarding whale occurrence within the Bay and increased gray whale presence observed in recent years. WETA continues to implement these procedures. As recently as February 2026, WETA implemented a new pilot program in partnership with the Marina Mammal Center called Whale Smart that includes training to implement the following best practice measures:

- Quickly identify whales and interpret key behaviors to prevent dangerous close encounters;
- Navigate safely in high-whale-activity areas using proven, practical operating guidelines; and
- Share real-time sightings with Vessel Traffic Service to improve awareness and coordination across the Bay.

This new training is in addition to protective measures implemented last year which include:

- Ferry operators taking proactive steps to avoid whales, such as cutting engines after spotting a gray whale and allowing it to pass safely before resuming service.
- U.S. Coast Guard Vessel Traffic Service (VTS) issuing broadcast alerts for all whale sightings, alerting mariners to exercise extreme caution.
- VTS working directly with ferry operators to implement temporary lane changes, particularly east of Angel Island where whale sightings were highest, further reducing the risk of vessel strikes.[21]

With respect to vessel strike, the Draft EIR analysis recognizes that ferry vessels operate within established navigation routes in San Francisco Bay that currently support existing ferry traffic, and further explains that adherence to these protocols reduces the potential for vessel collision with marine mammals, and that ferry operators are trained to maintain situational awareness and adjust operations accordingly (refer to page 3.3-40). The analysis in the EIR appropriately relies on existing, enforceable WETA policies and procedures and evaluates project impacts based on those conditions. As described on Pages 3.3-37 through 3.3-41, the analysis in Section 3.3 is based on available information regarding marine mammal occurrence and vessel strike risk, including recent data reflecting increased whale presence in the Bay, and evaluates potential operational and cumulative effects accordingly. Cumulative conditions, including vessel strike within San Francisco Bay, are addressed in Section 3.3.5, Cumulative Impacts, which evaluates the project's incremental contribution to regional vessel activity and associated marine mammal risks (refer to Pages 3.3-66 through 3.3-68).

The Draft EIR explains that vessel operations would be consistent with existing ferry practices, including reduced speeds during terminal approach (page 2-31) and compliance with posted speed limits, with the acknowledgment that operational guidelines may be adjusted as needed to account for site-specific conditions (page 3.8-33). As explained in EIR Section 1.1.3, Incorporation by Reference, this project EIR incorporated by reference the 2003 WETA EIR, while mitigation measures, including Mitigation Measures 15.2 and 15.2 governing marina mammal sighting, detection, and avoidance protocols, were adopted by the WETA Board and incorporated into the approved ferry service expansion project. Continued implementation of these measures is therefore not discretionary but a required component of WETA's approved operations, which this project would join. Accordingly, no substantial evidence has been

[21] Marine Mammal Center. 2026. Press Release. The Marine Mammal Center and San Francisco Harbor Safety Committee Pilot New Vessel Operator Training Program. February 6. Available: https://www.marinemammalcenter.org/news/the-marine-mammal-center-and-san-francisco-harbor-safety-committee-pilot-new-vessel-operator-training-program. (accessed June 2026).

provided demonstrating that the project would result in a significant increase in whale strike risk beyond existing conditions.

Further, the analysis in Section 3.3, *Biological Resources,* of the Draft EIR incorporates recent observational data and acknowledges increased whale occurrence in the Bay despite the species' generally low potential to occur (page 3.3-24), and further clarifies that since the adoption of the 2003 WETA EIR, WETA has continuously worked with the Marine Mammal Center to "develop and implement a multi-layered marine mammal protection protocol that reflects ongoing technological advances, evolving scientific understanding of best practices, and updated NOAA guidance to ensure its implementation of Mitigation Measures 15.1 and 15.2 in the 2003 WETA EIR is as robust as possible," (page 3.3-53). Therefore, although the Draft EIR incorporates by reference WETA's whale strike analysis that relied on a baseline condition with fewer whale occurrences, Section 3.3 acknowledges the increased whale presence and documents that the mitigation incorporated by reference is continually updated to reflect evolving technologies. The Draft EIR concludes that, with implementation of WETA's adaptive marine mammal protection program, including monitoring, reporting, and vessel operation adjustments, the project would not substantially increase the risk of vessel strike to marine mammals (refer to Impact BIO-1 pages 3.3-42 through 3.3-56). The description of existing conditions, analysis, and incorporated mitigation measures related to whale presence in the Draft EIR remain valid as written, and no revisions to the EIR are required.

Draft EIR Section 3.3, *Biological Resources,* evaluates the project's incremental contribution to regional vessel activity as well, including existing and planned ferry operations throughout the San Francisco Bay. The Draft EIR explains that the proposed project would represent a small increment of total vessel traffic and would operate within established ferry routes and would be subject to existing regulatory requirements. The analysis concludes that the project's contribution to cumulative impacts related to vessel traffic and marine mammal vessel strike would not be cumulatively considerable (refer to Section 3.3.5, pages 3.3-66 through 3.3-68). The description of existing conditions, analysis, and significance conclusions related to cumulative vessel traffic in the Draft EIR remain valid as written, and no revisions to the EIR are required.

Draft EIR Section 3.3, *Biological Resources,* of the Draft EIR further explains that ferry operators are trained to maintain situational awareness and implement avoidance procedures when marine mammals are observed. The WETA Marine Mammal Protection Program includes monitoring, reporting, and communication protocols with agencies and other vessel operators, and is designed to be adaptive based on evolving conditions and scientific understanding. The Draft EIR concludes in the discussion of Impact BIO-1 (refer to pages 3.3-42 through 3.3-56) that with implementation of the WETA adopted mitigation measures including required operational protocols, impacts to marine mammals, including potential vessel strike, would be less than significant. The description of existing conditions, analysis, and significance conclusions related to ferry operation and marine mammal avoidance in the Draft EIR remain valid as written, and no revisions to the EIR are required.

Based on this analysis and the implementation of WETA's adopted mitigation measures, the Draft EIR concludes that impacts to marine mammals, including the potential for vessel strike, would be less than significant (refer to Pages 3.3-40 and 3.3-41 and Impact BIO-1, Pages 3.3-42 through 3.3-56).

In summary, the analysis and significance determinations with regard to ferry vessel operation and related biological resources impacts in the Draft EIR remain valid and no new significant environmental issues have been raised.

2.2.29 Topical Response: Wind

Several comments state that the proposed project might impact wind conditions at the Berkeley Waterfront, focusing on two distinct issues: (1) whether removal of the vegetated berm and trees along the Seawall Drive peninsula would change wind shelter conditions in the South Sailing Basin and South Cove, particularly for beginner sailors and windsurfers using the Cal Sailing Club instructional area; and

(2) whether the breakwater design adequately accounts for wind and wave conditions, including winter gale-force northwest wind events. The City addresses each issue in turn.

CEQA Considerations

Consistent with CEQA Guidelines Section 15126, CEQA requires evaluation of a project's physical environmental effects within select resource areas. Wind conditions are not covered under any existing CEQA Appendix G topic or threshold and are not typically analyzed unless they would result in a secondary physical impact (e.g., exacerbating air quality emissions, soil erosion, or hazards from structural failure). With respect to recreation, Appendix G asks whether a project would result in accelerated substantial physical deterioration of a recreational facility or require the construction of expansion of recreational facilities. The potential for localized changes in wind exposure affecting recreational conditions does not constitute a direct or indirect physical impact under CEQA.

Tree removal is addressed in the aesthetics, biological resources and land use and planning sections: Impact AES-1, pages 3.1-27; AES-3, pages 3.1-31 through 3.1-32; Mitigation Measure BIO-1(c), pages 3.3-55 through 3.3-56, Impact BIO-5, pages 3.3-65 through 3.3-66, Cumulative Impacts, pages 3.3-69; and in Impact LU-2, pages 3.9-12 and following with regard to the BCDC San Francisco Bay Plan, Berkeley General Plan, Berkeley Municipal Code, and Berkeley Marina Master Plan). The speculative possibility that removal of some trees could alter localized wind patterns does not trigger CEQA review.

Additionally, the project does not include features that would create or exacerbate unsafe wind conditions such as introduction of large structures or topographic alterations. Therefore, the EIR does not include a specific analysis of wind exposure or related mitigation measures.

Wind Shelter Effects of Tree and Berm Removal

As described in the EIR at Section 2.5.3, Project Description, the proposed project includes removal of the existing vegetated berm and approximately 39 trees across the project site (see Chapter 3, *Errata* of the Final EIR), the majority of which are in poor health. The berm to be removed is on average four feet tall. Species to be removed include Monterey Cypress, Monterey Pine, Italian Stone Pine, Japanese Black Pine, and others. The project includes replacement planting of between 50 and 70 new trees as 24-inch box trees throughout the project site, including California Buckeye, Monterey Cypress, Primrose Tree, Drooping Melaleuca, and Torrey Pine. The trees proposed for removal are located primarily on the western side of the Seawall Drive corridor and in the interior of the parking lot area; the majority of trees on the eastern side of the peninsula are not proposed for removal and would remain in place. Cars in the parking lot will generally be taller than the 4-foot tall berm being removed.

In addition, as a potential project component, a solar canopy structure ranging from approximately 14 to 20 feet in height supported by vertical steel posts approximately 16 feet in height would be installed over the Seawall Drive parking lot. While the phasing and final determination of whether the solar canopy will be constructed is not yet confirmed, if implemented it would provide a continuous horizontal structural element along the parking lot that could act as a windbreak in the vicinity of the South Cove.

Comments request that the Final EIR specifically analyze whether removal of the berm and trees would materially affect wind conditions and identify mitigation measures.

The question for purposes of CEQA is not whether any change in wind conditions would occur, but whether such a change would constitute a significant environmental impact. As set forth in the Draft EIR at Section 3.11, Recreation, the applicable significance thresholds for recreational impacts are whether the project would: (1) increase the use of existing recreational facilities such that substantial physical deterioration would occur; (2) result in a reduced recreational facilities per capita ratio requiring new facilities; or (3) result in substantial adverse physical impacts associated with new or physically altered recreational facilities.

A potential change in wind exposure conditions in the South Sailing Basin does not meet any of these thresholds. The South Sailing Basin is not being physically altered, reduced in size, nor is access

restricted by the proposed project. The Cal Sailing Club's instructional area, the public sailing docks, and the South Cove waters remain fully intact and available for their existing recreational uses. A change in wind conditions that may affect the experience of beginner sailors does not constitute physical deterioration of a recreational facility under CEQA - the recreational resource itself is preserved and accessible. Regardless, based on over 25-years of professional experience, the Coastal Engineering Design lead for the Project does not anticipate material changes to the wind conditions within the South Sailing Basin due to the proposed project.

Even if wind conditions experienced by users were to change at the South Cove this would not constitute a significant physical impact under CEQA pursuant to CEQA Guidelines Appendix G. Wind conditions are one of many factors, including tides, wave conditions, weather, and personal preference, that influence where recreational users choose to launch and sail on any given day. A potential modest change in wind exposure at the South Cove does not physically degrade the facility, does not reduce its capacity, and does not modify access to it. The South Cove and South Sailing Basin would remain fully available for their existing recreational uses. Furthermore, the magnitude and direction of any wind change resulting from berm and tree removal is speculative. Wind conditions in the South Cove are affected by a complex range of factors including regional wind patterns, tidal conditions, shoreline geometry, and surrounding landforms and structures, including the topography of Shorebird Park which is nearer to the area in question and is not changed by the Project. Whether the removal of the berm and some existing trees and replanting of new trees would change experienced wind conditions in the South Cove beyond the localized area immediately adjacent to the changed vegetation is not established by the comments.

For these reasons, a potential change in wind shelter conditions in the South Sailing Basin does not constitute a potentially significant or significant environmental impact under CEQA, and no revision to the Draft EIR is warranted on this basis.

Breakwater Design, Wave Climate, and Ferry Operations

Several comments state that the wind and wave data used in the breakwater design is inadequate, including that winter gale-force northwest wind events are not adequately accounted for and that the proposed breakwater would leave the ferry float unprotected in such conditions. One comment questions whether ferries will be able to dock reliably during high wind events.

As an initial matter, these comments address the adequacy of the project design in response to environmental conditions - that is, the impact of the environment on the project, rather than the impact of the project on the environment. CEQA requires analysis of a project's effects on the environment, not an assessment of whether the project itself is adequately designed to withstand environmental conditions.

The project's coastal engineering analysis was conducted by licensed professional coastal engineers from COWI North America and is documented in the Berkeley Water Transportation Pier Ferry Project Coastal Study (COWI, December 2025) ("Coastal Study"). The Coastal Study established design parameters for water levels, wave conditions, wind, and currents specific to the Berkeley Ferry Terminal site. The structural and coastal engineering aspects of the project, including the breakwater design and wind and wave climate analysis, have been subject to rigorous independent engineering criteria review. The BCDC Engineering Criteria Review Board (ECRB) is an advisory board composed of eminent structural, coastal, and geotechnical engineers that assists BCDC in evaluating the engineering aspects of projects requiring BCDC permits. The project has been presented to the ECRB on two occasions. Following the second review, the ECRB determined that a third presentation was not required. Outstanding technical questions, including those related to wind and wave conditions, will be resolved through the ongoing BCDC permitting process, which includes continued ECRB coordination.

Ferry service reliability in high wind conditions is an operational matter governed by WETA safety protocols, which establish the conditions under which ferry service operates and may be suspended. WETA, as the ferry service operator, is responsible for establishing and enforcing those protocols. No revision to the Draft EIR is warranted on this basis.

Subject: San Francisco Bay Regional Water Quality Control Board Comments on the *Draft Environmental Impact Report for the Berkeley Water Transportation Pier Ferry Project, City of Berkeley, Alameda County, California*
SCH No. 2025040995

Dear Ms. McNulty:

San Francisco Bay Regional Water Quality Control Board (Water Board) staff appreciates the opportunity to review the *Draft Environmental Impact Report for the Berkeley Water Transportation Pier* Ferry *Project* (DEIR). The DEIR evaluates the potential environmental impacts associated with implementing the Berkeley Water Transportation Pier Ferry Project (Project).

The project site is located at the Berkeley Waterfront along the San Francisco Bay (Bay) in the City of Berkeley, Alameda County. The project site encompasses the closed Berkeley Pier, including the entry area for the Berkeley Pier; the San Francisco Bay waters surrounding a portion of the closed Berkeley Pier; the existing parking lot off Seawall Drive; the Skates on the Bay parking lot and parking lot M (for construction staging); roadways with landscaping (University Avenue and Seawall Drive); and various pathways and sidewalks. A1-2

The Berkeley Pier was closed in July 2015 due to visually observed structural problems on the underside of the concrete decking and pilings. The proposed project aims to revitalize the Berkeley Waterfront by developing new dual-purpose pier and ancillary uses that support both public recreation and zero-emission public ferry service. The project would include the following components: demolition of portions of the closed pier, new public pier, new breakwater that provides pedestrian access and recreational amenities, recreational amenities, ferry infrastructure, dredging, new public plaza, improvements to University Avenue and Seawall Drive, a portion of the planned Bay

Trail Extension, new landscaping, new wayfinding signage, utility connections, and operation of zero-emission electric passenger ferry service. A1-2

Summary

As is discussed below, we have concerns with the following aspects of the proposed Project: A1-3

- It may not be possible to fully mitigate impacts to aquatic species associated with the proposed use of nighttime pile driving.
- Concentrations of contaminants in sediments at the Project site have not been compared to screening levels that are protective of marine species. A1-4
- The DEIR does not propose treatment for runoff from the new concrete pier and dock. A1-5
- The proposed use of permeable pavement for stormwater runoff treatment may not be appropriate at the Berkeley Marina, which was built over landfilled waste materials A1-6

Comment 1. In Section 3.3.3, Regulatory Framework, the discussion of the extent of Water Board jurisdiction on page 3.3-31 does not correctly identify the extent of Water Board jurisdiction at the Project site.

Text on page 3.3-2 states that, “in many cases, the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM, unless isolated conditions or ephemeral waters are present”. Along creeks and rivers, the Water Board has consistently asserted jurisdiction up to at least the top of bank. Along the Bay shoreline, the Water Board considers areas of the bank below the epochal high tide line to be regulated as waters of the State. A1-7

Comment 2. To address potential impacts to aquatic species, the City should consult with NOAA Fisheries, the USFWS, and CDFW during the permitting process.

In Section 3.3.4, Impact Analysis, the discussion of impacts to fish during pile driving on page 3.3-45 states that the City would consult with NOAA fisheries and CDFW during the permitting process. Some of the aquatic species that may be impacted by pile driving and other construction-related activities are managed by the U.S. Fish and Wildlife Service (USFWS). In the Bay, USFWS consultation is necessary for potential impacts to longfin smelt and foraging least terns. Also, since the beneficial uses of the Bay in the Water Board’s Basin Plan include wildlife habitat and the preservation of rare and endangered species, consultation with the Water Board is also necessary. A1-8

Comment 3. Biologists that monitor work at the Project site must be approved by NMFS and CDFW.

In the discussion of Mitigation Measure BIO-1(A) on page 3.3-53, the text states that the worker awareness program must be conducted by a City-approved qualified biologist. The biologist must also be approved by NMFS and CDFW. If USFWS determines that project work may impact species managed by USFWS, the biologist must also be approved by USFWS. A1-9

Comment 4. Mitigation Measure BIO-3, Provide Compensatory Mitigation for Loss of Jurisdictional Waters Prior to Operation, defers the preparation of an actual compensatory mitigation plan to the permitting of the Project.

Text on page 3.3-61 states that the City will submit a proposed mitigation plan to the resource agencies for review and approval during permitting. The mitigation plan should be provided in the DEIR so that the agencies can assess if the proposed compensatory mitigation will be sufficient to mitigate the Project's impacts to jurisdictional waters to a less than significant level. A1-10

In a CEQA document, a project's potential impacts and proposed mitigation measures should be presented in sufficient detail for readers of the CEQA document to evaluate the likelihood that the proposed remedy will actually reduce impacts to a less than significant level. CEQA requires that mitigation measures for each significant environmental effect be adequate, timely, and resolved by the lead agency. In an adequate CEQA document, mitigation measures must be feasible and fully enforceable through permit conditions, agreements, or other legally binding instruments (CEQA Guidelines Section 15126.4). Mitigation measures to be identified at some future time are not acceptable. It has been determined by court ruling that such mitigation measures would be improperly exempted from the process of public and governmental scrutiny which is required under the California Environmental Quality Act. Therefore, the DEIR lacks an adequate discussion of proposed mitigation measures for the Project's impacts to waters of the State. A1-11 A1-12

Comment 5. Mitigation Measures BIO-1(D) and BIO-1(E), do not address the Project's impacts to aquatic species associated with the proposed nighttime work for pile driving in the Bay.

Text in Section 2.6.2, Construction Schedule, states that the Project may require up to 50 days in which nighttime work will be used for pile driving. However, Mitigation Measure BIO-1(D), Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction, and Mitigation Measure BIO-1(E), Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction, do not address impacts associated with the proposed nighttime pile driving. Both of these mitigation measures included responses to visual observations of fish or marine mammals. But such observations are not be feasible after dark. A1-13

We prefer that pile driving and other construction activities be implemented during daylight hours, when it is easier to observe any discharges of construction materials to Bay water and it is easier to observe marine mammals, water birds, and fish in the vicinity of the construction site. Please revise the Project description to remove the proposed nighttime pile driving. A1-14

Comment 6. Constituents detected in sediment at the Project site should be compared to ecological screening levels.
On page 3.8-7, the discussion of chemicals detected in sediments at the Project site states that the measured concentrations did not exceed State for Federal hazardous waste criteria. Hazardous waste criteria are not the appropriate criteria to use in screening sediments for potential impacts to wildlife. Constituent concentrations that are lower than hazardous waste criteria may negatively impact wildlife. Please compare the chemical concentrations in the sediments with the surface layer screening levels in the *Master Quality Assurance Project Plan for the Don Edwards San Francisco Bay National Wildlife Refuge* (QAPP) (USFWS and H.T. Harvey, December 13, 2024). The screening levels in the QAPP were developed to be protective of aquatic species in marine environments. A1-15

Comment 7. The DEIR does not propose treatment for stormwater runoff from the new pier and ferry dock. A1-16
The DEIR must be revised to describe how runoff from the new pier and ferry dock's impervious surfaces will be treated prior to discharge to the Bay.

Comment 8. The proposed use of pervious pavement to treat stormwater runoff at the Marina may not be appropriate.
The DEIR proposes to treat runoff from land side post-construction impervious surfaces using permeable pavement and bioretention areas. Permeable pavement passes water through the pavement and allows the runoff to infiltrate into the soil below the permeable pavement. However, permeable pavement may not be appropriate at the Berkeley Marina, which was built over landfilled waste materials. Water infiltrating into buried waste may mobilize contaminants that will then be conveyed to the Bay via the movement of groundwater. Permeable pavement is only recommended when the bottom of the gravel infiltration reservoir below the permeable pavement is at least 5 feet above the local groundwater. According to text on page 3.8-35, depth to groundwater at the Project site is approximately 5 to 13.4 feet below the surface. A1-17

Prior to constructing areas of permeable pavement at the project site, the depth to groundwater below the areas of proposed permeable surfaces should be determined and the potential presence of waste materials in the subsurface should be assessed.

If you have any questions, please contact me at (510) 622-5680, or via e-mail at brian.wines@waterboards.ca.gov. A1-18

Letter A1

Commenter: Brian K. Wines, Water Resource Control Engineer, South and East Bay Watershed Section, San Francisco Bay Regional Water Quality Control Board

Date: April 18, 2026

Response to Comments A1-1 to A1-2

These comments are introductory or nonsubstantive in nature and do not raise a significant environmental issue. No further response is required.

Response to Comments A1-3 to A1-6

Refer to Response to Comments A1-13, A1-15, A1-16, and A1-17.

Response to Comment A1-7

For the purposes of CEQA, because the limits of State Water Board jurisdiction are not defined by Porter-Cologne and there is no current written regulatory definition that specifies the limits of waters of the State in tidal areas, no changes are warranted related to the Draft EIR analysis, conclusions or mitigation. Refer to Draft EIR pages 3.3-31 and 3.3-32 for a discussion of how regulations for field determinations have not been established for waters of the State. In response to this comment, the following clarification text revisions have been made to the Draft EIR:

Section 3.3.3 page 3.3-32:

> The SWRCB and RWQCBs have not currently established regulations for field determinations of waters of the State except for wetlands. In many cases, the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM unless isolated conditions or ephemeral waters are present. However, in the absence of statewide guidance, each RWQCB may interpret jurisdictional boundaries within their region, and the SWRCB has encouraged applicants to confirm jurisdictional limits with their RWQCB before submitting applications. As determined by the RWQCB, waters of the State may include riparian areas or other locations outside the OHWM, leading to a larger jurisdictional area over a given water body compared to USACE. The San Francisco Regional Water Quality Control Board has indicated that along creeks and rivers, they would assert jurisdiction up to at least the top of bank and along the Bay shoreline, they consider that areas of the bank below the epochal high tide line to be regulated waters of the State. For the purposes of this EIR, the one-year extreme high tide line was used to delineate the extent of jurisdictional waters, in line with USACE guidance, and assumed to encompass both waters of the U.S. and waters of the State. Further coordination with the SFRWQCB will be conducted during the permitting process.

Response to Comment A1-8

The Draft EIR identifies consultation with NOAA Fisheries (or NMFS) and CDFW for potential effects to federal- and State-listed special status species that could occur during in-water construction activities (refer to Section 3.3.4, pages 3.3-45 through 3.3-47 for this discussion) but omits reference to USFWS consultation. Consultation with USFWS would also occur because the project has potential to affect longfin smelt, a species managed by the USFWS. Refer to Response to Comment A2-35 to A2-38 for a discussion of impacts to California least tern.

In response to this comment, the following clarification text revisions have been made to the Draft EIR:

Section 3.3.4 page 3.3-46:

> In addition, the City would consult with NOAA Fisheries, USFWS, SFRWQCB, and CDFW during the permitting process.

Section 3.3.4 page 3.3-47:

> In addition, the City would consult with NOAA Fisheries, USFWS, SFRWQCB, and CDFW during the permitting process.

Response to Comment A1-9

Agency approval of biological monitors is an environmental regulatory permitting requirement that will be satisfied during the separate-from-CEQA-compliance regulatory review process; but is not, by itself, a mitigation measure necessary under CEQA. However, in response to this comment, page 3.3-43 of the Draft EIR is revised as follows:

> However, implementation of Mitigation Measures BIO-1(a), BIO-1(b), and BIO-1(c) would require a Worker Environmental Awareness Program…. Biologists responsible for implementing Mitigation Measure BIO-1(a) and other biological mitigation measures would be required to meet any qualifications and approval requirements established by applicable resource agencies through project permits and authorizations.

This revision is clarifying in nature and does not alter the subsequent analysis or significance conclusions presented in the Draft EIR. The analysis and significance conclusion presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-46 of the Draft EIR that concludes that impacts to special status species would result in a less than significant impact with mitigation remains valid as written. No further revisions to the Draft EIR are necessary in response to this comment beyond the above clarification.

Response to Comment A1-10

Consistent with CEQA Guidelines §15126.4(a)(1)(B), when project-specific details are not yet available, mitigation measures may be formulated with performance standards that ensure the measure will be effective once the missing information becomes available. CEQA expressly allows agencies to not finalize all the details of mitigation if the agency commits to specific performance criteria and to a process ensuring that the final mitigation will achieve the required outcomes, including finetuning that could result from separate regulatory permitting processes. The Draft EIR includes a requirement that existing pier structures be removed at a ratio of at least 1:1 for impacts to jurisdictional waters (refer to Mitigation Measure BIO-3 on page 3.3-61) to achieve a no-net increase in Bay fill, which is sufficient to mitigate the impact on jurisdictional waters to a less-than-significant level under CEQA. Preparation of a fully developed, site-specific mitigation plan requires final design information and jurisdictional determinations that are not yet available. Because the precise footprint, final pile and decking layouts, and the results of a formal jurisdictional delineation will be established during final design and agency permitting, it is not possible to calculate exact impact quantities or to prepare a fully developed mitigation plan at this time. The final mitigation plan required to secure permits from USACE, SFBRWQCB, and BCDC will be determined in coordination with these regulatory agencies, consistent with the performance standards in Mitigation Measure BIO-3.

Refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements,* for further discussion about how Mitigation Measure BIO-3 is not deferred mitigation under CEQA. In addition, refer to the errata in Chapter 3 of the Final EIR for changes to the wording of Mitigation Measure BIO-3, and which clarifies that implementation of Mitigation Measure BIO-3 would require no net increase in Bay fill, rather than compensatory mitigation.

Response to Comment A1-11

Refer to Response to Comment A1-10 and Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, for a discussion about how Mitigation Measure BIO-3 complies with CEQA requirements. The City looks forward to continued coordination and collaboration with the SFRWQCB as it pertains to mitigation for fill.

Response to Comment A1-12

The mitigation disclosed in an EIR must be adequate, enforceable, and sufficiently specific so that the public and agencies can evaluate its likely effectiveness. The Draft EIR provides a clear, enforceable, minimum mitigation requirement that avoids the net loss of jurisdictional waters due to project implementation (refer to Mitigation Measure BIO-3 on page 3.3-61 and as revised in the errata in Chapter 3 of the Final EIR). A fully engineered mitigation plan is not typically completed at the Draft EIR stage, and mitigation details are also further finalized during the separate regulatory permitting process. At the end of Mitigation Measure BIO-3 in the Draft EIR (refer to page 3.3-66), it is stated that "This measure may be modified or supplemented by permit conditions from applicable regulatory agencies." Refer also to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, for further discussion about how Mitigation Measure BIO-3 is not deferred mitigation under CEQA. Draft EIR Table 3.3-4 in Section 3.3.4 Impacts Analysis, Impact BIO-3, page 3.3-60, includes the estimated net change in square feet of fill within waters of the State.

Response to Comment A1-13

Draft EIR Mitigation Measures BIO-1(d) is related to time of year of in-water construction and requires a soft startup of construction equipment in water to allow fish and marine mammals to vacate the area before a pile driver reaches full power. Note that the starting up of construction equipment would not happen during the nighttime but only during the daytime when construction commences. This allows for visual observation during the start-up period to ensure that fish or marine mammals leave the vicinity of the construction site. Once they vacate the area, it is not anticipated that fish or marine mammals would revisit the construction site until after the construction ceases. Further, as described below, nighttime pile-driving will be limited and additional non-visual monitoring protocols will be used. In response to this comment, the text of Draft EIR Section 3.3, *Biological Resources*, has been clarified as follows:

Section 3.3.4 page 3.3-45:

> However, Mitigation Measure BIO-1(a) and BIO-1(d) would be required. Mitigation Measure BIO-1(a), which requires a Worker Environmental Awareness Program (in part to support implementation of Mitigation Measure BIO-1(d)), and Mitigation Measure BIO-1(d), which dictates seasonal work windows, soft-start and ramp-up procedures, exclusion zones, and sound attenuation measures during pile driving, would reduce impacts related to special-status fish to less than significant with mitigation. Soft-start procedures would occur when pile driving and pile-extraction activities commence during daytime hours, allowing marine mammals to leave the vicinity of the construction site before pile driving reaches full power. Nighttime pile driving, if required, would only occur as a continuation of work initiated during the daytime after implementation of the daytime soft-start procedures. In addition, the City would consult with NOAA Fisheries and CDFW during the permitting process.

Section 3.3.4 page 3.3-48:

> However, Mitigation Measure BIO-1(a) and BIO-1(d) would be required. Mitigation Measure BIO-1(d) requires implementation of soft-start and ramp-up procedures, monitoring, and exclusion zones based on the most current NMFS-approved guidance to avoid and minimize marine mammal exposure to pile-driving noise. Soft-start procedures would occur when pile driving and pile-extraction activities commence during daytime hours, allowing marine mammals to leave the vicinity of the construction site before pile driving reaches full power. Nighttime pile driving, if required, would only

occur as a continuation of work initiated during the daytime after implementation of the daytime soft-start procedures. Implementation of these measures would reduce construction related, pile-driving noise impacts related to special-status marine mammals to less than significant with mitigation.

Section 3.3.4 page 3.3-50:

In addition to the Worker Environmental Awareness Program required under Mitigation Measures BIO-1(a), implementation of BIO-1(d), BIO-1(e), and HYD-1 would also be required to mitigate impacts on marine mammals during construction. The MMMP developed under BIO-1(e) would apply the project's hydroacoustic analysis to establish Level A and Level B protection zones and integrate these with the soft-start procedures and observation protocols identified in Mitigation Measure BIO-1(d). These measures would require soft-start techniques, a sound curtain, buffer zones, and biological monitoring to address impacts due to pile driving noise. Soft-start procedures would be implemented at the start of pile-driving and pile-extraction activities, which would only commence during the daytime, allowing marine mammals to leave the vicinity before pile driving reaches full power. Any nighttime pile driving, if required, would occur only as a continuation of work initiated during the daytime after implementation of the daytime soft-start procedures. Mitigation Measure BIO-1(d) would ensure that any impacts to marine mammals would avoid injury and be limited to behavioral impacts, and would thus be less than significant.

The Draft EIR Mitigation Measure BIO-1(e) requires visual monitoring and qualified biologists for in-water construction work; however, such visual monitoring would not be feasible at night. As described in Draft EIR Section 2.6 *Construction Details*, on page 2-26, construction work would be conducted primarily during the daytime. Nighttime pile driving would only occur in circumstances where construction phasing or safety require extended hours and after construction activity has already begun earlier during the day. Nonetheless, in response to this comment, the text of the Draft EIR Mitigation Measure BIO-1(e) has been clarified to provide more specifics related to potential nighttime pile driving as follows:

Section 3.3.4 page 3.3-56:

Mitigation Measure BIO-1(e): Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction

Prior to construction, the City shall prepare a Marine Mammal Monitoring Plan (MMMP) to avoid and minimize potential adverse impacts on marine mammals during pile driving and tug operations. The MMMP shall implement general guidelines set forth in the MMPA and incorporate the hydroacoustic modeling results developed for the project to define site-specific protection zones and avoid exposure of marine mammals to underwater sound levels exceeding the most up to date Level A (injury) thresholds identified by NOAA Fisheries. The MMMP shall include the following:

- **Protection and Monitoring Zones**: Using the hydroacoustic modeling results, the MMMP shall define shutdown and disturbance zones for each marine mammal hearing group. These zones will be tailored to the pile type, size, and driving method and will correspond to the Level A and Level B effect distances developed for the project. The plan will describe how these protection zones will be verified and monitored in the field, integrating them with the soft-start and observation procedures described in Mitigation Measure BIO-1(d).
- **Vessel Operation Protocols**: The MMMP shall include vessel-operation measures consistent with the MMPA. Construction vessels under power shall remain at least 300 feet from whales and 150 feet from dolphins, porpoises, seals, and sea lions. When marine mammals are encountered, vessel operators shall reduce speed to no-wake, shift to neutral, and allow the animals to pass safely before resuming operations.
- **On-Site Monitoring and Response**: A qualified biologist shall be present on site, either observing from the pier or aboard a vessel, during all pile-driving and tug operations. The biologist shall document all marine-mammal observations, note behavioral responses, and immediately alert project personnel if a whale enters the modeled harassment distance or comes within 300 feet, or

if any other marine mammal enters the modeled harassment distance or comes within 150 feet, whichever is greater. Upon such an observation, the contractor shall implement the appropriate delay or shutdown procedures identified in the MMMP.

- **Adaptive Management and Coordination**: The MMMP shall outline communication and reporting protocols, including stop-work notification procedures and coordination with NMFS Protected Species Division. Results from daily monitoring will be used to assess the effectiveness of the protection zones and adjust them, if needed, in consultation with NMFS.
- **Nighttime Pile Driving**: Nighttime pile driving shall be limited to situations where safety concerns or significant schedule delays require that pile driving started during daytime hours extend beyond typical work hours. For instances where nighttime pile driving is required, the MMMP shall include non-visual monitoring protocols, such as passive acoustic monitoring, thermal/infrared cameras, and night-vision optics, as well as larger nighttime exclusion/shutdown zones, extended soft-start procedures, and the most effective feasible hydroacoustic attenuation.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Response to Comment A1-14

As discussed in Response to Comment A1-13, construction work would be conducted primarily during the daytime, and nighttime pile driving would only occur when absolutely necessary. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A1-15

Impact HAZ-1 in Section 3.7, *Hazards and Hazardous Materials* of the Draft EIR (page 3.7-27) discusses the results of a 2025 sediment sampling analysis conducted within the five dredge units within the project vicinity, which included evaluation of the sediments for placement at disposal sites in San Francisco Bay, specifically the Cullinan Ranch Restoration Project (CRRP) and the Montezuma Wetlands Restoration Project (MWRP) beneficial reuse sites.[22] Based on the findings of the sampling and analysis, which included comparison of sediment chemistry to San Francisco Bay sediment background concentrations and site-specific screening criteria for CRRP and MWRP, the sediments sampled are suitable for reuse at San Francisco Bay, CRRP, and/or MWRP beneficial reuse sites. The sediment screening levels requested for comparison by the commenter were established specifically for the Don Edwards San Francisco Bay National Wildlife Refuge, which is a different beneficial reuse site than those evaluated in the 2025 sediment sampling analysis. Page 2-28 in Chapter 2, *Project Description* of the Draft EIR indicates that the location for disposal of dredged materials would depend on the sampling results of the dredged materials, as well as permitting requirements. Based on the results of the 2025 sediment sampling analysis, it is expected that MWRP or another disposal site in the San Francisco Bay would be used. The Don Edwards San Francisco Bay National Wildlife Refuge is not identified in the Draft EIR as a potential disposal site for dredged materials as part of the proposed project; therefore, comparison of the 2025 sediment samples to the site-specific screening levels for the Don Edwards San Francisco Bay National Wildlife Refuge is not applicable to the proposed project.

The analysis and significance conclusion presented under Impact HAZ-1 in Section 3.7, *Hazards and Hazardous Materials*, of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A1-16

The Draft EIR's analysis of stormwater runoff focuses on operational impacts from impervious surfaces that generate contaminated runoff such as parking areas and roadways with vehicular activity (see Draft EIR Section 3.8, *Hydrology and Water Quality*). Because the new pier surface will not support vehicle operations or fuel-related contamination sources, the runoff from the pier surface itself consists of uncontaminated precipitation and does not meet the thresholds for a significant environmental impact under CEQA. In addition, there is already an existing pier at the project site and stormwater runoff from the existing pier represents the existing baseline conditions. When the proposed project is compared to existing baseline conditions, the amount and quality of runoff from the proposed new pier is not expected to change. This analysis is consistent with the Draft EIR's findings that project-related water quality impacts would be less than significant, as documented in Section 3.8, *Hydrology and Water Quality* and the associated mitigation measure.

However, the City acknowledges that SFRWQCB regulatory requirements mandate stormwater treatment standards for all new impervious surfaces, including the pier, regardless of CEQA significance. The specific treatment approach and compliance mechanism will be established through the City's permit application process and subject to SFRWQCB review and approval. This regulatory and design-level analysis occurs outside CEQA scope and does not require revision to the Draft EIR.

No revision to the Draft EIR is warranted on this basis.

Response to Comment A1-17

As described on page 2-18 of the Draft EIR, the proposed project includes permeable pavement for the majority of the proposed parking. The proposed permeable pavement does not provide stormwater treatment or rely on infiltration. As described in Draft EIR Section 2.5.2, the permeable pavement conveys stormwater via an under-drain to new bioretention areas designed for stormwater treatment in compliance with the City's NPDES permit and applicable stormwater quality standards. The detailed design of the stormwater treatment system will be reviewed and permitted by the City and SFRWQCB to ensure compliance with applicable regulatory requirements. The Draft EIR appropriately addresses potential water quality impacts in Section 3.8, *Hydrology and Water Quality*; detailed design and regulatory compliance occur through separate permitting processes. Accordingly, no revisions to the Draft EIR are required.

Response to Comment A1-18

As this comment does not raise any significant environmental issues, no further response is required.

Subject: Berkeley Water Transportation Pier Ferry Environmental Impact Report SCH # 2025040995

Dear Liza McNulty:

The California Department of Fish and Wildlife (CDFW) received a Draft Environmental Impact Report (DEIR) from the City of Berkeley for the Berkeley Water Transportation Pier Ferry (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code. A2-2

CDFW ROLE

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the state. (Fish & G. Code, § 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines §15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources. Additionally, CDFW is responsible for marine biodiversity protection under the Marine Life Protection Act in coastal marine waters of California, and ensuring fisheries are sustainably managed under the Marine Life Management Act. A2-3

[1] CEQA is codified in the California Public Resources Code in § 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with § 15000.

CDFW is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. CDFW requires a Lake and Streambed Alteration Notification, pursuant to Fish and Game Code section 1600 et. seq., for Project activities affecting lakes or streams and associated riparian habitat. Notification is required for any activity that may substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank including associated riparian or wetland resources; or deposit or dispose of material where it may pass into a river, lake or stream. Work within ephemeral streams, washes, watercourses with a subsurface flow, and floodplains are subject to notification requirements. A2-4

Likewise, to the extent implementation of the Project may result in “take” as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), related authorization as provided by the Fish and Game Code will be required. A2-5

PROJECT DESCRIPTION SUMMARY

Proponent: City of Berkeley

Objective: The objective of the Project is to replace the Berkley Pier with a new publicly accessible pier, breakwater, and ferry terminal. The proposed project would include construction of a new 1,080-foot pier, a 400-foot breakwater, and ferry boarding infrastructure. There would be development of a new public plaza at the pier entrance; improvements along University Avenue and Seawall Drive including a raised cycle track, new pedestrian amenities, and upgraded transit facilities. The project also included renovation of existing parking areas with permeable pavement and potential solar canopies, as well as installation of new utility connections, shoreline repair, and dredging to support ferry operations. Primary Project activities include removal of the old Pier structures, installation of new concrete piles, and the installation of a breakwater. On land, the project will consist of utility trenching, demolition of hardscapes, and repaving roads and parking areas. A2-6

Location: The Project is located within the City of Berkeley at the waterfront near the Berkeley Pier and includes the adjacent land along Seawall Drive and University Avenue (37°51'40.3"N, 122°19'00.3"W).

Timeline: April 2027 to December 2028.

STATE AND FEDERALLY LISTED AND COMMERCIALLY/RECREATIONALLY IMPORTANT SPECIES A2-7

Protected species under the State and Federal Endangered Species Acts that could potentially be

present near Project activities include:

- Longfin smelt (*Spirinchus thaleichthys*), state-threatened
- Chinook salmon (*Oncorhynchus tshawytscha*), state and federally threatened (Central Valley Spring-run), state and federally endangered (Sacramento River Winter-run), state species of special concern (Central Valley Late Fall Run, Central Valley Fall Run)
- Steelhead (*Oncorhynchus mykiss*), federally threatened (Central California Coast evolutionary significant units)
- Green sturgeon (*Acipenser medirostris)*, federal threatened (Southern Distinct Population Segment)
- White sturgeon (*Acipenser transmontanus)*, state candidate species
- Pacific lamprey (*Entosphenus tridentatus*), state species of special concern
- California Least tern (*Sternula antillarum browni),* state and federally endangered, state fully protected
- White-tailed kite (*Elanus leucurus*), state fully protected
- Crotch's bumble bee (*Bombus crotchii*), state candidate species
- Burrowing owl (*Athene cunicularia*)
- Western pond turtle (*Actinemys marmorata*), federally threatened

A2-7

Several species with important commercial/recreational fisheries value and habitat value for spawning and rearing could potentially be present near Project activities. These include: Eelgrass (*Zostera marina),* Dungeness crab *(Metacarcinus magister),* California halibut (*Paralichthys californicus),* Pacific herring (*Clupea pallasii*), Rockfish (*Sebastes spp*.), Surfperches (*Embiotocidae*).

Lake and Streambed Alteration

CDFW requires a Lake or Streambed Alteration (LSA) Notification, pursuant to Fish and Game Code section 1600 et seq., for Project activities affecting river, lakes or streams and associated riparian habitat. Notification is required for any activity that may substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank (including associated riparian or wetland resources); or deposit or dispose of material where it may pass into a river, lake, or stream. Work within ephemeral streams, drainage ditches, washes, watercourses with a subsurface flow, and floodplains is generally subject to notification requirements. In addition, infrastructure installed beneath such aquatic features, such as through hydraulic directional drilling, is also generally subject to notification requirements. Therefore, any impact to the mainstems, tributaries, or floodplains or associated riparian habitat caused by the proposed Project will likely require an LSA Notification. CDFW may not execute a final LSA Agreement until it has considered the final EIR and complied with its responsibilities as a responsible agency under CEQA.

A2-8

Migratory Birds and Raptors

CDFW has authority over actions that may result in the disturbance or destruction of active bird nest sites or the unauthorized take of birds. Fish and Game Code sections protecting birds, their eggs, and nests include section 3503 (regarding unlawful take, possession, or needless destruction of the nests or eggs of any bird), section 3503.5 (regarding the take, possession, or destruction of any birds-of-prey or their nests or eggs), and section 3513 (regarding unlawful take of any migratory nongame bird). Migratory birds are also protected under the federal Migratory Bird Treaty Act. A2-9

Fully Protected Species

Fully Protected Species (Fish & G. Code § 3511 and 4700) have the potential to occur within or adjacent to the Project area, including, but not limited to: white-tailed kite (*Elanus leucurus*), and California least tern (*Sternula antillarum browni*) (LETE). A2-10

Project activities described in the DEIR should be designed to completely avoid any fully protected species that have the potential to be present within or adjacent to the Project area. Fully protected species may not be taken or possessed at any time and no licenses or permits may be issued for their take except as follows:

- Take is for necessary scientific research
- Efforts to recover a fully protected, endangered, or threatened species, live capture and relocation of a bird species for the protection of livestock
- They are a covered species whose conservation and management is provided for in a Natural Community Conservation Plan (Fish & G. Code, §§ 3511, 4700, 5050, & 5515). A2-11

Specified types of infrastructure projects may be eligible for an Incidental Take Permit (ITP) for unavoidable impacts to fully protected species if certain conditions are met (Fish & G. Code §2081.15).

CDFW also recommends the DEIR analyze potential adverse impacts to fully protected species due to habitat modification, loss of foraging habitat, and/or interruption of migratory and breeding behaviors. CDFW recommends that the Lead Agency include in the analysis how appropriate avoidance, minimization and mitigation measures will reduce indirect impacts to fully protected species. Project proponents should consult with CDFW early in the Project planning process. A2-12

MARINE BIOLOGICAL SIGNIFICANCE

The San Francisco Bay-Delta is the second largest estuary in the United States and supports numerous aquatic habitats and biological communities. It encompasses 479 square miles, including shallow mudflats. This ecologically significant ecosystem supports both state and federally threatened and endangered species and sustains important commercial and recreational fisheries. A2-13

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist the City of Berkeley in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources. Editorial comments or other suggestions may also be included to improve the clarity of the document. A2-14

I. Project Level Impacts and Other Considerations

Mitigation Measures BIO-1 and BIO-3

Comment: The proposed Project includes using both a vibratory driving and impact hammer to drive up to 416 piles that range from concrete sheet piles to 24"-36" diameter steel and concrete piles. Mitigation Measure BIO-1 is broken up into multiple sections with measures to avoid and or minimize impacts to aquatic species from pile driving, including through implementation of worker education, special status species surveys, work windows, and hydroacoustic attenuation. However, Mitigation Measure BIO-1 does not address potential compensatory mitigation to offset hydroacoustic impacts to aquatic species from pile driving. A2-15

Additionally, the proposed Project would have an estimated net increase in cover area of 17,050 square feet, or approximately 0.39 acres. The proposed Mitigation Measure BIO-3 proposes to offset this increase of cover by removing additional existing decking and piles from the defunct wharf at a 1:1 ratio. However, this ratio may not be sufficient to offset the potential impacts to state listed species based on the impacts of the proposed Project. A2-16

The increase in fill and cover from the proposed pier and ferry dock, in addition to the impacts from increased underwater sound during construction and new work dredging may require an increased ratio to appropriately offset the impacts to state listed species that will be considered under CDFW's authorization of the Project.

Recommendation: CDFW recommends adding a section to Mitigation Measure BIO-1 to address compensatory mitigation to offset impacts from pile driving, particularly hydroacoustic impacts to species. CDFW also recommends that the final EIR consider a total mitigation ratio of 3:1, if fill removal is chosen to mitigate for the Project's impacts, to offset loss of species habitat and impacts from underwater sound. Additionally, mitigation credits, from a CDFW approved mitigation bank, may serve as an appropriate alternative mitigation option. A2-17

Dredging

Comment: The Project includes a proposal to dredge approximately 400,000 cubic yards from the unmaintained federal navigation channel adjacent to the pier to allow ferry access. The DEIR is not clear about who will conduct the dredging and whether this will be initially dredged and then A2-18

maintained by the U.S. Army Corps of Engineers as a federal navigational channel or whether the City of Berkeley will be responsible. A2-18

Additionally, it is CDFW's understanding that there has been substantial time between dredging events at this location and the initial 400,000 cubic yards of material would be considered a new dredging event. The DEIR lacks detail on the potential impacts to aquatic species and their habitat from this new dredging and how those impacts may be offset. A2-19

Recommendation: CDFW recommends the final EIR clearly describe who will be responsible for dredging and maintaining the navigation channel and how the impacts of conducting this new work dredging will be offset. A2-20

Crotch's Bumble Bee

Comment: The DEIR states that Crotch's bumble bee (*Bombus crotchii*) have the potential to occur on the Project site but it does not state avoidance and minimization measures to reduce potential impacts to less-than-significant.

The Project location is within the Crotch's bumble bee range (https://wildlife.ca.gov/Conservation/CESA) and grassland adjacent to the Project site may contain potential habitat for Crotch's bumble bee. As a candidate species, unauthorized take of this species pursuant to CESA is a violation of California Fish and Game Code section 2080 et seq. A2-21

The Project activities may result in the loss of nesting and foraging habitat for Crotch's bumble bee, and potentially the loss of individuals in nests due to crushing by construction personnel or equipment, excavation, and placement of soil stockpiles. Additionally, Project activities may result in direct mortality through crushing or filling of active bee colonies and hibernating bee cavities, reduced reproductive success, loss of suitable breeding and foraging habitats, loss of native vegetation that may support essential foraging habitat.

Recommended Mitigation Measure Habitat Assessment: A habitat assessment shall be conducted by a qualified entomologist knowledgeable with the life history and ecological requirements of Crotch's bumble bee. The habitat assessment shall include all suitable nesting, overwintering, and foraging habitats within the Project area and surrounding areas. Potential nest habitat (February through October) could include that of other *Bombus* species such as bare ground, thatched grasses, abandoned rodent burrows or bird nests, brush piles, rock piles, and fallen logs. Overwintering habitat (November through January) could include that of other *Bombus* species such as soft and disturbed soil or under leaf litter or other debris. The habitat assessment shall be conducted during peak bloom period for floral resources on which Crotch's bumble bee feed. Further guidance on habitat surveys can be found within *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species* (https://wildlife.ca.gov/Conservation/CESA). A2-22

Recommended Mitigation Measure Survey Plan: If Crotch's bumble bee habitat is present within the Project area, the Project should include a pre-construction survey plan as a mitigation measure. The survey plan should be submitted to CDFW for review. Surveys should be conducted by a qualified entomologist familiar with the behavior and life history of Crotch's bumble bee. If CESA candidate bumble bees will be captured or handled, surveyors should obtain a 2081(a) Memorandum of Understanding (MOU) from CDFW. Surveys should be conducted during the colony active period (i.e. April through August) and when floral resources are in peak bloom. Bumble bees move nests sites each year, therefore, surveys should be conducted each year that Project work activities will occur. Further guidance on presence surveys can be found within Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species (https://wildlife.ca.gov/Conservation/CESA). A2-23

Recommended Mitigation Measure Crotch's Bumble Bee Avoidance or Take Authorization: If Crotch's bumble bee are detected during pre-construction surveys, a Crotch's bumble bee avoidance plan should be developed and provided to CDFW for review prior to work activities involving ground disturbance or vegetation removal. A2-24

If full take avoidance is not feasible, CDFW strongly recommends that the DEIR state that the Project proponent will apply to CDFW for take authorization under an ITP.

Recommended Mitigation Measure Herbicide Application: To minimize impacts to bumble bees, avoid the bloom periods for herbicide application and mowing activities. If this is not possible, CDFW recommends that the Project obtain take authorization under an ITP, pursuant to Fish and Game Code section 2081 subdivision (b). A2-25

Western Pond Turtle

Comment: The DEIR states that Western Pond Turtles have been observed at the parks and ponds around the project site. The DEIR states that if a western pond turtle is found on site, a qualified biologist will capture and relocate the individual.

The Western Pond Turtle (*Actinemys marmorata*) is a native, protected species in California. Under California Code of Regulations Title 14, Section 40 (b) The live capture and release of native reptiles and amphibians done to avoid such death or injury may occur only with CDFWs written approval. A2-26

Recommended Mitigation Measure: CDFW recommends that BIO-1 state that if a Western Pond Turtle is found in the construction area, CDFW shall be contacted for guidance. A2-27

Burrowing Owl

Comment: The DEIR states that burrowing owls (*Athene cunicularia*) are unlikely to be affected by the project due to the low potential to occur on the project site. However, a 2025 occurrence of burrowing owl is noted 0.7 miles north of the Project area in CNDDB.

The burrowing owl is currently a candidate species under CESA and is afforded the same protection as a CESA-listed species (CEQA Guidelines, §15380, subds. (b)). Unauthorized take of this species pursuant to CESA is a violation of Fish and Game Code section 2080 et seq. The mitigation measures in BIO-1(c) may not be sufficient to avoid impacts to burrowing owls as they do not address the potential for occurrence. A2-28

Recommended Mitigation Measure: The DEIR should modify BIO-1 to state that if burrowing owls are detected during surveys within or near the Project area, a protective buffer will be established to ensure construction activities will not impact the burrowing owl or their habitat. Appropriate buffers typically have a 150 to 1,500-foot radius and vary depending on the level of disturbance and timing of construction. If the burrowing owl show signs of distress (e.g., defensive vocalizations and/or flying away from the nest), the buffer distance should be increased. The Designated Biologist shall submit the results of the surveys, including a Burrow Complex Map to CDFW for approval prior to beginning Covered Activities. If changes in burrowing owl presence are detected (e.g., burrowing owl have moved onsite or changed burrow use), the Designated Biologist shall contact the CDFW Regional Representative by phone or email within 24 hours of the observation to consult on appropriate measures to avoid or minimize impacts of the Project. If a lapse in Project-related work of 14 calendar days or longer occurs, the Lead Agency shall contact the CDFW Regional Representative by phone or email and may be required to conduct additional surveys before work may be reinitiated. A2-29

The Designated Biologist shall visually inspect any pipes, debris piles, culverts, pallet stacks, burrow exclusion installations, or similar structures for burrowing owl before the material is moved, buried, or capped. The Designated Biologist shall inspect all open holes and trenches within the Project Area at a minimum of twice a day and immediately prior to backfilling. At the end of each workday, the Lead Agency shall place an escape ramp at each end of trenches or holes to allow any animals that may have become trapped in the trench or hole to climb out overnight. The ramp may be constructed of either dirt fill or wood planking or other suitable material that is placed at an angle no greater than 30-45 degrees. If any worker discovers that burrowing owls have become trapped, they shall halt Covered Activities and notify the Designated Biologist immediately. Project workers and the Designated Biologist shall allow the burrowing owl to escape unimpeded.

Recommended Mitigation Measure Burrowing Owl Monitoring: The Designated Biologist(s) shall be present during construction activities to monitor the behavior of any burrowing owl. The Designated Biologist(s) shall have the authority to order stop work if burrowing owl exhibit distress and/or abnormal behavior for (e.g., excessive vocalizations, defensive flights at intruders, flushing A2-30

frequently, or otherwise displaying agitated behavior). Permittee shall not resume activities until CDFW has been consulted by the Designated Biologist and both the Designated Biologist and CDFW confirm that the burrowing owl's behavior has normalized. CDFW, in consultation with the Designated Biologist(s), shall determine whether to increase the size of the no-disturbance buffer. A2-30

Recommended Mitigation Measure Compensatory Mitigation: CDFW highly recommends that the Project proponent obtain take authorization from CDFW through issuance of an ITP if full avoidance of take during construction and/or operations is not feasible. The DEIR must include all biologically appropriate and feasible take avoidance measures. If permanent or temporary impacts of the proposed Project to burrowing owl foraging and/or nesting habitat cannot be completely avoided, the DEIR should include measures to minimize the impacts of construction on owls and their habitat, and effective compensatory mitigation to offset all habitat loss. A mitigation plan should be prepared in consultation with CDFW. A2-31

Nesting Bird

Comment: The surveys and avoidance buffers proposed by mitigation measure BIO-1(c) may not be sufficient to reduce impacts to nesting birds to less-than-significant levels. A2-32

Project activities, including grading, ground disturbance, operation of heavy machinery, increased foot traffic, and the movement of workers, may generate noise or visual disturbances which may in turn result in nest abandonment, reduced reproductive success, loss, or reduced health or vigor of eggs or young. Grading, tree removal, and vegetation removal may also result in direct take of nesting birds.

Take of nesting birds, birds in the orders Falconiformes or Strigiformes, and migratory nongame bird as designated in the MBTA is a violation of Fish and Game Code (§ 3503, 3503.5, 3513). CNDDB indicates that white-tailed kite and northern harrier may occur within the Project site. White-tailed kite is a Fully Protected species (Fish & G. Code § 3511), and this status qualifies them as rare, threatened, or endangered pursuant to CEQA Guidelines § 15380. A2-33
To reduce impacts to nesting birds, including white-tailed kite and northern harrier, CDFW recommends modifying BIO-1(C)to reflect the following measures.

Recommended Mitigation Measure: To the extent feasible, Project activities shall be conducted outside of the bird nesting season (typically February 1–September 15, and as early as January 1 for raptors). If Project activities cannot happen outside of bird nesting season a preconstruction nesting bird survey shall be conducted by a qualified biologist no more than 14 days prior to the commencement of Project-related activities to identify active nests that could be impacted by construction, and a second focused survey shall be conducted with 48 hours of Project commencement. If Project activities lapse for a period longer than seven days, a focused survey shall be conducted before activities recommence. The preconstruction nesting bird survey shall include Project boundaries, including any temporary disturbance areas, and where no established A2-34

survey protocol exists, CDFW recommends the following minimum survey radius: (1) 250 feet for Passerines, and (2) 1,000 feet for raptors. If active nests are found, a no-disturbance buffer shall be established around the nest. A qualified biologist, in consultation with CDFW, shall establish a buffer distance. The following nest avoidance buffers are recommended: (1) 250 feet for passerines, (2) 1,000 feet for raptors, and (3) 0.5 mile for golden eagle. The buffer shall be maintained until the nestlings have fledged (e.g., are capable of flight and become independent of the nest), to be determined by a qualified biologist. The avoidance buffer can be removed, and no further measures are necessary once the young have fledged or the nest is no longer occupied, as determined by a qualified biologist. A2-34

California Least Tern

Comment: The DEIR states that LETE are not expected to occur within the project site. However, LETE has been recorded adjacent to the project site according to CNDDB unprocessed data. Despite the existence of suitable nesting habitat and potential for LETE to nest or forage adjacent to Project and staging areas, the DEIR does not include analysis on the potential for the Project to significantly impact LETE, nor does it include measures to avoid, minimize or mitigate potentially significant impacts to LETE. A2-35

LETE are CESA and federal Endangered Species Act (ESA) endangered and state fully protected species. Populations of LETE nest along the West coast of North America from Baja California north to the San Francisco Bay and establish nesting colonies on sandy soils with little vegetation along Pacific Ocean beaches, lagoons and bays (USFWS 1980). LETE were once widespread and abundant, but increasing human disturbance to sandy beaches, hunting for the millinery trade, and increasing predator populations caused the population to undergo a major decline in the early 1900s (USFWS 2006). LETE nesting occurs between April 15 and late September, and successful development and growth of chicks requires habitat free of human disturbance, protection from avian and mammal predators, and proximity to aquatic foraging habitat. LETE have high site fidelity and return to nesting areas year after year. This species is highly sensitive to human disturbance and will readily abandon nesting areas if disturbed. A2-36

Project activities could impact LETE in the short term due to generation of noise from construction equipment, groundwork, and operation and movement of equipment and workers that would have the potential to disturb LETE foraging, roosting, and nesting. Direct mortality of LETE could occur through nest abandonment, resulting in reduced reproductive success (loss or reduced health or vigor of eggs or young). A2-37

Recommended Mitigation Measure: A CDFW-approved biologist, in coordination with CDFW, shall conduct breeding and occupancy surveys for LETE in all suitable habitats within and adjacent to the Project area during the LETE nesting season (April 15- September 15) prior to each year of construction to determine whether LETE are present. A2-38

If LETE are found in suitable habitat near the Project site, appropriate buffers shall be incorporated to avoid and minimize impacts to LETE. A 700-foot no-work buffer shall be implemented between construction activities and any current-year breeding LETE detections. Noise-reducing modifications to equipment as well as portable acoustic barriers/blankets placed near noise sources may be appropriate to reduce auditory and visual impacts to breeding shorebirds. A qualified avian biologist shall advise and support buffer establishment in consultation with CDFW. Fully protected species such as LETE may not be taken or possessed at any time. The qualified biologist shall also be on-site during all Project activities to ensure that fully protected species impacts are avoided by all Project activities.

If breeding and occupancy surveys demonstrate that LETE utilize any habitat in the Project area that would be temporarily or permanently impacted by Project development, the Project shall develop a Least Tern Mitigation and Monitoring Plan in coordination with CDFW, which shall outline actions the Project will take to avoid impacts to LETE and their habitat. These actions could include:

1) Establishing protected areas within the Project area for LETE nesting, prior to Project impacting existing nesting habitat;
2) Creating a monitoring program to assess LETE populations within existing and/or established protected areas and restored habitat in the Project area;
3) Incorporating other methods for promoting LETE resiliency on lands within the Project area; and
4) Identifying and implementing metrics for assessing success of the Least Tern Mitigation and Monitoring Plan.

A2-38

II. Editorial Considerations

Comment: On page 2-6 (Section 2.5.1- Waterside) makes two references to Section 2.7.2 as the section in which piles for the pier and breakwater are discussed. In the DEIR, Section 2.7.2 is specific to energy and consumption. The final EIR should revise this reference to appropriately direct reviewers to Section 2.6.1 – Construction Activities and Equipment in which specific details related to proposed piles are discussed.

A2-39

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/SubmittingData#44524420-pdf-field-survey-form. The

A2-40

completed form can be mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov. The types of information reported to CNDDB can be found at the following link: https://wildlife.ca.gov/Data/CNDDB/Plants-and-Animals. A2-40

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, Section 753.5; Fish & G. Code, Section 711.4; Pub. Resources Code, Section 21089.) A2-41

CONCLUSION

CDFW appreciates the opportunity to comment on the DEIR to assist the City of Berkeley in identifying and mitigating Project impacts on biological resources. Questions regarding this letter or further coordination should be directed to Arn Aarreberg, Environmental Scientist, at R7CEQA@wildlife.ca.gov and Chad Rynearson, Environmental Scientist, at Chad.rynearson@wildlife.ca.gov. A2-43

Letter A2

Commenter: Craig Shuman, D. Env, Marine Regional Manager, California Department of Fish and Wildlife

Date: April 24, 2026

Response to Comment A2-1 to A2-4, A2-6

These comments do not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A2-5

The Draft EIR identifies consultation with CDFW for impacts to State-listed species (refer to Section 3.3.4, pages 3.3-46 and 3.3-47). In addition, Section 3.3.4, under Impact BIO-1, starting on page 3.3-43 discusses impacts to special-status species, including State-listed species, and concludes that impacts would be less than significant with implementation of identified mitigation. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A2-7

All species included in the comment list (longfin smelt, Chinook salmon [Central Valley Spring-run and Sacramento River Winter-run], steelhead, green sturgeon, white sturgeon, Pacific lamprey, California least tern, white-tailed kite, Crotch's bumble bee, burrowing owl, and western pond turtle, eelgrass, Dungeness crab, California halibut, Pacific herring, rockfish, and surfperches) are addressed in the Draft EIR under both Environmental Setting (refer to pages 3.3-17 through 3.3-24) and under Impact BIO-1 (refer to pages 3.3-43 through 3.3-57), except for Chinook salmon – Central Valley fall/late fall-run ESU. Section 3.3.4, under Impacts BIO-1, starting on page 3.3-43 discusses impacts to special-status species, including State and federally listed species, and concludes that impacts would be less than significant with implementation of identified mitigation (refer to Mitigation Measures BIO-1(a) through BIO-1(e), HYD-1, and AES-1). In response to this comment, the Chinook – Central Valley fall/late fall-run ESU has been added as moderate potential to occur in the project site via the following clarification Draft EIR text changes to Section 3.3, *Biological Resources*, and Appendix C, *Supporting Biological Resources Information:*

Section 3.3.2, page 3.3-19:

> Marine and Anadromous Wildlife Species
>
> Twenty-three ~~two~~ (2~~2~~3) special-status marine species were evaluated for their potential to occur within the project site (Appendix C), of which 13~~2~~ have high to moderate potential to occur within the marine areas of the project site. The species that can be reasonably anticipated to occur were determined based on the published ranges of the species, and the type, extent, and condition of habitat available at the project site.
>
> Seven species have a high potential to occur in the project site:
>
> - Green sturgeon – Southern DPS (*Acipenser medirostris*, pop. 1 federally threatened, SSC)
> - White sturgeon (*Acipenser transmontanus*, State candidate threatened) non-breeding
> - Chinook salmon – Sacramento River Winter-Run Evolutionarily Significant Unit (ESU) (*Oncorhynchus tshawytscha*, pop. 7 federally and State endangered) non-breeding
> - Pacific lamprey (*Entosphenus tridentatus*, SSC)
> - Longfin smelt – San Francisco Bay-Delta DPS (*Spirinchus thaleichthys,* pop. 2 federally endangered and State threatened)

- Harbor seal (Phoca vitulina richardii, MMPA)
- California sea lion (Zalophus californianus, MMPA)

~~Five~~ Six species have a moderate potential to occur within the project site:

- Steelhead – Central California coast DPS (*Oncorhynchus mykiss irideus*, pop. 8 federally threatened) non-breeding
- Steelhead – Central Valley DPS (*Oncorhynchus mykiss irideus*, pop. 11 federally threatened) non-breeding
- Chinook salmon – Central Valley spring-run ESU (*Oncorhynchus tshawytscha*, pop. 11 federally threatened) non-breeding
- Chinook salmon – Central Valley fall/late-fall-run ESU (*Oncorhynchus tshawytscha*, pop. 13, SSC) non-breeding
- Harbor porpoise (*Phocoena phocoena*, MMPA)
- Common bottlenose dolphin (*Tursiops truncates*, MMPA)

Section 3.3.2, page 3.3-22:

Chinook Salmon - Central Valley Spring-Run ESU

The Chinook salmon - Central Valley spring-run ESU is federally threatened. Chinook salmon is an anadromous fish spending most of its life in coastal waters. This population of chinook salmon spawns in the Sacramento River and its tributaries. Juveniles are reared in the San Joaquin Delta and migrate to the ocean between December, January, and February, and adult immigration through the delta and into the lower Sacramento River occurs from late January to early February.[67] Therefore, there is a moderate potential for individuals to migrate, forage, and transit within the project site.

Chinook Salmon – Central Valley fall/late-fall-run ESU

The Chinook salmon - Central Valley fall/late-fall-run ESU includes both fall-run and late-fall-run Chinook salmon; however, only the fall-run is a CDFW SSC. Chinook salmon are anadromous, spending the majority of their life cycle in marine waters before returning to freshwater systems to spawn. Fall-run Chinook salmon migrate upstream through the San Joaquin Delta from July through December and spawn from early October through late December, with the timing of runs varying by stream.[68] Late fall-run Chinook salmon migrate through the San Joaquin Delta from mid-October through December and spawn from January through mid-April. Following emergence, most juvenile fall-run and late-fall-run Chinook salmon rear in freshwater for approximately one to seven months before emigrating to the ocean, while a smaller proportion remain in freshwater and migrate as yearlings. Among the Central Valley Chinook salmon populations, the fall-run is the most abundant and exhibits a life history strategy characterized by a relatively short freshwater residence period. The fall-run population emigrates to the ocean during the spring, prior to the onset of elevated summer water temperatures, allowing juveniles to utilize lower-elevation reaches of Central Valley rivers during outmigration. This life history strategy, combined with the population's relative abundance, has resulted in fall-run Chinook salmon being the primary stock propagated at the five major Central Valley hatcheries.[69] Based on the species' migration ecology, habitat use, and the location of the project site within a potential migratory corridor, there is moderate potential for Central Valley fall-run/late-fall-run Chinook salmon to occur within the project site and vicinity during migration or dispersal periods. Individuals may use aquatic habitats within or adjacent to the project site for passage and transient foraging; however, the project site does not provide suitable spawning or long-term rearing habitat.

[67.] NMFS. 2014. Recovery Plan for the Evolutionarily Significant Units of Sacramento River Winter-Run Chinook Salman, Central Valley spring-run Chinook Salmon, and the Distinct Population Segment of Central Valley Steelhead. July.

[68.] NMFS.(no date). *Central Valley fall/late fall-run Chinook* [PDF]. NOAA Fisheries. https://www.st.nmfs.noaa.gov/data-and-tools/Salmon_CVA/pdf/Salmon_CVA_Name_Central_Valley_fall-late_fall-run_Chinook.pdf. Accessed July 2026.

Section 3.3.4, page 3.3-44:

Marine

Special-status Fish

The following analysis applies for the following species: green sturgeon - Southern DPS; white sturgeon non-breeding; chinook salmon - Sacramento River Winter-Run ESU non-breeding; Pacific lamprey; longfin smelt - San Francisco Bay-Delta DPS; steelhead - Central California coast DPS non-breeding; steelhead - Central Valley DPS non-breeding; ~~and~~ chinook salmon - Central Valley spring-run ESU non-breeding; and chinook salmon - Central Valley fall/late-fall-run ESU non-breeding.

Appendix C, page C-8:

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
Oncorhynchus tshawytscha pop. 11 chinook salmon - Central Valley spring-run ESU	FT/ST G5T2Q/S2	Adult numbers depend on pool depth and volume, amount of cover, and proximity to gravel. Water temps >27 C are lethal to adults. Federal listing refers to populations spawning in Sacramento River and tributaries.	Moderate Potential (non-breeding)	Suitable freshwater breeding habitat for the species does not occur within the Project site. However, the Bay habitat within the Project site provides migrating habitat for this species.
Oncorhynchus tshawytscha pop. 13 chinook salmon - Central Valley fall/late-fall-run ESU	None/None G5T3Q/S3 SSC	Populations spawning in Sacramento River and San Joaquin rivers and their tributaries.	Moderate Potential (non-breeding)	Suitable freshwater breeding habitat for the species does not occur within the Project site. However, the Bay habitat within the Project site provides migrating habitat for this species.

Even with these Draft EIR clarification text changes, the analysis and significance conclusion presented in Draft EIR Section 3.3.4 under Impact BIO-1 (page 3.3-43) of less than significant impacts to wildlife species with implementation of identified mitigation remains valid.

Response to Comment A2-8

Refer to Response to Comment A2-5 for a discussion of how the Draft EIR identifies consultation with CDFW for impacts to State-listed species. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A2-9

With regard to Fish and Game Code sections 3503, 3503.5, and 3513 and federal Migratory Bird Treaty Act (MBTA), refer to Draft EIR Section 3.3.3, pages 3.3-29 and 3.3-33 for related regulatory discussions and Impact BIO-1, pages 3.3-44 and 3.3-52 for an impacts discussion that concludes less-than-significant-with-mitigation impacts with regard to State-protected species and native and migratory birds (refer to Mitigation Measures BIO-1(a), BIO-1(c), and AES-1). Refer also to Response to Comment A2-28 to A2-31 for clarifying changes to Mitigation Measure BIO-1(c) addressing impacts to nesting birds. No other changes to the Draft EIR are necessary in response to this comment.

Response to Comment A2-10

White-tailed kite is addressed in the Draft EIR in the Environmental Setting (refer to pages 3.3-17 through 3.3-18) and in the summary of scoping comments received (refer to page 3.3-41). The Draft EIR concludes that although there is a low potential for white-tailed kite to occur in the project site, it is not expected to be affected by the project. Appendix C of the Draft EIR explains why there is a low potential for this species to occur on the project site.

Refer to Response to Comment A2-35 to A2-38 for discussion of impacts related to California least tern, revisions to the Draft EIR regarding California least tern and the conclusion that impacts to this species would be less than significant.

Response to Comment A2-11

The Draft EIR includes a description of the regulatory protections for “fully protected” species in Section 3.3.3 Regulatory Setting, page 3.3-33. Take of fully protected species must be avoided, as incidental take cannot be authorized except with some narrow exceptions, as the comment notes.

White-tailed kite is a fully protected species with low potential to occur on the project site. Refer to Response to Comment A2-10 for discussion of impacts on white-tailed kite.

California least tern is also a fully protected species; refer to Response to Comment A2-35 to A2-38 for a discussion of impacts to this species and conclusion that impacts to this species would be less than significant. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A2-12

California state fully protected species with potential to occur within the project site include white-tailed kite and California least tern. These species have low potential to occur within the project site, as described in Draft EIR Appendix C *Supporting Biological Resources Information* and the Draft EIR Environmental Setting (refer to pages 3.3-17 through 3.3-18). As stated in the Draft EIR, no potential adverse impacts to fully protected species, including white-tailed kite and California least tern, from habitat modification and loss of foraging habitat would occur, as the project site is already developed and suitable foraging habitat would continue to be available in the project vicinity. Refer to Response to Comment A2-10 for discussion of impacts on white-tailed kite in the Draft EIR. Refer to Responses to Comment A2-28 to A2-31 and A2-35 to A2-38 for clarifying text changes to Draft EIR discussions regarding habitat impacts and avoidance for California least tern. Wildlife movement, which includes migratory behavioral disturbance, is discussed under Impact BIO-4 and impacts would be less than significant. White-tailed kite are non-migratory. California least tern forage in open waters within and surrounding the project site during their migration, thus discussion of impacts to foraging habitat in the Draft EIR (refer to Response to Comment A2-35 to A2-38) also addresses disturbance of migratory behavior. No additional revisions to the Draft EIR are necessary in response to this comment.

Response to Comment A2-13 to A2-14

These comments do not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Responses to subsequent comments are provided in Responses A2-14 through A2-43 as appropriate. No further response is required.

Response to Comment A2-15

Impact BIO-1 (refer to pages 3.3-45 through 3.3-46 and 3.3-48 through 3.3-51) concludes less-than-significant-with-mitigation impacts with regard to construction-related hydroacoustic (pile-driving) impacts to aquatic species. The Draft EIR concludes that construction-related hydroacoustic impacts to special-status aquatic species would be less-than-significant-with-mitigation (refer to Mitigation Measures BIO-1(a) and BIO-1(d)). CEQA does not require compensation for temporary physiological or behavioral disturbance. Therefore, compensatory mitigation is not appropriate for hydroacoustic impacts, because such effects are acute, short-term, and best addressed by avoidance, engineering controls, timing, and monitoring as discussed in the Draft EIR. Additional mitigation measures, with regard to potential impacts to aquatic species from pile driving required to secure permits from USFWS, NMFS, CDFW, and SFBRWQCB will be determined in coordination with these regulatory agencies. No Draft EIR changes are necessary in response to this comment.

Response to Comments A2-16 and A2-17

The 1:1 replacement ratio described in the Draft EIR is a minimum baseline commitment to ensure no net loss of jurisdictional waters by the lead agency, City of Berkeley, under CEQA, and is not a fixed or final future permitting-stage outcome. This ratio is substantiated by the in-kind, in-place nature of the proposed mitigation: removal of existing pier piles and decking offsets new net fill and cover within the same water body and habitat type, avoiding the establishment risk, time lag, and functional uncertainty typically associated with off-site or out-of-kind mitigation approaches that warrant higher ratios. The actual mitigation ratio and specifics will be determined during agency permitting based on the final design, the results of a formal jurisdictional and functional assessment, and regulatory agency review. The analysis presented in Draft EIR Section 3.3.4 under Impacts BIO-1 and BIO-3, (pages 3.3-45 through 3.3-51 and 3.3-60 through 3.3-61, respectively) conclude that impacts to special-status aquatic species regarding project cover area would be less-than-significant-with-mitigation (refer to Mitigation Measures BIO-1(a), BIO-1(d), BIO-1(e), BIO-3, and HYD-1), and is, thus, adequate under CEQA. Refer also to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*. No Draft EIR changes are necessary in response to these comments.

Response to Comment A2-18

Refer to Section 2.2.15, *Topical Response: Maintenance Dredging*, which includes a detailed discussion of dredging responsibilities, regulatory oversight, and the distinction between the proposed one-time construction dredging and any future maintenance dredging.

That topical response also includes a revision to the Draft EIR to clarify that no maintenance dredging program is proposed as part of the project at this time, and that any future maintenance dredging would be subject to separate evaluation, permitting, and environmental review, as appropriate. These clarifications do not alter the impact analysis, significance determinations, or mitigation measures presented in the Draft EIR. No further revisions to the EIR are necessary.

Response to Comment A2-19 and A2-20

The Draft EIR identifies construction-related dredging as part of the project in Chapter 2, *Project Description*, on page 2-28. Impacts related to construction dredging are discussed in Section 3.3.4, pages 3.3-45 to 3.3-51. The Draft EIR concluded that construction dredging impacts related to aquatic species and habitat would be less-than-significant-with-mitigation (refer to Mitigation Measures BIO-1(d) and

HYD-1). Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate,* and Section 2.2.15, *Topical Response: Maintenance Dredging*, for discussion of post-construction sedimentation rates and maintenance dredging. No changes to the Draft EIR are necessary in response to these comments.

Response to Comments A2-21 to A2-25

Based on the informal habitat assessment for Crotch's Bumble Bee (CBB) done during a project site reconnaissance survey on September 19, 2024, as noted in Draft EIR Section 3.3.1 (page 3.3-2), suitable habitat for this species within the project site is present but marginal due to high levels of disturbance and limited floral resources. Thus, the species has low potential to occur and, in the absence of new information on potential species presence, that determination has not changed. Project activities would not involve herbicide use and mowing activities during construction. Operational maintenance herbicide use and mowing at the project site would be conducted in accordance with Berkeley Department of Parks, Recreation, and Waterfront policies and would be similar to existing practices.

While impacts to CBB remain less than significant in the absence of mitigation, in response to this request by CDFW and in acknowledgement that there is low potential for CBB to occur, the following mitigation measure requiring a habitat assessment and pre-construction surveys has been added to Draft EIR Section 3.3 *Biological Resources*:

Section 3.3.4, page 3.3-55:

> Mitigation Measure BIO-1(f): Implement CDFW-Requested Measure for Crotch's Bumble Bee Prior to Construction
>
> A formal habitat assessment of the project site landside project disturbance areas shall be performed by a qualified biologist prior to initiating ground disturbing activities to determine if suitable nesting or foraging habitat is present within the project site. The assessment shall include:
>
> - Review of occurrence record data
> - Analysis of foraging, nesting, and overwintering resources
> - Documentation of plant species observed (including what is blooming at the time of the survey and percent cover)
>
> The locations of nesting resources, including rodent burrows, cavities, thatched grasses, brush, rock piles, fallen logs, and manmade structures, shall be mapped during the assessment. Areas adjacent (within 50 feet) to the project site shall also be considered, if accessible, to determine if there is suitable nesting or foraging habitat.
>
> If suitable nesting and foraging resources are detected during the habitat assessment, they will be avoided by a minimum 50-foot buffer, where possible. If avoidance is not possible, protocol-surveys following the CDFW *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species* (CDFW 2023) will be conducted to determine if Crotch's bumble bee is present within the project site. A minimum of three visits will be conducted during the colony active season (April – August) and will be spaced 2-4 weeks apart. Surveys will be conducted each year that construction activities occur within suitable nesting habitat, because bumble bees move their nests each year. If no Crotch's bumble bees are detected on the project site, no further mitigation actions will be required. If Crotch's bumble bees are detected, consultation with CDFW will be initiated to determine the most appropriate strategy to avoid impacts to bumble bees on the project site. If full take avoidance is not feasible, the City will apply to CDFW for take authorization under an Incidental Take Permit.

In addition, the following clarifying text changes are made to Draft EIR Section 3.3 *Biological Resources* as follows:

Section 3.3.2, page 3.3-17:

In addition, the following ~~six~~ 11 species (one insect, one reptile, and ~~four~~ nine avian species) were determined to have a low potential to occur, and therefore, with the exception of Crotch's bumble bee and burrowing owl (due to their State candidate endangered status), least tern, and the northwestern pond turtle (which is discussed further due to the proximity of potential habitat near the project site)… No special-status wildlife species were observed during the survey conducted in September 2024.

…

Crotch's Bumble Bee

Crotch's bumble bee occupies open, dry habitats such as coastal scrub, grasslands, chaparral margins, and sparsely vegetated alluvial terraces that support abundant spring and early summer blooming plants. The species relies on diverse nectar and pollen resources. Nesting typically occurs in abandoned rodent burrows or concealed upland cavities with sufficient thatch or loose soil, while overwintering queens select undisturbed, well drained areas.

Crotch's bumble bee has only one known occurrence recorded within five miles of the project site. Suitable habitat on the project site is of low quality because most terrestrial areas of the project site are paved or landscaped with sparse floral resources for foraging. Although small mammal burrows on the project site may provide suitable nesting habitat and floral resources for foraging occur adjacent to the site, the highly developed character of the project site and associated anthropogenic disturbance reduce the availability and connectivity of habitat needed to support the species. Therefore, there is low potential for this species to occur within the project site.

Section 3.3.4, page 3.3-43:

Special-status Wildlife

Crotch's Bumblebee, Northwestern Pond Turtle, Burrowing Owl, Double-Crested Cormorant, Least Tern, and Nesting Birds

Crotch's bumblebee (state candidate endangered), ~~Northwestern~~ northwestern pond turtle (federally proposed threatened, SSC), burrowing owl (state candidate), and least tern (federally endangered, state endangered, and state fully protected) ~~has~~ have a low potential and double-crested cormorant (CDFW Watch List) has a moderate potential to occur in terrestrial portions…during the nesting season.

Crotch's bumblebee has a low likelihood to be present in undeveloped portions of the project site. Based on the low likelihood for this species to occur, the low quality of habitat in the project site, and the distance from the known occurrence of this species, potential impacts to Crotch's bumblebee are less than significant. Nonetheless, the City would implement Mitigation Measure 1(f), as recommended by CDFW. Implementation of this agency-requested mitigation, however, does not change the conclusion that impacts to this species is less than significant without mitigation due to the low likelihood of occurrence.

…

However, implementation of Mitigation Measures BIO-1(a), BIO-1(b), and BIO-1(c) would require a Worker Environmental Awareness Program (WEAP), as well as preconstruction surveys for and avoidance of northwestern pond turtle, burrowing owl, and nesting birds. Biologists responsible for implementing Mitigation Measure BIO-1(a) and other biological mitigation measures would be required to meet any qualifications for approval requirements established by applicable resource agencies through project permits and authorizations. Mitigation Measure BIO-1(a) would include Crotch's Bumble Bee as part of the WEAP; however, this does not change the conclusion that impacts to this species would be less than significant without mitigation….

Section 3.3.4, page 3.3-51:

> **Special-Status Wildlife**
>
> The proposed project would primarily occur within existing developed areas, and would not involve significant new levels of disturbance to suitable Crotch's bumble bee habitat or to the mouth of Strawberry Creek…

These Draft EIR clarification text changes do not change Draft EIR significance conclusions with regard to special-status wildlife species.

Response to Comment A2-26 to A2-27

There is low potential for northwestern pond turtle to occur within the project site, as described in Draft EIR Section 3.3 *Biological Resources*, page 3.3-19 and 3.3-44. However, in response to this comment the following clarification text changes have been made to Draft EIR Section 3.3 *Biological Resources*, Mitigation Measure BIO-1(b)as follows:

Section 3.3.4, Page 3.3-54 and Page 3.3-55:

> Mitigation Measure BIO-1(b): Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction
>
> No less than seven days prior to the start of any construction activities within 500 feet of Strawberry Creek (including staging and mobilization), a City-approved qualified biologist will conduct a preconstruction survey for northwestern pond turtle within suitable habitat on the project site as feasible. If any northwestern pond turtle are identified within the work area, they will be allowed to leave the work site on their own. CNDDB Field Survey Forms will be submitted to the CDFW for all special-status animal species observed.
>
> If any northwestern pond turtles are observed by construction personnel within or adjacent to (within 50 feet) the project site, all work within the vicinity of the observation will be halted and the ~~qualified biologist will be notified immediately to evaluate the occurrence and relocate the animal as necessary.~~ City will contact CDFW immediately for guidance. Only a ~~qualified~~ CDFW-approved biologist will capture and relocate wildlife. Construction personnel are not permitted to handle said animals. If northwestern pond turtles become federally-listed at the time of construction, no individuals shall be handled without approval from USFWS.…

Response to Comments A2-28 to A2-31

There is low potential for burrowing owl to occur at the project site, as described in Draft EIR Appendix C *Supporting Biological Resources Information*, page C-9, which includes the same occurrence information provided in this comment (i.e. the sighting of a burrowing owl 0.7 miles away from the project site). As noted in Appendix C, based on the site conditions evaluated in the Draft EIR, which include poor quality burrowing owl habitat consisting of some ground squirrel burrows in developed and landscaped areas that are subject to heavy recreational use and frequent human disturbance, there is a very low likelihood that burrowing owl would be present within the project site. Thus, the species is unlikely to be impacted by project activities, has low potential to occur, and, in the absence of new information, that determination in the Draft EIR has not changed. However, while impacts to burrowing owl remain less than significant in the absence of mitigation, in response to this CDFW comment and in acknowledgement that there is low potential for burrowing owl to occur, revisions have been made to Draft EIR Mitigation Measure BIO-1(c) as follows:

Section 3.3.4, page 3.3-55 and 3.3-56:

Mitigation Measure BIO-1(c): Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction

Burrowing Owl

Prior to project construction, a qualified biologist will conduct a habitat assessment to determine if potential habitat for burrowing owl is present in or near the project site. If potential habitat is present in or within 500 feet of the project site, a qualified biologist will conduct a pre-construction survey of the project site (plus a 500-foot buffer as access allows) for the presence of burrowing owl. The survey will be conducted no more than 14 days prior to ground disturbing activities and will conform to CDFW guidelines for burrowing owl Take Avoidance Surveys as described in Appendix D of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.[100] A report of pre-construction survey efforts and results will be submitted to the City within 30 days of completion of the survey. The report will include the dates, times, weather conditions, and personnel involved in the survey. Depending on survey results, the report will also include observations of burrowing owl or potential burrows, and the location and habitat description of the observations. If burrowing owl, active burrows, or their sign (i.e., tracks or pellets) are not observed in the project site, no additional measures related to impact avoidance and minimization of the absent species are recommended. If burrowing owl, active burrows, or their sign are observed within the project site, CDFW will be notified and the following measures will be implemented:

- A qualified biological monitor will be present during landside construction on the project site to document burrowing owl observations, burrow statuses, and require that construction activities do not negatively affect burrowing owl. The duration and frequency of monitoring will be determined at the discretion of the qualified biologist and a monitoring report detailing monitoring results will be submitted to the City within 30 days of the completion of project activities or breeding season (February 1 to August 31), if applicable.
- The biological monitor will visually inspect any pipes, debris piles, culverts, or similar structures for burrowing owl before the material is moved, buried, or capped. Open holes and trenches within the project site will be inspected at the beginning and end of each landside construction workday and immediately prior to backfilling. At the end of each such workday, trenches and holes will be ramped so that any animals that may have become trapped in the trench or hole can climb out. The ramp may be constructed of dirt fill or wood planking or other suitable material at an angle no greater than 30-45 degrees. If a burrowing owl is trapped in a trench or hole, work will stop and the qualified biologist will be notified immediately. The burrowing owl will be allowed to escape unimpeded.
- If active burrows are observed on the project site, a non-disturbance buffer will be established restricting all ground-disturbing activities from occurring within the buffer and a qualified biological monitor will be present at the initiation of project activities. The buffer will be established by a qualified biologist and range from 330 ft. to 1,500 ft. depending on project activity, line of sight, and local topography during the breeding season. During the non-breeding season (September 1 to January 31), the buffer will range from 165 ft. to 330 ft. The buffer will be demarcated using brightly colored flagging and may only be reduced at the discretion of a qualified biologist based on the factors listed above and potential use of sound and visual barriers (i.e., hay bales). Removal of the buffer will only occur if a qualified biologist determines burrowing owl are not present in the vicinity and any potential burrows are inactive.
- If active burrow avoidance is infeasible during the non-breeding season or during the breeding season, where resident owls have not yet begun egg laying or incubation, or where the juveniles are foraging independently and capable of independent survival, the City in coordination with a qualified biologist will consult with CDFW to prepare, authorize, and implement a passive

relocation program consistent with Appendix E of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.

- A habitat mitigation plan will be developed in coordination with the City and CDFW for loss of active burrowing owl burrow sites if implementation of a passive relocation plan is necessary and/or burrowing owl are documented to nest on site or within 500 feet of the project site. This would be based upon the portion of the project site that overlaps with the primary foraging area around the burrow site (approximately 500-foot buffer) to be replaced at a minimum 1:1 ratio.

Nesting Birds

Project construction activities, including but not limited to vegetation removal and ground disturbance that result in noise or disturbance affecting potential nesting bird habitat, should commence outside of the nesting season (February 1 through September 15), if feasible. If construction begins outside the nesting season, a nesting bird survey is not required.

If ground disturbing project activities begin within the nesting season (February 1 through ~~August 31~~ September 15), then no more than seven days prior to the initiation of project activities, a nesting bird pre-construction survey shall be conducted by a City-approved qualified biologist within the disturbance footprint, plus a 300-foot buffer for passerines and a 1,000-foot buffer for raptors. During construction within the nesting season, an additional focused survey shall be conducted prior to tree removal to identify active nests with the subject tree(s). If no active nests are observed, no further action would be required. Ground-disturbing project activities that are initiated outside of the nesting season may continue into the nesting season without requiring new nesting bird surveys.

Pre-construction nesting bird surveys shall be conducted by a qualified biologist during the time of day when birds are most active and should be of sufficient duration to reliably conclude presence or absence of nesting birds on the project site and within the designated buffer. A report of the nesting bird surveys results shall be submitted to the City for review and approval prior to clearance for mobilizing equipment. If nests are found, their locations shall be flagged (if possible) and recorded with the use of a GPS unit. Avoidance buffers shall be established around active nests. Depending upon the species, suitable minimum buffers may be 50 feet for non-raptor species and 300 feet for raptor species, or as determined by the qualified biologist in consultation with CDFW based on species sensitivity, construction activities, and other factors.

If active nests are present, all project work shall be conducted outside the established avoidance buffer zone from the nest until it is no longer active. No staging of large equipment shall occur within the avoidance buffer until the qualified biologist confirms that breeding/nesting is complete and all the young have fledged. If buffer zones are determined to be infeasible, a City-approved qualified biological monitor shall be on site to monitor project activities within the avoidance buffer zones to ensure active nests and nesting birds are not impacted. Nesting bird surveys are not required for project activities that occur between September 16 and January 31. A report of all survey results and any proposed avoidance buffers shall be submitted to the City for review and approval.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

[100.] California Department of Fish and Game (CDFG). 2012. Staff Report on Burrowing Owl Mitigation. Department of Fish and Game. March 7, 2012. Available at: http://www.dfg.ca.gov/wildlife/nongame/docs/BUOWStaffReport.pdf2 (accessed July 2026).

In addition, the following clarifying text changes have been made to Draft EIR Section 3.3 *Biological Resources*:

Section 3.3.2, page 3.3-18:

In addition, the following ~~six~~ 11 species (one insect, one reptile, and ~~four~~ nine avian species) were determined to have a low potential to occur, and therefore, with the exception of Crotch's bumble bee

and burrowing owl (due to their State candidate endangered status), least tern, and the northwestern pond turtle (which is discussed further due to the proximity of potential habitat near the project site)… No special-status wildlife species were observed during the survey conducted in September 2024.

Burrowing Owl

Burrowing owl occupy open, dry habitats such as grasslands, coastal dunes, salt marsh edges, and sparsely vegetated disturbed sites that support abundant small mammal and insect prey. The species relies on a mix of invertebrates and small vertebrates for foraging, with peak activity at dawn and dusk. Nesting and roosting typically occur in underground burrows—often those excavated by ground squirrels, pocket gophers, or other fossorial mammals—or in artificial burrows and cavities with loose soil for excavation, while nonbreeding individuals favor undisturbed, low-vegetation areas for shelter and foraging.

Although one occurrence has been documented within five miles of the project site and burrowing owls are known to overwinter at César Chávez Park, the project site itself does not provide the habitat conditions required for overwintering. The site lacks open, low-stature annual grassland and protected foraging areas with sufficient insect prey, which are essential for sustaining overwintering individuals.

Adjacent areas, including fragmented grasslands in Shorebird Park and along University Avenue, contain limited open space but do not provide suitable overwintering habitat. While some ground squirrel burrows are present, these grassland areas are routinely mowed for park use and subject to heavy recreational use and frequent human disturbance, which reduces prey availability and limits habitat suitability. In addition, the grassland areas along University Avenue are narrow and linear, lack refuge from disturbance due to regular trail use, recreation, and the presence of dogs, and are exposed to numerous tall perching structures that support hawks and other avian predators.

A migrating or displaced individual could briefly land on the project site or within nearby areas during movement; therefore, this species has a low potential to occur.

Section 3.3.4, page 3.3-51: Special-Status Wildlife

The proposed project would primarily occur within existing developed areas, and would not involve significant new levels of disturbance to suitable Crotch's bumble bee or burrowing owl habitat, or to the mouth of Strawberry Creek…

Refer to Response to Comment A2-21 for additional Draft EIR clarification text changes related to construction impacts related to special status wildlife, including burrowing owls. The Draft EIR clarification text changes in response to this comment do not change Draft EIR significance conclusions with regard to special-status wildlife species. No additional changes the Draft EIR are required in response to these comments.

Response to Comments A2-32 to A2-34

Nesting birds are addressed in the Draft EIR Section 3.3.4 under Impact BIO-1 (page 3.3-44). Potential impacts to nesting birds are discussed in the Draft EIR, which concludes that impacts would be less than significant with mitigation incorporated (refer to Mitigation Measures BIO-1[a] and BIO-1[c]). Refer to Response to Comment A2-28 to A2-31 for details of the Draft EIR clarification text changes incorporating protocols for protecting nesting birds.

Refer to Response to Comment A2-10 for discussion of impacts on white-tailed kite.

Northern harrier is addressed in Draft EIR Appendix C *Supporting Biological Resources Information*, page C-9. It is not expected to occur due to lack of breeding habitat within the heavily developed project site, and absence of open meadows and marshes the harrier prefers as foraging habitat. However, even if

it were to occur on the project site, impacts would be less than significant with implementation of Mitigation Measures BIO-1(a) and BIO-1(c).

Response to Comment A2-35 to A2-38

Suitable breeding habitat for California least tern is not present at the project site, because it lacks large expanses of open, sparsely vegetated sandy or gravel substrates and undisturbed shoreline conditions required for nesting, and is instead characterized by hardened shoreline, deep water, urbanization, and heavy anthropogenic disturbance as described in Draft EIR Appendix C *Supporting Biological Resources Information*, page C-10. There is potential for California least tern to forage over open water within and adjacent to the project site. However, in response to the comment which notes the species has been recorded in CNDDB unprocessed data, and other public comments that note citizen-reporting (eBird) sightings of this species, the potential for the species to occur within the project site has been changed from "not expected" to low in Appendix C, and the following clarification text changes have been made to Draft EIR Section 3.3 *Biological Resources* and Appendix C, *Supporting Biological Resources Information*:

Section 3.3.2, page 3.3-18:

…

- Alameda song sparrow (*Melospiza melodia pusillula*, SSC)
- Least tern (*Sternula antillarum browni,* Federally endangered, State endangered, State fully protected)

Section 3.3.2, page 3.3-19:

Least Tern

California least tern is a small tern with a distinctive black-capped head and is federally endangered, State endangered, and a State fully protected species. This species nests along the California coast and breeds colonially on bare or sparsely vegetated areas.[62] The California least tern nests during summer from Baja California north to the San Francisco Bay. Least terns are migratory and spend winter months in coastal areas of Mexico and Central America. Least terns forage primarily on silversides (e.g., topsmelt), northern anchovies, Pacific herring, and surfperches.[63] This species nests in colonies on bare or sparsely vegetated flat substrates, including beaches, alkali flats, or paved areas.

California least terns have a low potential to forage over open water within and adjacent to the project site. This species has no potential to nest within the project site despite the presence of bare or sparsely vegetated areas due to the heavy recreational use and disturbed nature of the project site.

62. Cornell Lab of Ornithology. 2026. All About Birds. Updated online and accessed at: https://www.allaboutbirds.org/. Accessed June 2026.

63. Burton and Terrill. 2012. Least Tern Literature Review and Study Plan Development prepared for U.S. Army Corps of Engineers. https://www.spn.usace.army.mil/Portals/68/docs/Dredging/LMTS/S%20and%20S/11%20-%20Least%20Tern%20Lit%20Rev%20Study%20Plan%20Report%20Final.pdf (accessed September 2026).

Section 3.3.4, page 3.3-43:

…Impacts to northwestern pond turtle would be potentially significant and Mitigation Measures BIO-1(a) and BIO-1(b) would be required.

California least tern may forage over open water portions of the project site but does not have potential to breed within the project site. Temporary impacts during construction would occur within open water areas, temporarily excluding least tern from a small portion of their greater foraging area,

that is, open water within the San Francisco Bay. Similar foraging habitat is available along the shoreline to the north and south of areas to be temporarily impacted by the project, thus impacts to least tern would be less than significant.

Section 3.3.4, page 3.3-51:

Special-Status Wildlife

… Therefore, impacts on northwestern pond turtle due to operation would be less than significant.

Impacts to California least tern from operation would be minimal, with the ferry operating in open water and the existing use of the project site for recreation would continue with similar levels of activity and disturbance. Wake generated by ferry operation would be consistent with existing vessel operations in the Bay, thus impacts to California least tern foraging habitat due to project operation would be less than significant.

Appendix C, page C-10:

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
Sternula antillarum browni California least tern	FE/SE G4T2T3Q/S2 FP	Nests along the coast from San Francisco Bay south to northern Baja California. Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches, alkali flats, land fills, or paved areas.	~~Not Expected~~ Low Potential	There are no known occurrences within five miles, suitable colonial breeding sites are not present, and the Project site is largely developed and disturbed by recreational use. This species may forage over open water in the vicinity of the project site.

These Draft EIR clarification text changes do not change Draft EIR significance conclusions with regard to special-status wildlife species.

Response to Comment A2-39

In response to this comment, the following clarifying text changes have been made to Section 2.5.1, *Waterside*, page 2-6, of the Draft EIR:

The new pier and breakwater would have safety railings, public amenities (fish cleaning station, seating, shade canopy, and security gates). In addition, at the entrance to the pier, the City is proposing a gate that would remain open to the public, except in cases where public safety requires closure, such as during a tsunami evacuation, high wind advisory, or other emergency situations. The proposed pier would be a maximum of 1,080 feet in length and would have a width of 22 feet. The reinforced concrete deck comprising the pier would be an approximately 2-foot-thick slab. Piles for the pier are discussed in Section 2.6.1~~2.7.2~~ below.

The proposed new breakwater would create a safe harbor from the predominant southwesterly wind and waves for ferry vessel charging and boarding on the north side of the new pier. The breakwater would also offer recreational pedestrian access. The proposed breakwater would be approximately 400 feet in length and would have a width of 15 feet. The reinforced concrete deck comprising the breakwater would be an approximately 2-foot-thick slab. Piles for the breakwater are discussed in Section 2.6.1~~2.7.2~~ below.

These text changes are editorial in nature. The analysis and significance conclusion presented in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A2-40 to A2-43

Survey results will be provided to permitting agencies (e.g., USACE, CDFW, RWQCB, BCDC, USFWS, and NMFS) as required during permit review and compliance, and any submission to the CNDDB will be handled per CDFW's data-submission and access protocols. While Public Resources Code §21003(e) supports incorporating EIR information into shared databases for future environmental determinations, submitting occurrence data to the CNDDB is an informational action and does not itself mitigate project impacts. Filing fees will be paid upon filing the Notice of Determination, as required by CEQA Guidelines Section 21089.

These comment do not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

SUBJECT: Comments on the Draft Environmental Impact Report for the Berkeley Water Transportation Pier Ferry Project

Dear Liza:

Thank you for the opportunity to comment on the Draft Environmental Impact Report (DEIR) for the Berkeley Water Transportation Pier Ferry Project (project). A3-2

The San Francisco Bay Conservation and Development Commission (BCDC) is providing the following comments as a responsible agency under the California Environmental Quality Act (CEQA) with discretionary approval power over aspects of the project within BCDC's jurisdiction, as described below. BCDC will rely on the Final EIR when considering the permit application for the project, and we appreciate this opportunity to comment on the information and analyses presented in the DEIR. The Commission itself has not reviewed the DEIR; the following comments are based on BCDC staff review of the DEIR, considered in relation to BCDC's governing authorities under the McAteer-Petris Act (Title 7.2 of the California Government Code), and the *San Francisco Bay Plan* (Bay Plan). A3-3

San Francisco Bay Conservation and Development Commission

BCDC is a State planning and regulatory agency with permitting authority over San Francisco Bay, the Bay shoreline, and Suisun Marsh, as established in the McAteer-Petris Act and the Suisun Marsh Preservation Act, respectively. Per the McAteer-Petris Act, BCDC is responsible for granting or denying permits for any proposed fill; extraction of materials; or substantial changes in use of any water, land, or structure within the Commission's jurisdiction (Government Code Section 66632). Additionally, BCDC establishes land use policies for the Bay as a resource and for development of the Bay and shoreline in the Bay Plan, which policies provide the basis for the Commission's review and actions on proposed projects. A3-4

Project Description

Based on the DEIR, the majority of the project would be located within at least two areas of BCDC's permitting jurisdiction: A3-5

- In the San Francisco Bay, being all areas subject to tidal action, including the marshlands lying between mean high tide and five feet above mean sea level; tidelands (land lying between mean high tide and mean low tide); and submerged lands (Government Code Section 66610(a)). Areas of Bay jurisdiction include any filled areas where filling commenced after September 17, 1965.

- In the shoreline band, consisting of all territory located between the shoreline of the Bay, as defined above, and 100 feet landward of and parallel with the shoreline (Government Code Section 66610(b)).

A3-5

In addition, portions of the project are located within Bay Plan-designated "Waterfront Park, Beach" priority use areas. Within the Commission's jurisdiction, projects proposed within these priority use areas must be consistent with the Bay Plan's Recreation policies and any relevant policies specified in Bay Plan Map 4 (which is inclusive of the area where the project is proposed).

A3-6

BCDC requests that the City of Berkeley include mapping of BCDC's jurisdiction in the Final EIR and pay particular attention to potential project impacts that may occur in these areas as they relate to the Commission's policies. The Final EIR project description should also clearly detail where each component of the project would take place relative to the Commission's jurisdiction. BCDC staff is available to review any mapping or draft language to ensure that our agency's jurisdiction is accurately depicted and described. BCDC provides data and mapping tools on our website at https://www.bcdc.ca.gov/resources/maps-and-data/. Copies of our planning documents are available at https://www.bcdc.ca.gov/resources/plans/. BCDC's laws and regulations can be referenced at https://www.bcdc.ca.gov/resources/laws-and-regulations/.

A3-7

A3-8

A3-9

Our understanding is that project areas in the Bay jurisdiction include the proposed pier and breakwater, ferry vessel infrastructure, dredging, and Seawall Drive Parking Lot. Project areas in the shoreline band jurisdiction include the plaza, the proposed public restroom, Seawall Drive, the Bay Trail extension at Seawall Drive, and a small section of University Avenue as it connects with the plaza, encompassing portions of the proposed expanded AC Transit bus stop facilities, new cycle track, and University Avenue roadway improvements.

A3-10

BCDC staff recently reached an agreement with the City of Berkeley regarding the depiction of BCDC jurisdiction at the project site. This depiction can be found in the project exhibits for the May 11, 2026, BCDC Design Review Board meeting, which are posted on BCDC's website and can be requested from staff.

A3-11

Project Description

Based on information provided in the DEIR, we understand that the project would:

A3-12

- Demolish approximately 1,280 feet of the approximately 2,970-foot-long closed pier;

- Construct a new 1,080-foot-long, 22-foot-wide public pier at the same location as the closed pier with pedestrian access and recreational amenities, including seating, shade canopy, trash cans, security gates, and a fish cleaning station with cold water potable taps and that drains directly into the Bay;

- Construct a new 400-foot-long, 15-foot-wide, pile-supported breakwater perpendicular to and connected to the new pier, providing pedestrian access and recreational amenities, including seating and trash cans;

- Install ferry vessel infrastructure, including up to two 120-foot-long and 10-foot-wide gangways, up to two 135-foot-long and 42-foot-wide boarding floats, electrical charging equipment, fare collection systems, loading platform, and security gates;

- Dredge a maximum volume of 400,000 cubic yards to create a navigation channel and turning basin located along the closed pier;

- Construct a new, accessible public plaza, replacing the existing pier entrance, providing public access and recreational amenities, including a public restroom, bicycle racks and lockers, seating, paving, lighting, and landscaping;

- Implement improvements along University Avenue, including roadway and sidewalk repairs, improved AC Transit bus facilities, a private vehicle passenger loading zone, and a new approximately 1,800-foot-long and 12-foot-wide raised cycle track on the south side along University Avenue between Marina Boulevard and Seawall Drive;

- Implement roadway repairs to Seawall Drive and renovate Seawall Drive Parking Lot with new pavement, surfacing, striping, lighting, and stormwater treatment;

- Develop a portion of the planned Bay Trail Extension, south of the pier and along Seawall Drive, installing a 12-foot-wide paved path with shoulders approximately 2 feet in width;

- Placement of new rock rip rap as slope protection along approximately 300 feet of shoreline on the eastern side of Seawall Peninsula, just north of the 199 Seawall Drive structure;

- Provide new landscaping as well as tree removal and replacement at various locations throughout the project site;

- Provide new way-finding signage and replacement lighting at various locations throughout the project site;

A3-12

- Install new electric infrastructure to charge ferry vessels, and power lighting and other on-site uses, connecting to an underground 12kV duct bank to be installed and operated by Pacific Gas and Electric (PG&E);
- Install new water connections for the fish cleaning station, public restroom, and hose bibs for deck cleaning;
- Install a new, dedicated fire water main and fire hydrant;
- Install new wastewater connections for the public restroom;
- Install new telecommunication line connections; and
- Operate new zero-emission electric passenger ferry service, connecting the Berkeley ferry terminal to San Francisco and Larkspur ferry terminals.

A3-12

The project may also include the following future improvements:

- A solar panel system over the renovated Seawall Drive Parking Lot.

Additionally, BCDC understands that the project and DEIR alternatives analysis are based on the following objectives:

- Enhance public access and recreational opportunities at the Berkeley Waterfront; and
- Provide efficient and environmentally friendly zero-emission public ferry service between Berkeley and San Francisco.

Environmental Analyses

Below are BCDC staff's remaining questions and comments on the DEIR, organized by environmental topic. Language from CEQA Appendix G: Environmental Checklist Form has been included for reference. Addressing these questions and comments in the Final EIR and addressing any related impacts with mitigation measures will support staff in efficiently and expeditiously developing relevant conditions and necessary findings to include in the permit application staff recommendation when the project comes before BCDC for consideration.

A3-13

AESTHETICS

Would the project: c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the proposed project is in an urbanized area, would the plan conflict with applicable zoning and other regulations governing scenic quality?

A3-14

Impact AES-3 discusses the potential impact of the solar canopy at the Seawall Drive Parking Lot on visual character and the quality of public views. On page 3.1-32, the DEIR states, "The solar shade structures introduce new linear elements and repetitive architectural forms, replacing previously organic shapes and softened skyline with geometric forms and engineered materials. The proposed redevelopment of this area introduces more distinct built elements that would contrast with the existing naturalized features," and concludes that the impact would be less than significant because "while the proposed project would result in visual changes to this area, the proposed updates to the Seawall Drive parking lot would be compatible with existing uses, would enhance the site's functionality while incorporating clean energy solutions, and would be designed and implemented in adherence to the City's goals, policies, and development review criteria related to the maintenance and enhancement of visual character, while also aligning with the City's renewable energy goals." This significance finding reads more like a statement of overriding considerations than a finding of the degree to which an impact could occur. Please revisit this conclusion and instead provide a more detailed explanation of how the project would be designed and implemented in adherence to the applicable zoning and other regulations regarding scenic quality, including BCDC's policies regarding visual resources. Note that as part of the significance finding, other considerations such as clean energy solutions (while desirable) may not be relevant. A3-14

BIOLOGICAL RESOURCES

For the Regulatory Framework in Section 3.1.3, please note that in addition to the McAteer-Petris Act, the Bay Plan includes policies regarding native and special-status species and habitats. Please review the policies in the Bay Plan sections pertaining to Fish, Other Aquatic Organisms and Wildlife; Subtidal Areas; and Mitigation, and ensure that the EIR appropriately considers any relevant policies. A3-15

Would the project: a) Have a substantial adverse effect, either directly or through habitat modifications, on any native or species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game, U.S. Fish and Wildlife Service, or NOAA's National Marine Fisheries Service? A3-16

1. Page 3.3-41 identifies the California least tern (*Sternula antillarum browni*) as a "species mentioned in public comments that are not expected to occur within the project site, nest, in the vicinity, or to be affected by the project." According to page C-10 of the DEIR Appendices, there are no known occurrences of California least tern "within five miles, suitable colonial breeding sites are not present, and the project site is largely developed and disturbed by recreational use." BCDC staff is aware of dredging restrictions from U.S. Fish and Wildlife Service and the California Department of Fish and Wildlife that prohibit dredging from the Berkeley Waterfront to San Leandro Bay to protect foraging California least tern during their breeding season. Please provide the reference data to substantiate the finding that California least tern are not expected to be impacted by project activities. A3-17 A3-18

2. The Subtidal Nearshore Marine subsection on page 3.3-10 calls out benthic organisms associated with soft-sediment habitat. However, the habitat types for subtidal areas are not delineated or mapped in the DEIR as terrestrial habitats are. Therefore, the impacts of the project on the marine and estuarine environment and associated organisms cannot be adequately assessed. Please map the distribution of specific habitat types in the submarine environment to effectively evaluate the potential for environmental impacts. A3-19

3. Ferry operations have the potential to change flow dynamics within the water column, which may alter sediment deposition and erosion patterns and impact marine life, including fish, seabirds, and waterfowl. Please include an analysis of how the project may affect flow dynamics and evaluate associated environmental impacts. As requested above, the delineation of aquatic habitats and their tolerance levels to currents and turbulence is essential to understanding the actual expected resilience of biological resources to the increased hydrological disturbance from both the introduced energy of ferry operations and dredging. A3-20 A3-21

4. The DEIR defines Oceanic Conditions on page 3.3-8 to include "parameters such as salinity, temperature, depth, turbidity, tidal range, and current velocity, as well as circulation patterns, wave energy, and sediment dynamics." However, the subsequent sections are missing a discussion of salinity, turbidity, tidal range, current velocity, circulation patterns, wave energy, and sediment dynamics. Please include these parameters in the evaluation of marine and estuarine conditions. A3-22

5. The DEIR does not appear to address operational light impacts on native and special status species and habitats from new lighting proposed at the Seawall Drive Parking Lot, on the pier, breakwater, gangways, and floats, and at the public plaza. Please include a discussion of the potential for operational impacts of new lighting on biological resources as a result of the project. A3-23

Would the project: c) Have a substantial adverse effect on State or federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

1. In permitting this project, BCDC may require compensatory mitigation for adverse environmental impacts associated with new Bay fill. The DEIR anticipates this with Mitigation Measure BIO-3: *Provide Compensatory Mitigation for Loss of Jurisdictional Waters Prior to Operation*, which requires the removal of additional portions of the existing pier as compensatory mitigation for new fill. On page 3.3-61, mitigation for fill is proposed to be provided at a minimum of 1:1 ratio and to occur prior to or concurrently with construction, as approved by regulatory agencies. The DEIR notes that the City plans to develop a mitigation plan detailing the required additional demolition, which may be modified or supplemented by permit conditions from applicable regulatory A3-24

agencies. To the extent possible, please demonstrate the feasibility of fill removal for compensatory mitigation and evaluate potential environmental impacts anticipated with this method of compensatory mitigation in this EIR. The details provided should be sufficient to weigh the additional impacts to species and water quality against the benefit of fill removal. (Reference 14 CCR § 15126.4(a)(1)(D) [an EIR should discuss any adverse environmental impacts of a mitigation measure].) A3-24 A3-25

2. Page 2-28 indicates that the project proposes to dredge a 100-foot-wide, federally authorized U.S. Army Corps of Engineers (USACE) channel adjacent to the dilapidated pier and the turning basin to allow ferry vessels to turn and dock at the two boarding floats. It is important to note that this channel is not included in the USACE's dredging program. The USACE has not dredged this channel in the past 25 years (or more), and dredging in this area would be considered new work dredging. Please include information regarding the new work and maintenance dredging volume and proposed frequency, as well as information on plans for proposed beneficial reuse or disposal. Per BCDC's Bay Plan policies pertaining to Fish, Other Aquatic Organisms, and Wildlife; Subtidal Areas; Mitigation; and Dredging, dredging should be the minimum necessary for the project, and adverse impacts should be avoided and minimized. When impacts cannot be avoided, mitigation may be required. Please provide an analysis of the impacts to habitat and species from the expansion of the dredge footprint. Please also include avoidance, minimization, and mitigation measures to address both the new work and maintenance dredging proposed by the project. A3-26 A3-27 A3-28

GEOLOGY AND SOILS

Would the project: a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: iii) seismic-related ground failure, including liquefaction or landslides?

As stated on page 2.5-28, "project construction would be required to comply with the American Society of Civil Engineers (ASCE) Seismic Design of Piers and Wharves (61-14) guidelines." We recognize that the updated ASCE 61-26 has not yet been adopted; however, this code update is out for review, and its adoption is anticipated to occur this year. Please update the discussion in this section to include the 2026 code changes and evaluate the project design against the updated ASCE 61-26 guidelines. A3-29

Would the project: b) Result in substantial soil erosion or the loss of topsoil?

Page 3.5-31 states: "In addition, the shoreline around the project site is made of armored rip rap; therefore, there is no soil that could be eroded." BCDC staff believe that this conclusion may be oversimplified, especially in light of the project proposing shoreline repair along "a stretch of the shoreline that is actively eroding" (page 2-22). Please a) provide more detail justifying this statement or providing context on shoreline change over time at the project site, and b) consider the impact of riprap placement on erosion rates in the surrounding areas, as A3-30

the areas adjacent to the armored rip rap may become more susceptible to erosion as a result of the nearby armoring. A3-30

Would the project: c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse? A3-31

1. Page 3.5-30 states that the groundwater table elevation at the project site is 5 feet. Please provide a datum for this height and confirm that all other elevations have an associated datum.

2. The potential for groundwater rise over the 50-year project life is not accounted for in the analysis. Please include and reassess the project area's potential to experience liquefaction over the project's estimated lifetime. A3-32

3. Page 3.5-30 states: "Implementation of geotechnical recommendations, such as the use of deep soil mix, retaining wall recommendations, and continued geotechnical engineer oversight would reduce potential impacts related to liquefaction and lateral spreading." Please discuss the overall suitability of the underlying geologic unit/soils for the project, disclose the potential for failure as a result of seismic activity or ground failure, and describe how the mitigation measures above will avoid or mitigate such failure. A3-33

HAZARDS AND HAZARDOUS MATERIALS

Would the project: a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials? or b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Impact HAZ-1 acknowledges that the pier pilings for the existing pier may have been treated with chemicals that have the potential to lead to toxicity in the surrounding water and sediment. On page 3.7-28, the DEIR concludes that impacts related to the disturbance of the piles would be less than significant due to California Health and Safety Code and California Code of Regulations requirements regarding Treated Wood Waste (TWW). However, it is not clear whether the measures required by the code are to be implemented by default, or whether they would only be implemented if the pier pilings are confirmed to be treated wood and, if so, how that confirmation would be made. Please include a description of whether and when testing would occur to confirm the composition of the piles and what would trigger implementation of the TWW requirements. A3-34 Please also ensure that the discussion in this section is consistent with the discussion of pile removal in the Hydrology and Water Quality section and vice versa (page 3.8-30). A3-35 If necessary, please include a mitigation measure that includes an assessment of the pilings that could trigger the State code requirements. A3-36

HYDROLOGY AND WATER QUALITY

For the Regulatory Framework in Section 3.8.3, please note that BCDC's governing legislation has the status of State law, and the Bay Plan is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. While both BCDC's laws and policies have a regional focus, in terms of their legal effect, they are not regional or local regulations. Additionally, please note that there are a number of Bay Plan policies that are relevant to the Hydrology and Water Quality analysis, including those in the Water Surface Area and Volume, Subtidal Areas, Climate Change, Shoreline Protection, and Dredging. Please review these sections of the Bay Plan and ensure the relevant policies are considered appropriately. A3-37 A3-38

Would the project: a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality? A3-39

1. The project would result in a significant increase in vessel traffic within the turning basin. The area just outside of the turning basin is impaired for multiple pollutants, including PCBs. Please include an analysis of the impacts to water quality from increased traffic and provide BMPs that will be deployed to prevent further impairment. Please also consider potential impacts from increased traffic with respect to the possibility of propeller wash causing scouring in the area and making the channel deeper. A3-40

2. Proposed new amenities at the new pier include a fish cleaning station located at the western terminus of the pier. Please identify potential impacts to water quality related to the fish cleaning station and identify mitigation measures as appropriate to ensure water quality protection. Please clarify if the intent is for fish cleaning waste to be disposed of in trash cans, thrown into the Bay, or disposed of by another means. Please indicate if/how instructional signage would be included to provide direction on the necessary waste disposal practices. A3-41

3. Mitigation Measure HYD-1: *Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition*, as described on page 3.8-34, requires that, prior to construction, the construction contractor shall prepare a Stormwater Pollution Prevention Plan (SWPPP) and implement the SWPPP during construction. The SWPPP shall be submitted to the Berkeley Public Works Department and the State Water Resources Control Board (via the Stormwater Multiple Application and Report Tracking System [SMARTS]) for review and approval at least 60 days prior to start of construction. Page 3.3-46 references Section 3.8, indicating that the project will comply with the SWPPP and maintain appropriate turbidity levels using best management practices (BMPs). Please indicate specific BMPs that would be used to reduce turbidity for this project and state the turbidity limits to be used as triggers for additional actions. A3-42

4. As described on page 3.8-35, "the landside portion of the site is already predominantly covered by impervious surfaces, and the proposed project would result in a net A3-43

decrease of approximately 32,000 square feet of impervious area through the inclusion of permeable paving, bioretention facilities, and other LID features. These measures would enhance localized infiltration opportunities compared to existing conditions and would not reduce the capacity for groundwater recharge." The proposed use of pervious pavement may not be appropriate, as the site is situated atop Bay fill. Please include a discussion of potential sediment contamination and potential water quality impacts from stormwater infiltration into the groundwater table or into the Bay. A3-43

Would the project: c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. result in substantial erosion or siltation on- or off-site;
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or
iv. impede or redirect flood flows?

1. The DEIR primarily uses the medium risk level projections for sea level rise and provides little in the risk assessment for the end-of-century or medium-high level projections. Chapter 2.5.1 states that, "the project design takes into account projected sea level rise." This sentence is not enough to adequately describe the sea level rise adaptation measures that the project is incorporating. Please expand this and specifically look at the end-of-century risks. Note that as part of the BCDC permit application for the project, the project proponents are expected to provide a sea level rise risk assessment prepared by a qualified engineer, per Bay Plan Climate Change Policy No. 2. The risk assessment will be expected to include mid- and end-of-century scenarios at the medium-high risk level, with the high emissions assumption, using the NAVD 88 datum. A3-44

2. The datums referenced in the DEIR alternate between NAVD88 and the City of Berkeley Mean Lower-low Water (MLLW). Please include all elevations with both datums, for example: X feet NAVD88 (X feet MLLW). A table relating these two datums for key identified elevations would also be useful. A3-45

5. The water elevations presented on page 3.8-7 appear to have confused some of the tidal elevations. The Highest Astronomical Tide (HAT) is noted to be +10.3 feet MLLW; however, HAT at this site is +8.4 feet MLLW, and +10.3 feet MLLW is the Extreme Water Level. A table with various tidal levels, that uses both NAVD88 and MLLW, could help reduce confusion. A3-46

6. Figure 3.8-3: *Floodplains Overlapping with and Adjacent to the Project Site,* on page 3.8-11, shows the FEMA 500-year floodplain. Because the pier and ferry terminal will be essential emergency facilities, further analysis of the 500-year floodplain would be useful in determining whether the terminal will be available for use under end-of-century sea level rise conditions. Please discuss the potential for interruptions to ferry terminal access in the analysis of sea level rise. A3-47 A3-48

7. Page 3.8-11 states: "A portion of the project site is located in a special flood hazard area. As shown on Figure 3.8-3, Central San Francisco Bay within the project site is mapped as 'Zone VE' of the 100-year floodplain, which are coastal areas with a 1 percent or greater chance of flooding in any single year and an additional hazard associated with storm waves." Figure 3.8-3 identifies other nearby areas mapped as Zone AE. Please update the narrative on page 3.8-11 to include a discussion of/acknowledge the Zone AE areas surrounding the project site. Please also state what the base flood elevation (BFE) is for Zone VE and Zone AE in the areas identified in Figure 3.8-3. A3-49 A3-50

8. Page 3.8-38 indicates the following regarding flood flow impedance: "While the proposed breakwater and piles will be located within Zone VE of the 100-year floodplain, the project is unlikely to change the water elevation or exacerbate flooding due to the size and capacity of San Francisco Bay and relatively small volume of the new in-water structures." This conclusion does not address the issue related to erosion potential. Please provide an analysis related to how the breakwater structure may change wave action/sediment transport in the project area, resulting in changes to the anticipated scour areas. A3-51

LAND USE AND PLANNING

For the Regulatory Framework in Section 3.8.3, please note that BCDC's governing legislation has the status of State law, and the Bay Plan is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. While both BCDC's laws and policies have a regional focus, in terms of their legal effect, they are not regional or local regulations. A3-52

Would the project: b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

BCDC acknowledges the attempt to conduct Bay Plan consistency analysis for Impact LU-2, but it is important to note that BCDC will independently conduct its own analysis of the project's consistency with our governing laws and policies at such time as an application for the project is brought forth to the Commission for approval. It would be helpful to state in the analysis for Impact LU-2 that as part of the permitting process, special conditions or project changes may be imposed by BCDC as necessary to ensure the consistency of the project with our laws and policies. A3-53

RECREATION

Would the project: a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

A3-54

For the Regulatory Framework in Section 3.11.3, please note that BCDC's governing legislation has the status of State law, and the Bay Plan is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. While both BCDC's laws and policies have a regional focus, in terms of their legal effect, they are not regional or local regulations.

1. Impact REC-1 discusses whether the project could result in the increased use of existing recreational facilities that could result in the deterioration of those facilities. The analysis includes a discussion of potential conflicts with recreational uses during construction and operations. The DEIR analysis concludes that sufficient alternative recreation locations exist to accommodate demand that may be displaced by construction activities and that operations would not hinder access to existing facilities. However, it is difficult to reach this conclusion without a more detailed description of recreational demand and the potential volume of users who may need to seek alternative facilities during construction. Please provide additional details regarding existing demand for recreational facilities and estimating the volume of users of different types of facilities who may need to seek alternatives as a result of the project. A3-55

2. The Regulatory Framework in Section 3.11.3 provides an overview of applicable federal, State, and local regulations. Thank you for including sections on the McAteer-Petris Act, the San Francisco Bay Plan, and the BCDC Regional Shoreline Adaptation Plan. In the section on the San Francisco Bay Plan, please add that portions of the project are located within a Bay Plan-designated "Waterfront Park, Beach" priority use area. A3-56
   Additionally, in the section on the McAteer-Petris Act, please reference Chapter 7 of the McAteer-Petris Act, which relates to the San Francisco Bay Area Water Trail, a non-linear, recreational trail of launching and landing sites for non-motorized small boaters that circumnavigates the San Francisco Bay. BCDC led the adoption of the San Francisco Bay Area Water Trail and continues to support its implementation in partnership with the California State Coastal Conservancy and the San Francisco Estuary Partnership through its regulatory program. A3-57
   Additionally, please identify the South Sailing Basin and the Marina as designated San Francisco Bay Water Trail sites on pages 3.11-6 and 3.11-7. (https://sfbaywatertrail.org/trailhead/berkeley-marina-small-boat-launch/; https://sfbaywatertrail.org/trailhead/berkeley-marina-ramp/). A3-58

TRANSPORTATION

For the Regulatory Framework in Section 3.12.3, please note that the Bay Plan contains relevant policies in the Transportation Public Access policy sections. Please review these sections and incorporate any relevant policy language as appropriate. A3-59

Would the Project: c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?

A3-60

Impact TRA-3 assesses whether the proposed project would substantially increase hazards due to a geometric design feature or incompatible use. However, the analysis itself is light on details and is too high-level and vague, particularly regarding University Avenue and Seawall Drive (page 3.12-22). As part of the pre-application review of this project, BCDC staff has seen a potential for user conflicts with the introduction of the new ferry infrastructure and parking program at the waterfront. The project will include a new parking lot configuration at the Seawall Drive Parking Lot, new expectations for parking for ferry customers, and new circulation patterns and behaviors associated with commuting, which differ from those associated with recreation. This impact cannot adequately be assessed without mapping projected circulation routes for different user groups under different scenarios (peak hour commute times on weekdays and peak recreation times on weekends) to identify where conflicts could potentially occur. Similarly, with more details on the types and locations of potential conflicts, the analysis should also provide more details on the impact reduction measures to be implemented and how they specifically address particular potential safety concerns. Otherwise, it cannot be concluded that these measures (such as crosswalks, wayfinding, etc.) will have the desired effect of reducing the impact.

A3-61

A3-62

ALTERNATIVES ANALYSIS

During the May 12, 2025, BCDC Design Review Board briefing on the project, a number of concerns were raised by members of the public that siting the ferry terminal in the proposed location would have a detrimental effect on water recreation such as swimming and board sailing that could lead to impacts on other water access points regionally as individuals who currently use the Berkeley Marina are displaced. In BCDC's May 21, 2025 comment letter on the Notice of Preparation (NOP), BCDC requested that at least one of the alternatives presented in the EIR's alternatives analysis allows for the evaluation of an alternate location for the ferry terminal on the waterfront, and evaluate whether an alternate location could reduce potential impacts related to recreation, ferry wake, dredging, and impacts on biological resources, etc.

A3-63

A3-64

Section 5.9: *Alternatives Considered but Rejected* indicates that the City considered but ultimately rejected several alternatives previously studied as part of a Draft EIS/EIR from 2008, including alternatives that sited the ferry terminal in alternate locations on the waterfront. Based on that study, the DEIR rejected the three alternative locations within the City of Berkeley. However, the discussion supporting the rejection of the alternative sites was not adequately detailed, and did not consider different versions of the project at those locations that could reasonably achieve the project objectives or avoid environmental impacts. For example for the Berkeley Marina Basin location, the DEIR states that the alternative would not meet project objectives to enhance public access and recreational opportunities or provide efficient and environmentally friendly public ferry service, but does not adequately explain why it would not. It does not answer the question of what would prevent a project located at that

A3-65

A3-66

site from being designed to provide additional public access improvements, nor does it provide enough information about the extent of relative delays for a ferry traveling within the marina and why they would be equated with inefficiency. Similarly, for the HS Lordship location, it is not clear what the constraints related to dredging, operating speeds, and conflicts with BCDC Bay Plan policies are, or why that location would be expected to have greater environmental impacts. For these two rejected alternatives, the EIR should provide additional rationale explaining in more detail why they are infeasible or more environmentally impactful. If a version of the project at one of these locations (or another location not yet studied) could feasibly accomplish most of the project objectives, then the EIR should include it as an alternative and compare it to the proposed project.

A3-66

A3-67

Conclusion

We appreciate your attention to the topics discussed above and for the opportunity to make the above comments on the DEIR. If you have any questions or concerns regarding this matter, please do not hesitate to contact me at (415) 352-3635 or by email at lindsay.martien@bcdc.ca.gov.

A3-68

Sincerely,

Lindsay Martien

Letter A3

Commenter: Lindsay Martien, Principal Shoreline Development Analyst, San Francisco Bay Conservation and Development Commission

Date: April 28, 2026

Response to Comments A3-1 to A3-4

These comments do not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A3-5

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* for a discussion of BCDC jurisdiction with respect to the project site and based on coordination with BCDC staff.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A3-6

As described in Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*, the City acknowledges that BCDC will independently review the project's consistency with its governing laws and policies at the time a permit application for the project is brought forth to the Commission for approval. The Draft EIR separately evaluates the proposed project's consistency with San Francisco Bay Plan policies in Table 3.9-1 (BCDC Bay Plan Consistency) under Impact LU-2 in Section 3.9, *Land Use and Planning* (refer to Draft EIR pages 3.9-12 through 3.9-23), including applicable Bay Plan Map 4 policies. The analysis therein concludes that the project would be consistent with applicable Bay Plan policies with implementation of identified mitigation measures for biological resources and hydrology/water quality (refer to Draft EIR page 3.9-23).

The Draft EIR demonstrates that the proposed project is consistent with applicable Bay Plan Map 4 policies for the Berkeley Waterfront. The analysis, significance conclusions, and mitigation measures presented under Impact LU-2 in the Draft EIR remain valid as written, and no revisions are necessary.

Response to Comment A3-7

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*, for a discussion of BCDC jurisdiction with respect to the project site and based on coordination with BCDC staff as well as a revised map.

The City has prepared a consistency analysis with the San Francisco Bay Plan for areas within BCDC jurisdiction in the Draft EIR. Refer to Draft EIR Section 3.9, *Land Use and Planning* (Impact LU-2, pages 3.9-12 through 3.9-23), that concludes land use plan consistency impacts would be less than significant with implementation of Mitigation Measures BIO-1(a) through BIO-1(f), BIO-2, BIO-3, and HYD-1.

No further changes to the Draft EIR are necessary in response to this comment.

Response to Comment A3-8 and A3-9

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*, for a discussion of BCDC jurisdiction with respect to the project site and based on coordination with BCDC staff. The project-level map showing impacts within BCDC jurisdiction and the precise location of each project component relative to BCDC jurisdiction will be provided as part of the formal permit application package submitted to the Commission. The Draft EIR includes a project description and

jurisdictional overview to support environmental review; the permit application will contain the detailed, scaled map and GIS layers that BCDC requires for its jurisdictional review and permitting decisions.

To further clarify BCDC jurisdiction, the following text has been added to Section 3.9, *Land Use and Planning*, page 3.9-2:

> ## Current Land Use Designations and Zoning
>
> *Project Site*
>
> The project site has a Berkeley General Plan land use designation of Waterfront/Marina.1 The General Plan describes the Waterfront/Marina as areas intended to maintain and preserve areas of Berkeley adjacent to the Bay for open space, recreational uses, waterfront-related commercial and visitor services, boating, and water transit facilities. The project site has a zoning designation of Unclassified (U). Development within Unclassified areas requires a Use Permit in compliance with Berkeley Municipal Code Section 23.208.020, which governs Use Permits in Unclassified zones. The project site is subject to the Berkeley Marina Use Permit (Permit No. 5567), issued in 1965, which authorizes existing uses and permits implementation of the Marina Master Plan. This permit governs current uses at the Berkeley Waterfront and establishes a framework for future improvements. The project will be required to obtain a new Use Permit for any new use proposed, which includes the use of the pier for the operation of a public ferry. A summary of the permitting process pursuant to Berkeley Municipal Code Section 23.208.020 is provided in Section 3.9.3, Regulatory Framework, below.
>
> Portions of the project site are located within the jurisdiction of the San Francisco Bay Conservation and Development Commission (BCDC), pursuant to the McAteer-Petris Act. The City will coordinate with BCDC staff, as appropriate, during permitting to confirm jurisdictional boundaries and applicable regulatory requirements.

The analysis and significance conclusions presented in Section 3.9, *Land Use and Planning*, of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-10

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A3-11

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*, for a discussion of BCDC jurisdiction with respect to the project site, an approved jurisdictional map, and coordination with BCDC staff. No additional Draft EIR changes are necessary in response to this comment.

Response to Comment A3-12

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A3-13

Refer to Response to Comments A3-14 to A3-68 for responses to specific comments related to the environmental analyses and mitigation measures.

Response to Comment A3-14

The first discussion paragraph under Impact AES-3 of the Draft EIR refers to a number of specific policies and regulations implemented by the Berkeley General Plan, Berkeley Marina Master Plan, Berkeley Municipal Code, and the San Francisco Bay Plan pertaining to visual resources and scenic quality.

To respond to this comment, the following clarifying text in underline has been added under Impact AES-3, Seawall Drive, first full paragraph on page 3.1-32:

> As shown in Figure 3.1-7, the existing shoreline is characterized by natural elements; specifically, the mature tree canopy provides a soft, variable tree line which largely dominates the view as it contrasts against the sky. The proposed solar panels over the parking area present a distinct, solid horizontal line against the sky that is generally only visible from KVP 4; all other viewpoints discussed herein lack prominent views of the proposed solar panels due to their location and angle of view. Distant structures and development across the Bay are vaguely visible through the series of vertical lines created by the solar support columns. The solar shade structures introduce new linear elements and repetitive architectural forms, replacing previously organic shapes and softened skyline with geometric forms and engineered materials. The proposed redevelopment of this area introduces more distinct built elements that would contrast with the existing naturalized features. While the proposed project would result in visual changes to this area, the proposed updates to the Seawall Drive parking lot would be compatible with existing uses, would enhance the site's functionality while incorporating clean energy solutions, and would be designed and implemented in adherence to the BCDC Public Access Design Guidelines for Shoreline Spaces[10] and the City's goals, policies, and development review criteria related to the maintenance and enhancement of visual character, while also aligning with the City's renewable energy goals. For these reasons, impacts would be less than significant.
>
> [10.] San Francisco Bay Conservation and Development Commission (BCDC). 2005. Public Access Design Guidelines for the San Francisco Bay: Shoreline Spaces. https://www.bcdc.ca.gov/wp-content/uploads/sites/354/2023/09/Public-Access-Design-Guidelines-Shoreline-Spaces-PDF.pdf (accessed July 2026).

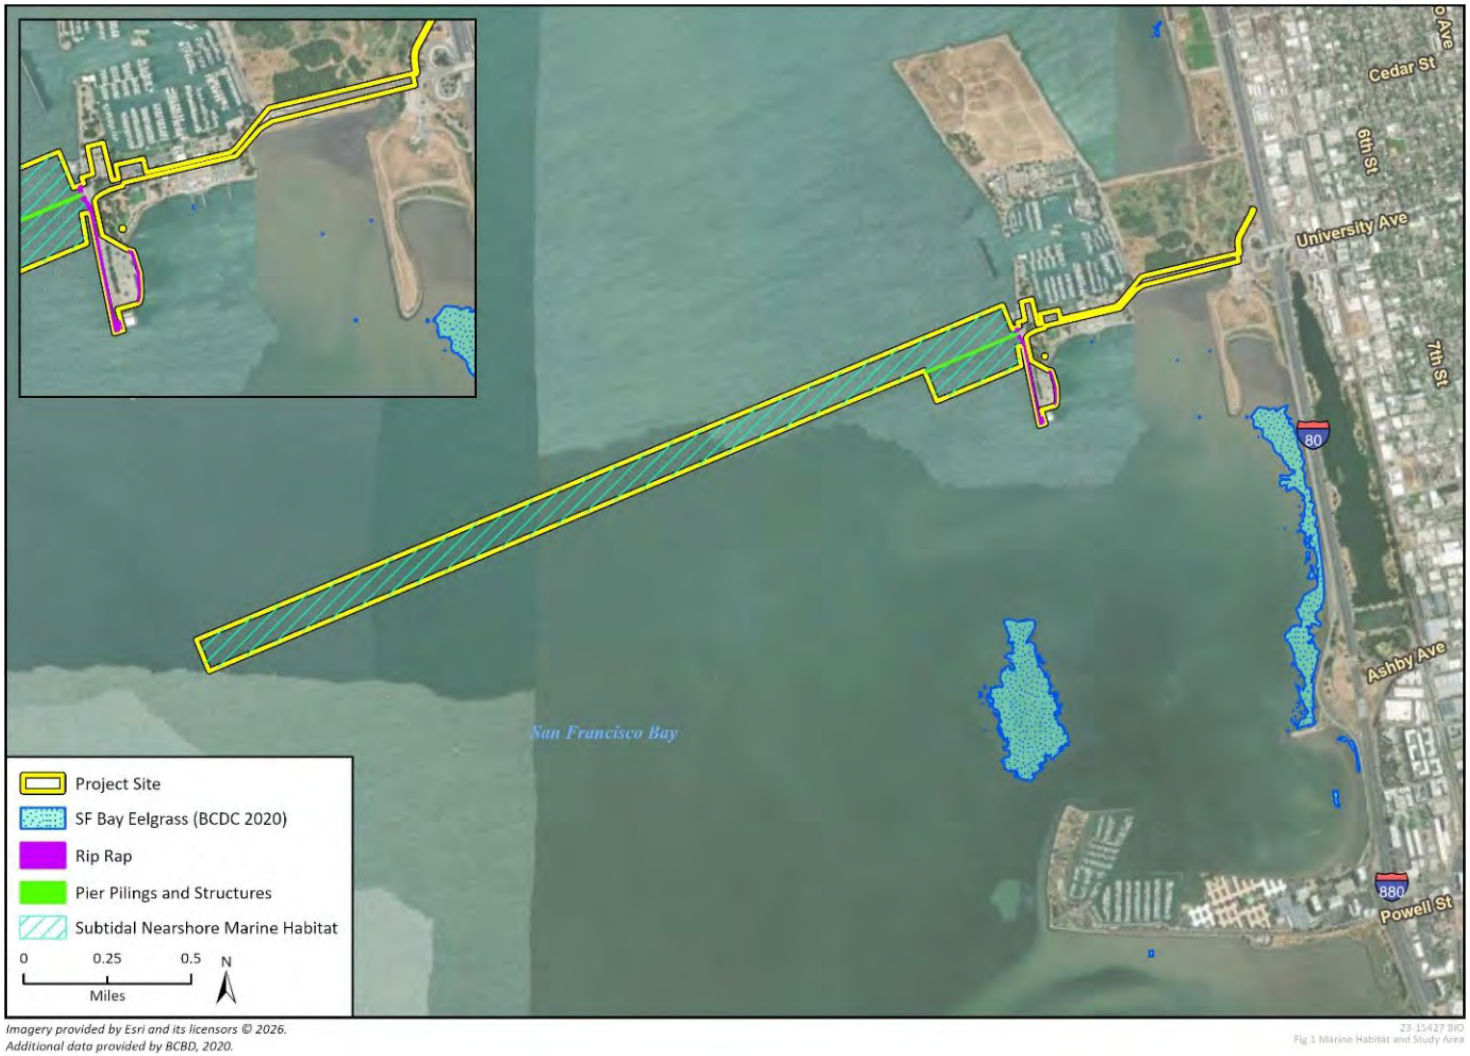
Environmental impacts associated with visual character or quality of public views are addressed in Impact AES-1, pages 3.1-28 through 3.1-38, and compliance with local regulations governing scenic quality are evaluated in Impact LU-2, page 3.9-12, in Table 3.9-1, page 3.9-19 and 3.19-20, of the Draft EIR. In particular, BCDC San Francisco Bay Plan Consistency is identified in Table 3.9-1. Such analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of visual character, scenic quality, and compliance with local regulations governing scenic quality is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written, and no further revisions to the EIR are necessary beyond the clarifying text included above.

Response to Comment A3-15

The comment references Draft EIR Section 3.1.3, which is in Section 3.1, *Aesthetics.* Consistency with San Francisco Bay Plan policies is addressed in Section 3.9, *Land Use and Planning.* Refer to Draft EIR Section 3.9, *Land Use and Planning* Impact LU-2 (pages 3.9-12 through 3.9-23) that includes a consistency analysis with policies in sections pertaining to Fish, Other Aquatic Organisms and Wildlife (page 3.9-13); Subtidal Areas (page 3.9-14); and Mitigation (3.9-21 to 3.9-22).

The analysis and significance conclusion presented in the Draft EIR remains valid. No Draft EIR changes are necessary in response to this comment.

Response to Comments A3-16 to A3-18



Because the comment does not provide specifics about what dredging restrictions it is referencing, a substantive response is unable to be prepared. Refer to Response to Comments A2-35 to A2-38 for discussion of and Draft EIR clarification text changes with regard to California least tern. No additional Draft EIR text revisions are necessary in response to these comments.

Response to Comment A3-19

The Draft EIR describes the subtidal nearshore habitat within the project site, which consist of mud and sedimentary particles in areas of lower water movement (refer to Section 3.3.3 Environmental Setting, page 3.3-10). No other subtidal habitats occur within the project site. However, in response to this comment, Figure 3.3-2 (Marine Habitat Types Within and Proximate to the Project Site) on page 3.3-9 has been revised for clarification to indicate subtidal nearshore marine habitat, which occurs throughout open water areas within the project site, and distinguish rip rap, pier pilings, and other structures that occur within that marine habitat, as described on page 3.3-10; refer to updated figure below.

Section 3.3, Figure 3.3-2, page 3.3-9:

Figure 3.3-2 Marine Habitat Types Within and Proximate to the Project ~~Footprint~~ Site (Revised)[39]

[39] Figure 3.3-2 has been revised to reflect the updated project footprint and to clarify the marine habitat types and structural features within and adjacent to the project site. The revised figure separately depicts subtidal nearshore marine habitat, riprap, and pier pilings and other structures; updates mapped San Francisco Bay Eelgrass based on BCDC 2020 data; removes the previously shown bathymetric contours; and improves the map extent and inset to enhance the visibility of marine habitat features.

Response to Comment A3-20

The Draft EIR discusses the impacts of ferry operational wake in Section 3.8.4, under Impact HYD-1, page 3.8-33, and concludes that impacts would be less than significant with mitigation (refer to Mitigation Measure HYD-1). For additional discussion of sedimentation and wave climate analysis, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A3-21

The Draft EIR describes the subtidal nearshore habitat within the project site, which consist of mud and sedimentary particles in areas of lower water movement (refer to Section 3.3.3 Environmental Setting, page 3.3-10). No other subtidal habitats occur within the project site. Refer to Response to Comment A3-19 for discussion of and Draft EIR clarification figure changes with regard to the marine habitat maps. In addition, refer to Response to Comment A3-20 for discussion of impacts of ferry operations and Response to Comment A2-19 and A2-20 for discussion of impacts of dredging.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment A3-22

Project site oceanographic characteristics related to temperature, sediment dynamics, depth, current velocities, circulation patterns, and tidal range are discussed in the Draft EIR Section 3.8.2, Environmental Setting, pages 3.8-4 to 3.8-7. Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of wave dynamics and energy and further discussion regarding sedimentation. In response to this comment, text additions of project site oceanographic characteristics related to salinity and turbidity have been added to Draft EIR Section 3.3.2 Environmental Setting, page 3.3-8, as follows:

Section 3.3.2, page 3.3-8:

> Water temperature in San Francisco Bay ranges from 53 °F to 60 °F. According to 2022 U.S. Environmental Protection Agency (USEPA) Waterbody Reports, water quality in the San Francisco Bay Estuaries watershed is considered a CWA Section 303d impaired waterbody. Salinity in the vicinity of the project site is estuarine and seasonally variable, influenced by tidal exchange and freshwater inflow from the Delta, and typically ranges between 10 to 20 ppt.[38] Ambient levels of turbidity in the San Francisco Bay are naturally elevated and highly variable due to tides, wind, and vessel traffic; resuspension of fine bay mud is common. Water quality is monitored for physical, chemical, and biological factors. The assessment of the water quality is analyzed against USEPA-approved water standards or thresholds, and water quality can either be categorized as good or impaired. The water quality parameters evaluated along the San Francisco Bay shoreline included dioxins, mercury, polychlorinated biphenyls, pesticides, foreign plants and/or animals, and trash. Bathymetric data indicates maximum depth within the project site at the end of the pier is approximately ten feet at mean lower low water (MLLW), and less than five feet at MLLW within the South Sailing Basin (Figure 3.3 2).
>
> [38] Schraga, T., and Cloern, J.E. 2017. Water quality measurements in San Francisco Bay by the U.S. Geological Survey, 1969–2015: Scientific Data, v. 4, Article 170098: 14 p., https://doi.org/10.1038/sdata.2017.98 (accessed July 2026).

Response to Comment A3-23

The Draft EIR includes an analysis of the operational impacts of new lighting on biological resources in Section 3.3.4 under Impact BIO-1 (page 3.3-42 to 3.3-56) and concludes less-than-significant impacts to biological resources as a result of proposed project lighting with implementation of Mitigation Measures AES-1. No Draft EIR changes are necessary in response to this comment.

Response to Comment A3-24

Refer to Response to Comment A3-25 regarding CEQA requirements compared to permitting process. In addition, refer to the errata in Chapter 3 of the Final EIR for changes to the wording of Mitigation Measure BIO-3. No further response is required.

Response to Comment A3-25

The Draft EIR discusses the impacts of pile installation and removal in Section 3.3.4, Impacts Analysis, on pages 3.3-45 through 3.3-51. Impacts due to pile removal for mitigation would be the same as impacts of pile removal during construction of the pier itself, as discussed on page 3.3-61 and 3.3-62. At this stage of project design, the precise location and quantity of fill-removal mitigation cannot be fully defined because it is subject to subsequent regulatory agency reviews. Consistent with CEQA Guidelines §15126.4(a)(1)(B), when specific design-level details are not yet available, the specific details of a mitigation measure may be developed after project approval so long as the lead agency establishes clear performance standards ensuring that the mitigation will be effective once final design information becomes available. The 1:1 replacement ratio described in the Draft EIR is a minimum baseline commitment to no net loss of jurisdictional waters by the lead agency, City of Berkeley, under CEQA, and is not a fixed or final future permitting-stage outcome. The actual mitigation ratio and specifics of exact piles to be removed will be determined during agency permitting based on the final design and regulatory agency review.

The analysis presented in Draft EIR Section 3.3.4 under Impacts BIO-1 and BIO-3, (pages 3.3-45 through 3.3-51 and 3.3-60 through 3.3-61, respectively) concludes that impacts to special-status aquatic species regarding project cover area would be less-than-significant-with-mitigation (refer to Mitigation Measures BIO-1[a], BIO-1[d], BIO-1[e], BIO-3, and HYD-1), and thus adequate under CEQA. No changes to the Draft EIR are necessary in response to this comment.

Response to Comments A3-26 and A3-27

Refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* which provides clarification that the dredging identified in the Draft EIR is new work dredging, as well as a discussion about future dredging for maintenance of the dredged channel.

The Draft EIR includes information about the construction dredging volumes and plans for dredged material disposal or beneficial reuse. Section 2.6.1, *Construction Activities and Equipment* (subsection *Dredging and Debris Disposal*), on page 2-28 of the Draft EIR describes the extent and volume of dredging required for the proposed project (up to approximately 400,000 cubic yards). As clarified in Section 2.2.15, *Topical Response: Maintenance Dredging,* the City is proposing a one-time dredging event. Regarding plans for dredged material disposal or beneficial reuse, page 2-28 of the Draft EIR provides a summary of the current plan for beneficial reuse. Page 3.7-27 of the Draft EIR in Section 3.7, *Hazards and Hazardous Materials* of the Draft EIR provides additional information about the sediment testing done for the proposed dredging area, as well as where those different dredge units can be disposed.

Response to Comment A3-28

The “expansion of the dredge footprint” in the Draft EIR refers to the expansion relative to the existing U.S. Army Corps of Engineers channel adjacent to the pier. The Draft EIR has conducted an analysis for the new construction-related dredging associated with the proposed project. The Draft EIR evaluates impacts due to construction-related dredging and provides mitigation in Section 3.3.4 under Impact BIO-1 (pages 3.3-45 through 3.3-51). Specifically, Mitigation Measure BIO-1(d) includes a work window of June 1 through November 30 to minimize impacts to special-status fish species during construction dredging. Refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* for discussion of maintenance dredging.

Response to Comment A3-29

The comment's concern regarding evolving seismic design standards is noted. The Draft EIR already identifies that the proposed pier and ferry infrastructure would be designed as a Risk Category IV essential facility and would comply with applicable seismic design standards, including the currently effective ASCE 61-14 and the California Building Code. As noted in the comment, ASCE 61-26 is an unpublished guideline that has not been adopted. CEQA requires that an EIR's analysis be based on the regulatory standards and guidelines in effect at the time of the analysis; an unadopted guideline that is subject to review and revision does not constitute an applicable regulatory requirement and is not an appropriate standard against which to evaluate project design. Should ASCE 61-26 be formally adopted prior to the submittal of permit applications, the project's engineering team will incorporate applicable updated requirements through the standard design and permitting process. No revisions to the Draft EIR are required.

Response to Comment A3-30

As described in the Draft EIR Chapter 2, *Project Description*, the proposed project includes in-kind repair of an approximately 300-foot-long segment of shoreline that is currently experiencing localized erosion along the eastern side of the Seawall Peninsula. The improvement would consist of restoration and stabilization of existing shoreline protection using geotextile/geogrid fabric, bedding material, and rock riprap designed to match surrounding shoreline conditions.

In response to this comment, Draft EIR Section 3.5, *Geology and Soils*, Impact GEO-4 (Operation, page 3.5-31) has been revised to clarify the existing shoreline conditions, the nature of the localized erosion identified in the Project Description, and the effect of the proposed shoreline repair on erosion in adjacent shoreline areas as follows:

> In addition, the shoreline around the ~~project site~~ ferry approach area is made of armored rip rap, rather than exposed native soils or unconsolidated shoreline sediments.~~; therefore, there is no soil that could be eroded.~~ As described in Chapter 2, *Project Description*, a localized section of shoreline along the eastern side of the Seawall Peninsula is currently experiencing deterioration of existing shoreline protection and exposure of underlying fill material. The proposed project would repair and stabilize this already-armored shoreline segment through in-kind replacement and reinforcement of existing shoreline protection features. Because the proposed shoreline repair would restore and maintain an existing hardened shoreline condition, rather than introduce new armoring into a previously natural shoreline, the project would not substantially alter shoreline geomorphology, wave reflection patterns, or erosion processes relative to existing conditions. Although shoreline armoring can influence localized erosion patterns in adjacent unarmored areas, the shoreline areas immediately adjacent to the proposed repair are similarly developed and protected with existing shoreline stabilization features. Therefore, the proposed shoreline repair would not substantially increase erosion rates in nearby shoreline areas beyond existing conditions. Finally, the ferry vessels approaching the project site would reduce speed to 8 knots or less when approaching the Berkeley pier boarding float, which would further minimize wake-related shoreline effects.[68] For these reasons, operational impacts on erosion or loss of topsoil would be less than significant.
>
> [68.] 8 knots is equal to approximately 9.2 miles per hour.

The clarification added in response to this comment provides additional information regarding existing shoreline conditions, the localized erosion area identified in the Project Description, and the function of the proposed shoreline repair. The clarification does not alter the impact analysis or significance determination presented in the Draft EIR and does not result in any new or more severe impacts. The analysis and significance conclusion presented under Impact GEO-4 (Soil Erosion or Topsoil Loss), remain valid as written. Accordingly, impacts related to erosion and shoreline stability would remain less than significant. No further revisions to the Draft EIR are required in response to this comment.

Response to Comment A3-31

In response to this comment and related concerns, Draft EIR Section 3.5, *Geology and Soils*, Impact GEO-3 (Liquefaction and Lateral Spreading, page 3.5-30) has been revised to incorporate clarifying text:

Draft EIR Page 3.5-30:

> Based on a groundwater ~~table elevation of~~ level encountered approximately 5 feet below existing ground surface during geotechnical investigations, soil testing results indicated there were discontinuous layers of liquefiable soil within the artificial fill.
>
> […]
>
> The liquefaction analysis of the artificial fill indicated that approximately half of the area may experience liquefaction or cyclic softening in discontinuous layers. Although future sea level rise and corresponding increases in groundwater elevations could increase liquefaction susceptibility over time, the project site is already characterized by shallow groundwater conditions and is mapped within a liquefaction hazard zone under existing conditions. Accordingly, liquefaction hazards associated with shallow groundwater conditions were considered in the geotechnical evaluation and the development of site-specific recommendations for the proposed project. In addition to the incorporation of site-specific recommendations, final engineering design would be required to comply with applicable California Building Code requirements and current geotechnical engineering standards in effect at the time of construction.
>
> […]
>
> The geotechnical report soil stabilization recommendations would be required for all proposed project landside and waterside components
>
> Although the project site is underlain by artificial fill, Young Bay Mud, and other Bay-margin deposits that may be susceptible to liquefaction, settlement, and lateral spreading during a seismic event, the site is suitable for the proposed project provided that site-specific geotechnical recommendations are incorporated into final design and construction. Consistent with Berkeley General Plan Policy S-14, which requires soil investigation and/or geotechnical reports for the project, implementation of recommendations included within the Geotechnical Report would be required as part of project design and prior to operation. The geotechnical report soil stabilization recommendations would be required for all proposed project landside and waterside components. Specifically, the use of deep soil mix would improve weak and potentially liquefiable soils, retaining wall design recommendations would stabilize landside fill areas, pile-supported structures would transfer loads to more competent subsurface materials, and continued geotechnical engineer oversight during construction would reduce risks associated with construction in areas of variable subsurface conditions. Additionally, final engineering design would be required to comply with the regulations described in Section 3.5.3, *Regulatory Framework*, including the California Building Code, International Building Code, and applicable seismic design standards for piers and wharves in effect at the time of construction. Regulatory compliance and implementation of the measures described above would reduce the potential for excessive settlement, lateral spreading, structural instability, or loss of bearing capacity during a seismic event. Therefore, construction and operational impacts related to substantial adverse effects involving seismic-related ground failure and unstable geologic unit risk specific to liquefaction and lateral spreading to less than significant.

These revisions clarify that the referenced groundwater measurement is expressed as a depth below existing ground surface observed during geotechnical investigations, rather than an elevation referenced to a vertical datum. Other elevation references discussed elsewhere in the Draft EIR identify the applicable datum where relevant. This clarification would not change the impact analysis or conclusions regarding liquefaction, lateral spreading, subsidence, or unstable geologic conditions. Impacts would remain less than significant. No further revisions to the Draft EIR are required in response to this comment.

Response to Comment A3-32

Draft EIR Section 3.5, *Geology and Soils*, identifies that the project site is located within a mapped liquefaction zone and that site-specific geotechnical recommendations would be incorporated into project design to address liquefaction and lateral spreading hazards (refer to Section 3.5.2, Environmental Setting, pages 3.5-7 through 3.5-16, and Section 3.5.4, Impact GEO-3, pages 3.5-28 through 3.5-30). However, in response to this comment and related concerns, Draft EIR Section 3.5, *Geology and Soils*, Impact GEO-3 (page 3.5-30) has been revised as described under Response to Comment A3-31.

The clarification made in response to this comment acknowledges that future sea level rise and corresponding increases in groundwater elevations could increase liquefaction susceptibility over time and further explains that existing conditions such as liquefaction hazards associated with shallow groundwater were considered in the geotechnical evaluation and development of site-specific recommendations for the proposed project. This revision is clarifying in nature and does not alter the impact analysis or significance determination presented in the Draft EIR and does not result in any new or more severe environmental impacts. The analysis and significance conclusion presented under Impact GEO-3 (Unstable Geologic Unit Risk), remain valid as written in the Draft EIR. Accordingly, with implementation of these requirements and geotechnical recommendations, impacts related to liquefaction and unstable soils over the life of the project would remain less than significant. No further revisions to the Draft EIR are required in response to this comment.

Response to Comment A3-33

Draft EIR Section 3.5, *Geology and Soils*, describes the existing conditions of the project site and identifies that portions of the artificial fill and underlying soils may be susceptible to liquefaction, settlement, and lateral spreading during a seismic event, and further explains that implementation of site-specific geotechnical recommendations would be required as part of project design and construction (refer to Section 3.5.2, *Environmental Setting*, pages 3.5-1 through 3.5-17, and Impact GEO-3, pages 3.5-28 through 3.5-30), However, in response to this comment, Draft EIR Section 3.5, *Geology and Soils*, has been revised to incorporate clarifying text as specified in Response to Comment A3-31.

The clarification added in response to this comment provides additional information regarding site suitability, the potential effects of seismic-related ground failure, and the manner in which the geotechnical recommendations identified in the Draft EIR would reduce those risks. The revision is clarifying in nature, and as such, does not alter the impact analysis or significance determination presented in the Draft EIR and does not result in any new or more severe impacts. The analysis and significance conclusion presented under Impact GEO-3 (Unstable Geologic Unit Risk), remain valid as written. Accordingly, with implementation of these requirements and geotechnical recommendations, impacts related to unstable soils and seismic-related ground failure would remain less than significant.

Response to Comment A3-34

The City's Design Team is currently advancing the design for the proposed project. As part of the design process, the City's Design Team will be developing plans for demolition of the existing pier. As part of that planning process, the Design Team will need to determine whether wood piles would be considered Treated Wood Waste (TWW). Standard best practice is to conduct a hazardous materials survey prior to developing the final demolition plans and to include information about TWW in the demolition plans. This survey will be prepared as part of the design process.[23]

In response to this comment, the following clarification text changes have been made to Draft EIR Section 3.7, *Hazards and Hazardous Materials*, Impact HAZ-1, page 3.7-28 as follows:

[23] Rivas, Jessica. 2026. Senior Marine Engineer, COWI. Personal communication via phone regarding TWW with Leo Mena, Rincon Consultants, Inc. June 29, 2026.

> However, compliance with existing regulations would minimize the potential risk associated with piles that have been treated with creosote, which is also known as Treated Wood Waste or TWW. TWW at the project site would be identified prior to construction, as part of the design process, via visual inspection for indications of treated wood, such as but not limited to end tags, wood manufacturer stamp codes, discoloration, and/or odor.[45]
>
> [45.] California Department of Toxic Substances Control (DTSC). 2026. "Treated Wood Waste." Via https://dtsc.ca.gov/toxics-in-products/treated-wood-waste/ (accessed June 2026).

The analysis and significance conclusion presented under Impact HAZ-1 in Section 3.7, *Hazards and Hazardous Materials*, of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-35

In response to this comment, Draft EIR Section 3.8, *Hydrology and Water Quality*, has been revised to ensure consistency with the discussion of treated wood waste in Section 3.7, *Hazards and Hazardous Materials*. Specifically, Impact HYD-1 in Draft EIR Section 3.8.4, *Impacts Analysis*, page 3.8-29 has been revised to incorporate the following clarification:

> Waterside Construction Surface Water Quality
>
> Construction activities within surface waters have the greatest potential to affect water quality in the San Francisco Bay. Impacts to the San Francisco Bay would be primarily due to construction-related dredging, demolition of the existing pier, and construction of a new pier. In-water construction activities, such as dredging, existing pile removal and new pile installation, and pier deck demolition and construction, as well as any associated sediment disturbance, have the potential to directly affect San Francisco Bay water quality. Some of the existing pier piles, if wooden, could contain hazardous materials, such as creosote, that could be released during demolition and removal activities. Consistent with standard practice, existing wooden piles would be evaluated for the presence of wood preservatives and managed in accordance with applicable requirements, including requirements related to Treated Wood Waste, if applicable, as discussed further in Section 3.7, *Hazards and Hazardous Materials*. Dredging of debris, removal of existing pier infrastructure, and pier installation could resuspend bottom sediments, increasing turbidity in the immediate project vicinity. Elevated turbidity can reduce light penetration, affecting photosynthetic organisms and potentially adversely affecting water quality. Sediment resuspension may also release adsorbed contaminants such as metals, hydrocarbons, or legacy pollutants into the water column, where they can be transported by currents and dispersed to adjacent areas.

A related clarification has also been incorporated into Draft EIR page 3.8-30, as follows:

> The work surface on the barge deck will include a containment basin for creosote, piles, concrete, and any mud or sediment removed during pulling. Upon removal from substrate, the piles will be moved expeditiously from the water into the containment basin. Any sediment accumulated from the pile removal operations ~~will be assumed to contain creosote and~~ will be contained, managed, and disposed ~~offsite in an appropriate landfill~~ of in accordance with applicable federal, State, and local requirements, including any requirements associated with treated wood preservatives identified during pre-construction materials characterization (refer to Section 3.7, *Hazards and Hazardous Materials*).

The revisions described above provide consistency in the discussions of pile removal and TWW management in Sections 3.7, *Hazards and Hazardous Materials*, and 3.8, *Hydrology and Water Quality*. The clarification text does not alter the impact analysis, significance determination, or mitigation measures presented in the Draft EIR. The analysis and significance conclusion presented under Impact HYD-1 in

Section 3.8, *Hydrology and Water Quality*, and Impact HAZ-1 in Section 3.7, *Hazards and Hazardous Materials*, remain valid as written. No further response is required.

Response to Comment A3-36

Refer to Response to Comment A3-34, which explains that sampling to confirm whether wooden piles are considered TWW would occur as part of the design process. Because the sampling will occur during the design process, consistent with best industry practice, no mitigation would be necessary. The sampling that will be conducted would be to comply with existing regulations. No further revisions to the EIR are necessary.

Response to Comment A3-37

To clarify the regulatory framework described in the Draft EIR, minor revisions have been made to more accurately characterize the legal authority of BCDC and the Bay Plan.

The following clarification text changes have been made to Draft EIR Section 3.8.3, page 3.8-23, as follows:

> *San Francisco Bay Plan*
>
> The San Francisco Bay Plan is the guiding policy document for the BCDC codified by the McAteer-Petris Act. The plan includes policies to ensure water quality in San Francisco Bay is maintained at levels sufficient for the protection and beneficial use of San Francisco Bay. For additional information about pertinent policies, please refer to Section 3.9, *Land Use and Planning.*
>
> BCDC implements the McAteer-Petris Act, a State law governing development within the San Francisco Bay and its shoreline, and administers the San Francisco Bay Plan, which includes policies that are adopted as State regulations.

The analysis and significance conclusions of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-38

Refer to Section 3.8, *Hydrology and Water Quality* (Section 3.8.3, *Regulatory Framework)*, of the Draft EIR, which describes the applicable regulatory setting for the project, including the role of the San Francisco Bay Conservation and Development Commission (BCDC) and the Bay Plan. Draft EIR Section 3.9, *Land Use and Planning*, includes a comprehensive evaluation of project consistency with applicable Bay Plan policies. Including those related to climate change, shoreline protection, water quality, and other Bay resources relevant to the proposed project (refer to Section 3.9.4, *Impacts Analysis*, Table 3.9-1, pages 3.9-12 through 3.9-23). As described therein, the project would maintain consistency with all policies relevant to hydrology and water quality with implementation of Mitigation Measure HYD-1. The City therefore has considered the Bay Plan policies identified by BCDC in preparing the Draft EIR, and acknowledges that BCDC will conduct an independent review of project consistency with applicable Bay Plan policies during its permitting process.

Accordingly, the analysis, significance conclusions, and mitigation measures presented in Section 3.8, *Hydrology and Water Quality*, Section 3.9, *Land Use and Planning*, and related sections of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-39

First, as a matter of clarification, the nearby waters are not impaired. The Draft EIR considered the potential impacts related to hazardous materials in dredged materials in Impact HAZ-1 in Section 3.7, *Hazards and Hazardous Materials* of the Draft EIR. Pages 3.7-27 and 3.7-28 specifically discusses the

results of sediment sampling and the potential impacts associated with dredging. The conclusions in Impact HAZ-1 in the Draft EIR remains valid as written.

With regard to vessel traffic and turbulence, page 3.8-3 of the Draft EIR acknowledges that the Bay is subject to lots of turbulence with existing vessel traffic.

> The Central Bay is characterized by strong tidal exchange, persistent wind, and complex underwater currents that routinely mobilize fine sediments and contribute to naturally elevated and highly variable turbidity levels. The U.S. Geological Survey has a long-running water-quality monitoring program in San Francisco Bay that tracks turbidity and suspended-sediment concentrations and notes that tidal currents change direction four times daily and wind direction/intensity fluctuate on a daily cycle, contributing to spatial and temporal variability in turbidity throughout the Bay.[4] External factors such as tidal currents, waves, and wind affect water quality alongside freshwater and marine influences. These dynamic hydrodynamic conditions result in frequent resuspension of bottom sediments from wind waves, vessel traffic, and tidal currents, such that background turbidity levels are already influenced by ongoing natural and anthropogenic processes.
>
> [4.] U.S. Geological Survey. 2022. Water quality of San Francisco Bay, California, water years 2020–21 (Fact Sheet 2022–3087). U.S. Department of the Interior. Available: https://doi.org/10.3133/fs20223087 (accessed September 2025).

Refer to Impact HYD-1 in Section 3.8.4, *Impacts Analysis* of the Draft EIR, which addresses potential impacts of increased vessel traffic on Waterside Operation and Surface Water Quality on page 3.8-33 of the Draft EIR. As discussed in the Draft EIR, the "project would minimize propeller-wash–induced turbidity and sediment resuspension through a combination of design, operations, and monitoring measures. The berth and maneuvering basin would be designed with adequate depth and scour protection to dissipate jet energy, and vessels would follow a low-wake approach with posted speed limits and captain training to limit throttle use." The analysis and significance conclusion presented under Impact HYD-1 in Section 3.8, *Hydrology and Water Quality*, of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-40

Refer to Response to Comment A3-39, which provides text from the Draft EIR about how the design of the project would dissipate jet energy for scour protection. The primary effect of propeller wash is localized seabed disturbance and scour in the immediate vicinity of the vessel. Within the navigation channel, localized scour would not adversely affect navigation because it increases, rather than reduces, available water depth. The sediment transport assessment identified sediment deposition and gradual infilling of the dredged channel as the dominant long-term process (refer to Coastal Study, Section 6, *Hydrodynamic and sediment transport*).[24] The propeller wash may locally offset a portion of the sediment accumulation predicted within the channel. The analysis and significance conclusion presented under Impact HYD-1 in Section 3.8, *Hydrology and Water Quality*, of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-41

As described in Section 2.5.1, *Waterside*, on page 2-10 of the Draft EIR, the fish cleaning station would include cold water potable taps, and drain directly into the Bay. Standard covered trash cans and fishing line recycling receptacles would be provided at regular intervals along the pier and breakwater. These amenities are planned for regular maintenance, as discussed in Section 2.7.3 on page 2-32 of the Draft EIR.

[24] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed July 2026).

In response to this comment, the following clarification text changes have been made to Draft EIR Section 3.8.4, *Impacts Analysis,* page 3.8-33, as follows:

> Projects in Berkeley are subject to CalOSHA regulations regarding management of certain hazardous materials. Title 8 of the California Code of Regulations Section 5194, 5531-5608, and 5198 cover the control and management of chemicals, including paints, solvents, fuels, detergents and sludges, and lead. CalOSHA requires testing, monitoring, containment, and disposal of these materials, such that exposure levels do not exceed CalOSHA standards.[53]
>
> The proposed fish cleaning station would be a small amenity with intermittent use, typical of public fishing piers. While the station would include a drain that discharges to the Bay, the volume and frequency of fish cleaning activities would be limited and would not result in substantial degradation of water quality due to consistent flows, dilution and regular tidal flushing. The covered trash receptacles and fishing line recycling stations would promote proper disposal of fish waste and associated materials. These amenities would be regularly serviced to promote usage and maintain sanitary conditions, minimizing the potential for water quality-related impacts to surface waters.
>
> [53.] California Code of Regulations. 2025. Title 8, Industrial relations. Office of Administrative Law. Available: https://www.dir.ca.gov/Counters/t8index.htm (accessed September 2025).

The analysis and significance conclusion presented under Impact HYD-1 in Section 3.8.4, *Impacts Analysis* of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-42

Turbidity limits are listed on page 3.8-19 of the Draft EIR in Table 3.8.1: *Water Quality Objectives for Surface Waters.* Additionally, refer to page 3.8-17 which lists turbidity requirements under *Construction Stormwater General Permit* and references Attachment J for specific requirements, including monitoring for turbidity during discharges. BMPs would include, but not be limited to, erosion controls, sediment containment measures, stabilization of disturbed soils, trash management, and spill prevention protocols. Demolition of the closed pier will utilize barges designed to prevent sediment and other material from falling back into the water. All material will be offloaded and stored in an upland staging area. To minimize potential turbidity from pile removal, piles will be removed from the water and into a containment basin on the barge. The pile will not be shaken, hosed-off, left hanging to drip or any other action intended to clean or remove adhering material from the pile. Refer to Impact HYD-1 in Section 3.8.4, *Impacts Analysis*, which specifies measures to minimize turbidity on page 3.8-37, and which commits to monitoring and treatment measures in compliance with the Construction Stormwater General Permit throughout. No further revisions to the EIR are necessary.

Response to Comment A3-43

Refer to Response to Comment A1-17 for a discussion of water quality as it relates to permeable pavement.

Response to Comment A3-44

Refer to Section 2.2.23, *Topical Response: Sea Level Rise,* for a discussion of the sea level rise projections used in the project design.

The City acknowledges the comment's concern regarding the clarity of the statement within Draft EIR Section 2.5.1, *Proposed Project Components* (*Waterside*), indicating that "The project design takes into account projected sea level rise" (refer to Draft EIR page 2-10). In response to this comment and to clarify how SLR was considered in the project design process within the Draft EIR, Section 2.5.1, *Proposed Project Components* (*Waterside*, page 2-10) has been revised as described in Section 2.2.23, *Topical Response: Sea Level Rise*. This revision is clarifying in nature and does not alter the impact analysis, significance determinations, or mitigation measures presented in the Draft EIR.

Regarding BCDC Bay Plan Climate Change Policy No. 2, the City provided a consistency analysis with this policy in Table 3.9-1, Section 3.9, *Land Use and Planning* of the Draft EIR (page 3.9-15). The City also acknowledges that the project will be required to obtain BCDC approvals. Accordingly, the City prepared a Coastal Study including a project-specific sea level rise risk assessment, consistent with applicable BCDC permit requirements. These permitting analyses are intended to support subsequent regulatory review and final project design and are separate from the environmental impact analysis required under CEQA. The Draft EIR contains sufficient information to evaluate the project's potential impacts related to flooding, drainage, erosion, and water quality and to support the conclusions presented under Impact HYD-4. Therefore, the future preparation of additional engineering studies for permitting purposes does not alter the adequacy of the CEQA analysis contained in the Draft EIR.

The Draft EIR evaluated future flooding and sea level rise conditions and disclosed the basis for concluding that impacts related to flooding, drainage, erosion, and water quality would be less than significant. The clarifying text revision described in the Topical Response provides additional information regarding sea level rise adaptation considerations incorporated into the project design but does not change the environmental analysis or significance determinations presented in the Draft EIR. Therefore, the analysis and significance conclusion presented under Impact HYD-4 in Section 3.8, *Hydrology and Water Quality*, of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-45

As discussed in Draft EIR Section 3.8, *Hydrology and Water Quality*, and in Section 2.2.23, *Topical Response: Sea Level Rise*, water levels, tidal elevations, design flood elevations, and sea level rise projections were evaluated using engineering analyses prepared for the project. The use of different vertical datums reflects the fact that certain coastal engineering analyses and regulatory guidance are commonly expressed relative to tidal datums such as MLLW, while other engineering and planning analyses are commonly expressed relative to NAVD88.

In response to this comment, Draft EIR Section 3.8, *Hydrology and Water Quality* has been revised to clarify the relationship between the two vertical datums and to provide a summary conversion table for key tidal elevations. Specifically, the following clarifying text has been added to Section 3.8.2, *Environmental Setting*, at the beginning of the Tides and Currents subsection (Draft EIR pages 3.8-7 and 3.8-8).

Tides and Currents

While the discussion presented herein primarily references the City of Berkeley Mean Lower-Low Water (MLLW) vertical datum, other discussions such as those within Section 3.3, *Biological Resources*, may reference both the North American Vertical Datum of 1988 (NAVD88) and the Berkeley MLLW vertical datum when presenting tidal elevations, flood elevations, and sea level rise projections. For reference, NAVD88 is approximately 0.6 feet below Berkeley MLLW at the project site. Unless otherwise noted, future references to elevations relevant to the project may be presented in both datums to facilitate comparison. Table 3.8-1, below, summarizes representative tidal datums and conversion values applicable to the project site.

Table 3.8-1 Representative Vertical Datum Conversion Values

Datum (NOAA)	NAVD88 (feet)	Berkeley MLLW (feet)
Highest Astronomical Tide (HAT)	+7.8	+8.4
Mean Higher-High Water (MHHW)	+6.2	+6.8
Mean High Water (MHW)	+5.6	+6.2
Mean Sea Level (MSL)	+3.4	+4.0
North American Vertical Datum of 1988 (NAVD88)	0.0	+0.6
Berkeley Mean Lower-Low Water (MLLW)	-0.6	0.0

Datum (NOAA)	NAVD88 (feet)	Berkeley MLLW (feet)
Lowest Astronomical Tide (LAT)	-2.1	-1.6

Source: COWI. 2025. Berkeley Water Transportation Pier Ferry Project: Basis of Design 60% Submittal. December 12.

The Berkeley Waterfront experiences mixed semidiurnal tides, with water levels ranging from approximately +6.8 feet ~~mean lower-low water (~~MLLW~~)~~ during average higher-high tide conditions to about +~~10.3~~ 8.4 feet MLLW ~~under 100-year extreme tide events~~ during Highest Astronomical Tide (HAT) conditions. Extreme Water Level conditions may reach approximately +10.3 feet MLLW during severe storm and coastal flooding events. The design still water level, which accounts for astronomical tides, storm surge, and projected sea level rise through 2075, is estimated at +11.9 feet MLLW.

With the addition of the new Table 3.8-1 described above, the existing Draft EIR Table 3.8-1, *Water Quality Objectives for Surface Waters*, on Draft EIR Page 3.8-19 and Table 3.8-2, *Water Quality Objectives for Groundwater*, on Draft EIR Page 3.8-21 have been renumbered as Table 3.8-2 and Table 3.8-3, respectively, and cross references to these tables on Draft EIR Pages 3.8-18, 3.8-27, 3.8-29, and 3.8-31 have been revised accordingly. The City notes that revision is clarifying in nature and accordingly does not affect the underlying hydrologic or biological analyses, engineering assumptions, impact conclusions, or mitigation measures presented in the Draft EIR. For additional discussion regarding sea level rise projections, design elevations, future flood conditions, and project resilience considerations, please refer to Section 2.2.23, *Topical Response: Sea Level Rise*.

The analysis and significance conclusions presented in Section 3.8, *Hydrology and Water Quality*, and related sections of the Draft EIR remain valid as written. No further revisions are necessary.

Response to Comment A3-46

As discussed in Response to Comment A3-45 and in Section 2.2.23, *Topical Response: Sea Level Rise,* engineering analyses supporting the project distinguish between tidal datums and extreme water level conditions when evaluating flooding hazards, sea level rise, and design elevations.

Refer to Response to Comment A3-45, which includes a revision to Draft EIR Section 3.8, *Hydrology and Water Quality* (page 3.8-7), to clarify that HAT at the project site is approximately +8.4 feet MLLW and that +10.3 MLLW corresponds to an Extreme Water Level condition rather than HAT.

To the extent the comment requests the inclusion of a table comparing the vertical datums, please refer to Response to Comment A3-45. As discussed therein, Draft EIR pages 3.8-7 and 3.8-8 have been revised to clarify the relationship between NAVD88 and Berkeley MLLW and to include Table 3.8-1: Representative Vertical Datum Conversion Values, which presents tidal elevations and datum conversion values applicable to the project site, to improve consistency and facilitate comparison of tidal elevations, flood elevations, and sea level rise projections throughout the Draft EIR. For additional discussion regarding tidal elevations and sea level rise projections considered in the Draft EIR, please refer to Section 2.2.23, *Topical Response: Sea Level Rise*.

The revision in Response to Comment A3-45 is clarifying in nature and does not alter the hydrology, flooding, or sea level rise analyses presented in the Draft EIR. Therefore, the analysis and significance conclusions presented under Impacts HYD-3 and HYD-4 in Section 3.8, *Hydrology and Water Quality*, remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-47

Draft EIR Section 3.8, *Hydrology and Water Quality*, evaluates flood hazards, tsunami hazards, sea level rise, and risks associated with inundation, and includes that impacts would be less than significant (refer to Figure 3.8-2, Impact HYD-3, and Impact HYD-4). As discussed therein and in Section 2.2.23, *Topical Response: Sea Level Rise,* the project was designed using site-specific coastal engineering analyses that

evaluated future water levels, storm conditions, and sea level rise projections over the 50-year design life of the project.

With respect to the relationship between the project's design and extreme flood events, the 500-year floodplain represents water levels associated with a 0.2 percent annual chance flood event, which corresponds to a 1-in-500 chance of occurring in any given year. While portions of the proposed waterside facilities would be exposed to elevated water levels during such an extreme event, the project has been designed so that the pier, breakwater, piles, gangways, and associated structural components would withstand the water levels and wave forces associated with these conditions. However, the City notes that the operational availability of the ferry terminal during an extreme storm event differs from the structural integrity of the facility. During a 500-year storm event, ferry operations would likely be suspended due to the severe weather conditions, including high winds and elevated wave activity, which would affect navigational safety. Similarly, public access to the pier may be temporarily restricted during such an event. However, these operational interruptions would be temporary and would not indicate structural failure or loss of the facilities, as the pier, breakwater, piles, and other structural components would have sufficient reserve capacity to withstand the wave forces and water levels associated with a 500-year storm event.

It should also be noted that the peak water levels associated with a 500-year storm are expected to persist for a relatively short duration, typically less than four hours. Following passage of the storm and the return of safe operating conditions, the ferry terminal would be capable of resuming operations. Therefore, even in the unlikely circumstance that emergency response activities requiring waterborne access to Berkeley coincided with an extreme storm event, any interruption in service would be temporary and would not represent a substantial long-term loss of emergency transportation capabilities. To provide additional clarification within the Draft EIR, the following text has been added to Section 3.8.4, Impacts Analysis (Impact HYD-4, page 3.8-40):

> The Universal Charging Float battery systems would be housed in smoke-tight, watertight compartments with real-time monitoring, automated shutoff systems, and multiple redundant fire suppression systems, substantially reducing the potential for pollutant release in the event of inundation. Additionally, as depicted in Figure 3.8-3, portions of the project site are located within FEMA-designated 500-year floodplains. However, the proposed ferry terminal includes infrastructure intended to remain structurally resilient during extreme coastal flood events. As described in Section 3.12, *Transportation*, WETA and its contracted operator proactively monitor weather forecasts and U.S. Coast Guard advisories. In the event of an approaching storm, senior staff coordinate with vessel crews to evaluate the safety of continuing ferry service on affected routes. Although ferry operations may be temporarily suspended during severe storm conditions such as a 500-year flood event due to navigational safety concerns, the pier, breakwater, piles, and associated structural elements have been designed to accommodate water levels and wave forces associated with extreme flood events, as the project's coastal engineering analyses considered future sea level rise and coastal flooding conditions over the life of the project. Therefore, any operational interruption associated with extreme storm or flooding events would be temporary and would not be expected to result in a substantial long-term loss of emergency transportation or evacuation capabilities, nor would any operational interruption indicate structural failure of the proposed facilities.

For additional discussion regarding future sea level rise conditions, flood elevations, project resiliency, and adaptation considerations, refer to Section 2.2.23, *Topical Response: Sea Level Rise*.

The above revision is clarifying in nature and does not alter the impact analysis, significance determinations, or mitigation measures presented in the Draft EIR. Therefore, the analysis and significance conclusions presented under Impact HYD-4 in Section 3.8, *Hydrology and Water Quality*, remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-48

Refer to Response to Comment A3-47 regarding operation of the ferry terminal with sea level rise.

Response to Comment A3-49

Refer to Section 3.8.2, *Environmental Setting*, under the *Flood Hazard Areas* discussion and Figure 3.8-3, *Floodplains Overlapping with and Adjacent to the Project Site*, of the Draft EIR. As noted by the comment, Figure 3.8-3 depicts both FEMA Zone VE and Zone AE flood hazard areas in the vicinity of the project site. The existing narrative primarily focuses on the Zone VE portion of the project site because the proposed pier, ferry terminal, breakwater, and other waterside facilities are located within San Francisco Bay and are therefore associated with coastal flood hazards and wave action represented by Zone VE. However, portions of the surrounding shoreline and adjacent lands surrounding the project site are mapped within FEMA Zone AE, which represents areas subject to inundation by the 1-percent-annual-chance flood event where Base Flood Elevations (BFEs) have been established.

The City agrees that acknowledgement of the nearby Zone AE areas would improve consistency between the text and Figure 3.8-3. Accordingly, the following clarification text has been added to Section 3.8.2, *Environmental Setting* (page 3.8-11):

> A portion of the project site is located in a special flood hazard area. As shown on Figure 3.8-3, Central San Francisco Bay within the project site is mapped as "Zone VE" of the 100-year floodplain, which are coastal areas with a 1 percent or greater chance of flooding in any single year and an additional hazard associated with storm waves. Zone VE areas have a 26 percent chance of flooding over a 30-year period.[29] As also shown on Figure 3.8-3, portions of the shoreline and surrounding areas adjacent to the project site are mapped as FEMA Zone AE, which identifies areas subject to inundation from the 1-percent-annual-chance flood event where Base Flood Elevations (BFEs) have been established. While the proposed waterside project components are primarily associated with the Zone VE flood hazard area, nearby shoreline areas include both Zone AE and Zone X flood hazard designations. FEMA Flood Insurance Rate Maps identify BFEs for the mapped Zone VE and Zone AE areas adjacent to the project site. The BFE for Zone VE ranges from approximately 12 to 13 feet and the BFE for adjacent Zone AE areas is approximately 10 feet. These BFEs represent the estimated water surface elevation associated with the 1-percent-annual-chance flood event and are used for floodplain management and project design purposes. Further offshore, the San Francisco Bay is designated as open water, which is not considered a special flood hazard area.[30]
>
> [29.] FEMA. 2026. Flood Map Service Center. Available: https://msc.fema.gov/portal/search?AddressQuery=Berkeley%20marina (accessed February 2026).
>
> [30.] FEMA. 2026. Flood Map Service Center. Available: https://msc.fema.gov/portal/search?AddressQuery=Berkeley%20marina (accessed February 2026).

This revision is clarifying in nature and does not alter the flood hazard analysis, impact conclusions, or mitigation measures presented in the Draft EIR. Therefore, the analysis and significance conclusions presented under Impacts HYD-3 and HYD-4 in Section 3.8, *Hydrology and Water Quality*, remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-50

In response to this comment, refer to Response to Comment A3-49, which revises Section 3.8.2, *Environmental Setting* (page 3.8-11) to clarify the FEMA flood zones and BFEs applicable to the project site.

Because BFEs are established through FEMA floodplain mapping and do not alter the flood hazard characterization evaluated in the Draft EIR, the addition of this information is clarifying in nature. To the extent the comment requests additional discussion regarding future flooding conditions, sea level rise, or coastal flood resilience, please also refer to Section 2.2.23, *Topical Response: Sea Level Rise*.

Response to Comment A3-51

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about wave action and sediment transport patterns. Wave disturbance coefficients were calculated at key locations including the ferry berths, pier, and plaza. This analysis was specifically designed to quantify how the breakwater reduces wave agitation at the ferry berths and shoreline. The modeling results confirm that a minimum 300-foot breakwater configuration provides sufficient sheltering for both ferry berths, minimizes wave exposure, and achieves nearly the same reduction in wave-induced downtime as the longer 400-foot breakwater. Without a breakwater, the terminal would experience notable wave-induced operational downtime, particularly during late spring and summer months when southwesterly winds generate higher wave activity. With the 300-foot breakwater, monthly average downtime remains below 2 percent for all months throughout the year, including the most energetic wave periods.

Response to Comment A3-52

In response to this comment, the following text has been added to Draft EIR Section 3.9.3, Regulatory Framework, within Section 3.9, *Land Use and Planning* (page 3.9-4):

> *BCDC San Francisco Bay Plan*
>
> In compliance with the McAteer-Petris Act, BCDC prepared the first San Francisco Bay Plan in 1968 which was transmitted to the California Legislature and the Governor in 1969. BCDC amends the Bay Plan over time to address regional needs. The San Francisco Bay Plan includes policies to guide future uses of the Bay and the shoreline. The Plan aims to protect the Bay from unnecessary filling, promote public access, and ensure sustainable development. It designates priority use areas for water-oriented activities, such as ports and recreational facilities, and establishes environmental safeguards to preserve the Bay's natural resources. The Plan also includes specific policies for shoreline protection, habitat restoration, and climate resilience, ensuring that land use and planning decisions support ecological health and community needs. Pertinent policies are identified and addressed in detail under Impact LU-2 within this EIR section.
>
> Although BCDC laws and policies have a regional focus and are therefore included within the Regional and Local Regulations subsection of Section 3.9.3, *Regulatory Framework*, BCDC's governing legislation, the McAteer-Petris Act, has the status of State law and is effectively comprised of State regulations subject to approval by the California Office of Administrative Law.

The above revision is clarifying in nature and does not alter the analysis or significance conclusions presented in Section 3.9, *Land Use and Planning*, of the Draft EIR. The analysis, significance conclusions, and mitigation measures presented therein remain valid as written, and no further revisions are necessary.

Response to Comment A3-53

As described in Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* the City acknowledges that BCDC will independently review the project's consistency with its governing laws and policies at the time a permit application for the project is brought forth to the Commission for approval. The Draft EIR addresses this nuance on page 3.9-12 under Impact LU-2 in Section 3.9, *Land Use and Planning*. To provide additional clarity, page 3.9-12 of the Draft EIR has been revised as follows:

> Given the project location within 100 feet of the San Francisco Bay shoreline, the BCDC San Francisco Bay Plan would be applicable in terms of land use planning. BCDC will determine whether the proposed project is consistent with the McAteer-Petris Act and Bay Plan policies. Such determinations are made by BCDC on a case-by-case basis when considering permit applications. As part of this process, BCDC will conduct an independent review of the project's consistency with its governing laws and policies and may impose conditions or require project modifications to ensure

compliance. To the extent that consistency with these laws and policies is subject to CEQA review, ~~T~~the City's evaluation of project consistency with applicable BCDC San Francisco Bay Plan policies is discussed in Table 3.9-1.

The above revision is clarifying in nature and does not alter the analysis or significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, of the Draft EIR. The analysis, significance conclusion, and mitigation measures presented therein remain valid as written, and no further revisions are necessary.

Response to Comment A3-54

In response to this comment, the following text has been added to Draft EIR Section 3.11.3*, Regulatory Framework*, within Section 3.11, *Recreation* (page 3.11-8):

BCDC San Francisco Bay Plan

The San Francisco Bay Plan, developed by BCDC, serves as a comprehensive framework for managing the Bay and its shoreline. The Plan emphasizes the importance of preserving and enhancing public access to the Bay, including the development of parks, marinas, beaches, and fishing piers. It aims to balance environmental preservation with recreational opportunities, ensuring that the Bay remains a valuable natural asset for both current and future generations. The Plan establishes policies and identifies priority use areas to guide development within BCDC's jurisdiction, including the "Waterfront Park, Beach" designation, which applies to portions of the project site. By guiding development and conservation efforts, the Plan supports the creation of recreational spaces that contribute to the overall quality of life in the Bay Area. Although BCDC laws and policies have a regional focus and are therefore included within the Regional and Local Regulations subsection of Section 3.11.3, *Regulatory Framework*, BCDC's governing legislation, the McAteer-Petris Act, has the status of State law and is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. The BCDC San Francisco Bay Plan includes the following policies related to recreation and public access: …

The above revision is clarifying in nature and does not alter the analysis or significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR. The analysis, significance conclusions, and mitigation measures presented therein remain valid as written, and no further revisions are necessary.

Response to Comment A3-55

For discussion concerning existing recreational demand and construction period impacts on recreation access, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

While public access is an important consideration for project planning and community use, temporary access disruptions during construction are not an environmental impact under CEQA, unless they result in a physical deterioration of a recreational resource. As discussed in Draft EIR Section 3.12, *Transportation* (page 3.12-17), the City of Berkeley regulates encroachment on roadways through a permitting process that considers potential effects on roadways and includes requirements for traffic control plans. Any potential effects on the roadway system during construction would be minimized through implementation of the construction-related traffic control plan. As described in Draft EIR Chapter 2, *Project Description,* Section 2.6.2 (pages 2-28 to 2-29), project construction is expected to occur in phases. A traffic control plan would be implemented in any given phase to maintain recreational access to the maximum extent feasible. In addition, the City of Berkeley maintains standards relating to pedestrian access during construction projects, which would require safe and accessible paths of travel for pedestrians throughout the construction period. Prior to the beginning of construction, the contractor will be required to implement the traffic control plan. Adopted standards require that recreational and vehicular access be maintained during construction to the maximum extent feasible. Accordingly, construction traffic control

plans would maintain, to the maximum extent feasible: (1) vehicular and recreational access to the South Cove area; (2) vehicular access along University Avenue to Seawall Drive; and (3) access to the Bay Trail and adjacent recreational areas. Pedestrian access along Seawall Drive and the shoreline would be maintained except when actual construction of the Bay Trail was occurring, and pedestrian detours would be provided during those periods. These access provisions are a required component of construction permitting and are not discretionary measures. While final construction staging and circulation routes will be determined by the contractor in coordination with the City, the City's permitting process and standards for maintaining vehicular and pedestrian access to the maximum extent feasible during construction would ensure that no permanent or substantial adverse physical effect on recreations resources would occur. Accordingly, temporary access disruptions during construction would not constitute a significant impact under CEQA.

In response to this comment, Section 3.11, *Recreation* of the Draft EIR has been revised to include the following clarifications on pages 3.11-16 and 3.11-17. Draft EIR page 3.11-16 has been revised as follows:

> Direct impacts on parks due to construction would be limited to the installation of a wayfinding signage in Shorebird Park. These potential impacts would be minor, as the construction would be completed using hand tools, would last one day, and would not require the closure of Shorebird Park. For these reasons, direct impacts on parks would be limited; however, there is the potential for construction to result in indirect impacts on recreational resources located near the project site, such as air quality and noise impacts due to use of construction equipment.
>
> Construction activities associated with the proposed project would be phased and managed to maintain recreational access to the Berkeley Waterfront to the maximum extent feasible. During construction, temporary access constraints may occur in localized areas used for staging or active work. However, the City would implement access management practices, including maintaining access where feasible, providing temporary detours around active work areas, and installing temporary signage and wayfinding to direct recreational users to available areas of the waterfront, consistent with the City's construction permitting requirements and traffic control standards.

In addition, Draft EIR page 3.11-17 has been revised to include a similar clarification:

> While construction of the proposed project may temporarily influence recreational users to seek alternative park facilities, the Berkeley Waterfront area spans approximately 100 acres with multiple access points at other locations that would not be affected by construction staging. In addition, although access routes may be temporarily modified, construction staging and sequencing would be organized, to the maximum extent feasible, to minimize disruption to public access while maintaining safe construction operations. Therefore, project construction would not preclude recreation at the Waterfront to such an extent that recreational facilities would physically deteriorate or new recreational facilities would be needed.

The revisions above are clarifying in nature and do not alter the analysis presented under Impact REC-1, nor would they result in an increased level of impact significance. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No further revisions to the Draft EIR are required.

Response to Comment A3-56

Refer to Response to Comment A3-54, which includes revisions to the EIR to indicate that potions of the project site are within a "Waterfront Park, Beach" priority use area. The revision in Response to Comment A3-54 is clarifying in nature and does not alter the analysis or significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR. The analysis, significance conclusions, and mitigation measures presented therein remain valid as written, and no further revisions are necessary.

Response to Comment A3-57

In response to this comment, subsection 3.11.3, *Regulatory Framework*, *State Regulations*, in Section 3.11, *Recreation*, page 3.11-8, second paragraph, of the Draft EIR has been revised as shown in strikeout/underline:

McAteer-Petris Act

The McAteer-Petris Act, enacted in 1965, established the San Francisco Bay Conservation and Development Commission (BCDC) to address public concerns about the future of San Francisco Bay. The Act empowers BCDC to regulate development and fill within the Bay, requiring that changes promote public access and recreational opportunities. This provision mandates comprehensive planning through the San Francisco Bay Plan, which includes requirements for parks and recreational areas to enhance public enjoyment of the Bay. Additionally, the Act empowers BCDC to issue and deny permits for projects within its jurisdiction, balancing development projects with environmental preservation and public access. In addition, Chapter 7 of the McAteer-Petris Act describes the San Francisco Bay Area Water Trail, a non- linear, recreational trail of launching and landing sites for non-motorized small boaters that circumnavigates the San Francisco Bay. The South Sailing Basin and Marina are designated San Francisco Bay Water Trail sites.

The analysis and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No further revisions to the EIR are required.

Response to Comment A3-58

In response to this comment, Subsection 3.11.2, Environmental Setting, Berkeley and State Park Facilities Adjacent to the Project Site, South Sailing Basin, page 3.11-6 of the Draft EIR has been revised as shown in strikeout/underline:

South Sailing Basin

The South Sailing Basin, located immediately south and southeast of project site is identified as a Water/Recreational use in the Marina Master Plan (refer to Figure 3.11-2).[16] The South Sailing Basin is a designated San Francisco Bay Water Trail site.[17] Three public docks, located south of University Avenue and south of the sailing club facilities, and south of the project site provide public access to the water for small boats (sail, windsurf, wing, kayak, canoe, paddleboard, etc.) and swimming. The Cal Sailing Club and the Cal Adventures Center utilize the public access docks for sailing and other water recreation activities in the South Sailing Basin.

16. Berkeley, City of. 2003. Berkeley Marina Master Plan. https://berkeleyca.gov/sites/default/files/2022-02/Berkeley-Marina-Master-Plan 1.pdf (accessed September 2024).

17. San Francisco Bay Conservation and Development Commission (BCDC). 2026. Berkeley Marina Small Boat Launch. https://sfbaywatertrail.org/trailhead/berkeley-marina-small-boat-launch (accessed September 2026).

Subsection 3.11.2, Environmental Setting, Berkeley and State Park Facilities Adjacent to the Project Site, Berkeley Marina Basin, page 3.11-5 of the Draft EIR has been revised as shown in strikeout/underline:

Berkeley Marina Basin

The Berkeley Waterfront is an approximately 125-acre area west of I-80 in the City of Berkeley. The Berkeley Marina Basin refers to a subset of the Berkeley Waterfront north of the project site that includes the main boat harbor with approximately 1,000 recreational boat slips (Figure 3.11-2). In 1937, Berkeley built the original yacht harbor (i.e., the Marina Basin) in the Waterfront area. In the

1960s, the City participated in regional planning efforts to develop an East Bay Shoreline for recreation and public access. During this period, the City decided to re-develop the existing yacht harbor of 1937 into the modern Berkeley Marina Basin that exists today.[11] The predominant activity at the Berkeley Marina Basin Main Harbor involves the operation of boat slips for up to 1,000 recreational sailboats, as well as other activities such as dinner cruises, commercial charter boats for sightseeing and fishing, sailing lessons and dragon boat canoe racing. The Marina is a designated San Francisco Bay Water Trail site.[12]

[11.] Berkeley, City of. 2024. Draft Waterfront Specific Plan for the City of Berkeley Public Tidelands Area. Available: https://berkeleyca.gov/sites/default/files/documents/BWSP_Draft_2024-11-08.pdf (accessed September 2024).

[12.] San Francisco Bay Conservation and Development Commission (BCDC). 2026. Berkeley Marina Boat Ramp. https://sfbaywatertrail.org/trailhead/berkeley-marina-ramp/ (accessed September 2026).

The analysis and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No further revisions to the EIR are required.

Response to Comment A3-59

The Draft EIR identifies relevant Bay Plan transportation and public access policies and evaluates project consistency with those policies within Table 3.9-1 under Impact LU-2 in Draft EIR Section 3.9, *Land Use and Planning* (refer to Draft EIR pages 3.9-17 through 3.9-19). The analysis therein concludes that the project would maintain consistency with the Bay Plan with incorporation of mitigation (refer to Draft EIR page 3.9-23).

In response to this comment, Section 3.12, *Transportation* (subsection 3.12.3, *Regulatory Framework*, page 3.12-11), of the Draft EIR has been revised to include reference to Bay Plan policies as follows:

BCDC San Francisco Bay Plan

The San Francisco Bay Plan, developed by BCDC, serves as a comprehensive framework for managing the Bay and its shoreline. The Plan emphasizes the importance of preserving and enhancing public access to the Bay, including the development of parks, marinas, beaches, and fishing piers. It aims to balance environmental preservation with recreational opportunities, ensuring that the Bay remains a valuable natural asset for both current and future generations. The Plan establishes policies and identifies priority use areas to guide development within BCDC's jurisdiction, including the "Waterfront Park, Beach" designation, which applies to portions of the project site. By guiding development and conservation efforts, the Plan supports the creation of recreational spaces that contribute to the overall quality of life in the Bay Area. Although BCDC laws and policies have a regional focus and are therefore included within the Regional and Local Regulations subsection of Section 3.12.3, *Regulatory Framework*, BCDC's governing legislation, the McAteer-Petris Act, has the status of State law and is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. Refer to Table 3.9-1 within Section 3.9, *Land Use and Planning*, of this EIR, which identifies the relevant BCDC San Francisco Bay Plan policies applicable to transportation and public access considerations at the project site.

The above revision is clarifying in nature and does not alter the analysis or significance conclusions presented in Section 3.12, *Transportation*, of the Draft EIR. The analysis, significance conclusions, and mitigation measures presented therein remain valid as written, and no further revisions are necessary.

Response to Comment A3-60

Impact TRA-3 in Section 3.12, *Transportation* of the Draft EIR (page 3.12-22) states the following:

University Avenue and Seawall Drive Design and Use Safety

The project would include improvements along University Avenue and Seawall Drive. As described in further detail in Chapter 2, *Project Description*, these improvements would not change the overall circulation of these roadways but, rather, would improve the roadways compared to existing conditions. The proposed project includes new facilities for transit, bicycle, and pedestrian users. The proposed project includes features to separate pedestrians and bicyclists from vehicles, compared to existing conditions. In addition, the improvements to AC transit bus stops would follow similar existing configurations and would not create any new safety hazards. This would minimize geometric design hazards for all types of transit utilizing the project site. In addition, the roadway design would be subject to the City of Berkeley Roadway Design Standards.

The proposed project would introduce a new use, compared to existing conditions. Bicyclists, pedestrians, transit users, and motorists would bike, walk, take the bus, and drive to the project site to access the ferry service. While this would be a new use compared to existing conditions, people already access the site via bus, bike, walking, or car. The proposed project would include safety features that would overall improve safety, including crosswalks, wayfinding signage, and bicycle/pedestrian facilities separated from roadways.

There are several reasons that no design conflicts were identified for this intersection. The design of the AC Transit bus route in this area was developed in consultation with AC Transit to remove potential conflicts with different user groups. It was determined that this layout of through lanes, stopping lanes and bus loading lanes would provide for the most effective paths of travel for each user group. Figure 2-10, University Avenue Improvements (4 of 4) of the Draft EIR (page 2-17) identifies a blue passenger drop off zone, orange bus stop and loading area, and green cycle track and path of travel. In addition, this would enhance an existing throughfare as AC Transit currently travels through this area; this upgrade to the bus loading zone would accommodate a greater number of users, while also providing separated paths of travel for vehicles, bicycles, and pedestrians. The 15-mile per hour speed limit in this area would continue and additional signage and wayfinding would be introduced to designate travel ways for each user group. For these reasons, no impacts with regard to a geometric design feature or incompatible use were identified. The analysis and significance conclusion presented under Impact TRA-3 in Section 3.12, *Transportation*, of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment A3-61

As discussed in Response to Comment A3-60, the City developed roadway design in collaboration with AC Transit to address potential circulation conflicts among different user groups. Refer also to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* for a discussion of how the City addresses circulation conflicts. BCDC will independently evaluate the project for consistency with San Francisco Bay Plan policies related to circulation as part of its permit review process. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation.

Response to Comment A3-62

The design of the Project incorporates projected circulation routes for different user groups under various use scenarios and has been developed in consultation with AC Transit and Cyclists user groups, as well as extensive public feedback. Refer also to Response to Comments A3-60 and A3-61. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation.

Response to Comment A3-63

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* concerning the unimproved water access near 199 Seawall Drive and other water access points, which are separate from the area where ferries will operate.

The proposed ferry terminal would be located on the north side of the existing Berkeley pier. This location is well away from any conflict with the current existing swimming and board sailing launch points for the Berkeley Marina. No revisions to the EIR are necessary.

Response to Comment A3-64

Refer to Section 2.2.2, *Topical Response: Alternatives*, which describes the City's process in conducting an Alternatives analysis, consistent with CEQA and how it considered alternative locations.

Response to Comment A3-65

Refer to Section 2.2.2, *Topical Response: Alternatives*, and Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*.

The 2008 EIS/EIR considered an alternative next to the Berkeley Fishing Pier. Because this alternative was substantially similar to the concept identified in the proposed project, it was not considered further.

The 2008 EIS/EIR considered an alternative off Gilman Street. Different versions of this alternative would not change the conclusions made in the Draft EIR that this alternative would increase not decrease environmental impacts (page 5-26). Given the geography of the shoreline, there is no alternative location near the foot of Gilman Street that would avoid locating the alternative within Eastshore State Park, which is an area that is more ecologically sensitive than the proposed project site. In addition, locating a ferry terminal within an established park presents the potential for the project to be deemed infeasible if the project is funded with federal Department of Transportation funds, which is expected in the future. Once U.S. Department of Transportation funds are obtained, the project will be required to comply with Section 4(f) requirements. Under Section 4(f) of the U.S. Department of Transportation Act, agencies must select an alternative that completely avoids using protected public parks, historic sites, or wildlife refuges unless that alternative is deemed infeasible or imprudent. Because other alternative sites have been found to be feasible and prudent (i.e., the proposed project site), an alternative off Gilman Street is not expected to be feasible, pursuant to Section 4(f) requirements.

The 2008 EIS/EIR considered an alternative near Buchanan Street. This alternative location is in Albany, outside of the City's jurisdiction. The basis for considering but rejecting it from further evaluation can be found on page 5-26 to 5-27 of the Draft EIR, under the bullet "Locations outside of the City of Berkeley." Potential different versions of this alternative would not change the fact that it is outside of the City's jurisdiction and would not change the conclusions in the Draft EIR.

The purpose of Draft EIR Section 5.9, *Alternatives Considered but Rejected*, is to identify the principal reasons certain alternatives were not carried forward, rather than provide a project-level impact analysis of each conceptual alternative considered during planning. See CEQA Guidelines Section 15126.6(c), which provides that an EIR need only "briefly describe the rationale for selecting the alternatives to be discussed," and "briefly explain the reasons underlying the lead agency's determination." The Draft EIR provides those reasons for each alternative discussed in Section 5.9, including jurisdictional considerations, consistency with project objectives, environmental constraints, and other feasibility considerations. The Draft EIR therefore provides an adequate description of the alternatives screening process and the basis for the City's determinations. Accordingly, the analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment A3-66

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

Response to Comment A3-67

Refer to Section 2.2.2, *Topical Response: Alternatives,* which describes the City's process in conducting an Alternatives analysis, consistent with CEQA and how it considered alternative locations. The 199 Seawall Drive location studied in the 2008 Berkeley/Albany Ferry Terminal Study Draft EIS/EIR and referenced in this comment is located "in the cove behind Hs Lordships Restaurant" (Section 2.8, page 2-43)." This 'cove' is the South Cove Sailing Basin, and locating a ferry terminal in this location would not only significantly increase the area and volume of dredging required due to the ferry vessel route (40,000 cubic yards of bay mud within the cove itself) but would also introduce conflicts with the recreational uses of the South Cove Sailing Basin. Since the 2008 Berkeley/Albany Ferry Terminal Study Draft EIS/EIR was published, no dredging of the South Cove Sailing Basin has occurred. As such, the estimates for additional dredging from that document are considered conservative for existing conditions, since additional sedimentation within the South Cove Sailing Basin has occurred over the past 18 years.

Furthermore, the proximity to existing recreational resources, including existing water access would present greater potential impacts to recreational access, which could be inconsistent with policies in the Bay Plan.

As a whole, the 199 Seawall Drive alternative site, which is within the South Cove Sailing Basin, would present more environmental impacts through increased dredging footprint and volume and greater potential conflicts with recreational users. Because this alternative would not reduce significant environmental impacts, it has been considered but rejected in the Draft EIR.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment A3-68

These comments are nonsubstantive in nature and do not raise a significant environmental issue. No further response is required.

Re: Berkeley Water Transportation Pier Ferry – Draft Environmental Impact Report (DEIR)

Dear Liza McNuity:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Berkeley Water Transportation Pier Ferry Project. The Local Development Review (LDR) Program reviews land use projects and plans to ensure consistency with our mission and state planning priorities. The following comments are based on our review of the February 2026 DEIR. A4-2

Please note this correspondence does not indicate an official position or approval by Caltrans on this project and is for informational purposes only.

Project Understanding

The proposed project would demolish portions of the closed pier, new public pier, new breakwater that provides pedestrian access and recreational amenities, recreational amenities, ferry infrastructure, dredging, new public plaza, improvements to University Avenue and Seawall Drive, a portion of the planned Bay Trail Extension, new landscaping, new wayfinding signage, utility connections, and operation of zero-emission electric passenger ferry service. A4-3

Air Quality/Noise

Air Quality, Section 3.2-21& 3.2-24 pgs. 154 & 157: Please update the Bay Area Air District (BAAD) May 2017 CEQA Air Quality Guidelines to the newer 2022 guidelines, criteria, and thresholds (*link*). A4-4

Noise, Section 3.10-24 pg. 497 – Waterside, *"Implementation of Mitigation Measure NOI-1…would reduce construction noise levels by up to 20 dBA for demolition"*: per A4-5

Table 3.10-16, reduction due to mitigation should be 10dBA (A-weighted decibels) as opposed to 20dBA. A4-5

Climate Resilience

Please keep Caltrans updated on the project as it advances. Caltrans is interested in improving resilience to the particularly vulnerable southbound Interstate (I)-80 and as a result will participate in ongoing Regional Shoreline Adaptation Plan (RSAP) coordination with the cities of Albany, Berkeley, and Emeryville. A4-6

For any questions or concerns, please reach out to the Climate Change Branch at D4_ClimateResilience@dot.ca.gov.

Thank you again for including Caltrans in the environmental review process. Should you have any questions regarding this letter, please contact Melissa Hernandez, Associate Transportation Planner via LDR-D4@dot.ca.gov. For future early coordination opportunities or project referrals, please visit Caltrans LDR website (*link*) or contact LDR-D4@dot.ca.gov. A4-7

Sincerely,

YUNSHENG LUO
Branch Chief, Local Development Review
Office of Regional and Community Planning

Response to Comment A4-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A4-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A4-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A4-4

The Bay Area Air District 2022 CEQA Air Quality Guidelines were used for purposes of the Draft EIR air quality analysis and the respective significance thresholds. The general methodology for assessing air quality impacts has not changed between the 2017 version and the 2022 version of these guidelines. The following clarification text revisions have been made to the Draft EIR:

Section 3.2, page 3.2-21:

> This analysis uses the Bay Area Air District ~~May 2017~~ 2022 CEQA Air Quality Guidelines to evaluate air quality. Air pollutant emissions generated by project construction and operation were estimated using the California Emissions Estimator Model (CalEEMod), version 2022.1. CalEEMod uses project-specific information, including the project's land uses, square footage for different uses (e.g., restroom building and parking), and location, to model a project's construction and operational emissions. The analysis reflects the construction and operation of the proposed project as described under Section 2, Project Description.

Section 3.2, page 3.2-24:

> The Bay Area Air District ~~May 2017~~ 2022 *CEQA Air Quality Guidelines* include project-level thresholds for construction-related and long-term operational emissions of air pollutants. These thresholds represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. Construction emissions associated with plan implementation are discussed qualitatively to evaluate potential air quality impacts.
>
> For health risks associated with TAC and $PM_{2.5}$ emissions, the Bay Area Air District ~~May 2017~~ 2022 *CEQA Air Quality Guidelines* state a project would result in a significant impact if ~~the~~ any of the following thresholds are exceeded:

These changes to the Draft EIR are simply for textual clarification purposes; therefore, no additional air quality modeling and analysis is required. The Draft EIR air quality significance thresholds, impact analysis conclusions, and mitigation measures remain valid as written.

Response to Comment A4-5

As explained on page 3.10-24, a 10 dBA reduction is only applicable to construction phases that include use of pile driving equipment (i.e., demolition and pile installation) and a 20 dBA reduction is applicable for all other phases (i.e., dredging and construction of waterside infrastructure and amenities). Table 3.10-16 appropriately applies these decibel reductions to the respective construction phases. No further revisions to this table are necessary.

However, the text on page 3.10-24 has been clarified as follows:

> Implementation of Mitigation Measure NOI-1, including the use of temporary noise barriers, would reduce construction noise levels by up to 20 dBA for ~~demolition,~~ dredging~~,~~ and construction of waterside infrastructure and amenities (excluding pile driving equipment).[18,19] For construction phases which include the use of pile driving equipment (e.g., demolition and pile installation), ~~S~~shrouding of pile driving equipment would attenuate noise levels by 10 dBA or more.
>
> 18. Bies, David A, Hansen, Colin H., Howard, Carl Q. 2018. Engineering Noise Control, Fifth Edition.
>
> 19. Harris, Cyril M. 1991. Handbook of Acoustical Measurements and Noise Control.

These text changes are clarifying in nature. The analysis and significance conclusions presented in Impact NOI-1 in Section 3.10, *Noise* of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Response to Comment A4-6

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment A4-7

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Subject: Berkeley Perry Fier Project Updates

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Liza,

My name is Shreyas Chand. I'm the Commodore (Chairman of the Board of Directors) for the Cal Sailing Club. I made a comment at the meeting this eveinng regarding the Draft EIR. We plan to make a larger written comment, but in the meantime would like to request getting process updates to this email. O1-1

Thank you as well for your professional running of the meeting this evening and accepting public comment.

Finally, as I also mentioned at the meeting, I want to extend an invitation to the project team to engage with our organization and use us as a resource as part of this process. CSC's membership holds a diverse range of views on the project, and as a club we take no position for or against the ferry project as a whole. However, we are fully invested in ensuring that our programs, and recreational users are well considered in the pier ferry project as existing stakeholders (CSC for well over half a century!) in the waterfront.

Best,
Shreyas Chand
Commodore
Cal Sailing Club
124 University Ave
https://www.cal-sailing.org/ O1-2

P.S. If you have never visited or availed of CSCs programs, please do consider checking us out. We have our first open house on April 5th and will be offering free sailboat rides to the public from 1PM to 3PM.

Letter O1

Commenter: Shreyas Chand, Commodore, Cal Sailing Club

Date: March 16, 2026

Response to Comment O1-1

The City has added the comment's contact information to the project notification list and would provide future notices via email in accordance with CEQA and City procedures. No further response is required.

Response to Comment O1-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

DRAFT EIR Characterized by Inadequate and Misleading Transit Impact Analysis

Summary:

The Draft EIR[1] fails to adequately analyze the cumulative adverse impacts imposed by the project on the region's ailing public transportation infrastructure.[2] The EIR acknowledges (but does not estimate) the impacts of drawing commuters from BART, AC Transit and existing WETA service (Jack London to San Francisco). Additionally, the document lacks clear evidence supporting the revenue and fare recovery projections. Ridership estimates appear speculative and are not supported by available data; in fact, the projections contradict existing evidence and longstanding experience. Collectively, these omissions obscure the fact that 80% of ferry operations may require public subsidies at the expense of existing transit options.

O2-1
O2-2
O2-3
O2-4

Regional Public Transportation is Ailing:

[1] https://berkeleyca.gov/your-government/our-work/capital-projects/berkeley-pier-ferry-access-project
[2] According to the Legislature: "New methodologies under the California Environmental Quality Act [were] needed for evaluating transportation impacts that are better able to promote the state's goals of reducing greenhouse gas emissions and traffic-related air pollution, promoting the development of a multimodal transportation system, and providing clean, efficient access to destinations." https://lci.ca.gov/ceqa/sb-743/faq.html

O2-1

Between new infrastructure and capital costs for ferry services the initial project expenditure are approximately $125 M. City of Berkeley infrastructure projects have consistently experienced 20-50% cost overruns. The project would consume financial resources that would otherwise be available to existing systems that are under financial strain as evidenced by:

- A recent $590 M emergency loan to maintain existing public transportation operations;
- BART incurring a $350-400 M deficit and projecting service cuts up to 70%;
- AC Transit projecting a $74 M deficit in 2026-27;
- High operating costs resulting in proposed fare increases for all ferry routes.

The addition of new overhead costs from the proposed project will create additional a majority strain to the existing transportation infrastructure.

O2-5

The high costs for this project will adversely impact existing public transportation by consuming federal, state, regional and local resources that would otherwise be available to existing systems experiencing operating deficits.

O2-6

Failure to Document Impacts on Existing WETA Service, AC Transit and BART:

The EIR acknowledges (but does not estimate) the impact of drawing commuters from BART and AC Transit:

> *It is anticipated that most of these trips are not new trips, and were originally headed to San Francisco by driving across the Bay Bridge. Some of these trips might have shifted from commuters previously taking BART and Transbay bus services. [3.12-20 DRAFT EIR]*

O2-7

There is no evidence presented to suggest the project will substantially reduce driving trips across the Bay Bridge. Anecdotally, there are a range of social determinants that limit trip reduction potential. For example, comparatively limited

"on the hour" ferry schedules may not provide the time flexibility many working family members require.

A plausible scenario is that a majority ridership will result from existing WETA, AC Transit and BART commuters switching services. Switching by existing commuters seems particularly probable for bicycle-carrying customers. Thus, one new heavily subsidized service will be pulling critical operating revenue from existing subsidized services. WETA routinely surveys its ridership and this "switching" hypothesis could be tested utilizing existing survey platforms. O2-7

The EIR should provide more robust (including survey-based) estimates on the financial impact to existing WETA (Jack London), AC Transit and BART revenues resulting from existing transit users switching services. O2-8

Farebox Revenue Assumptions Defy Operational Experience:

The draft cites the WETA Berkeley Ferry Service Business Plan which projects:

> *Ridership forecasts and fare assumptions for new weekday and weekend ferry service between Berkeley and San Francisco generates farebox revenue that covers approximately 52 percent of operating costs in the tenth year of service*
> [WETA Berkeley Ferry Service Business Plan p40.]

No ferry route has achieved greater than 44% other than Vallejo to San Francisco. Across all routes system wide farebox recovery in 2023-2025 was 24% of operating expenses. [Monthly Budget Report FY 2024/25] O2-9

This 24% figure is not evenly distributed across the system. Rather ridership and farebox recovery are dominated by the Vallejo Service. The comparative success of this service is likely related to the fact that riders have more limited public transportation options. Routes shared with BART and AC Transit do not exceed 23% revenue recovery, and half are less than 10% fare recovery.

Route	Fare Revenue		Projected Ridership	
	Total	% of Total	Total	% of Total
Alameda/Oakland Ferry Service	$ 3,231,470	23%	744,045	29%
Alameda Harbor Bay Ferry Service	$ 1,107,843	8%	256,567	10%
Alameda Seaplane Lagoon Ferry Service	$ 1,549,173	11%	359,194	14%
Vallejo Ferry Service	$ 6,232,208	44%	795,359	31%
South San Francisco Ferry Service	$ 698,795	5%	102,627	4%
Richmond Ferry Service	$ 1,245,745	9%	307,881	12%
Total	**$ 14,065,234**		**2,565,673**	

O2-9

Source:Fiscal Year 2024-25 Budget

The proposed project farebox revenue assumptions lack substantial evidence, contradict existing history and should be recalculated and presented in this EIR. Based on ridership experience, the proposed service would require ongoing subsidies on the order of 80% of operating costs, further exacerbating the adverse impacts on established transit options also requiring subsidies.

O2-10

Speculative Ridership Estimates:

Overall ridership estimates also appear speculative. For example, the Technical Memorandum supporting the ridership estimates states:

> *Assuming that an individual rider is taking a round trip, then the 1,910 total rides would represent 955 unique riders taking a round trip between Berkeley and San Francisco.* [Technical Memorandum Page 1]

O2-11

Given the alternative transit options (BART, AC Transit, carpool) and the constrained ferry schedule, there is a high likelihood that unique riders may choose split mode travel. This option may be particularly attractive for individuals who do not park at the proposed site and cyclists who can utilize all three options without the need to return to a specific destination.

The business plan also suggests the project will *get San Francisco residents / students to jobs / class in Berkeley* [WETA Berkeley Ferry Service Business Plan

O2-12

p26.] It seems highly improbable that individuals traveling from San Francisco to UC Berkeley or Berkeley City College would shift from a mode of transit (BART) that disembarks 1-5 minutes from campuses to a mode that arrives in the Berkeley Marina.

O2-12

The EIR should survey existing commuters from Jack London to San Francisco to determine the extent there is split mode travel. Distinctions should be made between those utilizing automobiles, public transit and bicycles.

O2-13

Letter O2

Commenter: Geoffrey Lomax, Contact Person and Berkeley Resident, Within Our Means Berkeley

Date: April 8, 2026

Response to Comment O2-1

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts. No further response is required.

Response to Comment O2-2

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts. No further response is required.

Response to Comment O2-3

Regarding the comments about revenue and fare recovery, refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

Regarding the comments about ridership, refer to Table 2-4 in Chapter 2, *Project Description* on page 2-31 of the Draft EIR for discussion about ridership estimates. The ridership estimates used in the Draft EIR are not speculative; they are directly sourced from WETA's March 2022 Berkeley Ferry Service Business Plan. The projections were used in the EIR as a reasonable forecast of anticipated ridership. Ridership estimates will be updated regularly in tandem with WETA updates to their Business Plan and long range planning about the feasibility and implementation of new routes. No revisions to the EIR are necessary. No further response is required.

Response to Comment O2-4

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O2-5

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O2-6

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O2-7

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to reductions in vehicle tips, transit-to-transit mode shifts, and how WETA onboard surveys were used in the analysis. No further response is required.

Response to Comment O2-8

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations.

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts. No further response is required.

Response to Comment O2-9

Regarding the comments about revenue and fare recovery, refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility.* This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O2-10

Regarding the comments about revenue, fare recovery, and subsidies, refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility.* This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O2-11

Refer to Response to Comment O2-3 for discussion about ridership projections. While ferry users could choose a different mode of travel on their return journey, this would not materially affect the findings or conclusions of the EIR. No further response is necessary.

Response to Comment O2-12

As described in Chapter 5, *Economic Development Opportunities*, of the WETA Berkeley Ferry Service Business Plan, the proposed ferry service is intended to improve access between Berkeley and San Francisco for a variety of trip purposes, including employment, education, recreation, and special events. The Business Plan specifically acknowledges that successful ferry operations would depend on coordination with transit, shuttle, bicycle, and pedestrian connections between the terminal and destinations throughout Berkeley (refer to Business Plan pages 31-34).

The comment does not provide evidence demonstrating that the Business Plan's discussion of potential employment and educational travel demand is incorrect. Accordingly, no revisions to the Draft EIR are required. The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O2-13

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to how WETA onboard surveys were used in the analysis, as it relates to mode split. Refer also to Section 2.2.20, *Topical Response: Parking,* for additional discussion regarding parking and transportation demand considerations.

The analysis and significance conclusions related to transportation and VMT remain valid as presented in the Draft EIR. No revisions are required.

Letter O3

Subject: Citizens for East Shore Parks (CESP) Comments on Berkeley Water Transportation Pier Ferry Project Draft EIR

Dear Ms. McNulty,

Citizens for East Shore Parks (CESP) has the following comments on the Draft Environmental Impact Report (DEIR) regarding the proposed Berkeley Ferry Terminal. CESP was founded in 1985 to create shoreline parks along the East Bay shoreline. Its initial major campaign was to create the McLaughlin Eastshore State Seashore. CESP is very concerned about both the environmental impacts from any proposed activity on the East Bay shoreline and also the impacts on recreational use and access. CESP has the following comment after reviewing the DEIR.

O3-1

<u>The Ferry Would Cost Far Less If located in the Berkeley Marina</u>

It appears from various analyses that the proposed project will cost around $170 Million, but that is not disclosed in the DEIR. The Richmond ferry, which requires a $9 per rider subsidy for every $1 of fare, cost $20 Million to build. The

O3-2

estimate for the ferry located at the Berkeley Marina is around $20 Million. The cost figures are not included anywhere in the DEIR. O3-2

The Reduction of Vehicle Miles Traveled (VMT) is Miniscule and Does Not Justify the Cost of the Project

The 2003 URS WTA EIR which looked at expansion of entire system had this to say about VMT's:

> "As shown in Table 3.12.8, the total regional VMT for the No Project Alternative will increase by 33.7 percent over the baseline, while the total regional VMT for the Proposed Project would increase by 33.6%. (Section 3.12.2.2 Impacts and Mitigation p. 435 of pdf)"

That is a .07% decrease in VMT. It states further:

> "The largest reductions in VMT occur in counties where ferries are competing with congested highway facilities, such as San Francisco, San Mateo, and Marin. However, an increase in drivers accessing transit is expected due to increases in VMT in the vicinity of terminals to ferry ridership at new terminals." (as discussed in Impact T-1).

O3-3

And:

> "The Proposed Project would have a total regional VMT of 0.07% less than the No Project Alternative. While the overall percentage reduction may seem small, it may reduce peak hour volumes on the Bay Bridge by almost a lane's worth of traffic."

The reduction of .07% at the projected cost would result in funds diverted from BART and Bus Transit agencies which would probably have a greater reduction in VMTs. In any case, the DEIR does not address this issue at all. O3-4

Parking

There are only 729 parking spaces in close proximity to the proposed terminal. The ferry is expected to have capacity for the day of 1600 departing riders. Hence, more than likely all parking will be taken up by ferry riders in the morning commute with no parking spaces for daytime users of the park area. Moreover, there will be a charge for parking. Furthermore, there was no analysis O3-5 O3-6

of commuters parking further away adjacent to the Meadow in the McLaughlin Eastshore State Park or around the DoubleTree hotel.

O3-6

The DEIR did not analyze parking at these other locations or the potential impact on the McLaughlin Eastshore State Park.

Dredging

Analyses show that there would be a need for on-going periodic dredging for the channel for the ferry. This is around 400,000 cubic yards. There is no analysis of the impacts of this on-going dredging.

O3-7

Sea Level Rise and RSAP Issues

The sea level rise the DEIR uses is 1.6 feet by 2075. Not 6.6 or 7 feet by 2100. The DEIR states that the landside features and pier would be built to protect to that 1.6 level. But this sea level rise does not address the potential impacts of the 6.6 sea level rise which should have been included and used.

O3-8

Impacts on Biological Resources

The DEIR states that the Least Tern was not sighted and thus not a concern. But we have reports now that there have been sightings sufficient for it to be evaluated for impacts as a changed circumstance.

O3-9

Furthermore, the DEIR relies on the prior Programmatic EIR (PEIR) done in 2003 that stated that whale strikes in the Bay were not an impact that required analysis for impacts. Yet, the current information is that Whale sitings in the Bay have grown over the years and strikes have also increased. This changed circumstance was not analyzed in the DEIR.

O3-10

The DEIR consistently maintains that in the construction phase any environmental impacts can be mitigated to less than significant. It also maintains that in the operational phase the ferry will not have impacts on biological resources.

O3-11

Seawall Impact Issues

The DEIR did not analyze the impacts that seawalls will have beyond the immediate location based. Nor was there an analysis of wave action on the adjacent park lands such as "Cesar Chavez" Park and the McLaughlin Eastshore State Seashore. O3-12

The Environmentally Superior Alternative is Alternative 4

This is a reduced landside facility. The main objection in the DEIR to this alternative is the reduction in not enhancing public access and recreation. While this alternative has allegedly less public access than the Preferred Alternative, the DEIR did not address the major deficiencies and reduction in recreational access that would result as discussed in James McGrath's letter of March 27, 2026, which is incorporated herein by reference. As the environmentally superior alternative, it should be the alternative for the site if a ferry is to operate out of Berkeley. O3-13

Sincerely,

Arthur Feinstein
CESP Board President

Norman La Force
CESP Vice President

Letter O3

Commenter: Arthur Feinstein, Board President, and Norman La Force, Vice President, Citizens for East Shore Parks

Date: April 21, 2026

Response to Comment O3-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O3-2

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the Marina Basin Alternative from further evaluation.

Response to Comment O3-3

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the reduction of Vehicle Miles Traveled (VMT).

With regard to use of the 2003 WETA EIR, the Berkeley Water Transportation Pier Ferry Draft EIR did not rely on the VMT estimates provided in 2003 and instead conducted a VMT analysis for this project, refer to Impact TRA-2 in Section 3.12, *Transportation* of the Draft EIR (pages 3.12-20 to 3.12-21).

The systemwide VMT figures cited in the comment are drawn from the 2003 WETA EIR, which evaluated expansion of ferry service across the entire Bay Area transit system. For this project, VMT significance is evaluated under Section 3.12, *Transportation* Impact TRA-2, consistent with CEQA Guidelines Section 15064.3, which requires project-specific evaluation and considers net change in Total VMT attributable to the project rather than a systemwide percentage metric. As explained in Section 2.2.27, *Topical Response: VMT,* many project-generated trips substitute for longer-distance automobile travel across the Bay Bridge, resulting in a net reduction in VMT even where some riders access the terminal by automobile.

The analysis and significance conclusion presented under Impact TRA-2 in Section 3.12, *Transportation* of the Draft EIR remains valid as written. No revisions to the EIR are necessary.

Response to Comment O3-4

The proposed project is implementation of new ferry service. The EIR does not have an obligation to evaluate a different project of increasing other transit use in the region. The EIR evaluates VMT as discussed under Impact TRA-2 in Section 3.12, *Transportation* of the Draft EIR. The analysis remains valid as written. No revisions to the EIR are necessary.

Response to Comment O3-5

The estimate of 1600 departing riders referenced by the comment appears to be based on total passenger trips rather than unique riders. As described in Draft EIR Section 2.7.1, *Operational Scenario and Ridership*, the ridership projections presented in Table 2-4 represent total trips. For example, the projected 1,910 weekday trips in the first year of service would represent approximately 955 unique round-trip riders, assuming a rider travels from Berkeley and returns the same day (refer to Draft EIR page 2-31). Refer to Section 2.2.20, *Topical Response: Parking*, regarding adequate parking supply. No further response is necessary.

Response to Comment O3-6

Refer to Section 2.2.20, *Topical Response: Parking.* The comments raise concerns about the introduction of parking fees, which would change access to the Berkeley Waterfront, which is currently no cost at some lots. The City acknowledges this concern. The imposition of parking fees, however, does not impose an environmental impact that need be analyzed. Furthermore, the Parking and TDM Plan demonstrates that the Berkeley Waterfront has the capacity to accommodate both ferry patrons and recreational users. No further response is necessary.

Response to Comment O3-7

The Draft EIR identifies construction impacts due to construction dredging in Section 3.3.4, under Impact BIO-1 on pages 3.3-45 to 3.3-51. In addition, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate,* and Section 2.2.15, *Topical Response: Maintenance Dredging,* for discussion of post-construction sedimentation rates and maintenance dredging. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O3-8

Refer to Section 2.2.23, *Topical Response: Sea Level Rise,* for a discussion of the sea level rise projections used in the project design.

Response to Comment O3-9

Refer to Response to Comment A2-35 to A2-38 for discussion of and Draft EIR clarification text changes with regard to California least tern. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O3-10

In Draft EIR Section 3.3.4 under Impact BIO-1, pages 3.3-52 through 3.3-54, vessel strikes are analyzed as a known source of mortality for whales and are evaluated with regard to the project's incremental contribution to this risk in the context of existing San Francisco Bay vessel operations, which includes substantial commercial, recreational, and ferry vessel operations. This is not a changed circumstance. Refer to Response to Comment O7-13 for additional discussion of whale strikes. In addition, refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* and Section 2.2.28, *Topical Response: Whale Strike*. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O3-11

As shown on page 3.10-32 of the Draft EIR, construction noise impacts were determined to be Significant and Unavoidable, even with implementation of mitigation; therefore, this comment is inaccurate in stating that impacts were found to be less-than-significant. The Draft EIR evaluates biological resource impacts due to project construction and operation in Section 3.3, *Biological Resources* (subsection 3.3.4, *Impacts Analysis*, pages 3.3-40 through 3.3-66), and concludes that impacts would be less than significant or less than significant with implementation of mitigation (Refer to Mitigation Measures BIO-1, BIO-2, BIO-3, HYD-1 and AES-1). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O3-12

The project does not include seawalls as part of the project description. However, an approximately perpendicular-to-pier breakwater is included as part of the project description. For discussion of wave climate and breakwater effects, including areas beyond the project site, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate.* No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O3-13

As discussed in Draft EIR Section 5.8, *Alternative 4: Reduced Landside Facilities Alternative* (pages 5-19 through 5-24), Alternative 4 was developed to evaluate whether environmental impacts could be reduced by eliminating several proposed landside improvements, including the public plaza, Bay Trail Extension, cycle track, renovated Seawall Drive parking lot, electric vehicle charging infrastructure, and certain transit-related improvements. As disclosed in the Draft EIR, these modifications would result in reduced construction activity and reduced impacts in several resource areas relative to the proposed project.

The Draft EIR also evaluates the effects of Alternative 4 on attainment of project objectives. As described in Section 5.8, Alternative 4 would not meet the project objective of enhancing public access and recreational opportunities at the Berkeley Waterfront to the same degree as the proposed project because it would eliminate or substantially reduce several public access, recreational, bicycle, pedestrian, and visitor-serving improvements. Specifically, the Draft EIR states that Alternative 4 would not provide the proposed Bay Trail Extension, cycle track, public plaza, or several other amenities intended to expand recreational opportunities and public access to the waterfront. For further discussion regarding the formulation of project objectives as they relate to the development of project alternatives, please refer to Section 2.2.2, *Topical Response: Alternatives* (Sub-Section Project Objectives). For additional discussion regarding alternatives, including the criteria used to develop and evaluate alternatives and alternatives considered but rejected from detailed analysis, such as the no-ferry-service pier alternative, please refer to Section 2.2.2, *Topical Response: Alternatives*.

The comment's preference for Alternative 4 is noted. CEQA does not require selection of the environmentally superior alternative; rather, it requires disclosure and evaluation of the environmental consequences of the proposed project and reasonable alternatives. The Draft EIR identifies and compares the environmental impacts and objective attainment of all alternatives to inform decision-makers. Refer to Draft EIR Sections 5.8, *Alternative 4: Reduced Landside Facilities Alternative*, and 5.10, *Environmentally Superior Alternative*. Nevertheless, this comment has been included in the Project record provided to City decision makers for consideration. No revisions to the Draft EIR are necessary in response to this comment.

Letter O4

PARKS, RECREATION AND WATERFRONT COMMISSION

City of Berkeley

Liza McNulty, PE
Capital Improvement Program Manager
Parks, Recreation & Waterfront Department
City of Berkeley
2180 Milvia Street, 3rd Floor
Berkeley, CA 94704
lmcnulty@berkeleyca.gov

RE: Parks, Recreation and Waterfront Commission — Formal Comments on the Draft Environmental Impact Report, Berkeley Water Transportation Pier Ferry Project (State Clearinghouse No. 2025040995)

Comment Deadline: April 28, 2026, 5:00 p.m.

Formal Comments on the Draft EIR

The Parks, Recreation and Waterfront Commission submits the following formal comments on the Draft EIR for the Berkeley Water Transportation Pier Ferry Project. These comments are organized by topic area and are intended for inclusion in the public record and response in the Final EIR. The Commission requests written responses to each comment pursuant to Public Resources Code Section 21104 and CEQA Guidelines Section 15088. O4-1

Section A: Project Delineation and Description

Comment A-1: Incomplete Project Description — Universal Charging Float

EIR Section 2.5.1 and Figure 2-4 (footnote 5) describe the proposed Universal Charging Float (UCF) as a key piece of ferry infrastructure, noting it would feature a 1.351 MWh Echandia battery weighing approximately 47,554 pounds. However, Figure 2-4 states that "the UCF has not yet been designed" and that "UCF dimensions may differ from what is shown" in renderings. The UCF is not included in the project renderings. O4-2

The EIR should disclose the UCF's size, configuration, placement, and operational characteristics, analyze the associated environmental impacts, and identify appropriate mitigation measures.

Comment A-2: Marina Master Plan Consistency Requires Clarification

The 2003 Berkeley Marina Master Plan governs permitted uses at the project site (EIR Section 3.9.2). The Plan restricts new development to replacing and remodeling existing commercial and non-profit facilities, with limited expansion on a case-by-case basis. The Plan does not identify a commercial ferry terminal as a permitted use. EIR Section 3.9.4 (Impact LU-2) evaluates the project against individual Master Plan policies but does not analyze whether a commercial ferry terminal is a permitted use under the Plan's development restrictions. The EIR should provide that analysis. O4-3

Section B: Parks and Open Space Impacts

Comment B-1: Significant and Unavoidable Recreation Impacts Lack Recreation-Specific Mitigation

EIR Section 3.11.4 (Impact REC-2) finds significant and unavoidable construction impacts on the surrounding recreational environment. The mitigation measures listed for this impact are drawn entirely from other chapters (noise, air quality, biology, etc.) and none specifically addresses the loss of recreational access during construction. The EIR should identify construction-period mitigation measures that directly address recreational displacement, including maintenance of access to adjacent parks, wayfinding for recreational users, and scheduling protocols to reduce disruption during peak use periods. O4-4

Comment B-2: Impacts on Existing Recreational Fishing Are Inadequately Analyzed

EIR Section 3.11.4 (Impact REC-1) identifies the restoration of pier fishing as a project benefit but does not analyze how fishing activities will coexist with the gated ferry boarding areas described in Section 2.5.1. The EIR should demonstrate how the pier layout accommodates recreational fishing alongside ferry operations and should address construction phasing to minimize the period during which no pier fishing access is available. O4-5

Comment B-3: Construction Noise Mitigation Does Not Address Named Adjacent Parks

EIR Section 2.2 identifies the project site as immediately adjacent to several heavily used parks and recreational facilities, including the waterfront park (referred to in the EIR as César E. Chávez Park), Horseshoe Park, Shorebird Park, Marina Mall, Adventure Playground, and portions of the Bay Trail Extension.

EIR Section 3.10.4 (Impact NOI-1) and Section 3.11.4 (Impact REC-2) confirm that construction noise, particularly pile driving, would exceed applicable Berkeley Municipal Code thresholds at sensitive receptors. Mitigation Measure NOI-1 requires a Construction Noise Management Plan but does not reference any of the named adjacent parks or require park-specific protections. NOI-1 should be revised to include park-specific protections for each adjacent park. O4-6

The EIR should disclose the expected construction noise levels at each park with those protections in place.

Section C: Environmental and Biological Impacts

Comment C-1: Eelgrass Survey Findings Must Be Disclosed and Mitigated

EIR Section 3.3 concludes that no eelgrass is currently present within the project site based on baywide inventories from 2003, 2009, and 2014. However, Figure 3.3-2 identifies areas of potential eelgrass habitat within the project footprint, and no site-specific eelgrass delineation survey has been conducted. Eelgrass beds in San Francisco Bay constitute Essential Fish Habitat under the Magnuson-Stevens Act (EIR Section 3.3). O4-7

The EIR should require a pre-construction eelgrass delineation survey, analyze potential impacts, and identify mitigation measures addressing NOAA Essential Fish Habitat consultation requirements. O4-7

Comment C-2: Ferry Wake and Vessel Disturbance Impacts on Waterbirds and Shorebird Park

EIR Section 3.3 concludes that ferry wake would be "consistent with existing vessel operations" and finds operational biological impacts less than significant. This conclusion is not supported by any quantitative wake comparison, species-specific assessment, or analysis of foraging disruption along the transit corridor. The vessel approach speed protocol referenced in the analysis was designed for water quality and turbidity, not biological protection. O4-8

The EIR should provide a quantitative operational biological impact analysis that addresses the combined disturbance from vessel operations — including wake, noise, lighting, vehicle traffic, and passenger activity — on foraging and roosting waterbird populations, special-status fish, and marine mammals along the transit corridor.

Comment C-3: Jurisdictional Waters Compensatory Mitigation Baseline Needs Clarification

EIR Section 3.3 (Mitigation Measure BIO-3) requires compensatory mitigation for impacts to jurisdictional waters at a 1:1 ratio, to be achieved through demolition of portions of the existing pier, but defers the supporting mitigation plan entirely to a post-approval process. CEQA requires that mitigation measures be sufficiently defined to allow meaningful evaluation prior to project approval. O4-9

The EIR should include a preliminary calculation comparing the footprint of new fill against proposed demolition to demonstrate the 1:1 ratio is achievable, clarify whether the ratio applies to piling area, deck area, or both, and specify whether the mitigation plan will be subject to public review and agency approval prior to construction.

Comment C-4: Tree Removal Analysis Is Inadequate and Mitigation Is Undefined

EIR Section 3.3 (Impact BIO-5) discloses that approximately 39 of 61 trees on the project site would be removed, but the analysis is limited to confirming that no coast live oaks are among the trees to be removed and that a removal permit will be obtained. The EIR should provide a tree-by-tree inventory identifying each tree proposed for removal by species, diameter at breast height (DBH), condition rating, or location in order to enable the public to evaluate whether individual trees qualify for protection under Berkeley Municipal Code Chapter 12.44. O4-10

The EIR does not address the functional recreational role of the trees proposed for removal. The EIR should analyze whether removal of the Seawall Drive tree canopy would change wind exposure conditions at the South Sailing Basin and whether those changes would affect the safety of recreational water users, and identify appropriate mitigation measures. O4-11

The EIR defers the Urban Forestry Unit’s replacement evaluation entirely to post-approval, stating only that “it is expected that some replacement would be required” (EIR Section 3.3). O4-12

Unlike other biological resource impacts addressed in this EIR, Impact BIO-5 includes no standalone mitigation measure for tree removal. The proposed replacement list is identified in the project description (EIR Section 2.5.3) but is not incorporated into any mitigation measure, commitment, or condition of approval. The EIR should be revised to identify protected trees, potential impacts from their removal and appropriate mitigation measures. O4-12

Section D: Operational Impacts on the Multi-Use Recreation Area

Comment D-1: Ferry Wake Impacts on Non-Motorized Watercraft and Open-Water Swimmers Not Analyzed for Operations

EIR Section 3.11.4 notes that the Berkeley Marina serves kayaks, sea kayaks, sailboards, paddleboards, and windsurfers, and that open-water swimmers use the waters around the marina coves. EIR Section 3.11 does not identify open-water swimming in its baseline characterization of existing recreational uses, a baseline adequacy issue under CEQA Guidelines Section 15125. O4-13

EIR Section 3.11.4 concludes that ferry wake "would not be noticeable within the context of the Berkeley Waterfront area and existing sailboat, motorized boats, and other recreational craft use." This conclusion is not supported by any quantitative wake height or wake energy analysis at locations where swimmers and non-motorized watercraft users are present. The vessel speed protocol referenced in Section 3.11.4 is analyzed in Section 3.8.4 for turbidity and sediment resuspension, not for physical safety effects on people in the water. This is a permanent operational impact that will exist for the life of the project. O4-14

The EIR should provide quantitative wake analysis for all recreational use locations, including locations used by open water swimmers. The EIR should also identify the physical effects of ferry wake on water conditions at kayak launch areas and sailboard launch zones. Vessel speed protocols should be adopted as mitigation measures to protect the safety of each recreational user group. O4-15

Comment D-2: Maritime Security Exclusion Zone Impacts on Recreational Access Are Not Addressed

The EIR does not address operational access restrictions that may arise from Maritime Transportation Security Act (MTSA) compliance. Under 33 CFR § 105.200, passenger vessel facilities serving vessels of 150 gross tons or more are subject to security zone requirements that can extend 25 to 100 meters into surrounding waters. The EIR does not identify the gross tonnage of the proposed ferry vessels and therefore cannot determine whether MTSA requirements apply. The EIR should disclose the gross tonnage of the proposed vessels, determine whether MTSA security zone requirements are triggered, and if so, analyze the impact of those zones on recreational water access adjacent to the terminal. O4-16

Comment D-3: Operational Noise from Terminal Activities Is Not Adequately Analyzed

The parks proximate to the ferry terminal and approach roadways are sensitive uses. EIR Section 3.10.4 analyzes operational noise and does not assess impacts on adjacent parks, including Shorebird Park and the Bay Trail corridor, as distinct noise-sensitive receptors. O4-17

The EIR's construction noise analysis applies a residential threshold to Shorebird Park pursuant to Berkeley General Plan Policy EM-47, acknowledging parks as noise-sensitive receptors (Section 3.10.4, footnote 14). Tables 3.10-13 and 3.10-15 show Shorebird Park closer to the project site than Skates on the Bay.

O4-18

The EIR should provide a cumulative operational noise impact analysis for Shorebird Park and the Bay Trail corridor applying appropriate outdoor recreational noise compatibility standards, and identify appropriate mitigation measures.

Comment D-4: Terminal Lighting Impacts on Adjacent Parks and Nesting Wildlife Not Analyzed

EIR Section 3.1.4 (Impact AES-4) finds light and glare impacts less than significant, citing DarkSky-compliant fixtures, photocell controls, and timers. The project site is immediately adjacent to Shorebird Park, which provides nesting and foraging habitat for sensitive shorebird species. The EIR should analyze the impact of artificial light at night (ALAN) from terminal operations on nesting shorebirds and identify ALAN as a separate operational impact category.

O4-19

Comment D-5: Sea Level Rise Operational Adaptation Not Adequately Addressed

EIR Section 3.8.4 and the project's coastal study (COWI, December 2025, cited in EIR footnote 7) confirm that the pier, breakwater, and plaza are designed to accommodate approximately 1.6 feet of sea level rise by 2075. The EIR classifies the pier as a Risk Category IV Essential Facility with a design life of approximately 50 years (EIR Section 2.5.1). The California Coastal Commission's Sea Level Rise Policy Guidance (November 2024) recommends that critical infrastructure use a planning horizon of 100 years or greater, and the 2024 OPC Sea Level Rise Guidance recommends evaluating Intermediate, Intermediate-High, and High Scenarios to assess a spectrum of potential impacts. By 2100, the 2024 OPC Guidance projects statewide sea level rise between 1.6 and 3.1 feet under Intermediate to Intermediate-High scenarios, with higher amounts under High scenarios.

O4-20

The EIR should provide a 100-year analysis of impacts to the pier, breakwater and landside infrastructure under the Intermediate-High and High SLR scenarios as recommended by the 2024 OPC Guidance, and identify appropriate mitigation measures.

_____

Allan Abshez
Chair, Parks, Recreation and Waterfront Commission
City of Berkeley

For questions, contact: Parks, Recreation & Waterfront Department, City of Berkeley, 2180 Milvia Street, 3rd Floor, Berkeley, CA 94704. Comments must be received by 5:00 p.m., April 28, 2026. Submit to: lmcnulty@berkeleyca.gov

Letter O4

Commenter: Allan Abshez, Chair, Parks, Recreation, and Waterfront Commission

Date: March 11, 2026

Response to Comment O4-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O4-2

This comment references a footnote to Figure 2-4. As a matter of clarification, this footnote is meant to refer to the figure and not the entire Project Description. The Draft EIR describes the Universal Charging Float (UCF) in several places. Pages 2-10 to 2-11 of the Draft EIR provide an overview of the UCF and page 2-27 describes the piles associated with the UCF. Throughout the Draft EIR, the analysis considers the potential impacts associated with the installation of the UCF. For example, Section 3.3, *Biological Resources* considers the impacts from the installation of piles associated with installing the UCF and Section 3.7, *Hazards and Hazardous Materials* considers the potential impacts related to accidental release of hazardous chemicals.

To clarify the level of detail and ensure consistency with the environmental analysis, the following text change has been made to Section 2.5.1, page 2-11 of the Draft EIR:

> In addition, the UCF would include a fire suppression system for the batteries comprised of a primary fire suppression (direct foam injection system), secondary fire suppression (aerosol fire suppression), and tertiary fire suppression (freshwater deluge system). Although the final engineering design and dimensions of the UCF are not yet complete, this EIR evaluates a conservative maximum design envelope that includes all major structural, electrical, and safety components. The final UCF configuration, dimensions, and layout would be determined during final design and permitting but would not exceed the scope or introduce impacts beyond those analyzed in this EIR.

Additionally, in response to this comment, the following clarifying text change has been made to Figure 2-4, Footnote 5, on page 2-8 of the Draft EIR:

> The project would include a Universal Charging Float or UCF featuring a 1.351 MWh Echandia battery weighing approximately 47,554 pounds. The UCF has not yet been designed and is not included in this rendering. UCF dimensions may differ from what is shown in this rendering; however, the environmental analysis in this EIR assumes a conservative maximum design envelope that encompasses potential variations in size, equipment, and operation.

The Draft EIR discloses the UCF's function, anticipated components, placement, and operational characteristics at a level sufficient to support a conservative environmental analysis under CEQA. Accordingly, the analysis and significance conclusions presented in the Draft EIR remain valid as written, and no additional mitigation measures are required. No further revisions to the EIR are necessary beyond the clarifications provided above.

Response to Comment O4-3

The statement that the Berkeley Marina Master Plan establishes a list of permitted land uses at the project site is not accurate. The Berkeley Marina Master Plan provides a long-term vision, guiding principles, policies, and capital improvement strategies for the Berkeley Marina. To the extent that the Marina Master Plan contains applicable goals, principles, and policies relevant to the proposed project, Draft EIR Section 3.9.4, *Impacts Analysis*, evaluates the proposed project's consistency with those provisions and concludes that the project would be consistent with the applicable principles and policies,

including those related to preservation and enhancement of public access, recreational opportunities, pedestrian and bicycle facilities, infrastructure improvements, and water-oriented recreational uses (refer to Impact LU-2, Table 3.9-4, pages 3.9-29 through 3.9-33).

Regarding the specific claim that the proposed ferry terminal is not a permitted use at the project site, Draft EIR Section 3.9.2, *Environmental Setting*, explains that the project site has a Berkeley General Plan land use designation of Waterfront/Marina and a zoning designation of Unclassified (U). The Draft EIR further explains that development within the Unclassified District is governed by Berkeley Municipal Code Section 23.208.020 and that the proposed project would be required to obtain a Use Permit for operation of a public ferry (refer to page 3.9-2). Accordingly, while the Marina Master Plan provides guidance regarding the future development and management of the Berkeley Marina, it is not the regulatory mechanism that establishes which uses are permitted at the project site. Accordingly, the Draft EIR adequately addresses applicable land use designations, zoning regulations, permitting requirements, and consistency with the Berkeley Marina Master Plan. For further discussion of land use plan consistency as it pertains to the proposed project, refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O4-4

With regard to Impact REC-2, refer to Section 2.6.2, *Construction Schedule* in Chapter 2, *Project Description* of the Draft EIR (pages 2-28 and 2-29). For additional discussion of the concerns raised by this comment, refer to Response to Comment A3-55, which includes revisions to the Draft EIR Section 3.11, *Recreation*, regarding construction phase maintenance of recreational access to the maximum extent feasible, temporary detours and wayfinding measures, and the limited potential for construction activities to disrupt recreational use of the Berkeley Waterfront.

The revisions described in Response to Comment A3-55 are clarifying in nature and do not alter the analysis presented under Impact REC-1, nor would they result in an increased level of impact significance. The analysis and significance conclusions presented therein remain valid as written, and no further revisions are required.

Response to Comment O4-5

Recreational fishing is referenced throughout the recreation discussion with regard to the Berkeley Municipal Pier, Berkeley Marina Basin, McLaughlin Eastshore State Park, San Francisco Bay, and Additional Facilities. Refer to Section 3.11.2, *Environmental Setting* in Section 3.11, *Recreation*, on pages 3.11-4 to 3.11-7 of the Draft EIR. While the comment is correct that shoreline fishing will be curtailed during construction of the proposed project, recreational fishing activities will be restored on the new pier.

To the extent the comment is concerned with construction phasing, refer to Response to Comment A3-55, which revises Section 3.11, *Recreation*, of the Draft EIR to clarify the analysis of temporary construction-related impacts on recreational access. The revision presented therein is clarifying in nature, and does not alter the analysis or subsequent significance conclusion under Impact REC-1. The analyses and significance conclusions presented in the Draft EIR remain valid as written, and no further revisions are necessary.

Response to Comment O4-6

Refer to Section 2.2.8, *Topical Response: Construction & Operation Noise at Nearby Parks,* for a discussion about the potential noise at these parks.

Response to Comment O4-7

The National Marine Fisheries Service (NMFS) California Eelgrass Mitigation Policy (CEMP; 2014) recommends no net loss of eelgrass habitat function but does not address impacts to potential eelgrass habitat [emphasis added]. As identified in Section 3.3 *Biological Resources*, eelgrass is not within the project site and would not be affected by implementation of the project.

Finally, 250 meters is the adopted threshold for potential impacts to eelgrass.[25] No documented occurrences of eelgrass have been reported less than 1,000 feet from the project site. Therefore, the proposed project is not expected to impact eelgrass habitat function. No revisions to the EIR are necessary.

Response to Comment O4-8

The Draft EIR addresses operational impacts, including ferry operational noise and lighting, to special status fish and marine mammals in Section 3.3.4, under Impact BIO-1, pages 3.3-52 through 3.3-54, Refer to Response to Comment O7-17 for discussion of and Draft EIR clarification text changes addressing ferry operations impacts on waterbirds. Impacts from ferry vessel operational wake are discussed under Impact BIO-3, page 3.3-61. Impacts to aquatic species movement from operational noise are discussed under Impact BIO-4, page 3.3-64. These various related ferry vessel operational impacts were determined to be less than significant in the Draft EIR. In addition, refer to Section 2.2.11, *Topical Response: Ferry Operations,* for further discussion of vessel interaction with aquatic species and Section 2.2.4, *Topical Response: Biological/Underwater Noise*, and Section 2.2.28, *Topical Response: Whale Strike*, for discussion of effects of vessel speed on aquatic species.

Revision of the EIR to add a full, quantitative operational analysis of every combined disturbance pathway (wake, noise, lighting, vessel, and passenger activity) is not warranted under CEQA, because the project's incremental increase in ferry vessel operation is small relative to existing Bay vessel operational levels. In addition, comment claims of population-level effects are speculative without site-specific exposure and demographic data such as the frequency, duration, and spatial overlap of foraging areas with project vessel wake envelopes under actual operating conditions and demographic data, including local abundance, seasonal residency patterns, foraging success rates, and survival or reproductive metrics for the affected species. No Draft EIR changes are necessary in response to this comment, beyond the clarifying revisions made in Response to Comment O7-17.

Response to Comment O4-9

Preparation of a fully developed, site-specific mitigation plan requires final design information and jurisdictional determinations that are not yet available. Refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, as well as Response to Comment A1-10 for further discussion about how Mitigation Measure BIO-3 is not deferred mitigation under CEQA. In addition, refer to the errata in Chapter 3 of the Final EIR for changes to the wording of Mitigation Measure BIO-3.

Response to Comment O4-10

Draft EIR Section 3.3.4 under Impact BIO-5 on page 3.3-65 addresses the proposed removal of trees against the City-determined Specific CEQA Threshold (page 3.3-45): whether the project would "Remove, damage, or replace trees designated as protected by the City of Berkeley Tree Ordinance, including coast live oak trees and any trees growing in or on any street, parking strip, public square, park or playground." Under Impact BIO-5, the Draft EIR concludes that, with City approval of the tree removal permit, impacts related to conflicts with local policies or ordinances protecting trees would be less than significant. A detailed, tree-by-tree inventory is not necessary for CEQA assessment purposes but may be prepared and

[25] USACE and EPA 2011 Programmatic EFH Conservation Measures for the LTMS Program Agreed-upon by USACE, EPA, and NMFS https://www.spn.usace.army.mil/Portals/68/docs/Dredging/LMTS/LTMS%20EFH%20full%20signed%20agreement%20FINAL%206-9-2011.pdf, Accessed June 18, 2026.

reviewed through the City's separate permitting process, which is the appropriate venue for determining individual tree protection status and compliance with Chapter 12.44 of the Berkeley Municipal Code. No changes to the EIR are necessary in response to this comment.

Response to Comment O4-11

Refer to Section 2.2.29, *Topical Response: Wind* (Sub-Section Wind Shelter Effects of Tree and Berm Removal), for discussion concerning CEQA and potential changes to wind patterns. No revisions to the EIR are required, and no mitigation measures are warranted.

Response to Comment O4-12

The Draft EIR addresses the proposed removal of trees and consistency with the Berkeley Municipal Code in Section 3.3.4 under Impact BIO-5, page 3.3-65 and concludes a less-than-significant impact. CEQA requires the Draft EIR to disclose potential impacts and identify feasible mitigation, but it does not require the document to duplicate other regulatory processes that already govern technical details like tree-replacement ratios. Under the Berkeley Municipal Code, the City Urban Forestry Unit, not the Draft EIR, determines which trees are protected and what replacement is required. In addition, the list of trees to be removed in the Draft EIR Project Description does not need to also be incorporated as mitigation in the Draft EIR Biological Resources section, as potentially significant environmental impacts were not identified with respect to the protection of trees and, thus, mitigation is not required. No changes to the Draft EIR are necessary.

Response to Comment O4-13

Section 3.11, *Recreation* of the Draft EIR identifies swimming as an existing recreational use within the project site throughout Section 3.11.2, *Environmental Setting*. Refer to Draft EIR pages 3.11-6 and 3.11-7, which describe swimming as a primary recreational activity occurring throughout the San Francisco Bay and describes the South Sailing Basin, public docks located south of University Avenue and the sailing club facilities, and the rocky shoreline at the southernmost point of the 199 Seawall peninsula as resources supporting recreational swimming. The Draft EIR accordingly considers potential impacts to the existing recreational use of swimming under Impact REC-1, and concludes that impacts would be less than significant (refer to Draft EIR pages 3.11-16 through 3.11-20).

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment O4-14

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, regarding the Coastal Study analysis of wave climate and potential changes near the proposed ferry terminal, including at the South Cove Sailing Basin. As part of the project design process, the City's Design Team (COWI) carried out hydrodynamic and sedimentation modeling using a two-dimensional hydrodynamic and sediment transport model to assess currents, wave-driven transport, and long-term sediment deposition within the dredged areas. The model was calibrated against historical survey data from the Berkeley Marina. The modeling effort accounts for wind conditions, tidal forcing, regional hydrodynamic conditions, and site-specific bathymetry.

In response to comments concerning ferry wake conflicts with water-based recreation, pages 3.11-19 and 3.11-20 of the Draft EIR has been revised to clarify the discussion of ferry operations, existing recreational uses, and the applicability of Berkeley Municipal Code Section 6.20.180. The text revisions addressing these topics are provided in Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

The text changes presented under Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*, and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* are clarifying in nature,

and do not result in a change to the Impact REC-1 significance conclusion presented in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment O4-15

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*, which provides clarifications regarding vessel speed protocols, and to Response to Comment O4-14, which provides information about the Coastal Study. The text change presented in Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* is clarifying in nature and does not result in a change to the Impact REC-1 significance conclusion presented in the Draft EIR.

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment O4-16

The comment's discussion of Maritime Transportation Security Act (MTSA) requirements conflates provisions that are not applicable to the proposed project. 33 CFR Part 105 (Maritime Security: Facilities) applies to certain facilities, including those serving passenger vessels carrying more than 150 passengers, and establishes requirements related to Facility Security Plans, restricted access areas, and operational security procedures. These regulations do not establish or require fixed "security zones" extending 25 to 100 meters into surrounding waters, as stated in the comment.

The proposed Berkeley ferry terminal would be operated by the Water Emergency Transportation Authority (WETA), which already complies with applicable MTSA and U.S. Coast Guard requirements at its existing ferry facilities. These requirements involve operational and administrative security measures (e.g., access control, screening, and coordination with vessel security plans) rather than establishment of large, permanent exclusion areas in surrounding waters.

With respect to vessel characteristics, ferry vessels similar to those proposed for the project (e.g., Dorado-class electric ferries) have a gross tonnage of approximately 96, which is below the 150 gross tonnage threshold referenced in the comment. Accordingly, the specific trigger cited by the comment is not applicable to the project.

Section 3.11, *Recreation* of the Draft EIR (pages 3.11-14 through 3.11-24) evaluates potential impacts to water-based recreational uses, including boating and shoreline access. The analysis considers the physical footprint of the terminal, docking operations, and navigation safety requirements, and concludes that the project would not substantially reduce recreational access or use of surrounding waters.

To the extent that operational safety buffers or standard navigational practices would be implemented (as is typical for any ferry terminal), these would be limited in spatial extent and duration and would not preclude continued recreational use of adjacent waters.

The analyses and significance conclusions presented under Impact REC-1 in Section 3.11, *Recreation*, and throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment O4-17

Refer to Section 2.2.8, *Topical Response: Construction & Operation Noise at Nearby Parks,* for a discussion about the potential noise at these parks.

Response to Comment O4-18

Refer to Section 3.10.5 of the Draft EIR, which includes an analysis of cumulative noise impacts, including from operation of the project. The conclusions in this analysis would apply to nearby parks and recreational resources.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment O4-19

The Draft EIR addresses impacts to nesting birds as a result of operational lighting in Section 3.3.4, under Impact BIO-1 on page 3.3-52 and concludes that impacts would be less than significant. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar to existing conditions and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy mitigation requirements. Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for discussion of operational nighttime lighting. No Draft EIR changes are necessary in response to this comment.

Response to Comment O4-20

Refer to Section 2.2.23, *Topical Response: Sea Level Rise,* for a discussion of the sea level rise projections used in the project design.

Dear Ms. McNulty,

The Sierra Club thanks the City of Berkeley for the opportunity to provide written comment on the DEIR for the proposed Berkeley Waterfront Transportation Pier Ferry Project. O5-1

Attached, please find the following:

- Sierra Club DEIR Comment letter dated April 27, 2026
- *Effects of Ferry Traffic on Migratory Birds of San Francisco Bay*
- Slideshow for *Effects of Ferry Traffic on Migratory Birds of San Francisco Bay*

O5-2

Thank you for your time and consideration of our feedback. Should you have any questions, please do not hesitate to contact us.

Sincerely,

John J. Bauters, Chair
Sierra Club San Francisco Bay Chapter

EFFECTS OF FERRY TRAFFIC ON MIGRATORY WATERBIRDS IN THE SAN FRANCISCO BAY

Commuter ferry routes cross valuable subtidal and intertidal habitats in the San Francisco Bay estuary that support a wealth of natural resources, including large numbers of migratory waterbirds during the winter. When new routes were proposed for the region under a new transit authority in 1999, we initiated studies to evaluate the ecological effects of commuter ferries on rafting waterbirds. The main objectives were to: 1) conduct on-board ferry surveys to assess species-specific buffer distances; 2) examine waterbird avoidance of watercraft in land-based surveys at selected areas; and 3) document distribution of waterbirds along ferry routes with aerial surveys.

On-board ferry surveys were used to determine how waterbirds responded behaviorally to the passage of a commuter ferry. Observers recorded the behavioral response (fly, dive, swim, alert posture) of waterbirds and their distance from the ferry. Surf scoters (*Melanitta perspicillata*), lesser and greater scaup (*Aythya affinis* and *A. marila*), and western and Clark's grebes (*Aechmophorus occidentalis* and *A. clarkii*) were the most abundant species found across all ferry routes, with diving ducks representing the most abundant guild. Behavior response distances ranged from 50-500 m for grebes, 30-900 m for scoters, and 60-500 m for scaup. Most waterbirds showed a behavior response within 300 m, and we used that distance to estimate the zone within which birds were affected. In addition, we used GPS tracking to determine that variation in the path of the ferries was usually 200 m. Thus, we calculated a total effect area along a ferry route from their sum or a distance of 500 m. Affected areas ranged from 2.44 to 75.75 km^2 and included 0.07-14.26 km^2 of shoals preferred for foraging (<4 m deep).

O5-49

We studied the duration of disturbance of a ferry transit from land-based surveys. At selected sites, we recorded numbers and behavior of waterbirds before and after transit. Scaup densities declined after ferry transit along the Vallejo and Alameda Harbor Bay route, and scoters decreased after passage of the Larkspur ferry. However, patterns were not consistent, probably because birds were responding to several factors such as time-of-day, weather, and other disturbances. When we compared weekday to weekend surveys, we found more waterbirds along routes during the weekdays despite more frequent ferry traffic.

Aerial surveys indicated that diving ducks accounted for 85% of open water birds, dominated by scaup and scoter (90%). Numbers were highest during Nov-Dec in the North Bay, consistent in the central Bay, and lowest in the South Bay. While new commuter ferries may be beneficial at reducing vehicle traffic, they will have an effect on waterbird populations. Although they do not eliminate open water habitats, they may preclude use of it by waterbirds. Thus, our study indicated that effects on waterbirds should be considered when planning new transit routes or increasing their frequency, especially in shoal areas used for foraging.

EFFECTS OF FERRY TRAFFIC ON MIGRATORY WATERBIRDS IN THE SAN FRANCISCO BAY

Wildlife Response to Recreational Activities (adapted from Knight and Cole, 1995)

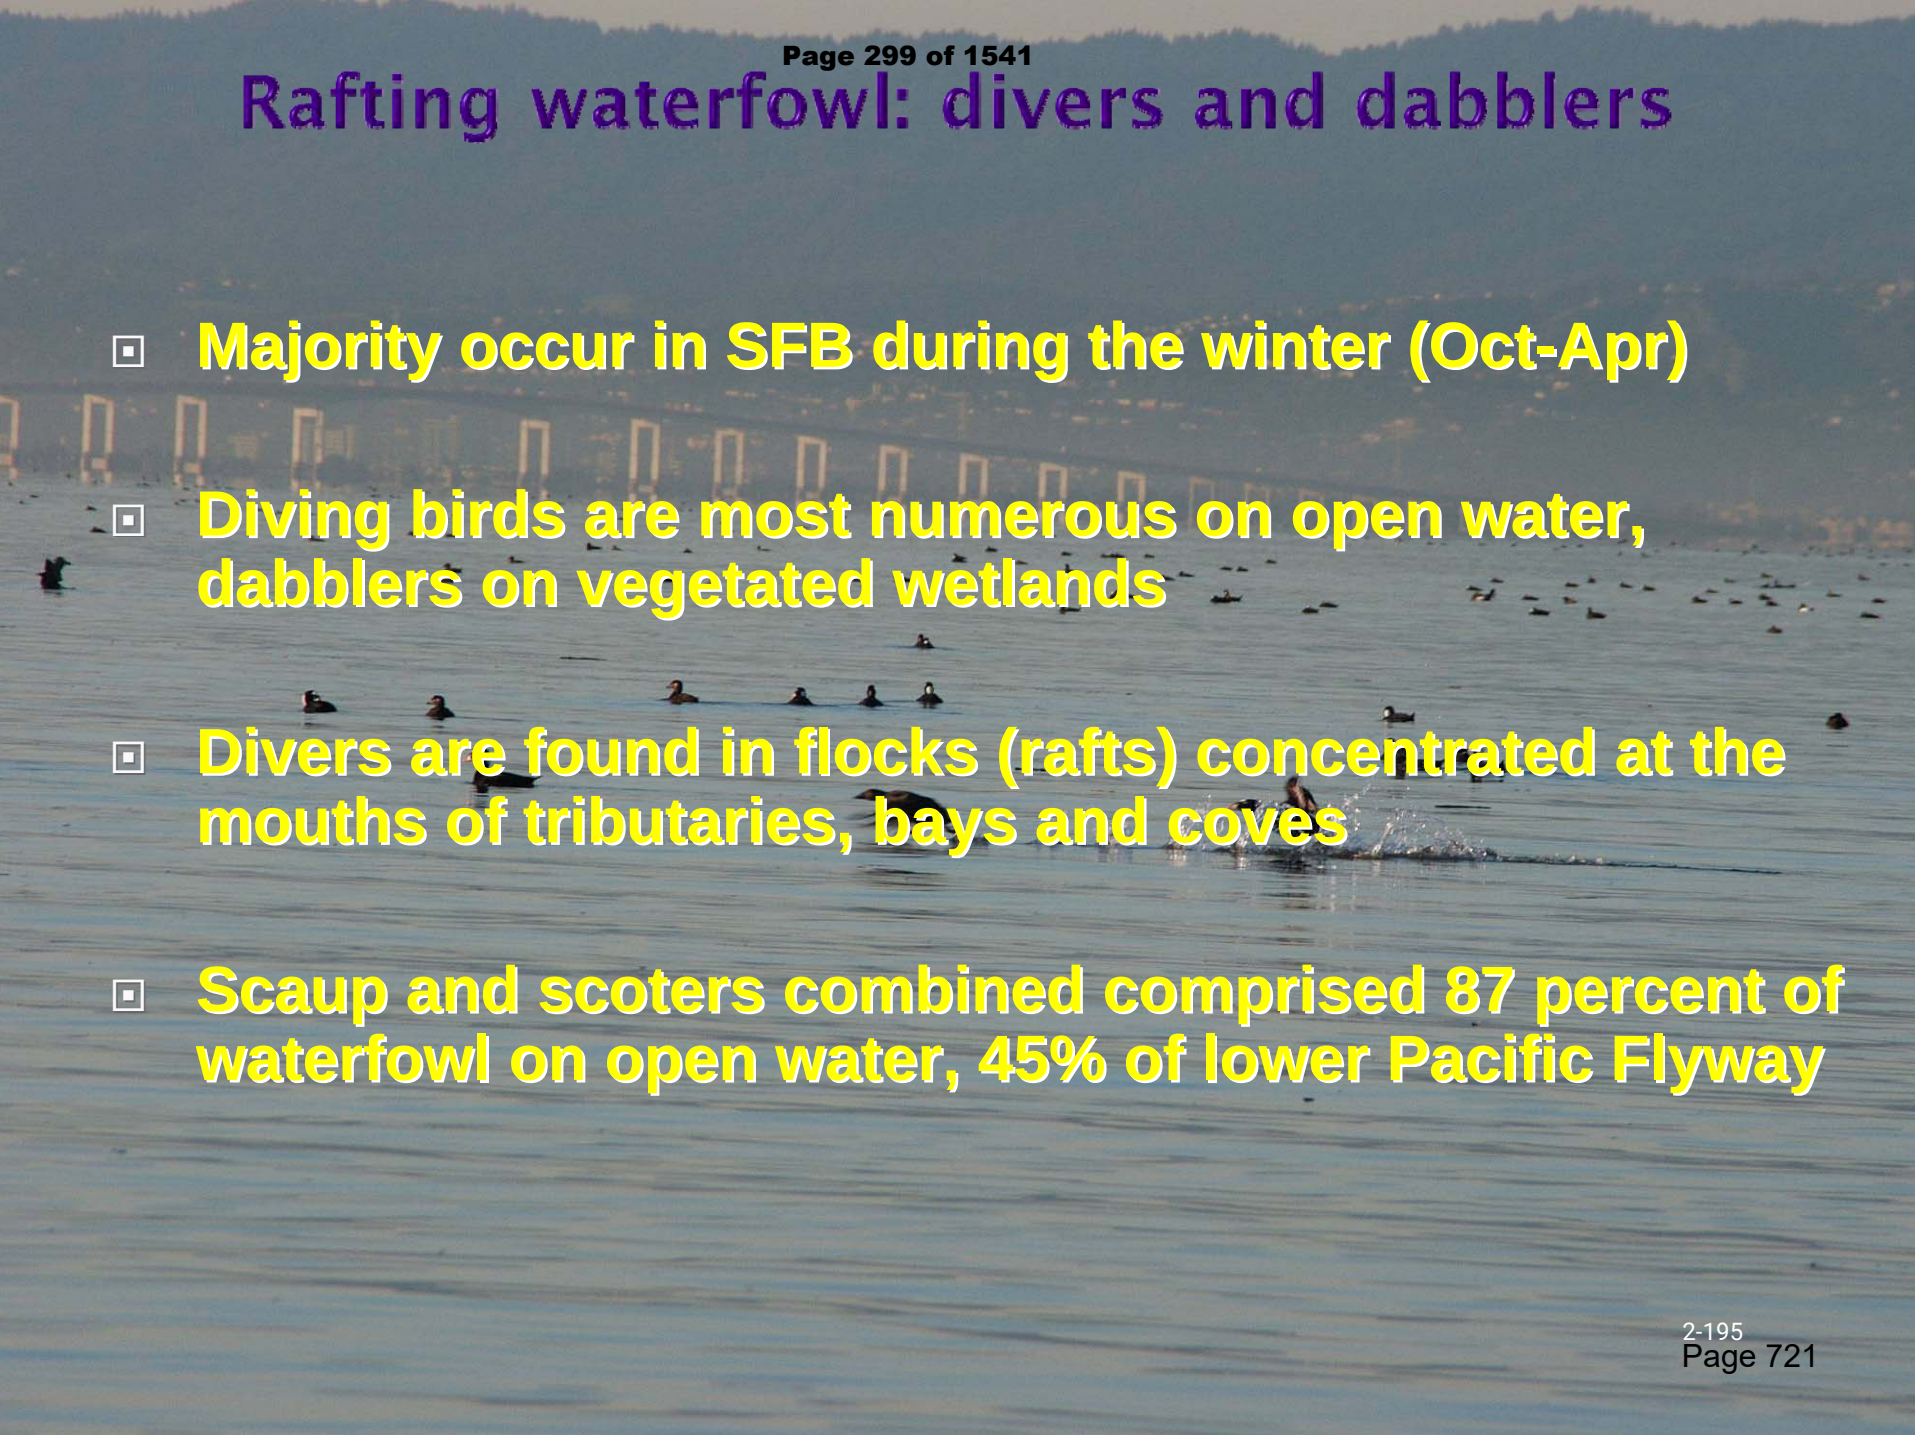
Generalizations about disturbance of waterbirds

(J. Evens, ARA)

- Larger birds are less tolerant of than smaller ones (Rodgers and Schwikert 2003, Fernandez-Juricic *et al*. 2002)
- Larger flocks flush at greater distances than smaller flocks or individuals
- Flight distance is correlated positively with flock size and species diversity. Flight distances longer for species that are foraging (Mori et al. 2003, ARA 2008)
- Waterbirds may relocate to less profitable areas or emigrate to compensate for disturbance

Waterbirds susceptible to disturbance by watercraft

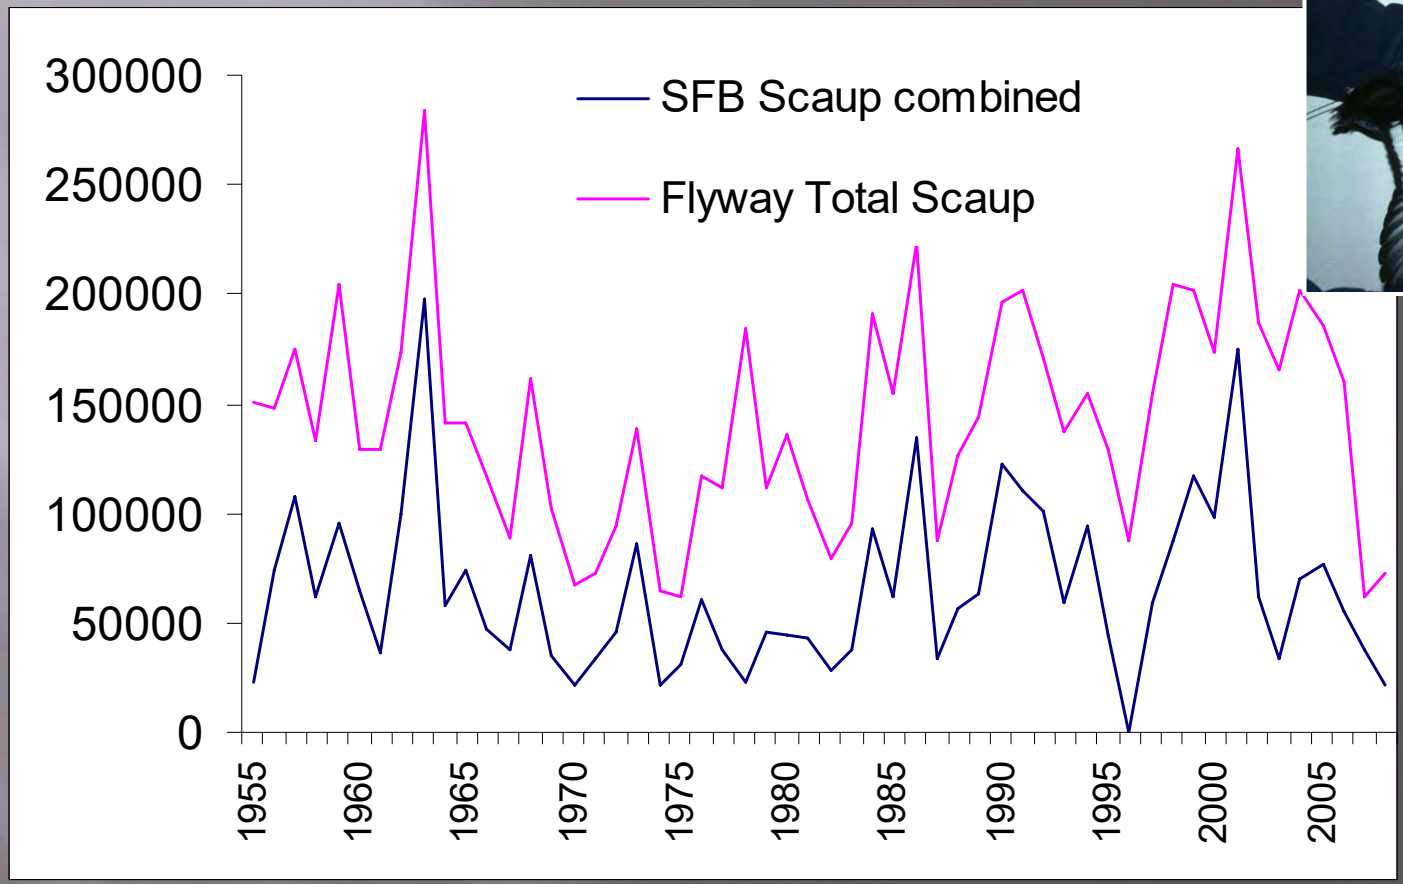
- Solitary nesting birds
- Colonial nesting birds
- Flocking shorebirds
- Rafting waterbirds



2-194

(J. Evens, ABA)

Rafting waterfowl: divers and dabblers

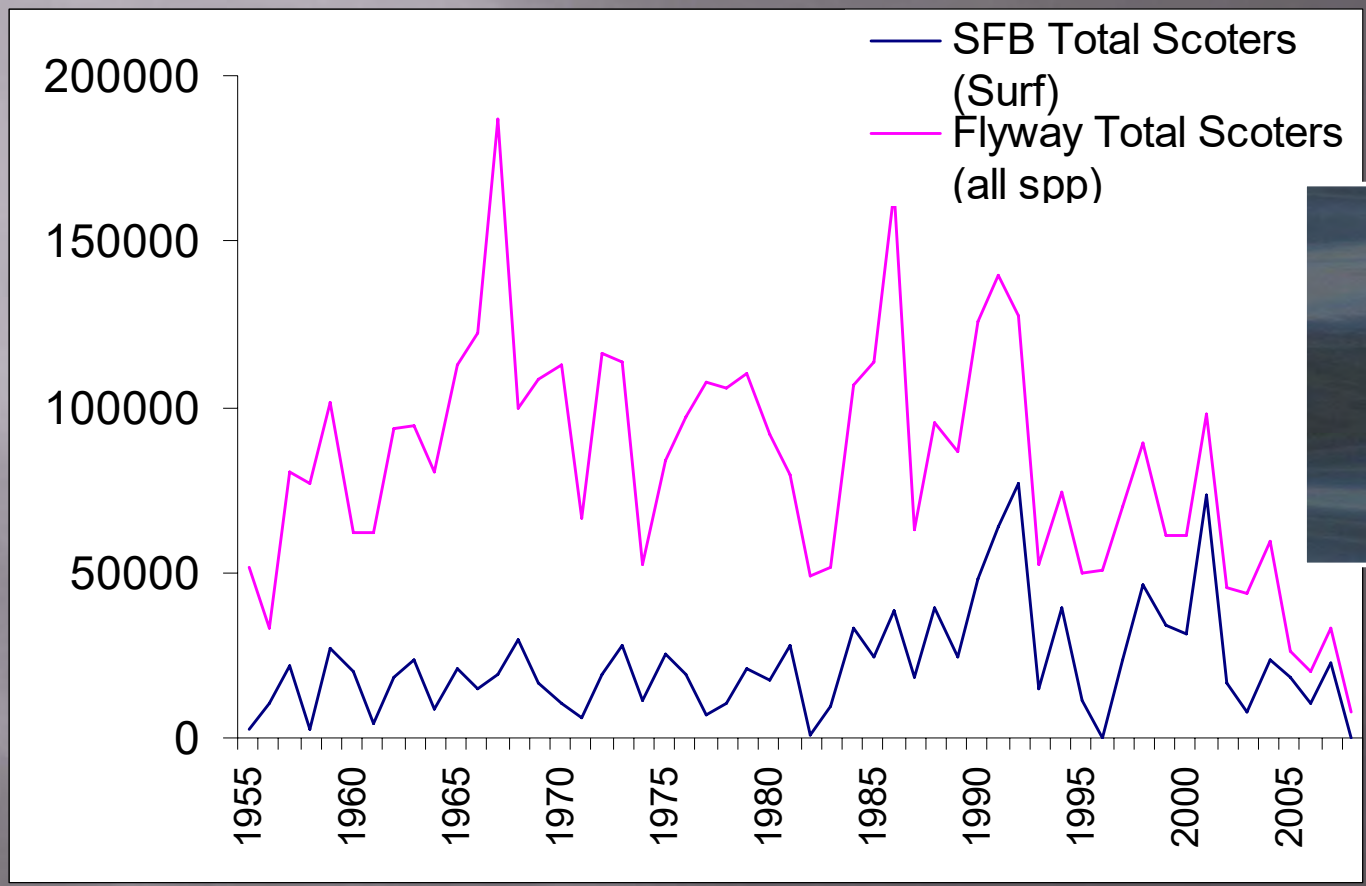


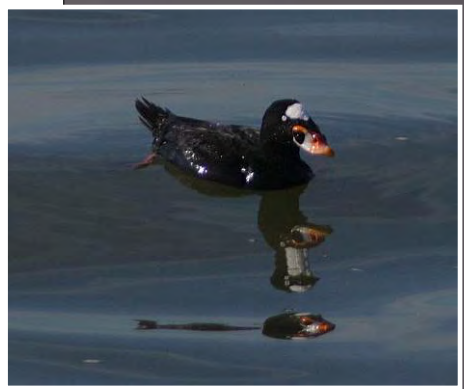
- Majority occur in SFB during the winter (Oct-Apr)
- Diving birds are most numerous on open water, dabblers on vegetated wetlands
- Divers are found in flocks (rafts) concentrated at the mouths of tributaries, bays and coves
- Scaup and scoters combined comprised 87 percent of waterfowl on open water, 45% of lower Pacific Flyway

San Francisco Bay Waterfowl – Open Water

- Mid-winter aerial surveys from 1970-1991 averaged 425,000 waterfowl present in mid-January
- Mid-winter waterfowl surveys 1992-2007 exclusive of 1996) averaged 182,800 birds
- Numbers of waterfowl decreased 25% from the 1950s until 1990 (Takekawa *et al*. 2000)
- Waterfowl continue their downward trend from 300,000 in the late 1980s (Accurso 1992) to 184,200 (SE ±65,700) from 1992-2007

Midwinter Index for Greater and Lesser Scaup combined, 1955-2008





- Winter average 44% of lower Pacific Flyway scaup

* 1996 No SFB Data

Midwinter Index for Surf Scoters, 1955-2008

- Winter average 42% of lower Pacific Flyway scoters

* 1996 No SFB Data

SFB FERRIES

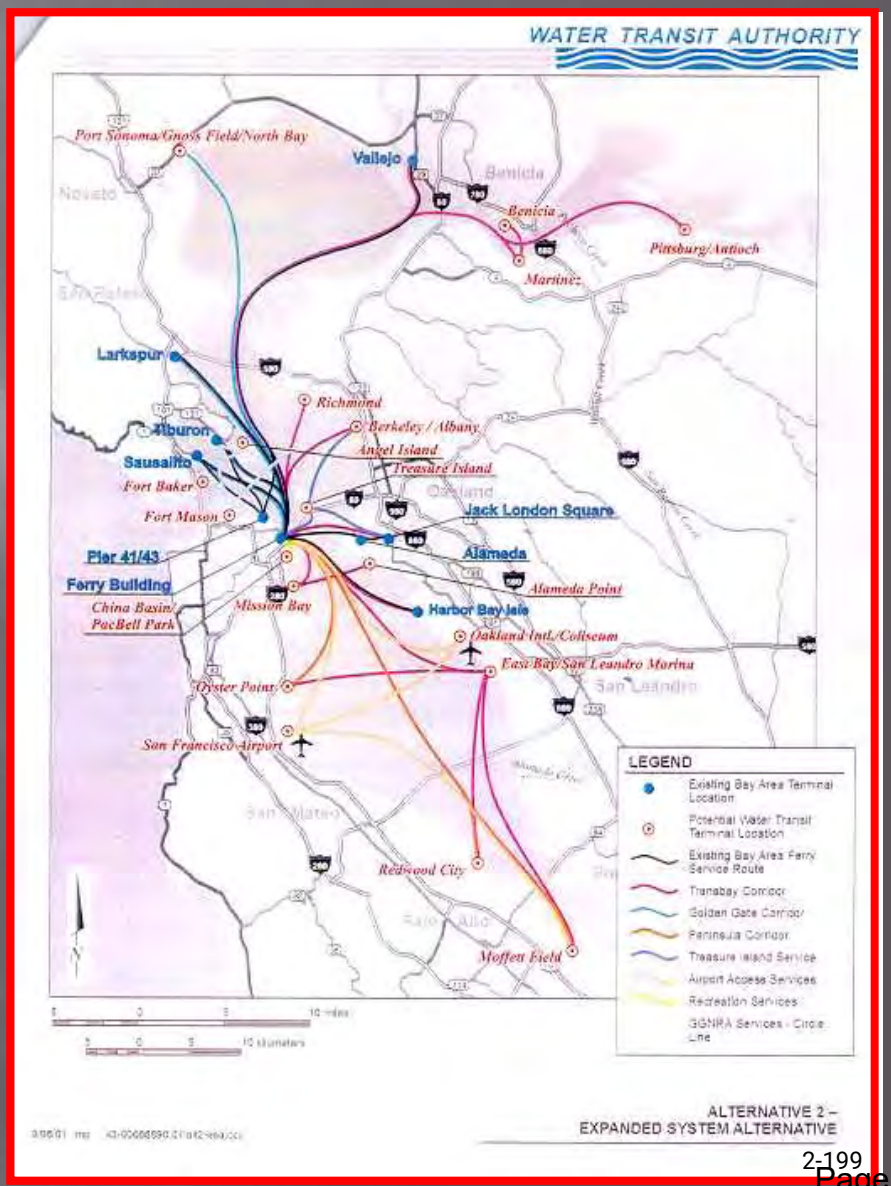
San Francisco Chronicle

BAY AREA

AND CALIFORNIA

SECTION A



The proposed regional ferry system, according to Water Transit Authority officials, would carry 12 million passengers a year by 2025.

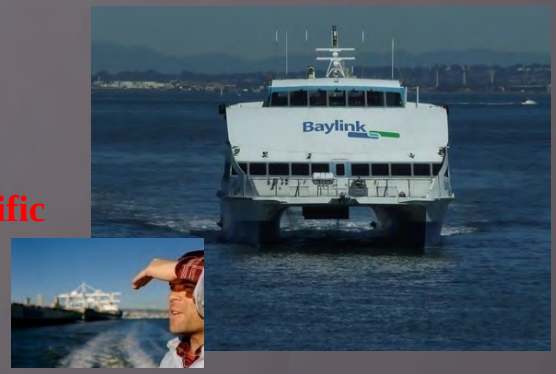
$662 million, 10-year plan to make bay a ferry capital

A businessman and a bicyclist board the ferry Mendocino just before departure from the San Francisco Ferry Building dock.

Proposal would add 7 routes and use less-polluting vessels

Resource Concerns:
Open Water Disturbance
Displacement Effects
Habitat Erosion

Objectives



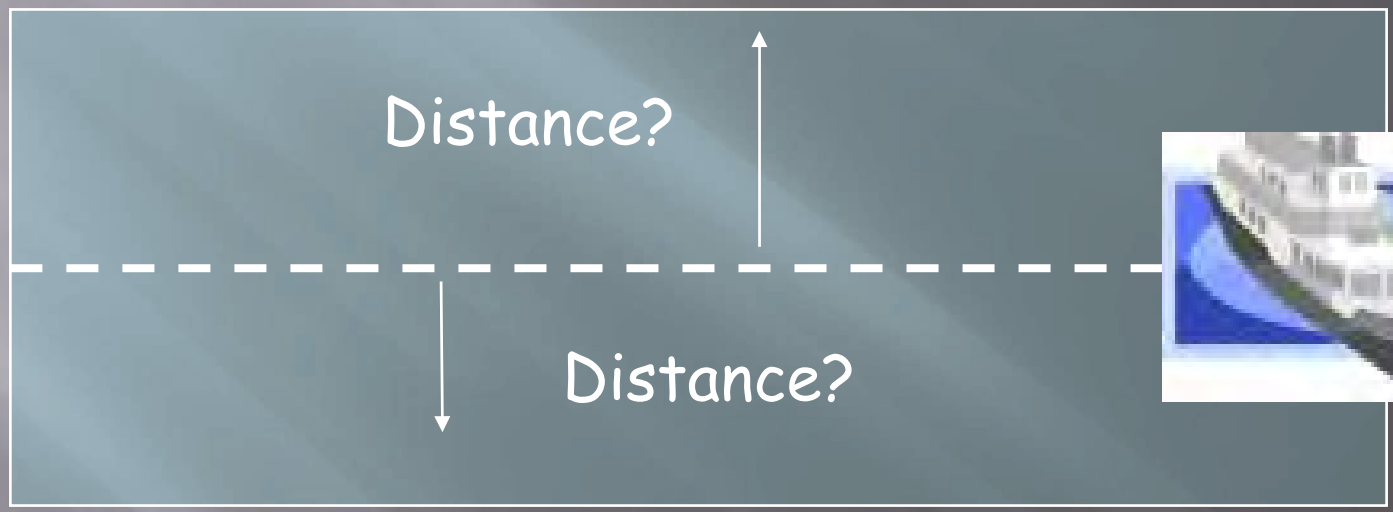
1. Conduct ferry surveys in San Francisco Bay to assess species-specific buffer distances.

2. Examine waterbird avoidance of watercraft in land-based surveys at selected areas.

3. Document distribution of waterbirds along ferry routes with aerial surveys.

I. Ferry Surveys-- Existing Ferry routes, Distances, Travel times, and Round Trips

(Inventory of Bay Area Water Transit Services and Facilities, July 2001, Pacific Transit Mgmt. Oakland)



Existing Ferry Route[1]	Dist (km)	Minimum Time (min)	Round Trip (min)	First trip of day (winter)		Daily Round Trips (current)
				Wday	Wend	
Larkspur-SFFB	20.3	30	70	550	940	21
Sausalito-SFFB	9.4	25	70	710	1120	9
Tiburon-P41	7.7	20	70	1100	940	7
Tiburon-SFFB	7.7	20	50	600	920	7
Vallejo-SFFB	43.2	55	120	600	900	11
Ala/Oak/SFFB/P41	10.1	Ala-SFFB: 20 Oak-SFFB: 30	65	600	900	13
Ala-Harbor Bay-SFFB	13.9	25	60	630	None	6

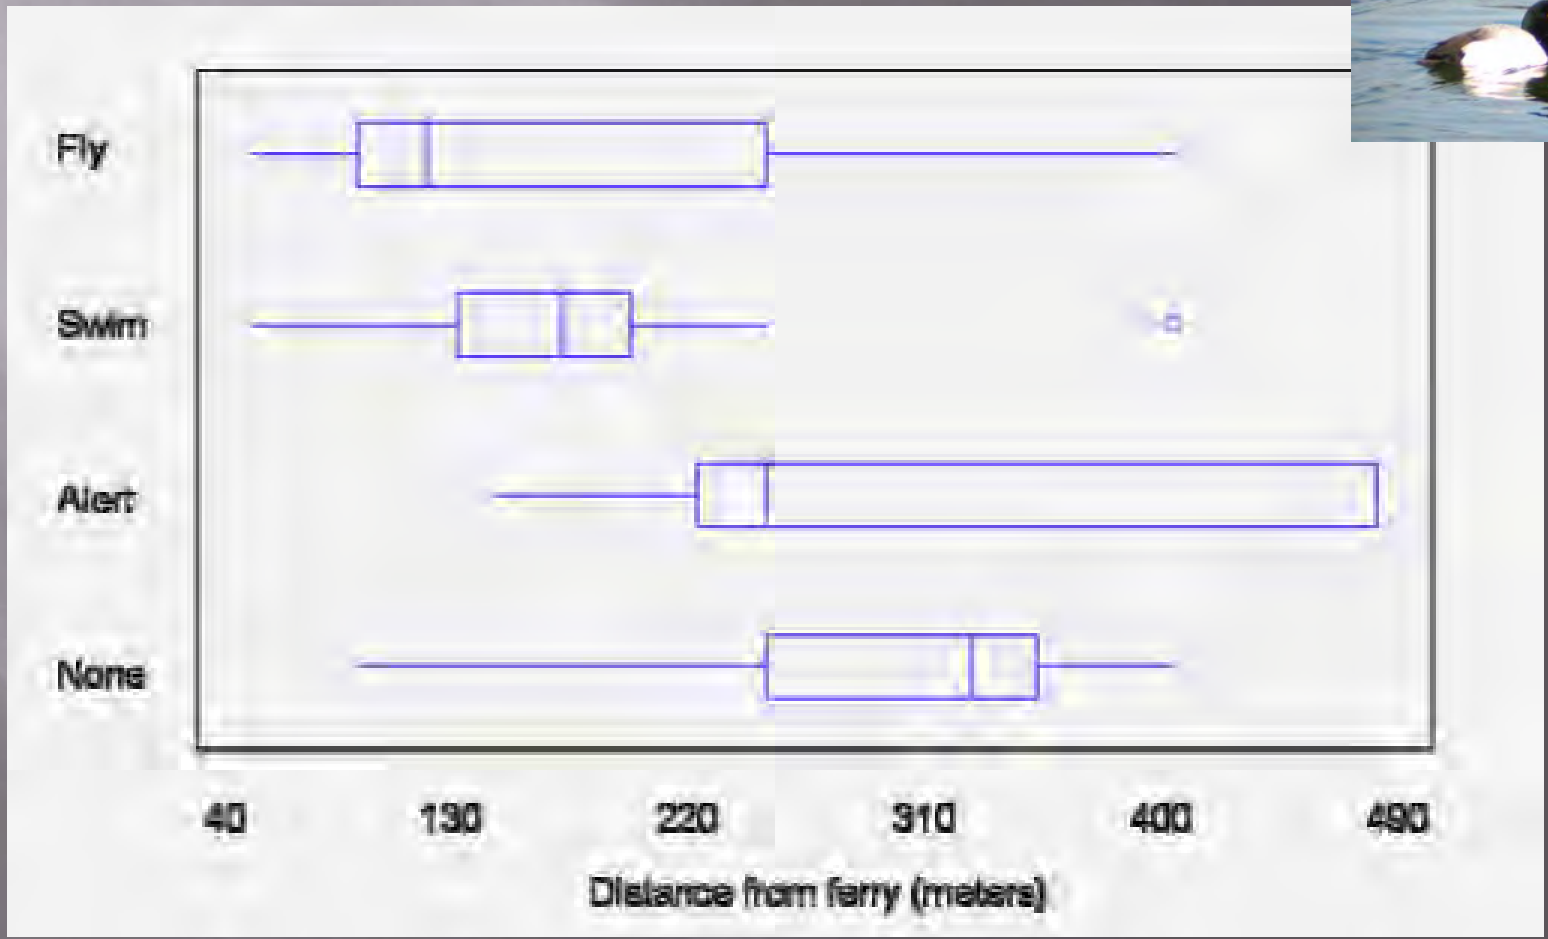
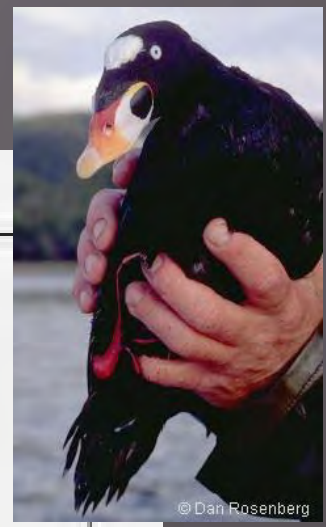
I. Disturbance Response - Behavior

Flight Response

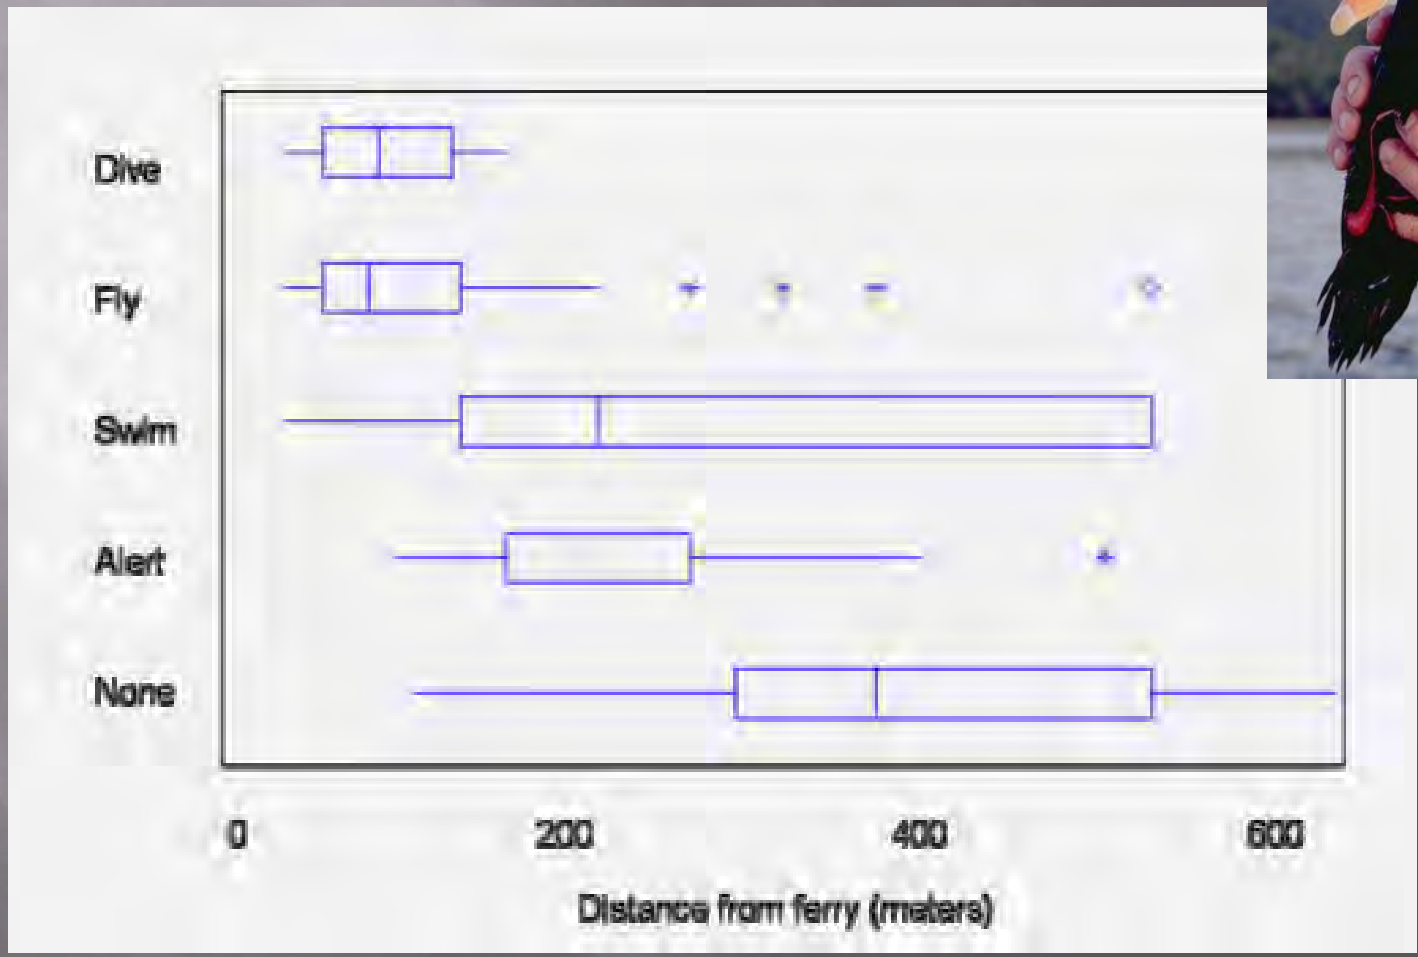


Diving Response

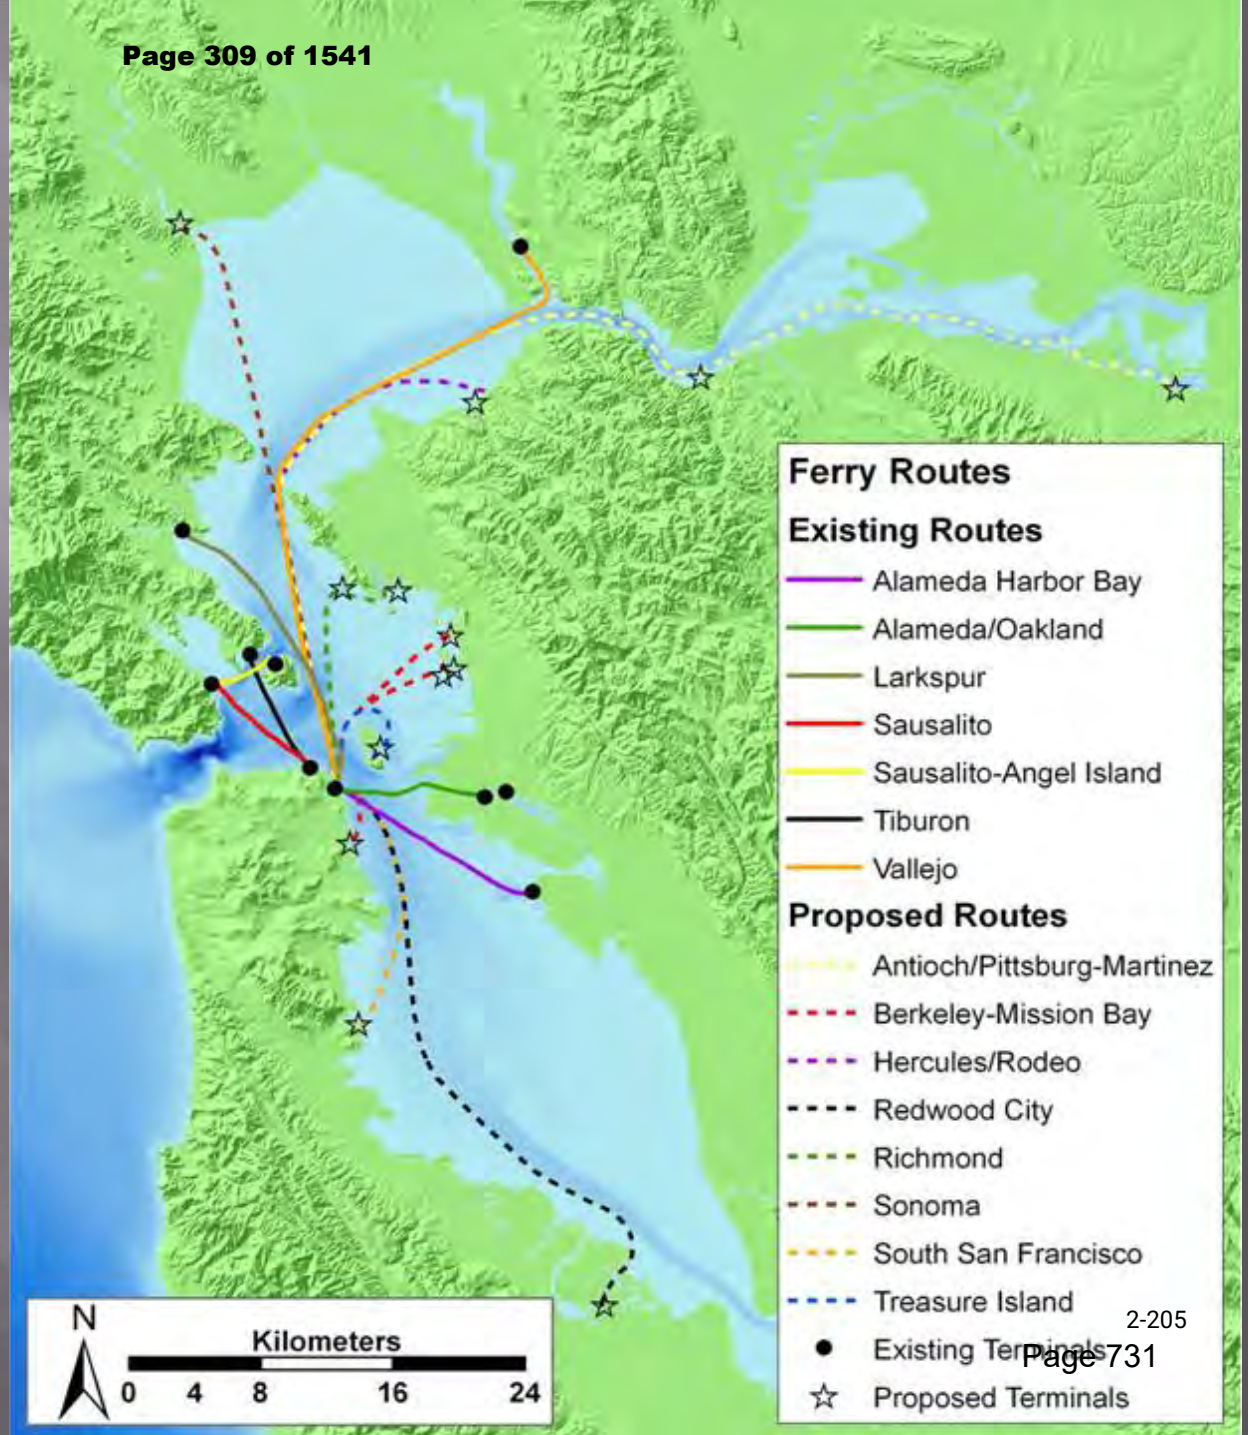
I. Disturbance Response – Behavior



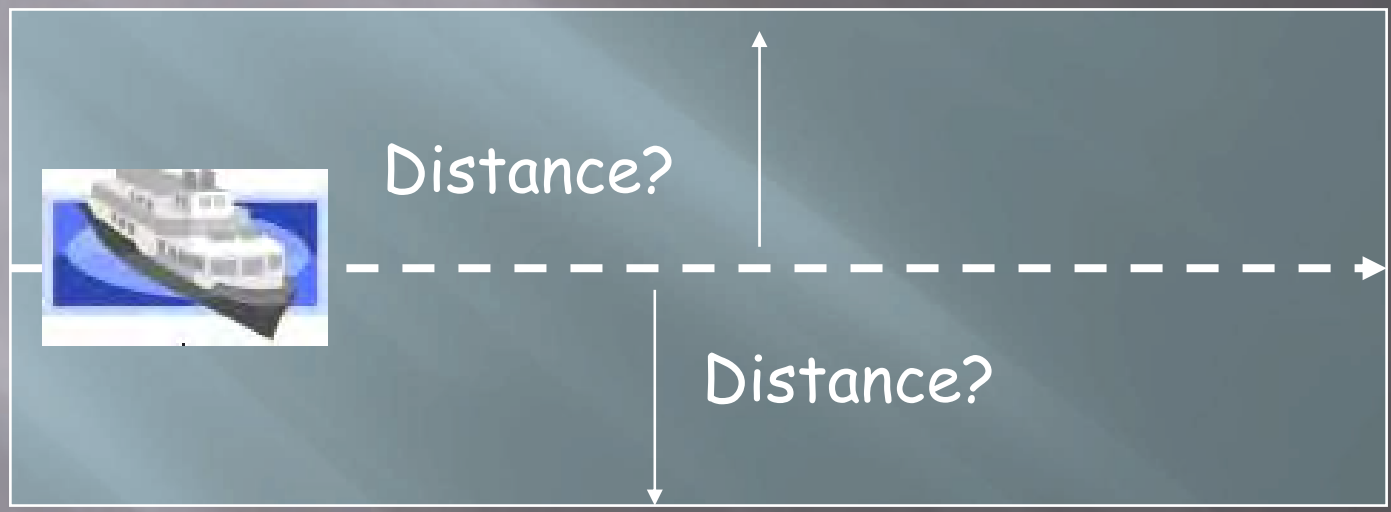
Scaup



I. Disturbance Response – Behavior

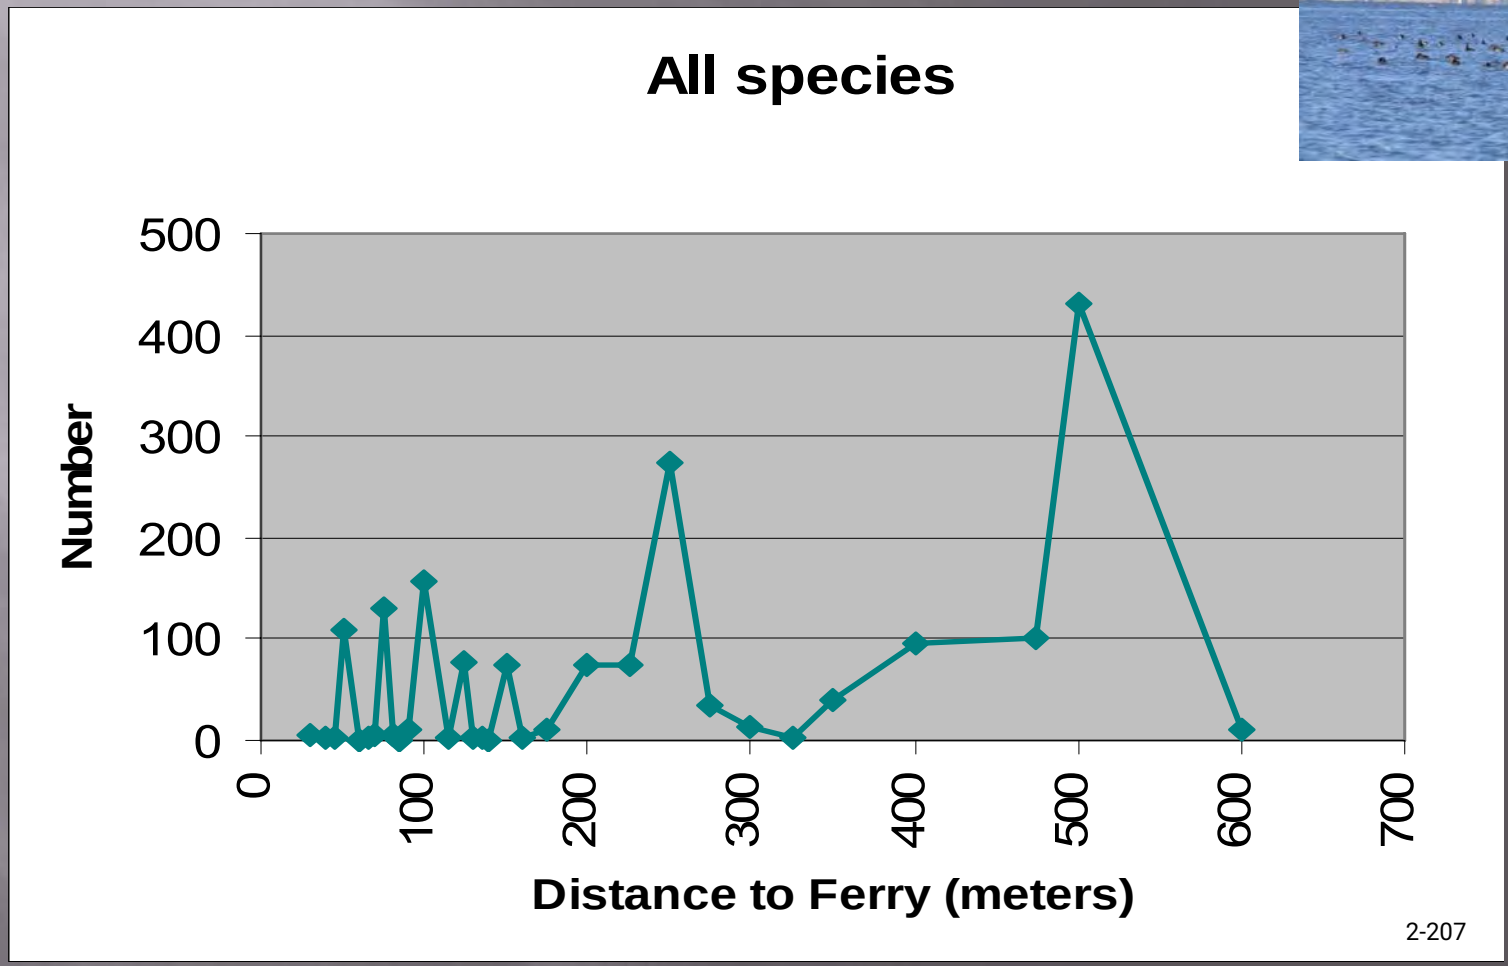


Scoter



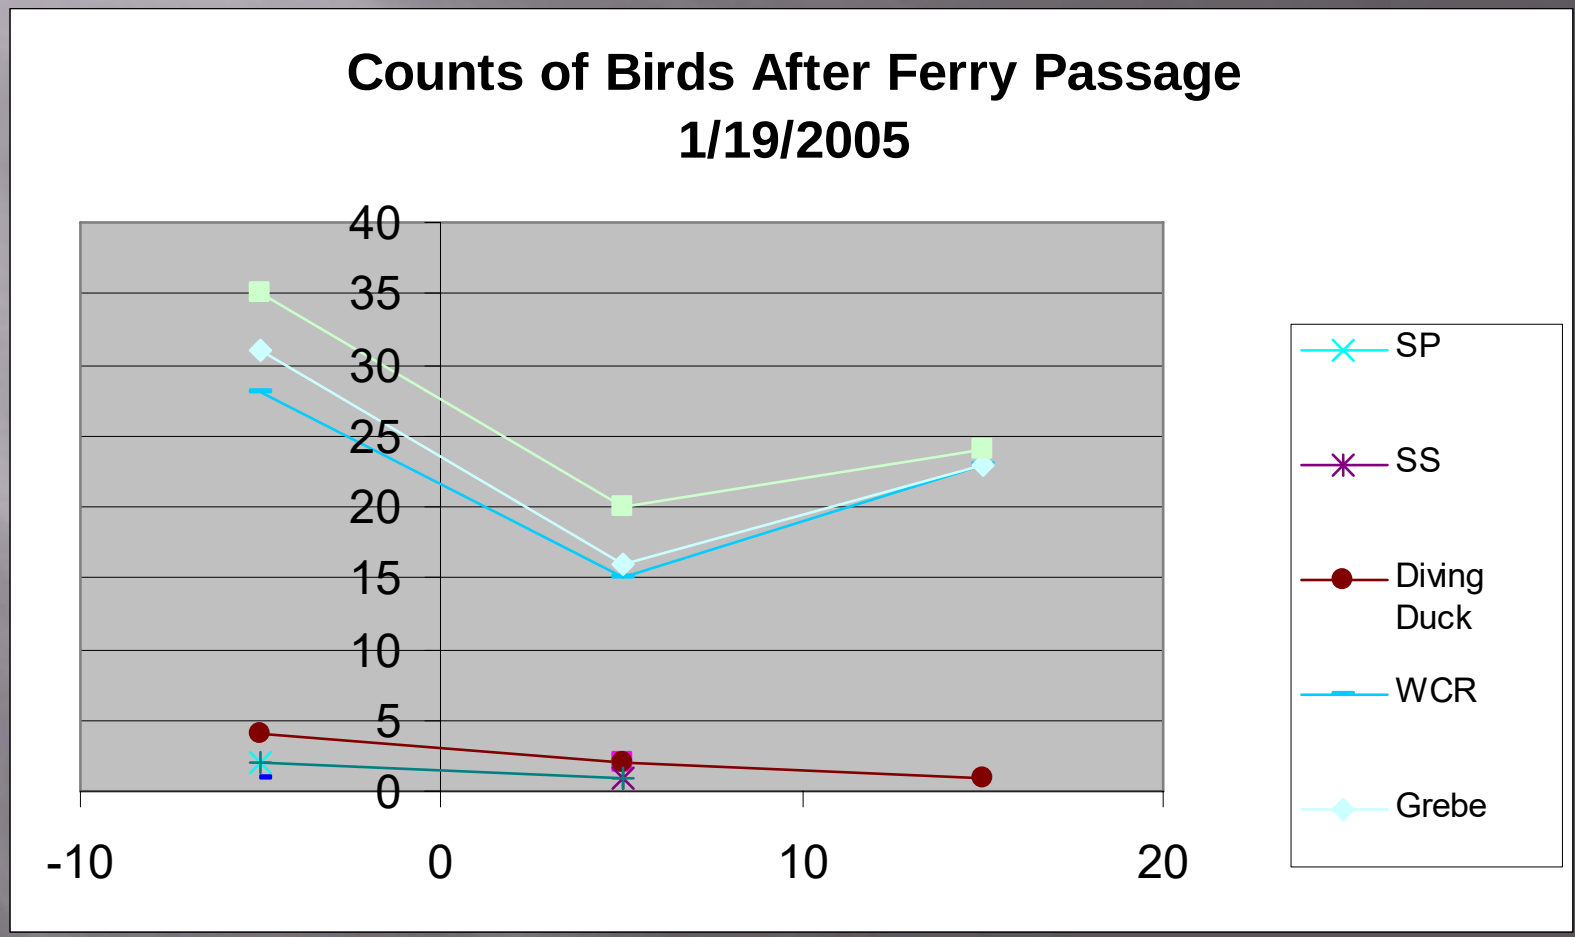
II. Ground Surveys – at selected locations along routes

IIa. Disturbance Response – Abundance

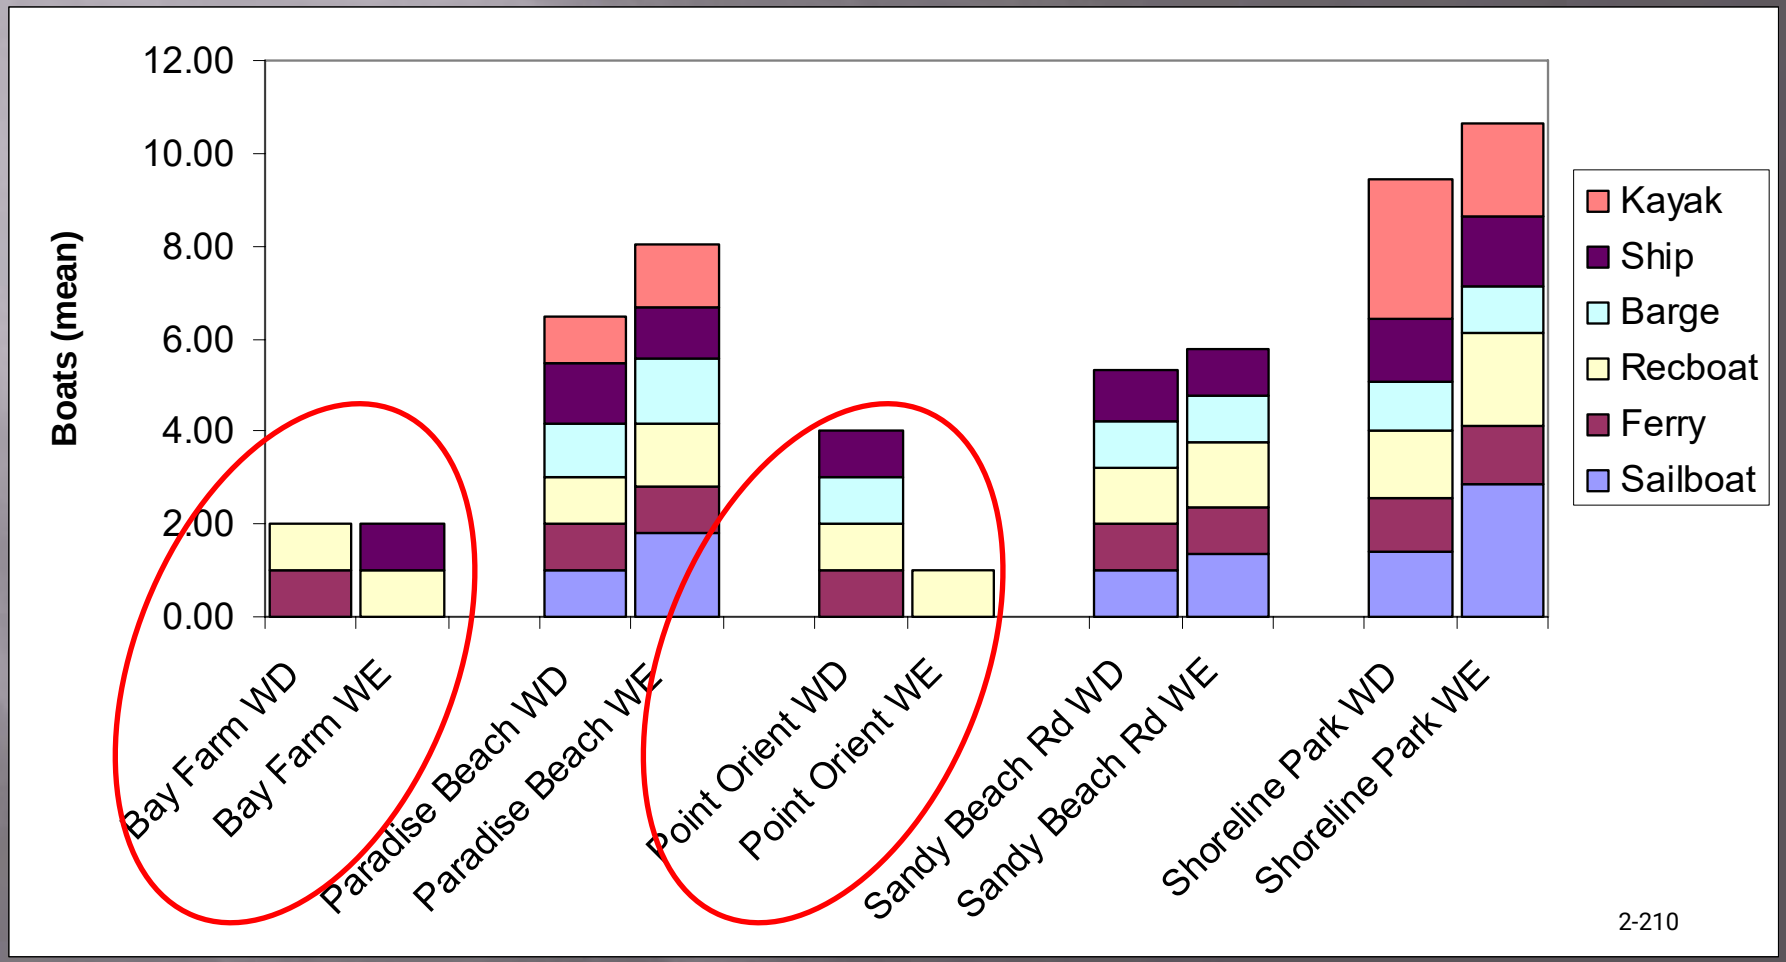


IIa. Disturbance Response – Abundance closer to ferry route, fewer birds

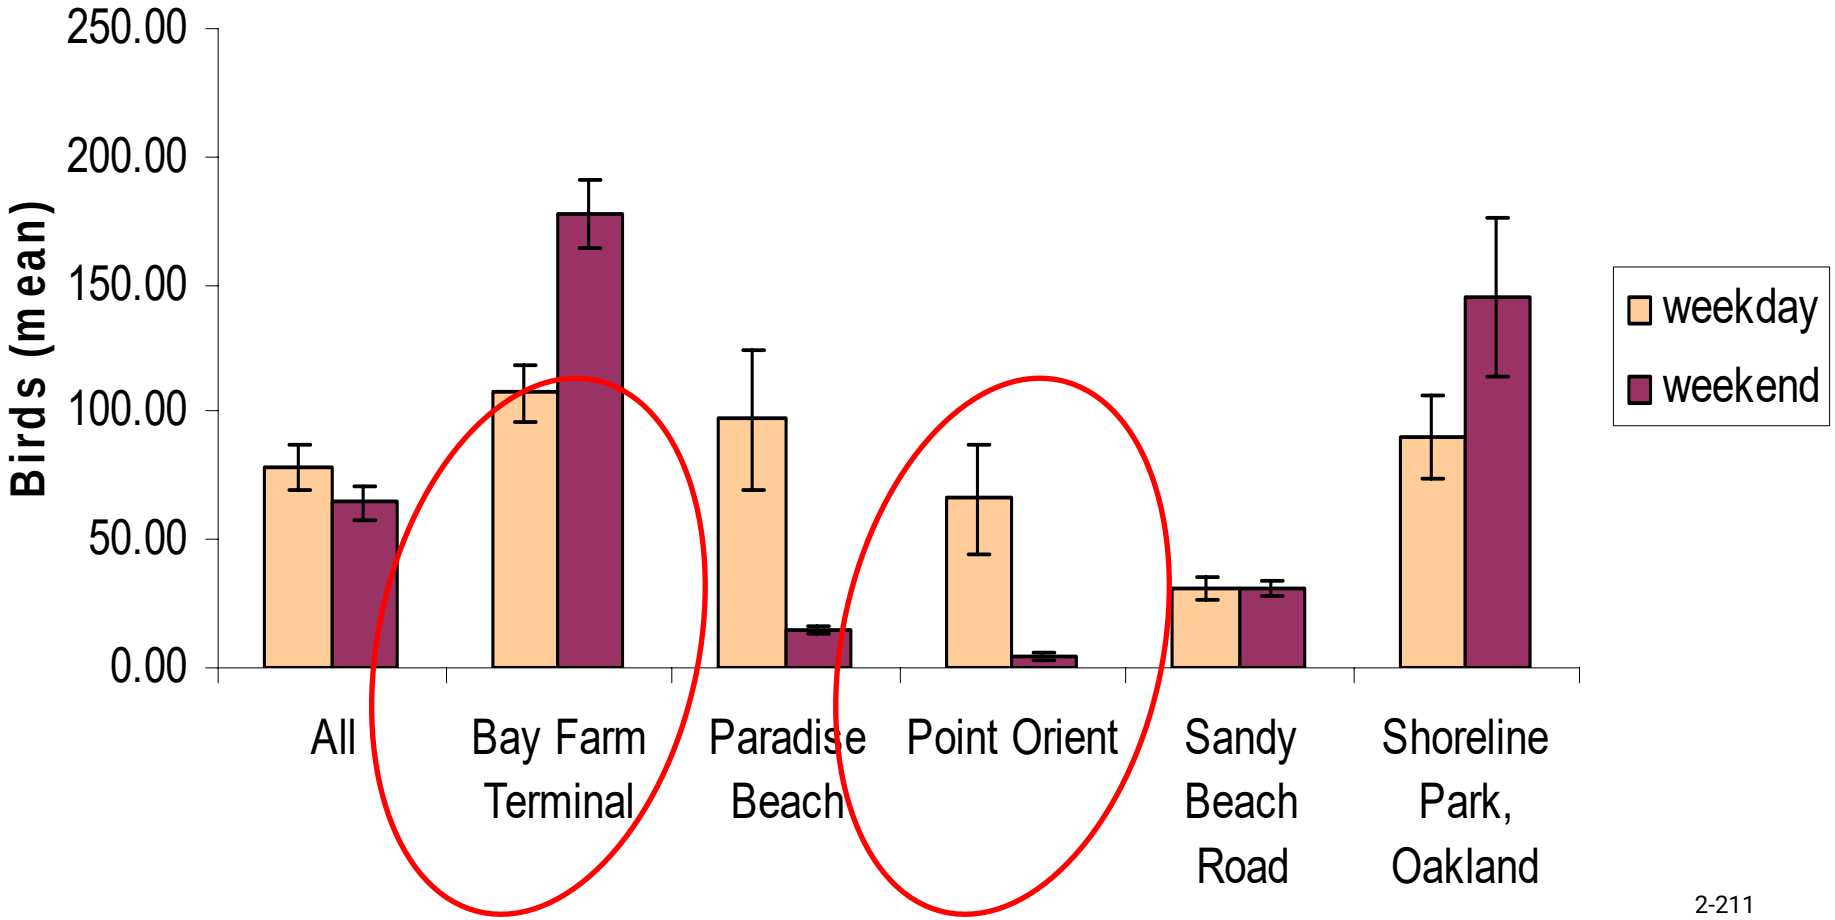
IIb. Disturbance -- Duration



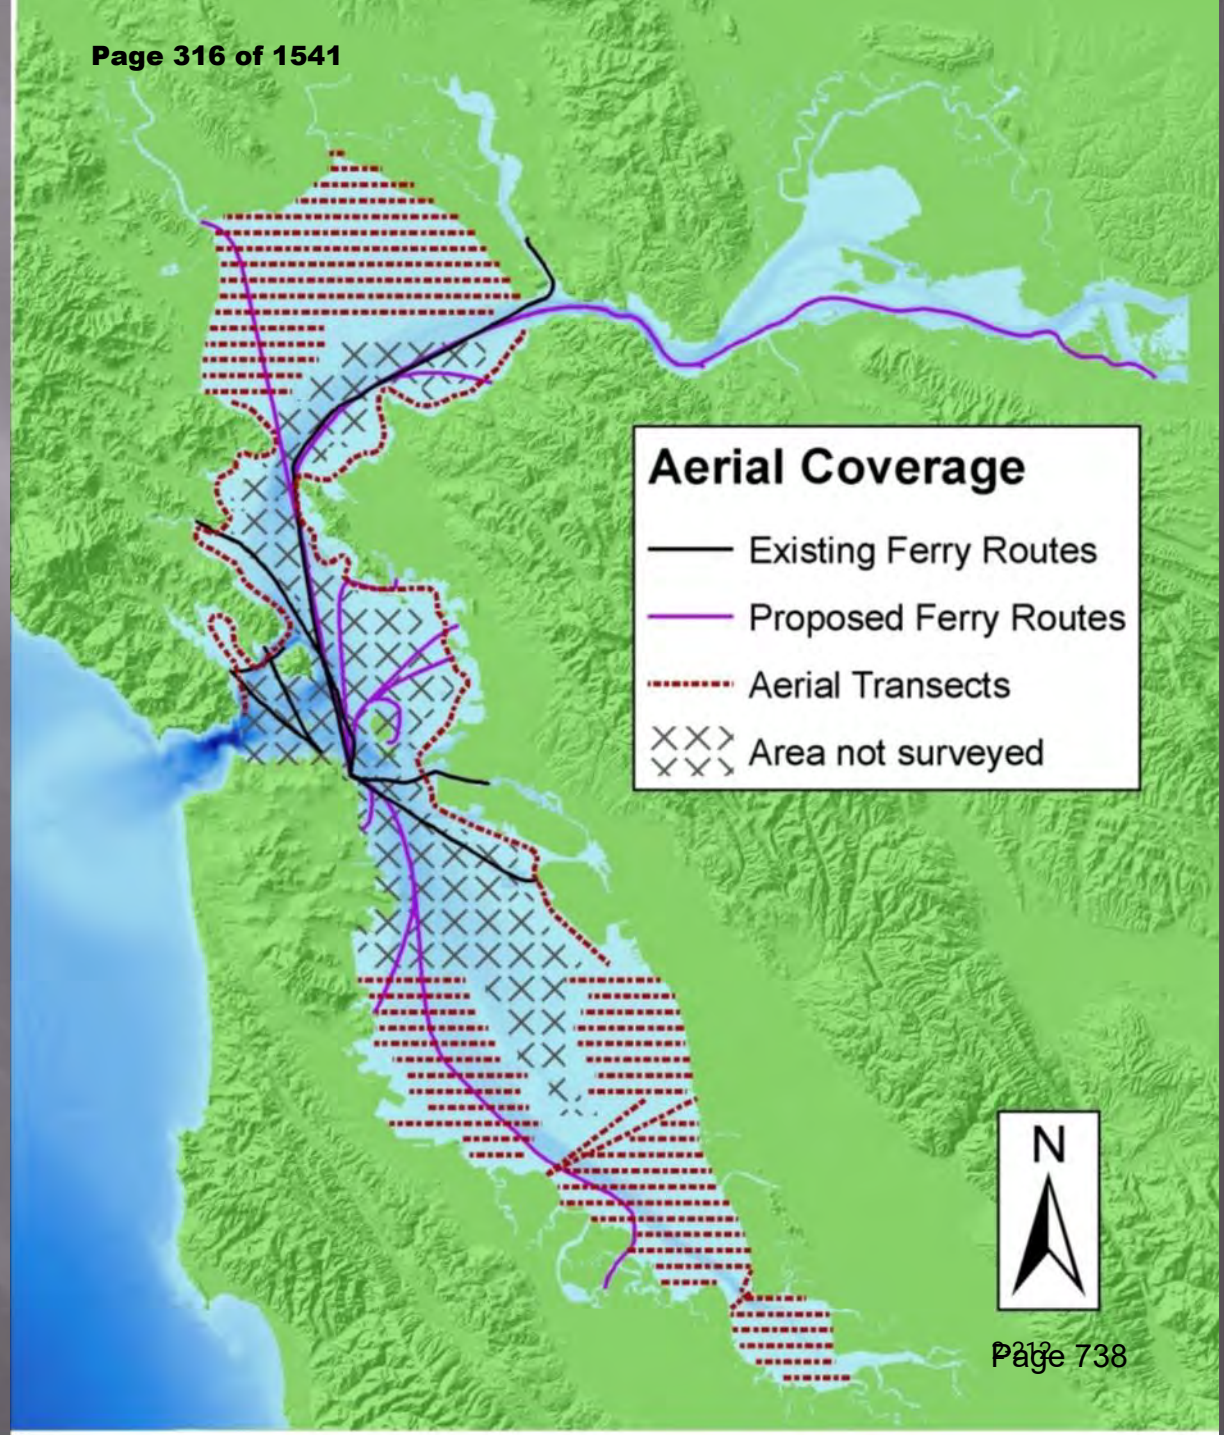
Elapsed Time?



IIb. Disturbance – Duration
Paradise Beach
Birds decrease as ferry passes, then increase

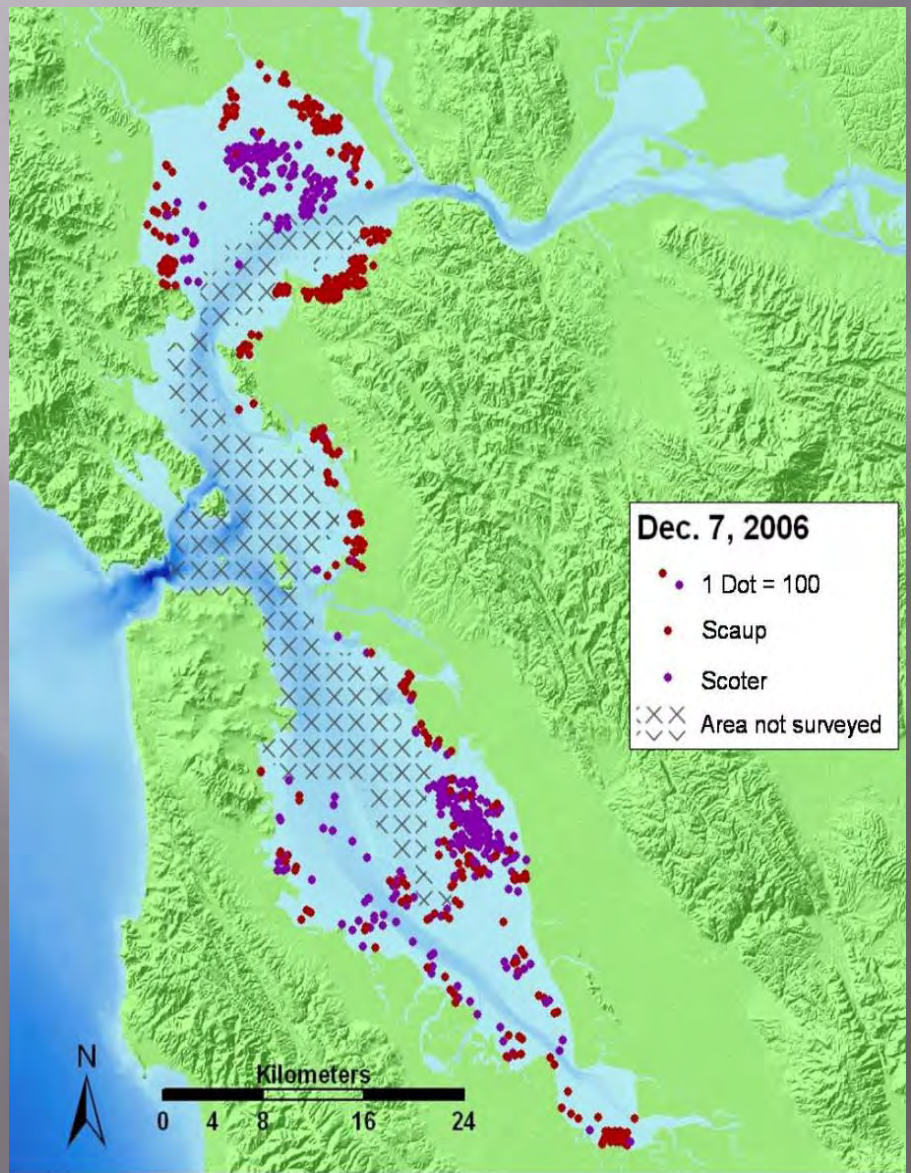


IIb. Disturbance -- Duration
Boats – WeekDay, WeekEnd

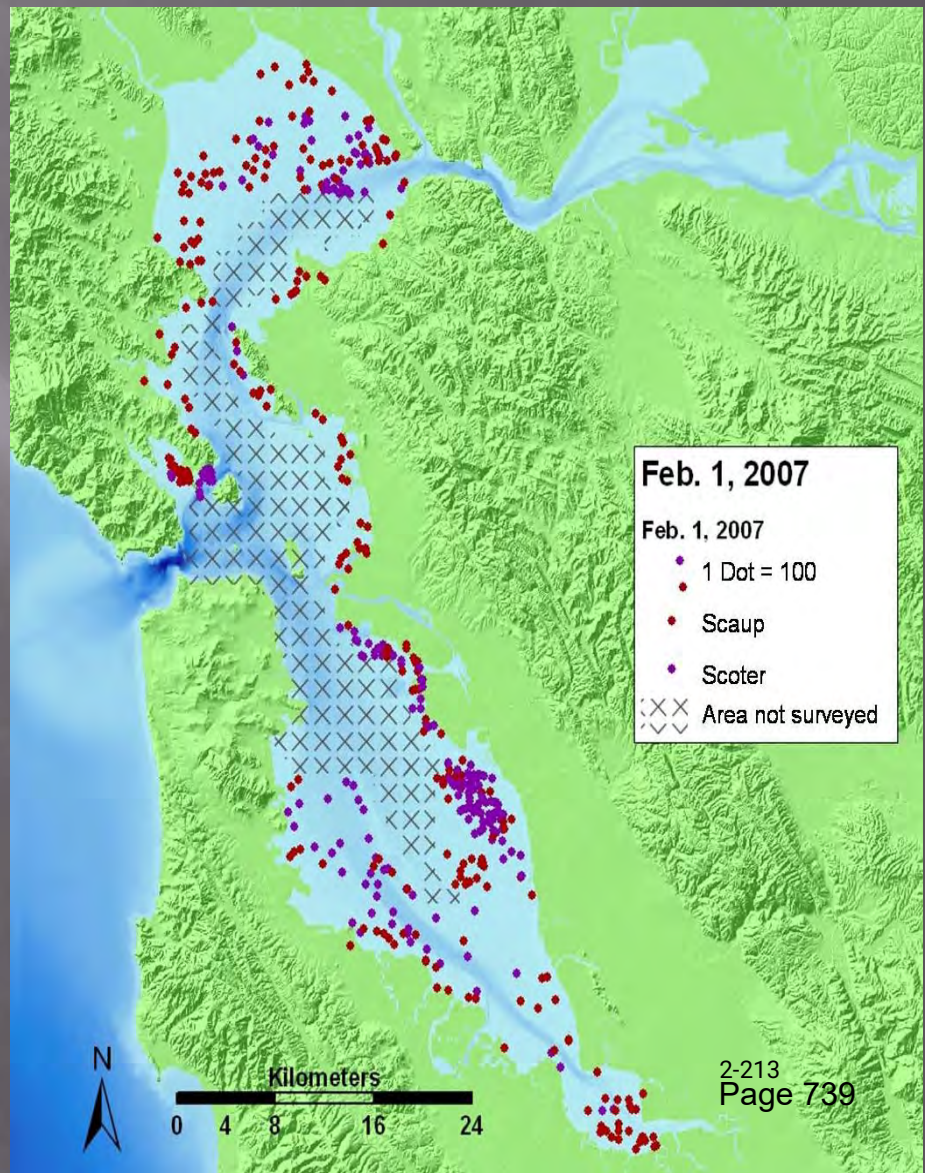


IIb. Disturbance -- Duration

Birds Response varies by site- WeekDay, WeekEnd



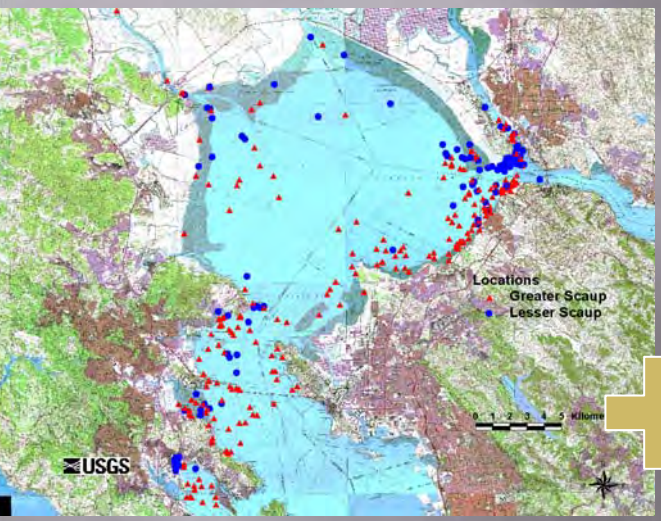
2-211

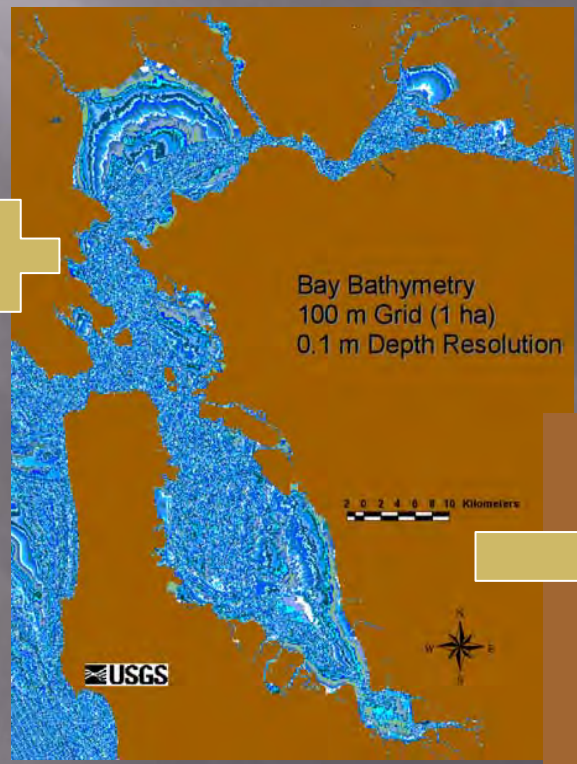


III. Aerial Surveys – augmented midwinter survey during early and late winter months

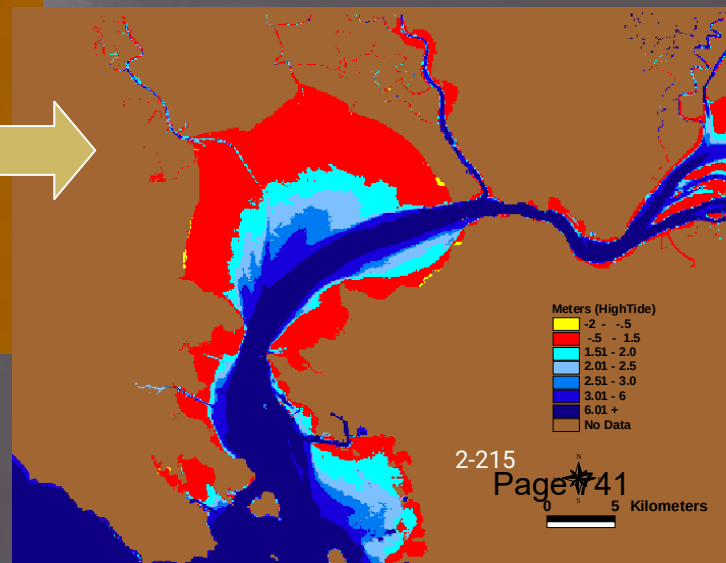
III. Disturbance – Distribution

Species may move or emigrate to avoid disturbance



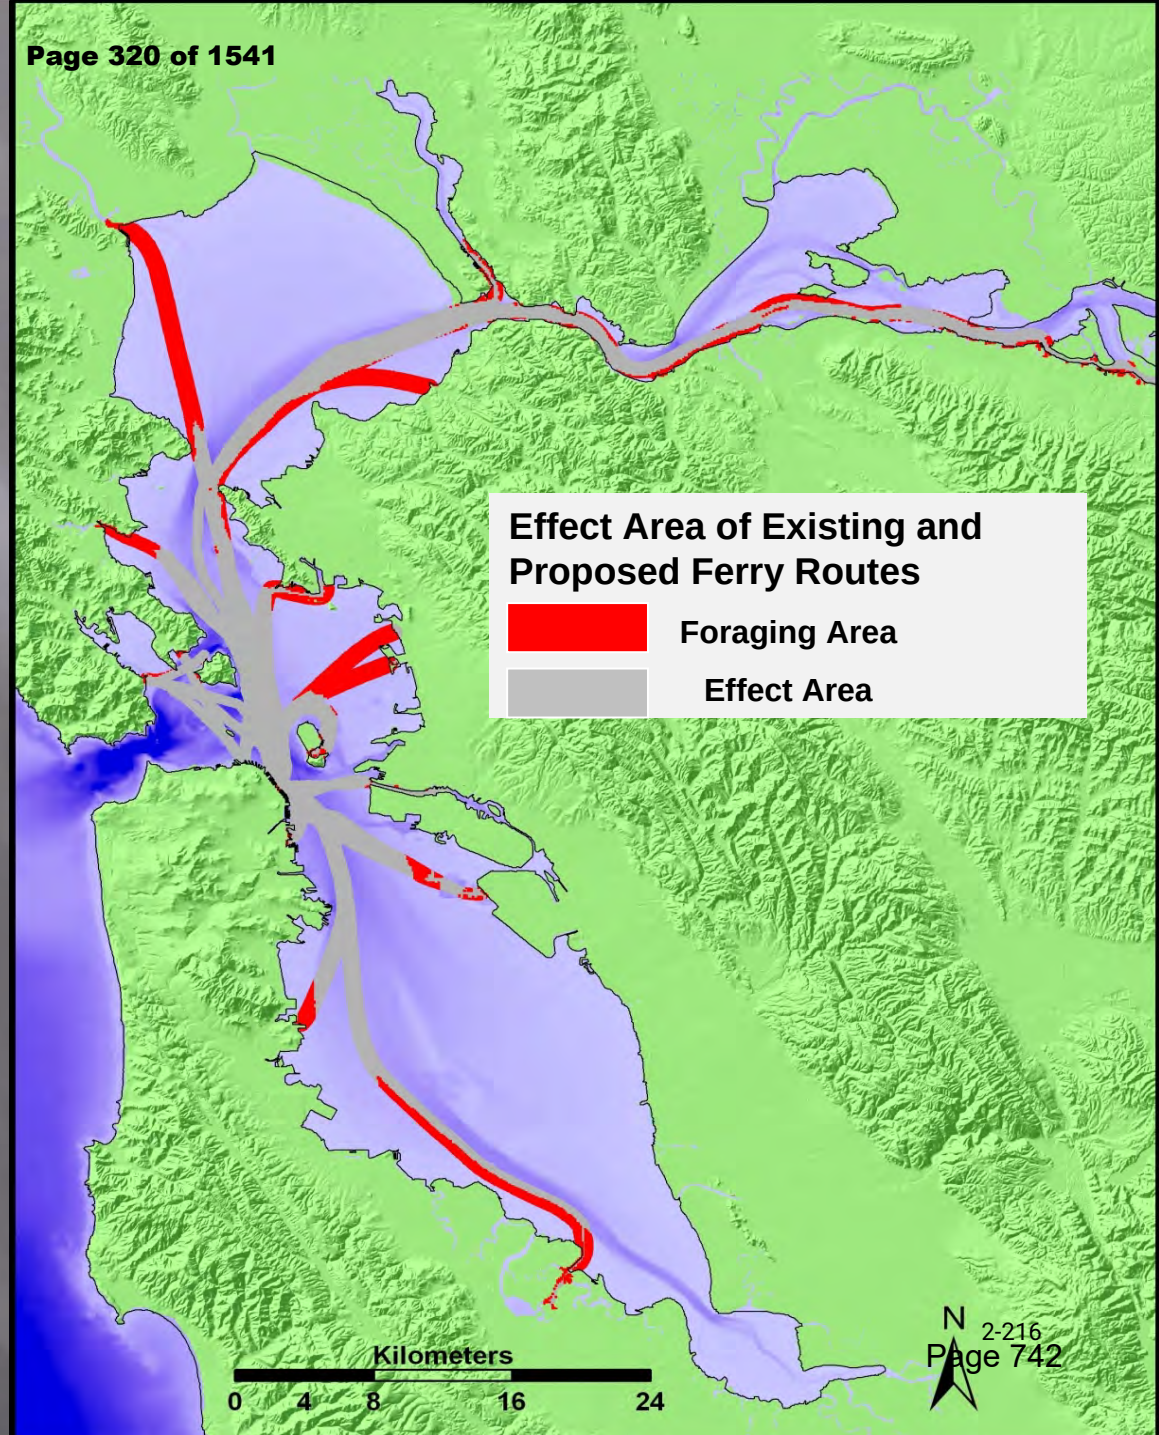


Measuring the Habitat Effect – Buffer Zones



- Buffer zones based on observed flush distances (mean plus one SD: after Rodgers and Schwikert 2003)
- Add 40 m to minimize agonistic responses and to account for mixed species (Thompson and Thompson 1985, Gutzwiller et al. 1998)
- Buffer zones should be based on the species most sensitive to disturbance (scaup)
- "One size fits all" approach for management: "a buffer zone of 250 meters from areas of high-use by rafting waterbirds as a quideline for minimizing the impacts of non-motorized watercraft on rafting waterbirds" (Evens 2008)

Include importance of shoals for foraging divers



III. Disturbance Zone –

2.4-65.0 km^2 including 0.07-4.6 km^2 of foraging areas.

Proposed routes will affect 4.3-75.8 km^2

USGS

Conclusions

- Diving birds alter their behavior in response to commuter ferries
- Response distance depends on species but is typically 300 m for scoters
- Duration of the disturbance with ferry passage is difficult to measure, given habituation occurs early in the winter
- Disturbance zones suggest indirect loss of habitat several km^2 of open water habitats

Potential Means to Reduce Disturbance Effects?

Establish Estuarine Protected Areas

- Establish undisturbed foraging and resting areas

Letter O5

Commenter: John J. Bauters, Chair, Sierra Club San Francisco Bay Chapter

Date: April 27, 2026

Response to Comments O5-1 to O5-3

Refer to subsequent Response to Comments for responses to the specific comments raised. This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O5-4

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for discussion related to the use of the 2003 WETA EIR in the Draft EIR. The 2003 WETA EIR is a programmatic analysis of ferry service expansion in the San Francisco Bay Area, while the 2026 proposed project Draft EIR is a project-level analysis for a specific and separate Berkeley pier ferry project not tiered from the 2003 WETA EIR. No further response is required.

Response to Comment O5-5

Responses to subsequent comments are provided in Responses O5-6 through O5-49 as appropriate. No further response is required.

Response to Comment O5-6

The comment states that the Draft EIR incorrectly concludes that the California least tern would not occur within the project site or be affected by the project and requests that the EIR consider this species.

Refer to Response to Comment A2-35 to A2-38 for discussion of and Draft EIR clarification text changes with regard to California least tern. Refer also to Section 2.2.11, *Topical Response: Ferry Operations,* for discussion of ferry service impacts to biological resources. No Draft EIR changes are necessary in response to this comment.

Response to Comment O5-7

Refer to Response to Comment O7-17 for discussion of and Draft EIR clarification text changes with regard to waterbirds. Refer to Section 2.2.11, *Topical Response: Ferry Operations*, for discussion of vessel interaction with aquatic species. No Draft EIR changes are necessary in response to this comment.

Response to Comment O5-8

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for discussion of wave climate and breakwater effects beyond the project site. No Draft EIR changes are necessary in response to this comment.

Response to Comment O5-9

A project objective stated in Draft EIR Section 2.3 is to: “Minimize environmental impacts by considering existing infrastructure and sea level rise projections.” The Draft EIR further discusses sea level rise and requirements of the Berkeley Local Hazard Mitigation Plan and Regional Shoreline Adaptation Plan (Section 3.5.3 Regulatory Framework on page 3.5-22, and Section 3.8.3 Regulatory Framework on page 3.8-21, respectively). Sea level rise concerns are addressed in Draft EIR Section 3.8.4 under Impact HYD-4, page 3.8-40 and under Impact HYD-5, page 3.8-42, concluding that impacts related to sea level rise on shorelines would be less than significant. Refer also to Section 2.2.23, *Topical Response: Sea Level*

Rise, for discussion of analysis done to inform project design as related to sea level rise and Section 2.2.25, *Topical Response: Siltation/Wave Climate,* for discussion of wave energy impacts within the project site and beyond. No Draft EIR changes are necessary in response to this comment.

Response to Comment O5-10

Because CEQA focuses on and requires analysis of physical environmental impacts, ADA requirements are not explicitly discussed in CEQA documents. The Draft EIR evaluates transportation, circulation, and access-related physical environmental effects consistent with CEQA requirements. While these analyses may overlap conceptually with accessibility considerations, the EIR's purpose is not to determine compliance with ADA standards. ADA requirements are addressed through project design.

Nonetheless, please refer to the 2024 Berkeley Water Transportation Pier Ferry Project Basis of Design Report, which was made available during the public review period of the Draft EIR.[26] As noted in this report, the ferry landing's passenger boarding system, including the gangway, float, ramps, and platform will be designed and constructed to ADA codes and standards. The proposed fish cleaning station will also have an ADA compliant stainless steel table and sink for public use.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O5-11

Refer to Response to Comment O5-10 for more information about this topic. No further discussion is required.

Response to Comment O5-12

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is addressed under CEQA and equity concerns.

Response to Comment O5-13

While it is true that an increase in parking, relative to existing conditions, could result in a greater number of vehicle trips, the Draft EIR concluded in Impact TRA-2 in Section 3.12, *Transportation* (pages 3.12-20 to 3.12-21) that VMT impacts would be less than significant. In fact, as explained in Impact TRA-2, the project is expected to result in an overall reduction in regional VMT. While the proposed project would increase the number of parking spaces, relative to existing conditions, the City has also identified TDM measures, as part of its Parking and TDM Plan, that would help decrease the number of vehicle trips to the Waterfront. The analysis and significance conclusion presented under Impact TRA-2 in Section 3.12, *Transportation*, of the Draft EIR remains valid as written. No revisions to the EIR are necessary.

Response to Comment O5-14

Refer to Response to Comment O5-13 for a discussion about how transportation impacts would remain less than significant, even if the project would increase the number of parking spaces relative to existing conditions.

Response to Comment O5-15

Refer to Section 2.2.2, Topical Response: Alternatives (subsection Alternatives Dismissed) for a discussion related to how the City determined which Alternatives to consider in its analysis. As explained in that Topical Response, the City need not consider alternatives that do not lessen a significant environmental impact. As explained in Response to Comment O5-13, the proposed project would result in

[26] Available: https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_BWTPF-Basis-of-Design-60-Submittal.pdf

less than significant transportation impacts. An alternative that reduces parking would not lessen a significant environmental impact, and the City would not be required to analyze it under CEQA. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is necessary.

Response to Comment O5-16

Refer to Response to Comment 05-15 for a discussion of the CEQA requirements to address alternatives. The proposed project includes improvements to bus facilities that would serve AC Transit route 51B, including improving facilities to allow for future expansion (see Chapter 2, *Project Description* page 2-12). The project is implementation of ferry service, which would have a net benefit on transit service in the region.

The analysis and significance conclusion presented in the Draft EIR remains valid as written. No revisions to the EIR are necessary.

Response to Comment O5-17

The City of Berkeley has the ability to establish parking fees independently of this project; the parking pass referenced in this comment is not the subject of this EIR.

Refer to Section 2.2.20, *Topical Response: Parking.* Issues related to parking pricing (such as removing existing annual passes or establishing new fee structures) are potential policy decisions that may be implemented by the City as part of project operations or broader waterfront management. Such policies are not part of the CEQA project description, are not environmental impacts under CEQA and further are not required to ensure the Waterfront can accommodate all users. CEQA focuses on physical environmental effects, and social or economic considerations such as user cost are not treated as environmental impacts unless they result in a physical change in the environment. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment O5-18

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, for a discussion of how the proposed project includes, and the Draft EIR analyses assume, installation and operation of an electric ferry, and not a ferry that would be propelled by any other means of fuel or energy source. GHG and energy impacts, including the source of electricity were discussed in Draft EIR Section 3.6.4 *Energy Sources*.

In addition, refer to Response to Comment P36-115 for a full discussion of why the BTU-per-passenger comparison is not necessary. The CEQA significance thresholds for GHG and energy consumption do not have a BTU per passenger mile threshold nor do they require the comparison of project emissions to alternative project options. Further, Draft EIR Alternatives (Section 5.9) discussed alternative projects such as increasing Bay Area Rapid Transit (BART) capacity and improving access to BART, both of which were alternatives that were considered but rejected as they did not meet the project objective of provision of zero emission ferry service between Berkeley and San Francisco. The analysis in the Draft EIR accurately analyzes GHG and energy emissions with respect to CEQA and Bay Area Air District thresholds, demonstrates that electrical consumption would be from 100 percent renewable energy sources from 2030 throughout the lifetime of the project, and incorporates the emissions from the two years of non-100 percent renewable electricity consumption into the analysis (refer to methodology discussion on Draft EIR page 6.3-31). Therefore, the Draft EIR GHG emissions and energy significance conclusions remain the same, and no Draft EIR changes are necessary in response to this comment.

Response to Comment O5-19

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, for a discussion of how the proposed project includes, and the Draft EIR analyses assume, installation and operation of an electric ferry, and not a ferry that would be propelled by any other means of fuel or energy source.

WETA currently has 150-passenger and 400-passenger electric ferry projects currently funded and/or under construction. The Draft EIR provides an analysis for a 250-passenger vehicle, which is consistent with the assumptions in the *WETA Berkeley Ferry Service Business Plan 1.0* prepared in March 2022 and available https://sanfranciscobayferry.com/project/berkeley-ferry-project/. The fact that 250-passenger ferries are not currently available does not mean that non-electric ferries would be operated as part of the proposed project. WETA is under contract with several developers to build and implement electric ferries to transition the San Francisco Bay ferry fleet to a 100 percent electrified fleet.

Therefore, additional air quality modeling and analysis is not required. The Draft EIR air quality significance conclusions and mitigation measures remain the same, and no Draft EIR text changes are necessary in response to this comment.

Response to Comment O5-20

As described in the Draft EIR, the proposed project differs substantially from the 2003 project because it would utilize battery-electric ferry vessels and shore-based charging infrastructure, which fundamentally changes the project's energy characteristics. While the Draft EIR incorporates portions of the 2003 WETA EIR by reference pursuant to CEQA Guidelines Sections 15150 and 15152, it does not rely on that document for project-specific analysis. The Draft EIR provides current, project-specific analysis of the proposed electric ferry system, including energy use. As such, the diesel-based energy intensity comparisons presented in the 2003 WETA EIR are not applicable to the proposed battery-electric ferry operations evaluated in this Draft EIR. Section 2.7.2, *Energy Source and Consumption* (Page 2-31), of the Draft EIR describes the project's electrical demand, charging requirements, and operational profile, while energy demand and related utility impacts are evaluated in Sections 3.6 (*Greenhouse Gas Emissions and Energy*, Impact GHG-2) and 3.14 (*Utilities and Service Systems,* Impact UTIL-1*)*. Unlike the diesel-based ferries evaluated in 2003, the proposed vessels would operate using grid-supplied electricity stored in onboard batteries and the Universal Charging Float (UCF). As a result, energy consumption is not directly comparable to prior analyses based on fossil fuel use and BTUs per passenger-mile.

CEQA does not require an EIR to demonstrate that a proposed project is more energy-efficient than other transportation modes or to replicate comparative metrics such as BTUs per passenger-mile. Rather, CEQA requires analysis of a project's energy demand and potential for wasteful, inefficient, or unnecessary consumption of energy resources (CEQA Guidelines Appendix G). The Draft EIR provides this analysis and evaluates the project's electrical energy demand, infrastructure requirements, and operational efficiency. Based on this analysis, the project would not result in wasteful or inefficient energy use, particularly given its use of zero-emission electric propulsion and modern vessel technology (refer to Impact GHG-2 and GHG-3 of the Draft EIR, pages 3.6-43 to 3.6-46).

The Draft EIR adequately evaluates the project's energy demand and efficiency consistent with current CEQA requirements. Comparisons to diesel-based ferry energy intensity metrics presented in the 2003 WETA EIR are not applicable to the proposed battery-electric ferry system. The analysis and significance conclusion presented in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-21

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts.

Response to Comment O5-22

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, and Response to Comment P36-115 for a discussion of why the BTU-per-passenger comparison for energy use is not necessary. The CEQA significance thresholds for GHG and energy consumption do not have a BTU per passenger mile threshold nor do they require the comparison of project emissions to alternative project options. Furthermore, Draft EIR Alternatives (Section 5.9) discussed alternative projects such as increasing Bay Area Rapid Transit (BART) capacity and improving access to BART, both of which were alternatives that were considered but rejected as they did not meet the project objective of provision of all-electric ferry service between Berkeley and San Francisco. The analysis in the Draft EIR accurately analyzes GHG and energy emissions with respect to CEQA and Bay Area Air District thresholds. Therefore, the Draft EIR GHG emissions and energy significance conclusions remain the same, and no Draft EIR changes are necessary in response to this comment.

Response to Comments O5-23 and O5-24

The comment discusses the 2003 WETA EIR and states that the Draft EIR does not provide an updated analysis to account for changed information since the 2003 WETA EIR.

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for discussion related to the use of the 2003 WETA EIR in the Draft EIR.

Response to Comment O5-25

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

The 400,000 cubic yards of dredging is based on the current best available information, and based on the latest engineering for the project. In this Draft EIR, the City has analyzed the environmental impacts associated with the dredging of 400,000 cubic yards.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O5-26

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR. A supplemental analysis of the potential impacts from dredging approximately 400,000 cubic yards is not needed because the Draft EIR already analyzes the potential impacts from dredging 400,000 cubic yards.

The analysis and significance conclusion presented in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-27

The Draft EIR evaluates impacts due to dredging and pile installation in Section 3.3.4 under Impact BIO-1 on pages 3.3-45 through 3.3-51, and concludes that such construction impacts would be less than significant with implementation of mitigation (refer to Mitigation Measure BIO-1[d]). Additionally, dredging would result in only short-term temporary impacts to water quality and benthic infaunal communities. In addition, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate* for a discussion of

sedimentation; refer to Section 2.2.15, *Topical Response: Maintenance Dredging*, regarding operational impacts. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O5-28

Refer to Response to Comments O5-29 through O5-34 for responses to the specific concerns addressed in the comment.

Response to Comment O5-29

The Draft EIR considers potential impacts on benthic habitat. Refer to Impact BIO-1 in Section 3.3, *Biological Resources* of the Draft EIR (page 3.3-45 to 3.3-46), which found impact to benthic organisms to be less than significant with the implementation of Mitigation Measure HYD-1. The analysis and significance conclusion presented under Impact BIO-1 in Section 3.3, *Biological Resources* of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-30

The Draft EIR considers potential impacts on fish from turbidity. Refer to Impact BIO-1 in Section 3.3, *Biological Resources* of the Draft EIR (page 3.3-45 to 3.3-46), which found impact to fish due to turbidity, to be less than significant with the implementation of Mitigation Measure HYD-1. The analysis and significance conclusion presented under Impact BIO-1 in Section 3.3, *Biological Resources* of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-31

The Draft EIR considers potential impacts associated with potential hazardous materials in dredged materials. Refer to Impact HAZ-1 in Section 3.7 *Hazards and Hazardous Materials* (page 3.7-27) of the Draft EIR, which includes a summary of the results of sediment sampling conducted in the area where dredging would occur. Page 3.7-27 of the Draft EIR identifies that concentrations of various parameters do not exceed California or Federal hazardous waste criteria. The analysis and significance conclusion presented under Impact HAZ-1 in Section 3.7 *Hazards and Hazardous Materials* of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-32

The Draft EIR considers potential impacts on special-status species from dredging. Refer to Impact BIO-1, in Section 3.3, *Biological Resources* of the Draft EIR (pages 3.3-46, 3.3-48, and 3.3-50) for a discussion related to dredging impacts on special-status species. Impact BIO-1 found that impacts on special-status species from dredging would be less than significant with the implementation of Mitigation Measures BIO-1(a), BIO-1(b), and HYD-1. The analysis and significance conclusion presented under Impact BIO-1 in Section 3.3, *Biological Resources* of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-33

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about dredging and sediment transport patterns and Section 2.2.15, *Topical Response: Maintenance Dredging*, regarding analysis of maintenance dredging.

Response to Comment O5-34

Refer to Response to Comments O5-29 through O5-33 for a response to the specific issues raised by the commenter.

Refer to Section 2.2.15, *Topical Response: Maintenance Dredging*, which discusses how potential future maintenance dredging is addressed in the Draft EIR.

Response to Comment O5-35

The Draft EIR evaluates construction impacts due to dredging on sensitive species, including longfin smelt, chinook salmon, steelhead, marine mammals, and special-status birds in Section 3.3.4 under Impact BIO-1 on pages 3.3-45 through 3.3-51, and concludes that impacts would be less than significant with implementation of mitigation (refer to Mitigation Measures BIO-1[a], BIO-1[c], BIO-1[d], BIO-1[e], and HYD-1). Delta smelt and western snowy plover are not expected to occur in the project site. Draft EIR Appendix C *Supporting Biological Resources* provides reasoning for why western snowy plover is not expected to occur. Delta smelt is not included in Appendix C because the species did not come up in database searches. Its range is currently limited to the Sacramento-San Joaquin River Delta,[27] although historically could be found in the upper San Francisco Estuary, including western San Pablo Bay near Napa and Sonoma counties. Recent population declines related to multiple factors, including drought, reduced availability of freshwater inputs, and increases in water temperatures, among other factors, have led to continued decline of this species.[28] Additionally, dredging would result in only short-term temporary impacts to water quality and benthic infaunal communities. In addition, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of sedimentation and Section 2.2.15, *Topical Response: Maintenance Dredging*, regarding maintenance dredging. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O5-36

The Draft EIR addresses project-specific impacts to special-status species, whether directly or via habitat change, due to dredging and in-water construction in Section 3.3.4 under Impact BIO-1 (pages 3.3-45 through 3.3-51) and concludes that impacts would be less than significant with implementation of mitigation (refer to Mitigation Measures BIO-1[a], BIO-1[c], BIO-1[d], BIO-1[e], and HYD-1). Additionally, the Draft EIR discusses the natural high turbidity of waters in the San Francisco Bay in Section 3.8.4 under Impact HYD-1, page 3.8-30, and concludes that given waters in the project site are subject to pronounced fluctuations due to tidal action, wind-driven waves, and regional sediment transport. Project-related turbidity would not be expected to measurably increase local or regional turbidity beyond existing conditions and, thus, impacts would be less than significant. In addition, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of sedimentation and Section 2.2.15, *Topical Response: Maintenance Dredging,* regarding maintenance dredging. Finally, Draft EIR analysis of project-specific construction-related noise impacts on species is presented under Impact BIO-1 (page 3.3-45 through 3.3-51) and concludes less than significant with mitigation (refer to Mitigation Measures BIO-1[a] and BIO-1[d]). No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O5-37

Regarding maintenance dredging, refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* for a discussion about how any future dredging for maintenance of the dredging channel is addressed in CEQA.

[27] USFWS. Delta smelt (*Hypomesus transpacificus*) Range. Available: https://www.fws.gov/species/delta-smelt-hypomesus-transpacificus/map (accessed August 2026).

[28] Moyle, P.B., L.R. Brown, J. R. Durand, J. A. Hobbs. 2016. Delta Smelt: Life History and Decline of a Once-Abundant Species in the San Francisco Estuary. *San Francisco Estuary and Watershed Science*. Available: https://doi.org/10.15447/sfews.2016v14iss2art6 (accessed August 2026).

Response to Comment O5-38

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about sediment settlement patterns.

Response to Comment O5-39

Regarding maintenance dredging, refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* for a discussion about how any future dredging for maintenance of the dredging channel is addressed in CEQA.

Response to Comment O5-40

Refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* which discusses how potential future maintenance dredging is addressed in the Draft EIR.

Response to Comment O5-41

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about the bathymetric and sedimentation data, historical sedimentation rates, sediment transport modeling, and projections that informed both the design of the project and the Draft EIR.

Response to Comment O5-42

As discussed in Draft EIR Chapter 5, *Alternatives*, CEQA requires evaluation of a reasonable range of project alternatives capable of attaining most of the project's basic objectives while potentially reducing environmental impacts. CEQA does not require evaluation of every conceivable engineering design variation. For additional discussion of the range of alternatives evaluated, their related assumptions, and alternatives considered but dismissed from detailed analysis in the Draft EIR, please refer to Section 2.2.2, *Topical Response: Alternatives*.

To the extent that the comment specifically requests evaluation of helical piles, the City's licensed professional coastal engineers considered the feasibility of alternative foundation systems during project design. However, helical piles are generally used in marine environments as anchoring systems for floating facilities rather than as the primary vertical support system for large fixed pier structures. Due to their relatively small cross section, helical piles have limited axial and lateral load capacity when extending above the mudline to support substantial structures. As a result, helical piles would not provide the axial capacity needed to support gravity loads associated with the proposed pier and breakwater, nor would they provide the lateral capacity required to resist seismic, wave, wind, berthing, and other marine loading conditions applicable to the project.[29] Because helical piles are not a feasible foundation system for the proposed project, the City did not evaluate them as a separate project alternative. Instead, the Draft EIR evaluates the environmental effects of the feasible pile-supported marine structures proposed for the project and includes measures, including Mitigation Measure BIO-1(d), to avoid and minimize biological impacts associated with pile installation activities (refer to Draft EIR page 3.3-55).

Accordingly, the analysis and conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O5-43

The analysis supporting this document is consistent with CEQA requirements and incorporates the avoidance, minimization, and mitigation sequencing that aligns with BCDC's policy framework. As

[29] Rivas, Jessica. 2026. Senior Marine Engineer, COWI. Personal communication via email regarding helical piles with Leo Mena, Senior Environmental Planner, Rincon Consultants. June 24, 2026.

described throughout Section 3.3, *Biological Resources*, of the Draft EIR, the project will be required to obtain a permit from BCDC. No further response is required.

Response to Comment O5-44

Regarding the comments about siting and unnecessary fill, as discussed in Section 5.9, *Alternatives Considered but Rejected*, of the Draft EIR, the City considered different off-site alternatives, but ultimately rejected them. Refer to Section 2.2.2, *Topical Response: Alternatives*, for more information on this topic. Under existing conditions, fill has already been placed at the project site for the existing pier. The City has chosen a site where the majority of the fill being placed would be in-kind replacement of fill already in the Bay. In fact, there is likely an environmental benefit from this in-kind replacement, given that the project would replace wood piles, which were likely treated with creosote (refer to page 3.7-28 of the Draft EIR). Additionally, the City considered two alternatives to the proposed project, Alternatives 2 and 3, that would reduce fill. These alternatives will be considered by City decision makers when they decide whether to certify the Final EIR and approve the project.

Regarding the comment about excessive dredging, the amount of dredging that would occur for the project site would be the minimal necessary to maintain safe operations. The City's Design Team has prepared a Coastal Study to determine the minimum necessary dredging and fill for the project.[30]

The analysis and significance conclusion in the Draft EIR remains valid as written. Specifically, the City's mitigation measure for impacts related to fill (Mitigation Measure BIO-3 in Section 3.3, *Biological Resources*), as well as the design of the project including, dredging, remain valid as written. No further revisions to the EIR are necessary.

Response to Comment O5-45

As discussed in Draft EIR Section 3.3.4 under Impact BIO-1, pages 3.3-52 through 3.3-54, vessel strikes are a known source of mortality for whales, and the project's incremental contribution to this risk in the context of the existing Central Bay transit corridor use, which includes substantial commercial, recreational, and ferry vessel operational levels, was determined to be less than significant. Refer to Response to Comment O7-13 for additional discussion of whale strikes. In addition, refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, and Section 2.2.28, *Topical Response: Whale Strike*. No Draft EIR changes are necessary in response to this comment.

Response to Comment O5-46

Cumulative impacts to whales and other aquatic species with potential to be present in San Francisco Bay are discussed in Draft EIR Section 3.3.5, pages 3.3-67 through 3.3-69, and were determined to be less than significant. Refer to Responses to Comments O5-45 and O7-13 for additional discussion of whale strikes. In addition, refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, and Section 2.2.28, *Topical Response: Whale Strike.* No Draft EIR changes are necessary in response to this comment.

Response to Comment O5-47

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy*, the City has concluded that the Draft EIR is sufficient from a CEQA perspective. Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* for more discussion concerning land use planning and consistency with BCDC policy. Please note that Section 3.3, *Biological Resources*, of the Draft EIR, explains that any fill associated with the project would be subject to the *Long Term Management Strategy for the Placement of Dredged Material in the San Francisco Bay Region* referenced in this comment. Also refer to Response to Comments O5-6 through O5-46 for responses to specific comments raised in the comment letter. No further response is required.

[30] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study. Prepared for City of Berkeley. December.

Response to Comment O5-48

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O5-49

Inasmuch as the individual comments contain reference to these materials and pose comments on the Draft EIR's analysis, responses to these attachments are included within the specific responses to the comment letter. No further response is required.

2180 Milvia Street, 3rd Floor
Berkeley, California 94704

RE: Comments on the Draft Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry Project

Dear Ms. McNulty:

Save The Bay appreciates the opportunity to submit comments regarding the Draft Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry Project. Save The Bay protects and restores San Francisco Bay for people and wildlife, as we have for 65 years. To comply with state laws and regulations, this environmental review process must include a comprehensive analysis of the project impacts and assess a reasonable range of alternatives to inform the public and agency decision-making.

O6-1

O6-2

The DEIR fails to analyze a project alternative that would place the ferry terminal within the existing marina basin that is already served by a dredged channel, which would not require dredging approximately 400,000 cubic yards of material for a federal navigation channel and a new turning basin. The DEIR includes insufficient justification for excluding analysis of that marina alternative, so its designation of Alternative 4 as the environmentally superior option cannot reasonably be supported. The final EIR should compare the impacts of dredging a new channel with any dredging required to deepen or maintain the existing channel to the marina basin.

O6-3

Additionally, in its treatment of potential San Francisco Bay Trail extensions and upgrades to be included in the final project, the Draft EIR prioritizes avoidance of temporary construction impacts over the long-term environmental benefits of integrated public transit and public access to the Bay. Completing the Bay Trail is a regional priority, and closing all gaps in the Bay Trail in this area would *increase* the environmental, transportation and recreational benefits of the project, facilitating more bike-to-ferry connections and more users of this section of the trail.

To summarize, The EIR should analyze a Marina Basin Alternative and fully evaluate Bay Trail improvements, as outlined below.

O6-4

The Need for a True Analysis of the Marina Basin Alternative

The Draft EIR incorrectly rejects analysis of a Marina Basin alternative with a brief mention of operational preferences rather than providing a thorough comparison of benefits and impacts.The

O6-5

EIR analysis should compare a Marina Basin alternative with project alternatives that are adjacent to the Berkeley Pier.

O6-5

A thorough analysis of the Marina Basin option and comparison with other alternatives studied should clearly and quantitatively state the difference in project impacts to habitat and species, as well as the recreational and access benefits of each project. A legally adequate CEQA analysis will support the statutory mandates for the San Francisco Bay Conservation and Development Commission, Regional Water Quality Control Board, and other permitting agencies to determine whether the ferry project meets their requirements for minimizing Bay fill, complying with authorized uses of the shoreline, maximizing beneficial uses of the waters of the state, protecting endangered and threatened species and their habitat, providing maximum feasible public access, and other standards.

O6-6

The DEIR presents the benefits of new amenities that could be added within the scope of the preferred alternative, but fails to acknowledge that Bay swimmers, windsurfers and other recreational users of the waterfront would benefit from no-changes made to existing access. It also assumes that without the sword design pier option, a pier would no longer be needed in the area. Each project alternative analyzed should instead indicate clearly what public access components 1) remain undisrupted, 2) stand to benefit from the alternative, and 3) are not otherwise affected by the alternative.

O6-7

Evaluate the Long-Term Benefits of Bay Trail Improvements in Any Project Alternative

The EIR should include a more comprehensive study of public recreation and access impacts, including acknowledgement that the DEIR's Alternative 4 would eliminate the Bay Trail extension, the public plaza and the cycle track. A Marina Alternative would not necessarily have the same impacts on existing public recreation and access. The Draft EIR's treatment of Alternative 4 also incorrectly assumes that it is environmentally superior in reducing temporary construction-related impacts but increasing long-term impacts to air quality, greenhouse gas emissions, and transportation.

O6-8

The EIR should present the same impact analysis for a Marina Alternative and other alternatives and should not exclude Bay Trail improvements simply because they would impose temporary construction impacts. The EIR should include analysis of how project alternatives would advance or set back the "Transit First" policies and the regional goals of Plan Bay Area 2050, which seeks to build complete street networks and modernize trail facilities to reduce regional Vehicle Miles Traveled and greenhouse gas emissions that contribute to climate change.

O6-9

Conclusion

The City of Berkeley should address deficiencies in the DEIR by including a comprehensive impact and alternatives analysis of a Marina Basin terminal option. The preferred alternative must minimize the dredging and fill of the San Francisco Bay while maximizing long-term

O6-10

public access, recreation and sustainable transit benefits through improvements to the Bay Trail. We thank you for the opportunity to comment on this important project. O6-10

Sincerely,

David Lewis
Executive Director
Save The Bay

Letter O6

Commenter: David Lewis, Executive Director, Save The Bay

Date: April 28, 2026

Response to Comment O6-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O6-2

The Draft EIR includes a comprehensive analysis of environmental impacts (refer to Chapter 3, *Environmental Impact Analysis*) and a reasonable range of alternatives (refer to Chapter 5, *Alternatives*). For a discussion about why the Draft EIR is adequate, refer to Section 2.2.5, *Topical Response: CEQA Adequacy*. For a discussion of the assumptions used to formulate the alternatives evaluated in the Draft EIR and alternatives that the City has dismissed, refer to Section 2.2.2, *Topical Response: Alternatives*.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O6-3

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation. The analysis and conclusions presented in Chapter 5, *Alternatives*, of the Draft EIR remain valid as written, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O6-4

The City acknowledges the importance of the San Francisco Bay Trail as a regional recreational and transportation resource and agrees that enhancing public access and non-motorized connections is a key benefit. With respect to the comment's suggestion that additional Bay Trail extensions or upgrades should be included as part of the project, CEQA requires an EIR to evaluate the environmental impacts of the proposed project as defined by the lead agency and a reasonable range of alternatives (CEQA Guidelines Section 15126.6). The Draft EIR includes Bay Trail improvements that are within the project's defined scope. Expanding the project to include additional Bay Trail segments is beyond the currently defined scope and would constitute a different or expanded project. To the extent that additional Bay Trail segments could be constructed in the future through separate projects, those improvements would be subject to their own environmental review and permitting processes. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion about why the In-Marina Ferry Terminal Alternative was rejected from further evaluation by the City.

Response to Comment O6-5

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The analysis and conclusions presented in Chapter 5, *Alternatives*, of the Draft EIR remain valid as written, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O6-6

This comment reiterates regulatory agency permitting requirements and does not speak to the adequacy, significance conclusions, or mitigation in the Draft EIR. The Draft EIR acknowledges that the proposed project is subject to the jurisdiction of the San Francisco Bay Conservation and Development Commission (BCDC), the San Francisco Bay Regional Water Quality Control Board (RWQCB), and other responsible and permitting agencies. As described in Draft EIR Chapter 2, *Project Description*, and throughout the relevant sections of Chapter 3, *Environmental Impact Analysis*, the City of Berkeley will obtain all necessary permits and approvals from such agencies prior to commencement of construction activities.

Compliance with agency-specific requirements will be confirmed through the separate respective permitting processes. Such permits will include conditions that ensure the project meets applicable regulatory standards before project construction begins. No Draft EIR changes are necessary in response to this comment.

Response to Comment O6-7

The Draft EIR acknowledges that different users of the Berkeley Waterfront may have different preferences regarding existing conditions and future improvements. Consistent with CEQA, however, the Draft EIR evaluates the recreational features proposed as part of the project against the environmental baseline and analyzes the recreational effects of the proposed project and alternatives. As discussed in Draft EIR Section 5.5, Alternative 1: *No Project Alternative*, the No Project Alternative would not include the reconstructed pier, ferry-related public access improvements, public plaza, Bay Trail Extension, cycle track, or other recreational amenities included in the proposed project (refer to Draft EIR pages 5-3 through 5-9).

The purpose of the alternatives analysis is to evaluate the environmental consequences and objective attainment of reasonable alternatives, not to determine individual recreational preferences. The recreational consequences within the CEQA context of each alternative are described in Draft EIR Chapter 5, *Alternatives*, and the recreational benefits associated with the proposed project are evaluated in Draft EIR Section 3.11, *Recreation*, which acknowledges existing recreational uses and determines that the proposed project would result in a net increase in recreational opportunities (refer to Impact REC-1). Individual user or organizational preferences and concerns are matters for decision-makers to consider when determine whether or not to approve the project.

Insofar the comment refers to existing water access at the project site at 199 Seawall Drive, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which notes that access to this site would be maintained under the proposed project.

The analysis and conclusions presented in Chapter 3, *Environmental Impact Analysis*, and Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O6-8

Draft EIR Section 5.8, *Alternative 4: Reduced Landside Facilities Alternative* (pages 5-19 through 5-24), expressly identifies the landside improvements that would be eliminated under Alternative 4, including the Bay Trail Extension, public plaza, cycle track, bus facilities, improvements to University Avenue and Seawall Drive, and associated parking lot enhancements. The Draft EIR further acknowledges that Alternative 4 would provide fewer public access and recreational benefits than the proposed project and would not meet the project objective of enhancing public access and recreational opportunities at the Berkeley Waterfront to the same extent as the proposed project.

Section 5.10, *Environmentally Superior Alternative*, of the Draft EIR also evaluates environmental impacts associated with Alternative 4 across all resource areas analyzed in Chapter 5, including air quality, greenhouse gas emissions, transportation, recreation, and land use (refer to Draft EIR pages 5-28 through

5-31). As described in Table 5-2, *Comparison of Alternatives*, the Draft EIR compares the relative effects of Alternative 4 against the proposed project and the other alternatives, including resource areas where the reduced landside improvements would result in reduced environmental benefits relative to the proposed project (refer to Draft EIR pages 5-29 and 5-30). The determination of the environmentally superior alternative presented in Draft EIR Section 5.10 is based on a comparative evaluation of the alternatives as a whole and not solely on temporary construction-related impacts.

The comment's views regarding the relative merits of Alternative 4 compared to the proposed project are acknowledged. The Draft EIR discloses the tradeoffs associated with Alternative 4, including both reduced environmental impacts and reduced public access, recreation, bicycle, pedestrian, and transportation improvements, thereby providing decision-makers with information necessary to evaluate the alternatives. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O6-9

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation. As discussed throughout the Draft EIR, one of the project's basic objectives is to provide efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco. The Draft EIR evaluates the project's transportation and greenhouse gas impacts in Section 3.6, *Greenhouse Gas Emissions and Energy*, and Section 3.12, *Transportation*, and compares the ability of each alternative to attain project objectives in Chapter 5, *Alternatives* (refer to Sections 5.5 through 5.10). These same impacts are analyzed for Alternatives 1 to 4 in Chapter 5, *Alternatives* of the Draft EIR. The City further notes that the In-Marina Ferry Terminal Alternative was not rejected because of temporary construction impacts associated with Bay Trail improvements. Rather, it was rejected because it would not meet most of the project objectives, would be infeasible (operational and navigational), would not reduce environmental impacts, and would increase environmental impacts on recreation.

The analysis and conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O6-10

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation. Chapter 5, *Alternatives*, of the Draft EIR evaluates the environmental tradeoffs associated with the proposed project and reasonable alternatives, including differences in public access, recreation, transportation, and environmental effects. The City's conclusions regarding the alternatives analysis are supported by the information presented in the Draft EIR.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Re: Berkeley Waterfront Transportation Pier Ferry Project DEIR, State Clearing house #2025040995

Dear Ms. McNulty,

These comments are submitted on behalf of the Citizens Committee to Complete the Refuge regarding the *Draft Environmental Impact Report (DEIR) for the proposed Berkeley Waterfront Transportation Pier Ferry Project*. Our comments are focused on the impacts and proposed mitigation measures for biological resources. We support and incorporate by reference the comments submitted by the Sierra Club, Golden Gate Bird Alliance, and comments submitted by Erin Diehm regarding potential impacts to marine mammals, birds and fish. O7-1

The City of Berkeley's proposed project includes the following elements: O7-2

- Construction of a new pier 1,080-feet in length and 22-feet wide
- A 400-foot breakwater that is 15-feet in width
- Ferry boarding infrastructure that includes two 120-feet long and 10-feet wide gangways that would allow passengers to board via two boarding floats that are 135-feet long and 42-feet wide
- Development of a new public plaza at the pier entrance
- New pedestrian amenities
- Upgraded transit facilities
- Renovation of existing parking areas with permeable pavement and solar canopies
- Installation of new utility connections
- Shoreline repair consisting of approximately 300-feet length of rock rip rap slope protection
- Approximately 400,000 cy of initial dredging to support ferry operations
- Removal of existing piles and installation of new piles as described in Table 2-1

Table 2-1 Summary of Proposed Piles[20]

Location	Pile Type	Number of Piles
Landside/Shoreline Retaining Wall	24-inch Steel Pipe Pile	46
UCF Guide and Donut Piles	36-inch Steel Pipe Pile	18
Pier, Landing Platform, and Breakwater	24-inch Octagonal Prestressed Concrete Pile	227
Breakwater	48-inch x 14-inch Concrete Sheet Pile	125

O7-2

- Weekday/weekend/special event ferry service from Berkeley to San Francisco/Mission Bay and weekend/special event ferry service from Berkeley to Larkspur.

Based upon our review of the information provided in the DEIR and the 2003 Final Program Environmental Impact Report, Expansion of Ferry Transit Service in the San Francisco Bay Area prepared for the Water Transit Authority (2003 WTA EIR), we have the following substantive concerns:

- The DEIR places heavy reliance on the 2003 WTA EIR and fails to acknowledge and analyze the substantial change in circumstances for a number of special status species that occur within San Francisco Bay that could be adversely impacted by the proposed ferry routes. The environmental impacts to these species must be identified, analyzed and mitigation measures must be proposed. O7-3
- The impacts of the weekend and special event route from Berkeley to Larkspur Landing were not analyzed in the 2003 WTA EIR, thus the 2003 WTA EIR cannot be relied upon for identification, analysis or mitigation measures, and must be reviewed under the current DEIR. O7-4
- The DEIR fails to identify the frequency of future maintenance dredging or the anticipated volume and areal extent of maintenance dredging. O7-5

These, and other significant concerns, must be addressed prior to certification of the Environmental Impact Report (EIR) for the proposed project. O7-6

Commentors:

CCCR, with a membership of 2,000, has an ongoing history of interest in wetlands protection, wetlands restoration and wetlands acquisition. Our senior members were part of a group of citizens who became alarmed at the degradation of the Bay and its wetlands. We joined together, and with the support of Congressman Don Edwards, requested that Congress establish the Nation's first national wildlife refuge in an urban setting. The process took seven long years and in 1972 legislation was passed to form the San Francisco Bay National Wildlife Refuge ("Refuge"). We turned to Mr. Edwards again, and in 1988 (the first year he submitted it), his legislation to double the size of the Refuge was signed into law. The Refuge now bears his name in honor of his efforts. O7-7

CCCR has taken an active interest in the protection of the habitats and species that occur within San Francisco Bay, and the local, regional, state and federal regulations and policies that protect the Bay.

Substantial Change in Circumstances Since the 2003 WTA EIR: O7-8

The DEIR fails to acknowledge that substantial changes have occurred for a number of sensitive/special-

status species occurring within San Francisco Bay that could be adversely impacted by the proposed ferry routes. The DEIR fails to adequately identify or analyze the direct, indirect and cumulative impacts of ferry traffic to marine mammals and sea ducks. The DEIR fails to analyze or propose mitigation measures to reduce the adverse impacts of ferry operations to sensitive/special-status species.

California Code of Regulations Title 14, § 15162 (a) requires that additional environmental review occurs if:

> "(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;" [emphasis added]

O7-8

Or:

> "(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:
>
> (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
> (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;" [emphasis added]

Berkeley to Larkspur Ferry Route Not Analyzed in the 2003 WTA EIR:

The 2003 WTA EIR did not analyze a Berkeley to Larkspur ferry route. The direct, indirect, and cumulative impacts to biological resources that might occur from operation of a ferry along this route were not identified or analyzed and as such, mitigation measures were not proposed.

O7-9

Impacts to Gray Whales Inadequately Analyzed:

The 2003 WTA EIR includes Impact B-15 High-speed ferries could potentially strike gray whales in San Francisco Bay, and acknowledges the "increase in gray whale sightings in San Francisco Bay." The 2003 WTA EIR attributes this increase to the fact that the "gray whale population in the Pacific has returned to historic levels." The 2003 WTA EIR states:

> "…Since there have been no recorded whale strikes, whales are likely not migrating perpendicularly to ferry routes but are probably feeding at preferred locations and likely are actively avoiding ferry vessel routes…As alluded to above, no documented collisions between gray whales and any type of vessel have occurred in San Francisco Bay (Cordero 2001)." [emphasis added]

O7-10

A recent paper by Slaathaug et al[1] reports that the Eastern Northern Pacific population of gray whales has declined by 52% since 2016, and suggests that increased gray whale sightings within San Francisco

[1] Slaathaug JM, Lane RS, Keener W, Perez A, Flannery M, Webber MA, Grimes A, Wilkin AM, O'Hern JE, Duignan PJ, Calambokidis J and Crocker DE. 2026. "*Gray whales (Eschrichtius robustus) in San Francisco Bay experience high mortality and have limited affiliation to known foraging groups*." Front. Mar. Sci. 13:1775666. doi: 10.3389/fmars.2026.1775666

Bay may reflect a response to climate change and food availability, rather than an increase in population numbers – "…As food webs are impacted, some species have moved into areas of increased human activity, encountering anthropogenic hazards." Disturbingly, the authors report that for the period from 2018-2025, 30 of 70 whale carcasses necropsied displayed "blunt and/or sharp force trauma consistent with vessel strike" as a cause of death. This represents a significant change in circumstance from the conclusion provided in the 2003 WTA EIR.

The authors state:

> "This work confirms that gray whales entering SF Bay are highly susceptible to vessel strike mortality and highlights a crucial need to identify and implement adaptive management strategies to mitigate injuries and mortality as whales continue to utilize novel habitat."

O7-10

And conclude:

> "The prevalence of vessel strike mortality and additional evidence of sub-lethal vessel interactions emphasize the crucial need for research and management to prioritize understanding and mitigating vessel interactions in SF Bay. Adaptive management strategies such as dynamic or presence-induced slow speed zones can be valuable in reducing vessel strike mortality (Allen and Garmestani, 2015; Holling et al., 1978; Laist et al., 2014; Reeves, 2022). Protecting this population along its migratory corridor as it contends with a changing environment will be critical for the species' ability to rebound from its current decline." [emphasis added]

The 2003 WTA EIR Mitigation B-14.1, mentions the National Marine Fisheries Service (NMFS) minimum distance guidance of 100 yards for whales, and notes that the guidance does not consider potential boat speeds. The mitigation measure does not explicitly require that the minimum distance for whales be adhered to.

O7-11

Mitigation B-15.1 from the 2003 WTA EIR requires that:

> "Ferry operators shall be aware of the potential for whales entering the Bay and should know how to spot whales at the surface. The USCG reports whale sightings and distance to vessels when they receive a report of a whale sighting. Ferry captains shall be made aware of these reports and exercise diligence when a whale sighting has been reported. The ferry system shall implement a program of informing ferry operators of whale sightings and locations. For example, if one captain sights a whale, it should be reported through a network to all other captains. Operators should be informed or reminded during seasonal periods of heightened whale activities or presence. If whale sightings continue to increase in the Bay, having dedicated lookouts on board or other detection equipment could be warranted, especially during certain times of the year. Devices (such as sound-generating equipment) used to scare whales from the area may be considered intentional harassment by NMFS and would not likely be allowed."

O7-12

And Mitigation B-15.2 requires that "Ferries shall be equipped with a whale detection system such as forward-looking sonar. Such a system is currently under development and being tested on a NOAA vessel in Cape Cod Bay."

Neither of Mitigations B-15.1 or B-15.2 describe protective requirements beyond whale detection, e.g. a required decrease in speed, distance set-back, area avoidance, etc.

Due to the declining Eastern Northern Pacific gray whale population, the increasing frequency with which gray whales are entering and transiting the Bay, and in light of the significant increase in whale ship strike mortality, we urge that additional mitigation measures be analyzed and implemented such as "dynamic or presence-induced slow speed zones," to ensure the impacts of ferry operation (described in this DEIR) is reduced to a level that is less than significant. O7-12

The Berkeley Water Transportation Pier Ferry Project Administrative Record (https://berkeleypierferryproject.com/) includes a Memorandum dated February 18, 2026 from Tom Hall, Director of Operations and Tim Hanners, Director of Project Delivery & Engineering San Francisco Bay Ferry (WETA), to Liza McNulty, Capital Improvement Program Manager, City of Berkeley, "*Marine Mammal Protection & Whale Avoidance*." If the Operational Measures at #3 are proposed to be incorporated as mitigation measures, they should have been included as such within the body of the DEIR for public review and comment:

> "The following operational measures shall be observed by all vessel operators: mandatory second bridge watch at speeds exceeding 30 knots; mandatory second bridge watch when exceeding 10 knots anywhere in the Bay whales are known to be present via visual observation or regional information sharing; logging of all watch assignments and avoidance actions; speed reduction to 10 knots if an observed whale cannot be given a buffer of at least half of a nautical mile; real-time communication of observations with Vessel Traffic Service (VTS) and the Marine Mammal Center (MMC); avoidance of natural haul-out sites with 100–250 meter buffers; and crew training on whale detection and response procedures." [emphasis added]

O7-13

Can a ferry traveling at speeds exceeding 30 knots effectively avoid a whale strike? This is an important question, especially since gray whales like to cruise low in the water, only briefly coming to the surface.[2]

The DEIR must identify, analyze and propose mitigation measures for significant direct, indirect and cumulative impacts to gray whales resulting from ferry operation, not just impacts associated with the construction of the proposed ferry terminal.

Impacts to Harbor Porpoises and Bottlenose Dolphins Inadequately Analyzed:

The 2003 WTA EIR only mentions the harbor porpoise once stating, "Other marine mammal species that have been seen occasionally in the Bay include the humpback whale (*Megaptera noveangliae*), harbor porpoise (*Phocoena phocoena*), northern elephant seal (*Mirounga angustirostris*), Steller sea lion (*Eumetopius jubatus*), northern fur seal (*Callorhinus ursinus*), and less frequently, the southern sea otter (*Enhydra lutris*)." [emphasis added] The bottlenose dolphin isn't mentioned at all. The word "dolphin" is mentioned under Mitigation B-14.1 that describes the NMFS Guidance regarding minimum avoidance distances: O7-14

[2] SF Gate. 3.31.2026. "*Windsurfer collides into whale in SF Bay as multiple wash up dead.*" https://www.sfgate.com/bayarea/article/gray-whale-death-22162140.php Accessed 4.2.2026. O7-13

NMFS Guidelines

Animal or Sensitive Site	Minimum Distance
Whales	91 meters (100 yards)
Pinnipeds (seals and sea lions)	46 meters (50 yards) in water 91 meters (100 yards) from haul-out sites
Dolphins	46 meters (50 yards)

The DEIR notes that "There are several occurrences [of harbor porpoise] recorded in the entrances of San Francisco Bay," and that "There is a moderate potential for individuals to migrate, forage, and transit within the project site." The only impacts identified, analyzed and for which mitigation measures are proposed, are construction related. No impacts or mitigation measures are proposed from ferry operation and as noted above, none were identified or proposed in the 2003 WTA EIR.

Keener and Clinton, 2019[3] note, "Porpoises are now seen regularly at locations much farther inside the Bay, such as Raccoon Strait, and near, Angel, Alcatraz, and Treasure Island. Passengers on the commuter ferries have seen them as far south as the San Francisco-Oakland Bay Bridge." And Stern et al confirm that their study[4] "…demonstrated that harbor porpoises now use SF Bay habitat on a daily basis across all months of the year."

The DEIR cannot rely on the 2003 WTA EIR for the identification and analysis of impacts to the harbor porpoise resulting from ferry operations. In addition, the DEIR must propose mitigation measures to reduce the impacts of ferry operations to the harbor porpoise to a level that is less than significant. The DEIR should include in its analysis of impacts, electric ferry noise impacts that may adversely affect foraging efficacy of the harbor porpoise. Smith et al[5] report: O7-14

> "The second component to consider is the potential for electric motors and power electronics to create significant levels of high-frequency tonal noise. These tones arise from the pulse width modulation (PWM) used to control the motor, and this was the source of the high-frequency tonal noise in the study of Gaggero *et al.* (2024). This high frequency tonal noise produced by electric outboards may therefore be of concern for high-frequency hearing specialists, such as harbour porpoises *(Phocoena phocoena),* which have best hearing in the range of approximately 10 to 140kHz (Kastelein *et al.,* 2017), and have been documented to elicit strong behavioral responses (Dyndo *et al.,* 2015; Wisniewska *et al.,* 2018) and be at an increased risk of auditory masking (Beedholm *et al.,* 2025) during exposure to the high-frequency signals produced by a vessel." [emphasis added]

Similarly, Gaggero et al[6] make the following observation for bottlenose dolphin:

> "This seems to suggest that the EB [electric boat] use does not provide any benefit from the

[3] Keener, William and Larry Clinton. 2019. "*Harbor Porpoise Comeback*." https://www.sausalitohistoricalsociety.com/2019-columns/2019/12/25/harbor-porpoise-comeback. Accessed 4/25/2026.
[4] Stern, S. Jonathan, William Keener, Isidore D. Szczepaniak, and Marc A. Webber. 2017. "*Return of Harbor Porpoises (Phocoena Phocoena) to San Francisco Bay.*" Aquatic Mammals 2017, 43(6) 691-702, DOI 10.1578/AM.43.6.2017.691
[5] Smith, Tom A., Charlotte R. Findlay, Andrea Grech La Rosa, and Peng Wu. 2026. "*A comparative study of underwater radiated noise from electric and conventional boats.*" Journal of Acoust. Soc. Am. 159 (3): 2388-2397
[6] Gaggero, Tomaso, Enrico Armelloni, Antonio Codarin, Carola Chicco, Maurizio Spoto, Carlo Franzosini, Saul Ciriaco, Marta Picciulin. 2024. "*Electric boat underwater radiated noise and its potential impact on species of conservation interest.*" Marine Pollution Bulletin 199 (2024) 115937 pp. 1-10

> underwater noise pollution point of view, in comparison with the more common CEBs [combustion engine boats]. However, EB, when it is in use, generates evident tonal components .. aching a level of 130 dB re 1µPa, one of which overlaps with the best hearing frequency of the bottlenose dolphin (40 kHz). These tonal sounds have frequencies similar to those used by odontocetes for echolocation-based foraging and navigation, although bottlenose dolphin communication exploits a wider variety of frequency range, from the low to the high frequencies (Boisseau, 2005). [emphasis added]
>
> … This paper therefore demonstrates that the common sense for which electric boats are more silent (as it is perceived by humans' sensitivity to noise) may be proved wrong for some species of marine mammals. This claims for further studies to better evaluate if the EB noise represents a stressor for the marine species that have high frequency specialised hearing, such as the bottlenose dolphin." [emphasis added]

O7-14

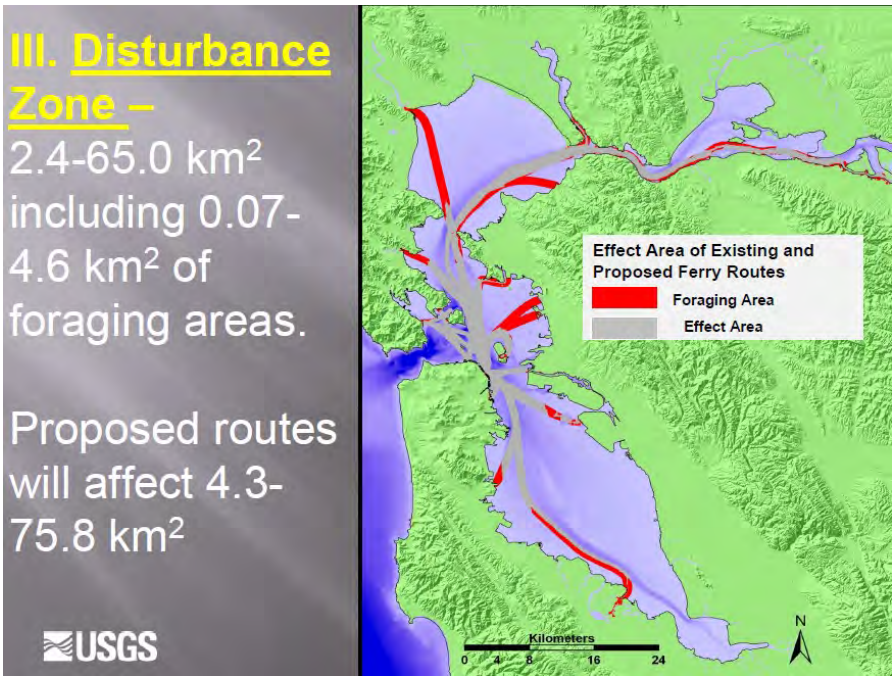
While the findings of both of these studies were based on smaller vessels, the impacts of electric ferries on harbor porpoises and dolphins requires further analysis to determine whether there are significant impacts to the use of echolocation by these species for foraging and for communication, and whether these impacts can be mitigated.

Impacts to Waterbirds Inadequately Analyzed:

The potential for adverse impacts to waterbirds on the Bay from Project ferries must be analyzed in the DEIR. Impact B-11 of the 2003 WTA EIR states, "Ferry traffic could disturb roosting, rafting, and foraging waterfowl in the Bay," and acknowledges that waterfowl are "sensitive to the noise level, speed, size, and visual effects of traveling vessels, and generally react to this disturbance by flushing (taking flight away from the area of disturbance)." The EIR also acknowledged that:

O7-15

> "The projected ferry routes for the Proposed Project would bisect shallow areas of the Bay that are used as foraging and roosting areas for diving birds, particularly surf scoter, canvasback, lesser and greater scaup, and ruddy duck," and that "An increase in the frequency of flushing of waterfowl flocks would be considered potentially significant."



Mitigation B-11.1 states, "Ferry routes shall be consolidated within common corridors, travel down deeper channel areas as much as possible, and choose the shortest routes across shallow areas to leave as much undisturbed shallow open-water habitat as possible."

However, Mitigation B-11.2 defers development of additional specific mitigation measures to an undisclosed later date, without providing any minimum standards, "Response of waterfowl to new ferry routes in shallow North and South Bay roosting, rafting, and foraging habitat shall be evaluated. Evaluation could include observations of ferry operations and waterfowl responses by an authority such as the Point Reyes Bird Observatory (PRBO)." [emphasis added] Yet incomprehensibly concludes, "Impact After Mitigation: This impact would be considered less than significant after implementation of Mitigations B-11.1 and B-11.2." The current DEIR cannot rely upon the 2003 WTA EIR to address the impacts of ferry operations on waterbirds.

O7-16

The effects of ferry traffic on waterbirds present on bay waters was studied by U.S.G.S. biologists who

presented their findings at the 2008 South Bay Salt Pond Restoration Project South Bay Science Symposium[7]. A slide from their presentation is provided below:

Presentation slide from Takekawa et al. 2008. Effects of Ferry Traffic on Migratory Waterbirds in the San Francisco Bay. South Bay Salt Pond restoration Project South Bay Science Symposium 2008: Research and Restoration of the South Bay, 25 Sept. 2008.

The 2025 San Francisco Bay State of the Birds Report[8] indicates significant population decreases for the period of 1989-2024, in the North and Central Bay open water represented predominately by Lesser and Greater Scaup and by Scoters. Scaup had a bay-wide annual decline of -2.6%, while Scoter had a bay-wide annual decline of -7.5%. According to the report these trends "mirror larger declines in the Pacific Flyway and continentally." Audubon California reports[9], "*Forty to fifty percent of the Pacific Flyway's Surf Scoter population is believed to overwinter in San Francisco Bay…Over the past 50 years, however, their populations have declined across their range by 50-60%.*" O7-16

Larsen and Laubek[10] studied the effects of high-speed ferries on wintering sea ducks in the Kattegat Sea, Denmark. Their study identified the following impacts of high-speed ferries to sea ducks (Common Eiders and Common Scoters):

> "The impacts of high-speed ferries on sea ducks may be divided into three main categories: i) changes in habitat, ii) disturbance and iii) collision risk. Changes in habitat by high-speed ferries may occur where the ferries pass through shallow waters, through the physical effect of the underwater waves generated by the combined effect of the hull and the water jet, on the

[7] Takekawa et al. 2008. Effects of Ferry Traffic on Migratory Waterbirds in the San Francisco Bay. South Bay Salt Pond restoration Project South Bay Science Symposium 2008: Research and Restoration of the South Bay, 25 Sept. 2008. Abstracts of oral and poster presentations. https://www.southbayrestoration.org/science/2008symposium/2008Symposiumpresentations/presentations/Takekawa%20et%20al_Effects%20of%20Ferry%20Traffic%20on%20Migratory%20Waterbirds%20in%20the%20San%20Francisco%20Bay%20.pdf

[10] Larsen, J.K. and Laubek, B. (2005). Disturbance effects of high-speed ferries on wintering sea ducks. Wildfowl. 55. 99-116. https://wildfowl.wwt.org.uk/index.php/wildfowl/article/view/1176/1176

bottom substrate (Dahl & Kofoed-Hansen 2003). Changes in substrate composition may in turn affect the benthic fauna on which sea ducks depend. Sailing, like many other human activities, is a source of disturbance to birds. A boat passing through a sea-duck site will cause a temporary displacement of birds and a change in activity pattern within a corridor along the route travelled. Depending on the frequency of disturbance and the ability of birds to compensate for the resultant loss of feeding time, and the concomitant increase in energy expenditure, this may lead to a loss of feeding habitat. Finally, high-speed ferries may pose a collision risk to sea ducks. The speed at which a high-speed ferry travels leaves limited reaction time for sea ducks located in the ferry's immediate path, which might be especially critical during feeding bouts, when sea ducks spend much time underwater, or when visibility is reduced. Birds may collide with the ferry or, when attempting to escape by diving, become caught in the underwater turbulence." [emphasis added]

O7-16

These studies raise significant concerns regarding the potential negative impacts of the proposed ferry service transiting the San Francisco Bay – questions that must be answered through the environmental review:

- What are the potential long-term direct, indirect, and cumulative impacts to diving duck and other waterbirds (i.e., Double-crested Cormorant) populations, and their use of foraging areas from disturbance caused by 28 daily trips of high-speed ferries between San Francisco Bay and Berkeley during the week and 14 daily trips on the weekend, and 12 daily trips of high-speed ferries between Berkeley and Larkspur on the weekends, plus an unspecified number of special event trips for each of the two routes? O7-17
- Could the repeated flushing response to ferry disturbance result in decreased body condition of diving ducks due to disruption of critical feeding and roosting behaviors. Repeated flushing in response to disturbance requires an expenditure of energy that may have negative impacts on energy stores for migration or reproduction (i.e., will the birds have sufficient energy store to reach their breeding ground and once there, will they have sufficient energy to successfully reproduce?). Scoters have a low reproductive rate so any negative impacts on breeding success will have negative repercussions at the population level. O7-18
- Could the substrate disturbance of the high-speed ferry in adjacent shallower waters have negative impacts on benthic invertebrates – i.e. diving duck food supply? O7-19

Dredging:

- The DEIR fails to provide the location of the ferry turning basin on any of the project figures. Please provide this information along with an estimate of the areal extent of the turning basin. O7-20
- The DEIR does not mention maintenance dredging. Does the City have an estimate of the volume of material that will need to be dredged and the frequency with which maintenance dredging will be needed? O7-21
- There has been an exponential increase in the estimated volume of material that will need to be dredged between the 2003 WTA EIR (13,260 cy), the 2008 Draft EIS/EIR Berkeley/Albany Ferry Terminal Study (150,000 cy) and the current DEIR (400,000 cy). This is yet another example of the change in circumstances that has occurred since the 2003 WTA EIR. O7-22

Consideration of the Use of Helical Piles:

- The proposed project would install approximately 416 concrete or steel piles of various width and shape. The installation would require impact pile driving, resulting in potential significant adverse impacts to wildlife. For aquatic species there are numerous mitigation measures proposed that may or may not reduce the adverse impacts to a level that is less than significant, including soft-start and ramp-up procedures, utilization of a sound/bubble curtain, etc. to address noise and vibratory impacts. In addition, there are turbidity concerns that could result in reduced visibility, impaired foraging ability, and clogged gills in fish. We urge the City to analyze the use of helical piles to assess whether the reduction in construction time, reduction in noise, vibration and turbidity offset the higher initial costs. O7-23

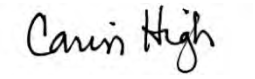
Incomplete List of Species Within the Project Vicinity:

- The DEIR dismissed the occurrence of the state fully protected White-tailed Kite within the project vicinity despite the fact that there are numerous reports of the species occurring at Shorebird Park as recently as March 2026 on iNaturalist, YouTube videos of a White-tailed Kite nest with adults feeding nestlings at Cesar Chavez Park in May 2020, and an eBird observation of an individual carrying nesting material within the project boundary in April 2026. White-tailed Kite should be added to the list of species with a high likelihood of occurring within the project vicinity. O7-24
- Similarly, the DEIR does not include the federally listed threatened California Least Tern, reported on eBird at Berkeley Marina-bayside in May of 2023. O7-25
- There are numerous reports of Brown Pelican from Berkeley Marina-bayside from April 26, 2026 and other adjacent locations, including April 13, 2026 at Shorebird Park, and February 2026 at the Berkeley Pier. O7-26
- The longfin smelt is listed as having a high potential to occur within the project site. The EIR should give special consideration of mitigation measures necessary to adequately protect this species, as well as green sturgeon, white sturgeon, and winter-run Chinook salmon given the significant declines in the population numbers for all of these species. O7-27

Specifications of Electric Ferries to be Used Should be Provided:

- Information regarding the speed at which the electric ferries can travel should be provided in EIR. O7-28
- Analysis of the potential impacts of speed/different acoustic signatures on marine mammals and rafting sea ducks should be provided, to assess whether additional mitigation measures should be proposed to ensure the adverse impacts of electric ferry operations are less than significant for these suites of species. O7-29

Observation of the Conversion from Diesel Engines to Electric Ferries in the state of Washington:



- Several news articles have circulated regarding the delay in converting from diesel to electric engines due to rising costs. We recognize the Washington State ferries are much larger as they transport cars and large vehicles. Is it certain that the ferry service proposed for the Berkeley Ferry Terminal will in fact be based on electric ferries? If not, additional analysis must be conducted to identify impacts of diesel engines on air quality, biological resources, water quality, hazardous materials, and energy consumption. O7-30

Conclusion:

Based upon our review of the information provided in the 2003 WTA EIR and the change in circumstances for biological resources of the Bay, it is evident that the analysis of impacts of ferry operations on biological resources of the Bay, and the mitigation measures that were (or were not) proposed to ensure those impacts were reduced to a level that is less than significant, are clearly inadequate. We urge that this be rectified and that the public is provided the opportunity to review and provide comments on any changes made before the Final EIR is released and certified. O7-31

Thank you for the opportunity to provide comments. We request that we be notified of any future opportunities for review and comment on this project. O7-32

Respectfully submitted,

Carin High, CCCR Co-Chair

Letter O7

Commenter: Carin High, Co-Chair, Citizens Committee to Complete the Refuge

Date: April 28, 2026

Response to Comment O7-1 and O7-2

These comments do not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O7-3

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Refer to Response to Comments O7-24 to O7-27 for responses to specific species raised in the comment letter.

Response to Comment O7-4

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

Regarding the Berkeley to Larkspur route, although WETA's Berkeley Ferry Service Business Plan, Version 1.0 does identify weekend service to Larkspur, additional project planning would be needed to provide this service. Specifically, while the range of proposed electric ferry vessels allow for service to San Francisco, the range may not yet allow for service to Larkspur. In addition, additional infrastructure would be necessary to dock electrical ferry vessels in Larkspur. For these reasons, the City has removed the Berkeley to Larkspur service from the Project Description of the EIR. For these reasons, the Berkeley to Larkspur route is not reasonably foreseeable, and would be subject to additional environmental review if and when it were to be proposed for implementation.

Specifically, Draft EIR Section 2.7.1, Operational Scenario and Ridership (page 2-30), has been revised as follows.

> A conceptual plan for ferry service has been provided in the 2022 San Francisco Bay Area Water Emergency Transportation Authority (WETA) Berkeley Ferry Service Business Plan, Version 1.0.[24]This is a living document and updates to the Business Plan and contemplated ferry service will be ~~captured~~ described in future updates. The following ferry operation is proposed in the current Berkeley Ferry Service Business Plan, Version 1.0:
>
> 1. WETA would operate two 250-passenger electric zero-emission vessels on the weekday route between Berkeley and San Francisco.
> 2. Weekend service would operate ~~a single 250-passenger vessel to Larkspur and~~ a single 250-passenger vessel to San Francisco.
> 3. At least three round-trip services would be completed during peak hours for the Berkeley/San Francisco weekday service, pursuant to WETA Board-adopted standards.
> 4. The Berkeley-San Francisco service would travel 6.7 miles between the Berkeley Ferry Terminal and the San Francisco Ferry Terminal. The total one-way travel time would be 25 minutes, door-

to-door. Weekday peak-direction headways[25] would be approximately 35 minutes. Weekend headways would be 70 to 110 minutes, depending on the time of day.

5. ~~The Berkeley-Larkspur service would travel 11.8 miles between the terminal at the Berkeley Marina and the Larkspur Ferry Terminal. The one-way travel time would be 35 minutes, door-to-door. Weekend headways would be 90 to 150 minutes, depending on the time of day.~~
6. Special event service may operate between Berkeley and San Francisco or Mission Bay (e.g., for events at the Chase Center or Oracle Park or future events at the Berkeley Marina)~~, as well as between Larkspur and Berkeley~~.

[24.] WETA. 2022. WETA Berkeley Ferry Service Business Plan, Version 1.0. March 17, 2022. Available: https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf (accessed August 2024).

[25.] A headway refers to the time interval between successive ferry departures.

Draft EIR Table 2-4 (page 2-31) has also been revised to remove references to Larkspur as follows:

Table 2-4 Daily Ridership Projections (trips)

Destination	Weekday	Weekend Day	Special Events
Projected First Year of Service			
San Francisco	1,910	1,367	209
Mission Bay[1]	2,106	1,503	209
~~Larkspur[2]~~	~~–~~	~~515~~	~~104~~
Estimated Fifteenth Year of Service[1]			
San Francisco	2,110	1,510	230
Mission Bay[1]	2,320	1,660	230
~~Larkspur[2]~~	~~–~~	~~580~~	~~115~~

[1] Total trips (including stop at San Francisco Ferry Terminal) (i.e., ridership estimate is additive of Berkeley to San Francisco passengers)

~~[2] Weekend service only~~

[2.] Ridership projections were developed after the onset of the COVID-19 pandemic using pre-pandemic ridership assumptions and demand data that were adjusted to reflect pandemic-related changes in travel behavior, fare structures, and ferry service demand.

Source: WETA. 2022. WETA Berkeley Ferry Service Business Plan, Version 1.0. March 17

The removal of the Berkeley-Larkspur route reduces the scope of project operations analyzed in the Draft EIR and does not result in any new significant environmental impacts or a substantial increase in the severity of any previously identified impact. Rather, the revised project description reflects a more conservative operational scenario than that analyzed in the Draft EIR. Therefore, the Draft EIR's impact analyses, significance conclusions, and mitigation measures remain valid, and the clarification does not constitute significant new information pursuant to CEQA Guidelines Section 15088.5.

Response to Comment O7-5

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate* and Section 2.2.15, *Topical Response: Maintenance Dredging,* for discussion of post-construction sedimentation rates and maintenance dredging. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-6

Refer to Response to Comments O7-1 through O7-5 and O7-7 through O7-32 for responses to specific issues raised in the comment letter. As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective.

Response to Comment O7-7

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O7-8

The Draft EIR is based on a comprehensive literature and database review and on project-specific technical studies. Specifically, the Draft EIR biological resources analysis in Section 3.3.2, Environmental Setting, pages 3.3-3 through 3.3-24, relied on current agency databases and peer-reviewed literature (including State and federal species occurrence records, CNDDB/CDFW data, NOAA/USFWS records, eBird and other observational databases, and the 2003 WETA EIR), together with recent field surveys. That review informed the Draft EIR conclusions about species presence, habitat suitability, and the likely magnitude of project-level effects.

The Draft EIR evaluates impacts to marine mammals and special-status birds from project construction and operation in Section 3.3.4 under Impact BIO-1, pages 3.3-45 through 3.3-51, and Impact BIO-4, pages 3.3-63 through 3.3-62, and concludes that impacts would be less than significant or less than significant with implementation of mitigation (refer to Mitigation Measures BIO-1[a], BIO-1[c], BIO-1[d], BIO-1[e], and HYD-1). Cumulative impacts on biological resources are evaluated in Draft EIR Section 3.3.5, pages 3.3-67 through 3.3-69 and concluded to be less than significant. Refer to Response to Comment O4-8 for further discussion of operational impacts on marine mammals. Refer to Response to Comment O7-17 for discussion of and Draft EIR clarification text changes with regard to waterbirds. Refer to Section 2.2.11, *Topical Response: Ferry Operations,* for discussion of vessel interaction with aquatic species. Refer to Section 2.2.4, *Topical Response: Biological/Underwater Noise,* and Section 2.2.28, *Topical Response: Whale Strike,* for discussion of effects of vessel speed on aquatic species. Finally, there are no new circumstances or new, substantial information that affects the aforementioned significance conclusions in the Draft EIR or triggers the need for additional environmental planning review. The analysis and significance conclusions in the Draft EIR remain valid. No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-9

Refer to Response to Comment O7-4.

Response to Comment O7-10

As described in Draft EIR Section 3.3.4 (Impact BIO-1, pages 52 to 54), the analysis acknowledges that vessel strikes are a known source of mortality for gray whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay transit corridor, which includes substantial commercial, recreational, and ferry vessel operational levels. In addition, refer to Response to Comment O7-13 for discussion regarding the potential occurrence of whale strike and Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for discussion regarding change in circumstances with respect to whale strike and inclusion of new related information in the Draft EIR. No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-11

This comment refers to general guidelines from NMFS for avoidance of whales protected under the Endangered Species act and/or the Marine Mammal Protection Act included in the 2003 WETA EIR. Draft

EIR Section 3.3.4 under Impact BIO-1(pages 3.3-45 through 3.3-51) discusses establishment of buffer distances to create safe zones, which exceed 100 yards, based on NMFS guidelines that allow calculation of thresholds to avoid injury and harassment of marine mammals from noise produced by various construction activities. Construction impacts would be less than significant with implementation of Mitigation Measure BIO-1(d), which establishes safe zones based on these thresholds. Draft EIR Section 3.3.4(page 3.3-54) discusses project operation impacts to marine mammals and the Mitigation Measures in the 2003 WETA EIR requiring best practices to reduce the potential for whale strikes and concludes that impacts would be less than significant impacts. Refer to Response to Comment O7-13 and Section 2.2.28, *Topical Response: Whale Strike*, for further discussion of whale strikes. In addition, refer to Section 2.2.11, *Topical Response: Ferry Operations*, for discussion of vessel interaction with aquatic species and Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for discussion of effects of vessel speed on aquatic species. No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-12

In Draft EIR Section 3.3.4 under Impact BIO-1, pages 3.3-52 through 3.3-54, vessel strikes are analyzed as a known source of mortality for whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay transit corridor, which includes substantial commercial, recreational, and ferry vessel operational levels. Refer to Response to Comment O7-13, Section 2.2.1, Topical Response: 2003 WETA EIR Applicability, and Section 2.2.28, *Topical Response: Whale Strike*. Since significant impacts are not concluded in the Draft EIR, there is no need for additional mitigation. No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-13

The 2003 WETA EIR, Implementation and Operations Plan, Mitigation and Monitoring Plan, and the Memorandum mentioned in the comment is described on page 3.3-38 of the Draft EIR. The project analyzed in the Draft EIR addresses impacts of ferry operations and refers to WETA policies and mitigation measures in place for operation of ferry routes in the San Francisco Bay. As described on page 3.3-53 of the Draft EIR, WETA works closely with the Marine Mammal Center to develop a protocol to protect whales and other marine mammals and reflects ongoing technological advances, current scientific understanding, and updated NOAA guidance to ensure that its implementation of 2003 WETA EIR Mitigation Measures 15.1 and 15.2 is as robust as possible. In addition, refer to Section 2.2.1, Topical Response: 2003 WETA EIR Applicability, and Section 2.2.28, *Topical Response: Whale Strike*. Since significant impacts are not concluded in the Draft EIR, there is no need for additional mitigation. No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-14

The Draft EIR identified moderate potential for harbor porpoise and bottlenose dolphin to occur in Section 3.3.2, Environmental Setting, pages 3.3-20, 3.3-23, and 3.3-24. Project construction and operational impacts to marine mammals, including these two species, were evaluated in Section 3.3.4 under Impact BIO-1, pages 3.3-48 through 3.3-54, and the Draft EIR concludes that impacts would be less than significant or less than significant with implementation of mitigation (refer to Mitigation Measures BIO-1[a], BIO-1[c], BIO-1[d], BIO-1[e], and HYD-1). In addition, refer to Section 2.2.4, *Topical Response: Biological/Underwater Noise*, and Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability.* No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-15

The proposed increase in project-related operational ferry trips would be incremental relative to existing vessel operational levels in San Francisco Bay. Asserting a direct population-level impact (including foraging and roosting for diving birds) from the project alone is speculative without site-specific evidence linking the project's incremental disturbance to measurable declines in body condition, migration

success, or reproductive output. The Draft EIR addresses impacts to wildlife movement in Section 3.3.4, Impacts Analysis under Impact BIO-4, pages 3.3-63 through 3.3-62, and concludes that impacts would be less than significant. Refer to Response to Comment O7-17 for discussion of and Draft EIR clarification text changes with regard to waterbirds. Refer to Section 2.2.11, *Topical Response: Ferry Operations*, for discussion of vessel interaction with aquatic species. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O7-16

Refer to Response to Comment O7-15.

Response to Comment O7-17

Most diving ducks and other waterbird species in San Francisco Bay are not considered special-status under CEQA, because they are common, widespread, and not listed as threatened, endangered, or otherwise protected under federal or State endangered species acts or CDFW special-status criteria. Thus, such species are not evaluated individually as special-status species in the Draft EIR. The Central Bay already supports dense commercial, recreational, and ferry operational levels; the Draft EIR compares the incremental ferry operations of the project to this existing baseline rather than to an undisturbed Bay. Refer to Response to Comment O7-8 for further discussion of waterbirds in the Draft EIR. In response to this comment the following discussion has been added to Section 3.3.4 under Impact BIO-4, page 3.3-64:

Section 3.3.4, page 3.3-63:

> Marine
>
> Operation of ferry vessels would occur at the water surface level, with some incremental increase in ferry boat noise and lighting within the project ~~area~~ vicinity. The project proposes to operate two ferry vessels with regular service to San Francisco ~~and weekend service to Larkspur~~, which ~~are both~~ is an active shipping port~~s~~ with existing recreational and ferryboat use. Therefore, the project would represent an incremental increase in existing boat trips on the Bay.
>
> Temporary disturbance from ferry operations would be localized and intermittent, affecting only a small portion of the broad open-water foraging and roosting areas used by migratory and wintering birds in San Francisco Bay. The project's operational corridor represents a minor fraction of the available bay habitat, and similar foraging and roosting sites occur immediately north and south of the corridor. Because displacement events would be shorter and birds can move to adjacent habitat with comparable resources, the loss of usable foraging or roosting area is expected to be temporary and minimal.
>
> Special-status fish and marine mammals, specifically whales, are likely habituated to existing levels of boat trip levels and would avoid new ferry boat service….

This clarification text change does not change the significance conclusions in the Draft EIR. In addition, refer to Section 2.2.11, *Topical Response: Ferry Operations,* for discussion of ferry vessel operational impacts related to aquatic species. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O7-18

Refer to Response to Comment O7-17 for a discussion related to diving ducks. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O7-19

Refer to Response to Comment O7-17 for a discussion related to diving ducks. No Draft EIR changes are necessary in response to this comment

Response to Comment O7-20

The dredging location within the project site, including the proposed ferry turning basin, is identified in Figure 2.2, page 2-3 of the Draft EIR. No Draft EIR changes are necessary in response to this comment.

Response to Comment O7-21

The Draft EIR includes an estimated maximum one-time construction dredging volume of 400,000 cubic yards in Chapter 2, *Project Description*, page 2-28. Refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* for a discussion of how maintenance dredging is addressed in the EIR. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-22

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

The 400,000 cubic yards of dredging is based on the current best available information, and based on the latest engineering for the project. In this Draft EIR, the City has analyzed the environmental impacts associated with the dredging of 400,000 cubic yards.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O7-23

Refer to Response to Comment O5-42 for discussion of helical piles and why they are not feasible for this project. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-24

Refer to Response to Comment A2-10 for discussion of impacts on white-tailed kite. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-25

Refer to Response to Comment A2-35 to A2-38 for Draft EIR clarification text changes addressing California least tern and related impacts. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-26

The Draft EIR focuses its special-status species evaluation on taxa that are currently listed or otherwise designated as special-status by federal, State, or recognized conservation lists, and on species for which the project site provides suitable habitat. Special-status species are defined in Draft EIR Section 3.3.2, Environmental Setting, page 3.3-17. Brown pelican was delisted under both the federal and California Endangered Species Acts in 2009 because the populations were found to be recovered based on the best scientific and commercial data.[31] Recovery means that the species is no longer in danger of extinction or likely to become so within the foreseeable future. Following delisting, the brown pelican remained a fully

[31] Removal of the Brown Pelican (*Pelecanus occidentalis*) From the Federal List of Endangered and Threatened Wildlife; Final Rule, 50 Fed. Reg. 59444 (Nov. 17, 2009) (to be codified at 50 CFR §17.11(h)). Available at: https://www.federalregister.gov/documents/2009/11/17/E9-27402/endangered-and-threatened-wildlife-and-plants-removal-of-the-brown-pelican-pelecanus-occidentalis. Accessed on September 25, 2026.

protected species under California Fish and Game Code (CFGC) until 2023, when its fully protected species status was also removed by State Bill 147. Species that have been formally delisted or that lack current regulatory special-status are not treated as special-status species under CEQA. The decisions by wildlife regulatory agencies to remove more stringent species protections were made specifically because this species is no longer "rare." Rare is defined under CCR 15380(b)(2) as existing in small numbers throughout all or a significant portion of its range that it may become endangered if its environment worsens or that the species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in the federal Endangered Species Act. Brown pelican is rated as a species of low conservation concern on the Continental Concern Score by Partners in Flight, further indicating that this species is no longer rare, as defined by CCR 15380(b)(2).[32,33] Brown pelican is still protected under CFGC Section 3503 and the MBTA, and any impacts to this species would be less than significant via implementation of Mitigation Measures BIO-1(a) and BIO-1(c). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-27

The Draft EIR evaluated impacts to longfin smelt, green sturgeon, white sturgeon, and winter-run Chinook salmon in Section 3.3.4 under Impact BIO-1, page 3.3-45, and concludes that impacts would be less than significant with implementation of Mitigation Measures BIO-1(a) and BIO-1(d). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-28

Refer to Section 2.2.11, *Topical Response: Ferry Operations*, for a discussion of how vessel speeds are addressed in the EIR, consistent with CEQA.

Response to Comment O7-29

Refer to Response to Comment for O7-8 for discussion of potential impacts of ferry operations to marine mammals and rafting waterbirds. In addition, refer to Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for discussion of ferry operational noise impacts related to marine species. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O7-30

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, for a discussion of how the proposed project includes and the Draft EIR analyses assume installation and operation of an electric ferry, and not a ferry that would be propelled by any other means of fuel or energy source.

Response to Comment O7-31

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

---

Re: Comments on the Draft Environmental Impact Report — Berkeley Water Transportation Pier Ferry Project

Dear Ms. McNulty and the Project Team,

On behalf of the Cal Sailing Club (CSC) Board of Directors, we welcome the opportunity to comment on the Draft Environmental Impact Report (Draft EIR) for the Berkeley Water Transportation Pier Ferry Project. CSC has long called the Berkeley waterfront home, and we see exciting potential upsides in environmentally friendly developments that make the Bay more accessible to Berkeley residents and visitors — including our own members. We appreciate the City's sustained effort to advance this project, and the community engagement to shape it. O8-1

CSC's membership holds a range of views on the project, and as a club we take no position for or against it. We do, however, share a collective interest in ensuring that the EIR provides a thorough analysis of potential impacts on the waterfront's recreational uses. The South Sailing Basin and its environs are the foundation of our educational and recreational programs, and a number of physical and environmental questions about the project's effects on that area do not appear to be fully addressed in the Draft EIR. We raise these as areas where we believe additional analysis would strengthen the document and lead to better outcomes for everyone. O8-2

Requests for Additional Environmental Analysis

1. **Parking Access for Recreational Users**

   CSC members, volunteers, and guests depend on nearby parking to participate in sailing, windsurfing, kayaking, and paddleboard programs. Many participants carry equipment that cannot easily be transported via transit. The Draft EIR acknowledges a net reduction in available parking spaces but does not appear to fully assess the downstream effect on recreational users who rely on that capacity. O8-3

   Specifically, the Draft EIR's analysis in Chapter 3, Environmental Impact Analysis, states that "parking scarcity alone does not constitute a significant impact on the environment" and that the EIR "has found no secondary environmental impacts related to parking" (see page 3-11 and Section 3.9, Land Use and Planning, Table 3.9-1, BCDC Bay Plan Consistency discussion).

However, the BCDC San Francisco Bay Plan policy on Recreation and Public Access states that “facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons” and that “shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking.” While the Draft EIR references the City’s forthcoming Parking and TDM Plan (cited at footnotes 19 and 20 of Section 3.9), neither that plan nor the EIR itself appears to quantitatively evaluate whether the shared-use parking strategy will preserve adequate access for equipment-dependent recreational users such as CSC’s members. O8-4

Section 3.11, Recreation, identifies CSC and Cal Adventures as users of the South Sailing Basin public docks (page 3.11-6) and lists construction staging at the Skates/N Lot and Parking Lot M as potentially reducing parking availability (Impact REC-1, page 3.11-16). However, the operational analysis does not address the long-term displacement of recreational parking by ferry commuter demand. It is important to recognize that even if there is a “net increase in recreational facilities that do not currently exist,” (Impact REC-1, page 3.11-16), the “impacts related to a substantial physical deterioration of existing recreational facilities,” are indeed very significant to users of those facilities. O8-5

The Final EIR must explicitly evaluate impacts on recreational parking in compliance with the 2025 San Francisco Bay Plan, which calls for “conveniently located areas where vehicles can be parked for more than short periods of time” at waterfront recreational facilities. If ferry ridership is projected to increase demand for parking beyond current capacity, the EIR should identify mitigation measures that preserve adequate access for recreational users. O8-6

2. **Wind Shadow Effects from Peninsula and Berm Changes**

The South Sailing Basin benefits from wind shelter provided by the existing landforms along Seawall Drive. This sheltered area is essential to CSC’s instructional programs: it allows beginners to develop sailing and windsurfing skills in a protected environment before venturing into the more exposed and therefore challenging Bay. Any changes to the berm, tree height, or peninsula geometry could alter this wind shadow in ways that are difficult to reverse. O8-7

The Project Description (Section 2.5.2, page 2-18) explains that the project would remove the existing vegetated berm at the Seawall Drive parking lot along with approximately 40 trees, including Monterey Cypress, Monterey Pine, and other species (page 2-22). Replacement plantings of 50 to 70 new trees are proposed, but these would be 24-inch box trees that would take years to reach the canopy height of the mature trees being removed. Section 3.1, Aesthetics (page 3.1-31), acknowledges that the removal of these trees and berm would change the visual character of the Seawall Drive corridor, replacing “organic shapes and softened skyline with geometric forms and engineered materials,” but the Draft EIR does O8-8 O8-9 O8-10

not evaluate the functional recreational impacts of these landform changes on wind exposure in the adjacent South Sailing Basin.

The Final EIR should specifically evaluate whether proposed modifications to these landforms would materially affect wind conditions in the South Sailing Basin, and if so, on what timescale vegetation or other mitigations might restore that shelter. O8-10

3. **Siltation and Sediment Transport**

   Construction activities and alterations to the pier footprint, new breakwater, and adjacent shoreline have the potential to disturb sediment and affect siltation patterns in the South Sailing Basin. The Draft EIR does not appear to include a thorough analysis of sediment transport under the proposed project.

   The Draft EIR addresses dredging-related turbidity in Section 3.8, Hydrology and Water Quality (pages 2-28 and 3.8-30), noting that up to 400,000 cubic yards of material would be dredged and that turbidity from dredging "diminishes to background levels within a radius of approximately 600 feet within one tidal cycle." However, this analysis focuses on water quality in the immediate dredging zone and does not evaluate longer-term sediment redistribution to the South Sailing Basin. Similarly, Section 3.5, Geology and Soils (Impact GEO-4, page 3.5-31) addresses ferry wake and erosion but concludes impacts are less than significant based on the armored rip-rap shoreline, without analyzing sediment deposition patterns in the South Sailing Basin. The new 400-foot breakwater could alter wave energy and current patterns in the project vicinity, which could redirect sediment transport toward or away from the basin's shallow areas. O8-11

   We request that the Final EIR assess whether construction or long-term ferry operations could alter siltation or erosion rates in the South Sailing Basin, and if so, what mitigation measures would be employed. Siltation could affect the navigability of the basin's shallow-water areas, which are used for beginner instruction and non-motorized watercraft.

We recognize that these questions may require additional technical study, and we offer CSC's institutional knowledge of the South Sailing Basin and its conditions as a resource to the project team. We look forward to reviewing the responses to these comments in the Final EIR and hope to see proposed changes that benefit the entire Berkeley waterfront community. O8-12

Thank you for your consideration.

Respectfully,

Cal Sailing Club Executive Committee
Cal Sailing Club
124 University Ave, Berkeley, CA 94710

Letter O8

Commenter: Executive Committee, Cal Sailing Club

Date: April 28, 2026

Response to Comment O8-1 and O8-2

These comments do not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O8-3

Refer to Section 2.2.20, *Topical Response: Parking,* which discusses parking considerations under CEQA, the evaluation of secondary physical effects related to parking, parking availability, and the City's parking management approach for managing both ferry patrons and recreational users. Refer also to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*, regarding equipment-dependent recreational activities and access needs.

The analyses and significance conclusions presented in Sections 3.11, *Recreation*, 3.12, *Transportation*, and related sections of the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment O8-4

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is addressed under CEQA, as well as how the project would provide sufficient parking for all users.

Response to Comment O8-5

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is addressed consistent with CEQA.

To the extent the comment is concerned with construction staging, refer to Response to Comment A3-55, which revises Section 3.11, *Recreation*, of the Draft EIR to clarify the analysis of temporary recreational impacts on recreational access. The revision presented therein is clarifying in nature, and does not alter the analysis or subsequent significance conclusion under Impact REC-1. The comment suggests that are impacts related to a substantial physical deterioration of existing facilities but does not provide information about what existing facilities they are referring to, nor any evidence to how existing facilities would be degraded as a result of the project.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the EIR are necessary.

Response to Comment O8-6

Refer to Section 2.2.20, *Topical Response: Parking.* As discussed therein, parking availability and convenience are not environmental impacts under CEQA in themselves. The Draft EIR evaluates potential secondary physical impacts associated with parking and concludes that project implementation would not result in significant adverse impacts related to recreational access.

To the extent the comment's concerns relate to the BCDC San Francisco Bay Plan, the Draft EIR evaluates consistency with applicable Bay Plan policies in Section 3.9, *Land Use and Planning*, including policies related to shoreline access, parking, and recreation. The analysis concludes that the project would maintain and enhance public access to the waterfront through a combination of retained and reconfigured parking, active transportation improvements, public transit access, and new recreational

amenities (refer to Impact LU-2). Because no significant parking-related environmental impact has been identified, mitigation is not required under CEQA. For further discussion of project consistency with BCDC Bay Plan policies, please refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*.

The analyses and significance conclusions presented in Sections 3.11, *Recreation*, 3.12, *Transportation*, and related sections of the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment O8-7

Refer to Section 2.2.29, *Topical Response: Wind* (Sub-Section Wind Shelter Effects of Tree and Berm Removal), for discussion concerning CEQA and wind. No further response is required.

Response to Comment O8-8

The proposed project would provide replacement trees where appropriate consistent with Berkeley's Municipal Code and practices of Berkeley's Urban Forestry Unit, as stated on Draft EIR page 3.3-65 of Section 3.3, *Biological Resources.* No further response is required.

Response to Comment O8-9

This statement provides context for the comment but does not identify issues with the adequacy of the aesthetics analysis, significance conclusions, or mitigation measures in the Draft EIR. Therefore, no further response is required.

Response to Comment O8-10

Refer to Section 2.2.29, *Topical Response: Wind* (Sub-Section Wind Shelter Effects of Tree and Berm Removal), for discussion concerning CEQA and wind. No further response is required.

Response to Comment O8-11

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about sediment transport and siltation impacts on the South Cove Sailing Basin.

Response to Comment O8-12

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

RE: Comments on the Draft EIR for the Berkeley Pier with Ferry Access Project

Dear Liza McNulty,

Thank you for the opportunity to provide public comment on the Draft Environmental Impact Report (DEIR) for the Berkeley Pier with Ferry Access Project, as required by the California Environmental Quality Act (CEQA). Please see the detailed list of comments below. Our primary concern is the lack of study of wintering waterbirds, especially rafting and foraging terns, grebes, and ducks. The environmental impacts of construction and ferry operation on those birds and their open-water habitat was not sufficiently addressed in the DEIR. O9-1

Golden Gate Bird Alliance is a non-profit organization whose mission is to inspire people to protect Bay Area birds and our shared natural environment. For over 100 years we have been a leader in bird conservation and habitat protection. Our 7,000 members and supporters envision a world where birds, wildlife, and all people flourish together. O9-2

Impacts to Wintering Waterbirds

The DEIR is deficient in outlining impacts and mitigation related to the offshore wintering habitat for many bird species including state and federal Special Status Species as well as species experiencing population declines in the Bay Area. **A single land-based survey date in September is insufficient to understand the ecology and species composition, let alone the environmental impacts to these species from pier construction phases and later ferry operations.** The Biological Resources table in Appendix 2 is incomplete without consideration of overwintering presence. Disturbance from construction or ferries is shown to flush waterbirds from their roosting and foraging grounds[1]. Local habitat changes at one location on a migratory flyway can have significant impacts to larger populations of waterfowl[2]. O9-3

[1] Takekawa, John, Natalie R. Wilson, Susan W. De La Cruz, and Jane O. Anfinson. 2004. Effects Of Ferry Traffic On Migratory Waterbirds In The San Francisco Bay. USGS Western Ecological Research Center, San Francisco Bay Estuary Field Station. john_takekawa@usgs.gov

[2] De Felipe, M., J. A. Amat, J. L. Arroyo, R. Rodríguez, and C. Díaz‐Paniagua. 2024. Habitat Changes at the Local Scale Have Major Impacts on Waterfowl Populations Across a Migratory Flyway. Global Change Biology 30:e17600.

California Least Terns (*Sernula antillarum browni*) are in fact present and foraging in and adjacent to the project site, primarily in the months of May through August. While the DEIR is correct in that there is not suitable nesting habitat for this species in the project site, there is very suitable habitat for foraging as demonstrated by the birds currently using it according to eBird observations,[3] likely commuting from the Alameda nesting colony. Without consideration of the impacts of both construction and ferry operations on this sensitive state and federally listed Endangered species and its foraging patterns and habitat in the Berkeley off-shore area, this project should not proceed. O9-4

Additionally, the following species are present in the project site throughout the winter and are listed by US Fish and Wildlife Service or California Department of Fish and Wildlife[4] as species of special conservation concern: Ruddy Duck, Western Grebe, Clark's Grebe, Elegant Tern, Caspian Tern, Osprey, California Gull, California Brown Pelican, and Common Loon. While their designation is specific to their nesting habitat, these birds overwinter and forage in the open bay, in the project area. Their critical overwintering habitat is key to their survival. The DEIR identifies thresholds of significance as impacts that "result in direct take or habitat removal or alteration for candidate, sensitive, or special-status species." The pier construction and ongoing ferry operations would absolutely result in habitat removal and alteration for California Least Tern as well as these special-status species. O9-5

In addition to these species with special designation, an analysis of Christmas Bird Count and eBird data show dramatic declines in these species' populations in the greater Bay Area over the last 50 years: Greater Scaup, Lesser Scaup, Surf Scoter, Bufflehead, Common Goldeneye, and Western Sandpiper. All are present in abundance in the project site during winter.

The DEIR does outline mitigation strategies for protecting and surveying for nesting birds, including avoiding terrestrial construction during the bird breeding season which we were happy to see. However, breeding habitat is only one important part of a bird's life cycle and overwintering habitat is also critical for protecting migratory birds. This project should not proceed without further study of overwintering offshore birds during construction and ferry operation, and outlining appropriate mitigation measures. O9-6

2003 PEIR Out of Date

The 2003 Programmatic EIR (PEIR) for Expansion of Ferry Transit Service in the San Francisco Bay Area, prepared for the Water Transit Authority, lacks alignment with current San Francisco Bay ecological science. There have been substantial changes in the ecology of the Bay since 2003, including declines in multiple wintering and migratory bird populations as outlined above as well as increased presence of multiple whale species. Increased Ferry use in the Bay, including an added ferry terminal in Berkeley as part of this project, calls for a new PEIR based on the changing conditions in species presence and the overall ecology of the San Francisco Bay. These changing conditions and species declines, O9-7

including dabbling open water ducks like Surf Scoter, are also well documented in the recently published San Francisco Bay State of the Birds Report[5]. O9-7

Lighting Impacts to Birds and Wildlife

Impact AES-4 in the DEIR outlines lighting impacts of the project and suggests using Dark Sky approved lighting fixtures. We strongly encourage this mitigation measure and support the use of Dark Sky approved lighting in all projects including this one. The impacts of artificial lighting at night are beyond aesthetic for birds, nocturnal insects, and other wildlife. The cumulative light from urban environments, skyglow, has shown to be a top predictor for bird migration stopover frequency[6], putting the birds at risk of collision[7] and predation. Mitigation measure AES-1 should be adopted to prevent these impacts. O9-8

Based on the project design it seems there will be significantly more lighting fixtures than currently in place, both on the land in the parking area and on the new pier. In addition to ensuring the fixtures are Dark Sky approved, we also recommend following the Dark Skies principles for responsible outdoor lighting[8] which asks that lighting be only as bright as absolutely necessary, and only on when necessary.

Thank you for your time and consideration.

Sincerely,

Glenn Phillips
Executive Director

Letter O9

Commenter: Glen Phillips, Executive Director, Golden Gate Bird Alliance

Date: April 28, 2026

Response to Comment O9-1

Refer to Responses to Comments O9-3 through O9-8 for a discussion of waterbirds and the evaluation of potential impacts to aquatic bird species. No further response is required.

Response to Comment O9-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O9-3

A reconnaissance-level field survey, when combined with targeted database and literature review and the application of standard CEQA avoidance/minimization measures, provides sufficient, project-specific information to map and evaluate potential species habitats and sensitive biological resources to support CEQA impact analysis. CEQA requires enough information to evaluate environmental effects and to adopt feasible mitigation; it does not require exhaustive scientific research or the generation of new baseline science beyond what is necessary to make an informed determination. The "biological resources table in Appendix 2" is in fact a table titled *Special Status Animal Species in the Regional Vicinity of the Project Site* in Appendix C (pages C-7 through C-12) and evaluates the potential to occur of all special-status species with known occurrence records in standard database searches described in Draft EIR Section 3.3.1, Introduction, page 3.3-1. If overwintering birds did not meet the definition of a special-status species under CEQA, as defined in Section 3.3.2, Environmental Setting, page 3.3-17, they were not included in the table in Appendix C. Refer to Responses to Comment O7-17 and P46-4 for details of Draft EIR clarification text changes related to waterbirds, including offshore wintering birds, and the Pacific Flyway, respectively. No further revisions to the EIR are necessary. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O9-4

Refer to Response to Comment A2-35 to A2-38 for details of the Draft EIR clarification text addition changes related to California least tern. No additional changes to the Draft EIR are necessary in response to this comment.

Response to Comment O9-5

Refer to Response to Comment A2-35 to A2-38 for details of the Draft EIR clarification text changes related to California least tern. Ruddy duck, western grebe, Clark's grebe, elegant tern, Caspian tern, osprey, California gull, and California brown pelican, are not CDFW species of special concern. Common loon is a species of special concern, and osprey and elegant tern are CDFW Watchlist species. These species had no occurrence records in the standard nine USGS 7.5-minute quadrangle search of the California Natural Diversity Database (CNDDB) including the project site and, thus, were not considered in the Draft EIR. California is outside the breeding range for common loon, which is limited to northern North America, from Alaska and much of Canada south into the northern United States, with clear, fish-rich lakes in boreal and near-arctic regions. Elegant tern nests in large colonies on beaches, and there is no suitable breeding habitat within the project site or its vicinity given the high anthropogenic disturbance in the vicinity of the project site. Osprey are not known to nest at the Berkeley Marina according to the Golden Gate Bird Alliance-run website SFBayOspreys.org, and prefer to build nests off the ground in treetops, cliffs, or elevated human-built structures. There is low potential for common loon, osprey, and

elegant tern to forage over open water or roost on trees or structures within and adjacent to the project site. In response to this comment, potential for these species to occur within the project site have been added as low in Appendix C, and the following clarification text changes have been made to Draft EIR Section 3.3, *Biological Resources* and Appendix C, *Supporting Biological Resources Information*:

Section 3.3.4, page 3.3-18:

Special-status Wildlife Species

Fifty-one ~~Forty-seven~~ (~~47~~ 51) terrestrial special-status wildlife species were assessed for their potential to occur within the project site (Appendix C), of which 12 ~~seven~~ have the potential to occur within the terrestrial portions of the project site. One species, double-crested cormorant (*Nannopterum auritum*, CDFW Watch List), was determined to have a moderate potential to occur and is discussed in further detail below.

In addition, the following ~~six~~ 11 species (one insect, one reptile, and ~~five~~ nine avian species) were determined to have a low potential to occur, and therefore, with the exception of Crotch's bumble bee and burrowing owl (due to their State candidate endangered status), least tern, and the northwestern pond turtle (which is discussed further due to the proximity of potential habitat near the project site), are not discussed further because they are unlikely to be affected by the project:

- Crotch's bumble bee (*Bombus crotchii*, State candidate endangered)
- Northwestern pond turtle (*Actinemys marmorata*, federally proposed threatened, State species of special concern [SSC])
- Cooper's hawk (*Accipiter cooperii*, CDFW Watch List)
- Burrowing owl (*Athene cunicularia*, State candidate)
- Common loon (*Gavia immer*, SSC)
- Brant (Branta bernicla, SSC)
- White-tailed kite (*Elanus leucurus*, State fully protected)
- Alameda song sparrow (*Melospiza melodia pusillula*, SSC)
- Osprey (*Pandion haliaetus*, CDFW Watch List)
- Least tern (*Sternula antillarum browni*, Federally endangered, State endangered, State fully protected)
- Elegant tern (*Thalasseus elegans*, CDFW Watch List)

Appendix C, page C-9:

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
Falco peregrinus anatum American peregrine falcon	FD/SD G4T4/S3S4	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	Not Expected	There are two known occurrences within five miles; however, suitable cliffs or tall buildings are not present.
Gavia immer common loon	None/None G5/S1 SSC	Breeds in northern freshwater lakes in Canada and the northern United States, migrates to coastal waters or large southern lakes in winter. Frequents bodies of water that are extensive, fairly	Low Potential	No recorded occurrences within five miles, however winter habitat is present in open water in the vicinity of the project site.

		deep, and produce quantities of large fish.		

Appendix C, page C-10:

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
Nannopterum auritum double-crested cormorant	None/None G5/S4 WL	Colonial nester on coastal cliffs, offshore islands, and along lake margins in the interior of the state. Nests along coast on sequestered islets, usually on ground with sloping surface, or in tall trees along lake margins.	Moderate Potential	There are no known occurrences within five miles, and the Project site is largely developed and disturbed by recreational use; however, this species is known locally to nest on man-made structures.
Pandion haliaetus osprey	None/None G5/S4 WL	Ocean shore, bays, freshwater lakes, and larger streams. Builds large nests in tree-tops or tall structures within 15 miles of a good fish-producing body of water.	Low Potential	There are no recorded occurrences within five miles. Suitable foraging habitat is present over open water within the project site. There are suitable trees and tall structures for nesting within the project site, but due to high anthropogenic disturbance and no documentation of nests, it is unlikely that ospreys would nest in the project site.
Rallus obsoletus obsoletus California Ridgway's rail	FE/SE G3T1/S2 FP	Salt water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay. Associated with abundant growths of pickleweed, but feeds away from cover on invertebrates from mud-bottomed sloughs.	Not Expected	There are two known occurrences within five miles; however, suitable marsh habitats are not present and the Project site is largely developed and disturbed by recreational use
Riparia riparia bank swallow	None/ST G5/S3	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	Not Expected	There are no known occurrences within five miles, suitable river banks are not present, and the Project site is largely developed and disturbed by recreational use.
Rynchops niger black skimmer	None/None G5/S2 SSC	Nests on gravel bars, low islets, and sandy beaches, in unvegetated sites. Nesting colonies usually less than 200 pairs.	Not Expected	There are no known occurrences within five miles, suitable gravel bars and beaches are not present, and the Project site is largely developed and disturbed by recreational use.
Sternula antillarum browni	FE/SE G4T2T3Q/S2 FP	Nests along the coast from San Francisco Bay south to northern Baja California. Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches,	~~Not Expected~~ Low Potential	There are no known occurrences within five miles, suitable colonial breeding sites are not present, and the Project site is largely

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
California least tern		alkali flats, land fills, or paved areas.		developed and disturbed by recreational use. This species may forage over open water in the vicinity of the project site.
Thalasseus elegans elegant tern	None/None G5/S3 WL	Nests on open, sandy undisturbed beaches and on salt-evaporating pond dikes (San Diego) in association with the Caspian tern. There are three known breeding colonies in San Diego Bay, Los Angeles Harbor, and Bolsa Chica Ecological Reserve. Outside of breeding season they can be found along the Pacific coast, from California, all the way into South America. They eat mostly small schooling fish and the northern anchovy is their primary prey.	Low Potential	There are no known occurrences within five miles, suitable breeding sites are not present. This species may forage over open water in the vicinity of the project site.

Regardless of these clarification text changes, the analysis and significance conclusion presented under Impact BIO-1 in Section 3.3.4 Biological Resources Impacts Analysis, page 3.3-43 of the Draft EIR remains valid. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O9-6

Refer to Response to Comment O7-8 for discussion of project construction and operation impacts to waterbirds, which include overwintering species, and their respective habitat. Refer to Response to Comment O9-3 for discussion of CEQA requirements with regards to additional scientific studies. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O9-7

The comment discusses the 2003 WETA EIR and states that the Draft EIR does not provide an updated analysis to account for changed circumstances, specifically concerning biological resources.

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Response to Comment O9-8

Construction lighting impacts to terrestrial wildlife are discussed in Draft EIR Section 3.3.4 under Impact BIO-1, page 3.3-44, and were determined to be less than significant with implementation of Mitigation Measure AES-1. Lighting impacts to terrestrial wildlife during project operation are discussed under Impact BIO-1, page 3.3-51, which concludes that, because lighting added as part of the project would be designed in accordance with City ordinance and would be similar to existing levels of lighting already present on the project site, impacts would be less than significant. For further discussion of nighttime lighting and its effects on the shoreline, refer to Section 2.2.18, *Topical Response: Nighttime*

Lighting/ALAN. In response to this comment the following clarification text change has been added to Section 3.3.4 under Impact BIO-1, page 3.3-51:

Section 3.3.4, page 3.3-51:

> **Special-Status Wildlife**
>
> […]
>
> Impacts on nesting birds, including double-crested cormorant, from operation would also be minimal. Any additional lighting added as part of the project, as discussed in *Section 3.1, Aesthetics,* under Impact AES-4, would be designed in accordance with City ordinance, and would be similar to existing levels of lighting present on the project site. The ferry would operate in open water, and the existing use of the project site for recreation would continue with similar levels of activity and disturbance. Wake generated by ferry operation would be consistent with existing vessel operations in the Bay and not result in disturbance to nesting or roosting habitats above the existing shoreline riprap armoring. Therefore, impacts on migratory and nesting birds due to operation would be less than significant.

This clarification text change does not result in changes to the Draft EIR significance conclusions.

Letter O10

Subject: Public Comment on Berkeley Pier-Ferry Draft Environmental Impact Report (DEIR)

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

Berkeley Waterfront Community Coalition would like to submit the attached public comment on the Draft Environmental Impact Report (DEIR) for the Berkeley Water Transportation Pier Ferry Project (due today April 28, 2026 at 5 pm). Thank you in advance for your time in reviewing the comments. Please let us know if we can clarify anything in the document.

O10- 1

BWCCDEIRCOMMENTSFINAL.pdf

A confirmation of timely receipt would be most appreciated.

Best regards,

Camille Antinori
On behalf of Berkeley Waterfront Community Coalition

Date: **April 28, 2026**
To: **Liza McNulty, PE, Project Manager**
City of Berkeley, Parks, Recreation, and Waterfront Department
2180 Milvia, 3rd Floor
Berkeley, California 94704
From: **Berkeley Waterfront Community Coalition**
Re: **Berkeley Water Transportation Pier Ferry Draft EIR Comments**

Berkeley Waterfront Community Coalition (BWCC) is a nonprofit organization formed under the auspices of Berkeley Partners for Parks, a 501(c)3 organization. Its founding members seek to preserve and expand access for a diverse public to enjoy the waterfront and share ideas for supporting this unique urban shoreline. BWCC's mission is to develop projects that raise awareness of the waterfront, enhance a sense of community, and support the waterfront's role in providing affordable public access to blue- and greenspace amenities to the region and beyond. BWCC submitted scoping comments in response to the City of Berkeley's (COB) Notice of Preparation (NOP) in May 2025 for the Berkeley Water Transportation Pier Ferry project (the "project"). Below, we are pleased to submit comments to the City of Berkeley's Draft Water Transportation Berkeley Pier Ferry Environmental Impact Report, made available Friday, February 27, 2026 (~3pm). We submit these comments to inform the city that this Draft Environmental Impact Report (DEIR) is inadequate under the California Environmental Quality Act (CEQA), Public Resources Code § 21000 et seq., and the CEQA Guidelines, California Code of Regulations, title 14, §15000 et seq. (CEQA Guidelines).

O10-2

O10-3

This letter is submitted along with the reports/linked attachments prepared by BWCC, EBOWS, Placer.ai through COB's license managed by Visit Berkeley tourist bureau, and public comments on elements of the project. We also list references to studies which bear on the health and equity benefits of bluespace - areas near bodies of water like lakes, oceans and rivers - and the importance of those needs in California as they relate to the waterfront area in the vicinity of the project. We respectfully refer the city to those, both here and throughout these comments, for further detail on our comments.

O10-4

We request that the city reply to each of the comments in this letter and prepare and recirculate a new and adequate DEIR. O10-5

I. Overview of principal deficiencies

The DEIR, as prepared, contains fundamental deficiencies that undermine its usefulness as an informational and decision-making document under CEQA. The project setting, description, and baseline conditions are incomplete and, in key respects, inaccurate. These shortcomings permeate the entire analysis and compromise the evaluation of environmental impacts relative to baseline conditions. The DEIR fails to incorporate readily available data necessary to characterize existing recreational use in and around the project area, and the impact analyses frequently ignore, misstate, or omit relevant evidence available at the time of the Notice of Preparation, including any meaningful cumulative impact assessment. Moreover, the DEIR provides no credible evidentiary basis for its conclusion that the project would result in a net increase in recreational activity along with less-than-significant impacts. On the contrary, available evidence indicates that the proposed ferry project would reduce public access to the waterfront and increase the cost of bluespace recreation. None of these impacts, nor the inconsistencies of the project, can be discerned from reading the DEIR. O10-6 O10-7 O10-8

The stated need for the project—beyond basic pier restoration—is not substantiated, calling into question the adequacy of the project objectives and the resulting range of alternatives, which are either improperly rejected or insufficiently analyzed. Many sections of the DEIR justify impacts or project as a whole based on obtaining a recreational pier, with the Water Emergency Transportation Authority (WETA) ferry expansion plan for Berkeley as the only option, with the ferry service almost incidental, for achieving this objective. The DEIR poses too narrow a framing for this objective. Moreover, as this letter notes, the ferry component of the project as framed in the DEIR and related documents not fully integrated into the DEIR introduces significant environmental impacts. It has a potential for significant environmental impacts, if the DEIR had included required CEQA information with analysis. Many of the project's recreational improvements as claimed by the DEIR will occur in the baseline scenario, and feasible alternatives exist for pier replacement/restoration claimed by the project based on historical patterns and recent documentation. The DEIR's rationale for rejection or noninclusion of these feasible alternatives is missing or cursory. O10-9 O10-10 O10-11

With regard to each of CEQA's substantive requirements—a complete and stable project description, a thorough analysis of significant impacts, identification of feasible and enforceable mitigation measures, an analysis of a reasonable range of alternatives—the DEIR falls short. As a result, the DEIR fails to meet CEQA's O10-12

fundamental purpose of providing disclosure to the public of the project's environmental effects.

O10-12

Finally, as context for any consideration of overriding significant impacts, we present evidence demonstrating a lack of substantial economic benefits and the presence of adverse social impacts, further undermining any claim of overriding considerations. Rather, the DEIR relies on unsubstantiated claims of increased economic and social benefits for justification at several points.

O10-13

II. DEIR fails to provide adequate project description

An accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR."[1] On the other hand, "[a] curtailed, enigmatic or unstable project description draws a red herring across the path of public input."[2] "[O]nly through an accurate view of the project may the public and interested parties and public agencies balance the proposed project's benefits against its environmental cost, consider appropriate mitigation measures, assess the advantages of terminating the proposal and properly weigh other alternatives ... ."[3]

O10-14

Further, "[t]he project description must contain (1) the precise location and boundaries of the proposed project; (2) a statement of the objectives sought by the proposed project, including the underlying purpose; (3) a general description of the project's technical, economic, and environmental characteristics; and (4) a statement briefly describing the intended uses of the EIR."[4]

A. Electric ferry - no vessel specifications

The cover photo of the DEIR shows a sailboat alongside the pier, a pier with recreational extension, but no ferry. The project objective is to put in a zero-emission ferry. The operational details in Section 2.7 call for a 250-passenger ferry. However, we were not able to identify an electric ferry model of 250-passengers. WETA is building

O10-15

[1] Washoe Meadows Community v. Department of Parks & Recreation (2017) 17 Cal.App.5th 277, 287 quoting Citizens for a Sustainable Treasure Island v. City and County of San Francisco (2014) 227 Cal.App.4th 1036, 1052; South of Market Community Action Network v. City and County of San Francisco (2019) 33 Cal.App.5th 321, 332.
[2] San Joaquin Raptor Rescue Center v. County of Merced (2007) 149 Cal.App.4th 645, 655.
[3] Id.
[4] South of Market Community Action Network, 33 Cal.App.5th at 332 citing CEQA Guidelines, § 15124; see also 14 Cal. Code Regs. (C.C.R.) § 15124(a) [An EIR must include a project description that provides "the precise location and boundaries of the proposed project."]

O10-14

three 150-seat electric ferries and two 400-passenger ferries[5]. BWCC members note that the 150-passenger electrics would probably only have the range for Treasure Island to San Francisco, and the 400-passenger boats could possibly manage the entire route. The diesel-powered Bay Breeze vessel class at 97' length overall does carry 250 passengers.[6]

O10-15

The DEIR does not identify which vessel WETA is planning to use at the Berkeley marina. The project description cannot be based on hypothetical concepts that may come to fruition in the future, but must be based on **existing technology** and contractual plans at the time of the NOP scoping call. To properly understand the environmental impact, the EIR must provide specifications of the electric vessel it plans to use.

O10-16

Further, it must provide specifications on infrastructure to serve an electric ferry vessel in an emergency. Alternative transportation across the Bay in an emergency is in the scope of the project and is one objective. It must specify electrification infrastructure to withstand natural disasters. It should also specify whether and to what extent the electric ferry service will be able to handle emergency vehicles and emergency personnel. If the city cannot perform this request, then it must change references to electric ferries as constituting only **hypothetical scenarios** not in the foreseeable future, and omit any project outcomes that rely on electric ferries.

O10-17

B. Missing information on level of ferry service

City of Berkeley documents describe the project as a large-scale commuter ferry with fourteen roundtrips or 28 crossings during weekdays (Large-Scale Ferry Feasibility Study, City Council Work Session, Tuesday, December 7th, 2021) and thirteen departures or 26 crossings to SF and Larkspur on weekends. This information is not provided in the DEIR. Operational details give a generic WETA minimum systemwide standard for peak weekday service: "At least three round-trip services must be completed during peak hours for the Berkeley/San Francisco weekday service, per WETA Board-adopted standards." With three roundtrips in the morning and three in the evening peak hours, this implies only 12 crossings during weekdays and none on the weekends. The DEIR characterizes the ferry as recreational. However, the WETA Berkeley Ferry Service Business Plan Version 1, a CEQA and DEIR planning document, (WETA Berkeley Ferry Service)

[6] See https://www.nicholsboats.com/portfolio/project/bay-breeze.

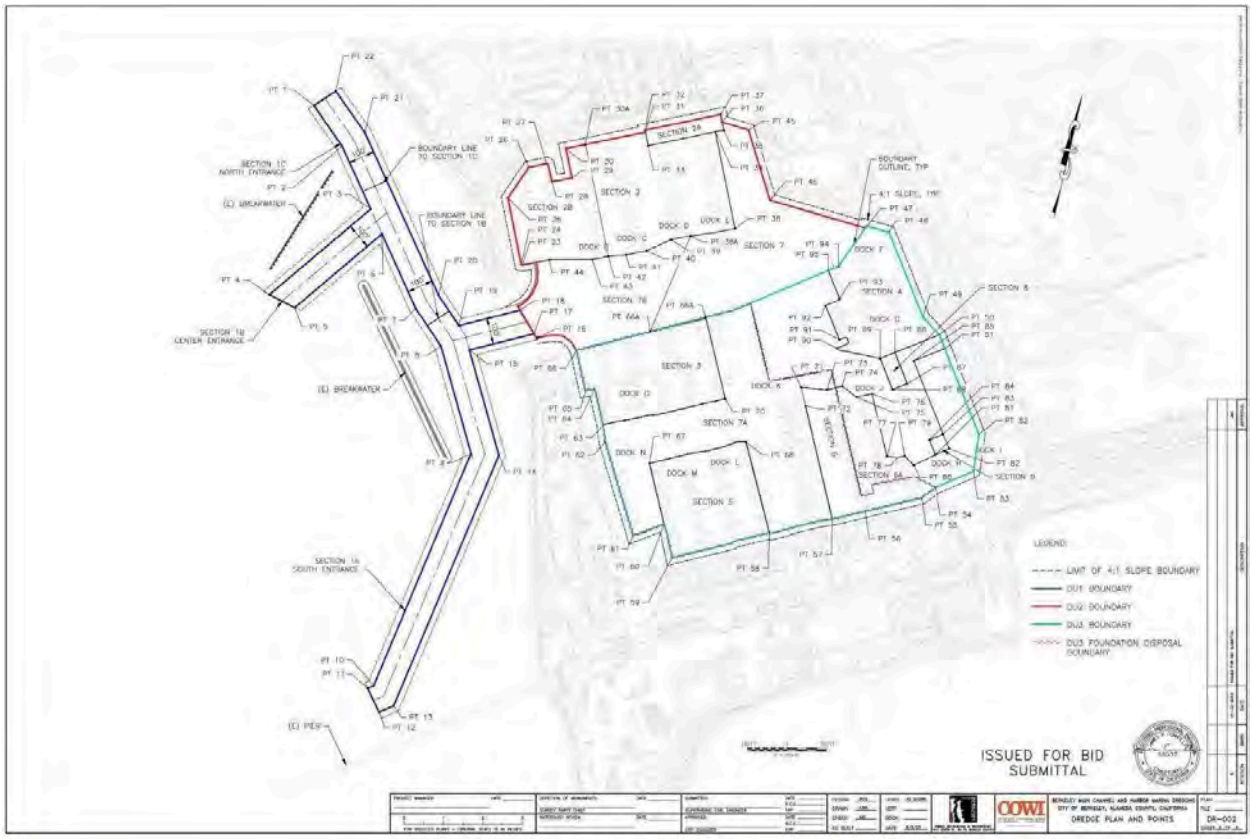
O10-15

includes on page 58 of the pdf and Appendix B. Table 1 - service assumption of 8 AM peak direction and 6 AM reverse direction trips plus 6 PM peak direction and 8 reverse direction trips for the two vessels allocated to the service, for a total of 28 trips per day. Other City of Berkeley presentations have also included this same schedule. The lack of an approximate schedule within the DEIR itself makes it impossible to calculate marginal and cumulative environmental impacts. The current DEIR should be rescinded and re-issued whereby service schedule assumptions consistent with planning documents are provided.

O10-19

O10-20

C. Project transportation demand management omitted



Transportation demand management (TDM) to accommodate ferry patron traffic to the waterfront has been developed for the project and serves as a key design feature for the landside elements of the project. The COB has hired various consultants to address this project element. Both the latest draft of the Kittelson study and the Nelson-Nygaard studies address parking needs for the ferry, with the Kittelson study (link includes both Berkeley WTPF Baseline Parking Conditions, February 28, 2025 and the Water Transportation Pier-Ferry Project Parking and TDM Plan, March 7, 2025) as the most recent document. The DEIR partially integrates aspects of the Kittelson study in reference to mitigation measures, e.g. bicycle and bus facilities, but it does not include in the project description the project elements that call for the mitigation measures. The description should indicate clearly that across planning documents that the majority of ferry patrons arrive by car versus all other transit options, even with mitigation measures. The bulk of landside project features call for shifting land use from recreational public access to ferry patron parking. The Kittelson study estimates 421 ferry patron parking spaces needed versus the 250 currently accommodated in the project design. The needed 421 spaces reduces to 356-389 with the mitigation measures and 42 more with paid parking, still exceeding allotted spaces. This information bears on impact analysis throughout the document, such as for VMT estimates, noise, emissions, land use planning, and recreation. The current DEIR does not make this apparent. The full details of the TDM should be included in the project description and analysis along with descriptions of TDM enforcement and administration methods.[7]

O10-21

O10-22

[7]A waterfront benefits district plan has been discussed: CONSENT CALENDAR January 18, 2022 TO: Honorable Mayor and Members of the City Council FROM: Councilmember Rashi Kesarwani (Autho. To the extent this is still intended as part of the ferry TDM strategy, this plan should also be included in the project description and any mitigation measures.

D. New dredging activity described as one-time maintenance

Dredging area map for Berkeley Marina project as described in the maps and technical specification issue for January 2024 Bid Submittal (Marina Dredging 24-11644-C Plans.pdf).

O10-23

BWCC submitted scoping comments pointing out that the NOP project description characterized **project dredging as maintenance** despite the project area not ever having been dredged. Maintenance has occurred in the marina and marina entrance channel but this is not the project area. We reiterate our NOP scoping comments: The area proposed for the ferry route includes a federal navigation channel under the Army Corps of Engineers. However, the channel is not dredged by the Corps, as it is not considered a critical navigational location, nor has it been dredged. The area proposed for the ferry dock is **new dredging**. The Berkeley marina was partially dredged under a recent Berkeley Marina maintenance dredging project. The area described in technical specifications for bid submittals is below. Note that this area was not fully dredged.

O10-24

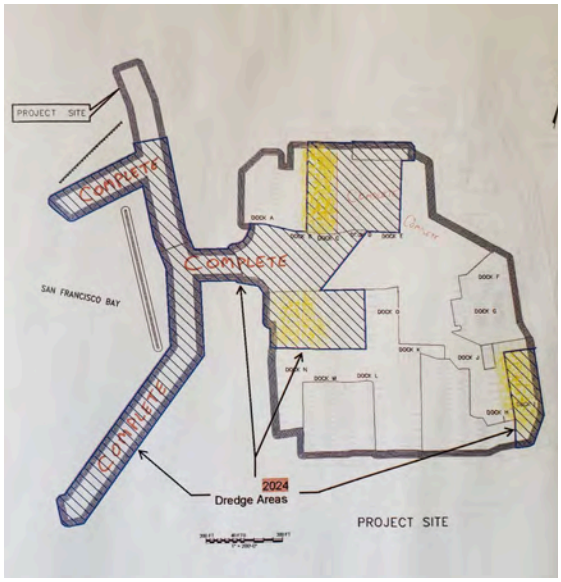


Image from Berkeley harbormaster office for the Berkeley Marina maintenance dredging shows areas actually dredged under this past effort.

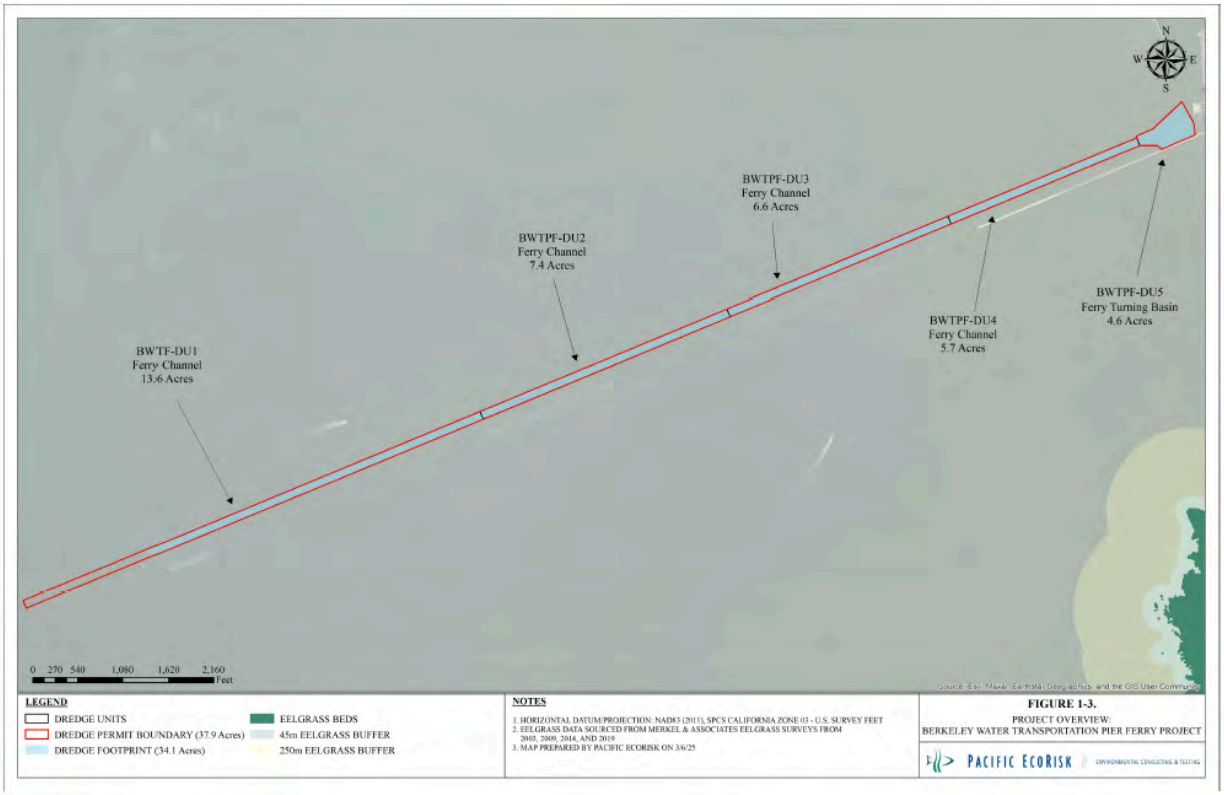
O10-25



The area intended to be dredged as envisioned under the current Project is orders of magnitude larger, indicated in the images below. There is no overlap in the Berkeley Marina dredging event except for a small section inshore. There is also no footprint overlap with any other dredging project past or present. Section 15125 of CEQA also says (3) An existing conditions baseline **shall not include hypothetical conditions**, such as those that might be allowed, but have never actually occurred, under existing permits or plans, as the baseline. In this case, any broader plans for dredging cannot be used as a baseline (as basis to claim maintenance dredging), even if it was permitted.

O10-26

The project's dredging images (below) are from April 2025, prior to issuance of NOP and similar to actual NOP maps. The inshore "well" for the ferry terminal and turning basin and the new navigational channel for the ferry (required for the ferry only) have not been dredged. The Army Corp of Engineers website[8] shows the Berkeley Marina dredging project in 2024 where dredging was solely focused inside the Marina and Marina entrances.

O10-27

[8] https://www.spn.usace.army.mil/Missions/Regulatory/Public-Notices/Article/3655212/spn-2005-299690-berkeley-Marina-dredging/

Areas required to be dredged and staged under the WETA ferry.

O10-28

With the new breakwater design, siltation potential exists on top of existing siltation patterns. To provide context, the Task 2.1 Berkeley Marina Dredging Needs Technical Memo by Moffat and Nichol written for the Berkeley Marina Specific Plan, April 21, 2021, states that: "The average rate of sediment accumulation in the Harbor Basin is approximately 0.05' per year and the rate at the harbor entrance is approximately 0.1' per year. There are some locations at the harbor entrance which accumulate sediment at a faster rate – closer to 0.2' per year." For this reason, the marina has been dredged periodically. From this same report, we know Maintenance Dredging Permits issued to the City of Berkeley for maintenance dredging of the marina are as follows:

O10-29

- 02/1973 dredging 5,000 Cubic Yards (CY)
- 08/1991 dredging 73,000 CY apparently from the harbor entrance
- 02/2005 dredging < 500 CY Dock H-I apparently to repair revetment
- 04/2006 dredging < 8,750 CY Dock A-C associated with dock replacement

With the 2025 dredging, the range of maintenance dredging events is 14-19 years. Comparable information for the Project is not provided, even though breakwater and

ferry terminal infrastructure added beyond the footprint of the existing pier would imply greater siltation rates. O10-29

Any dredging for the ferry project should be considered new dredging and then ongoing new maintenance dredging and treated as such under the rules and regulations of BCDC, CEQA, the Army Corps of Engineers and any other agency overseeing dredging in the Bay. It should also note that navigational channel dredging is not necessary but exists solely for the needs of the project. O10-30 Then, the current DEIR should be rescinded and re-issued whereby all environmental impacts are re-assessed in light of this new information for both construction and long-term dredging over the life of the project. O10-31

Areas required to be dredged and staged under the WETA ferry. O10-32

E. Areas of Known Controversy ignores substantial community input on environmental, recreational, social and economic impacts of the project

While the Areas of Known Controversy section of a DEIR may contain a brief summary of issues raised by agencies and the public, this DEIR unduly omits the range and depth of controversy that contributed to an understanding of the project. Simultaneously, it overstates the level of meaningful community input integrated into the planning process. We note briefly here a more elaborated statement of public comment brought forward with evidence bearing on the DEIR, and as evidence itself of public concerns. O10-33

First, the project website hosted by the city contains documents with more extensive issues than those summarized in the DEIR:

- Focus groups 1-3 in 2021: meetings conducted to **prevent discussion** of the no-project alternative or recreational pier / no-ferry alternative. Comments note the amenity-only value of the ferry.
- Community workshop #1 in 2021: financial viability, post-pandemic work and business patterns, feasibility of site location; impact on recreational character of waterfront, value of current open space uses.
- Community workshop #3 and breakout sessions in 2021: project does not generate revenue for the Marina Fund; lack of data to support aspirations for secondary economic benefits of ferry to waterfront and BerkeleyPier ferry community feedback.
- Questionnaire #1 2021: Survey of 377 Berkeley residents noting amenity use rather than commuter use of a ferry; domination of cars as **mode of travel to the ferry**; Larkspur as second most desired destination although ferry project only offering weekend service for this destination; support of paid parking for ferry patrons only; comments on expanded recreation facilities around a recreational pier; fishing amenities as most often requested amenity for a recreational pier; noting existence of current recreational activity and scope for expansion of these activities. Most respondents lived within two miles of the project area. O10-34
- Pier Ferry community feedback: land use conversion from recreational public access to transit parking; Measure L consistency; call for reasonable range of alternatives to include recreation-only pier for sensitive environment; feasibility data; conflicts with existing uses; inquiries on Government Code 65302 for physical changes to areas; historical sources of federal funding for pier-only options as alternative

Second, a petition signed by 950 individuals in November 2022 and sent to city council and staff asked the city to coordinate the Berkeley Marina Area Specific Plan (later referred to as the Waterfront Specific Plan) with the WETA ferry and pier project, both of which implicate land use decisions and environmental impacts in the same area. O10-35

Planning processes for the project and BMASP/WSP were held where **the public was directed not to discuss the pier** in the BMASP meetings. O10-35

Third, in 2025, the city altered its State Coastal Conservancy (SCC) grant specifications for paving the South Cove West lot by converting the lot from a "free public resource that provides enhanced equitable access to waters of San Francisco Bay…" (quote from COB grant application) to a paid parking lot consistent with the project's transportation demand management plan for ferry patrons arriving by car. Through a public records act request and ensuing email communications, the SCC could not provide the basis to justify that the conversion remained consistent with equitable access criteria (documents available upon request). No local nonprofits or the Parks, Recreation and Waterfront Commission were notified of the proposal before it was placed as an action item on a COB city council agenda. The paid parking plan in the south lots in the vicinity of the ferry and within the ferry TDM met with strong negative Berkeley citizen response. See approximately **600 written comments in opposition sent to the city**, linked in Attachments. O10-36

Finally, a September 2022 preliminary summary report sent to the city and available here reported that over half of Berkeley shoreline fishers randomly selected for survey analysis expressed the view that a ferry at a restored recreational area would conflict with fishing, due to safety and regulations, congestion and scaring off fish, reducing the recreational experience. O10-37

The DEIR should expand its reference to areas of known controversy to assist decisionmakers in this land use decision as it offers evidence bearing on all aspects of the project: environmental, social, economic, environmental equity, and feasibility. O10-38

III. DEIR fails to establish an accurate project setting or baseline.

A. DEIR has incomplete baseline and environmental settings.

O10-39

The baseline descriptions of the area and vicinity of the project and environmental settings throughout the DEIR are incomplete. As such, they do not provide a reference for near and long-term cumulative impacts.

1. CEQA requirements revisited

Baseline descriptions and environmental settings under CEQA §15125 - Environmental Setting state that: O10-40

> (a) **An EIR must include a description of the physical environmental conditions in the vicinity of the project.** This environmental setting will

normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to provide an understanding of the significant effects of the proposed project and its alternatives. **The purpose of this requirement is to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts.**

(1) Generally, the lead agency should describe physical environmental conditions as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. **Where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency may define existing conditions by referencing historic conditions, or conditions expected when the project becomes operational, or both, that are supported with substantial evidence. In addition, a lead agency may also use baselines consisting of both existing conditions and projected future conditions that are supported by reliable projections based on substantial evidence in the record.** O10-40

…

(c) Knowledge of the regional setting is critical to the assessment of environmental impacts. Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project. The EIR must demonstrate that the significant environmental impacts of the proposed project were adequately investigated and discussed and it must permit the significant effects of the project to be considered in the **full environmental context.**

(d) The EIR shall **discuss any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans.** Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan or State Implementation Plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, regional blueprint plans, plans for the reduction of greenhouse gas emissions, habitat conservation plans, natural community conservation plans and regional land use plans for the protection of the coastal zone, Lake Tahoe Basin, San Francisco Bay, and Santa Monica Mountains.

2. Gaps in the existing environmental conditions

a. Section 3-1 omits current and reasonably foreseeable projects and conditions, rendering cumulative impact analysis incomplete

O10-41

The following conditions exist or do so in the foreseeable future but are not included in the DEIR, rendering marginal and cumulative impact analysis inadequate, contrary to CEQA standards:

- COB and TSA Holdings LLC (TSA) are in option agreement negotiation for a 45-year ground lease.[9] Currently, TSA Holdings personnel have access to the site for environmental studies, design and engineering work, permitting work and can make city-approved repairs. This agreement provides the following[10]:
  - Renovate and reopen HsLordships facility to the public
  - Repave Seawall Lot as well as Seawall Drive
  - Extend Bay Trail pedestrian and bike paths
  - Allocate 150 spaces of the 199 Seawall Lot exclusively to TSA Holdings for customer use.

O10-42

- D&E docks under construction during May 2025 are about to reopen, providing new 79 large boat slips initially with a total of 94 planned. This project brings greater recreational activity, as well as greater vehicle traffic and access demand to the waterfront in the vicinity of the project area.

O10-43

- East Dock in the South Sailing Basin was closed in February 2025 due to needed repairs but reopened in September 2025 after the NOP was issued.

O10-44

- Parking lots South Cove East, South Cove West and J&K lots are to become paid parking lots, converted from free public lots, by COB Resolution, June 2025.

O10-45

- COB recently passed the Safe Streets (Measure FF) committing $15m for 14 years to increasing bike paths in the city. This information should be noted as a description of alternative bike recreation facilities enhanced nearby.

O10-46

DEIR attributes bike and pedestrian path development in the future only to the adoption of this project. Yet, the Bay Trail bike and pedestrian paths, running through nine counties rimming the SF Bay, are typically funded as standalone projects.

O10-47

---

[9] Option Agreement with TSA Holding Group, LLC for 199 Seawall Drive; ANNOTATED AGENDA BERKELEY CITY COUNCIL MEETING Tuesday, January 27, 2026 6:00 PM; City Real Property: Leases and license Agreements.

[10] Lease states: "In addition to renovation of the leased premises, the Ground Lease requires TSA to complete a value of $17 million in off-site improvements, which includes improvements and maintenance of the entire Seawall Parking Lot, portions of the Bay Trail and Seawall Drive, or other Waterfront areas. In exchange for the off-site improvements, TSA is granted 150 exclusive-use parking stalls at the Seawall Lot for 45 years, the initial lease term. With improvements as required by this lease agreement, the 199 Seawall Lot is anticipated to have between 430-450 total parking spaces, pending final design."

O10-42

The initial Bay Trail and South Basin Bay Trail extension in the Berkeley waterfront (2014 onward) were **standalone projects funded primarily by non-COB funds**. The city already has an option agreement with TSA Holdings to build the Bay Trail in the waterfront on the south peninsula. This project should be **treated as a baseline and not contingent on the project**. Without the current DEIR project, permitting pathways may differ, but bike trail and pedestrian pathway development plans would continue. O10-48

These realized and foreseeable conditions must be included in the baseline and environmental settings discussions in the DEIR across impact categories to assess the cumulative impacts of the project, where CEQA requires looking at all projects, plans and activities for an area under review. O10-49

b. Failure to provide recreational baseline

BCDC scoping comments requested specific baseline information: " …please note that the Bay itself functions as a recreational facility …The EIR should document the recreational uses in and around the Project site, identify the service area and service population for the recreational facilities serving those uses…" Further specifics about the intent of this scoping comment can be found in the minutes of the two DRB meetings. BWCC also requested adequate baseline analysis in its scoping comments. O10-50

The DEIR asserts this information is provided elsewhere, but does not include a complete or quantitative inventory. We note (others have too) that, instead, on page 3.11-15 of the EIR, the city selectively quotes from the BCDC scoping letter, eliding the part about documenting the recreational uses. It then claims that Section 3.10.2 covers such uses. This is clearly a typo. Section 3.10 covers noise. There is a section in the discussion of recreation that provides only a general description of recreational activities without establishing the intensities at different locations, or applying **Bay Plan Policy Recreation Policy 3A-7**, which provides **protection for all existing recreational uses and establishes that such uses shall be "easily available from parking reserved for the public."** O10-51

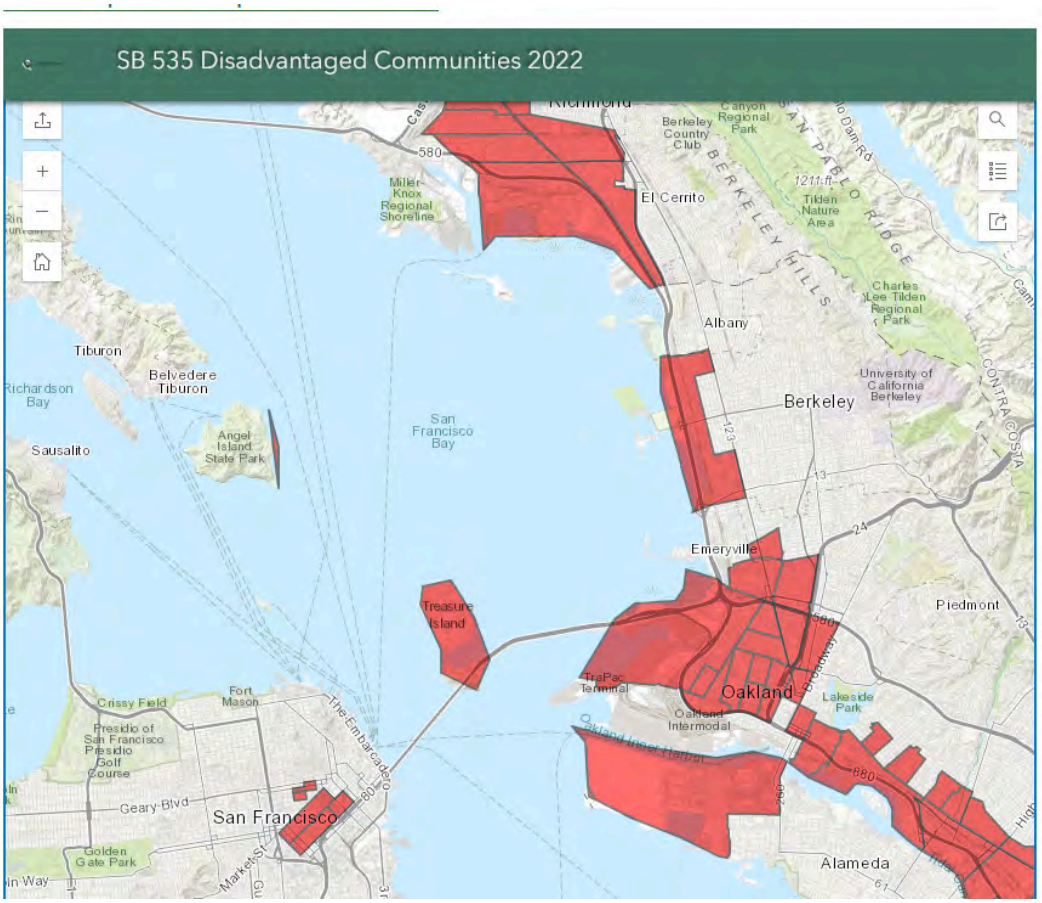
The DEIR does not provide a quantitative inventory, map the spatial distribution of uses, or evaluate regional demand or intensity of use. It omits the role of nonprofit community-based recreational programs and the value of existing activities. Among other impacts, the project proposes to eliminate nearly all public parking such that this baseline information would be critical for impact analysis and determining consistency with other plans relevant to the DEIR. This omission is inconsistent with CEQA requirements. A full inventory and documented methodology for assessing recreational use must be included. O10-52

c. Incomplete spatial description of the integrated land–water recreational system O10-53

The DEIR does not adequately describe the interconnected recreational system that defines the project area. It omits the scale and connectivity of Cesar Chavez Park,

Shorebird Park, Horseshoe Park, Adventure Playground, Seawall Drive shoreline recreation areas, and McLaughlin Eastshore State Park units (North Basin Strip, Berkeley Meadow, Berkeley Beach, Brickyard Cove). This results in an incomplete spatial baseline that understates the functional integration of land and water recreation. O10-53

The DEIR does not consistently define recreational areas. Figure 3.11-1 (p. 3.11-2) includes Aquatic Park lagoon waters in its definition of park, increasing the number normally inferred as land acreage and ostensibly not including the park water areas of the waterfront. The DEIR notes that the park acreage ratio is 34.5 acres per 1000 residents. This number should be **recalculated** using consistent metrics. It either has to redo the figure and acreage ratio to be only land or both land and water, then treat the waterfront area's land and water acreage consistently with other city parks. Under the Berkeley Municipal Code definition of the marina 6.20.010 Definitions | Berkeley Municipal Code, these water areas are substantially larger and support extensive, unique water-based recreational use unavailable at inland parks. The park acreage ratio nevertheless does not distinguish the quality of the resources or the type of access. The waterfront affords "bluespace" access more than any other city park. The DEIR must recognize the *quality* of recreational facilities as well as the *quantity* of acreage. O10-54 O10-55 O10-56



d. Omission of demographic and equity-relevant recreational data

Existing literature shows shoreline and pier fishing disproportionately serve low-income communities and communities of color, and often functions as subsistence or low-cost recreation. The DEIR does not incorporate this equity-relevant recreational baseline information, and therefore does not adequately describe who relies on the project site for recreation. This omission undermines the baseline's adequacy with respect to CEQA's requirement to consider social context where relevant to environmental conditions. O10-57

Further, if affected users are disproportionately from underserved communities, **SB 1000 Land use: general plans: safety and environmental justice (aka Planning for Healthy Communities Act)** https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201520160SB1000 and related guidance create an additional lens for CEQA analysis. SB 1000 intends to integrate environmental justice (EJ) into local land use planning to reduce health risks and inequities in disadvantaged communities. Planning documents are directed to consider SB1000 to integrate environmental justice, land use and open space elements among other elements, to promote equitable land use decisions. Open space under SB1000 is a limited and valuable resource. Impacts include public facilities access and access to physical opportunities. Disproportionate impacts are to be avoided. If the project is inconsistent with these goals, that is a significant impact. O10-58

The West Berkeley Census tracts lie within a SB535 Disadvantaged Community classification under the Office of Environmental Health Hazard Assessment. Therefore, O10-59

the DEIR must state impacts on local population for access to public facilities and access to affordable physical activity within a unique waterfront setting that has health benefits distinct from green spaces inland. Bluespace access will become increasingly important due to warming effects of climate change. Equity-serving availability of shoreline access must be weighed against project impacts.

Source: https://oehha.ca.gov/calenviroscreen/sb535

O10-59

e. Reliance on regulatory text that does not reflect actual use

The DEIR (p.529 pdf) relies on Berkeley Municipal Code Section 6.20.180 to characterize swimming and windsurfing as prohibited within the project area. However, these activities occur regularly and have historically occurred at the site. The DEIR does not reconcile this discrepancy between regulatory designation and observed recreational use, resulting in a baseline that does not reflect actual conditions.

O10-60

The court case *Fat v. County of Sacramento*, No. C037610, 02 C.D.O.S. 3642, 2002 DJDAR 4646. Filed April 2, 2002. Ordered published April 26, 2002. This holds that baseline is generally considered existing physical conditions at time of review, not what is legally permitted under zoning rules or in this case a municipal code prohibiting an

O10-61

activity in a defined area so that actual on-the-ground use constitutes the baseline, not what "should" be there. Also, *Communities for a Better Environment v. South Coast AQMD (2010)* 48 Cal.4th 310 found that the baseline must reflect realistic actual existing conditions and agencies cannot use permitted levels of activity as the baseline. *Union of Medical Marijuana Patients v. City of San Diego (2019)* 7 Cal.5th 1171 reinforces that actual conditions matter even if legally complicated. Illegality does not automatically exclude a use from baseline. Therefore, the existing use of the marina area around the pier in the Project area includes swimming and windsurfers as part of the baseline recreational environmental setting. The city as lead agency cannot distort its baseline with unused legal entitlements. O10-61

f. Inconsistency with Federal Recreation Protections (U.S. DOT Act Section 4(f))

The DEIR asserts that Section 4(f) does not apply because the project does not receive federal funding. This conclusion may be premature. As the project is not yet funded, federal funds are a potential source of funding. Federal funding has recently been used for both the Santa Cruz and Santa Monica pier renovations. Federal funding provided Berkeley's pier both in 1937 and in 1965. The DEIR does not evaluate this potential or reassess applicability, and its determination is not supported by substantial evidence. O10-62

B. Inventory of recreational activity available at time of scoping comments but unused

As the DEIR does not include an inventory of regional and local recreational use at the waterfront for baseline analysis, we attempt to fill the gap here with information readily available for DEIR preparation. O10-63

The Berkeley waterfront land area constitutes the city's largest park area, with over 100 land acres of public open space. The land area includes Cesar Chavez Park, Shorebird Park, Horseshoe Park, Adventure Playground, in addition to the general walking and bike paths connecting the entire waterfront and the casual in-car viewing area along Seawall Drive and the shoreline fishing areas along Seawall Drive. McLaughlin Eastshore State Park areas are officially the North Basin Strip, the Berkeley Meadow, and the Berkeley Beach and Brickyard Cove, which are integrally linked to the Berkeley waterfront managed by the city. The recreational space coextensive with the ferry project includes waterways that come under BCDC jurisdiction, including the recreational South Sailing Basin serviced by three public docks and two small-boat hoists, and the recreational boating and sportfishing yacht harbor. The harbor was built with two major infusions of federal or state funds, once in 1936 (as a WPA project) and once in 1965 under the State Small Boat Harbor Law, for purposes of recreation. The California Wildlife and Conservation Fund gave money for the rehabilitation of the pier as a recreational fishing pier in 1957. O10-64

1. City-licensed cell phone mobility data for waterfront recreation

Data from Visit Berkeley, the tourism bureau for the City of Berkeley. This office, with funding from COB, pays for a Placer.ai license, a database/software company collecting mobile cell phone data. The private sector and government agencies value this service for the outlook it provides on potential markets and client needs. This data is available to the COB. The public made COB aware on numerous occasions of its usefulness but the DEIR does not incorporate any of this information for baseline and expected future conditions at the waterfront. O10-65

BWCC requested data on the marina for 2019, the furthest back the data is available, and for the most recent year, 2025, separating the waterfront into three zones: 1) south, where the Project WETA terminal would go, 2) central area where the Doubletree and Marina Boulevard lot is located, and 3) the north area which includes Cesar Chavez park. The basic data trends are as follows:

Table of visits from Overview reports

	Visits 2019	Visits 2025	% chg	Visitors 2019	Visitors 2025	% chg	Avg income 2019	Avg income 2025	% chg
South	245.2k	283k	15.4%	151k	171.1k	13.3%	151k	159k	5.3%
North	212.5k	260k	22.3%	99.9k	111.3k	11.4%	160k	167k	4.4%
Central	109.9k	134.8k	22.66%	72.5k	85.5k	18%	159k	163k	2.5%
Total	567.6k	677.8k	19.42%	323.4	367.9k	13.76%			

Source: Placer.ai report requested from Visit Berkeley under COB license.

The number of visits (defined as 15 min or longer) and visitors between 2019 and 2025 increased, even with the closure of HsLordship restaurant, the 199 Seawall Lot parking lot, the continued closed pier, and the closure of D&E docks for reconstruction. In 2025, waterfront visits totaled 678k, translating to >1800 visits per day. The current number of visitors in 2025 to the project area in the south waterfront alone is 171.1k/365 = 469 visitors per day. According to WETA Berkeley Ferry Service Business Plan, March 17, 2022 Version 1.0, a DEIR planning document, weekday ridership is estimated at 955 per day (most coming by car and some by bus or shuttles) in the first year, increasing to 2036 in the tenth year. This would increase per-person visitation to this project area by 104% to board the ferry in the first year. This is also corroborated by Table 3.10-18 which shows average daily traffic from Seawall Drive to Marina Boulevard, the route to the project's proposed ferry terminal, increasing 77% with the project (DEIR p. 489 pdf). These baseline conditions and the marginal and cumulative impacts are not disclosed in the DEIR. O10-66

Current visitation trends revealed in Placer.ai data relevant to the DEIR are as follows[11]:

- Peak seasons of visitation in the south waterfront in 2025 are April, late June and August and are much higher than in the north waterfront areas. In 2019, peaks were June and July.
- Peak seasons in north waterfront in 2025: visitation looks steadier throughout the year with March and September as slight peaks. In 2019, visitation trends were similar to the south, with a major peak in July, most likely indicating 4th of July celebrations. Otherwise, visitation hovered below the south.
- Visit duration is longest in the south waterfront.
- Average income of visitors is less in the south waterfront.
- Ethnicity makeup is similar across 2019 and 2025: south waterfront attracts more nonwhite visitors.
- The catchment area for visitors goes well beyond Berkeley, into Richmond and Oakland, and beyond. Visit origins are regional and not concentrated in Berkeley.
- All areas show increases in visitation >10% as compared to three years ago.

O10-67

This data is corroborated by another Placer.ai report specifically made available earlier to the city of Berkeley. The number of visits totaled 1.8 million from Jun 1, 2024- May 31, 2025. The number may be larger due to a looser definition of visits (of smaller duration, e.g.). However the number of visitors is remarkably similar – 675.1k – to this report. That report is linked here:

https://view-su2.highspot.com/viewer/b16127e1532dd08df95725fbfd8b4fc4#1

This version of the waterfront visitation also shows that the south area of the waterfront in the project area receives more visitors than the north waterfront; the south receives visitors of lower income and lower education, who are more nonwhite on average. Their visit duration is longer.

2. City-commissioned waterfront park visitor survey data

The City of Berkeley hired Kittelson and Associates, Inc. to conduct an in-person survey of park visitors arriving by car. The report, while aimed at understanding how to reduce parking demand for the Project, also serves as a source of information on the quality and intensity of recreational visitors for representative baseline conditions. An in-person

O10-68

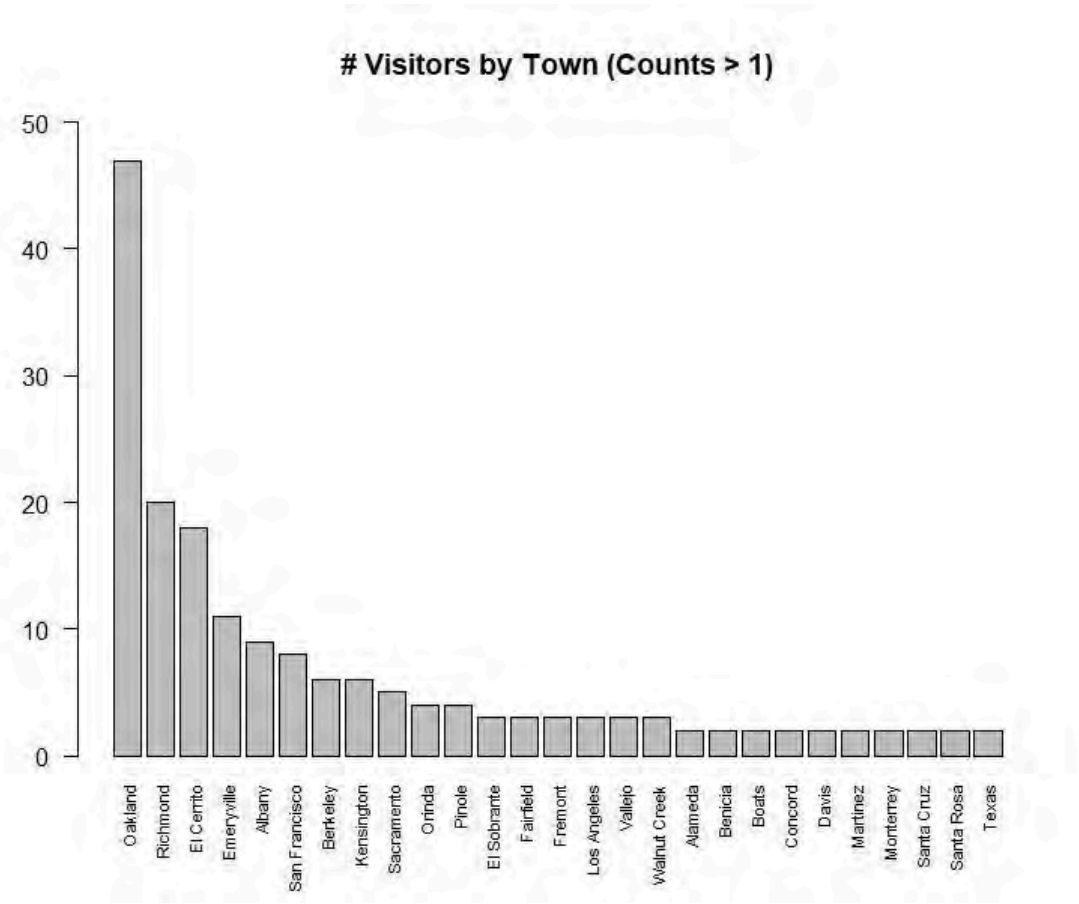
[11] https://drive.google.com/drive/folders/1dLnk8zbFW2kiOLZSuy5Po51TjP5T5opy?usp=sharing
Please let us know any issues accessing these reports.

O10-67

intercept survey was conducted on three Thursdays and two Saturdays between April and August 2024 for those arriving by car, although some persons interviewed arrived by bike, bus or other modes. This report is referenced in the DEIR only in Section 3.10 discussion of noise impacts. Here we draw on the raw data for the in-person survey we obtained through a Public Request Act to provide a more complete overview of baseline and environmental setting useful for assessing all categories of impacts listed in the DEIR. We find the following conditions pertinent to a DEIR:

- Most recreational visitors arriving by car are coming from outside Berkeley (63%) (Figure 18 in Kittelson report).
- Many are older: 52% are 50 or over.
- Frequency of visits is high. Over 50% visit once a week or more and about 30% visit more than once a week.
- 36% of visitors earn <= $75k. And 47% reported earning *below* the median household income for Berkeley of $108,558 (Figure 34 of Kittelson study) and (U.S. Census Bureau QuickFacts: Berkeley city, California).
- Duration of visit is long in a number of key public access lots: In O-lot, J&K, South Cove West, and FGHI, the average stay is greater than four hours on a weekday, weekend or both. FGHI may be dominated by liveaboards while the others have turnover more typical with recreational visits. O10-68
- Walking is the most popular activity, followed by sailing/boating and sightseeing/photography.

We verified this data in a BWCC analysis and extended the analysis. See report (CEQABaselineReport.pdf): Berkeley Waterfront Visitation Characteristics and Distribution, BWCC, April 2026, linked in Attachment section.



To illustrate the waterfront's role in equitable public access to the shoreline, the data also shows that:

- Seawall Drive and South Cove West have most lowest-income (<$25k) income visitors.
- J&K lot next to the bait shop sees a high number of those earning less than $75k, as does L&M lot and H&I. O10-69
- The lowest income group (<$25k) most often parks in South Cove West, which is part of the Project area.

Defining the north and south and central area as above, we reported to the city that the the south waterfront area (area of the project) in aggregate attracts lower-income (<$75k) visitors more than other parts of the waterfront, consistent with Placeer.ai data. See attached report for barchart.

Regarding race/ethnicity (RE) which was reported in the Kittelson data, we note the following distributional patterns of importance to environmental justice and affordable access to the coastline:

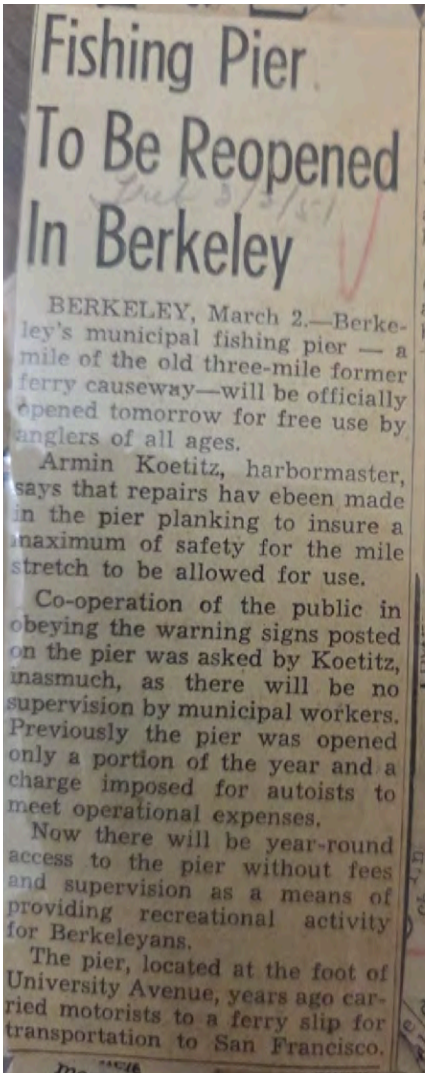
- Seawall Drive, **slated to be eliminated as a recreational viewing location**, has the greatest percentage of those identifying as Black/AA alone (Table 9).
- Seawall Drive and 199 Seawall both host the largest percentage of Black/AA and Hispanic waterfront visitors as compared to other public access areas (Table 9).
- Seawall Drive and 199 Seawall together attract most of the Black/AA and Hispanic waterfront visitors (Table 10).

Source: Survey data for waterfront visitation from Kittelson; plot generated by BWCC.

O10-70

While the cell counts for non-White alone groups are small, the patterns coincide with other studies with larger cell counts across a sample, namely the Berkeley shoreline fishing study by Antinori et al. (2025, 2026). Within this sample drawn randomly from Seawall Drive shoreline fishers in 2022-2023, demographic data shows 21% Black/African-American, 26% Hispanic and 24% White alone, a pattern “flipped” in

comparison to Berkeley demographic data. Along Seawall Drive, shoreline fishers are Both Seawall locations are slated to be eliminated from public access under the project plan and by lease agreements. The 199 Seawall public access lot will be dedicated exclusively to TSA Holdings and ferry patrons. Seawall Drive public in-car viewing access area is to be mostly eliminated under the project, as discussed in the Recreation/Land Use section of this document.



010-70

Despite direct impact on public access and equitable access goals noted elsewhere in this document, the **DEIR omits this information from baseline and project descriptions and from impact analysis across multiple categories** (e.g. land use, recreation, aesthetics, biological, cultural, greenhouse gas/energy).

010-71

3. **Public input and publicly available reports on Berkeley shoreline and pier fishing as major recreational and cultural resource**

BWCC NOP scoping comments specifically directed COB to include available data on fishing activity. This is absent in this report. Although the WETA and WSP plans mention adding much-valued fishing amenities like fish-cleaning stations and seats to the proposed pier extension, the project makes practically no reference to nor includes data on current fishing activity, nor historical pier fishing which was a central feature of the waterfront. Data has existed on the value of the project area as a recreational and subsistence fishing area. These reports and readily available sources of data have been available to the city at the time of the NOP and were not integrated into the draft EIR.

Fishing Pier To Be Reopened In Berkeley

BERKELEY, March 2.—Berkeley's municipal fishing pier — a mile of the old three-mile former ferry causeway—will be officially opened tomorrow for free use by anglers of all ages.

Armin Koetitz, harbormaster, says that repairs hav ebeen made in the pier planking to insure a maximum of safety for the mile stretch to be allowed for use.

Co-operation of the public in obeying the warning signs posted on the pier was asked by Koetitz, inasmuch, as there will be no supervision by municipal workers. Previously the pier was opened only a portion of the year and a charge imposed for autoists to meet operational expenses.

Now there will be year-round access to the pier without fees and supervision as a means of providing recreational activity for Berkeleyans.

The pier, located at the foot of University Avenue, years ago carried motorists to a ferry slip for transportation to San Francisco.

O10-72

O10-73

Fishing has been a long-standing and well-documented use of the site. The DEIR covers the waterfront from ice age to the 1906 earthquake, but there has been little on the recreational activity at the pier since 1938. In 1935, the city received a $1.5m federal grant from the Works Progress Administration (WPA) to build a yacht harbor and Aquatic Park. Simultaneously, the Bay Bridge, funded by President Roosevelt's New Deal, rendered the auto ferry obsolete. In 1938, title to the two-lane pier transferred to the city. The recreational pier was an immediate hit for recreational and subsistence fishing. Newspaper stories of the day ran with headlines like: "Short on Ration Stamps? Fish biting at local pier" (1943), "Youngsters enjoy fishing lessons at Berkeley Pier" (1938), "Halibut are taking hooks off city pier" (1943), "Fishing's

Good on Berkeley pier: bass are running heavy" (1945). In 1940, the Berkeley Gazette reported that 35,000 people had used the fishing pier in the previous year. In 1946-1947, repairs were made. Garbage fill was stuffed under the near-shore portions of the pier and used to expand parking lots, with intermittent weekend pier openings for fishing even during construction due to demand. The California Wildlife Conservation Fund (WCF) provided funds in 1957 to rebuild and restore the pier on the basis of **its value as a recreational resource.** The Berkeley pier was its first pier project. The fishing pier saw around 101,100 people and the yacht harbor 94,100 in 1957, according to 1958 city documents. Before closure in 2015, the Berkeley Pier was one of the most heavily used fishing locations in the Bay Area.

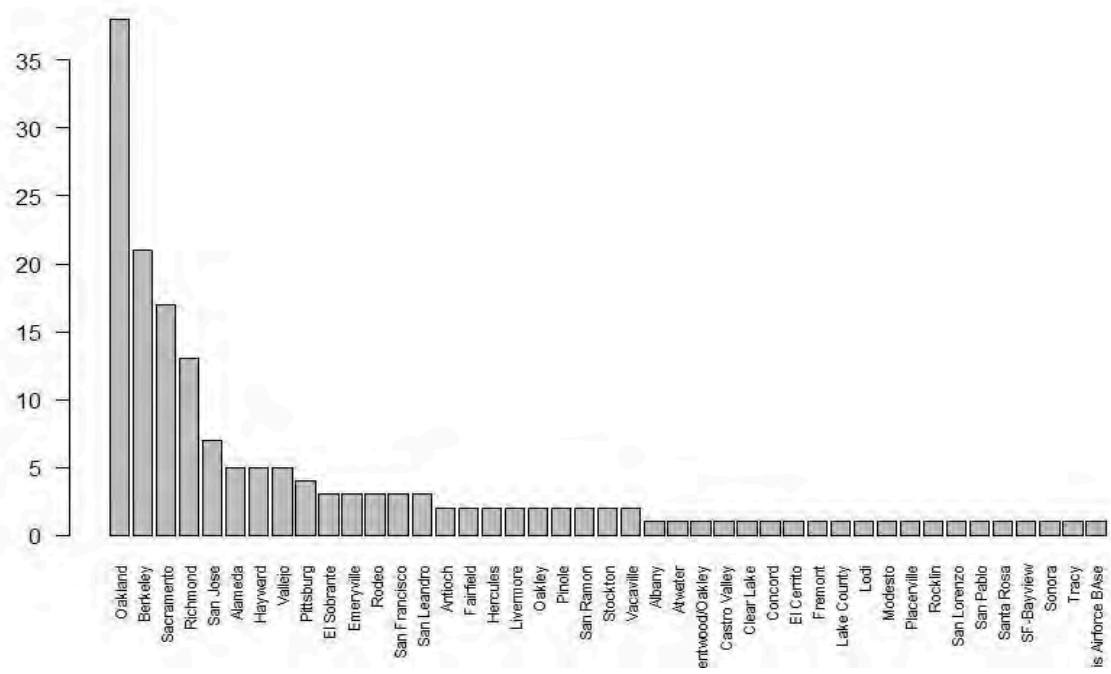
Urban fishing is distinct from fishing in "destination" areas. It is close-to-home, affording much more access to angling as a recreational sport and as another source of food. In parts of California, fishing on public piers has been free with no license required since at least 1914, and Governor Earl Warren made it official for all California public piers in 1951 as long as it was for fun and not profit. It plays a large social, economic and social role in addition to distributional equity aspects in California and elsewhere (Quimby, Stevenson, Joose).

Ken Jones, a chronicler of pier fishing in California, states: "If a survey had been done over the past twenty-five years as to the most visited pier in the Bay Area, the winner undoubtedly would have been either the pier at Pacifica or this pier in Berkeley." He adds, "For availability, transportation, ease of fishing, and facilities, Berkeley was hard to beat." (https://www.pierfishing.com/berkeley-pier/).

The DEIR states: "Two of the evaluation efforts focused on the Berkeley Pier and did not consider the property's larger developmental context, current ownership, and functionally related relationship of the Berkeley Pier to the larger Berkeley Marina, to which it is historically linked. As recommended by guidance from OHP, the evaluation was updated in 2025 to support the proposed project's environmental review to amplify information about the resource and document changes that have occurred since the previous evaluation.[43] Additionally, the updated 2025 Berkeley Pier evaluation assessed local eligibility, which was not included in previous evaluations." The outcome of that evaluation is not clear.

Despite having closed the pier in 2015 and started WETA ferry service negotiations in 2016, the City of Berkeley is still a major draw for fishers. These reports based on recent survey analysis from 2021 to 2023 document this activity - apart from any CDFW data:

O10 - 73



O10 - 74

O10-75

- *Fishing the Berkeley Waterfront: How much is it worth and for whom?*, Presentation to Bay Conservation and Development Commission, January 17, 2023.
- *Fishing at the Berkeley Waterfront - What is it Worth?*, with M. Banal, P. King and M. Peterson, Preliminary Summary Report, September 2022. This report was in the packet for Parks, Recreation and Waterfront Commission agenda packet for Wed 9/14/2022 at 7pm.
- Normal for Whom? Exploring socioeconomic variation in a travel cost analysis of urban shoreline fishing (Antinori et al. 2025). This was provided as a link and described in the NOP. The peer-reviewed published version of this report is at: "Normal for whom? Exploring socioeconomic variation in a travel cost analysis of urban shoreline fishing,"

According to Antinori et al. 2025 (and Antinori et al., 2026), 77% of anglers fished in Berkeley before COVID, 61% prefer Berkeley over other locations, and 55% fish for consumption purposes. These patterns reflect both recreational and subsistence fishing, neither of which is incorporated into the baseline. Current average annual visitation for angling at this urban shoreline is 30. Thirty-three percent and 35% of anglers in the sample earn less than $50k and between $50k-$90k, respectively, and lower income anglers visit this area more frequently.

O10-75

Town of origin for shoreline fishers at Berkeley waterfront. Note that Oakland is the most frequent town of origin, followed by Berkeley then Sacramento. *Source: Survey data 2021-2023, reported in preliminary form in 2023 presentation above.*

The graph below shows the town of origin for angler visits to the Berkeley shoreline, 2022-2023. Note that most by far are coming from Oakland. After Berkeley, the next most common town of origin is Sacramento. Anglers also visit from as far away as Livermore. **The park is a regional open space asset, providing respite from heat in the inland areas, which will become more important with climate change.**

O10-75

The DEIR also omits policy literature quantifying recreational fishing value, including per-trip estimates of approximately $36–$78 per visit, and broader literature showing high statewide participation in marine recreation and the regional significance of shoreline fishing sites (Christensen, J., King, P., 2017; Reineman et al. 2016; Pendleton and Rooke, 2006; Pendleton 2011). This omission prevents accurate characterization of use and social benefits.

O10-76

The Berkeley marina is also the home port for numerous sportfishing operations and small commercial fishers who rely on fisheries productivity in the Bay. Readily available local sources of Berkeley-specific fish reports generated by local recreational/subsistence fishers and commercial operations include:

- BerkeleyMarina_baitntackle: Instagram posts regularly from the marina's bait shop show catches from nearby Berkeley waterfront locations (see Biological resources section for more data).
- California Dawn sportfishing Facebook page: https://www.facebook.com/californiadawnsportfishing/
- Golden Eye 2000 sportfishing Facebook page: https://www.facebook.com/goldeneye2000sportfishing/
- Amethyst Fishing Charters
- Reel Fishing

O10-77

4. City-mandated reporting on nonprofit recreational programming in project area and beneficial public use contributions

The DEIR does not include nonprofit recreational operations under the City's berth fee waiver program, including the Pegasus Project, Blue Water Foundation, Berkeley Racing Canoe Center, or Cal Sailing Club. These organizations provide sailing education, youth programming, and public access recreation. In April 2020 alone, these organizations provided approximately $354,500 in services in exchange for $40,863 in berth value (88% return on investment), demonstrating substantial public benefit and recreational intensity. The City has not provided updated fee waiver reporting since 2020, as required under City Council Resolution 58859-N.S. adopted in 1997 and updated in Resolution No. 66544-N.S. of April 29, 2014 (see attached), and the DEIR does not incorporate updated data. The omission of this program significantly understates the scale, social value, and equity dimensions of recreational use at the

O10- 78

marina and, therefore, must be included in the project description, project setting and environmental setting.

O10- 78

The City of Berkeley remains unique in California in providing a fee berth waiver program for community service and recreational outreach. Nestled within the marina's 1000 slips, there are currently four nonprofits under the berth fee waiver program:

- **Pegasus Project:** Founded in 1994 by Peter Hayes, co-founder of Nautilus Institute for Security and Sustainability and the "No Child Left Ashore" vision, using Hayes' 51' wooden ketch for youth outings from K-Dock.
- **Blue Water Foundation:** founded in 1992 to provide at-risk and under-represented youth an opportunity to sail, using K-dock.
- **Berkeley Racing Canoe Center (BRCC):** Encourages competitive dragon boat racing and recreational paddling for all ages and abilities, using two slips on M-dock. BRCC gives free boat rides to massive numbers of Bay Festival visitors each year and hosts field trips for schools and youth groups, and donates "private cruises" as fundraising auction items to many local nonprofits. BRCC Board could provide details, BRCC Board <brccboard@dragonmax.groups.io>
- **Cal Sailing Club (CSC)**: Founded in 1948 under auspices of the University of California and transmuted to a nonprofit in 1982 to provide low-cost sailing education and access, using six slips at J dock. In 2025, this organization gave 1512 free rides on keelboats and dinghies in the South Sailing Basin to the community during seven open house sails and additional free rides to support the city's Bay Festival. These had a value of $125,496.

O10-79

The Parks Department has not provided updated fee waiver reports as is required under City Council Resolution 58859-N.S. (1997) and City Council Resolution 66,544-N.S. (2014) to the PRW Commission or City Council since the 2020 report. The DEIR likewise does not recognize the value, level, intensity and quality of recreational activity represented by this program. Information available to the city on CSC alone, **and which is available for all the organizations,** is found in the box below as a **source of recreational inventory available for the DEIR but omitted**.

O10- 80

Cal Sailing Club (CSC), a nonprofit, volunteer-run cooperative, has for decades made water sports available to all. Long known as The Beating Heart of the Berkeley Marina, CSC welcomes everyone through low-cost and no-cost access to membership, ongoing free community events like monthly open houses, and youth rides. CSC's major activity is teaching sailing and windsurfing safety. Membership is open to the public. Members get lessons and, after achieving ratings, use of the club's fleet of 26 dinghies, 6 keelboats and 80 windsurfing boards including novice, intermediate, and advanced designs. Membership dues and volunteer work provide access to lessons and

recreational use of the club's equipment. There are no charges for lessons or use of equipment. Members have to pass rating tests and contribute work in order to achieve ratings. Our clubhouse is located on the south side of the Berkeley Marina. The Club is open all year, from noon to sunset on weekdays and from 9:00 AM to sunset on weekends. Instruction, maintenance, and administration are all done by volunteer members. CSC is a registered Community-Based Organization (CBO) under the San Francisco Bay Conservation and Development Commission (BCDC).

For more information, see our website https://www.cal-sailing.org/ and come on down!

CSC By The Numbers (dated from 2024)

O10- 80

2500+: total number of free rides per year that have been provided to the public for decades now, giving visitors aged 5 and up superb views of the Golden Gate and the Berkeley waterfront during our monthly Open Houses from April to November.

$90,000 in estimated annual Value of Presence in Marina or Community Service for these free introductory sails provided to the general public and diversity groups.

1,100: annual active memberships.

19,026: number of members since 2009.

$1.33: Average daily cost for full membership (yes, that is one dollar and thirty-three cents, or $120 on a quarterly basis). Fee is waived if a member contributes additional volunteer hours.

$450 annual membership fee. Fee is waived if a member contributes sufficient volunteer hours.

54.4% of new members self-identified as other than White in the last 12 months as of November 2023 (29% as Asian, 9.5% as Hispanic, 3% as Black, 1.8% as Middle Eastern, 0.3% as Hawaiian, 0.2% as Amerindian, and 45.6% White). In comparison,

some studies have shown that sailing practitioners in the US are more than 80% white, and Berkeley is 55.5% white according to the census.

2,942: lessons given last year in sailing and windsurfing.

$45,000 grant from California Department of Boating and Waterways every year to teach Boating & Water Sports Safety.

7,126: estimated area in square miles from which CSC draws members.

50: Number of years CSC has been at the Berkeley waterfront and marina teaching high-level sailing skills in one of the most iconic sailing spots in the world.

O10- 80

5. Publicly-provided recreational swimming information

The DEIR understates the project area as a resource for swimming although this information was provided. In scoping comments by Julie Allen, the city and consultants were made aware of the high volume of swimmers that needed to be included in the DEIR. Allen's concerns included access issues, but because access was mediated though parking displacement, the DEIR dismissed the comment as not relevant, as parking is "not a CEQA environmental impact in and of itself" even though the main point was public access impacts. Allen's comments also included a request to recognize the volume of swimmers in the planning documents, requests that went ignored in community engagement exercises: "I ask also that all recreational users be invited to the table to give input. Hundreds of swimmers use this area and we were not included until April, and only then after aggressive insistence, and even then our #1 concern, parking, was declared off the table for discussion."

O10- 81

We here include further testimony from an East Bay Open Water Swim member:

*I started swimming at the marina during COVID (6 years ago this month!) and I only joined EBOWS then. I know that a lot of other folks had the same good idea and the number of Bay swimmers has gone through the roof in the past few years. There are **150** members of our Berkeley Marina Swim WhatsApp group, and that group started only a year or so ago and grows daily. The EBOWS Google group (all easy bay locations) had more than **600** swimmers for a bit, then we had to move to another platform and the new group has nearly **350** members -- that started from 0 less than a year ago (many regulars quickly re-joined), with more joining all the time. I also know*

O10- 82

that a LOT of marina swimmers are not in any of these groups. A while back we created a survey about parking habits and had 135 responses.

See EBOWS marina swim survey report in Attachments section.

Additional swimming groups which frequent the project area and nearby facilities:

- **Selkies:** 250 members.
- **Odyssey**: 55-75 swimmers out of the South Sailing Basin at Sunday swims. Swimmers launch from the south sailing basin in high water and HsLordships launch in low water and when the East Dock was closed. The regular schedule for many years has been Sunday mornings year round and Tuesday evenings in summer.
- **Other groups in Bay:** https://baynature.org/magazine/summer2025/swimming-together-in-san-francisco-bay/

O10- 82

Open water swimming in the Bay is growing in popularity for many reasons. As the Bay has been getting cleaner, swimming has become more attractive. It is a less-injury-prone activity for the aging population which is growing in size. Open water swimming has well-known health effects - with a literature that was available to the DEIR preparers (see Gascon et al, Pouso, Sturm et al, White et al. studies in reference section for verification).

C. DEIR revision necessary

Given the inaccurate and incomplete environmental baseline setting, we urge a revision to the DEIR to include a complete and quantitative description of existing baseline conditions to reevaluate environmental impacts and support informed decision-making. Without a full description of existing recreational uses, an EIR cannot provide substantial evidence to support its conclusions or determine whether impacts such as displacement, increased use, or loss of access will occur.

O10- 83

IV. DEIR shortcomings on project environmental impacts

A. Impacts on Aesthetics omitted

O10- 84

The Berkeley waterfront includes heavily used public access and viewing areas which the project area subsumes. The DEIR however understates both the scope of the visual impact and the range of affected scenic and cultural experiences which the public currently enjoys.

CEQA defines public views as those experienced from publicly accessible locations. The San Francisco Bay Plan states provides aesthetic objectives applicable to the project and stated in the DEIR:

O10- 85

- **Public Access Policy 9**. Public access improvements provided as a condition of any approval should be consistent with the project, the culture(s) of the local community, and the physical environment, including protection of Bay natural resources, such as aquatic life, wildlife and plant communities, and provide for the public's safety and convenience.
- **Appearance, Design, and Scenic Views Findings and Policies, Finding d.** Probably the most widely enjoyed "use" of the Bay is simply viewing it-from the shoreline, from the water, and from afar; a Bay view can add substantially to the value of a home, office, or apartment building. Also, the Bay is a major visitor attraction for the tourist industry.
- **Recreation Policy 9:** Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes, **provided the development and operations of the ferry facilities do not interfere with current or future park and recreational uses, and navigational safety can be assured.** Terminal configuration and operation should not disrupt continuous shoreline access. Facilities provided for park and marina patrons, such as **parking, should not be usurped by ferry patrons.** Shared parking arrangements should be provided to **minimize the amount of shoreline area** needed for parking

O10- 85

1. Incorrect CEQA significance standard

The DEIR treats "remain visible" and "low profile" as the significance test. That is not the CEQA standard. CEQA Guidelines §15064.5(a) and Appendix G require analysis of whether a project would cause a substantial adverse change to a scenic vista, including degradation of scenic quality, fragmentation or interruption of view corridors, the introduction of dominant new visual features, and alteration of the character of a recognized scenic resource. Partial visibility of distant features does not satisfy this inquiry.

O10- 86

2. Scenic-quality effects of major project components not evaluated

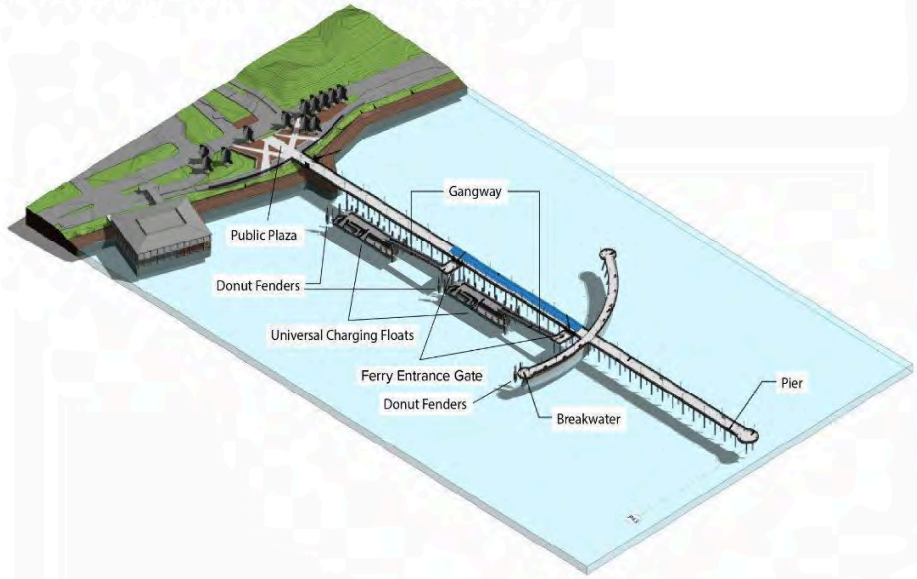
The DEIR identifies the project's major new visual components — a 300- to 400-foot breakwater, ferry terminal infrastructure, solar canopy structures, and frequent ferry vessel operations — but neglects full and reasonable evaluation of whether these elements, individually or collectively, would fragment panoramic sightlines across the Bay, reduce the openness of the water foreground, alter skyline framing and scenic composition, or transform the shoreline from a natural panorama into an infrastructure-dominated view.

O10- 87

First, the DEIR acknowledges the breakwater but does not evaluate whether its scale and placement would materially alter scenic composition or degrade the visual character of the Bay shoreline. The breakwater introduces a large, continuous structure into existing open-water views along the shoreline. DEIR analysis focuses on selected views of retained visibility of distant scenic resources **rather than on the loss of open-water foreground conditions and uninterrupted view corridors.**

O10- 88

Second, the central visual element of the project — the ferry vessel itself — is absent from the DEIR's renderings and infrastructure figures. The project proposes ferry operations with approximately 28 weekday and 26 weekend crossings at a new 1,080-foot pier on the Berkeley waterfront. The DEIR cover rendering depicts the proposed pier with two pedestrians and a sailboat in the middle distance. No ferry vessel is shown. This is the image members of the public encounter first when reviewing the project, and it **portrays a misleading and largely inaccurate representation of the visual change** the project would introduce.



DEIR cover of the proposed pier and Figure 2-4 water rendering show no ferry vessel.

O10- 89

Internal Figure 2-5, entitled "Proposed Pier, Breakwater, and Ferry Vessel Infrastructure Layout," labels the gangway, ferry entrance gate, donut fenders, universal charging floats, and the breakwater. It also does not depict a ferry vessel. A reader examining the figure cannot determine the scale of the vessels relative to the pier or breakwater.

O10- 90

Figure 2-5 Proposed Pier, Breakwater, and Ferry Vessel Infrastructure Layout

DEIR Figure 2-5. Ferry infrastructure is labeled; the ferry itself is not shown.

O10- 90

We attempted to AI-generate a rendering to include a 250-passenger Bay Breeze-style vessel as specified in the project description. While not perfect, with ferry in wrong location, it gives some idea of the ***scale*** of a ferry within the project area:

Our

O10- 91

ChatGPT prompt for generating this above image was: *here is a picture on the cover of the Water Emergency Transportation Authority Berkeley ferry environmental impact report showing the proposed pier. But it does not depict the 250-passenger ferry that it*

says will dock at this pier. Can you recreate the rendering with a 250-passenger ferry docked next to the ferry terminal pictured?

)10- 91

Images from the WETA website depict other ferries that may be used at the project site:

92

Left: 400-passenger battery-electric ferry to be built for San Francisco Bay Ferry. Specificaiotns are 142ft 1in x 34ft 9in Subchapter K vessels. https://www.advancedmaritimetechnologyinternational.com/news/vessel-build-and-maintenance/nbbb-to-design-and-build-two-400-passenger-battery-electric-ferries-for-san-francisco-bay-ferry.html. *Right: 400-passenger Hydrus model at Richmond terminal.* [About Us - San Francisco Bay Ferry](#) *which has similar dimensions as the 400-passenger ferry vessel.*

Observations:

- Were WETA to go with the 400-passenger electric ferry (recall that no 250-passenger electric ferry exists yet for WETA capable of servicing the Berkeley route), the vessel's 35 ft beam is wider than the 22 ft pier itself (by approximately 60%).
- The Hydrus and the Dorado regularly used in the WETA fleet and potential vessels for the Berkeley route rise approximately 22 ft (or more) above the waterline — roughly twice the height of the pier deck, and comparable to a two-story structure.

O10- 92

- At 28 weekday and 26 weekend crossings, a 250-passenger ferry is arriving or departing the pier on average every 30–35 minutes during operating hours. The vessel is therefore a **recurring visual element throughout the day**, not an incidental one.

O10- 93

- The DEIR states that a 250-passenger vessel is the operational assumption. WETA's current comparable vessels (MV Dorado class) are 130 ft × 35 ft and carry 320 passengers. A smaller passenger count does not imply a smaller vessel footprint at this hull length.

O10- 94

- None of these dimensions or relationships are illustrated in the DEIR.

O10- 95

Therefore, the DEIR has not presented evidence and analysis accounting for the cumulative presence of multiple large shoreline structures, continuous ferry vessel movement across key sightlines, the various vessels themselves which could be used for the route, or repeated daily visual intrusion across scenic viewpoints. CEQA requires evaluation of operational and combined effects on scenic resources and the viewer experience, not only of individual project elements. The DEIR needs to be rewritten to include this information in project description and impact analysis.

O10- 96

O10- 97

3. Construction-phase impacts not evaluated

The DEIR does not analyze visual obstruction from construction staging, pile driving, or infrastructure installation.

O10- 98

4. North-side pier and Skates Restaurant views not adequately analyzed

The ferry terminal and vessel operations would obstruct existing public views for pedestrians and patrons at Skates Restaurant and surrounding north-of-pier vantage points, which constitute a key public recreational area. The renderings in Figure 3.1-4 Key Viewpoints could be from Skates but show no vessel, which could intrude on views continuously with 28 weekday and 26 weekend crossings across to the Golden Gate Bridge and San Francisco skyline. **This is a substantial adverse change** under §15064.5(a). The DEIR's less-than-significant conclusion is unsupported: no mitigation measures, design alternatives, redesign, or reductions in frequency are evaluated.

O10- 99

5. Scenic-highway visibility is not the CEQA standard

The DEIR concludes no AES-2 impact because the project is not within, and is not visible from, State scenic highways SR 24 (~5.5 miles away) and I-80 (~1.7 miles away). CEQA does not confine scenic resource analysis to designated State scenic highways, nor does it require direct line-of-sight from such a highway to establish an impact. The governing inquiry is whether the project would cause substantial adverse effects to scenic resources — degradation of visual quality, alteration of scenic character, or obstruction of public views — from any affected public vantage point. Therefore, this impact standard is improperly applied.

O10- 100

6. Traffic-related aesthetic impact not reflected in the AES-2 analysis

Table 3.10-18 shows average daily traffic from Seawall Drive to Marina Boulevard — the route to the proposed ferry terminal — **increasing 77%** with the project (DEIR pdf p. 489; calculated as project-generated trips divided by existing ADT). This is a substantial change to the aesthetic experience of visiting the waterfront and is not reflected in the AES-2 analysis.

O10- 101

7. The DEIR does not treat Seawall Drive as a recreational amenity nor recognize its loss as an aesthetic impact

A BCDC permit opened the Seawall Drive lot on landfill in 1966. It has been free and open to the public ever since. The view from the lot is unavailable anywhere else along the San Francisco Bay shoreline: open water, the Golden Gate, the skyline, the Marin

O10 - 102

headlands. The Berkeley Historical Society and Museum uses a historic illustration of this view as one of its site icons (berkhistory.org). Since its opening, it has become a **cultural and community landmark**, providing a space for low-cost recreation and public respite for generations of visitors.

Berkeley Historical Society icon: "Berkeley — Exactly Opposite the Golden Gate." (berkhistory.org)

O10- 102

The city acknowledges that a key and consistent concern in community engagement activities for the WETA ferry-pier was to keep Seawall Drive in-car viewing on the west side of Seawall Drive. The October 24, 2025 City Manager's *Berkeley Pier-Ferry Update* to City Council states:

O10- 103

"...the City received consistent feedback from the public that **preserving parking on the western side of the road to maintain 'in-car Bay viewing' as a key public amenity is a priority.** Given this feedback, the design will include not only the new Bay Trail segment but **also parking stalls on the western side of Seawall Drive** where feasible."

This area is used extensively by families, fishers, persons on lunch breaks, and figures in countless conversations held – all while looking at one of the most iconic views in the world, protected from wind and waves. The Kittelson Transportation Demand Management data shows that Seawall Drive has the highest share of recreational visitors of Black/African-American, and Hispanic visitors. For the public in general, it is a low-cost, high quality public recreational asset.

O10- 104

Gordon Stout has assembled a series of Google Earth images of the south peninsula from October 2015 through September 2020. The series documents both sustained recreational use of Seawall Drive after the pier closed in July 2015 and COVID-19, indicating its location as a safe mental health stability activity which one could enjoy safely, even for mobility-challenged people. In all photos, you see cars along Seawall Drive, and in many photos, the spaces are full end to end. On any particular day, one can observe that many of the cars are not empty but are occupied with people

O10- 105

observing the view, fishing, or simply relaxing. **The area itself is a recreational asset,** not merely a parking lot, and should be treated as a recreational asset in the DEIR.

Figure 1. October 2015 — three months after the pier closed.

Figure 4. February 2020.

O10- 105

Figure 5. April 2020 — early COVID-19 period.

Figure 6. August 2020.

O10- 105

Figure 7. September 2020.

O10- 105

The same October 2025 update goes on to report, and the COB's BCDC *Design Review Board Staff Report November 3, 2025* reiterates that **all but 20 of these spaces would be removed for the Bay Trail improvements and stormwater treatment.** The Kittelson report suggests dedicating the spaces to ferry patron parking. Figure 3.1-3 of the DEIR (pdf p. 118) shows a single arrow for KVP#2 at the tip of the peninsula — not along its length, which is where the public experiences the Bay today, reflecting that the project acknowledges that Seawall Drive in-car viewing is eliminated. The Figure 3.1-4 photos show no viewpoint from shore along Seawall Drive looking west because that view is eliminated for in-car viewing options, and blocked by the breakwater.

O10- 106

Seawall Drive in the '70s illustrating historical in-car viewing recreation. Credit: Evie Vetterlein Wozniak.

The Seawall Drive lot is a community and cultural landmark. Removing this in-car viewing area, building the breakwater and ferry terminal, and running vessels across the shoreline would alter this setting irreversibly, obstruct visual access to the Bay, and eliminate a recreational resource that does not exist anywhere else on the shoreline.

O10-107

The DEIR concludes the project would not conflict with the Berkeley General Plan, the Marina Master Plan, the Berkeley Municipal Code, or the San Francisco Bay Plan. It reaches that conclusion without analyzing Seawall Drive recreation. It does not ask whether removing the Seawall Drive parking lot, adding a breakwater and ferry terminal, and running vessels across the shoreline is consistent with the policies those documents were written to uphold — policies that protect public visual access and scenic quality. Seawall Drive is a distinct public visual access and recreational resource. **The DEIR does not evaluate it as one, and the AES-3 finding of no policy conflict is not supported by substantial evidence.**

O10-108

In conclusion, the DEIR omits key information for aesthetics impact analysis, and misapplies policies and standards. The "less than significant" and "no impact" determinations for aesthetics impacts are not supported by substantial evidence. CEQA Guidelines §15064.5(a) and §15125(c) require the DEIR to consider impacts to both aesthetic and cultural or historic resources. The DEIR does not do so, and proposes no mitigation. The DEIR's finding under Impact AES-1 — that the project has a "relatively low profile" and needs no mitigation — does not constitute consistency with the San Francisco Bay Plan, *Appearance, Design, and Scenic Views upon the Bay* or Recreation Policy 9, or the BMMP — public access to shoreline recreational resources. In addition, the project removes a culturally and historically significant (even if not landmarked as such) shoreline viewing asset, a primary access point to the shoreline recreation area which the policy exists to protect.

O10-109

O10-110

Photos showing high use of Seawall Drive for unobstructed in-car viewing, shoreline fishing, picnicking. by CM Antinori.

O10-111

B. Recreation and Land Use Impacts

1. What policies and CEQA guidelines apply to recreational displacement, degradation of existing recreational facilities and land use / human interaction change?

a. CEQA Guidelines

CEQA's Appendix G (Recreation) provides a checklist which asks whether the project would increase the use of existing recreational facilities such that substantial physical deterioration would occur or be accelerated, or whether it includes/requires construction or expansion of recreational facilities with an adverse physical effect. But the threshold of significance is not limited to the checklist. The appendix states "Substantial evidence of potential impacts that are not listed on this form must also be considered." The lead agency must consider any substantial adverse effect on recreation, including loss of access, displacement of users, and degradation of the recreational experience (noise, visual, air quality, safety, severance of trails, loss of parking/staging areas, etc.). The checklist is a floor not a ceiling. O10-112

Appendix G for Land Use Planning asks whether the project would physically divide an established community or impose a significant environmental impact in conflict with a rule to avoid environmental impact. O10-113

b. Public trust

Because the project affects tidelands, navigable waters, shoreline areas, or other resources subject to the public trust, the lead agency must consider potential effects on public trust uses, including navigation, fishing, recreation, and ecological values *(National Audubon Society v. Superior Court (1983) 33 Cal.3d 419; Marks v. Whitney (1971) 6 Cal.3d 251)*.

Under *National Audubon*, state and local agencies have an affirmative and continuing duty to consider and balance public trust uses when making decisions affecting trust resources. CEQA requires disclosure and analysis of environmental impacts, including impacts on recreational access and use where applicable, which may inform the agency's separate obligations under the public trust doctrine. O10-114

Where a project may impair public trust resources or uses, the agency must evaluate those effects and, consistent with its public trust responsibilities, avoid or minimize impairment where feasible or otherwise ensure that any impairment is justified in light of competing interests.

c. San Francisco Bay Plan

SF Bay Plans emphasizes the importance of preserving and enhancing public access to the Bay and aims to balance environmental preservation with recreational opportunities. These SF Bay Plan policies apply the recreational and land use impacts of the project:

O10-115

Environmental Justice Policy 1: The Commission's guiding principles on environmental justice and social equity should shape all of its actions and activities.

Recreation Policy 9: Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes, provided the development and operations of the ferry facilities **do not interfere with current or future park and recreational uses,** and navigational safety can be assured. Terminal configuration and operation should not disrupt continuous shoreline access. **Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons.** Shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking.

O10-116

Transportation Policy 5. Ferry terminals should be sited at locations that are near navigable channels, would not rapidly fill with sediment and would not significantly impact tidal marshes, tidal flats or other valuable wildlife habitat. Wherever possible, terminals should be located near higher density, mixed-use development served by public transit. Terminal parking facilities should be set back from the shoreline to allow for public access and enjoyment of the Bay.

O10-117

Public Access Policy 5. Public access that substantially changes the use or character of the site should be sited, designed, and managed based on meaningful community involvement to create public access that is inclusive and welcoming to all and embraces local multicultural and indigenous history and presence. **In particular, vulnerable, disadvantaged, and/or underrepresented communities should be involved.** If such previous outreach and engagement did not occur, further outreach and engagement should be conducted prior to Commission action.

O10-118

Bay Plan Map No. 4 Policy 15. Berkeley Waterfront - Cesar Chavez Park - Preserve marina, beach, small boat launch, windsurfing access, fishing pier, interpretive center and multi-use trails. Possible ferry terminal. Allow if compatible with park and marina use; serve with bus public transit to reduce traffic and parking needs. Provide signage regarding fish consumption advisories for anglers.

O10-119

d. The McAteer-Petris Act

McAteer-Petris Act requires that development within San Francisco Bay promote public access, enhance recreational opportunities, and balance development with preservation of shoreline recreation.

O10-120

e. Berkeley Marina Master Plan (BMMP)

The Berkeley Marina Master Plan, adopted by City Council in 2003, represents a commitment "on the part of the citizens and City to provide a long-term recreation, and

O10-121

open space enhancement program for the Marina, including limited commercial and non-profit activity by lessees (Action Calendar, City of Berkeley, June 24, 2003). It provides the following relevant principles: O10-121

Principle 4. Provide for appropriate recreational, commercial and nonprofit development that both encourages use and protects or enhances the natural resources of the Marina lands. O10-122

Principle 5. Enhance access and use of the Marina, especially for members of special user groups such as elderly, economically disadvantaged or physically challenged persons. O10-123

Principle 6. Pursue a fiscally responsible and sustainable implementation program for the Marina. O10-124

2. DEIR is inconsistent with applicable policies for recreation and land use

The project site currently supports about 675,000 recreational visitors a year to this waterfront park, both on land and on water, with daily usage in the south waterfront project area alone at about 470 per day. The waterfront itself has a community character. Survey data from the Kittelson study and the shoreline fishing study show that visitors come frequently, often more than once a week. When they visit, visit durations tend to be long. Seawall Drive in-car viewing is a cultural and recreational activity in and of itself, with a community character, as described in the Aesthetics section of this document. The marina's approximately 100 liveaboards also constitute a resident community. The Berkeley waterfront supports unique, non-substitutable recreational uses, including unique shoreline views, wind-based recreation in both protected windsheds and unprotected in the wind slot, rare off-leash dog walking areas, and open water swimming. O10-125 O10-126 O10-127 O10-128

The **Impact Rec-1** claims that there is no impact on recreational access (and land use) because the Project will lead to a net increase in recreation. By this claim, it recognizes that the level of recreation is an implicit impact under CEQA. However, the argument that there is a net gain in recreation is specious. First, there is quantification of neither the increase in recreation nor decrease in recreation, so a claim of net positive increase is unsupported. As noted in the baseline section of this document, Bay Trail extensions for bike tracks and pedestrians would happen around the peninsula or a shortened loop on the peninsula even in the No-Project scenario, and do not rely on the project. The Bay Trail and bike paths would be funded under the lease with TSA Holdings. Safe Streets Measure FF project commits $15m a year for 14 years in funding for increased commuter and recreational bike paths in the City of Berkeley. D&E docks are opening for slipholders. These activities would continue without the project and should not be attributed to the project. O10-129 O10-130

The DEIR would need to provide analysis, modeling or assessment for the decrease in human use of the environment expected due to many changes in public access conditions and land use changes under the project, such as: O10-131

- 199 Seawall lot will be taken over as a private client lot and by ferry patron parking and not be accessible to the public to access shoreline facilities except as a patron of the ferry or the HsL tenant. O10-131
- The elimination of Seawall Drive as an in-car viewing area. O10-132
- The introduction of paid parking which will reduce affordability for recreational visitors. O10-133
- The implied beginning of enforcement of municipal code not currently enforced and not reflecting actual baseline use. The beginning of enforcement would reduce current recreation to the Bay waters. O10-134
- The change in biological resources in terms of fish habitat referenced in this comment document, and therefore reducing catch rates for fishers, a major attraction. O10-135
- Vehicular traffic to access the ferry would increase by 77% in the south waterfront area. O10-136

While not all recreational visitors will come by car, the Baseline section of this public comment shows that current visitation is characterized by a substantial proportion of older adults, visitors from outside of Berkeley, and those carrying gear and animals for dogwalking and and watersports. Reduction in demand among the population relying on cars for mobility issues will occur simply because the price of access will increase and available space decrease, leading to a change in human-use patterns. **Principle 5 of the BMMP aims to enhance access and use of the marina especially for elderly, disadvantaged and physically challenged. The DEIR claims it is consistent with this principle because it provides a cycle track.** In addition, it avoids analysis of the diminution of currently diversely accessible public areas, offering mainly benches and barriers between pedestrians and vehicles as substitutes. This also makes it inconsistent with **McAteer-Petris Act** because it fails to demonstrate that existing recreational uses will be preserved or enhanced and does not analyze the displacement of established shoreline recreation. O10-137 O10-138

The 2003 WETA Program EIR for system expansion offers quantitative analysis on how new ferry terminals increase VMTs. The ferry system expansion will only decrease VMTs by **0.07%** system-wide (section 3.12 Transportation of 2003 WETA EIR), with decreases only in areas that compete with congested highway facilities in San Francisco, Marin and San Mateo. This finding is compatible with this DEIR that average daily traffic (ADT) in the Project area will ***increase* 77%** (see DEIR noise section). Daily ferry users, most expected to depart from Berkeley, is estimated at 1160 (Table 2-4 of DEIR). This impact is not analyzed for impact on recreational facilities, degradation or change in public access, and potential to split a community comprised of regular waterfront recreational users. This in itself is inconsistent with **Impact LU-1** determinations and **Bay Map No. 4 Policy 15**. O10-139 O10-140

The DEIR fails to analyze the displacement of these users, the degradation of the recreational experience from the 77% increase in average daily traffic, and the lack of comparable facilities offering similar recreational opportunities at a comparable price. These are potentially significant impacts that must be analyzed, disclosed, and mitigated. The DEIR's treatment of impacts as only occurring temporarily during the O10-141 O10-142

construction phase is inconsistent with other data on VMTs and ADT, and land use as described in available Project documents. Therefore, the **project is inconsistent with Bay Plan Map No. 4 Policy 15.** O10-142

Principle 4 of the BMMP provides for nonprofit development that enhances the natural resources of the marina lands. One of the Marina nonprofits, Cal Sailing Club, brings new visitors to the waterfront, often those who have never sailed before, through its low cost operations and also free Open House days each month (except in winter), which attract upwards of 400 visitors each event (data available upon request). However, the transportation demand management plan was not described in the DEIR that has been partially put in place by the city for three lots adjacent to the nonprofit (South Cove East and West and J&K lots). The DEIR omits discussion of the TDM even though it has potentially significant impacts on recreational access, and omits discussion on any impacts on nonprofits. Therefore the DEIR runs afoul of both the **BCDC Recreation Policy 9** and the **BMMP Principle 4**. O10-143 O10-144

The Bay Plan requires that access to recreational facilities be easily available from public parking. **The DEIR does not demonstrate that access will remain adequate and instead contemplates the reduction and reallocation of shoreline parking for ferry use.** This reduces access for recreational users, particularly those who rely on vehicle access or have mobility constraints, and is inconsistent with **Recreation Policy 9**. O10-145

For the DEIR to say that there is a net increase in recreation ignores the distribution and quality of recreational activities given current and predicted trends. The Berkeley waterfront recreational area is the site of historical and heavy use for watersports recreation and bayside walking. The nearby McLaughlin Eastshore State Park has conservation and restoration projects. The DEIR does not acknowledge how the project displaces current and historical recreational usage, which is increasing from baseline (see section in this document under Baseline). O10-146

For perspective, the proposed project would constitute the **only ferry terminal and route traversing a pre-existing state and city park.** We list other WETA ferry terminal locations:

- Richmond – site of former Ford factory and WWII shipbuilding site
- Oakland and Alameda WETA ferries are in a shipping canal within Oakland's Inner Harbor and shipping lanes for Port of Oakland, next to barge docks and naval ships
- Mare Island and Vallejo terminals – built in an unused location around Mare Island naval base and shipyard within the Mare Island Strait at mouth of Napa River. The land has long been dominated by housing development and the naval base.
- South San Francisco – an industrial location within an existing Marina near the airport
- Alameda Seaplane Lagoon – within a decommissioned naval base

O10-147

- Harbor Bay – the terminal serves the housing development and businesses around Bay Farm Island that closely abut the shoreline
- San Francisco terminals – at preexisting marine terminals and piers within industrial sites

O10-147

At none of these ferry terminals is fishing, swimming, sailing, boating, or other windsports a dominant activity on the water as they are at the Berkeley waterfront. There is a rationale for this pattern. Those venues are already high-density and environmentally degraded: a large-scale ferry there does not displace the pattern of park usage nor add much marginally or cumulatively to pre-existing environmental damage as is consistent with **Bap Map No. 4 Policy 15**. As currently conceived, the Berkeley pier-ferry plan attempts to allow for recreation with what would be the only intentionally dual-use pier in the WETA system. The Bay Plan requires ferry terminals to be located in areas served by higher-density, mixed-use development and transit access. **The DEIR is inconsistent with this requirement because the project is located in a recreation-dominant waterfront park** rather than a mixed-use or transportation-oriented area. Other ferry terminals in the system are located in industrial areas, former military bases, or developed waterfronts. By contrast, the Berkeley waterfront is an active recreational park with established uses centered on public access and low-cost recreation. The DEIR therefore is inconsistent with **Transportation Policy 5**.

O10-148

O10-149

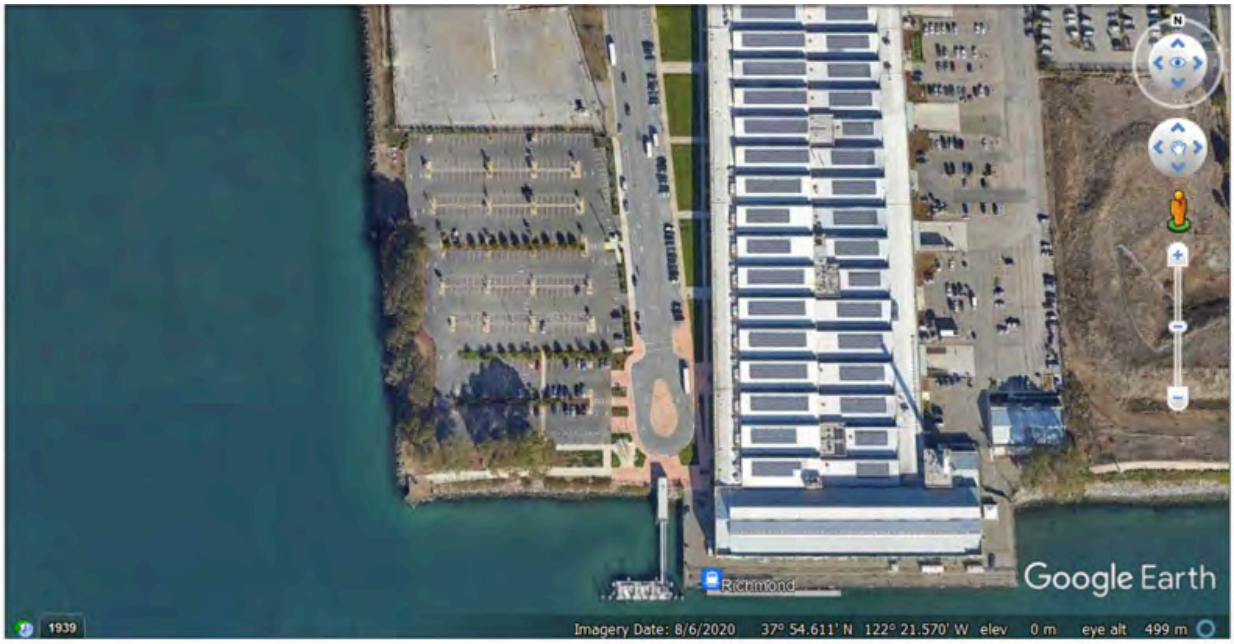
Ferry terminal locations typically consume real estate for parking, as evidenced by this comparison to other existing ferry terminal lots. The Google Earth images below were all taken at 499m by Paul Kamen, naval architect and marine engineer.

Above: South waterfront peninsula, site of project. Note that HsLorship's restaurant has been closed since 2018. COB is in lease-option stage with a tenant who will have exclusive use of

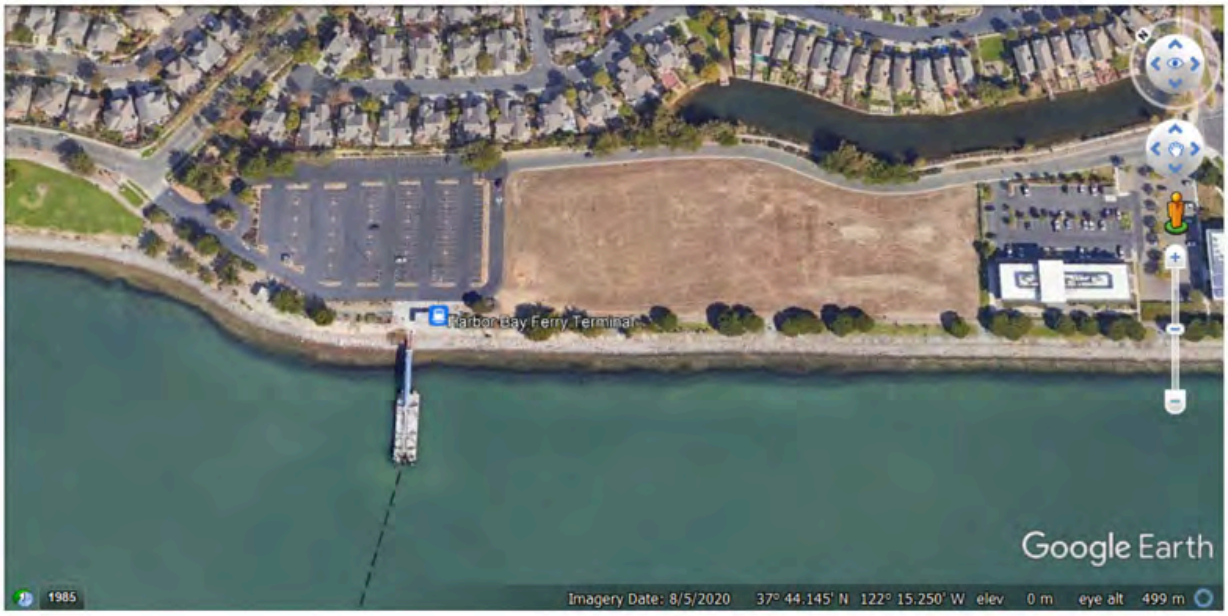
O10-150

150 parking spaces in the 199 Seawall Lot (empty lot space in above photo adjacent to the restaurant). Another 250 spaces in this lot will be dedicated to ferry parking. Seawall Drive in-car viewing area will be virtually eliminated. Therefore, the entire peninsula will be closed as a facility to access recreation at the waterfront.

O10-150



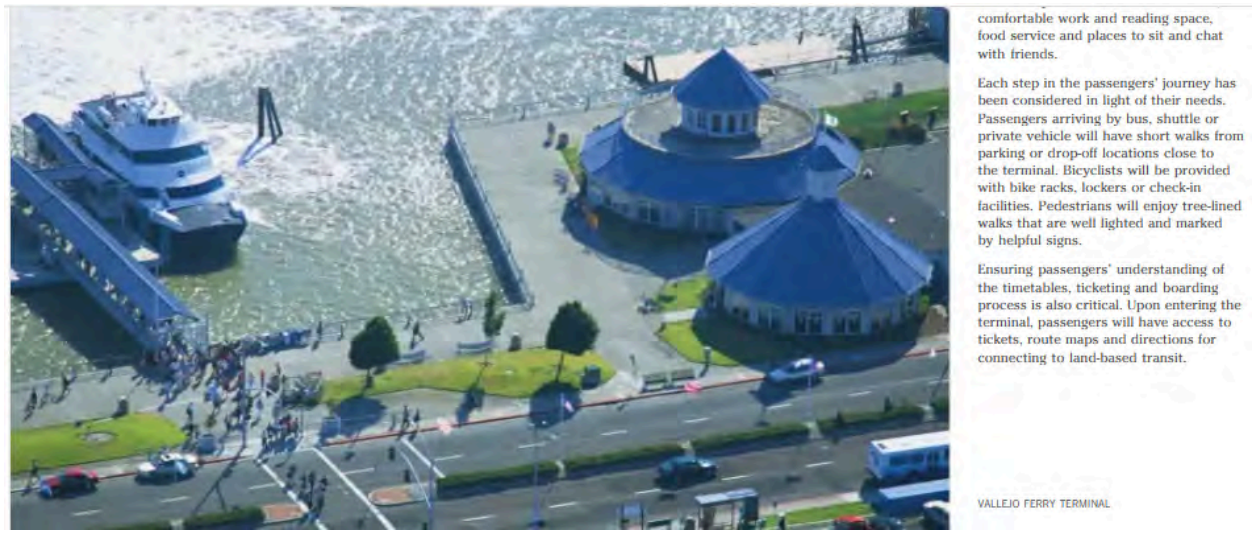
Above: Larkspur Landing Golden Gate ferry terminal with 1800 parking spaces. This was taken during covid when the lot was empty.



Above: Larkspur Landing terminal during regular operation.

O10-151

Above: WETA Richmond ferry terminal. Free parking is available in the lot adjacent to the terminal and includes 362 spaces for ferry patrons alone, with 15 public access spaces and 8 accessible spaces. The dichotomy in use assignments for ferry v recreation is indicative of this area not being a historically major recreational waterfront access area, having been the site of the former Ford factory, now converted to commercial purposes.



Above: WETA Harbor Bay ferry terminal in a modern residential development devoid of historical and existing recreation. The City of Alameda offers parking for 250 cars and two motorcycles at this terminal.

Above: WETA Vallejo ferry terminal. There is a waterfront parking garage and several surface lots directly across from the ferry terminal that serve ferry commuters. These include the City of Vallejo's waterfront garage plus multiple adjacent public lots. Over ~750+ spaces are available in the waterfront parking garage and surface lots near the ferry terminal combined (for daily paid parking). The main waterfront garage and the adjacent surface lots across from the Vallejo Ferry Terminal require payment (around $8 per 24 hours or a $50 monthly pass) for ferry patrons and other users. There are five paid parking lots available around the Vallejo Ferry Building which have security regularly patrolling the lots. Source: Vallejo Ferry Parking map.

010-151

Above: WETA Vallejo ferry terminal with text emphasizing business plans prioritization of ferry patron convenient access to the ferry boarding site.

WETA Implementation and Operations Plan | PDF | San Francisco Bay Area | Public Transport, p. 38.

O10-151

The DEIR claims recreation impacts due to construction, **Impact Rec 2**. The claim is that the impact is significant but mitigated because all the recreation **activities can move someplace else**. This belies the unique nature of recreation at the waterfront. During construction, much of the peninsula would be closed for project staging. The EIR argues that since that closure is temporary, and there are other areas in the marina, the impact would not be significant. Such truncated analysis ignores the language in the existing Marina Plan that protects access adjacent to the old restaurant and ignores Bay Plan policies which also protect those and other recreational uses like shoreline fishing and swimming. A loss of protected access for a long construction period and during project life is a significant impact.

O10-152

3. Other impacts on recreation and land use not addressed

Additionally, the DEIR does not analyze impacts on and mitigation measures for recreational fishing as a distinct resource use, despite its documented presence and regional significance. It does not evaluate how ferry traffic, noise, habitat modification, or breakwater construction could affect catch rates and fishing behavior.

O10-153

Moreover, the analysis does not address crossing-path conflicts at the marina entrance or the deterrent effect of commercial ferry operations on small-craft recreation. The marina's south entrance is the most heavily used entrance and exit for the marina, and the navigation path is at cross purposes - in that it crosses the ferry path, which is opposite or diverging directions, with the ferry route and docking maneuvers. There needs to be an adequate accounting of the effects of general navigational safety for these opposing activities. Boat traffic will increase with planned D&E dock completion. Despite the mitigation measures for slowing speed to reduce wake, the interference of marine traffic traveling at cross purposes with the ferry should be considered and alternatives assessed.

O10-154

The DEIR does not analyze functional displacement of recreation, meaning the loss or degradation of specific recreational activities that depend on this location uniquely. Instead, it treats displacement as a general redistribution of users to other parks. Missing from the analysis is any evaluation of impacts to place-dependent activities such as shoreline fishing along Seawall Drive, wind- and sail-based recreation in the localized wind corridor, open-water swimming, and unique shoreline viewing. The DEIR does not assess whether these activities would be reduced, constrained, or rendered less viable by changes in circulation, water-space configuration, and infrastructure placement.

O10-155

Additionally, the DEIR does not analyze intensity and congestion impacts on recreation access. It fails to evaluate how the addition of approximately 955-1053 ferry patrons, needing more than 400 parking spaces, in combination with a heavily-used waterfront would affect crowding, user conflict, safety, and recreational quality. There is no quantitative analysis in the DEIR of carrying capacity, peak-use conditions, or conflict between commuter and recreational users in shared shoreline and water space.

O10-156

The project potentially introduces a profound change in character of the waterfront from a shoreline park created for recreational use under federal grants. The residents of Berkeley have reasserted the priority of this area for recreation many times over. Notable movements supporting recreation include Save the Bay, which prevented the landfill/dump now known as Cesar Chavez Park from becoming a shopping mall in the sixties, leading to the creation of BCDC, and again in the eighties when Sante Fe Railroad sought to build a large commercial development. The developer push was so aggressive and the citizen response so emphatic that a moratorium was placed on waterfront development in 1987, and remained in place until adoption of the 2003 BMMP. O10-157

The process of advancing this ferry project has also been highly controversial, as indicated in the Areas of Known Controversy of this document but highly understated in the DEIR. Even the incremental implementation of the ferry plan elements, namely paid parking in the ferry transportation demand management plans, has met with controversy and opposition when the city approved paid parking in the three south waterfront lots in the Project area, a plan carried out without advance input from the community or advisory commissions. O10-158

The project has potential to change the recreational character of the area, meaning a shift from a low-cost, informal, mixed-use recreational waterfront to a transportation-dominant facility with commuter ferry operations. The analysis does not evaluate whether this represents a qualitative loss of recreational experience, even if some physical access remains. This is inconsistent with **BCDC Public Access Policy 5** and potentially the **McAteer-Petris Act**. Further, recreation policies require that facilities serve people of all races, cultures, ages, and income levels. Both the BWCC visitation report (attached) and the fishing study point to a lower-income demographic favoring visits to the Seawall Drive area of the waterfront, as well as non-white-only. The DEIR does not analyze recreational equity impacts, despite the waterfront's current functioning as a regionally significant, low-cost recreational resource. The project introduces increased access barriers through reduced parking, congestion, and changes to shoreline access, but the DEIR does not evaluate these effects and is inconsistent with **Environmental Justice Policy 1** of BCDC. Visitation to the waterfront is characterized by frequent (once a week or more) visitation of relatively long duration, **signifying a recreational community.** By introducing major traffic along University Avenue to Seawall Drive and then eliminating Seawall Drive in-car viewing, the project divides a uniquely-Berkeley cultural community that is connected by enjoyment of low-cost and convenient-for-all access to the Bay. **Therefore, impacts as evidenced in this document impose a CEQA impact for land use change**. O10-159 O10-160 O10-161

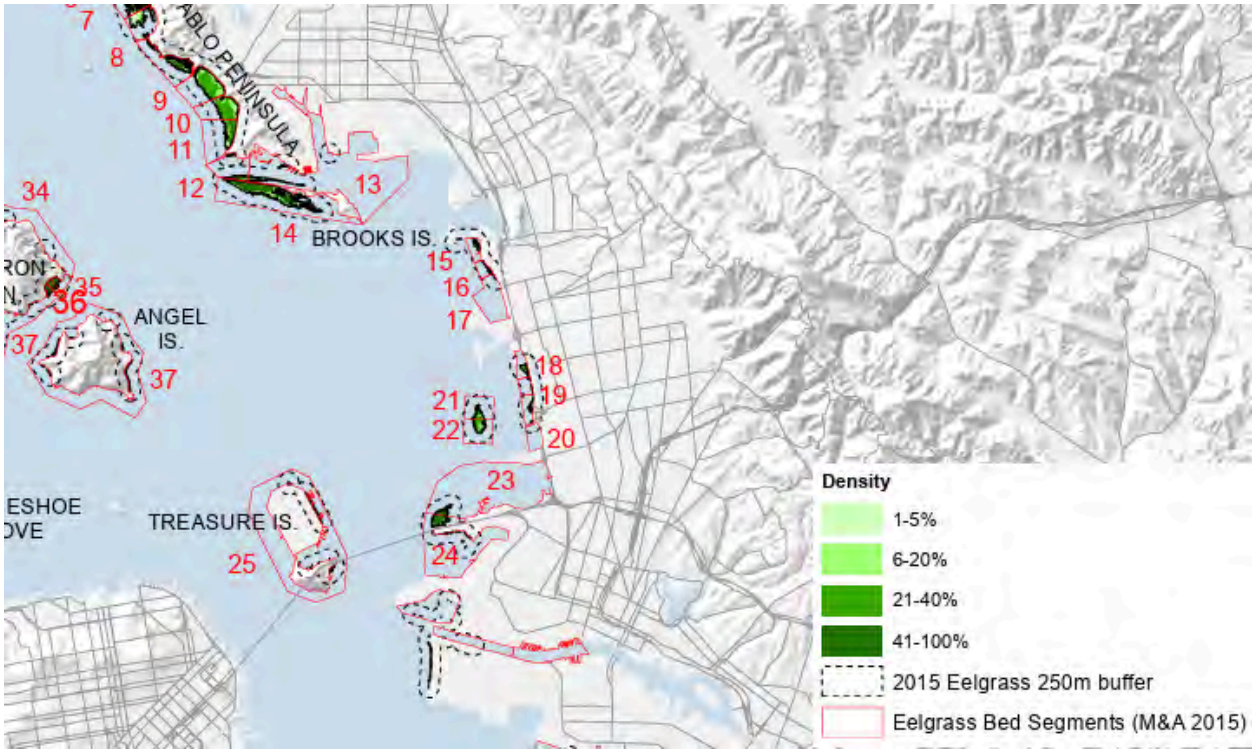
In conclusion, impact significance is ultimately a question of substantial evidence about whether an impact is "substantial, or potentially substantial." A diminishment of public-trust-protected recreational access is, by definition, substantial in kind. The DEIR indicates diminishment of public-trust-protected recreational access and land use changes. Because of related inconsistencies with plans pertinent to the project and CEQA impacts left unanalyzed in the DEIR, we advise that the DEIR be revised to (1) quantify current recreational use and the project's effect on it, (2) analyze consistency O10-162

with plan policies, (3) address the public trust implications on the record, and (4) evaluate a reduced-footprint or relocated alternative that preserves existing access. O10-162

C. Biological resources sections have serious omissions and inaccuracies

1. Environmental settings for eelgrass beds and related discussions misreport published studies and are inconsistent with state and regional plans for eelgrass policies and goals. O10-163

Eelgrass (*Zostera marina*) is a foundational species in the SF Bay and the only seagrass species in the Bay. It provides critical habitat for species, offering foraging, refuge and spawning grounds. In recent years, its potential for "blue carbon" has come to be known. Nevertheless, the DEIR repeatedly neglected substantial information and misreported data from sources they did cite, calling into question all aspects of this section.



a. Inadequate and incorrect data on eelgrass beds.

There is only cursory treatment of eelgrass in the current DEIR in the environmental setting section, even after years of increasing knowledge of eelgrass's significance to the ecosystem and restoration programming. The treatment extends into neglect and misstatement of available data. The eelgrass inventory available at the time of NOP is not represented. P.181 of the pdf and 3.3-11 states: *"There are previously documented eelgrass beds in the vicinity of the project site, but no documented occurrences of eelgrass within the project site. The nearest documented occurrence of eelgrass is from the South Sailing Basin, approximately 3,800 linear feet from any areas where in-water work is proposed, where less than 0.01 acre of eelgrass was mapped during the 2003 Baywide Eelgrass Inventory of San Francisco Bay.[39]"* O10-164

This passage cites Merkel & Associates, 2004 Baywide Eelgrass Inventory of San Francisco Bay: Pre-survey Screening Model and Eelgrass Survey Report, which has long been superseded. There was also no groundtruthing in the project vicinity nor at the Berkeley shoal at that time of this report due to cost considerations (Figure 13). Further, we could not find the quoted ".01 acre" in the report, although we did see that predicted suitable eelgrass distribution shows a high density potential around the project site (Figures 7 and 8b). O10-165 O10-166

The passage goes on to say *"This small patch of eelgrass was not re-detected during the subsequent baywide eelgrass inventories conducted in 2009 and 2014.[40, 41]"* citing the newer Merkel and Associates SF Bay Elgrass Inventory for 2009 and 2014. This is again incorrectly reported. Here is an image of Figure 2 from the Merkel 2014 report O10-167

clearly showing the presence of eelgrass beds as described in previous years, beds 18, 19, 21, 22.

O10-167

Further, Table 1 from the Merkel 2014 report (below) shows eelgrass acreage at the Berkeley shoal (sites 21 and 22) increasing from 2003 to 2014, as well as at nearby Albany Beach, Golden Gate Fields, Brickyard Cove, and the Emeryville shoal. These increases are notable because of sensitivity of eelgrass to water and light conditions and implications for supporting the ecological health of the Bay. Only the Berkeley shoreline along freeway I-80 seems to be suffering in the most recent 2014 inventory, though this trend may reverse in the future given eelgrass sensitivity to environmental conditions.

O10-168

Table 1. Location and Area of Eelgrass in San Francisco Bay (2003, 2009, and 2014 Surveys)

Eelgrass Segment Number	General Region	Bay Region	2003 (acres)	2009 (acres)	2014 (acres)

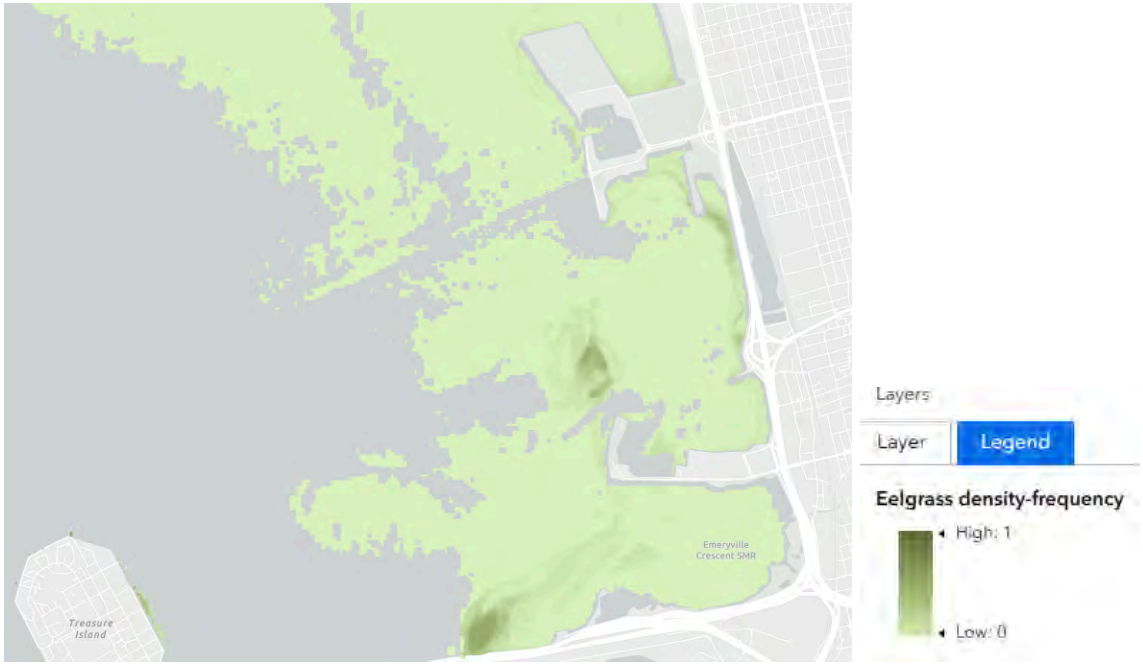
Table 1 from the Merkel 2014 report

O10-168

Page 183 of the pdf and 3.3-12 of the DEIR says: *"Eelgrass beds, a component of EFH, was not observed and does not contribute to EFH within the project site,"* in regards to essential fish habitat (EFH). Page 184 of the pdf and 3.3-13 states *"Eelgrass beds also provide refuge from predators and an abundant food supply. No eelgrass is currently documented to be present in the project site and has only been documented in very small patches in the South Sailing Basin over the last 15 years."* These claims must be rescinded in light of the above evidence.

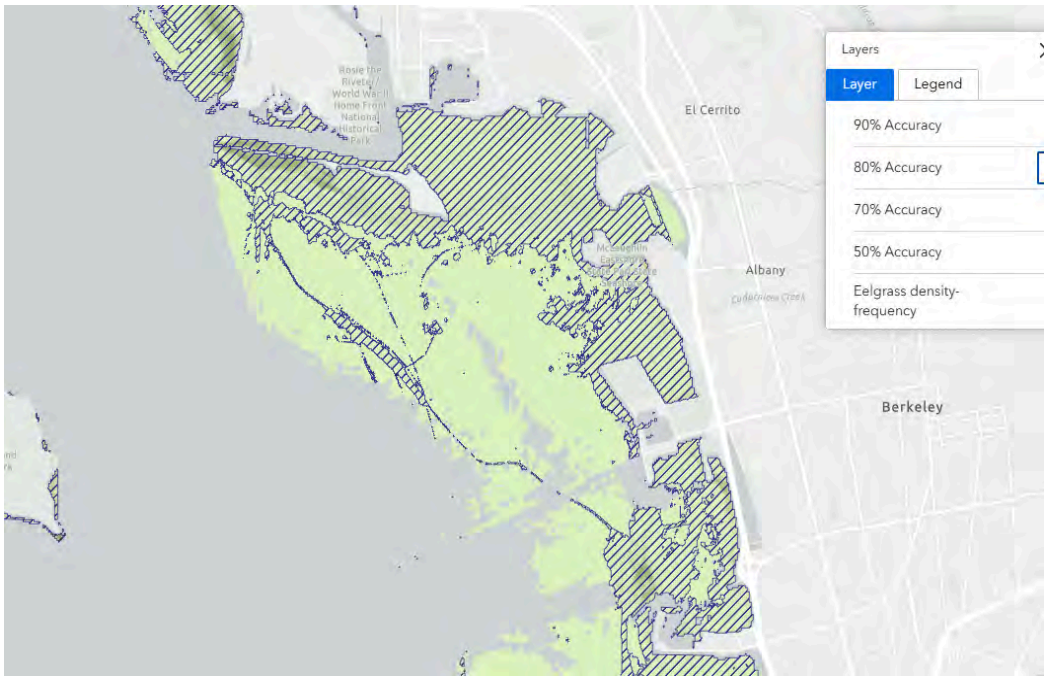


O10-169

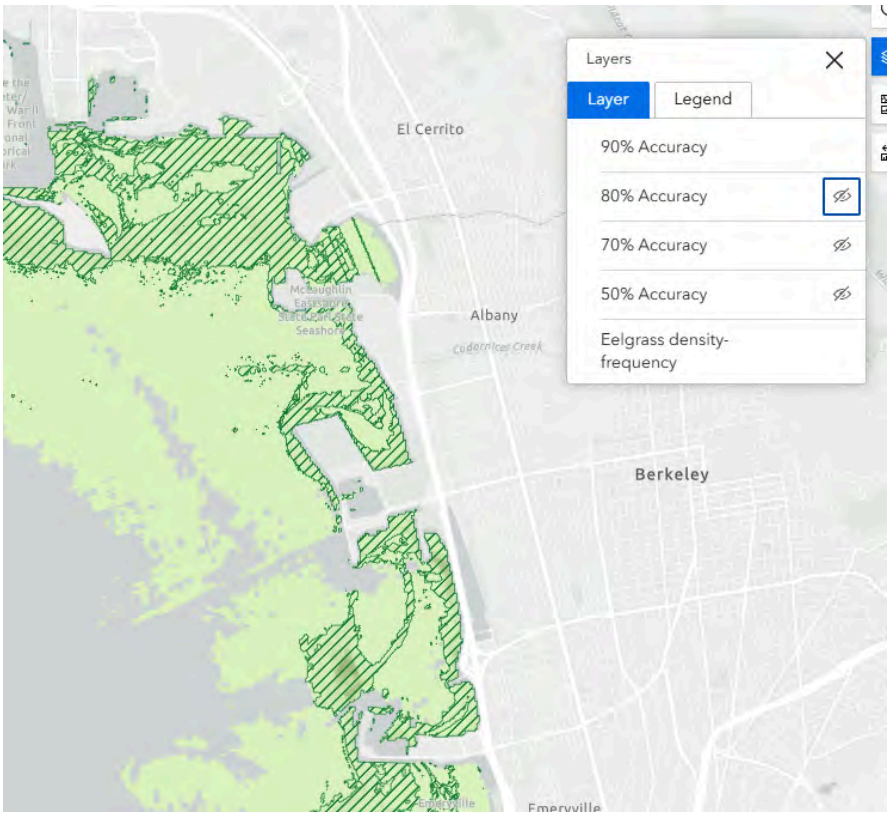
Furthermore, the San Francisco Bay Eelgrass Habitat Suitability Model managed by a collaboration among the Ocean Protection Council, The Audubon Society and the Estuary Ocean Science Center shows the entire area around the localized project site as suitable for eelgrass and the possible presence of eelgrass density.

O10-170

- https://experience.arcgis.com/experience/58ccd2fb13064cc590dbc646573253cd/
- San Francisco Bay Eelgrass Habitat Suitability Model | Audubon



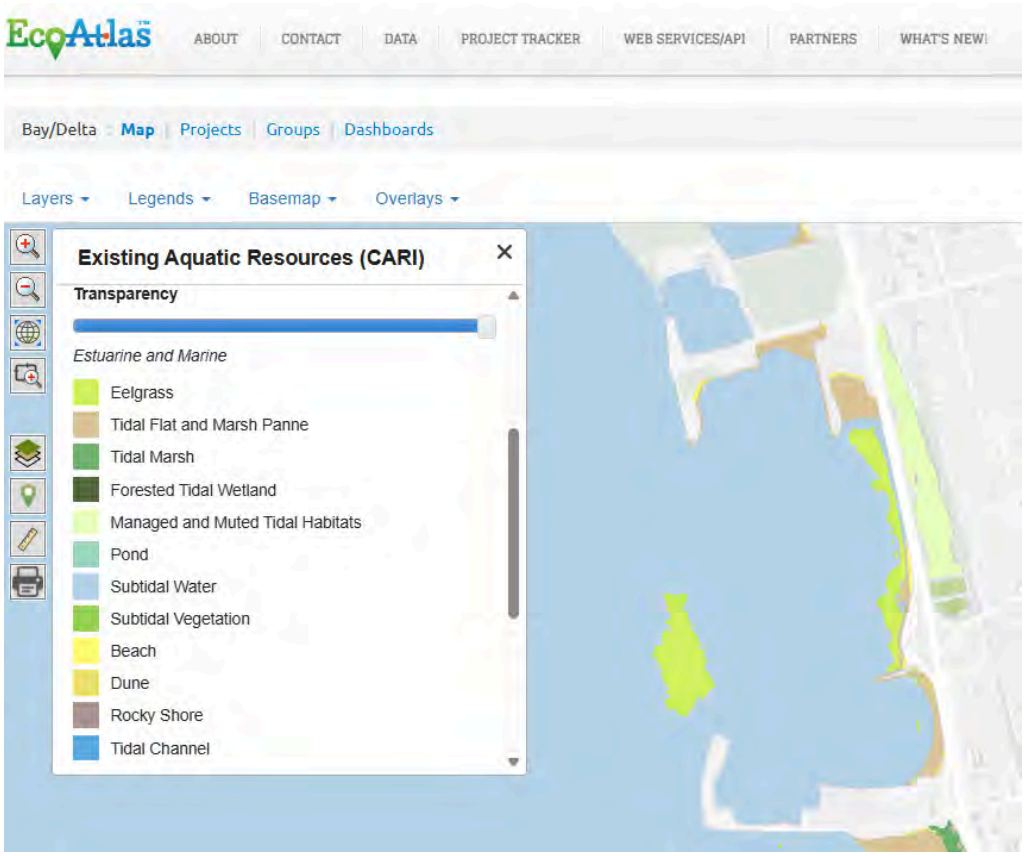
The text explanation for this figure states: Current Conditions shows the presence of Zostera marina along Berkeley waterfront with greater patches at the Ashby Shoal and the Berkeley Beach. Shown: Eelgrass density-frequency: The frequency of eelgrass occurrence multiplied by the mean value of each bottom cover class of eelgrass observed during three baywide surveys conducted in 2003, 2009, 2014, and the eelgrass survey of Richardson Bay in 2019. Eelgrass bottom cover classes included 100%, 40-100%, 20-40%, 5-20%, and 1-5% cover.



O10-170

The description of the model states that this baseline layer should not be used to demonstrate presence or absence of eelgrass beds. However, additional layers indicating accuracy at 80% and 90% levels continue to show high likelihood of eelgrass in the project area. Eelgrass is detected with 90% accuracy in the project area in the area designated for major dredging of a turning basin.

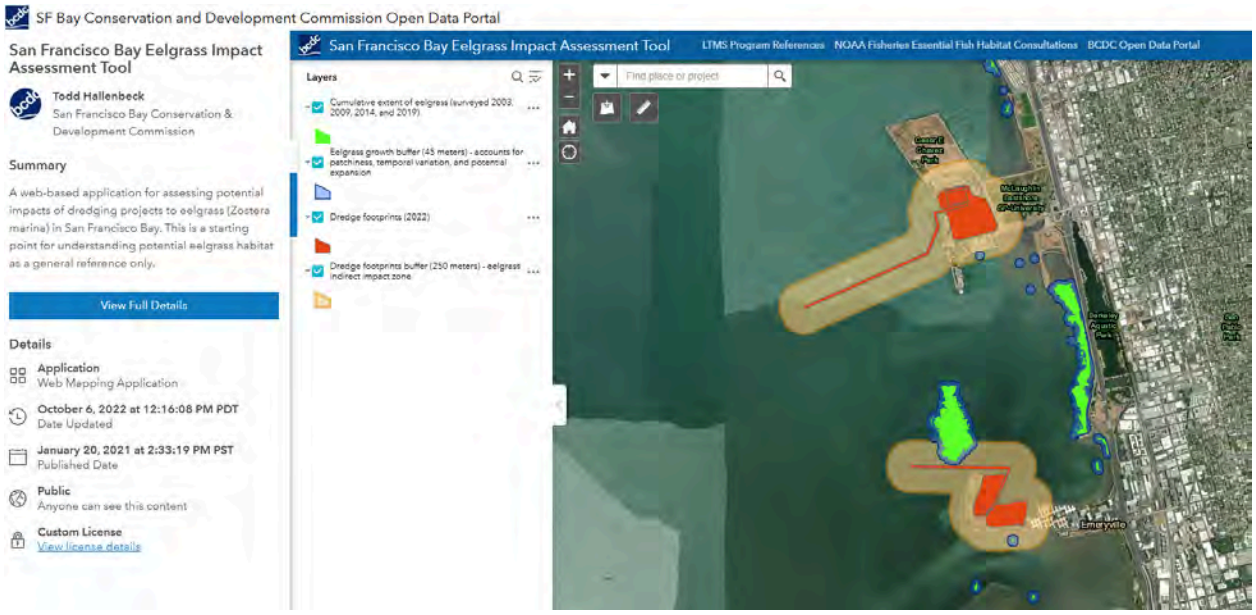
80% accuracy layer:



90% accuracy layer:

O10-170

It also appears that the existing pier itself, both the pedestrian portion (out to 3000' and closed in 2015) and the "ruins," beyond the "gap," provides eelgrass shelter from wave action, as seen by the greater concentration of eelgrass indicators just north of and parallel along the pier.



Further the EcoAtlas tool (EcoAtlas: Bay/Delta - Map) managed by the San Francisco Estuary Institute also corroborates the presence of persistent eelgrass beds along the Berkeley shoreline and the Berkeley/Ashby Shoal. See image below.

O10-171

From the BCDC eel grass assessment tool:
https://data-bcdc.opendata.arcgis.com/apps/BCDC::san-francisco-bay-eelgrass-impact-assessment-tool/explore

O10-172

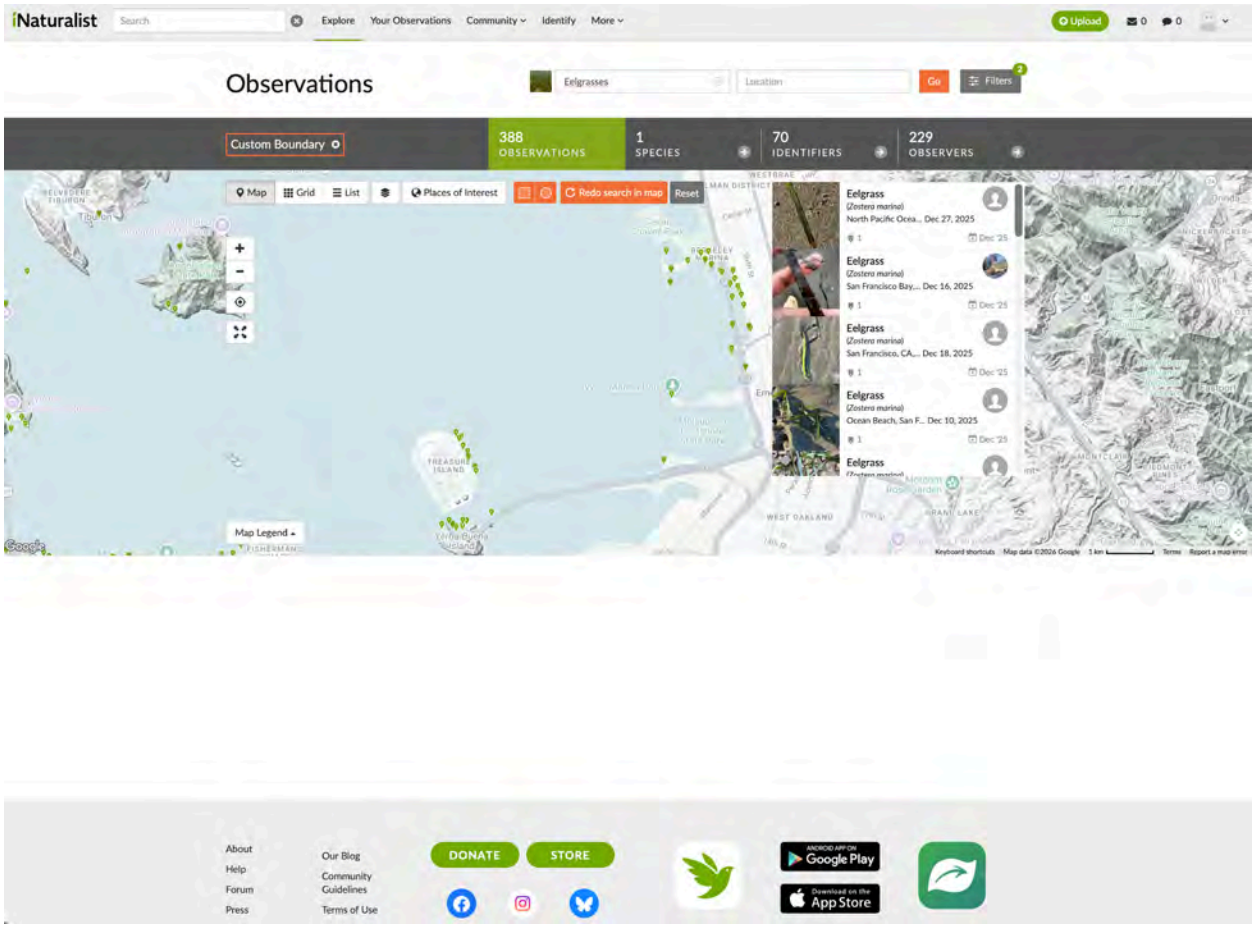
O10-172

We also have firsthand accounts from swimmers and kayakers in the South Sailing Basin that the eelgrass bed exists and is even a wayfinder for swimmers. A representative from the East Bay Open Water Swimmer group provides the following testimony:

O10-173

"I swim from Hs Lordships regularly and the Ashby Shoal is a popular low-tide attraction for swimmers; I can vouch that there is eel grass there and so can dozens of other swimmers. Photos taken in 2025 show eel grass mixed with other veg. The directions swimmers give one another for finding the Shoal when it is not fully exposed: Swim towards the port cranes about half a mile till you are swimming through eel grass." Julie Allen

O10-173



60

O10-173

iNaturalist also provides evidence of eelgrass occurring within the project site:

O10-174

Source of image above is iNaturalist website April 17, 2025.

O10-174

This area will need to be dredged, not only for new dredging during construction, but also for maintenance dredging for the life of the project, in the turning basin and along the navigation channel running parallel to the existing pier footprint (including ruins). The breakwater itself can create or exacerbate silting and scouring, with potential harmful impacts on the Bay's plant and animal life. Eelgrass could be negatively impacted. This construction and maintenance dredging and ferry transportation activity would most likely destroy eelgrass growing here now and remove any option of restoring eelgrass in this area of the Bay.

O10-175

A description of EFH, p. 3.3-12 (p. 183 of pdf) concludes again, based on inadequate and incorrect reporting described above: "Eelgrass beds, a component of EFH, was not observed and does not contribute to EFH within the project site." And p. 184, 3.3-13 for Habitat Areas of Particular Concern (HAPC), the report repeats: "No eelgrass is currently documented to be present in the project site and has only been documented in very small patches in the South Sailing Basin over the last 15 years." Page 190 claims that eelgrass is "not anticipated to occur."

O10-176
