This representation gives a false account of the environmental setting and therefore cannot be a basis for the DEIR's less than significant and no impact conclusion on eelgrass habitat, EFH and HAPC. The extensive initial dredging and then lifetime maintenance dredging could impact habitat restoration efforts for generations to come.

O10-176

The consultants conducted a terrestrial land survey on one day in September 2024 but no assessment was done for in-water species.

O10-177

As it stands, the DEIR cannot conclude that no eelgrass exists in the project area.

b. The project is inconsistent with State and regional eelgrass habitat conservation and restoration policies and goals.

i. Inconsistent with SF Bay Subtidal Habitat Goals

The Ocean Protection Council seeks to protect the state's 15,000 acres of eelgrass and restore more. Worldwide, seagrass bed conservation could lead to avoided emissions of 0.65 Gt CO2 per year (Hoegh-Guldberg, p. 50 cited in *Eelgrass restoration in San Francisco Bay: an Interdisciplinary Stated Preference Classroom Experiment*). The US EPA (Program Priorities: Subtidal Habitat, Eelgrass and Oyster Reef Restoration | US EPA) lists eelgrass restoration as a program priority for the San Francisco Bay Program for subtidal ecosystems:

"Subtidal ecosystems are where many shellfish, invertebrates, fish, marine mammals, diving ducks, and other wildlife feed, rest, hide, and reproduce. Native oysters can form reefs that filter nutrients from the Bay water and are a food source for fish and birds. Eelgrass in shallow areas depends on light filtration to grow and when present in large acreages support a wide range of marine life and have the added benefit of stabilizing shorelines by reducing wave energy and preventing erosion of sediments. Urbanization of the shoreline and shipping channels areas have significantly reduced native eelgrass beds and other beneficial underwater vegetation . EPA's San Francisco Bay Program works closely with regional partners to achieve the subtidal restoration goals outlined in the Subtidal Habitat Goals Report (pdf)."

O10-178

Under Regional and Local regulations on page 3.3-37-8, for the San Francisco Bay Subtidal Habitat Goal Report, A 50-Year Conservation Plan, SUBMERGED AQUATIC VEGETATION GOALS include: protect existing eelgrass habitat …through no net loss to existing beds, identify and protect areas ..for future eelgrass expansion, restoration and

creation, increase eelgrass population where one of the priority areas are the Albany and Berkeley shorelines.

O10-178

The existing available eelgrass inventories and habitat models demonstrate a conflict with these policies and significant impact and must be addressed as such.

On the same basis, the project is not consistent with **BCDC Subtidal Area Policy 2 (**see p. 451 of pdf).

ii. Inconsistent with NOAA Fisheries California Eelgrass Mitigation Policy and Implementing Guidelines October 2014

NOAA Fisheries have a stated goal of no net loss of eelgrass habitat function in California. Their policy states the following: *Eelgrass warrants a strong protection strategy because of the important biological, physical, and economic values it provides, as well as its importance to managed species under the Magnuson Stevens Fishery Conservation and Management Act (MSA).*

O10-179

Given the proximity to known and persistent eelgrass beds and the habit suitability and likely presence of eelgrass in the project area, and the continued project-lifetime dredging activity in the project area, the project conflicts with this goal and does not adequately address mitigation measures.

See:

- California Eelgrass Mitigation Policy and Implementing Guidelines | NOAA Fisheries
- https://www.fisheries.noaa.gov/s3//dam-migration/cemp_oct_2014_final.pdf

iii. CDFW scoping input on eelgrass impact assessment not addressed

The CDFW submitted scoping comments to the NOP specifically stating state and federal policies, including no-net-loss policies for wetland habitats, including eelgrass beds. Given the inadequate and misleading information presented in the DEIR, we suggest that the DEIR be rescinded and redone to include a responsible and honest assessment which will also serve to address CDFW concerns.

O10-180

Finally, we note that a loss of this habitat also foregoes the opportunity for carbon sequestration and potential revenue from blue carbon credits. The Audubon report

O10-181

states a value under a verified carbon standard for carbon sequestration trading of eelgrass in SF Bay to be $1.4-1.6 million / year.
(Eelgrass, Herring, and Waterbirds in San Francisco Bay: Threats and Opportunities OCTOBER 2018, p.11).

O10-181

c. Inaccurate framing of project activities

Overall, the mitigation measures only address construction. They do not address ongoing maintenance dredging and impacts of a ferry schedule with 28 Bay crossings/day weekdays and 26 on weekends. A proposed schedule must be added to the DEIR plus a complete project description as explained in the first section of this comment. Then the DEIR must be redone to assess impacts - both marginal and cumulative.

O10-182

2. Fish habitat and marine ecosystem impact for operations and life of project not assessed

The Bay waters around the pier prior are known among sportfishing operators and recreational fishers as fish spawning grounds. Fish populations are also migratory and seasonal, and interact with other parts of the Bay ecosystem. A number of plan elements were not discussed or mitigated in terms of their impact on fish species and habitat and spawning:

O10-183

- Ongoing maintenance dredging around the ferry terminal, breakwater and navigational channel running parallel to the existing pier for the project ferry route. Only construction activity seems to be addressed.
- The assumed ferry schedule of 28 ferry crossings per day and impact on the underlying marina ecosystem is not included for analysis. The DEIR concludes, in reference to water quality but also relevant here, that “[g]iven that Bay waters are naturally highly turbid and subject to pronounced fluctuations due to tidal action, wind-driven waves, and regional sediment transport, project-related turbidity would not be expected to measurably increase local or regional turbidity beyond baseline conditions and impacts would be less than significant.” (p. 3.8-30 and 423 of pdf). However, the resuspension of particulates and other turbulence caused by the WETA-assumed operational schedule, plus the cumulative impacts overall, are not analyzed for fish habitat.

O10-184

- The original WETA plan called for a diesel ferry, while electric ferries were mentioned later in the process. Uncertainty remains whether an electric ferry would accommodate the natural conditions of the Berkeley pier, which experiences high winds and waves during much of the year. As no electric ferry model exists for the route and service as described, the analysis should be

O10-185

reassessed on the assumption of a diesel ferry. Impacts cannot be assessed based on hypothetical conditions.

O10-185

We also did not see any discussion of impact on recreational fishing, particularly in regards to white sturgeons and halibut, which are historically popular species caught at the Berkeley pier. A white sturgeon was recently caught from the shoreline by a night fisherman and reported on social media for the Berkeley Bait shop. The DEIR needs to reassess its impacts with a new project description and include analysis of all elements of the project.

Photo of a white Sturgeon along Seawall Drive, Berkeley Waterfront, 2025. Photo credit: Berkeley Bait and Tackle Instagram. The project area includes sturgeon habitat.

O10-186

The tendency for eelgrass to grow along the north side of the pier (see above section) also is suggestive that the project area is fish spawning grounds. The DEIR notes some mitigation measures prior and during construction but none for operation. The DEIR needs to be rewritten to address operational impacts, cumulative and otherwise, on fish habitat. The current conclusions and mitigation measures are not supported.

O10-187

D. Emissions data needed

For section 3.6, Greenhouse Gas Emissions and Energy, emissions claims are unclear. The increase in ADT (+1127 ADT at the project site above baseline) indicates a substantial increase in traffic noted elsewhere in this document. Based on this ADT, the DEIR says that most of these trips would have otherwise been vehicle trips across the Bay Bridge to San Francisco. And that “some” would have been by bus or BART. We would like clarity on how much is “some.” Further, how many of those trips would be induced demand for the ferry option? Or recreational pier? Antinori et al. (2025, 2026)

O10-188

report doubling of fishing trips were a recreational-only pier to be opened. The COB Berkeley questionnaire on the ferry service indicates most ferry patrons would use the ferry as an amenity, not for commuting. The DEIR eventually defers modeling details to two references not in the DEIR package: CEQA Review of Sustainable Transportation Projects Technical Advisory and federal Guidelines for Providing Access to Public Transportation Stations. The modeling derived from these reports needs to be made transparent. O10-188

V. The DEIR fails to substantiate objectives and therefore a feasible range of alternatives, falling short of CEQA intent O10-189

A. EIR fails to substantiate the basic purpose or need for the ferry service as proposed, thereby artificially constraining the range of alternatives. O10-190

The DEIR has not demonstrated an underlying need for ferry service at the Berkeley location. The Berkeley terminal is a part of several of WETA's Network Concepts in the Business Evaluation. However, this in and of itself does not establish a need for the City of Berkeley, particularly when the project may not meet the narrowly defined project objectives listed on page 5-3 of the DEIR and following.

According to the DEIR and the 2003 EIR, the project does not meet the objective of reducing vehicle miles traveled as associated with reducing single-occupancy vehicles. It converts recreational parking to commuter parking. There is no substantiated evidence to say that the project is cost competitive or meets higher performance standards than other transportation options, as noted in the Social and Economic Benefits section of this comment document. Very little mitigation of transportation loads is expected or demonstrable with the project. The WETA 2003 EIR shows minimal percentage **(0.07%)** change in vehicle miles traveled as a consequence of ferry system expansion *systemwide*, much less for new terminals, including the Berkeley terminal as part of the overall plan. To the contrary, **new terminals *increase* VMT (WETA 2003 EIR). This DEIR corroborates that the current project *increases* ADT because of vehicles - many single-occupancy - driving to the ferry terminal located in a low-density zone and nature-based recreational park not zoned for housing, away from any transportation nexus, as discussed in the Recreation/Land Use impacts section. It has not demonstrated that the project reduces VMT overall.** The city's survey of Berkeleyans on the planned use of the ferry indicates that most will use the ferry as an amenity, not for commuting. O10-191 O10-192

But the project as described in the DEIR appears to address a second objective of restoring a recreational pier, a generally desired goal for the City of Berkeley. Since it has not established that large-scale ferry service meets its project objectives, alternatives under CEQA must consider alternative bluespace amenities that legitimately increase recreation, including ferry service scaled as a recreational amenity and recreational-only pier. These are feasible alternatives that fulfill project objectives as well as those that fill some project objectives. By limiting the analysis to incremental modifications of the commuter-scale ferry service for which there is unsubstantiated need, the DEIR fails to provide a reasonable range of alternatives as required.

O10-193

Here, DEIR objectives stated in Section 5 effectively predetermine the outcome of the alternatives analysis by prioritizing a large-scale ferry-based solution that does not meet its objectives. This approach improperly constrains the range of alternatives and undermines CEQA's core requirement that alternatives be capable of attaining most of the project's basic objectives while reducing environmental impacts. (CEQA Guidelines, §15126.6(a).)

O10-194

Cases to support these claims:

- ***City of Santee v. County of San Diego* (1989) 214 Cal.App.3d 1438**
- The court invalidated an EIR where the project objectives were framed so narrowly that they **effectively precluded meaningful alternatives**.
- *Laurel Heights Improvement Assn. v. Regents* (1988) 47 Cal.3d 376
- *San Francisco Tomorrow v. City and County of San Francisco* (2014) 229 Cal.App.4th 498
- *Bay-Delta Programmatic EIR* (2008) 43 Cal.4th 1143
- *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553
- *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957 The court faulted the EIR for failing to adequately consider **feasible alternatives raised in comments**.
- *Banning Ranch Conservancy v. City of Newport Beach* (2017) 2 Cal.5th 918 Reinforces that CEQA requires **serious consideration of feasible alternatives**, and dismissal must be supported by **substantial evidence**.

O10-195

B. DEIR alternatives analysis is biased towards the proposed project; it is unclear, unsubstantiated, shows minimal differentiation and is unrealistic. O10-196

1. Alternative 1 "No Project" is presented in a misleading way and with a false baseline.

MISLEADING BASELINE. Alternative 1 No Project is inconsistent with CEQA Guidelines §15126.6. CEQA Guidelines §15126.6(e)(2) requires that the **"No Project" Alternative be based on existing conditions** and what would reasonably be expected to occur in the foreseeable future if the project is **not** approved. For development projects, this requires analysis of the conditions under which the project does not proceed, evaluated against a baseline grounded in existing conditions and independently supported foreseeable changes. What is given in the DEIR is a constrained or outcome-oriented scenario constructed to emphasize the benefits of the proposed project. See the Baseline section of this document for exposition of existing conditions not represented in the DEIR. Because the required CEQA No Project Alternative is derived from the environmental baseline, **any incompleteness or distortion in the baseline necessarily carries through into the No Project analysis.** Where existing conditions are not fully and clearly established, the resulting No Project Alternative lacks a stable evidentiary foundation for projecting reasonably foreseeable future conditions and evaluating environmental change. These flaws undermine the function of No Project as a reliable CEQA comparison scenario, as explained in the Baseline section, and disqualifies the No-Project assessment. O10-197

The DEIR assumes, without substantial evidence, that environmental conditions would worsen in the absence of the project, including increased VMT, higher emissions, and stagnant recreational opportunities. These assumptions are speculative and do not meet the evidentiary standard under CEQA. (CEQA Guidelines, §15064(a).) O10-198

The DEIR also omits reasonably foreseeable improvements to the project area, including ongoing redevelopment efforts. By artificially constraining the baseline, the DEIR inflates the perceived benefits of the proposed project and undermines the validity of the alternatives comparison. O10-199

UNSUPPORTED ASSUMPTIONS. Beginning at page 5-3 of the DEIR, the analysis assumes that the **project's absence** will result in worsened environmental conditions, including increased vehicle miles traveled, higher emissions, and static recreational opportunities. These claims are speculative and do not meet the substantial evidence standard required under CEQA Guidelines §15064. Baseline conditions are such that recreational opportunities in fact ***increase*** without the project, as explained in the baseline section of this document. In contrast, many ***project elements decrease recreation or have the potential to decrease recreation.*** See the Recreational and O10-200 O10-201

Land Use Impact sections of this comment document. **It is specious and incorrect to say that no improvements would be made without the Project.** As noted, there are material precedents for such improvements. For example, the 199 Seawall site building and parking lot is currently under an option agreement between the city and with TSA Holdings, LLC (TSA) to renovate the building and repair the parking lot and Seawall Drive and Bay Trail. Before its closure, Hs Lordships restaurant was heavily used as an event space for large groups (e.g. school proms, Berkeley Public Schools Fund annual fundraiser, family reunions, etc.). The No Project Alternative does not include any demand forecast for this in-negotiation lease for activities developed for this location within the project area. O10-201 O10-202

This assumption is repeated across Alternatives 1–4. The No Project Alternative therefore could maintain a lower VMT and ADT in comparison to the project and the other stated alternatives, and should incorporate the 2003 EIR analysis. O10-203

EMISSIONS. The DEIR provides no mode-shift modeling, empirical substitution analysis, or quantified travel demand data demonstrating that ferry users would otherwise drive alone across the Bay, as opposed to taking BART, for example,[12] or that ferry service is the determinative factor in regional emissions outcomes. O10-204

SPECULATIVE. Under CEQA Guidelines §15064, impact determinations must be supported by facts, reasonable assumptions based on facts, or expert analysis grounded in evidence. The DEIR's reliance on **speculative** behavioral assumptions and **unsupported projections** of future conditions fails to meet this standard. By presenting a future No Project scenario that is not grounded in evidence, the DEIR inflates the relative benefits of the proposed project and undermines the integrity of the alternatives comparison required under CEQA Guidelines §15126.6. O10-205

2. Alternatives 2–4 are not meaningfully distinct approaches.

An EIR may not limit its analysis to variations of a single project where other feasible approaches exist. (*Laurel Heights*, supra, 47 Cal.3d at 400.) By failing to evaluate fundamentally different approaches—such as alternative locations, reduced-scale development, or non-ferry-based improvements—the DEIR does not provide the "reasonable range" required under CEQA. O10-206

SPURIOUS ALTERNATIVES. Alternatives 2, 3, and 4 do not represent meaningfully distinct options, but instead consist of minor design variations of the same ferry-based project. All retain the same core elements, including ferry service, project location, and O10-207

[12] Daily transbay BART passenger rides are estimated at around 60,000 to 83,000, with rush-hour use increasing, translating to 30,000 - 41,500 roundtrips. Source: BART Ridership Reports. The WETA ferry project for Berkeley estimates 955 roundtrips for their base scenario used for the DEIR. O10-204

operational assumptions, and differ only in limited features such as pier length, breakwater configuration, or landside amenities. As a result, the DEIR does not evaluate alternative approaches such as **eliminating** ferry operations, relocating the project, or pursuing non-ferry or recreation-focused improvements. O10-207

The descriptions are so limited that the alternatives collapse into vague variations that are difficult to distinguish beyond the most general level. This lack of clarity prevents meaningful evaluation and comparison, further undermining the purpose of the alternatives analysis. O10-208

By embedding project benefits into the comparative framework and relying on unsupported assumptions about future conditions, the DEIR effectively **treats the proposed project as the functional baseline** for comparison, rather than evaluating impacts relative to existing conditions and a properly defined No Project scenario. O10-209

While CEQA Guidelines §15126.6 of the California Environmental Quality Act Guidelines Section 15126.6 does not require that alternatives be entirely different projects, it does require a reasonable range of alternatives capable of fostering informed decision-making and meaningful environmental comparison. Here, the alternatives analysis fails to meet that standard because it does not evaluate fundamentally different ways of achieving the project's underlying objectives. O10-210

By limiting the alternatives to minor variations of the same project, the DEIR constrains the range of feasible alternatives and precludes a meaningful comparison of environmental outcomes. This approach undermines CEQA's purpose of ensuring that decision-makers and the public are informed of a true range of options, rather than a narrow set of variations that inherently favor the proposed Project.

We also note the potentially irresponsible mention of a shortened breakwater. As the design is currently presented, the breakwater barely protects the docking platform from south winds and has no protection from north winds. A shorter breakwater would cause unsafe situations. **This is not a feasible alternative**. O10-211

Alternative 3 envisions a ferry terminal without the pier extension. This would not achieve the objective of recreational access. Instead, it would cede space to a WETA ferry, to be compatible with standard WETA terminal design noted in the Recreational/Land Use impact section of this comment document. By following this option, Berkeley would **sacrifice 100 years of pier access to the Bay for recreation to support WETA business plans**. Most project environmental impacts would remain and recreation would decrease substantially from baseline, failing this project objective for which there is a reasonably substantiated need. O10-212

Therefore, Alternatives 2, 3, and 4 do not constitute a reasonable range of alternatives capable of informing environmental decision-making under CEQA Guidelines §15126.6. Instead, they function as incremental design variations of a predetermined project. Accordingly, the DEIR fails to provide adequate alternatives analysis: it does not present a meaningful spectrum of project options that could avoid or substantially reduce environmental impacts. O10-213

C. Reasonable alternatives rejected and no valid range of options

CEQA Guidelines §15126.6 requires an EIR to evaluate a reasonable range of feasible alternatives that could achieve most of the project's basic objectives while reducing environmental impacts. §15126.6(c) requires that the EIR "identify any alternatives… that were rejected as infeasible… and briefly explain the reasons." The purpose of this requirement is to ensure informed decision-making through meaningful comparison of different project options. The DEIR does not satisfy this requirement. The DEIR fails to articulate a need for the ferry commuter service. For waterfront access and recreation as an objective, the DEIR purports to restore a recreational pier. Yet, the DEIR has improperly screened out reasonable alternatives of a pier-only option and ignored other ferry terminal options, contributing to its constrained alternatives analysis. In this situation, public comments suggesting broader or different feasible alternatives become especially important, and agencies must address them. O10-214

1. DEIR does not adequately explore pier-no ferry alternative

Analogous to the ferry-only pier Alternative 3, the DEIR should include a pier-only alternative consisting of a 500' or longer public access pier without a ferry.

The DEIR provides **no explanation** for why a pier-only (without ferry) alternative was excluded, even though funding needs for Berkeley would be much less. The DEIR does not evaluate a pier-only alternative, and provides no explanation as to why it does not, despite substantial evidence that such an alternative is feasible and would meet key objectives related to public access and recreation while avoiding ferry-related impacts. O10-215

It would achieve the first project objective, i.e., repairing and extending the pier. By ignoring a pier-only alternative as in fact feasible, meeting recreation and public access objectives while reducing ferry-related impacts, the DEIR fails to provide a meaningful comparison or rationale for rejecting alternatives, thereby limiting informed decision-making and public participation.

A pier-without-ferry option was in fact funded by a state grant of $15 million for pier and marina infrastructure. **Funding was diverted to other uses**; however, the fact remains that potential funding options exist. The GHD engineering firm has already provided O10-216

COB with a feasibility study of replacing the existing pier. COB (2021) states that replacing the existing structure alone with a 2,000-foot pier would cost $26 million (and to 3,000 feet, around $32-$44 million). City staff have indicated in public meetings that COB's share of the waterside costs alone for the pier/ferry project would be approximately $26 million. **Therefore, a reopened pier up to 2,000' at least, without a ferry, is a feasible alternative. While WETA, COB and GHD estimates can be updated, a recreational pier without ferry service is a feasible option for COB.**

O10-216

Research and reports indicate a large increase in public demand if the pier were reopened and a basic functional facility maintained for fishing, walking, and cycling. Data by Antinori et al. (2025) (provided to the city prior to NOP date) and peer-reviewed in Antinori et al. (2026), predicted a restored *pier alone* would see a 96% increase in annual average visitation among anglers. Breaking this into income categories, the predicted increases are 70%, 88% and 114% for low, medium and high-income anglers. These increases are above baseline for the recreational pier-alone alternative. The benefits of this option should be considered against the DEIR project and its environmental impacts.

O10-217

2. Rejected in-marina alternatives

The Berkeley Waterfront Community Coalition (BWCC), in scoping comments, asked city staff to analyze in-marina locations. They rejected the option based on the WETA 2008 Berkeley/Albany Ferry Terminal Study Draft EIS/EIR prepared by URS that configured a terminal and new dock next to the Hornblower docks. The DEIR fails to consider any other reasonable configurations or locations that reduce environmental impacts. This version of the in-marina alternative from the 2008 WETA EIR functions much like a "straw man" in the current analysis. Other options exist. Hornblower docks next to the DoubleTree Hotel are one option. These docks are an underused space. See image below. The DEIR dismissed this alternative without analysis. The image below by Paul Kamen shows cost as well as impact comparisons.

O10-218

O10-218

Another possibility is the K-dock slips used by the Genentech and Tidelines ferries. This is a central location in the Marina and adds only two minutes' travel time to San Francisco, based on the Genentech ferry departures/arrivals, excluding docking maneuver time. Tidelines was a private company operating under a public grant which ran twice in the morning and twice in the afternoon. The Genentech ferry ran a similar schedule. Neither posed major interference with marina traffic. These ferries blended into marina activity without costly investments. All that was lacking was regular parking enforcement to restrict ferry patron parking to their designated Marina Boulevard location.

O10-219

BWCC scoping comments asked: "*Data on current usage by Genentech ferry and previous usage of Tidelines ferry ridership must be made available publicly for the report for a feasibility comparison of a small commuter ferry service operating in Berkeley."* This data was not provided, although it was requested prior to the DEIR issuance. This data would assist in decision-making on the viability of in-marina service.

O10-220

This alternative also meshes with WETA's Tack-to-Wind business outlook, under which WETA focuses on recreational instead of weekday commuter use, reflecting most Berkeleyans' pattern of usage. O10-220

An in-marina terminal was in fact assumed for the first assessment of the Berkeley-SF WETA ferry route in 2003. In Figure 5.1.1 and Table 5.1.5 of that 2003 EIR, it is estimated that dredging for a Berkeley/Albany service would only require 13,260 cubic yards of dredging, implying an in-marina terminal. Under these options, the in-marina alternative still meets the objective of enhanced recreation with transportation options for commuter service through a potentially modified weekday schedule. Reduced CEQA and COB impacts include: O10-221

- Reduced dredging and shared WETA/COB marina maintenance costs
- Lower project costs and potentially greater revenue generator for Berkeley
- Access to a ferry consistent with demand
- Reduced environmental impacts on water quality, acoustics, biological and aesthetic resources

VI. Social and economic benefits to Berkeley contextualized for decisionmaking

A. Social and economic context relevant to DEIR

In response to BWCC scoping comments, the DEIR says that "Economic factors are not an environmental impact of CEQA. This comment will be considered by the City decision-makers as part of the project approval process." In fact, the DEIR relies at several points on economic or social benefits to deliver its analysis: O10-222

- P. 447 of pdf and 3.9-10 says there will be positive economic and social benefits to dismiss public comment.
- P. 452 of pdf to claim consistency with BCDC **Climate Change Policy 7** O10-223
- Address **Berkeley Marina Master Plan Consistency Principle 5** to enhance access and use of the Marina, especially for elderly, economically disadvantaged or physically challenged persons (p. 469 of pdf). O10-224

It is also worth noting social and economic impacts because of the lead agency's authority to override significant environmental impacts and mitigation measures based on claims of economic and social benefits:

- Page 1-15: **Lead Agency Project Decision.** The lead agency may a) disapprove of the proposed project because of its significant environmental effects; b) require changes to the proposed project to reduce or avoid significant environmental effects; or c) approve the proposed project despite its significant O10-225

environmental effects, if the proper findings and statement of overriding considerations are adopted (CEQA Guidelines Sections 15042 and 15043).

- **Findings/Statement of Overriding Considerations.** For each significant impact of the proposed project identified in the EIR, the lead agency must find, based on substantial evidence, that either: a) the proposed project has been changed to avoid or substantially reduce the magnitude of the impact; b) changes to the proposed project are within another agency's jurisdiction and such changes have been or should be adopted; or c) specific economic, social, or other considerations make the mitigation measures or proposed project alternatives infeasible (CEQA Guidelines Section 15091). If an agency approves a project with unavoidable significant environmental effects, it must prepare a written Statement of Overriding Considerations that sets forth the specific social, economic, or other reasons supporting the agency's decision.

O10-225

In this section we review social and economic factors to provide context to the project and better inform decisionmaking.

O10-226

B. Weak evidence of economic or social benefits to Berkeley

1. WETA service economic and cumulative impacts

There is no evidence to support the claim of net positive economic and social benefits to Berkeley, although there is evidence to support the opposite conclusion. From the WETA Business Plan Evaluation, April 12, 2023, Summary of Network Concepts pages 2-6 of report, WETA lists the following visions for expansion:

1. Existing Network: 10 terminals
2. Plan Bay Area Network: 14 terminals
3. Core Network: 18 terminals
4. Coverage Network: 26 terminals

Plans 2-4 offer some form of Berkeley/Albany/Emeryville ferry service but the cumulative impacts are considerable, and are not fully discussed in the DEIR, as noted above. Compared to the existing 10-terminal network, the Coverage Network shows worse cumulative environmental impact, worse financial capacity, and worse productivity (Business Plan Evaluation, Table 8). The plan continues to outline four business future outlooks for the year 2050 (Table 2), with two based on pre-pandemic ridership levels (Steady as it Goes and Chart a New Course) and two with 30% reduction in commuter travel (Throttle Back and Tack to the Wind). They have no probabilities assigned to each scenario.

O10-227

Across all four of WETA's 2050 ridership outlook scenarios, the existing network remains the most productive, and operating costs per passenger-mile are highest under Coverage Network in every scenario. It is clear that we are not on a "new course." BART itself has not returned to pre-pandemic levels. Even under the "Throttle Back" scenario, operating costs jump substantially over the existing system. If anything, current outlooks appear to be most aligned with the "Tack-to-Wind" scenario that envisions as follows for WETA: 30% reduction of commuter travel but in order "to diversify its ridership base, WETA would expand its midday and off-peak and weekend service offerings, align its fares with other regional operators, and substantially enhance access to ferry terminals" (p.8 of 29), i.e. **an amenity ferry**.

O10-227

The Berkeley terminal would require subsidies from general public and Berkeley funds costing more than twice as much per passenger as the existing bus network. Kamen calculated from WETA's 2024–2025 budget that WETA annually delivers 2.57 million one-way rides at an actual cost of **$61.60 each**, with fares recovering 8.9% of cost and a **public subsidy of $56.10 per ride**. AC Transit, by contrast, delivers 34.6 million one-way bus rides annually at a cost of **$25.20** each, with farebox recovery of 3.4% and a subsidy of **$24.30 per ride.**

Kamen analysis (used with permission)

Cost and revenue data from the WETA 2024-2025 budget (https://weta.bynder.com/share/85AFA60B-3C3F-43B9-A69010245CFBEC9D/). Note that of 2/16/26, the 2025-2026 budget has not been approved or published.

Total annual revenue and expenditures, including capital costs (new ferries, terminal development, admin, planning, etc.):
$158.2 million.
Total number of one-way rides:
2.57 million. $158.2/2.57 = $61.6/ride.
Farebox revenue:
$14.1 million. Farebox Recover Ratio = $14.1/$158.2 = 8.9%
Subsidy per ride = (100%-8.9%) x 61.6 = $56.1/ride

Compare to AC Transit:
https://www.actransit.org/sites/default/files/2024-11/FY2024-25%20ACT%20Adopted%20Budget%20Book_2024.10.30.pdf

$605.8M Operating budget
$267.1M Capital budget
34.6 million rides
605.8+267.1)/34.6 = $25.2/ride
Fares = $29.7M
Farebox Recovery Ratio = 29.7/(605.8+267.1) = 3.4%
Subsidy per ride = (1-0.034) x 25.2 = $24.3/ride

O10-228

The economic costs to Berkeley should be kept in mind. WETA's Berkeley ferry business plan describes local funding as a source of capital and operating funds for several currently existing routes as well as for the Berkeley route. The ferry project's paid parking plans, currently being considered within the city, rely on recreational users to defray the city's costs of maintaining the ferry project's infrastructure and operations and will depress recreational visitation. O10-229

Historically, Berkeley ferries have failed. Tidelines commuter ferry service, which operated from inside the Marina, has not returned after the pandemic. Genentech closed its employee ferry to the Oyster Point campus as too expensive and replaced it with buses. In planning meetings (e.g. BCDC's DRB), staff have already discussed reducing the project from two docks to one. Unlike the Richmond and Vallejo routes — where ferry service saves commuters substantial time from the North and East Bay — a Berkeley-to-San Francisco ferry would take about the same time as BART, with a first-mile/last-mile problem BART does not have. O10-230

2. Transportation Impact TRA-2 conclusion not substantiated

The DEIR (pdf p. 555), for justifying Impact TRA-2, asserts without substantiation that West Berkeley residents, who have more limited public transit options, will experience increased employment in higher-paying San Francisco and San Mateo county jobs because of the ferry service. The justification is based on social and economic benefits. As the basis for an impact finding, we would ask for more analysis. According to Census data, West Berkeley (a SB535 community) on average is lower income than the rest of Berkeley. The WETA 2022 *Passenger Survey Report* reports that ferry riders are historically concentrated in higher income brackets, with large shares reporting household incomes above $100,000. This has changed. In 2017, only 6% of riders earned under $50,000 per year; pandemic-era fare reforms drastically reduced fares and raised that share to roughly 19% by 2021, and WETA's 2022 annual report describes a "significantly increased percentage of low-income riders." Even so, higher-income riders remain overrepresented, and Seamless Bay Area continues to characterize the rider base as "white-collar commuters paying a premium fare relative to BART or bus." Was 2017-2021 shift due only to low fares available during the pandemic and does the WETA budget now include subsidies that will keep fares at pandemic-level lows to maintain this distributional profile? On existing evidence and without further analysis, we would assume the Berkeley terminal would still disproportionately serve a high-income profile for commuter needs. Finally, we note again that the city's public questionnaire on ferry service indicated higher usage of the ferry as an amenity rather than as a commuter option. The questionnaire was made available to the public via the local online newspaper *Berkeleyside* and councilmember newsletters. *Berkeleyside* readership matches Berkeley's demographic profile, according to its documents (see Attachments). O10-231 O10-232 O10-233 O10-234

For social and economic benefits, decisionmaking should also weigh a *substantiated* impact under TRA-2 with the distribution of social and economic benefits. Visitors to the southern Berkeley waterfront — the area the project most directly affects — are on O10-235

average lower-income than visitors to other waterfront areas and already value the waterfront for its recreational value.

O10-235

3. Secondary benefits are aspirational

The Keyser Marston analysis commissioned by the City is the most substantive statement of the project's secondary economic benefits. It is cautious. The study projects "**very modest contributions to Marina Fund** — perhaps may generate up to 10% of any revenues the city receives from food and beverage consumer spending" (Keyser Marston, 2021, pp. 8–9). Its strongest forward-looking statement is the hope that a large-scale ferry with weekend service might attract an additional hotel.

O10-236

The experience of the existing WETA terminal at Jack London Square in Oakland counsels against this hope. The surrounding commercial area has struggled with a substantial vacancy rate despite the operating ferry, and the Waterfront Hotel — 145 rooms, a short walk from the terminal — closed in January 2025. The City's own public outreach in the 2021 community survey found that 60% of respondents would **never use the ferry to commute**, and 56% would rarely/never use it for leisure *or* would use it fewer than ten times per year.

4. High business risk potential

A commuter ferry vessel operating approximately 28 daily crossings, designed against a ridership estimate of >2000 (with Mission Bay service) and capacity to handle 4000 in more extreme business scenarios, represents a substantial capital commitment against uncertain demand. The risk of stranded assets is real, and would fall on both WETA and COB.

O10-237

There is option value in waiting. WETA's own planning allows it to expand where the fit is better — where ferry service meaningfully reduces transbay commute times, the environmental cost is lower, and rider base already exists. Berkeley is not that place today, and the evidence suggests it may not be for some time.

If approved, the WETA terminal would be the only terminal in the WETA system located within a pre-existing public park with long-established recreational use. **Many families and seniors rely on this area for affordable recreation and access to the water—activities widely recognized as contributing to physical and mental well-being.** Data indicate that visitors to the southern waterfront are, on average, lower-income than visitors to other waterfront areas not affected by the ferry proposal, which appears to serve a narrow ridership demographic. **State grants for the marina area and pier were awarded on the condition that they were to be used for recreational purposes**. Prior city planners advised comprehensive waterfront planning. In contrast, the current process divides the WETA pier-ferry project from all other waterfront planning as represented in the stalled Waterfront Specific Plan.

O10-238

O10-239

The marina is already designated for transportation uses, as demonstrated by previous ferry services operating there, including Prop SF, Tidelines and most recently,

O10-240

Genentech. Displacement of recreational uses is not necessary to accommodate in-marina ferry service if Berkeley wants to support WETA's ferry service plans outlined in the "Tack-to-Wind" post-pandemic scenario. O10-240

The Berkeley Waterfront Community Coalition therefore recommends that the City rescind, reevaluate and reissue the DEIR and give careful analysis to the alternatives, including restoration of the recreational pier without ferry service, and to a feasible range of project alternatives that do not impose adverse economic and social impacts for the region nor impose CEQA impacts to subsidize a costly and underused commuter transit mode. O10-241

VII. Conclusion

The project will have a number of potentially significant impacts on the environment, including (but not limited to) impacts on special status biological resources, critical habitats, aesthetics, public access, land use and culturally significant resources. As the project description, setting and baselines were improperly set, these impacts and others were not adequately analyzed and mitigated in the DEIR. Feasible alternatives with lower environmental impacts were rejected. As a result, the DEIR fails to serve as an adequate informational document and its conclusions are not supported by substantial evidence. For the foregoing reasons, BWCC urges the Council to delay further consideration of the project unless and until the city prepares and recirculates a revised DEIR that fully complies with CEQA and the CEQA Guidelines. Berkeley Waterfront Visitation Characteristics and Distribution

Berkeley Waterfront Community Coalition

April 27, 2026

Below is a set of tables we derived from in-person survey data collected by Kittelson and Associates, Inc. hired by City of Berkeley to assess impacts of the proposed ferry project on current and future recreational use. The in-person intercept survey was conducted on three Thursdays and two Saturdays between April and August 2024. Setting aside any issue with Kittelson's methodology, we have cleaned and organized the available data to better illustrate the diversity of visitors to the Berkeley waterfront. The original dataset has 459 observations. Tables below use all 459 respondents unless otherwise noted. The visitation tables by socioeconomic status use observations that had complete information and may include less than 459 observations. Refer to p. 12 of the Kittelson report for a map of the waterfront and lots.

Below you will find:

- Visitor profile: frequency of visits, residency, age, and activities
- Tables of spatial distribution of visitors by income
- Barcharts for spatial distribution of visitors by income across main waterfront zones)
- Explanation of data cleaning for accurate lot counts.
- Tables of spatial distribution of visitors by race/ethnicity (RE)

Visitor profile

Frequency of visits

A total of 454 visitors responded to the frequency question. 196 visitors (43%) visit the waterfront multiple times per week or every day, and another 14.5% visit a few times a month.

Table 1: Frequency of visits to the Berkeley waterfront (n = 454; 5 respondents did not answer)

Frequency	Count	% of respondents
Every day	62	13.7
A few times a week	134	29.5
About once a week	49	10.8
A few times a month	66	14.5
Once a month	25	5.5
Less than once a month	34	7.5
For special events	17	3.7
Rarely (please specify time of year)	67	14.8
Total	454	100.0

010-246

Residency and age

Of the 459 respondents, 40% are Berkeley residents and 60% are visitors from outside Berkeley. Berkeley residents skew somewhat older than non-Berkeley visitors: 58% of Berkeley residents are 50 or over, compared with 48% of non-Berkeley visitors. This pattern is consistent with the waterfront serving a substantial population of older local residents for whom it is a near-daily recreational destination.

Table 2: Berkeley vs. non-Berkeley residents (n = 459)

Residence	Count	% of respondents
Berkeley resident	183	39.9
Non-Berkeley resident	276	60.1
Total	459	100.0

Table 3: Age distribution (under 50 vs. 50 and over) by Berkeley residency. Includes 3 respondents aged 17 or younger in 'Under 50.' Excludes 40 respondents with missing age.

Residence	Under 50	50 and over	Total	% Under 50	% 50 and over
Berkeley resident	70	98	168	41.7	58.3
Non-Berkeley resident	130	121	251	51.8	48.2
Total	200	219	419	47.7	52.3

Activities

Walking is by far the most popular activity (39% of respondents), followed by sailing/boating (23%), sightseeing/photography (17%), and dog walking (17%). Respondents could select multiple activities, so percentages do not sum to 100%.

Table 4: Activities at the Berkeley waterfront. Respondents could select multiple activities, so percentages do not sum to 100%.

Activity	Count	% of 459 respondents
Walking	177	38.6
Sailing/boating	105	22.9
Sightseeing/photography	78	17.0
Dog walking	76	16.6
Wildlife viewing	53	11.5
Dining	43	9.4
Picnicking	35	7.6
Playground	24	5.2
Biking	21	4.6
Swimming	20	4.4
Running	19	4.1
Shoreline fishing	16	3.5
Charter fishing	8	1.7
Cruise	6	1.3

010-246

Parking lot visits by income

Table 5: Parking Lot Visits by Income (Counts)

Sum	38	26	55	39	48	23	26	22	53	330

010-246

This table answers the question: Of people parking at each lot, what % are in each income bracket? Seawall Drive and South Cove West have most lowest-income (<$25k) income visitors. J&K lot next to the baitshop sees a high number of those earning less than $75k, as does L&M which was halved in size by the parking enforcement department, and H&I.

Table 6: Row Percentages (% within each lot)

	$0-$24,999	$25,000-$49,999	$50,000-$74,999	$75,000-$99,999	$100,000-$124,999	$125,000-$149,999	$150,000-$174,999	$175,000-$199,999	$200,000 and up	Total

010-246

Visitation to south v. north areas of waterfront, by income

Consistent with the public's general understanding and earlier city-led focus groups, we define the waterfront's geographic areas as follows:

- "South" refers to South Cove East and West lots, J&K, L&M, Skates/N, O lot, and Seawall Drive. Data points from the 199 Seawall next to the derelict HsL restaurant in the south part of the waterfront are currently not included as the lot's gates are usually locked during the weekdays on which the respondents' data was collected, indicating the data may be in error. We are seeking clarification from city staff and will update as we receive more information
- "North" refers to D&E, the launch ramps, Spinnaker Way and Spinnaker Circle.
- "Other" includes any response not in "north" or "south" above.

The barchart below indicates a tendency for the south area in aggregate to attract lower income visitors more than other parts of the waterfront. While north and other have similar breakdowns of lower income (defined as <$75k) and higher income (defined as >=$75k), the south area has more lower and less higher income as a percentage.

Figure 1: Visitor Income by Waterfront Area

Data cleaning notes for more accurate lot counts

Forty-six of the Kittelson survey responses were classified as "other." On closer inspection, we recognized that many of these responses are easily reclassifiable to a lot under study. Below is how we have reclassified some of these observations so far.

- South Cove West
  - "Cal Sailing"
  - "West cove"
  - "West coast"
  - "Over by cal sailing, not sure which one of those listed this is"
- O Lot
  - "1 Seawall Drive, Gate O Dock"
- 199 Seawall Drive
  - "Upper HSL"
- South Cove East
  - "EAST COVE"
  - "next to new toilet bldg/CAL adventures"
- Seawall Drive (Street)
  - "seawall"
- Skates/N
  - "Skates"
- F&G
  - "F Marina"

010-246

Letter O10

Commenter: Draft Environmental Impact Report Review Committee, Berkeley Waterfront Community Coalition

Date: April 28, 2026

Response to Comment O10-1 and O10-2

These comments do not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-3

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment O10-4

Please refer to subsequent comments for a response to specific comments, including comments that rely on the information provided in attachments.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-5

All comments on the Draft EIR have been responded to and are included in their respective responses to comments. Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment O10-6

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

For responses to specific issues raised in the comment letter, please refer to the following Response to Comments.

Response to Comment O10-7

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* regarding quantified baseline inventory of recreational use and sufficient analysis of impacts on recreational uses. Refer to Section 2.2.9, *Topical Response: Cumulative Impacts,* for a discussion regarding the sufficiency of the cumulative impact analysis. The Draft EIR provides an adequate baseline for CEQA purposes, and the analyses and conclusions remain valid as written. No revisions are required.

Response to Comment O10-8

With respect to potential public access constraints related to parking, refer to Section 2.2.20, *Topical Response: Parking.* As stated in Section 2.2.20, *Topical Response: Parking,* the project would have sufficient parking spaces to accommodate all users and as described in the Topical Response, the project would not reduce public access to the Waterfront rather, bluespace recreation access would be maintained and enhanced with project implementation.

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, and 3.12, *Transportation*, of the Draft EIR remain valid as written. No revisions to the EIR are necessary.

Response to Comment O10-9

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of project objectives and its alternatives analyses.

Response to Comment O10-10

Refer to Section 2.2.2, *Topical Response: Alternatives* (Project Objectives subsection), which clarifies that the City's inclusion of ferry service as a core objective is consistent with a long-standing and well-documented interagency effort to establish ferry service at the Berkeley Waterfront and expand water transit service in the Bay Area. Therefore, the objectives appropriately define the purpose of the project consistent with CEQA Guidelines Section 15124.

The Draft EIR appropriately defines project objectives and evaluates environmental impacts independently of those objectives, consistent with CEQA requirements. The analysis, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written, and no revisions to the Draft EIR are required in response to this comment.

Response to Comment O10-11

The comment that the Draft EIR fails to adequately analyze the ferry component of the project or its associated environmental impacts is not correct. The Draft EIR includes a comprehensive, project-level evaluation of ferry operations and infrastructure across all relevant resource areas, consistent with CEQA requirements. This analysis is based on the Project Description provided in Chapter 2 and evaluates both construction and operational impacts in Chapter 3, supported by technical studies and substantial evidence in the record.

With respect to comments about improvements being attributed to the project, the Draft EIR establishes the environmental baseline in accordance with CEQA Guidelines Section 15125 and evaluates the project's incremental contribution to recreational access and facilities. Refer to Response to Comments O10-47 to O10-49 for a discussion of specific recreational improvements identified in the comment letter.

Regarding alternatives, Chapter 5, *Alternatives*, evaluates a reasonable range of feasible alternatives consistent with CEQA Guidelines Section 15126.6. The Draft EIR also includes a discussion of alternatives considered but rejected, including the reasons for their dismissal based on feasibility, environmental considerations, and the ability to meet project objectives. The comment's suggested pier restoration or replacement approaches are either encompassed within the alternatives screening process or would not meet the fundamental objectives of the project, as described in Sections 5.3 and 5.9 (Pages 5-2 and 5-25 through 5-28 of the Draft EIR). CEQA does not require evaluation of every conceivable alternative, but rather a reasonable range sufficient to inform decision makers. For additional information about how alternatives were considered consistent with CEQA, refer to Section 2.2.2, *Topical Response: Alternatives*.

The analysis, significance conclusions, mitigation measures, and discussion of alternatives presented in the Draft EIR remain valid as written, and no revisions to the Draft EIR are required in response to this comment.

Response to Comment O10-12

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

For responses to specific issues raised in the comment letter, please refer to the following Response to Comments.

Response to Comment O10-13

The comment is referring to later specific comments which are responded to in subsequent Response to Comments. Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations within CEQA documents.

This comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment O10-14

CEQA Guidelines Section 15124 requires that an EIR include a project description containing sufficient detail to allow evaluation of environmental impacts, including the project's location, objectives, and general characteristics. The Draft EIR includes these required elements in Chapter 2, *Project Description*, including Section 2.1 (*Project Location and Setting*), Section 2.3 (*Project Objectives*), Section 2.5 (*Proposed Project Components*), and Section 2.6 (*Construction Details*), as well as a description of operational characteristics in Section 2.7.

The Draft EIR project description represents the current and reasonably foreseeable project design at the time of preparation and provides a stable and comprehensive basis for environmental analysis. To the extent that earlier project concepts were presented during the Notice of Preparation (NOP) and scoping process at a more conceptual level, the refinement of project details reflected in the Draft EIR is a normal and expected part of the CEQA process and does not indicate an unstable or shifting project description. Rather, the Draft EIR provides a more fully developed and detailed description consistent with CEQA Guidelines requirements.

Refer to subsequent response to comments for responses to specific issues raised in the comment letter. The analysis, significance conclusions, mitigation measures, and discussion of alternatives presented in the Draft EIR remain valid as written, and no revisions to the Draft EIR are required in response to this comment.

Response to Comment O10-15

Refer to Section 2.2.10, *Topical Response: Electric Ferry*.

Response to Comment O10-16

Refer to Section 2.2.10, *Topical Response: Electric Ferry*.

Response to Comment O10-17

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, which explains that the Draft EIR includes sufficient details in the Project Description according to CEQA requirements, including a description of electric ferry infrastructure and emergency operations.

Response to Comment O10-18

Refer to Section 2.2.11, *Topical Response: Ferry Operations*, for a discussion of the operational details included in the Draft EIR, and how those are consistent with CEQA requirements.

Response to Comment O10-19

With regard to the description of ferry service operations, refer to Section 2.2.11, *Topical Response: Ferry Operations*, for a discussion related to the operational details used in the Draft EIR to inform the environmental analysis.

With regard to characterizing ferry service, the Project Objectives in the Draft EIR (page 2-4) describes the use of the ferry service as for both recreational and commuter purposes.

Response to Comment O10-20

Refer to Response to Section 2.2.11, *Topical Response: Ferry Operations*, for a discussion related to how the Draft EIR addresses service schedule assumptions.

Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment O10-21

First as a matter of clarification, the comment incorrectly describes TDM Measures as mitigation. As explained in Section 2.2.20, *Topical Response: Parking,* TDM Measures are not mitigation measures because there are no environmental impacts under CEQA that would require mitigation in the form of TDM.

Chapter 2, *Project Description* of the Draft EIR describes the physical improvements that could result on a physical impact on the environment, including those physical improvements that provide TDM benefits such as enhanced bicycle facilities and secure bike parking; improved bicycle and pedestrian access including a two-way cycle track along University Avenue and Bay Trail improvements; designated pick-up and drop-off zones; and wayfinding that would direct visitors to appropriate parking lots. All of these features are described in Chapter 2, *Project Description* (refer to pages 2-11 to 2-22 of the Draft EIR).

Thus, the characterization that the Draft EIR has omitted information about TDM is incorrect. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment O10-22

Refer to Response to Comment O10-21. In response to this comment and to improve clarity, the following text change has been made to Section 2.5 of the Project Description (Page 2-18):

> … The proposed project would replace all of the existing parking spaces with 400 to 450 new parking spaces (pending final design), including ADA-accessible and EV parking spaces.
>
> Project access is anticipated to occur via a combination of travel modes, including private vehicles, transit, bicycle, and pedestrian connections. Parking supply and demand assumptions, including the role of TDM measures, are evaluated in Section 3.12, *Transportation*, and in Appendix F, *Transportation Impact Assessment*.

Regarding the comment that the Draft EIR should identify that the majority of ferry patrons arrive by car, this information has already been provided in Appendix F of the Draft EIR. Page 2 of Appendix F of the Draft EIR includes Table 2: Estimated Daily Trip Generation for First Year of Service (without TDM). This table indicates that an estimated 40 percent of the estimated trips would be from car, and represents the majority of the trips. Please note that this is a conversative estimate because it does not account for TDM, as indicated in the title of the Table.

Regarding the comment that TDM should be included in the analysis, implementation of TDM would actually result in reduced impacts to the environment. Implementation of TDM would reduce the number of single-occupancy trips, which would result in reduced environmental impacts. Where relevant, the Draft EIR does consider how constructed elements of the project that provide TDM benefits would affect environmental impacts (refer to page 3.10-36 of the Draft EIR).

Insofar that the comment is concerned about parking, refer to Section 2.2.20, *Topical Response: Parking.*

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no further revisions are required beyond the clarification above.

Response to Comment O10-23

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. The comment associated with this figure are responded to in Response to Comment O10-24. No further response is required.

Response to Comment O10-24

The comment refers to a scoping comment and states that "the NOP project description characterized project dredging as maintained." This is not an accurate statement. The NOP identified that the project would include "Dredging along the existing 100-foot wide United States Army Corps of Engineers federal navigation channel that parallels the closed pier." The NOP does not use the words maintenance dredging and the NOP text was intended to physically identify where dredging would occur.

Refer to Section 2.2.15, *Topical Response: Maintenance Dredging.* As described in Section 2.6.1, *Construction Details* (Page 2-28), the Draft EIR identifies the extent, location, and volume of dredging required for project implementation. The environmental analysis in Section 3.3, *Biological Resources* and Section 3.8, *Hydrology and Water Quality,* evaluates dredging impacts based on the maximum anticipated dredging volume and associated in-water activities, regardless of whether the dredging is characterized as "new" or "maintenance." As further clarified in the referenced responses, dredging would occur under applicable regulatory oversight (including USACE, RWQCB, BCDC, and DMMO), and the Draft EIR does not rely on assumptions regarding federal maintenance dredging or prior dredging activities in this location. The Draft EIR evaluates dredging based on the full scope of project-specific activities and associated environmental impacts. The clarifications provided in Section 2.2.15, *Topical Response: Maintenance Dredging,* fully address the issues raised.

The analysis and conclusions presented in the Draft EIR remain valid as written, and no further revisions beyond those included in the referenced responses are required.

Response to Comment O10-25 to O10-28

Refer to Response to Comment O10-24 for a complete discussion on the issues raised in these comments. The analysis and conclusions presented in the Draft EIR remain valid as written, and no further revisions beyond those included in the referenced responses are required.

Response to Comment O10-29

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about sedimentation patterns.

Response to Comment O10-30

Refer to Response to Comment O10-24 for a complete discussion on the issues raised in this comment.

Regarding maintenance dredging, refer to Section 2.2.15, *Topical Response: Maintenance Dredging*, which discusses this topic.

The analysis and conclusions presented in the Draft EIR remain valid as written, and no further revisions beyond those included in the referenced responses are required.

Response to Comment O10-31

Dredging impacts from construction of the project have been analyzed throughout the Draft EIR. Draft EIR Section 2.6., *Construction Details*, describes the extent, location, and volume of project dredging required to support ferry operations (page 2-28 of the Draft EIR). Potential environmental impacts associated with dredging are evaluated throughout Chapter 3, *Environmental Impact Analysis*, including Section 3.3,

Biological Resources (Section 3.3.4, Impacts BIO-1 through BIO-3), and Section 3.8, *Hydrology and Water Quality* (Section 3.8.4, Impact HYD-1).

Regarding dredging required for long-term ongoing operation of the project, refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* which discusses this topic.

Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment O10-32

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-33

CEQA Guidelines Section 15123 (b)(2) states that the summary within the EIR shall "identify [a]reas of controversy known to the Lead Agency including issues raised by agencies and the public". Draft EIR page ES-3 contains this discussion. To summarize these areas of controversy, the discussion in the Draft EIR explains that members of the public identified concerns regarding parking availability for recreationalists.

The Draft EIR includes additional information about the issues raised by the public beyond the discussion in the Executive Summary. Refer to Sections 1.2.2, *Public Outreach*, 1.2.4, *EIR Notice of Preparation*, and 1.5, *Environmental Review Process*, of the Draft EIR for a summary of the public outreach conducted between 2021 and 2025. Additionally, the Draft EIR public comment period was held from February 27, 2026, to April 26, 2026, a total of 60 days, 15 more than what is required under CEQA.

Section 1.2.2, *Public Outreach*, of the Draft EIR explains that the City collected suggestions made by the community during public outreach efforts and incorporated them into the project, to the extent feasible. This discussion in the EIR also cites the *Environmental Justice Existing Conditions and Constraints Final Technical Study* prepared by the City, which explains how community input was integrated into the project.

For additional clarity, page ES-3 of the Draft EIR has been revised as follows:

> During the EIR scoping process, members of the public identified concerns related to the potential for the proposed project to affect parking availability for recreationalists, continued recreational access to the Berkeley Waterfront, potential impacts on biological resources including whales and other marine species, and the project's consistency with broader waterfront planning efforts. Chapter 3, *Environmental Impact Analysis* (see *Secondary Impacts* subsection) identifies the approach for addressing parking impacts under CEQA for the proposed project and describes the relationship between the proposed project and other waterfront planning efforts (see *Relationship with Draft Waterfront Specific Plan* subsection). In addition, each environmental resource section within Chapter 3 includes an *EIR Scoping Comments Consideration* subsection that identifies resource-specific concerns raised during scoping and explains how those issues are addressed in the environmental analysis. Public responses to the Notice of Preparation of a Draft EIR as well as public input received at the EIR scoping meeting held by the City are summarized in Chapter 1, *Introduction*.

This revision is clarifying in nature and does not alter the impact analysis or significance conclusions presented in the Draft EIR. The Draft EIR adequately identifies and addresses areas of known controversy, and no further revisions are required.

Response to Comment O10-34

The outreach identified in this comment is summarized in Section 1.2.2, *Public Outreach* in Chapter 1, *Introduction* of the Draft EIR (page 1-4). Refer also to Response to Comment O10-33 for a response to this comment. No further response is required.

Response to Comment O10-35

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion related to how the Draft EIR appropriately addresses the Draft Waterfront Specific Plan.

Response to Comment O10-36

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-37

The comment provides information regarding user opinions and preferences. Under CEQA, the purpose of an EIR is to evaluate environmental effects on physical conditions, not user perceptions or preferences (CEQA Guidelines §15382). As described in Chapter 2, *Project Description*, Subsection 2.3, *Project Objectives*, enhancing public pier facilities and recreational opportunities at the Berkeley Waterfront are key objectives of the proposed project. Chapter 2 further states in Subsection 2.5.1, *Waterside*, that the project would incorporate amenities that would directly support fishing at the Waterfront, including the development of a new pier and breakwater with safety railings, a fish cleaning station, seating, shade canopy, and security gates, which would remain open to the public, except in cases where public safety requires closure (refer to Page 2-6). Accordingly, the analysis provides in Section 3.11, *Recreation*, evaluates potential impacts to recreation and concludes that the project would provide a net increase in recreational opportunities, including restored fishing access (refer to Impact REC-1, Pages 3.11-16 through 3.11-20). Additionally, Section 3.3, *Biological Resources*, Subsection 3.3.4, *Impacts Analysis*, evaluates potential impacts on marine wildlife, including fish species. The analysis therein concludes that impacts to fish species would be less than significant with mitigation incorporated (refer to Pages 3.3-39 through 3.3-66).

This comment does not provide supporting arguments, data, or analysis to substantiate concerns related to impacts on fish behavior. Accordingly, no changes are warranted to the Draft EIR analysis, conclusions, or mitigation, and no further response is required.

Response to Comment O10-38

Refer to Response to Comment O10-33. Refer to Section 1.5, *Environmental Review Process*, for a summary of the CEQA process. Prior to making a decision on the proposed project, the City must certify that the Final EIR was presented to the Berkeley City Council and that they reviewed and considered the information in the Final EIR prior to making a decision about approving the project, consistent with CEQA Guidelines Section 15090. As discussed in CEQA Guidelines Section 15093, agencies must balance the various benefits of a project, such as economic, legal, social, technological, and larger-scale environmental benefits, with the potential environmental impacts associated with the project when making their decision. No further response is required.

Response to Comment O10-39

Refer to Response to Comments O10-40 through O10-83 for responses to specific issues raised in the comment letter. As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment O10-40

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-41

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion about why the cumulative impact analysis included in the Draft EIR is sufficient and complies with CEQA requirements.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-42

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts,* which explains that the Draft EIR includes the reopening of a restaurant at 199 Seawall Drive as a cumulative project. Refer to Response to Comment P36-108 for a discussion about this cumulative project, as it relates to parking.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-43

As shown in Draft EIR Table 3-1, *Present and Reasonably Foreseeable Cumulative Projects List* (page 3-9), the D&E Dock Replacement Project is identified as Cumulative Project No. 5 under the category of Recreation and Marina Projects. For clarity, in response to this comment, Table 3-1 has been updated to reflect the completion of the D&E Dock replacement project. Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which explains the methodology used to identify and evaluate cumulative projects.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No further revisions to the Draft EIR are necessary in response to this comment.

The reopening of the East Dock does not alter the conclusions of the Draft EIR. Because repairs have already been completed, no future construction-related impacts associated with that project would overlap with construction of the proposed project. In addition, operation of the East Dock represents the condition that would exist at the time of project operation and is generally consistent with the cumulative scenario evaluated in the Draft EIR. Therefore, the reopening does not result in new significant impacts, a substantial increase in the severity of identified impacts, or a change to the cumulative impact conclusions presented in the Draft EIR.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. Aside from the clarifying update to Table 3-1 regarding the status of the South Cove East Dock Pier Piling Repairs project, no further revisions to the Draft EIR are necessary in response to this comment.

This page intentionally left blank.

Table 3-1 Present and Reasonably Foreseeable Cumulative Projects List

Cumulative Project Number	Name	Jurisdiction	Land Uses	Cumulative Project Characteristics			
				Cumulative Project Use	Location	Status	Brief Description
Recreation and Marina Projects							
5	D & E Dock Replacement Project [a]	Berkeley	Waterfront/Marina	Docks	Berkeley Marina Basin	~~Under Construction~~ Substantially complete. Remaining contract work anticipated to be completed by September 30, 2026.[i]	Replacement of docks, concrete piles, utilities, gangway, and gate structure. Installation of a concrete wall, slope protection, and landslide improvements. The replacement dock system consisting of 79 slips has been installed. Minor repairs and restroom improvements remain to be completed under the construction contract.
....							
7	Tom Bates Regional Sports Complex Restroom & Community Space [a]	Berkeley	Waterfront/Marina	Park facilities	400-408 Gilman Street	Design	Installation of a restroom, meeting room, storage area, one youth soccer field, and six pickle ball courts.
8	South Cove East Dock Pier Piling Repairs [a]	Berkeley	Waterfront/Marina	Docks	Easternmost public dock within the South Cove Sailing Basin	~~Design~~ Completed September 2025	Structural rehabilitation of deteriorated pier structure that leads to East Dock.
9	Replacement of South Cove Middle Dock ADA Gangway Float [a]	Berkeley	Waterfront/Marina	Docks	Connected to the middle public dock within the South Cove Sailing Basin	Design	Replacement of damaged ADA-compliant dock.
...							
20	Bay Trail Extension to the Berkeley Marina [j]	Berkeley	Waterfront/Marina	Active transportation facilities	Extends from the Bay Trail and I-80 bicycle/pedestrian overcrossing west of Frontage Road through the southern Berkeley Marina to the Berkeley Yacht Club at the north end of Seawall Drive	Partially completed	Multi-use Bay Trail extension approximately 1.2 to 1.3 miles in length. Trail implementation has occurred in phases, with initial segments completed in 2014 and Segment 3 completed in 2020. Remaining segments south of Adventure Playground toward Seawall Drive and the Berkeley Yacht Club remain dependent on future funding. [k]
Infrastructure Projects							
~~20~~21	N-Lot Parking Lot Improvements [c]	Berkeley	Parking	Parking	Berkeley Marina near Skates	Design	Parking lot improvements
~~21~~22	South Cove West Parking Lot [a]	Berkeley	Parking	Parking	South side of University Ave at the Berkeley Waterfront by Cal Adventures Club	~~Construction (expected completion date is Summer 2026)~~ Completed April 2026	~~Renovated p~~Parking lot ~~with~~ improvements including new asphalt, storm water treatment system, and new safety elements.
~~22~~23	Climate Action Plan [d]	Berkeley	Infrastructure	Mixed uses	Berkeley	Adopted	Strategic plan to improve sustainability in Berkeley through increased energy efficiency and renewable energy, improved active and public transportation, reduced waste and improved accessibility to locally produced food.
~~23~~24	199 Seawall Structural Repair Project [e]	Berkeley	Waterfront/Marina	Improved structural integrity	199 Seawall Drive	Planning	Installation of new pilings to reinforce concrete on eastern side of the building, repairs to a failed beam support, and repairs to existing pilings.
~~24~~25	Interstate 80/Ashby Avenue (SR-13) Interchange Improvements [f]	Alameda County Transportation Commission, Caltrans	Transportation Infrastructure	Transportation	I-80 and Ashby Avenue interchange	Design	Reconstruct the interchange to improve traffic flow, safety, and multimodal access, including a separate pedestrian and bicycle overcrossing connecting Shellmound Street to the Bay Trail.
~~25~~26	Local Bus Service Frequency Upgrades | AC Transit | Systemwide [f]	Alameda County Transit	Infrastructure, Transportation	Enhanced transit access and frequency in high-demand corridors	Alameda; Routes 72/72M/72R and 51B	Implementation	Upgrades bus frequency to 5-10-minute peak headways on routes 72, 72M, 72R, and 51B, which serve key access points to the Berkeley Waterfront.

Response to Comment O10-44

As described in Response to Comment O10-43, the Draft EIR relies upon the best available information at the time of the Notice of Preparation (April 18, 2025) to define baseline conditions. At the time of Notice of Preparation, the referenced closure and repairs were ongoing and the project was identified as a cumulative project because completion and reopening of the facility was reasonably foreseeable prior to implementation of the proposed project (refer to Table 3-1, page 3-9 of the Draft EIR).

The City acknowledges that the South Cove East Dock reopened in September 2025 after publication of the Notice of Preparation and prior to preparation of the Final EIR. Accordingly, in response to this comment Draft EIR Table 3-1, Present and Reasonably Foreseeable Cumulative Projects List, has been revised to update the project status. Please refer to Response to Comment O10-43, which includes this revision as well as additional clarifying revisions in response to similar comments.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. Aside from the clarifying revision to Table 3-1, no further revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-45

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, and Section 2.2.20, *Topical Response: Parking,* for discussions regarding the cumulative impact assessment methodology and parking considerations as they relate to CEQA analysis.

The City acknowledges that, following publication of the Notice of Preparation, the Berkeley City Council approved implementation of parking fees at the South Cove East, South Cove West, and J/K parking lots. The fee program was scheduled to take effect beginning January 1, 2026, and would apply to more than 200 parking spaces within these lots. The program involves placement of parking fee collection equipment and associated payment kiosks that would be placed on existing concrete surfaces. Public Resource Code 21065 provides the following definition for a project: " 'Project' means an activity which may cause either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment…" The implementation of parking fees does not meet this definition pursuant to CEQA; therefore, the fee program identified by the commenter does not meet the definition of a cumulative project.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-46

Page 3-6 of the Draft EIR defined reasonably foreseeable projects as follows: "Reasonably foreseeable future projects are defined as those likely to occur during the same period of time as construction and operation of the project and that could contribute to the cumulative impact on a particular environmental resource. Reasonably foreseeable projects are future projects (including those currently proposed) that are likely or probable, rather than those that are merely possible. Generally, projects are reasonably foreseeable if they meet any one or more of the following conditions:

- The project is a foreseeable future phase of an existing project.
- Applications for project entitlements or construction are pending with a government agency (these projects may have been analyzed in a recent environmental document).
- The project is included in regional transportation plans; regional transportation improvement programs; local long-range transportation plans; local land use, general, and specific plans; or an agency's budget or capital improvement program."

Funding commitments alone do not constitute a reasonably foreseeable cumulative project. When it comes to Measure FF, a cumulative project would need to be a specific project located near the project

site that is reasonably foreseeable and not just merely possible. The comment has not identified a specific cumulative project that is funded through Measure FF that would constitute a cumulative project. The City's Measure FF webpage identifies two specific funded projects, including the Replacing Traffic Barriers with Planter Boxes project and the Outdoor Warning System: Emergency Siren Network project.[34] The planter box project involves replacement of existing traffic barriers at locations including Woolsey/Hillegass, Fulton/Ashby, and Harmon/California.[35] The emergency siren project involves installation of warning sirens at various locations throughout Berkeley.[36] Neither project is located within the project vicinity, involves bicycle recreation facilities, nor would contribute to recreation-related cumulative impacts associated with the proposed project. In addition, neither project would provide the type of bicycle facility improvements referenced in the comment. Accordingly, these Measure FF-funded projects do not constitute cumulative projects relevant to the recreation analysis for the proposed project.

The comment has not identified any specific bicycle improvement project funded through Measure FF. The general existence of Measure FF funding itself does not provide evidence that a reasonably foreseeable recreation or transportation project should be added to the cumulative projects list or discussed as an alternative recreational facility within the EIR. For further discussion regarding the identification of cumulative projects and cumulative analysis under CEQA, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-47

Although future Bay Trail improvements may occur independent of the project, the proposed Bay Trail extension is a project feature that advances the project objectives by enhancing recreation and multimodal access at the project site. The Draft EIR does not rely on the proposed project as the sole means of implementing Bay Trail improvements. Rather, the Draft EIR evaluates the environmental effects of all project components being proposed by the City, including the Bay Trail extension, consistent with CEQA Guidelines. Section 3.11, *Recreation*, evaluates project-related contributions to recreation and concludes that the project would result in a net increase in recreational opportunities at the waterfront due to the inclusion of features such as the Bay Trail extension (refer to Impact REC-1).

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-48

Under CEQA Guidelines Section 15125, an EIR must describe the physical environmental conditions at the time the NOP is published. Future improvements to the Bay Trail, regardless of when or by what funding mechanism they are constructed, are not appropriate to be considered a baseline condition. The comment does not raise any specific deficiencies in the cumulative analysis as it relates to the Bay Trail. The Draft EIR adequately characterizes baseline conditions and reasonably foreseeable cumulative conditions and evaluates the project's contribution to cumulative impacts consistent with CEQA Guidelines. Accordingly, the analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

[35] Berkeley, City of. 2026. Capital Projects, Replacing Traffic Barriers with Planter Boxes. https://berkeleyca.gov/your-government/our-work/capital-projects/replacing-traffic-barriers-planter-boxes (accessed July 2026).

[36] Berkeley, City of. 2026. Capital Projects, Outdoor Warning System: Emergency Siren Network. https://berkeleyca.gov/your-government/our-work/capital-projects/outdoor-warning-system-emergency-siren-network (accessed July 2026).

Response to Comment O10-49

CEQA distinguishes between baseline conditions (CEQA Guidelines Section 15125) and cumulative analysis (CEQA Guidelines 15130). The Draft EIR appropriately evaluated project-related impacts based on existing conditions at the time of Notice of Preparation (April 18, 2025) and project-related contributions to cumulatively considerable impacts consistent with the defined requirements within the referenced CEQA Guidelines.

Refer to Response to Comments O10-42 through O10-48 for specific responses to conditions raised by the comment.

The Draft EIR adequately characterizes baseline conditions and reasonably foreseeable cumulative conditions and evaluates the project's contribution to cumulative impacts consistent with CEQA Guidelines. Accordingly, the analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-50

Table 1-1, *EIR Scoping Comments and EIR Location Information*, within the Draft EIR, summarizes the comments received and where the City addressed those issues within the EIR.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* regarding quantified baseline inventory of recreational use and sufficient analysis of impacts on recreational uses.

Response to Comment O10-51

The comment correctly identifies a typographical error in Section 3.11.4 that references Section 3.10.2, which pertains to Noise. The correct reference is Section 3.11.2, *Environmental Setting*. In response to this comment, page 3.11-15 of the EIR has been revised to correct the reference as follows:

> One agency (BCDC) requested that the City document recreational use, identify the service area and service population, assess whether recreational facilities for the project are commensurate with need, and assess potential deterioration of facilities. Section ~~3.10.2~~ 3.11.2, *Environmental Setting* provides details about existing recreational use, the service area and service population, and the existing parks to person ratio; and Impact REC-1 addresses impacts associated with the physical deterioration of recreational facilities.

The above revision is clarifying in nature and does not alter the analysis or significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR.

Regarding the request for a quantitative inventory of recreational uses, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

With respect to Bay Plan Recreation Policy 3(a)(7), consistency with applicable San Francisco Bay Plan policies is evaluated in Draft EIR Section 3.9, *Land Use and Planning* (see Table 3.9-1 within Impact LU-2, pages 3.9-12 through 3.9-23). Although Recreation Policy 3(a)(7) is not specifically identified in Table 3.9-1, the Draft EIR's broader Bay Plan consistency analysis addresses the policy's underlying objectives related to public access, multimodal access, recreational facilities, parking, signage, and wayfinding.

Notably, BCDC did not identify omission of Recreational Policy 3(a)(7) as a concern in its comment Letter on the Draft EIR. Nonetheless, in response to this comment, Draft EIR Table 3.9-1 has been revised for clarity to expressly evaluate consistency with Bay Plan Recreation Policy 3(a)(7) as follows.

Table 3.9-1 BCDC San Francisco Bay Plan Consistency

Policy	Consistency
Recreation	
Policy 3(a)(7). Access to marinas, launch ramps, beaches, fishing piers, and other recreational facilities should be clearly posted with signs and easily available from parking reserved for the public or from public streets or trails.	**Consistent.** As described in Chapter 2, *Project Description*, the proposed project would include wayfinding signage along University Avenue, Marina Boulevard, Seawall Drive, the Seawall Drive Parking Lot, portions of the Berkeley Waterfront, and Shorebird Park to direct visitors to the new pier, ferry facilities, parking areas, and other recreational destinations. The project would also include interpretive and educational signage along the pier, breakwater, and Bay Trail Extension. Final signage design and placement would be refined through final design and applicable permitting processes. The project would also provide continued public access to recreational facilities from public streets and trails, including University Avenue, Seawall Drive, and the Bay Trail, and would maintain and improve public parking access through renovation of the existing Seawall Drive parking lot, which would provide approximately 400 to 450 public parking spaces. In addition, the project would enhance pedestrian, bicycle, and transit access through construction of a new cycle track, Bay Trail improvements, bicycle parking facilities, and transit improvements. Accordingly, the project would be consistent with Recreation Policy 3(a)(7).
Policy 7. Because of the need to increase the recreational opportunities available to Bay Area residents, small amounts of Bay fill may be allowed for waterfront parks and recreational areas that provide substantial public benefits and that cannot be developed without some filling.	**Consistent.** The proposed pier and breakwater would provide recreational opportunities to the Bay. As such, the fill would be allowed if it provides substantial public benefits and cannot be developed without some filling. Since the proposed project will provide an alternative form of transportation that will reduce vehicle miles traveled and greenhouse gas emissions, as well as providing a new recreational opportunity to access the Bay, the proposed project will result in substantial public benefits.

This page intentionally left blank.

The revisions described above are clarifying in nature and do not alter the impact analysis or significance conclusions presented in Section 3.9, *Land use and Planning*, or Section 3.11, *Recreation*, of the Draft EIR. Accordingly, the analysis, significance conclusions, and mitigation measures presented therein remain valid as written, and no further revisions are necessary.

Response to Comment O10-52

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* for a discussion of recreational uses.

Additionally, the comment that the project would eliminate nearly all public parking is not accurate. The Draft EIR states in Chapter 2, *Project Description*, that the project would replace the existing 404 parking spaces with 400 to 450 new public parking spaces (pending final design), including ADA-accessible and EV parking spaces (see Section 2.5, page 2-18). For further discussion of parking considerations, please refer to Section 2.2.20, *Topical Response: Parking.*

The Draft EIR provides an adequate baseline for CEQA purposes, and the analyses and conclusions remain valid as written. No revisions are required.

Response to Comment O10-53

Section 3.11, *Recreation*, describes the relationship among shoreline parks, marina areas, and adjacent state park lands, and identifies the broader recreational system within the project vicinity. Figures 3.11-1 and 3.11-2 (Draft EIR pages 3.11-2 and 3.11-3) illustrate the distribution of these resources and their connections via the Bay Trail and bicycle/pedestrian linkages. The impact analysis considers how the project would affect this interconnected system and concludes that the project would improve access and connectivity. As described in Chapter 2, *Project Description*, project features supporting recreational use include the new pier and breakwater, shoreline access improvements, pedestrian and bicycle infrastructure (including Bay Trail connections), enhanced transit access, and amenities such as an ADA-accessible public plaza, restrooms, bicycle parking, shade structures, seating, and a fish-cleaning station (see Draft EIR Section 2.5, *Proposed Project Components*).

For additional discussion of baseline adequacy, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

The Draft EIR provides an adequate baseline for CEQA purposes, and the analysis and conclusions remain unchanged. No revisions are required.

Response to Comment O10-54

Refer to Section 3.11, *Recreation*, including Figures 3.11-1 and Section 3.11.2, which identify recreational resources within the project vicinity, including shoreline parks, trails, marina basins, and adjacent waters. The Draft EIR evaluates recreation consistent with CEQA Guidelines by considering all physical recreational resources, including both land-based and water-based uses, and evaluating whether the project would cause deterioration or require new facilities (Impact REC-1).

In response to this comment, the following clarifying text changes have been made to Subsection 3.11.2, *Environmental Setting*, of the Draft EIR, which provides the following recreation definitions (refer to Page 3.11-1):

> Open space is a broad term for undeveloped land that provides public access, while a park is a specific type of open space that is developed for recreation and leisure activities. Parks can include playgrounds, sports fields, and paved paths, whereas open spaces can be more natural and less developed areas like forests, farms, or grasslands. Both open space and parks can be publicly owned and operated by a city, a regional jurisdiction, the State, or the federal government. A recreational facility is a specific, human-made structure or area designed for a particular recreational activity and can include elements such as parks and picnic sites, pathways and trails, boating docks, community

and nature center buildings, sports courts and swimming pools, among other elements. For purposes of the EIR analysis presented in Section 3.11.4, *Impacts Analysis*, recreational resources include both land-based facilities, such as parks, trails, and open space areas, as well as water-based areas used for recreation, such as marina basins, lagoons, and San Francisco Bay Waters. Figures depicting park and recreation resources may include water features to represent the full extent of recreational use areas rather than solely land acreage.

The text change is clarifying in nature and does not result in a change to the adequacy of the Draft EIR. The analysis, significance conclusion, and mitigation measures presented in the Draft EIR remain valid as written, and no further revisions are required.

Response to Comment O10-55

As identified on Page 3.11-1, Section 3.11, *Recreation*, of the Draft EIR, the park acreage ratio is 34.5 acres per 1,000 residents. As described therein, the City has a total of 4,430 acres of public parks and open space within City limits, spanning 52 parks (and associated buildings, parking lots, and play areas), 21 turf medians, 75 developed paths, 40 undeveloped paths, the Berkeley Marina, and 310 acres of parklands, as well as portions of the 1,833-acre McLaughlin Eastshore State Park, the 2,079-acre East Bay Regional Park District Tilden Regional Park, and 209-Claremont Canyon Regional preserve. The acreage of these parks and open space resources was obtained from publicly available information published by the agencies that manage these facilities, including the City of Berkeley General Plan, the City of Berkeley Parks, Recreation, and Waterfront Department website, and the East Bay Regional Park District website. These publicly available acreage figures represent the agencies' characterization of the recreational resources they manage and therefore provide a reasonable basis for evaluating existing park and recreation resources, as well as calculating the park acreage ratio presented in the Draft EIR. The total of 4,430 acres of parks and open space and a population of 128,348 residents in 2025 equates to 0.0345 acres per person, or 34.5 acres per 1,000 residents when multiplied by a factor of 1,000 to achieve the standard metric of acreage per 1,000 residents. which results in a total of 34.5 acres per 1,000 residents. The calculation of park acreage per resident is consistent with the City's methodology of identifying park acreage per resident. In addition, the Draft EIR does not rely solely on the park acreage ratio to evaluate impacts. As discussed within Section 3.11.4, *Impacts Analysis*, the Draft EIR evaluates whether the project would increase the use of existing recreational facilities such that substantial deterioration would occur or be accelerated (refer to Impact REC-1). Based on the information presented therein, the Draft EIR identifies that the project would improve and expand recreational opportunities at the Berkeley Waterfront through the construction of new public amenities, including Bay Trail improvements, waterfront access enhancements, public open space features, viewing areas, seating areas, and related recreational infrastructure. As such, the Draft EIR concludes that the project would add recreational resources and improve public access rather than reducing recreational opportunities available to residents, and accordingly concludes that impacts would be less than significant. No change to the Draft EIR or other response is necessary.

Response to Comment O10-56

Draft EIR Section 3.11, *Recreation*, describes existing recreational resources at the Berkeley Waterfront, including the type, function, and characteristics of facilities and use areas (see Section 3.11.2, *Environmental Setting*). This qualitative discussion reflects the quality of recreational opportunities, including the range of activities supported (e.g., shoreline access, boating, fishing, and passive recreation) and the physical features that enable those uses. Where available, the Draft EIR also provides quantitative information, such as park acreage and spatial extent of recreational areas. Together, these qualitative and quantitative descriptions provide an appropriate characterization of both the quality and quantity of recreational resources consistent with CEQA requirements, which focus on physical conditions and facility capacity rather than subjective measures of recreational experience. No revisions to the Draft EIR are required.

Response to Comment O10-57

As discussed in Section 3.11, *Recreation*, the Draft EIR evaluates environmental impacts to recreational resources consistent with CEQA Guidelines, which focus on physical environmental conditions and effects. CEQA does not require characterization of user demographics unless such information is necessary to evaluate whether a project would result in a physical environmental impact. Accordingly, the recreational baseline focuses on the location, capacity, and function of recreational facilities and access, which are the relevant factors for evaluating potential physical deterioration or the need for expanded facilities (see Draft EIR Section 3.11.4).

While socioeconomic considerations such as environmental justice are not a resource requiring evaluation under CEQA, the City continues to consider such issues through its broader planning and policy efforts, including its General Plan Environmental Justice Element. The Environmental Justice Technical Report describes how the City engaged with Environmental Justice communities in its extensive public engagement efforts and how that input helped to inform project design.

As described in Draft EIR Chapter 2, *Project Description* (see Section 2.5, *Proposed Project Components*), and Section 3.11, *Recreation* (see Impact REC-1), the project would expand recreational opportunities and improve public access to the waterfront through new and enhanced facilities, including shoreline access, a restored pier, public open space, and multimodal connections. These improvements would benefit a diverse range of users and increase overall accessibility.

The Draft EIR evaluates environmental impacts to physical recreational resources consistent with CEQA Guidelines, which do not require demographic analysis unless tied to physical environmental impacts. For additional discussion of baseline adequacy, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-58

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*, for a discussion of how the Draft EIR evaluates the project's consistency with applicable land use plans and policies.

SB 1000 (Government Code Section 65302(h)) requires local jurisdictions to address environmental justice in their General Plans, including through the preparation of an Environmental Justice Element or equivalent policies for disadvantaged communities. SB 1000 applies to the preparation or update of General Plans and does not establish a separate CEQA significance threshold for individual development projects. The proposed project is not a General Plan amendment or General Plan update, and therefore, the requirements of SB 1000 do not apply to the proposed project. Nevertheless, environmental justice considerations were incorporated into the planning process for the proposed project. As summarized in Draft EIR Section 1.2.2, *Public Outreach*, the City conducted extensive public outreach in 2025, including engagement with community organizations and groups representing historically underserved populations (see Draft EIR pages 1-4 and 1-5). In addition, the City prepared the Berkeley Water Transportation Pier Ferry Environmental Justice Existing Conditions and Constraints Technical Study, which was cited within Draft EIR Section 1.2.2 and made publicly available as part of the environmental review process[37], to evaluate environmental justice conditions in the project vicinity.

The Draft EIR evaluates the project's consistency with applicable local and regional plans, including policies related to public access and recreation, within Section 3.9, *Land Use and Planning* (see Impact LU-2), and evaluates potential physical environmental impacts that could affect surrounding communities, throughout Chapter 3, *Environmental Impact Analysis*, and identifies mitigation measures as appropriate. The analysis therein did not identify substantial evidence that the proposed project would result in

[37] Berkeley, City of. 2025. Berkeley Water Transportation Pier Ferry Environmental Justice Existing Conditions and Constraints Technical Study. October 15. Prepared by Rincon Consultants. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/Berkeley_2025_BWTPF-Environmental-Justice-Technical-Study.pdf (accessed July 2026).

disproportionately severe adverse physical environmental impacts on disadvantaged or underserved communities.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O10-59

SB 535 established a framework for identifying disadvantaged communities for purposes of directing portions of State climate-investment funding to communities experiencing disproportionate environmental burdens, with the goal of improving public health, quality of life, and economic opportunities while reducing climate-related pollution.[38] However, SB 535 does not establish independent CEQA significance thresholds, create environmental justice analysis requirements under CEQA, or otherwise modify the standards used to determine the significance of environmental impacts under CEQA.

Although SB 535 does not impose CEQA requirements, the proposed project would generally support many of the policy objectives associated with State identification of and investment in disadvantaged communities. As described throughout the Draft EIR, the proposed project would expand public access to the Berkeley Waterfront through construction of a public pier and breakwater, improved bicycle and pedestrian connections including a new cycle track and Bay Trail Extension, enhanced public transit facilities, and new public amenities (refer to Draft EIR Section 2.5, *Proposed Project Components*). In addition, the proposed project would provide a new zero-emission transportation option connecting Berkeley to regional job centers while reducing greenhouse gas emissions and supporting multimodal mobility. The project would provide public health benefits through reduced greenhouse gas emissions and expanded opportunities for active transportation, including improved bicycle and pedestrian infrastructure and supporting amenities that promote walking, bicycling, and transit use while improving access to the Berkeley Waterfront. Furthermore, WETA has identified the surrounding community as having comparatively limited transit access and a greater concentration of lower-income and historically underserved populations.[39] Accordingly, the proposed zero-emission ferry service would improve connectivity between the community and higher-paying regional job centers throughout the Bay Area while advancing the goals of SB 535 to improve public health and economic opportunity in disadvantaged communities.

However, the fact that nearby communities may be identified as disadvantaged communities under SB 535 does not create a separate CEQA impact category or significance threshold. Rather, potential environmental impacts of the proposed project are evaluated in the Draft EIR using the significance criteria established under CEQA. Consistent with that analysis, the project would not result in disproportionately severe adverse physical environmental impacts on disadvantaged communities.

For further discussion of how the Draft EIR evaluates consistency with applicable plans and policies, including those related to public access and recreation, refer to Response to Comment O10-58 and to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O10-60

For a discussion of BMC 6.20.180 as it relates to the Draft EIR analysis, refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

[38] California Environmental Protection Agency Office of Environmental Health Hazard Assessment. 2026. SB 535 Disadvantaged Communities. https://oehha.ca.gov/calenviroscreen/sb535 (accessed August 2026).

[39] WETA. 2022. WETA Berkeley Ferry Service Business Plan, Version 1.0. Prepared by Economic Planning Systems, Inc. March 17. Available: https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf. (accessed August 2026).

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-61

For discussion of existing water access and legally permitted recreational uses, refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*, and Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

The baseline and resulting analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-62

Page 3.11-7, Section 3.11, Recreation (Section 3.11.3, Regulatory Framework), states that Section 4(f) would only apply should project implementation involve federal funding. The comment is incorrect. CEQA compliance often occurs independently of NEPA compliance. NEPA compliance is required if the project has a federal nexus such as federal funding, requirement for a federal permit, or the use of federal land. In this instance, the project has not yet received any federal funding. It is likely that the project will require NEPA clearance when pursuing federal permits from National Marine Fisheries Service or U.S. Army Corps of Engineers (USACE). At that time, the federal lead agency would determine the NEPA pathway for environmental compliance. In summary, CEQA does not require an analysis of Section 4(f) impacts, and no change to the Draft EIR or other response is necessary.

Response to Comment O10-63 and O10-64

Section 3.11, *Recreation*, of the Draft EIR includes descriptions of each of the facilities identified by the comment, including formerly named Cesar Chavez Park (pages 3.11-5 and 3.11-6), Shorebird Park (page 3.11-4), Horseshoe Park (page 3.11-5), Adventure Playground (page 3.11-4), and McLaughlin Eastshore State Park (page 3.11-6), in addition to other facilities and uses at the Waterfront (see Section 3.11-2, *Environmental Setting*, pages 3.11-1 through 3.11-7). The level of detail provided therein is sufficient to support environmental analysis in accordance with CEQA Guidelines. No further revisions to the EIR are necessary.

Response to Comment O10-65

Section 3.11, *Recreation*, of the Draft EIR relies upon established, professionally reviewed data sources as described in reports accessible to the public. While the City has access to and may consider third-party proprietary tools such as Placer.ai for certain planning purposes, such tools are not typically used as primary data sources in CEQA documents due to limitations related to methodological transparency, replicability, and representativeness at broader geographic scales. Given that the proposed project serves a regional transportation function, including connectivity beyond the City of Berkeley, the use of more authoritative data sources is appropriate and ensures consistency with established CEQA practice.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* for further discussion of the environmental baseline described in the Draft EIR.

The level of detail provided therein is sufficient to support environmental analysis in accordance with CEQA Guidelines. No further revisions to the EIR are necessary.

Response to Comment O10-66

Refer to Response to Comment O10-65 regarding concerns about baseline conditions and use of Placer.ai data.

Cumulative impacts considering future uses are analyzed at a level of detail consistent with CEQA Guidelines within Section 3.11.5, *Cumulative Impacts*, based on the cumulative baseline established in

Chapter 3 (refer to pages 3-1 through 3-10). The analysis therein concludes that cumulative impacts related to increased visitation would be less than significant (refer to page 3.11-24).

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-67 to O10-70

Draft EIR Section 3.11, *Recreation*, evaluates recreational use based on physical conditions and access rather than demographic or socioeconomic characteristics of users consistent with CEQA Guidelines (Section 15064(e)). However, the City acknowledges the importance of accessibility to the Waterfront, as expressed in Draft EIR Chapter 2, *Project Description*, which describes that a key objective of the project is to maximize access to the Bay (see Section 2.3, Project Objectives, page 2-4). While not required by CEQA and therefore not directly analyzed in the Draft EIR, the City has addressed socioeconomic concerns through other project planning efforts, such as preparation of the Environmental Justice Technical Report, which included extensive public engagement to support project design refinements and identify key issues.

These efforts are reflected in Draft EIR Section 2.5, *Project Components*, which describes several project features that would increase public access at the Waterfront for all users, including the implementation of new and improved pedestrian and bicycle infrastructure, the new pier and breakwater, and supporting amenities such as the ADA-compliant public plaza, restrooms, shade canopies, seating, fish cleaning station, and bike racks, as well as enhancements to existing AC Transit infrastructure, all of which have been designed to support increased accessibility and encourage recreational uses. Draft EIR Section 3.11.2, *Environmental Setting*, appropriately characterizes existing Waterfront uses consistent with what is required by CEQA Guidelines and provides sufficient information to assess the potential impacts associated with project implementation and whether recreational opportunities would be increased or diminished by the project (refer to Draft EIR pages 3.11-1 through 3.11-7). This is evaluated in Draft EIR Section 3.11.4, *Impacts Analysis*, under Impact REC-1, which concludes that the project would result in a net increase in recreational opportunities and that impacts related to increased visitation and subsequent degradation of existing recreational facilities would be less than significant (see Draft EIR pages 3.11-16 through 3.11-20).

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-71

The Draft EIR analyzes physical project impacts related to each CEQA Appendix G resource at a level consistent with CEQA Guidelines. As described in Responses to Comments O10-67 to O10-70, demographic or socioeconomic characteristics do not represent physical environmental impacts requiring analysis under CEQA Guidelines Section 15064(e). Accordingly, such characteristics are not disclosed in the Draft EIR *Project Description*, as they are not recognized issues under CEQA, and inclusion of such data as provided by the comment would not result in a change to the physical impact conclusions presented in the Draft EIR. The Draft EIR instead describes the project features (Chapter 2, *Project Description*) and then analyzes project impacts related to environmental resources in accordance with CEQA Appendix G Guidelines based on sufficient evidence in the record, regulatory requirements, and professional judgement by subject matter experts within Chapter 3, *Environmental Impact Analysis*. Therein, the Draft EIR demonstrates that the proposed project features such as the new pier and breakwater, new recreational and active transportation infrastructure, enhanced AC Transit facilities, and supporting amenities would result in improved access to the Waterfront (see Section 3.11, *Recreation*, Impact REC-1, and Section 3.12, *Transportation*, Impact TRA-1).

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-72 to O10-73

The Draft EIR acknowledges fishing as an existing Waterfront activity within Section 3.11, *Recreation* (see Section 3.11.2, Environmental Setting, pages 3.11-1 through 3.11-7). As described in Chapter 2, *Project Description*, and in Section 3.11.4, *Impacts Analysis*, the project would restore public access to the Berkeley Pier, which has been closed since 2015, thereby enhancing opportunities for fishing and other recreational uses (see Section 2.5, *Project Components*, and Impact REC-1).

The analyses and significance conclusions, and mitigation measures presented in Section 3.11, *Recreation* of the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-74

In response to this comment, the following text revisions have been made to Draft EIR page 3.4-10 to clarify the results of the 2025 Berkeley Pier evaluation:

> Two of the evaluation efforts focused on the Berkeley Pier and did not consider the property's larger developmental context, current ownership, and functionally related relationship of the Berkeley Pier to the larger Berkeley Marina, to which it is historically linked. As recommended by guidance from OHP, the evaluation was updated in 2025 to support the proposed project's environmental review to amplify information about the resource and document changes that have occurred since the previous evaluation.[43] Additionally, the updated 2025 Berkeley Pier evaluation considered the Berkeley Pier within its broader historical context, including its relationship to the Berkeley Marina, and assessed local eligibility, which was not included in previous evaluations. The results of the 2025 updated evaluation indicate that the Berkeley Pier does not meet the criteria for listing in the NRHP, CRHR, Berkeley Register of Designated Landmarks BERD, or as a City of Berkeley historical resource. Accordingly, the updated evaluation confirms that no historical resources are present within or directly adjacent to the project site.

The above text change is clarifying in nature, as it provides additional information regarding the evaluation outcome, but does not result in a change to the analysis or impact conclusions presented in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented in Section 3.4, *Cultural Resources*, of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment O10-75

Draft EIR Section 3.11, *Recreation,* acknowledges fishing as an existing Waterfront use (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7) and evaluates how project features would affect access to shoreline and pier-based fishing (see Section 3.11.4, pages 3.11-16 through 3.11-20). As described in Draft EIR Chapter 2, *Project Description*, the project would restore public access to the Berkeley Pier, which has been closed since 2015, and install new amenities that would support fishing and other recreational uses, such as shade canopies, seating, and a fish cleaning station (see Section 2.5, *Proposed Project Components*). Accordingly, the Draft EIR concludes that the project features described in Section 2.5 would enhance opportunities for fishing and other recreational uses, and that impacts related to degradation of existing recreational facilities and uses would be less than significant as a result (see Impact REC-1, pages 3.11-16 through 3.11-20).

The analyses, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-76

CEQA requires evaluation of physical environmental impacts rather than economic valuation or social benefits (CEQA Guidelines 15064(e)). Accordingly, Draft EIR Section 3.11, *Recreation*, evaluates whether recreational opportunities would be increased or decreased and whether implementation of new

recreational infrastructure would result in environmental impacts based on physical changes. The absence of economic valuation does not affect the adequacy of the environmental analysis within the Draft EIR. Nonetheless, the project would involve installation of a new pier and breakwater with supporting amenities that would increase and encourage access to fishing (see Section 2.5, *Proposed Project Components*, and Impact REC-1), thereby enhancing the economic and social benefits associated with recreational fishing referenced by the comment.

The analyses, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-77

The Draft EIR acknowledges boating, fishing, and related water-dependent recreational uses in Section 3.11.2, *Environmental Setting* (see Draft EIR pages 3.11-1 through 3.11-7). The comment does not identify a deficiency in the environmental analysis or affect the conclusions of Impact REC-1 or REC-2.

The comment is noted for informational purposes. No revisions to the Draft EIR are required.

Response to Comment O10-78

Refer to Response to Comment O10-76 regarding the comment about understating the economic value, use and social benefits of uses at the waterfront.

The omission of specific nonprofit program reporting or updated berth fee waiver data does not undermine the adequacy of the recreational baseline for purposes of CEQA impact analysis.

For additional discussion of baseline adequacy, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.*

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-79

While the comment provides additional details regarding specific programs and their social value, CEQA focuses on physical environmental conditions and impacts. The omission of specific programmatic or economic descriptions does not affect the adequacy of the environmental analysis.

The comment is noted for the record. No revisions to the Draft EIR are required.

Response to Comment O10-80

Draft EIR Section 3.11, *Recreation*, describes water-based recreation uses of the Waterfront, including sailing and windsurfing, and specifically acknowledges Cal Sailing Club activities within Section 3.11.2, Environmental Setting (refer to page 3.11-6). The description of existing recreational facilities and uses presented therein reflects level of detail sufficient to support analysis under CEQA, rather than a catalog of specific programs and their socioeconomic benefits, which are not subject to CEQA evaluation (CEQA Guidelines 15064(e)). Additionally, the Draft EIR demonstrates that project implementation would maintain access to existing sailing areas and improve infrastructure supporting water-based recreation (see Impact REC-1). Therefore, inclusion of the socioeconomic considerations provided by the comment would not result in a change in analysis or significance conclusions under Impact REC-1 or Impact REC-2.

The analyses, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-81

The Draft EIR does not understate the project site as a resource for swimming. Section 3.11, *Recreation*, Subsection 3.11.2, *Environmental Setting*, identifies swimming among existing recreational uses within the South Sailing Basin and San Francisco Bay (Pages 3.11-6 and 3.11-7). For further discussion of the baseline conditions used in the recreation analysis, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*. With respect to parking as it relates to public access, refer to Section 2.2.20, *Topical Response: Parking,* which describes specific planned strategies to reduce the potential for public access impacts due to parking conflicts between recreational users and ferry commuters.

Although the City maintains the adequacy of the recreational baseline conditions and analysis, in response to this comment, the following clarifying text change has been made to Section 3.11.2 of the EIR (Page 3.11-7):

> Open water swimming is a recognized recreational activity within the Berkeley Waterfront, including use of marina coves and shoreline areas. While the Draft EIR does not quantify user volumes, these activities are considered part of the existing recreational baseline in evaluating potential impacts to recreational access and facilities. Windsurfers, wingers, swimmers, paddleboarders, and kayakers launch from the South Sailing docks or Shorebird Beach for access throughout the South Sailing Cove and beyond. An un-improved rocky shoreline at the southernmost point of the 199 Seawall peninsula is used by some swimmers and windsurfers/wingers, primarily when low tides make launching from the South Cove undesirable due to shallow water and exposed mudflats. According to Berkeley Municipal Code Section 6.20.180, Prohibited activities, swimming, bathing, windsurfing, and wading is prohibited within the City jurisdictional waters except for the South Sailing Basin (including the Shorebird Park Beach and the sailing docks), and no personal watercraft of any kind may be operated within 1,500 feet of the Berkeley Pier.

The above text change is clarifying in nature, as it provides additional transparency regarding the recreational baseline, but does not result in a change to the analysis or impact conclusions presented in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment O10-82

Refer to Response to Comment O10-81 regarding the consideration of swimmers in the EIR.

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions are necessary.

Response to Comment O10-83

For discussion of baseline adequacy, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.*

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-84

Impacts to visual resources are discussed and analyzed in Section 3.1, *Aesthetics,* Impact Evaluation, pages 3.1-20 through 3.1-36*,* of the Draft EIR. Such analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of visual resource impacts is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-85

The Draft EIR evaluates the proposed project's consistency with applicable Bay Plan policies in Table 3.9-1 (BCDC Bay Plan Consistency) under Impact LU-2 in Section 3.9, *Land Use and Planning* (Draft EIR pages 3.9-12 through 3.9-23). Table 3.9-1 identifies relevant Bay Plan policies, including Public Access Policy 9 and Recreation Policy 9, and provides a qualitative assessment of project consistency based on project design features and operational characteristics. The analysis therein concludes that the proposed project would be consistent with applicable Bay Plan policies with implementation of identified mitigation measures (see Draft EIR page 3.9-23), and acknowledges that BCDC will conduct an independent review of the project's consistency with its governing laws and policies. Regarding Recreation Policy 9, refer also to Section 2.2.20, *Topical Response: Parking,* for a detailed discussion related to consistency with this policy as it relates to parking access for different users of the Berkeley Waterfront.

With respect to the comment regarding BCDC Bay Plan Appearance, Design, and Scenic Views Finding (d), Table 3.9-1 evaluates consistency with applicable Bay Plan policies, including those related to Appearance, Design, and Scenic Views. This analysis appropriately addresses policy consistency, as the Bay Plan Findings provide the basis for those policies but are not themselves independently applied as standards for consistency review consistent with CEQA Guidelines. Impacts related to aesthetics, including scenic views, are evaluated in more detail within Draft EIR Section 3.1, *Aesthetics*, which concludes that impacts related to scenic views would be less than significant (see Impact AES-1). For further discussion regarding project impacts related to scenic views, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access.* The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O10-86

As detailed in the Operation discussion under Impact AES-1, page 3.1-20, of the Draft EIR, the low profile of the proposed project compared to the elevation of surrounding viewpoints is one of multiple factors considered when determining the significance of impacts to scenic views and vistas. Additionally, the visibility of key viewsheds (i.e., the San Francisco skyline, the Bay, surrounding ridgelines) is key to determining whether substantial adverse effects on scenic vistas would occur; if a proposed project were to obscure a scenic vista, that would result in a significant impact. The proposed project was determined to have less than significant impacts to scenic vistas.

Environmental impacts associated with scenic vistas are evaluated throughout the Draft EIR. Such analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of scenic vistas is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-87

Changes to the scenic views, including the Bay and the extended viewshed, as a result of individual project components are detailed in Section 3.1, *Aesthetics* (Impacts AES-1, pages 3.1-20 through 3.1-27, and AES-3, pages 3.1-28 through 3.1-33). Impacts related to degradation of scenic views/vistas and visual character, and consistency with applicable zoning and other regulations governing scenic quality, were determined to be less than significant.

The aesthetics analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of scenic vistas is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-88

The comment expresses concern that the Draft EIR does not fully evaluate impacts to views of the Bay and shoreline, and scenic composition, resulting from implementation of the proposed breakwater.

Changes to the scenic views, including the Bay and the extended viewshed, as a result of individual project components are detailed in Section 3.1, *Aesthetics* (Impacts AES-1, pages 3.1-20 through 3.1-27, and AES-3, pages 3.1-28 through 3.1-33). Impacts related to degradation of scenic views/vistas and visual character, and consistency with applicable zoning and other regulations governing scenic quality, were determined to be less than significant.

Aesthetics analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of scenic vistas is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-89 to O1-93

Refer to Section 2.2.26, *Topical Response: Vessel Aesthetics*, for a discussion about how the project's introductions of ferry vessels would be consistent with the visual character of the viewshed.

The absence of vessels in conceptual renderings does not affect the adequacy of the environmental analysis, which evaluates impacts based on realistic operational assumptions. Accordingly, the analysis and conclusions presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O10-94

Section 2.7.1, *Operational Scenario and Ridership*, of the Draft EIR identifies a representative vessel capacity of approximately 250 passengers for purposes of estimating ridership and service levels, consistent with what WETA projects in its Berkeley Ferry Service Business Plan. This capacity assumption is used to describe a reasonable operational scenario and to inform projections of ferry frequency and daily ridership. The Draft EIR does not state that vessel passenger capacity directly determines vessel dimensions, nor does it rely on passenger capacity as a proxy for vessel footprint. Refer to Section 2.2.10, *Topical Response: Electric Ferry*, which describes that the analysis in the Draft EIR is based on a defined project "envelope" or set of reasonable operational components described in Chapter 2, Project Description.

The comment does not identify an inconsistency in the environmental analysis or demonstrate that the impact conclusions would differ based on alternative vessel capacity assumptions. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment O10-95 to O10-96

Refer to Section 2.2.26, *Topical Response: Vessel Aesthetics*, for a discussion related to the aesthetics associated with introducing ferry vessels in the Berkeley Waterfront.

The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-97

Refer to Section 2.2.26, *Topical Response: Vessel Aesthetics*, for a discussion related to the aesthetics associated with introducing ferry vessels in the Berkeley Waterfront.

Refer to Section 2.2.5, *Topical Response: CEQA Adequacy,* which explains that the City has concluded that the Draft EIR is sufficient from a CEQA perspective.

The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-98

The analyses provided in Section 3.1, *Aesthetics,* provide separate discussions of construction and operational impacts to aesthetics. Environmental impacts associated with project construction aesthetics are evaluated throughout the Draft EIR. Such analyses are based on the assumptions

described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of project construction aesthetics is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-99

Appendix G of the CEQA Guidelines requires evaluation of a project's effects on public scenic views and vistas. Because CEQA is concerned with impacts to the physical environment experienced by the public, changes to views from private businesses, including restaurants, are not considered environmental impacts requiring separate analysis under Appendix G. Views from the pier and recreational paths around Skates Restaurant are discussed under threshold question for Impact AES-1, page 3.1-20, of the Draft EIR, and represented by KVP 1. Such analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of scenic views and vistas is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-100

The threshold question for Impact AES-2, page 3.1-28, of the Draft EIR, is directly quoted from the Appendix G of the CEQA Guidelines, "Would the project… Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a **state scenic highway**?" (Emphasis added.) Thus, since there are no State scenic highways within the project site, no impact to these scenic resources would occur. Discussion and analysis of scenic resources within the project vicinity, but outside a state scenic highway, are provided in Impact Evaluation, pages 3.1-20 through 3.1-36, Section 3.1, *Aesthetics*.

Environmental impacts associated with scenic resources within a state scenic highway are evaluated under Impact AES-2, page 3.1-28, of the Draft EIR. Such analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of scenic resources within a state scenic highway is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-101

Impact AES-2 evaluates whether the project would damage scenic resources within a designated State scenic highway, consistent with CEQA Guidelines Appendix G significance criteria. As explained in Response to Comment O10-100, because no State scenic highway exists at or near the project site, traffic volumes are not relevant to this threshold. To the extent the comment is concerned with the visual presence of increased vehicle traffic on University Avenue or Seawall Drive as a change to the visual character of the corridor, vehicle traffic is a transient condition rather than a permanent physical alteration to the visual environment. Vehicles move through and clear the corridor continuously, and University Avenue and Seawall Drive are existing paved roadways where vehicular use is already part of the established visual and functional character of the area. An increase in the volume of an existing, transient use does not constitute a permanent visual change to the physical environment.

Refer to Response to Comment O10-100 and refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN*, for a discussion related to aesthetic traffic impacts. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-102 to O10-114

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to in-car viewing spaces and views from Seawall Drive.

To the extent the comment raises concerns about the distribution of costs and benefits among waterfront users of different income levels, these are important policy considerations that the City

Council should weigh in its deliberations on the project. However, the distribution of costs and benefits among different user groups does not constitute a physical environmental impact under CEQA. CEQA Guidelines Section 15131 provides that economic and social effects of a project shall not be treated as significant effects on the environment.

With regard to whether Seawall Drive is a cultural or historical feature, as stated on page 3.4-24, Section 3.4 *Cultural Resources*,

> "…the project site, inclusive of the Berkeley Pier, and its associated features and buildings as well as the proximate César E. Chávez Park, is not considered eligible for listing as a City of Berkeley Landmark or Structure of Merit given a lack of historical or architectural significance requisite for listing. Therefore, the project site is not considered a historical resource for the purposes of CEQA impact assessment evaluation."

The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-115

Refer to Section 3.9, *Land Use and Planning*, including Table 3.9-1 (BCDC San Francisco Bay Plan Consistency) on pages 3.9-12 through 3.9-23 of the Draft EIR, which evaluates consistency with applicable Bay Plan policies (Impact LU-2). Page 3.9-14 specifically addresses project consistency with Bay Plan Environmental Justice and Social Equity Policy 1, which requires the Commission to consider its guiding principles in all actions. As concluded therein, the project would not preclude the implementation of Policy 1, as the City has considered environmental justice in the development of the project and the potential impacts on environmental justice reports through its preparation of the Environmental Justice Technical Report. Impact LU-2 concludes that the project construction and operation would remain consistent with the applicable Bay Plan policies with implementation of identified mitigation measures (see Draft EIR page 3.9-23).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are necessary.

Response to Comment O10-116

Impact LU-2 within Section 3.9, *Land Use and Planning*, of the Draft EIR (see Table 3.9-1, pages 3.9-12 through 3.9-23) evaluates the project's consistency with applicable Bay Plan policies. As discussed on Draft EIR page 3.9-18, the project is consistent with Recreation Policy 9 because the proposed ferry terminal is located within an area contemplated by the policy and would maintain recreational access, including through shared-use parking, while ensuring navigational safety. Accordingly, Impact LU-2 concludes the project would be consistent with Bay Plan policies (page 3.9-23). Regarding Recreation Policy 9, refer also to Section 2.2.20, *Topical Response: Parking,* for a detailed discussion related to consistency with this policy as it relates to parking access for different users of the Berkeley Waterfront.

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are necessary.

Response to Comment O10-117

Impact LU-2 within Section 3.9, *Land Use and Planning*, of the Draft EIR (see Table 3.9-1, pages 3.9-12 through 3.9-23) evaluates the project's consistency with applicable Bay Plan policies. As discussed on Draft EIR page 3.9-17, the project is consistent with Transportation Policy 5.

As described therein, the proposed ferry terminal would be located along the existing 100-foot-wide U.S. Army Corps of Engineers-designated federal navigation channel adjacent to the pier, thereby providing access to navigable waters suitable for ferry operations. Regarding sedimentation, the Draft EIR explains that according to the Coastal Study prepared for the project by COWI, sedimentation rates at the ferry

terminal site were less than 0.05 foot between 2020 and 2023, indicating practically no sedimentation at the project site.

With respect to Transportation Policy 5's direction regarding tidal marshes, tidal flats, and wildlife habitat, the Draft EIR concludes that the project would not significantly affect such resources. As discussed on Draft EIR page 3.9-17 and in Section 3.3, *Biological Resources*, there are no tidal marshes located near the project site, and impacts to wildlife habitat would be less than significant with mitigation, including implementation of Mitigation Measure BIO-3, which would require the removal of existing pier fill to address net increase in fill and cover.

Regarding the policy's statement that terminals should be located near higher-density, mixed-use development where possible, the Draft EIR explains that although the project site is not located adjacent to higher-density mixed-use development, it is served by existing AC Transit service and includes improvements that would support expanded transit access, as well as enhanced bicycle and pedestrian facilities. Additionally, consistent with the parking and public access provisions of Transportation Policy 5, parking facilities serving the ferry terminal would be located landward of shoreline access areas, including the Seawall Drive Parking Lot, Skates/N parking area, and Marina Boulevard Lot. The project would also provide amenities intended to enhance public access and enjoyment of the Bay, including shoreline access improvements, Bay-viewing opportunities, public open space, and a portion of the Bay Trail Extension with seating and viewing areas.

Accordingly, Impact LU-2 concludes the project would be consistent with Transportation Policy 5 and other applicable Bay Plan policies (page 3.9-23).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remain valid as written in the Draft EIR. No revisions are necessary.

Response to Comment O10-118

Impact LU-2 within Section 3.9, *Land Use and Planning*, of the Draft EIR (see Table 3.9-1, pages 3.9-12 through 3.9-23) evaluates the project's consistency with applicable Bay Plan policies. As summarized therein on Draft EIR page 3.9-18, the City conducted public engagement with disadvantaged and/or underrepresented communities and prepared an Environmental Justice Technical Report, in consistent with the requirements Public Access Policy 5. Additionally, as described in Section 1.2.2, *Public Outreach* (pages 1-4 through 1-5), the project includes extensive community outreach, including engagement with historically underrepresented groups, and the project design incorporates inclusive public access improvements such as the new public pier, plaza, and Bay Trail extension (Section 2.5). Accordingly, Impact LU-2 concludes the project would be consistent with Bay Plan policies (page 3.9-23)

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are necessary.

Response to Comment O10-119

Impact LU-2 within Section 3.9, *Land Use and Planning*, of the Draft EIR (see Table 3.9-1, pages 3.9-12 through 3.9-23) evaluates the project's consistency with applicable Bay Plan policies, including Bay Plan Map No. 4 Policy 15. As discussed on Draft EIR page 3.9-22, the project is consistent with Bay Plan Map No. 4 Policy 15 because the policy specifically identifies a ferry terminal as a potential use at the Berkeley Waterfront if compatible with park and marina uses and served by public transit.

As described in Chapter 2, *Project Description* (Section 2.5) and summarized in Table 3.9-1 on page 3.9-22, the project includes a ferry terminal designed to be compatible with park and marina uses, as well as features intended to preserve and enhance recreational uses and Bay access, such as the construction of a publicly accessible pier, shoreline access improvements, Bay Trail Extension, public plaza, and supporting amenities. Consistent with the policy's transit provision, the project would be served by existing AC Transit routes and includes infrastructure improvements designed to support transit access, bicycle access, and pedestrian circulation, thereby reducing reliance on private vehicle travel and related

traffic and parking needs. With respect to the policy's reference to fish consumption advisories, signage requirements related to fishing and public health are addressed through applicable regulatory and operational requirements and do not alter the Draft EIR's land use consistency analysis. Accordingly, Impact LU-2 concludes the project would be consistent with Bay Plan Map No. 4 Policy 15 and other applicable Bay Plan policies (page 3.9-23).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are necessary.

Response to Comment O10-120

As described in Draft EIR Section 3.9, *Land Use and Planning*, the McAteer-Petris Act establishes BCDC with the authority to regulate land use and development in the coastal San Francisco Bay area, with aims to limit unnecessary fill, promote public access, and provide comprehensive planning through the San Francisco Bay Plan (see Draft EIR page 3.9-3). Draft EIR Section 3.9, *Land Use and Planning*, subsequently evaluates the project for consistency with all applicable land use plans, including the San Francisco Bay Plan, under Impact LU-2. Table 3.9-1 provides a consistency analysis for relevant Bay Plan policies, including those related to fill, public access, and planning. As summarized therein and described in greater detail in Draft EIR Chapter 2, *Project Description* (Section 2.5, *Project Components*), the project would include features that enhance public access and recreational opportunities such as a new publicly accessible pier, Bay Trail extension, and plaza. Table 3.9-1 also explains that the project would remain consistent with McAteer-Petris regulations on fill through the implementation of mitigation measures for biological resources and hydrology/water quality (see Draft EIR pages 3.9-13 through 3.9-14 and 3.9-16 through 3.9-17). Accordingly, the analysis within Impact LU-2 concludes that with incorporation of specified mitigation measures, project construction and operation would remain consistent with the goals of the McAteer-Petris Act implemented by applicable Bay Plan policies (see Draft EIR page 3.9-23). As indicated on page 2-33 of the Draft EIR, the City will obtain a Major Permit or Major Permit Amendment from BCDC.

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are necessary.

Response to Comment O10-121

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

Project consistency with the Berkeley Marina Master Plan is evaluated under Impact LU-2 in Draft EIR Section 3.9, *Land Use and Planning* (pages 3.9-29 through 3.9-33), which concludes that the project would be consistent with the key goals and strategies of the Plan (refer to page 3.9-33).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-122

Refer to Response to Comment O10-121.

Table 3.9-4 (Berkeley Marina Master Plan Consistency) identifies Principles 4A and 4B as applicable to the project and explains that the project would encourage and support marine and recreation functions without conflicting with marine operations (refer to page 3.9-32). Accordingly, the Draft EIR concludes that the project would be consistent with the key goals and strategies of the Berkeley Marina Master Plan (refer to page 3.9-33).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-123

Refer to Response to Comment O10-121.

Table 3.9-4 (Berkeley Marina Master Plan Consistency) identifies Principle 5 as applicable to the project and explains that the project would provide the pedestrian and bicycle infrastructure identified by the policy, while also incorporating additional recreational amenities and safety features to improve access for all users, inclusive of special user groups identified by Principle 5, thereby demonstrating consistency with the principle (refer to Draft EIR page 3.9-32). Accordingly, the Draft EIR concludes that the project would be consistent with the key goals and strategies of the Berkeley Marina Master Plan (refer to page 3.9-33).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-124

Refer to Response to Comment O10-121. Table 3.9-4 (Berkeley Marina Master Plan Consistency) identifies Principle 6 as applicable to the project and demonstrates consistency by identifying the pertinent policy under this Principle related to "maintain[ing] the Plan's prioritized capital improvement program…". As explained in Draft EIR page 3.9-32, the proposed project is a Berkeley capital improvement project (see Draft EIR page 3.9-32). Accordingly, the Draft EIR concludes that the project would be consistent with the key goals and strategies of the Berkeley Marina Master Plan (refer to page 3.9-33).

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-125

For discussion of the environmental baseline, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.*

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the EIR are required.

Response to Comment O10-126

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to in-car viewing spaces and views from Seawall Drive.

To the extent the comment raises concerns about the distribution of costs and benefits among waterfront users of different income levels, these are important policy considerations that the City Council should weigh in its deliberations on the project. However, the distribution of costs and benefits among different user groups does not constitute a physical environmental impact under CEQA. CEQA Guidelines Section 15131 provides that economic and social effects of a project shall not be treated as significant effects on the environment.

With regard to whether Seawall Drive is a cultural or historical feature, as stated on page 3.4-24, Section 3.4 *Cultural Resources*, "

> …the project site, inclusive of the Berkeley Pier, and its associated features and buildings as well as the proximate César E. Chávez Park, is not considered eligible for listing as a City of Berkeley Landmark or Structure of Merit given a lack of historical or architectural significance requisite for listing. Therefore, the project site is not considered a historical resource for the purposes of CEQA impact assessment evaluation."

The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment O10-127

The Draft EIR identifies the liveaboard community in the Marina as a residential community and evaluates the environmental resource areas with those residents in mind. For example, noise impacts and air quality impacts use thresholds established for residences. Section 3.10, *Noise* of the Draft EIR (page 3.10-17) states the following: "construction noise impacts upon live-aboard boats were evaluated using the City's construction noise threshold of 65 dBA for multi-family residential land uses." Section 3.2, A*ir Quality* of the Draft EIR (page 3.2-10) states the following "any individual living in the house boats . . . would have that potential risk covered in the conservative health risk analysis from living within 1,000 feet of the project site, as it is assumed residents are exposed for the maximum duration during a construction period."

The analysis, significance conclusions, and mitigation measures remain valid as written, and no revisions to the Draft EIR are required.

Response to Comment O10-128

For discussion of the environmental baseline, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.*

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the EIR are required.

Response to Comment O10-129

As described in the Draft EIR, the proposed project would introduce new and enhanced recreational features that do not currently exist, including a restored public pier, Bay Trail extension, and dedicated cycle track (see Section 2.5.2 and Impact REC-1). These features would expand recreational access and opportunities at the Berkeley Waterfront. In addition, although the project may increase visitation, the analysis concludes that this increased use would not result in substantial physical deterioration of existing facilities because the project itself includes new recreational infrastructure that accommodates additional demand (Impact REC-1).

Furthermore, the Draft EIR does not rely solely on a generalized "net increase" conclusion. Instead, it evaluates existing recreational conditions at the project site and vicinity (Section 3.11.2), the specific recreational components included in the project design (Section 2.5, *Proposed Project Components*), and whether project-related increase in use would result in physical environmental effects (Impact REC-1). Based on this analysis, the Draft EIR determines that the project would provide additional recreational opportunities and would not cause adverse physical impacts requiring new facilities or resulting in deterioration of existing ones. This conclusion is supported by substantial evidence and is consistent with CEQA Guidelines Appendix G.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-130

Please refer to Responses to Comments O10-42, O10-46, and O10-47. As described in Response to Comment O10-42, the referenced TSA option agreement does not constitute a lease agreement or an approved project and therefore is not an existing condition under CEQA. Nonetheless, the potential new restaurant is addressed in the cumulative impacts analysis. As described in Response to Comment O10-46, approved bond measures similarly do not constitute defined projects or existing conditions. As described in Response to Comment O10-47, although similar recreational improvements may occur independent of the project, recreational enhancements such as the proposed Bay Trail extension are intentionally included in the project design to advance the goals identified in Section 2.3, *Project Objectives*.

The purpose of the Draft EIR is to disclose and mitigate for the environmental impacts associated with the features being proposed by the project. This Draft EIR has done so. The Draft EIR appropriately evaluates baseline conditions and the environmental effects of all project components, regardless of whether similar features may be implemented independently by other agencies or as part of other projects. Accordingly, the analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-131

Refer to Section 2.2.20, *Topical Response: Parking.*

The comment's concern that the 199 Seawall area would no longer be accessible to the public is not supported by the Draft EIR. The project would continue to provide public access to waterfront recreational resources and would maintain parking facilities intended to serve a variety of users, including recreational visitors. For further discussion regarding the evaluation of project-related changes to Seawall Drive, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding the analysis of potential impacts to existing recreational users from the project. With respect to changes in recreational demand, the Draft EIR evaluates reasonably foreseeable conditions associated with project operation, including increased visitation associated with ferry riders accessing the terminal and new recreation use of the pier for activities such as walking, fishing and sightseeing (refer to Draft EIR Page 3.11-9, Proposed Recreational Amenities). Impact REC-1 analyzes the impact of increased visitation, finding that the project would increase the number of visitors to the Berkeley Waterfront area in a manner that may increase the use of on-site and nearby recreational facilities (Draft EIR page 3.11-16). However, because the project concurrently creates a net increase in recreational facilities and opportunities (a restored pier, new Bay Trail and new dedicated cycle track), the Draft EIR concludes that resulting impacts related to physical deterioration of existing recreational facilities, and the need for new or altered parks to maintain acceptable service ratios, would be less than significant (refer to Impact REC-1, Draft EIR Pages 3.11-16 through 3.11-20). This conclusion is based on the project's contribution of new recreational capacity commensurate with the increased visitation it would generate, not on an assumption that visitation would remain unchanged.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment O10-132

For discussion of Seawall Drive view access and the net increase in recreational use, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-133

For discussion of parking considerations, refer to Section 2.2.20, *Topical Response: Parking.* Some comments raise concerns that changes to parking, including the introduction of parking fees, would disproportionately affect lower-income and non-white recreational users who currently access the Berkeley Waterfront at no cost. The City acknowledges this concern. The imposition of parking fees does not impose an environmental impact that needs be analyzed.

The analysis, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No revisions are necessary.

Response to Comment O10-134

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a discussion of Berkeley Municipal Code 6.20.180 and its relationship to the proposed project.

The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further response or revisions to the Draft EIR are necessary.

Response to Comment O10-135

Potential impacts to fish and marine habitat are evaluated in Draft EIR Section 3.3, *Biological Resources*, including Impact BIO-1 (effects to special-status species and habitats) and Impact BIO-3 (effects to jurisdictional aquatic habitat), while recreational fishing access is evaluated in Draft EIR Section 3.11, *Recreation* (see Impact REC-1).

Within Section 3.3, *Biological Resources*, the Draft EIR evaluates both construction and operational effects of the proposed project on aquatic habitats, including fish and Essential Fish Habitat, and concludes that construction and operational impacts to fish habitat would be less than significant with the incorporation of mitigation measures such as seasonal work windows, soft-start pile driving procedures, and monitoring requirements to minimize disturbance to fish and marine species, as well as mitigation to ensure no net increase in Bay fill or substantial loss of aquatic habitat (see Section 3.3.4, *Impacts Analysis*, Impacts BIO-1 and BIO-3). CEQA requires evaluation of physical environmental impacts, such as changes to aquatic habitat and species behavior. While recreational fishing depends in part on underlying ecological conditions, CEQA does not require analysis of changes in fishing success, catch rates, or user experience. Because the Draft EIR concludes that the project would not result in significant adverse effects to fish habitat, no significant indirect impact to recreational fishing would occur under CEQA.

Recreational fishing access is evaluated in Section 3.11, *Recreation*, which considers both existing access conditions and the addition of new publicly accessible facilities, including the restored pier and enhanced shoreline access. As described therein, the project would maintain and expand opportunities for public access to the waterfront and fishing locations, and impacts to recreational access are concluded to be less than significant (see Section 3.11.4, *Impacts Analysis*, Impact REC-1).

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-136

The comment appears to be referring to Table 3.10-18 in Section 3.10, *Noise* of the Draft EIR. Table 3.10-18 shows that on University Avenue, between Seawall Drive and Marina Boulevard, there would be an increase of 1,127 daily trips, in addition to the existing 1,471 daily trips.[40] Average daily traffic is used for the purpose of estimating vehicle traffic increases and the associated traffic noise. For the purpose of Draft EIR, the 77% ADT increase is reported for University Avenue and is used for the noise analysis of potential traffic noise impacts.

Draft EIR Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Assessment Memorandum*, evaluate traffic increases and associated effects, while Draft EIR Section 3.11, *Recreation*, evaluates whether the project would result in adverse physical effects on recreational facilities or reduce public access to those facilities. The analysis in Section 3.12, *Transportation* concludes that the project would contribute to a net reduction in vehicle miles traveled, the applicable CEQA threshold for transportation impacts (see Impact TRA-2), and would not result in substantial adverse changes to access or circulation conditions affecting the waterfront. This analysis supports the findings in Section 3.11, *Recreation* which concludes that the proposed project would improve recreational access compared to existing conditions (see Impact REC-1). To the extent the comment states that increased traffic could indirectly affect recreational access, such effects would only be relevant under CEQA if they result cause substantial

[40] 1,471/1,127 *100 percent = 76.6 percent

deterioration of such facilities. As demonstrated in the Draft EIR, access to the waterfront would be maintained and enhanced through the provision of parking, multimodal access improvements, and new recreational infrastructure. Therefore, even considering transportation conditions, the project would not reduce access to recreational resources and would not result in a significant recreational impact.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-137

With respect to parking and access, refer to Section 2.2.20, *Topical Response: Parking.* The Draft EIR evaluates potential secondary effects of parking and circulation in Section 3.12, *Transportation*, and concludes that access to the waterfront would be maintained, including provision of a comparable parking supply and improved multimodal access options. With regard to recreational access and equipment-dependent recreational uses, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*, and Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

The comment's concern that changes in parking cost or availability could influence visitation patterns reflects potential behavioral or preference-based changes, which are considered social or economic effects rather than physical environmental impacts under CEQA. The comment does not identify a deficiency demonstrating that the project would result in a substantial adverse physical impact on recreational resources.

Accordingly, the analyses and significance conclusions presented in Section 3.11, *Recreation*, and Section 3.12, *Transportation*, of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment O10-138

As described in Draft EIR Section 3.9, *Land Use and Planning*, and Section 3.11, *Recreation*, the McAteer-Petris Act establishes the San Francisco Bay Conservation and Development Commission (BCDC) and provides the statutory framework governing development and public access within San Francisco Bay (see Section 3.9.2 and 3.11.2). Implementation of the Act's policies occurs primarily through BCDC's administration of the San Francisco Bay Plan and permitting authority. Accordingly, consistency with the McAteer-Petris Act is evaluated through analysis of project consistency with applicable Bay Plan policies and BCDC regulations. The Draft EIR primarily addresses this framework in Section 3.9, *Land Use and Planning*, which evaluates the project's consistency with applicable regional plans and policies, including the San Francisco Bay Plan administered by BCDC and the Berkeley Marina Master Plan (see Impact LU-2, Table 3.9-1 and Table 3.9-4). This analysis concludes that the project is consistent with Bay Plan policies related to public access, recreation, and shoreline use, which are intended to implement the goals of the McAteer-Petris Act, and that the project is consistent with the key principles of the Berkeley Marina Master Plan, which similarly is intended to preserve marina access (see Draft EIR pages 3.9-23 and 3.9-33).

The Draft EIR evaluates existing recreational uses and access conditions in Section 3.11, *Recreation*, and analyzes whether the project would result in adverse physical effects on recreational resources or reduce public access (see Impact REC-1). As described therein, although certain existing site conditions would change, the project would restore public access to the Berkeley Pier, which has been closed since 2015; provide new and enhanced recreational facilities, including improved Bay Trail connections and shoreline access; and maintain public access to waterfront areas, including parking and viewing opportunities along Seawall Drive and adjacent areas (see Section 3.1, *Aesthetics*, Impact AES-3 and Section 3.9, Table 3.9-1). The Draft EIR acknowledges that recreational use patterns may shift as a result of these changes. However, CEQA requires evaluation of physical environmental effects, such as the availability and condition of recreational facilities and access, not preservation of specific informal use patterns or user preferences. Thus, the analysis in Draft EIR Section 3.11 appropriately concludes that the project would

result in a net increase in recreational opportunities and improved access and would not result in substantial physical deterioration of recreational resources or require new facilities.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-139

The reference to a 0.07 percent reduction in VMT is identified in the 2003 WETA EIR for the nine county Bay Area as a whole. Regardless, the Draft EIR does not rely on the conclusions made in the 2003 WETA EIR for its VMT impact analysis. The Draft EIR has provided a project-level VMT analysis with the latest data. Refer to Impact TRA-2 in Section 3.12, *Transportation* of the Draft EIR (pages 3.12-20 to 3.12-21).

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-140

The comment appears to be referring to Table 3.10-18 in Section 3.10, *Noise* of the Draft EIR. Table 3.10-18 shows that on University Avenue, between Seawall Drive and Marina Boulevard, there would be an increase of 1,127 daily trips, in addition to the existing 1,471 daily trips.[41] Average daily traffic is used for the purpose of estimating vehicle traffic increases and the associated traffic noise. ADT and VMT are different metrics used for different reasons. For the purpose of Draft EIR, the 77 percent ADT increase is reported for University Avenue and is used for the noise analysis of potential traffic noise impacts.

As described in page 3.12-8 of the Draft EIR, prior rules treated automobile delay and congestion as an environmental impact; however, the final update to CEQA Guidelines consistent with SB 743 recommends using vehicle miles traveled (VMT) as the most appropriate metric of transportation impact to align local environmental review under CEQA with California's long-term greenhouse gas emissions reduction goals.

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* for analysis of the impact on recreational facilities, change in public access. Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* regarding the project consistency with applicable plans and policies. Based on the analysis in the Draft EIR, the project would enhance not split a recreational community.

Response to Comment O10-141

Refer to Response to Comments O10-139 and O10-140 for individual responses to these comments. No further response is required.

Response to Comment O10-142

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access* (Sub-Section Bay Plan Policy 15 and Marina Master Plan), regarding consistency with Bay Plan Policy 15. Refer also to Response to Comment A3-55 for further discussion regarding the Draft EIR analysis of construction-related impacts to recreation.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-143

Project consistency with the Berkeley Marina Master Plan is evaluated under Impact LU-2 in Draft EIR Section 3.9, *Land Use and Planning* (pages 3.9-29 through 3.9-33). Table 3.9-4 (Berkeley Marina Master Plan Consistency) identifies Principles 4A and 4B as applicable to the project and explains that the

[41] 1,471/1,127 *100 percent = 76.6 percent

project would encourage and support marine and recreation functions without conflicting with marine operations (refer to page 3.9-32). Accordingly, the Draft EIR concludes that the project would be consistent with the key goals and strategies of the Berkeley Marina Master Plan (refer to page 3.9-33).

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the project's consistency with policies, as they relate to transportation and parking management.

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remains valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-144

First, as a matter of clarification, the Draft EIR does disclose the TDM features that are being implemented as a part of the proposed project, and that are being cleared under CEQA. For example, Section 3.10, Noise (page 3.10-36) of the Draft EIR states the following: "The project includes enhanced bicycle facilities and secure bike parking; improved bicycle and pedestrian access including a two-way cycle track along University Avenue and Bay Trail improvements; designated pick-up and drop-off zones; and wayfinding that would direct visitors to appropriate parking lots." In this context, the commenter may also be referring to the Parking and TDM Plan. Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the strategies in the Parking and TDM Plan, and how they are addressed from both a CEQA and policy perspective.

Response to Comment O10-145

Refer to Section 2.2.3, *Topical Response BCDC Jurisdiction, Planning Consistency, and Permit Compliance*, and Section 2.2.20, *Topical Response: Parking,* regarding consistency with Bay Plan Policy 9.

With respect to parking (Recreation Policy 9), Table 3.9-1 of the Draft EIR explains that the City would implement a parking strategy to balance shared-use parking for ferry patrons and recreational users, thereby minimizing the shoreline area dedicated to parking while maintaining access for existing recreational users and avoiding displacement of park and marina parking (page 3.9-18 of the Draft EIR). The analysis therein concludes that the project would not conflict with the Bay Plan, and related construction and operational impacts would be less than significant with incorporation of Mitigation Measures BIO-1(a) through BIO-1(f), BIO-2, BIO-3, and HYD-1 (page 3.9-23).

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-146

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding the analysis of recreational access and use.

The analyses and significance conclusions presented under Impact REC-1 and throughout Section 3.11, *Recreation* remain valid as written. No revisions are required.

Response to Comment O10-147

First, as a matter of clarification, there is no designated State or City park that the proposed project would traverse. While the proposed project is located adjacent to City parks, the proposed project would not be located within a City park, with the exception of the installation of a wayfinding sign in Shorebird Park (refer to page 3.11-16 of the Draft EIR). The proposed project would also not traverse any State Parks. The closest State Park is McLaughlin Eastshore State Park, and as shown in Figure 3.11-12 of the Draft EIR (page 3.11-3), the proposed project does not traverse this State Park.

Nonetheless, the City does understand that recreational activities occur near the project site. The analysis in Section 3.11, *Recreation*, of the Draft EIR described existing recreation conditions on the Berkeley Waterfront and evaluated potential impacts to recreational resources in the project vicinity. As described

in the impact analysis of that section, the proposed project would be located near areas that include existing recreational uses; however, the project would not result in a significant impact to recreational resources. Additionally, the proposed project would result in a net increase of recreational facilities.

Therefore, while the project is in proximity to existing recreational opportunities unlike other WETA ferry terminals as the commenter identified, it would not result in a significant impact to recreational resources. No further response is required.

Response to Comment O10-148

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access* (Sub-Section Bay Plan Policy 15 and Marina Master Plan), regarding consistency with Bay Plan Policy 15.

The analyses and significance conclusions presented throughout the Draft EIR, including Chapter 5, remain valid as written. No revisions are required.

Response to Comment O10-149

For a detailed discussion of land use plan consistency considerations related to the Draft EIR, refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*.

Impact LU-2 within Section 3.9, *Land Use and Planning*, of the Draft EIR (see Table 3.9-1, pages 3.9-12 through 3.9-23) evaluates the project's consistency with applicable Bay Plan policies, including Transportation Policy 5. As discussed on Draft EIR page 3.9-17, the project is consistent with Transportation Policy 5. The Draft EIR does not interpret Transportation Policy 5 as requiring that all ferry terminals be located adjacent to higher-density, mixed-use development. Rather, the policy provides that such locations should be used "wherever possible," recognizing that site-specific conditions may warrant alternative locations. As described on Draft EIR page 3.9-17, the project site provides direct access to an existing federal navigation channel, experiences minimal sedimentation, provides an opportunity for dual-use recreation improvements and is served by existing AC Transit service. The proposed project would further improve multimodal access to the ferry terminal through enhancements to AC Transit facilities that would support expanded transit service, as well as new bicycle and pedestrian infrastructure. In addition, BCDC Bay Plan Map No. 4 Policy 15 specifically identifies a ferry terminal as a potential use at the Berkeley Waterfront, provided that the facility remains compatible with park and marina uses. As discussed on Draft EIR page 3.9-22, the project is consistent with those requirements because it would maintain compatibility with existing recreational and marina uses while expanding public access and recreational amenities. For further explanation of the project’s consistency with the other elements of Transportation Policy 5, refer to Response to Comment O10-117.

To the extent the comment expresses concern regarding the proposed ferry terminal site due to the comment’s characterization of the site as a recreational area, the Draft EIR acknowledges and evaluates the existing recreational uses of the Berkeley Waterfront within Section 3.11, *Recreation*. As discussed therein, the proposed project has been designed as a dual-purpose facility that would both accommodate ferry service and expand public recreational opportunities. The project would preserve existing marina, shoreline, and recreational uses while providing new recreational infrastructure, including a publicly accessible pier, Bay Trail improvements, public open space, and shoreline viewing opportunities. As a result, the Draft EIR concludes that the project would result in a net increase in recreational opportunities and facilities available to the public (see Impact REC-1).

Accordingly, Impact LU-2 concludes that the proposed project would be consistent with Transportation Policy 5 and other applicable Bay Plan policies (refer to page 3.9-23). The Draft EIR therefore does not conclude that the project's location within a recreational waterfront setting results in a conflict with Transportation Policy 5.

The analysis and significance conclusion presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, remain valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-150

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of parking adequacy and how parking is considered under CEQA. Regarding the comment about the lease at the 199 Seawall Drive restaurant, including the potential use of 150 parking spaces, refer to Response to Comment P36-108.

Response to Comment O10-151

Comments associated with this figure are responded to in Responses to Comment O10-150. This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-152

The Draft EIR evaluates recreation impacts under two distinct CEQA thresholds in Section 3.11, *Recreation*:

- Impact REC-1, which evaluates whether the project would increase use of existing recreational facilities such that substantial physical deterioration would occur or require construction of new or expanded facilities (pages 3.11-14 through 3.11-20); and
- Impact REC-2, which evaluates whether the project includes construction of recreational facilities or requires expansion of such facilities that could result in adverse environmental effects (pages 3.11-20 through 3.11-24).

With respect to construction-related access, refer to Response to Comment A3-55. Under Impact REC-1, the Draft EIR evaluates whether temporary construction-induced constraints would result in a substantial physical deterioration of recreational resources. Given the availability of numerous other waterfront areas, including the South Sailing Basin, Marina Basin, Bay Trail, and adjacent regional shoreline facilities, the Draft EIR concludes that temporary displacement of recreational users would not result in physical degradation of facilities or require construction of new recreational resources. This conclusion does not assume recreational uses are fully interchangeable; rather, it reflects the CEQA standard, which focuses on physical environmental effects, not temporary inconvenience or limitations at specific preferred locations.

With respect to Impact REC-2, the Draft EIR concludes that the project would include construction of recreational facilities (e.g., pier improvements, shoreline amenities, Bay Trail improvements), and that construction of these facilities would result in significant and unavoidable environmental impacts due to impacts disclosed in other sections of the Draft EIR related to other CEQA-defined resources, rather than direct impacts to existing recreational uses(see Section 3.11.4, pages 3.11-20 through 3.11-24). Accordingly, the Draft EIR does not conclude that all construction-related recreation impacts are less than significant; rather, it recognizes significant impacts associated with facility construction, consistent with CEQA requirements.

The commenter's reference to the duration of construction does not alter the CEQA significance determination under Impact REC-1. CEQA distinguishes between temporary construction-phase disruptions and permanent physical impacts. As described in the Draft EIR, construction would be time-limited and would not permanently remove or degrade recreational facilities or access. Seasonal variation in recreational use does not change this conclusion, as access to the broader Berkeley Waterfront and surrounding shoreline resources would remain available throughout the construction period. For further discussion regarding the Draft EIR analysis of construction-related impacts to recreation, refer to Response to Comment A3-55.

With respect to policies referenced by the commenter, consistency with the Berkeley Marina Plan and BCDC Bay Plan policies is evaluated in Section 3.9, *Land Use and Planning* (Impact LU-2, Table 3.9-1). As described therein, the project would maintain and enhance long-term public access and recreational

opportunities, and temporary construction-related access constraints do not constitute a policy conflict where long-term access is preserved and improved.

The comment does not identify a deficiency demonstrating that construction-related access limitations would result in a substantial adverse physical impact on recreational facilities, as defined under CEQA.

Response to Comment O10-153

Refer to Response to Comment O10-135 regarding potential impacts to recreational fish. Fish and marine habitat are evaluated in Draft EIR Section 3.3, *Biological Resources*, including Impact BIO-1 (effects to special-status species and habitats) and Impact BIO-3 (effects to jurisdictional aquatic habitat), while recreational fishing access is evaluated in Draft EIR Section 3.11, *Recreation* (see Impact REC-1).

In response to this comment, the following clarifying text change has been made to Page 3.11-15 within Section 3.11.4 of the EIR:

> Organizations and individuals provided general comments about addressing recreational impacts, including impacts on swimming and fishing, as well as recreational access. Comments about recreation impacts and recreational access are addressed in Impacts REC-1 and REC-2. Potential indirect effects on fish habitat and behavior are evaluated in Section 3.3, *Biological Resources*, while this Section evaluates physical access to fishing opportunities. The City also received comments about parking. Comments about parking not related to CEQA impacts are not addressed in this Section (please refer to Chapter 3, Environmental Impact Analysis, for a discussion about how parking is considered in this EIR).

The above text change is clarifying in nature, as it provides additional transparency regarding the recreational baseline, but does not result in a change to the analysis or impact conclusions presented in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment O10-154

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* regarding navigation near the waterfront. Potential risks associated with vessel operation, including low-probability incident scenarios such as loss of control during approach or docking, are addressed through design features, vessel specifications, and operational procedures implemented by WETA and subject to oversight by applicable regulatory agencies, including the U.S. Coast Guard and other maritime safety authorities [see Draft EIR Section 2.9, *Discretionary Actions and Required Approvals* (refer to page 2-33) and Section 3.12, *Transportation* (refer to Impact TRA-3, pages 3.12-23 and 3.12-24)].

With respect to impacts on existing marina users: under the proposed project, ferry vessels travel and dock in open Bay waters north of the pier, entirely outside the marina entrance. As described in the Draft EIR at Section 3.11, *Recreation*, boats entering or exiting the marina would continue to navigate around ferry infrastructure in a manner similar to how they currently navigate the existing pier and other Bay vessels.

Response to Comment O10-155

Draft EIR Section 3.11, *Recreation*, evaluates the types of recreational uses present in the project vicinity, including shoreline access, fishing, boating, and passive recreation. The analysis considers how these uses would change based on the project's physical footprint and design.

As described in Draft EIR Section 2.5, *Proposed Project Components*, (pages 2-6 through 2-25), the project includes restoration of the Berkeley Pier (supporting fishing and sightseeing), new public access areas, and improved shoreline amenities. While certain existing informal uses (such as in-car viewing along Seawall Drive) would be reconfigured, the Draft EIR concludes that the availability of recreational opportunities would increase in both quantity and quality.

Section 3.3, *Biological Resources*, evaluates potential impacts on aquatic habitat (pages 3.3-1 et seq.), concluding that impacts would be less than significant with mitigation. Accordingly, there is no substantial evidence that changes in habitat would materially reduce fishing opportunities.

The Draft EIR's CEQA analysis focuses on whether recreation would be substantially degraded; it concludes that although the location and configuration of certain activities may change, overall opportunities would not be significantly diminished (Impact REC-1, page 3.11-20).

The analyses and significance conclusions presented under Impact REC-1 remain valid as written. No revisions are required.

Response to Comment O10-156

As described in page 3.12-8 of the Draft EIR, prior rules treated automobile delay and congestion as an environmental impact; however, the final update to CEQA Guidelines consistent with SB 743 recommends using vehicle miles traveled (VMT) as the most appropriate metric of transportation impact to align local environmental review under CEQA with California's long-term greenhouse gas emissions reduction goals. However, the EIR did evaluate project traffic with regard to queuing of vehicles and safety and found that the traffic added from the project would not result in a worsening of traffic and result in safety hazards (refer to Impact TRA-3 in Section 3.12, *Transportation* of the Draft EIR, page 3.12-22 through 3.12-24).

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* regarding conflicts between commuter and recreational users. Circulation conflicts among user groups are primarily a social consideration rather than a physical environmental impact under CEQA; however, the topic is also addressed through the City's compliance with the BCDC Bay Plan, including Transportation Policy 4 and Public Access Policy 11, which require that transportation and shoreline improvements maintain and enhance safe, physical access to and along the Bay shoreline for all users. The project incorporates dedicated infrastructure designed to safely accommodate both user groups, including a new Class IV cycle track on University Avenue, raised table-top style crosswalks, a widened sidewalk connecting the AC Trans bus stop to the proposed plaza, wayfinding signage for pedestrians, bicyclists and vehicles and improved shoreline pathways. The City presented exhibits illustrating circulation routes and connections for land, water and ferry users groups at the DRB May 11, 2026 meeting. The DRB indicated it was satisfied that the design addressed their concerns.

Response to Comment O10-157

The character of the project site is addressed throughout the Draft EIR where it is reflected in CEQA thresholds and relates to physical impacts caused by the project. Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* regarding existing recreational uses and analysis of impacts on those uses. Refer to Section 2.2.26, *Topical Response: Vessel Aesthetics*, regarding proposed ferry vessels similar to existing boats traversing the Marina and waterfront. Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding proposed lighting and effects on the existing waterfront. Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* regarding the preservation of existing recreational uses. Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* regarding land use plan consistency considerations.

As described in Chapter 2, *Project Description*, of the Draft EIR, the project would introduce recreational improvements in addition to ferry service, as the project reflects interagency goals of enhancing public access and recreational goals at the waterfront while providing efficient and environmentally friendly public ferry service (see Section 2.3, *Project Objectives*, and Section 2.5, *Project Components*). The Draft EIR evaluates changes proposed by the project for consistency with applicable land use plans and existing uses within Section 3.9, *Land Use and Planning*, and Section 3.11, *Recreation*. As discussed in the analyses, the proposed project would restore public access to the pier, expand recreational amenities, and incorporate a dual-use design that accommodates both recreation and ferry service consistent with applicable regulations (see Impact LU-2 and Impact REC-1).

The analyses and significance conclusions presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, and under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-158

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the City's planning efforts to address parking concerns.

CEQA Guidelines 15123(a) states that "An EIR shall contain a brief summary of the proposed actions and its consequences. The language of the summary should be as clear and simple as reasonably practical." CEQA Guidelines 15123(b)(2) states that the summary shall identify "Areas of controversy known to the Lead Agency including issues raised by agencies and the public." The City has provided a "brief summary" of areas of controversy, consistent with the CEQA Guidelines. Please also note that Table 1-1 in Chapter 1, Introduction of the Draft EIR includes a more detailed list of comments raised by the public, including areas of controversy, and Appendix A includes the full text of all scoping comments received, including those expressing comments related to the controversy of the project.

Because the comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR, no further response is required.

Response to Comment O10-159

Refer to Response to Comment O10-157 regarding compatibility of the ferry operations with existing recreation uses.

Refer to Response to Comment O10-118 regarding consistency with BCDC Public Access Policy 5.

Given the recreational infrastructure and supporting amenities incorporated into the proposed project, the Draft EIR demonstrates that the project would increase both the quality and quantity of recreational opportunities. As a result, the analysis concludes that the project would not substantially degrade recreational uses and would maintain compatibility between ferry operations and recreation through design features and operational characteristics (see Impact REC-1). Accordingly, the analysis in Section 3.9, *Land Use and Planning*, concludes that the project would be consistent with applicable plans and policies governing existing and planned development at the Waterfront (see Impact LU-2).

The analyses and significance conclusions presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, and under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-160

CEQA requires evaluation of physical environmental effects, and does not require analysis of social or demographic equity impacts unless such effects would result in a physical change in the environment (CEQA Guidelines §15064(e)). Accordingly, the Draft EIR appropriately focuses on physical conditions, including the availability, capacity, and accessibility of recreational facilities, rather than demographic characteristics of users. Consistent with CEQA Guidelines Appendix G, Section 3.11, *Recreation*, evaluates whether the project would (1) increase use of existing recreational facilities such that substantial physical deterioration would occur, or (2) require construction of new or expanded facilities that could result in adverse physical environmental effects. The analysis concludes that the project would result in a net increase in recreational opportunities, including a restored public pier, new Bay Trail connection, shoreline access improvements, and additional amenities such as seating, shade structures, restrooms, and a fish-cleaning station (Impact REC-1).

The comment's concerns regarding potential effects of parking availability, congestion, or cost on specific user groups represent socioeconomic and policy considerations. Under CEQA, such considerations are not treated as environmental impacts unless they would cause a physical

environmental change. As explained in Chapter 3, *Environmental Impact Analysis*, of the Draft EIR, parking availability and pricing are not environmental impacts in themselves, although potential secondary physical effects (e.g., changes in access) are evaluated where appropriate. For further discussion of parking considerations, refer to Section 2.2.20, *Topical Response: Parking*.

Refer also to page 3.9-14 for an explanation of how the project would not preclude the implementation of Environmental Justice Policy 1.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-161

To the extent the comment's concerns relate to BCDC Bay Plan Environmental Justice Policy 1, refer to Response to Comment O10-115, which explains how the Draft EIR demonstrates project consistency with Environmental Justice Policy 1 under Impact LU-2 within Section 3.9, *Land Use and Planning* (see Table 3.9-1).

Regarding the statement that the project would introduce major traffic along University Avenue to Seawall Drive, the Draft EIR evaluates transportation conditions associated with the project in Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Assessment*. As discussed in Appendix F, University Avenue within the project vicinity would continue to operate at acceptable levels of service under project conditions. Additionally, as described in Draft EIR Chapter 2, *Project Description* (see Section 2.5.2), and Section 3.12, *Transportation* (see Section 3.12.4), the project includes multimodal access improvements, including enhancements to transit, bicycle, and pedestrian facilities, that are intended to reduce reliance on private vehicle travel. Accordingly, the Draft EIR does not support the conclusion that the project would introduce major traffic effects that would substantially alter access to or use of the Berkeley Waterfront. To the extent the comment contends that the project would divide an existing recreational community or result in a land use change impact, the Draft EIR evaluated potential land use, recreation, and public access effects in Sections 3.9, *Land Use and Planning* (see Impact LU-2), and 3.11, *Recreation* (see Impact REC-1). As discussed therein, the project has been designed as a dual-purpose facility that would accommodate ferry service while preserving and enhancing public access and recreational opportunities. The project would not eliminate the recreational function of the Berkeley Waterfront. Rather, it would maintain existing marina and recreational uses while providing additional public amenities, including a publicly accessible pier, shoreline access improvements, Bay Trail improvements, and new public open space. As discussed under Impact REC-1, the Draft EIR concludes that the project would result in a net increase in recreational opportunities and facilities available to the public.

Regarding Seawall Drive in-car viewing, impacts to scenic views are addressed in Draft EIR Section 3.1, *Aesthetics*, which concludes that impacts to scenic vistas would be less than significant (see Impact AES-1). For additional discussion of Seawall Drive access for in-car viewing, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*.

The analyses and significance conclusions presented in Section 3.1, *Aesthetics*, Section 3.9, *Land Use and Planning*, Section 3.11, *Recreation*, and Section 3.12, *Transportation*, remain valid as written in the Draft EIR. No revisions are required.

Response to Comment O10-162

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* regarding quantification of current recreational use and analysis of impacts. Refer to Section 3.9, *Land Use and Planning* of the Draft EIR and Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* regarding consistency with BCDC plan policies. Regarding the public trust implications, refer to page 3.9-3 of the Draft EIR for an explanation of how the Draft EIR considers the Public Trust Doctrine. Refer to Section 2.2.2, *Topical Response: Alternatives*, regarding evaluating a reduced footprint or relocated alternative that preserves existing access.

The analyses and significance conclusions presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment O10-163

Refer to Response to Comment O4-7 regarding the Draft EIR discussion of eelgrass. Refer to Response to Comment O10-167 for a discussion related to misreported data. The proposed project is not expected to impact eelgrass habitat function. No revisions to the EIR are necessary.

Response to Comment O10-164

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required and no revisions to the EIR are necessary.

Response to Comment O10-165

Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR where the subsequent 2009 and 2014 Baywide Eelgrass Inventories are cited. No eelgrass is currently documented to be present in the project site. No further response is required and no revisions to the EIR are necessary.

Response to Comment O10-166

Refer to Figure 15b of the 2004 Baywide Eelgrass Inventory that shows eelgrass distribution in Central San Francisco Bay; the figure shows eelgrass was detected within the Southern Sailing Basin.

The commenter also states that Figure 7 and Figure 8b of the 2004 Baywide Eelgrass Inventory show there is a high potential for eelgrass in the area surrounding the Project site. These figures show the results of the Habitat Suitability Index (HSI), a pre-survey screening model. The discussion on page 36 of the 2004 Baywide Eelgrass Inventory indicates that only 8.6% of the areas identified as potential eelgrass habitat by the pre-survey screening model actually supported eelgrass during the surveys. In addition, the discussion suggested that updated eelgrass distribution and more accurate bathymetry is needed to allow for a more exact model. No eelgrass is currently documented to be present in the project site. No further response is necessary and no revisions to the EIR are necessary.

Response to Comment O10-167

The commenter provided a figure from the 2014 Baywide Eelgrass Inventory that shows no eelgrass was detected in the Southern Sailing Basin in 2014. No further revisions to the EIR are necessary.

In addition, the comment refers to beds 18, 19, 21, and 22 from the 2014 Baywide Eelgrass inventory as evidence of eelgrass presence in the vicinity of the project site. Beds 18, 19, 21, and 22 are located more than 1,000 meters from the location of proposed in-water work which far exceeds the adopted threshold of 250 meters for potential impacts to eelgrass.[42]

Response to Comment O10-168

Refer to Response to Comment O10-167 regarding the adopted threshold of 250 meters for these locations which are more than 1,000 meters from the location of proposed in-water work. No further response is required and no revisions to the EIR are necessary.

[42] USACE and EPA 2011, Programmatic EFH Conservation Measures for the LTMS Program Agreed-upon by USACE, EPA, and NMFS. https://www.spn.usace.army.mil/Portals/68/docs/Dredging/LMTS/LTMS%20EFH%20full%20signed%20agreement%20FINAL%206-9-2011.pdf, Accessed June 18, 2026.

Response to Comment O10-169

Refer to Response to Comment O10-166 and Comment O10-167 for a discussion of eelgrass presence at the project site. No further response is required and no revisions to the EIR are necessary.

Response to Comment O10-170

The listed limitations and caveats of the *San Francisco Eelgrass Habitat Suitability Model* include an explicit disclaimer that the result of the model should not be used to determine current presence or absence of eelgrass and that the model is based on imperfect data sets.[43] This comment does not change the significance conclusions or mitigation in the Draft EIR. As such, no revisions to the EIR are necessary.

Response to Comment O10-171

The data for the EcoAtlas tool come from the 2004, 2009, and 2014 Baywide Eelgrass Inventories. Refer to Section 3.3.2, *Environmental Setting,* of the Draft EIR and Response to Comment O10-166 and Comment O10-167 for an analysis of the results of the Baywide Eelgrass Inventories. No revisions to the EIR are necessary.

Response to Comment O10-172

The data for the BCDC tool are sourced from the 2004, 2009, and 2014 Baywide Eelgrass Inventories. Refer to Section 3.3.2, *Environmental Setting,* of the Draft EIR and Response to Comment O10-166 and Comment O10-167 for an analysis of the results of the Baywide Eelgrass Inventories. No revisions to the EIR are necessary.

Response to Comment O10-173

The Ashby Shoal eelgrass bed is located more than 1,000 meters from the location of proposed in-water work which far exceeds the adopted threshold of 250 meters for potential impacts to eelgrass.[44] No revisions to the EIR are necessary.

Response to Comment O10-174

All iNaturalist observations in the vicinity of the project site show eelgrass wrack, or uprooted eelgrass mixed with organic debris. In sheltered bays, tracking studies show that detached seagrass can drift over 3 miles depending on tide and wind shifts.[45] Therefore, the presence of eelgrass wrack is not indicative of the presence of eelgrass beds in the immediate vicinity of the project site. This comment does not change the significance conclusions or mitigation in the Draft EIR. No revisions to the EIR are necessary.

Response to Comment O10-175

Refer to Chapter 3.3 *Biological Resources* for a discussion of dredging impacts. As stated in Section 3.3.4, *Impacts Analysis*, the City would obtain all applicable permits from the DMMO prior to dredging activities and consult with NMFS and CDFW during the permitting process. No revisions to the EIR are necessary.

[43] Audubon Society 2026, https://www.audubon.org/california/partnerships/san-francisco-bay-eelgrass-habitat-suitability-model, accessed June 18, 2026.

[44] USACE and EPA 2011, Programmatic EFH Conservation Measures for the LTMS Program Agreed-upon by USACE, EPA, and NMFS.

[45] Baring et al. 2018, https://www.sciencedirect.com/science/article/abs/pii/S0272771417302378, accessed June 18, 2026

Response to Comment O10-176

Refer to Section 3.3.2 Environmental Setting of the Draft EIR and the Response to Comment O10-166 and Comment O10-167 for an analysis of eelgrass presence at the project site. No revisions to the EIR are necessary.

Response to Comment O10-177

See Response to Comment O9-3 for discussion of survey adequacy and Response to Comment 04-7 for discussion regarding the absence of eelgrass at the project site. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O10-178

The proposed project is not expected to impact eelgrass habitat; therefore, the project does not conflict with the San Francisco Bay Subtidal Habitat Goals.

As discussed in detail in Impact LU-2 in Section 3.9, *Land Use and Planning*, construction and operation of the project would overall be consistent with the key policies of the BCDC San Francisco Bay Plan with incorporation of identified mitigation measures for biological resources and hydrology/water quality, specifically Mitigation Measures BIO-1(a) through BIO-1(e), BIO-2, BIO-3, HYD-1, and AES-1. No revisions to the EIR are necessary.

Response to Comment O10-179

The proposed project is not expected to impact eelgrass habitat due to the absence of eelgrass at the project site; therefore, the project does not conflict with the goals of the CEMP. No revisions to the EIR are necessary.

Response to Comment O10-180

Refer to the statement in Section 3.3.4, *Impacts Analysis*, on page 3.3-41 of the Draft EIR addressing the comment Letter from CDFW. The proposed project is not expected to impact eelgrass habitat due to the absence of eelgrass at the project site. No revisions to the EIR are necessary.

Response to Comment O10-181

As stated in the Draft EIR, Section 3.3.2 (pages 3.3-11 through 3.3-13) and shown on Figure 3.3-2 on page 3.3-9, there is no eelgrass habitat within the project site, and no project impacts related to or loss of eelgrass habitat would occur. In addition, see Response to Comment O4-7 for further discussion regarding the absence of eelgrass at the project site. Finally, carbon sequestration is not a topic required for analysis pursuant to CEQA and CEQA Guidelines. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment O10-182

Ferry operations and service frequency are described in Section 2.7 (Chapter 2, *Project Description*) and are evaluated across impact areas in Chapter 3, *Environmental Impacts Analysis*, with operational impacts addressed based on representative and conservative assumptions.

Regarding impacts from ferry operations, refer Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion of how the City used the 2003 WETA EIR in the Draft EIR.

Regarding maintenance dredging, refer to Section 2.2.15, *Topical Response: Maintenance Dredging.*

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O10-183

See Response to Comment O4-8 for discussion of project operation impacts on fish and other aquatic resources. See Response to Comment A3-28 for clarifying text changes to address dredging impacts to aquatic species and their habitat, which would include spawning areas, if present. In addition, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate,* for a discussion of sedimentation and Section 2.2.15, *Topical Response: Maintenance Dredging,* for a discussion of maintenance dredging. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O10-184

Operational ferry impacts, including vessel activity, are analyzed in Section 3.3, *Biological Resources* and Section 3.8, *Hydrology and Water Quality*. The analysis presented therein considers vessel-induced turbulence and baseline water conditions. For additional discussion of ferry operations and regional effects, refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment O10-185

Refer to Section 2.2.10, *Topical Response: Electric Ferry,* for a discussion of how the proposed project includes and the Draft EIR analyses assume installation and operation of an electric ferry, and not a ferry that would be propelled by any other means of fuel or energy source.

Response to Comment O10-186

The comment states the EIR does not address the impacts on recreational fishing especially with regard to white sturgeons and halibut.

Refer to Response to Comment O10-153, which revises the Draft EIR to clarify that Section 3.11, *Recreation*, evaluates recreational fishing access and opportunities, while Section 3.3, *Biological Resources*, evaluates effects to fish species, including white sturgeon and halibut, and aquatic habitat.

The analysis, significance conclusions, and mitigation measures presented in Section 3.3, *Biological Resources*, and Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions are required beyond the clarification provided in Response to Comment O10-153.

Response to Comment O10-187

Eelgrass is not known to occur on the north side of the pier nor anywhere within the project site, as noted in Draft EIR Section 3.3.2, Environmental Setting, page 3.3-11, nor are eelgrass beds expected to contribute to essential fish habitat within the project site as noted in Draft EIR Section 3.3.2, page 3.3-12. As discussed in Draft EIR Section 3.3.4 under Impact BIO-2, page 3.3-58, operational impacts to fish habitat would be limited to potential impacts related to water quality and introduction of invasive species and would be less than significant. Refer to Response to Comment O4-8 for additional discussion of operational aquatic species impacts.

Essential fish habitat (EFH) includes various types of aquatic habitat where fish spawn, breed, feed, or grow to maturity. Thus, in response to this comment, the following clarifying text has been added to Draft EIR Section 3.3 Biological Resources, page 3.3-58:

Section 3.3, page 3.3-58:

> Vessel operators would be required to comply with all USCG and RWQCB requirements for ferry operations. Therefore, operational impacts related to sensitive marine habitats, including EFH for Pacific Coast Salmon, would be less than significant.

Cumulative impacts on fish habitat, including EFH, are assessed in Draft EIR Section 3.3.5 on pages 3.3-67 through 3.3-69 and concluded to be less than significant.

Even with this clarification text change, the analysis and significance conclusion presented in the Draft EIR under Impact BIO-2 in Section 3.3.4, Impacts Analysis (pages 3.3-58 through 3.3-59) remains valid. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment O10-188

See Section 2.2.27, *Topical Response: VMT*, for a discussion of how the proposed project would result in a net reduction in regional VMT. The mobile source emissions in the GHG analysis in the Draft EIR were based on the Technical Memorandum for the project dated January 16, 2026, and included as Draft EIR Appendix F. The Technical Memorandum states in Table 3 page 4, that there are 955 person trips, of which 48 are transit, 153 are bike, 38 are pedestrian, and 96 are "other" (defined as including multiple modes and private shuttles) along with 382 single passenger trips, 115 carpool trips, 76 passenger drop off in personal vehicles, and 48 Taxi/transportation network (TNC) trips. The 1,127 daily vehicle trips include only the drive alone, carpool, passenger drop off, and Taxi/TNC trips. The Memorandum states the trip generation provided in Table 3 is conservative and doesn't account for the parking and TDM strategies. The Memorandum further states that "Factors such as limiting parking supply would constrain the number of trips that could be supported to the project, so while the pier may attract some new demand, overall trip levels at the Waterfront would be expected to self-regulate. Furthermore, the trips associated with pier and recreational visitors would be expected to be higher during the weekends when the ferry usage would be lower than weekdays. Hence, the estimated trip generation only shows information from the proposed ferry which as mentioned earlier is considered conservative as it doesn't account for parking and TDM strategies." Therefore, the 1,127 vehicle trips would more than account for the recreational trips that could occur on the weekends and during the week when ferry usage is lower. The mobile-related GHG emissions analysis in the EIR is accurate (see methodology approach discussion on Draft EIR page 3.6-32), and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment O10-189

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the Draft EIR's project objectives and how the City has identified a reasonable range of alternatives, consistent with CEQA.

The Draft EIR adequately identifies project objectives and analyzes a reasonable range of alternatives consistent with CEQA Guidelines. Accordingly, the analysis and conclusions presented in Chapter 5, *Alternatives*, of the Draft EIR remain valid as written. No changes to the Draft EIR are required in response to this comment.

Response to Comment O10-190

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of project objectives and its alternatives analyses.

Response to Comment O10-191

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the evidence used to conduct the VMT analysis.

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations.

Response to Comment O10-192

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the evidence used to conduct the VMT analysis.

Response to Comment O10-193

Refer to Response to Comment O10-189 for a discussion of project objectives. Furthermore, as a matter of clarification, one of the basic project objectives is to "provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco" (see Section 5.3 in Chapter 5, *Alternatives* of the Draft EIR, page 5-2). Large scale ferry service does meet this project objective.

The comment suggests that the Draft EIR should have evaluated ferry service as a recreational amenity rather than as a transportation service. As discussed in Draft EIR Section 5.9, *Alternatives Considered but Rejected* (page 5-27), the City considered a Smaller Scale Ferry Service Alternative during the alternatives screening process. The Draft EIR explains that a smaller ferry service would still introduce ferry operations and associated infrastructure but would not substantially reduce significant environmental impacts relative to the proposed project. Accordingly, the City determined that further evaluation of this alternative would not provide a meaningful environmental comparison. To provide further clarification, Draft EIR Section 5.9, *Alternatives Considered but Rejected* (page 5-27) is revised as follows:

> **Smaller scale ferry service.** Under this potential alternative, smaller ferry vessels or a reduced ferry vessel schedule would be used. A smaller ferry or reduced ferry vessel schedule would still result in additional ferry vessels and would not reduce a significant environmental impact. Regarding biological resources, in general, fish and marine mammals potentially near the Berkeley waterfront are adapted to the high activity level of an active marina and would avoid ferry boats as they now avoid commercial and recreational boaters. An alternative that would introduce a smaller scale ferry service would still have the same potential impact. Therefore, this alternative would not reduce any environmental impacts. Similarly, the use of smaller vessels or smaller scale ferry service would also not avoid or substantially lessen significant environmental impacts associated with dredging. Regardless of vessel size or the schedule of ferry vessels, ferry operations would still require in-water improvements and construction activities within the San Francisco Bay to provide safe vessel access and passenger boarding facilities and therefore, although a smaller vessel could potentially reduce dredging requirements, there is no assurance that dredging would be avoided altogether. In addition, to the extent that a smaller scale ferry service or smaller ferry vessel could operate from within the Berkeley Marina using an existing berth or marina facilities, such an alternative would present similar operational and feasibility concerns as the Berkeley Marina Basin alternative (refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*, of the Final EIR). Similar to the Berkeley Marina Basin alternative, a smaller scale ferry service or smaller ferry vessel would result in operational inefficiencies and decreased reliability, as ferry operations within the marina would be subject to maneuvering constraints, increased docking and departure times, and potential conflicts with slipholders. Furthermore, a substantially smaller ferry service or smaller ferry vessel would not fully meet the project's basic objective of providing efficient and environmentally friendly zero-emission public ferry service between Berkeley and San Francisco, as a smaller vessel or substantially reduced service schedule would lessen the project's capacity to improve regional connectivity and reduce single-occupancy vehicle trips. Because this alternative would not reduce significant environmental impacts and would not meet the project's basic objective of providing efficient ferry service, this alternative has been considered but rejected.

The comment also suggests that the Draft EIR should have evaluated a recreational-only pier alternative without ferry service. As discussed in Draft EIR Section 5.9 (page 5-27), the City considered a *No Ferry Service with New Pier Alternative* but did not carry it forward for detailed evaluation because it would not meet one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission public ferry service between Berkeley and San Francisco. The Draft EIR also notes that funding

available through WETA is tied to implementation of ferry service and that WETA can only fund and implement ferry projects.

With respect to the range of alternatives, the Draft EIR was developed using screening assumptions and criteria intended to identify alternatives that could attain most of the project objectives while reducing environmental impacts. Consistent with those assumptions, Chapter 5 evaluates the No Project Alternative and three action alternatives that vary key project components, including the amount of Bay fill, breakwater length, pier length, and landside facilities, and compares their environmental impacts and ability to meet project objectives (Draft EIR pages 5-3 through 5-31). Draft EIR Section 5.9 additionally identifies and explains why numerous other alternatives were considered but rejected from detailed analysis, including alternative terminal locations, the In-Marina Ferry Terminal Alternative, a Smaller Scale Ferry Service Alternative, a No Ferry Service with New Pier Alternative, transit alternatives, and repair of the existing pier (Draft EIR pages 5-25 through 5-28).

For additional discussion regarding the assumptions and criteria used to formulate and evaluate alternatives, as well as alternatives considered but rejected from further evaluation, please refer to Section 2.2.2, *Topical Response: Alternatives*.

The Draft EIR adequately evaluates project objectives and alternatives consistent with CEQA Guidelines. The analysis and conclusions presented in Chapter 5, Alternatives, of the Draft EIR remain valid as written. No further revisions to the Draft EIR are required in response to this comment.

Response to Comment O10-194

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the Draft EIR's project objectives and how the City has identified a reasonable range of alternatives, consistent with CEQA.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-195

Refer to Section 2.2.2, *Topical Response: Alternatives*. No further response is required.

Response to Comment O10-196

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the how the Draft EIR has appropriately considered alternatives, consistent with CEQA requirements.

Response to Comment O10-197

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of how the Draft EIR addresses the No Project Alternative. The Draft EIR clearly identifies the assumptions underlying Alternative 1 and applies those assumptions consistently throughout the alternatives analysis. The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-198

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of how the Draft EIR addresses the No Project Alternative.

The Draft EIR's evaluation of the No Project Alternative is based on the assumptions identified in Draft EIR Section 5.5, *Alternative 1: No Project Alternative*, and is intended to facilitate a comparison of environmental effects among alternatives. The analysis and conclusions presented in Chapter 5, *Alternatives*, of the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-199

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of how the Draft EIR addresses the No Project Alternative. The Draft EIR clearly identifies the assumptions underlying Alternative 1 and applies those assumptions consistently throughout the alternatives analysis.

As described in Draft EIR Section 5.5, *Alternative 1: No Project Alternative* (pages 5-3 through 5-9), Alternative 1 evaluates conditions under which the proposed project would not proceed. The purpose of the No Project Alternative is to provide a basis for comparison with the proposed project, rather than to speculate regarding every potential future improvement that could occur in the project vicinity. Additionally, the Draft EIR does not overstate the benefits of the proposed project. Rather, it identifies the project features and improvements proposed by the City in Chapter 2, *Project Description* (see Draft EIR Section 2.5, *Proposed Project Objectives*), and evaluates the environmental effects of those features, including their environmental benefits and impacts, in accordance with CEQA's informational and comparative analysis requirements.

The City has identified reasonably foreseeable projects in Table 3-1 of the Draft EIR, which include recreational amenities. It is true that these projects may continue under the No Project Alternative; however, the greatest influence of the No Project Alternatives analysis, for the purposes of a meaningful comparative analysis, continues to be the elimination of project features associated with the proposed project. For example, in terms of temporary construction impacts, while the implementation of these future projects would require construction, these would also occur under proposed project conditions, and the main difference to disclose is the reduced impacts from reduced construction associated with the elimination of proposed project amenities. In terms of operational impacts, such as VMT, GHG, and air quality impacts, the addition of future recreational projects will not measurably affect the VMT, GHG, or air quality analysis for the No Project Alternative. This is because the proposed project results in VMT reductions that could not be realized by any of the reasonably foreseeable projects identified in the Draft EIR.

The comment's views regarding other potential future improvements and proposed project benefits are noted. However, the comment does not identify information demonstrating that the Draft EIR's alternatives analysis fails to provide the meaningful environmental comparison required by CEQA. The analysis and conclusions in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-200

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the substantial evidence used to analyze the No Project Alternative. Refer also to Response to Comment O10-199 for further discussion of the No Project baseline conditions.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-201

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the substantial evidence used to analyze the No Project Alternative. Refer also to Response to Comment O10-199 for further discussion of the No Project baseline conditions.

The Draft EIR evaluates recreational opportunities under both the proposed project and Alternative 1. As described in Draft EIR Section 5.5.2, *Recreation* (page 5-8), Alternative 1 would not include reconstruction of the pier, ferry-related public access improvements, the public plaza, Bay Trail Extension, cycle track, or other recreational amenities included as part of the proposed project. The recreational benefits and impacts associated with the proposed project are separately evaluated in Draft EIR Section 3.11, *Recreation*, which concludes that the project would result in a net increase in recreational opportunities at the Waterfront (see Impact REC-1). The City acknowledges that other recreational or waterfront

improvements may occur independently of the proposed project and such projects are addressed separately, as appropriate, in the Draft EIR (see Chapter 3, *Environmental Impact Analysis*, pages 3-5 through 3-10). However, the possibility of other recreational projects does not change the fact that the recreational facilities proposed as part of this project do not currently exist and would not be implemented as a part of this project under Alternative 1. Consistent with CEQA, the Draft EIR evaluates the proposed project's recreational features against the environmental baseline and concludes that implementation of those project features would increase public access and recreational opportunities relative to existing conditions.

The comment suggests that "many project elements decrease recreation or have the potential to decrease recreation." As documented in the paragraph above, the City has found that the project would directly increase recreational opportunities. Insofar the comment is related to concerns on indirect impacts on recreation from parking or access, refer to Section 2.2.20, *Topical Response: Parking*, Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

The comment's opinion regarding the relative recreational value of existing and proposed conditions is noted. However, the Draft EIR discloses the recreational features that would occur under the proposed project and evaluates the No Project Alternative as required by CEQA. The analysis and conclusions presented in Chapter 3, *Environmental Impact Analysis*, and Chapter 5, *Alternatives*, of the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-202

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the substantial evidence used to analyze the No Project Alternative.

As discussed in Draft EIR Section 5.5, *Alternative 1: No Project Alternative* (pages 5-3 through 5-9), the purpose of the No Project Alternative is to evaluate the condition under which the proposed project would not proceed. The No Project Alternative therefore assumes that the project-specific improvements associated with the proposed project, including the reconstructed pier, ferry service, public plaza, Bay Trail Extension, cycle track, and related facilities, would not be implemented. The Draft EIR does not assume that no development or improvements could ever occur elsewhere within the project vicinity.

The comment identifies potential future improvements that may occur independent of the proposed project, including redevelopment of the site at 199 Seawall Drive. As discussed in the *EIR Baseline* Section of Chapter 3 (pages 3-1 through 3-2), the closure of the 199 Seawall restaurant is part of the existing environmental baseline because the restaurant was closed at the time the Notice of Preparation was published. Furthermore, the Draft EIR expressly acknowledges the potential reopening of a restaurant at 199 Seawall Drive in its cumulative impact analysis. As described in the *Cumulative Scenario Setting* subsection (pages 3-6 through 3-10), the reopening of a restaurant at the 199 Seawall site is included within the assumed buildout of the Draft Waterfront Specific Plan and is incorporated into the cumulative analyses where relevant. Accordingly, the Draft EIR does not ignore potential future redevelopment of the site. The existence of potential future redevelopment opportunities does not alter the purpose of the No Project Alternative or the environmental comparison required under CEQA. The Draft EIR evaluates the environmental effects of the proposed project relative to the No Project Alternative and discloses the environmental consequences of both scenarios.

In response to this Comment the No Project scenario, page 5-4 of the Draft EIR has been revised for clarity as follows.

> Under the No Project Alternative, none of the improvements associated with the project and the current uses would remain. Below is a summary of the No Project Alternative.
>
> - The pier, breakwater, and associated infrastructure for the ferry vessels would not be installed, and the pier would continue to deteriorate and remain closed to the public.

- No new ferry service from Berkeley would be established and vehicle trips across the Bay would continue at their current rate.
- No new public plaza would be installed.
- None of the improvements along University Avenue or Seawall Drive would be installed, including no new cycle track, no upgraded bus facilities, and no Bay Trail Extension. Vehicles, buses, pedestrians, and bicyclists would continue to use the existing facilities.
- The Seawall Drive East Parking lot would remain in its current condition.
- None of the construction associated with the project would occur.
- Reasonably foreseeable projects, as identified in Table 3-1 would continue to be implemented.

To clarify the potential impacts from reasonably foreseeable projects, page 5-8 has been revised as follows.

Transportation

Under Alternative 1, the site would remain in its current condition, with no ferry infrastructure, public plaza, recreation, or transportation improvements implemented. Existing facilities such as the deteriorating pier and Seawall Drive East Parking lot would remain unchanged, and vehicle trips across the Bay would continue at their current rate. At the project site, trips to the site for recreation would continue. In addition, if future development occurs at the Berkeley Waterfront, including but not limited to the development of a new restaurant at 199 Seawall Drive, local VMT would increase. Regionally, VMT would increase over time with projected regional growth, University Avenue would not undergo any safety improvements, and emergency evacuation capabilities would remain constrained. Alternative 1 transportation impacts would be less than significant.

The proposed project's impact related to transportation would be less than significant (see Section 3.12, *Transportation*). Alternative 1 would have a greater impact related to transportation compared to the proposed project due to the lack of improvements on University Avenue that would improve circulation and pedestrian safety, the lack of zero-emission transportation infrastructure that would decrease VMT, and the lack of emergency evacuation capability improvements that the proposed project would provide.

The analysis and conclusions presented in Chapter 5, *Alternatives* of the Draft EIR remain valid as written, and no further revisions to the EIR are necessary beyond the clarifying text included above.

Response to Comment O10-203

Refer to Section 2.2.27, *Topical Response: VMT*, which demonstrates that the project would result in lowered VMT compared to the No Project Alternative. Under California SB 743, transportation impacts in CEQA documents are evaluated using VMT rather than roadway congestion measures such as Level of Service (LOS). Because the project would reduce VMT even under conservative assumptions, it would not result in a transportation impact under CEQA. With respect to the No Project Alternative, the Draft EIR evaluates reasonably foreseeable future conditions in the absence of the project, consistent with CEQA guidelines 15126.6(e)(2). This includes consideration of planned and expected changes in travel patterns, population, and regional growth that would occur regardless of project approval. As described in the Draft EIR (refer to Section 3.12, *Transportation*; Chapter 5, *Alternatives*; and Appendix F, *Transportation Impact Analysis*), these conditions include continued reliance on existing travel modes, which are expected to result in greater regional vehicle travel compared to conditions with the proposed project in place. Accordingly, the analysis and conclusions in Section 3.12,*Transportation* and Chapter 5, *Alternatives* of the Draft EIR remain valid as written, and no further revisions are required.

Response to Comment O10-204

Refer to Section 2.2.27, *Topical Response: VMT*, regarding substantive evidence of lower VMT with the project. With respect to proposed project, induced travel or new trip generation, Appendix F demonstrates that the project would primarily serve existing regional travel demand rather than induce new long-distance trips. Localized increases in traffic volumes associated with terminal access do not correspond to an increase in VMT, which is the applicable CEQA metric. As a regional transit improvement in a constrained corridor, the project would provide an alternative to automobile travel and reduce reliance on longer-distance vehicle trips, resulting in a net reduction in VMT, consistent with State guidance on transit projects.

The comment has not provided evidence demonstrating that the methodology or assumptions are inconsistent with CEQA Guidelines or State guidance. Because the project would reduce VMT even under conservative assumptions, it would not result in a transportation impact under CEQA. Accordingly, the analysis and conclusions in Section 3.12, *Transportation* of the Draft EIR remain valid as written, and no further revisions are required.

Response to Comment O10-205

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the substantial evidence used to analyze the No Project Alternative. Refer also to Response to Comment O10-199 for further discussion of the No Project baseline conditions.

The comment's concern with those assumptions is noted. However, the comment does not identify any specific error in the environmental comparison presented in Draft EIR Chapter 5, *Alternatives*. The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-206 to O10-208

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the how the Draft EIR has identified a reasonable range of alternatives, including the evaluation of alternatives that allow for meaningful decision-making, consistent with CEQA.

Regarding the comment about alternatives that eliminate ferry operations, relocate the project, or provide non-ferry recreation focused improvements, refer to Response to Comment O10-193.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-209

As discussed in Draft EIR Section 5.5, *Alternative 1: No Project Alternative* (pages 5-3 through 5-9), the Draft EIR evaluates the No Project Alternative separately from the proposed project and identifies the environmental consequences associated with that scenario. The Draft EIR does not establish the proposed project as the environmental baseline. Rather, the Draft EIR explicitly defines the environmental baseline conditions evaluated in the No Project Alternative within Chapter 3, Environmental Impact Analysis (see Draft EIR pages 3-2 and 3-3, and the *Environmental Setting* subsections of each resource section). Accordingly, Draft EIR Chapter 5, *Alternatives*, compares the environmental effects of the proposed project and alternatives against the No Project Alternative and against existing environmental conditions as described in the applicable environmental resource sections. For further discussions of the baseline conditions assumptions evaluated in the alternatives analysis and the relationship between project objectives and alternatives analysis, refer to Section 2.2.2, *Topical Response: Alternatives*.

The comment's concern with the assumptions underlying the No Project Alternative is noted. However, the Draft EIR clearly identifies the assumptions used in developing Alternative 1 and provides the comparative analysis required by CEQA. The analysis and conclusions presented in Chapter 5,

Alternatives, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-210

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the how the Draft EIR has identified a reasonable range of alternatives, including the evaluation of alternatives that allow for meaningful decision-making, consistent with CEQA.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-211

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of the data used to design the project. Pages 5-9 through 5-10 of the Draft EIR state the following: "The exact length of the breakwater under this Alternative would depend on future engineering to identify the shortened length that would still maintain the necessary safe harbor conditions for ferry vessels to dock next to the proposed pier." Any reductions in the size of the breakwater will maintain necessary safe harbor conditions. The comment does not identify a specific deficiency in the analysis presented. No revisions to the Draft EIR are required.

Response to Comment O10-212

The City acknowledges the comment's opinion regarding the relative merits of Alternative 3. As discussed in Draft EIR Section 5.7, *Alternative 3: Shortened Pier Alternative* (pages 5-14 through 5-19), Alternative 3 was developed and evaluated as a reduced-project alternative that would decrease the length of the reconstructed pier, reduce Bay fill, and lessen certain environmental impacts associated with construction and operation of the proposed project. The purpose of evaluating Alternative 3 is to provide decision-makers with information regarding the environmental tradeoffs associated with a smaller pier configuration, not to identify a preferred design.

The comment's preference for a longer recreational pier and greater public access is noted. This comment is included in the project record considered by City decision makers. The Draft EIR evaluates Alternative 3, discloses its environmental advantages and disadvantages, and compares its ability to meet the project objectives relative to the proposed project, consistent with CEQA requirements. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-213

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the how the Draft EIR has identified a reasonable range of alternatives, including the evaluation of alternatives that allow for meaningful decision-making, consistent with CEQA.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-214

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the how the Draft EIR has identified a reasonable range of alternatives, including the evaluation of alternatives that allow for meaningful decision-making, consistent with CEQA. This Topical Response also includes a discussion of the process in which alternatives were considered but rejected, including alternative locations, as well as the City's discretion in developing project objectives.

Regarding the comment about a pier-only alternative, refer to Response to Comment O10-215 for a discussion of how his alternative was considered but ultimately rejected.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-215

As discussed in Draft EIR Section 5.9, *Alternatives Considered but Rejected* (refer to page 5-27), the City considered a "No Ferry Service with New Pier Alternative," which would include reconstruction of the pier without ferry facilities. The Draft EIR explains that this alternative was not carried forward for detailed analysis because it would not meet one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission public ferry service between Berkeley and San Francisco. The Draft EIR further notes that funding available through WETA is tied to implementation of ferry service and that WETA can only fund and implement ferry projects. Accordingly, the City determined that the alternative would not attain most of the project's basic objectives and would not be feasible.

The comment that the Draft EIR fails to provide a meaningful comparison of alternatives is not accurate. Draft EIR Chapter 5, *Alternatives*, evaluates the No Project Alternative (Alternative 1) and three action alternatives (Alternatives 2 through 4) that provide varying levels of public access, recreational improvements, and ferry service, and compares their environmental impacts and attainment of project objectives. The analysis concludes that the No Project Alternative would not enhance public access and recreational opportunities because the existing pier would remain closed and continue to deteriorate. The analysis further concludes that Alternative 2 (Shortened Breakwater), Alternative 3 (Shortened Pier), and Alternative 4 (Reduced Landside Facilities) would provide public access and recreational benefits, but to a lesser extent than the proposed project because they would reduce recreational amenities or public access opportunities. In addition, Draft EIR Chapter 5 concludes that the No Project Alternative would generally result in greater impacts related to air quality, greenhouse gas emissions, land use and planning, and transportation because it would not provide the transportation and environmental benefits associated with the proposed ferry service.

For further discussion regarding the formulation of project objectives as they relate to the development of project alternatives, as well as the criteria used to develop and evaluate alternatives and alternatives considered but rejected from detailed analysis, such as the no-ferry-service pier alternative, refer to Section 2.2.2, *Topical Response: Alternatives*.

Accordingly, the City concludes that the Draft EIR evaluates a reasonable range of feasible alternatives consistent with CEQA requirements. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-216

Please refer to Response to Comment O10-215 regarding the City's consideration of a no-ferry-service pier alternative. To the extent the comment references alternative funding sources, grant availability, or project financing, such issues are primarily economic, financial, and policy considerations and are not environmental impacts subject to CEQA review. Please refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

The comment's opinion regarding the feasibility of a pier-only project is noted and included in the project record considered by decision-makers. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-217

The City acknowledges the comment's support for a recreational-use pier alternative. Refer to Response to Comment O10-215.

The information cited by the comment regarding potential recreational visitation does not alter the City's conclusion that a pier-only alternative would not attain most of the project's basic objectives. The City's determination regarding which alternatives were carried forward for detailed evaluation is discussed in

Draft EIR Section 5.9, *Alternatives Considered but Rejected*, and further addressed in Response to Comment O10-215 and Section 2.2.2, *Topical Response: Alternatives*.

The comment's preference for a recreation-focused alternative is noted and included in the record considered by City decision makers for consideration. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-218

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The comment proposes alternative marina configurations that differ from those previously evaluated. However, the comment does not provide information demonstrating that such alternatives would avoid the operational, access, recreational, or feasibility issues identified in Draft EIR Section 5.9. The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-219

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The comment's observations regarding previous ferry operations are noted. However, they do not alter the conclusions presented in Draft EIR Chapter 5, *Alternatives* regarding the City's evaluation of the In-Marina Ferry Terminal Alternative. The analysis and conclusions in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-220

The comment suggests that ridership data from previous ferry services may support the viability of marina-based or smaller-scale ferry operations. However, the Draft EIR's analysis relies on project-specific ridership projections developed by WETA and evaluates impacts based on a conservative maximum operational scenario. The environmental analysis does not depend on historical Genentech or Tideline ridership data to determine whether the In-Marina Ferry Terminal Alternative or Smaller Scale Ferry Service Alternative would attain most of the project's basic objectives or substantially reduce environmental impacts. The comment has not demonstrated that inclusion of the referenced ridership information would result in a different impact determination, a different alternatives-screening conclusion, or a change to the analysis presented in the Draft EIR.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for additional discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation. With respect to the suggestion that a smaller-scale ferry service should have been analyzed, Draft EIR Section 5.9 similarly explains that the City considered a Smaller Scale Ferry Service Alternative but determined that it would not substantially reduce environmental impacts compared to the proposed project because it would still require ferry operations and associated ferry infrastructure (Draft EIR page 5-27). Accordingly, the City concluded that a smaller-scale ferry service would not provide a meaningful reduction in environmental impacts and therefore did not warrant separate detailed analysis.

The comment does not identify information demonstrating that either an In-Marina Ferry Terminal Alternative or a Smaller Scale Ferry Service Alternative would attain most of the project's basic objectives while substantially reducing environmental impacts compared to the alternatives evaluated in Chapter 5. For further discussion regarding alternatives considered but rejected from detailed evaluation, please refer to Section 2.2.2, *Topical Response: Alternatives*.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-221

The 2003 WETA EIR is a programmatic document that did not include a project-level analysis for a terminal at the Berkeley Waterfront. Page 2-2 of the WETA EIR states the following: "While the IOP does not represent a precisely fixed set of routes and terminal sites, the Proposed Project is based on the anticipated routes and terminals that would result from implementation of the IOP. The routes, terminals, and frequency of service (headways) associated with the Proposed Project are listed in Table 2.1. The routes and terminals are shown on Figure 2.1. Further site-specific studies and design would be necessary prior to IOP implementation to determine actual terminal sites and routes." The suggestion that the 2003 WETA EIR proposed a terminal within the marina is not accurate and the 2003 WETA EIR specifically identifies that additional studies will be needed to determine the actual terminal site. This Draft EIR provides that project-level analysis for a terminal site in the Berkeley Waterfront.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The comment does not identify a deficiency in the Draft EIR's environmental analysis or alternatives evaluation. Therefore, no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment O10-222

This comment specifically refers to text on page 3.9-10 within Section 3.9, *Land Use and Planning*, of the Draft EIR. Under the 'EIR Scoping Comments' heading, there is a brief discussion about a comment received on the NOP regarding urban decay and a specific court case regarding urban decay. Although urban decay is not a CEQA issue, this Section of the Draft EIR does address the NOP comment received and explains that the referenced case is not applicable because the project would not draw businesses or recreators away from the Berkeley Waterfront. It is expected that the project would bring in new visitors and recreators to the Berkeley Waterfront, resulting in positive economic and social effects. The information regarding expected economic and social effects within this Section does not influence the results of any impact analyses or mitigation measures found throughout the Draft EIR. The information included in page 3.9-10 was not analysis but rather the City's good faith effort to provide a response to the public on matters that are not CEQA impacts. It is still true that economic and social matters are not considered under CEQA. No revision to the Draft EIR is required in response to this comment.

Response to Comment O10-223

This comment specifically refers to text on page 3.9-15 within Table 3.9-1, *BCDC San Francisco Bay Plan Consistency*, in Section 3.9, *Land Use and Planning*, of the Draft EIR. Within this table, the proposed project's consistency with BCDC San Francisco Bay Plan Climate Change Policy 7 is analyzed. The policy broadly states that BCDC should evaluate each project on case-by-case basis to determine the project's public benefits, resilience to flooding, and capacity to adapt to climate change impacts. The discussion in the Draft EIR finds that the project is consistent with Climate Change Policy 7 due to the many types of public benefits it could provide, including economic benefits, reducing VMT, decreasing emissions, and providing additional transportation infrastructure in the region. Although this discussion does include economic benefits as cited from the 2022 WETA Business Plan, environmental impacts are discussed as well. The City has identified public benefits because the policy specifically references benefits. Section 3.9.4, Impact Analysis, of the Draft EIR states that, "[a] policy inconsistency is considered a significant adverse impact only if the inconsistency would result in a significant adverse physical impact". Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for more information about this topic. No revision to the Draft EIR is required in response to this comment.

Response to Comment O10-224

This comment specifically refers to text on page 3.9-32 within Table 3.9-4, *Berkeley Marina Master Plan Consistency*, in Section 3.9, *Land Use and Planning*, of the Draft EIR. Within this table, the proposed project's consistency with Berkeley Marina Master Plan Principle 5 is analyzed. The policy broadly

encourages projects to enhance access and use of the Berkeley Marina, especially for members of special user groups such as elder, economically disadvantaged or physically challenged persons. The discussion finds that the project is consistent with Principle 5 because the project would provide the infrastructure identified within the policy. Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for more information about this topic. No revision to the Draft EIR is required in response to this comment.

Response to Comment O10-225

It is correct that if a lead agency approves a project with significant and unavoidable impacts, that agency must prepare a Statement of Overriding Considerations that describes the specific social, economic, or other reasons supporting their decision. The purpose of the EIR is to disclose the environmental impacts of a project, identify mitigation to avoid or reduce impacts, and consider alternatives to a project. The EIR is used as an informational document for agencies and the public. The preparation of a Statement of Overriding Considerations happens after the preparation of the Final EIR and is a part of the materials used by the decision-making body to make a decision on the project. No revision to the Draft EIR is required in response to this comment.

Response to Comment O10-226

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

As stated in Response to Comment O10-13, economic and social considerations are evaluated by decision makers during the consideration of the Final EIR and are not part of the contents of the Draft EIR or CEQA analysis.

This comment is included in the project record considered by City decision makers. No further response is required.

Response to Comment O10-227

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion related to cumulative projects, as it relates to WETA's planned expansion of ferry terminal.

Response to Comment O10-228

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Response to Comment O10-229

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how the Draft EIR addressed parking, consistent with CEQA.

Response to Comment O10-230

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment O10-231

The discussion of Impact TRA-2 in Section 3.12, *Transportation*, of the Draft EIR states that ferry service between Berkeley and San Francisco would increase access to higher-paying jobs, which is substantiated by the 2022 WETA Berkeley Ferry Service Plan. Ferry service between Berkeley and San Francisco would allow workers to live in the East Bay while working in San Francisco or other regional areas providing higher-paying employment opportunities. Refer to Chapter 6, Equity Considerations, of the 2022 WETA Berkeley Service Plan for more information. Rather than social or economic benefits, the discussion in Impact TRA-2 is focused on how daily vehicle trips associated with the project may not necessarily be new trips and could be shifted rides from other commuters; people in West Berkeley currently have limited transit options. The expansion of ferry service would result in a new transit option for West Berkeley residents, which could lead to a shift in rides across the region. No further response is required.

Response to Comment O10-232

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-233

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment O10-234

The comment states that the city's public ferry survey found that respondents viewed ferry service primarily as a community amenity rather than a regular commuting option.

Refer to Section 2.2.27, *Topical Response: VMT*, regarding development of the ferry ridership numbers as well as changes in VMT resulting from implementation of the project.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment O10-235

Refer to Response to Comments O10-13 and O10-231. As discussed in Response to Comment O10-13, economic merits or social considerations are not environmental issues subject to analysis under CEQA. Nevertheless, this comment has been included in the project record considered by City decision makers.

To the extent the comment raises concerns about the distribution of costs and benefits among waterfront users of different income levels, these are important policy considerations that the City Council should weigh in its deliberations on the project. However, the distribution of costs and benefits among different user groups does not constitute a physical environmental impact under CEQA. CEQA Guidelines Section 15131 provides that economic and social effects of a project shall not be treated as significant effects on the environment. Section 3.11, *Recreation* of the Draft EIR analyzes whether the project would have physical impacts on recreational uses and access, and concludes that the project enhances rather than diminishes recreational opportunities at the Berkeley Waterfront. The equity implications of fee structures for marina and ferry infrastructure are policy matters appropriately addressed through the City's public deliberative process, not through the CEQA environmental review of the physical project. No revision to the Draft EIR is warranted on this basis.

Response to Comment O10-236

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Response to Comment O10-237

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Response to Comment O10-238

Regarding the commenter's opinion on the project this comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Regarding, concerns about recreation, please refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* and Section 3.11, *Recreation* of the Draft EIR, for a discussion about the potential impacts on recreation.

Regarding the comment about the separate process between this proposed project and the Waterfront Specific Plan, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*.

Response to Comment O10-239

Regarding the comment about conditions in State grants, this comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Regarding the WSP, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion about how the Draft EIR appropriately considers the Draft WSP in the Draft EIR.

Response to Comment O10-240

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the Marina Basin Alternative from further evaluation.

Response to Comment O10-241

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of the City's evaluation of alternatives.

Refer to Response to Comment O10-215, for a discussion about an alternative that would restore the recreational pier without ferry service.

Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment O10-242

This comment is accurate. The Draft EIR has identified potentially significant impacts and identified mitigation measures to address those impacts, consistent with CEQA. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment O10-243

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment O10-244

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of alternatives that were considered but rejected and how the City has identified a reasonable range of alternatives, consistent with CEQA.

Response to Comment O10-245

The Draft EIR already fully complies with the CEQA Guidelines and is adequate, as discussed in Section 2.2.5, *Topical Response: CEQA Adequacy.* Additionally, refer to Section 2.2.7, *Topical Response: CEQA Process*, for a discussion about why recirculation is not required. No further response is required.

Response to Comment O10-246

Insofar that these references and attachments provide information for earlier comments, those comments are addressed in earlier response to comments. Please refer to earlier response to comments. This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Subject: Request for Extension of deadline for Berkeley Pier Ferry Project EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

Given that the DEIR is 1000 pages, I would like to formally request an extension of the 45 day comment period for another two weeks thereby ending on or about April 27.

P2-1

Thank you in advance for consideration of my request.

Emilie Strauss
Berkeley, California

Letter P2

Commenter: Emilie Strauss

Date: March 13, 2026

Response to Comment P2-1

The City acknowledged this request for an extension of the Draft EIR comment deadline. The comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. No further response is required.

Subject: Berkeley Pier Ferry Draft EIR Public Comment

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Good afternoon,

I have some concerns regarding the sustainability of this project, specifically due to the fact that the nearest housing is over a mile away. P3-1

From the draft document, it is unclear to me if the ridership projections were made before or after the COVID-19 pandemic -- while it appears that they were published in 2022, it's not entirely clear to me when and how the estimates were calculated. P3-2 Without more detail on the sources of ridership projections, operating revenue scenarios seem overly optimistic, and I believe these merit further scrutiny to re-evaluate them to ensure the project's long-term viability. P3-3

Best regards,

Diego

--
Diego Aguilar-Canabal

Letter P3

Commenter: Diego Aguilar-Canabal

Date: March 13, 2026

Response to Comment P3-1

The comment does not identify a deficiency in the environmental analysis presented in the Draft EIR. Nevertheless, the City notes that sustainability concerns are incorporated throughout the project design. As described in Draft EIR Chapter 2, *Project Description*, the project would support a transition to zero-emission regional transportation options and would be served by all-electric ferry vessels operated by WETA (see Section 2.3, *Project Objectives*, page 2-4). The project also includes multimodal access improvements intended to reduce reliance on single-occupant vehicle trips, including bicycle and pedestrian facilities, Bay Trail improvements, transit connections, bicycle parking, and transportation demand management measures (see Section 2.5.2, pages 2-11 through 2-22). In addition, the project would include electric vehicle charging infrastructure within the parking area and has been designed to accommodate future solar photovoltaic installations over portions of the parking facilities. Refer to Draft EIR Chapter 2, *Project Description* (Section 2.5.2, page 2-18).

The Draft EIR also evaluates greenhouse gas emissions in Section 3.7, *Greenhouse Gas Emissions*, which concludes that the project would not conflict with applicable plans, policies, or regulations adopted to reduce greenhouse gas emissions and would not generate significant greenhouse gas impacts (see Impacts GHG-1 and GHG-2). The greenhouse gas analysis accounts for the project's transportation characteristics, operational features, and consistency with regional and State climate objectives.

While the comment questions whether the terminal's location relative to residential areas affects project sustainability, the comment does not identify specific sustainability concerns or provide evidence demonstrating that the project's environmental analysis or greenhouse gas conclusions are inaccurate.

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment P3-2

The ridership estimates presented in Table 2-4 of the Draft EIR (refer to page 2-31) were derived from the WETA Berkeley Ferry Service Business Plan, Version 1.0 (herein referred to as WETA Business Plan), dated March 17, 2022. The Business Plan explains that the ridership projections are based on pre-pandemic ridership assumptions and demand data but were adjusted to account for pandemic-related changes in travel behavior, fare structures, and ferry service demand. Specifically, the Business Plan states that it was prepared "amidst the ongoing COVID-19 pandemic and in the context of emerging recovery trends" and that the ridership projections are "based upon pre-COVID assumptions but have been adjusted to reflect a 'pandemic recovery' fare structure and changing commuter travel pattern trends and demand for weekend services," (see WETA Business Plan, page 1).

The WETA Business Plan further explains that the ridership projections were developed using updated assumptions regarding post-pandemic travel patterns, including changes in peak-period travel demand and increased demand for weekend ferry service, and that projections will continue to be refined as additional information becomes available (see WETA Business Plan pages 1 and 13-18). Accordingly, the ridership estimates presented in the Draft EIR were developed after the onset of the COVID-19 pandemic using a methodology that incorporated both pre-pandemic ridership data and post-pandemic recovery assumptions.

Refer to Response to Comment O7-4, which revises Table 2-4, Daily Ridership Projections (trips), on Draft EIR page 2-31 within Chapter 2, *Project Description*, to provide additional clarity regarding the ridership assumptions associated with the proposed project. The revision presented in Response to Comment O7-

4 is clarifying in nature and does not result in changes to the analysis of operational impacts or related assumptions associated with the proposed project. Accordingly, the analysis and conclusions presented in the Draft EIR remain valid as written. No further revisions to the Draft EIR are necessary beyond the clarification above.

Response to Comment P3-3

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Subject: comments on WETA ferry draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty and relevant city of Berkeley folks,

I'm writing with serious concerns about the proposed berkeley ferry EIR and the lack of protection for recreational use.

I'm a regular marina swimmer and a 20+ year Berkeley resident. The EIR dismisses the important recreational use of the Hs Lordships/south peninsula launch spot and gives no assurance that current recreational use will be protected. Though "unimproved" this is an established entry spot, used for decades. It was acknowledged in the 2003 Marina Master Plan, with the intent to "enhance windsurfer activity" at the location. During water levels below 3 feet -- nearly 50% of the time! -- it is the only feasible swimming launch in the marina. P4-1 P4-2

The EIR discusses an effort to make swimming illegal within 1500 feet of the pier. This ignores the original intent of the code 6.20.180 (to prohibit jetskis) along with decades of practice. The city is misinterpreting and misrepresenting this code to avoid analyzing the impacts on recreational use. P4-3

The environmental impacts of the plan, which include construction of a large breakwater, have not been adequately investigated. That area is extremely shallow and a breakwater will have a heavy impact on the bathymetry of the already silt-choked sailing basin (already unusable at low tide). The EIR does not address the potential impact on eelgrass in that area (observed regularly during low tide Ashby Shoal outings) which serves as a foundational species of the Bay and is protected under federal and state laws. P4-4 P4-5

This plan would eliminate recreational use of this area which is enjoyed by swimmers, fishers, walkers, wing and windboarders, kayakers, bird watchers, and others. This recreational amenity is valuable to residents of all income and social backgrounds. If a ferry is needed in this area, alternatives should be considered that do not eliminate the vibrant recreational community. P4-6 P4-7

Thank you for your time,

-Julie Allen

Letter P4

Commenter: Julie Allen

Date: March 14, 2026

Response to Comment P4-1

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, which provides clarification regarding access to water-based recreation and associated launch areas.

The analysis and significance conclusions in the Draft EIR remain valid as written. No further response or revisions to the EIR are necessary.

Response to Comment P4-2

The Draft EIR analyzes the project for consistency with the Marina Master Plan in Section 3.9, Land Use and Planning, and concludes that the project would not conflict with the key principles of the plan (see Impact LU-2, Table 3.9-4). With respect to water access from the 199 Seawall site, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

The analysis and significance conclusions in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are necessary.

Response to Comment P4-3

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for clarification regarding the analysis of recreational impacts as it relates to the Berkeley Municipal Code.

The analysis and significance conclusions in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are necessary.

Response to Comment P4-4

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion about the South Cove Sailing Basin, as it relates to sedimentation and bathymetry.

Response to Comment P4-5

Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR for information regarding eelgrass. The Ashby Shoal eelgrass bed is located more than 1,000 meters from the location of proposed in-water work which far exceeds the adopted threshold of 250 meters for potential impacts to eelgrass[46]. No revisions to the EIR are necessary.

Response to Comment P4-6

For discussion of shoreline access at 199 Seawall launch site and equipment-dependent access points, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which explains how such access is considered in the CEQA baseline and how the project would not eliminate or reduce those opportunities.

[46] USACE and EPA 2011, Programmatic EFH Conservation Measures for the LTMS Program Agreed-upon by USACE, EPA, and NMFS.

Accordingly, the Draft EIR does not support the statement that recreational use of the referenced area would be eliminated. The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P4-7

The analysis in the Draft EIR indicates that the proposed project would not “eliminate” a vibrant recreational community. Rather, the Draft EIR finds that the proposed project would enhance recreational opportunities through the construction of recreational amenities. Refer to Response to Comments P4-1, P4-2, P4-3, and P4-6 for a response to specific concerns on recreation raised in the comment letter.

For a discussion of how the Draft EIR considered alternatives, refer to Section 2.2.2, *Topical Response: Alternatives*.

To the extent the comment references recreational opportunities for people of different income levels and social backgrounds, the City notes that CEQA generally focuses on the project's physical environmental effects rather than the socioeconomic characteristics of recreational users. The comment's view regarding the value of the marina to the community is acknowledged and has been included in the project record considered by decision-makers. The comment does not identify a deficiency in the Draft EIR's analysis, and no revisions to the Draft EIR are necessary in response to this comment.

Subject: Berkeley marina ferry project proposal

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hello I am a native Berkeley resident and outdoor enthusiast and I wanted to express my concern over the proposed ferry project and its impacts on the Berkeley marina. I am concerned that there will be a large amount of commuter traffic and a parking mess that will make it near impossible for the people who enjoy outdoor activities at the marina to navigate . Also the impact of the ferry terminal to the existing water conditions- wind shadow/ wave shadow and environmental impact on an already stressed ecosystem. Also I wonder why we need another expensive transportation solution that requires major investment and infrastructure and does not solve the overall transportation problem in the Bay Area. A large investment for very little positive impact with potentially devastating impact to the quality of life for the residents of Berkeley sounds like like an awful idea.
Please do not pass the ferry project- let's find other solutions to our transportation and not negatively impact the quality of life that makes Berkeley a unique gem with a beautiful waterfront.
Thank you
Corbin Pagter

Email: lmcnulty@berkeleyca.gov
Subject: comments on WETA ferry draft EIR

I was on the Berkeley Waterfront Commission when the restrictions on Jetski operation was passed as a recommendation to Council. In fact I contributed to the proposed wording, increasing the speed limit in the access corridor from 5 to 15 MPH for better control in waves outside the harbor. Clearly this has no application to paddleboards, kayaks, swimmers, etc. The wording "*No jetski or personal watercraft of any kind...*" is used because "Jetski" is a registered trademark of Kawasaki, and a "Jetski" may actually be a "Sea-Doo" (Bombardier) or a "Waverunner" (Yamaha). Hence the term "PWC" or Personal Watercraft is used to accurately describe what is commonly recognized in the English language as a "Jetski" from a builder other than Kawasaki. The wording "*of any kind*" is there to make sure jetskis/PWCs from other manufacturers are covered. It's a "Scotch Tape" kind of thing. If you say "cellophane tape" to avoid the trademark, it's not interpreted as packing tape, etc. P6-1

I've tried to use "jetski" in papers about jetski safety I've written for the National Academy of Forensic Engineers, but the peer reviewers have insisted that I stay clear of that word and use PWC to describe the same thing.

Ask any AI server for the definition of a PWC: Perplexity gives me this one in the first cited reference: "A Personal Watercraft (PWC) often known as a jet ski, is a compact recreational waterfacft propelled by an inboard jet drive system..."

Point is, you can't extend the ordinance to apply Berkeley Municipal Code Section 6.20.180 to anything other than what is commonly known as a "jet ski." This based on both widespread modern usage of the terms "PWC" or "Personal Watercraft," and on legislative intent, of which I have personal knowledge. P6-2

Liza McNulty, PE, Project Manager
Parks, Recreation & Waterfront Department
2180 Milvia Street, 3rd Floor
Berkeley, CA 94704
Email: lmcnulty@berkeleyca.gov
Subject: comments on WETA ferry draft EIR

The EIR is deficient in that it does not address the effect of various TDM (Transportation Demand Management) strategies on the environment. More specifically, it does not provide the detail required to asses where ferry passengers will park when demand exceeds the dedicated lot for ferry passengers. Also, the EIR does not include the environmental effects of using fast ferries to partially compensate for excessive time required to find a parking space. P7-1 P7-2

Of particular interest to boat berthers (who provide about 2/3 of Marina Fund revenue) is how guests, crew and family will be differentiated from ferry passengers who have strong incentives to use the lots intended for boat berthers. We assume that boat berthers will be issued parking permits in some for that will exempt them from time-of-day or elapsed time restrictions. But boats are rarely used by the owner alone. My 25 ft sailboat, for example, usually sails with a total crew of five, so four additional parking spaces are needed in the O-Dock lot. None of my crew live near a direct bus line, and they all bring a heavy sea bag and personal safety gear. That, and distance make bike access infeasible. Crew and guests have the same time-of-day requirements as ferry passengers: Early arrival and all-day, and sometimes overnight, use of the parking space. Larger boats may sail with ten crew or more. Boats that go fishing for the day have similar requirements for guest parking. P7-3

How will this be handled? Will all crew or guests have to stop by the marina office to get a temporary pass? Does the economic forecast allow for keeping the marina office open on Sunday mornings? Adding cost, whether monetary or tranactional (e.g.time wasted) reduces the marketability of berths on the south side of the harbor and will reduce berther revenue.

There will be unintended consequences. For example, a ferry commuter might buy an inexpensive (or even a semi-derelict) boat for the sole purpose of obtaining a parking pass. Note that some of the berther parking lots are closer to the proposed ferry terminal than the designated ferry passenger log. At $300/month (typical for a 25 ft berth) this is only $10/day, a bargain for a reliable and convenient space. This use would be a clear violation of tideland public trust (see 1913 tideland grant and 1962 amendments...) It's a non- P7-4

maritime and non-recreational use.

A related but often ignored environmental effect of insufficient parking: When passengers have to spend time finding a legal parking space, it increasing the required speed and carbon footprint of the ferries in order to meet a door-to-door transit time. P7-5

Various studies have shown that when missing a boat, train or carpool has serious consequences, e.g. being very late for work, most commuters will allow two standard deviations of time margin. Example: If parking is adequate and easy to find (see Richmond ferry terminal) the process of parking and walking back to the boarding gangway only takes about two minutes with a standard deviation of about one minute at most. So arriving five minutes before scheduled departure is a reliable strategy. But what if it takes 15 minutes to find a more distant parking space, searching in several lots or cruising for the closest on-street parking possibility, then at least five minutes to walk back to the ferry. Standard deviation perhaps 5 minutes. The average commuter will allow the 20 (15+5) minutes average delay, plus two sigma or ten minutes (2x5) margin to be sure not to miss the boat. This adds 25 minutes to the door-to-door commute time, compared to a scenario with ample parking. P7-6

For our short route to SF, the ferry has to very much faster to provide the same commute time, door-to-door. Remember that required power is proportional to speed cubed -- so the environmental impact of the ferry system is much reduced if sufficient parking is part of the system. It's cheaper and greener to provide the parking and slow down the boats. P7-7

Letter P7

Commenter: Paul Kamen

Date: March 14, 2026

Response to Comment P7-1

TDM strategies provide an alternative to driving and result in reduction of GHG emissions. Hence, TDM strategies are beneficial for the environment. The commenter appears to be concerned about how the TDM can affect parking availability. Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the project's effect on parking availability.

Response to Comment P7-2

Ferry vessels will not operate at higher speeds to compensate for time required to find a parking space. Ferry speeds are governed by operational, safety, and regulatory constraints, not passenger arrival patterns. No supporting arguments, data, or analysis were provided to substantiate these comments. Accordingly, no changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is required.

Response to Comment P7-3

Refer to Section 2.2.20, *Topical Response: Parking.* The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P7-4

The comment expresses concern that ferry users could obtain berthing privileges to access marina parking.

The comment concerns speculative user behavior and parking management practices rather than a physical environmental impact under CEQA. For discussion regarding project-related parking changes, parking management strategies, and the analysis of parking-related impacts under CEQA, refer to Section 2.2.20, *Topical Response: Parking.* No revisions are required.

Response to Comment P7-5

Ferry vessels will not operate at higher speeds to compensate for time required to find a parking space. Ferry speeds are governed by operational, safety, and regulatory constraints, not passenger arrival patterns. No supporting arguments, data, or analysis were provided to substantiate these comments. Accordingly, no changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is required.

Response to Comment P7-6

This comment pertains to commuter choice and travel behavior rather than environmental impacts as defined under CEQA. Parking convenience and commute reliability are social and operational considerations, not environmental impacts in and of themselves. The Draft EIR evaluates vehicle circulation and potential secondary environmental effects related to parking search behavior pursuant to CEQA requirements (refer to Section 3.12.4, *Transportation*, *Impacts Analysis* subsection, Pages 3.12-15 through 3.12-25). For further discussion on the evaluation of parking and potential secondary effects, refer to Section 2.2.20, *Topical Response: Parking*.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

This comment is noted; however no supporting arguments, data, or analysis were provided to substantiate these comments. Accordingly, no changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P7-7

Refer to Response to Comment P7-5.

Email: lmcnulty@berkeleyca.gov
Subject: comments on WETA ferry draft EIR

Successful ski resorts offer a variety of difficulty levels: There's a bunny slope, some intermediate runs, and the expert slopes. A ski resort needs all three.

Windsurfing and beginner sailing in the South Cove have the same requirements: A popular site needs to provide conditions for a wide range of skill levels. P8-1

One of the features that make the South Cove so desirable and popular for small boat sailing and windsurfing (and related wind-powered activities) is that it offers wind and waves at all levels of skill.

The "inner sailing area," with wind moderated by the land mass and the trees on Hs. Lordships peninsula, is of particular importance for the novice area. There are about 40 trees slated to be removed in order to increase the capacity of the Hs. Lordships parking lot from approx. 250 to 400. This will likely change the wind environment of the inner South Cove. More wind, more difficulty for novice sailors, more demands on the rescue skiff for both Cal Sailing Club and Cal Adventures. And less continued use by the more skilled sailors, if they had to go elsewhere to learn. P8-2

The South Cove site is unique among windsurfing sites for its skill level variety. Removing wind-attenuating trees will cause an environmental impact not mentioned in the EIR that will be difficult to undo. It will compromise access and safety. This needs to be analyzed in detail. P8-3

Letter P8

Commenter: Paul Kamen

Date: March 15, 2026

Response to Comment P8-1

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, and to Section 2.2.29, *Topical Response: Wind,* regarding maintaining South Sailing Basin conditions.

The Draft EIR concludes that the range of recreational opportunities, including those supporting different skill levels, would be maintained, and that water based recreation would continue to occur safely in the vicinity of the project. For further discussion of recreational water access, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P8-2

Refer to Section 2.2.29, *Topical Response: Wind*, which provides clarification regarding the analysis of wind conditions related to recreational uses.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P8-3

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Impact /marina meeting 3/16/2026

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi there

I am concerned about the impact of the planning of the ferry terminal in berkeley marina. We are a growing community wingers, windsurfers, sailors and need sometimes parking there to unload heavy gear. I come every other day to the marina to work out. When I windsurf I am also concerned about having enough wind and buildings being built at the current 'lordships' can restrict the wind flow or wind line.

P9-1

P9-2

I am also concerned about having too many ferries. Water is crowded with boats,... Lately I have been using my bike on the bay bridge to go to the city. Now that's something to work on!

P9-3

Kind regards
Tinne Aerts

Letter P9

Commenter: Tinne Aerts

Date: March 15, 2026

Response to Comment P9-1

Refer to Section 2.2.20, *Topical Response: Parking,* regarding parking availability as it relates to CEQA. Refer also to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*, regarding equipment-dependent recreational activities and access needs.

As discussed therein, CEQA does not treat parking availability, parking convenience, or user preferences regarding parking location as environmental impacts in themselves. The Draft EIR evaluates whether project-related parking changes would result in secondary physical environmental impacts, including restrictions on access to recreational resources. The Draft EIR concludes that recreational access would be maintained, parking supply would remain available for recreational users, and implementation of the project would not result in a significant impact to recreational resources or access.

The analyses and significance conclusions presented in Sections 3.11, *Recreation*, 3.12, *Transportation*, and related sections of the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P9-2

The comment is concerned about potential changes in wind conditions near 199 Seawall Drive from buildings being built there.

The City does not propose to build buildings near 199 Seawall Drive as part of this project. Refer to Section 2.2.29, *Topical Response: Wind* for discussion concerning CEQA and wind. Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* concerning the 199 Seawall launch point. No further response is required.

Response to Comment P9-3

The comment expresses concern regarding the quantity of ferries in the San Francisco Bay.

Page 2-30 of the Draft EIR describes that the project would operate two ferry vessels with regular service to San Francisco. The project would represent an incremental increase in existing boat trips on the Bay.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Letter P10

From: Leslie Absher <leslie@leslieabsher.com>
Sent: Sunday, March 15, 2026 2:19 PM
To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Comments on WETA ferry draft IER

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza McNulty,

I am writing to express opposition to the changes proposed in WETA's ferry draft IER to eradicate recreational activities in the waters of the Berkeley Marina. I have been following the developments and meetings between community members who use the marina for recreational swimming and other water sports closely. I am a regular swimmer at the marina and a member of the 500 strong East Bay Open Water swim group. P10-1 P10-2

Among my grievances is the fact that the IER makes little to no provisions for maintaining and respecting the decades long precedent of swimmers, boarders, wingers, windsurfers and others to be able to continue to enjoy the marina. The ferry draft states that it will charge recreational folks to park. It will declare swimming illegal in the open bay, where it doesn't have jurisdiction. It will get rid of Seawall drive 'in-car' viewing altogether after promising to protect it. P10-3 P10-4 P10-5

So many promises broken.

No more picnics, quick lunch breaks to unwind, gathering at sunset to look at the sky with a loved one, or swims with community groups. All the things that help us feel connected. The Bay belongs to all of us--swimmers, kayakers, windsurfers, kiteboarders, stand-up paddlers, wingers, and walkers. Everyone. P10-6

There is plenty of precedence in place protecting recreational access. BCDC governs the Bay and protects its continued recreational use. In 2003, the city acknowledged the Lordships entry point for recreational use in the marina master plan and yet the current plan ignores this precedent and the decades of established recreational use. P10-7

Perhaps most egregious in WETA's plan is its decision to remove Seawall Drive for 'in-car' viewing. Anyone who wants to look out at our Bay and relax for a while without forking out bucks is out of luck. Simply put cutting the public out of the picture is antithetical to what city government and its contractors should be doing. Time to set it right. P10-8

Sincerely,
Leslie Absher

Leslie Absher

Spy Daughter, Queer Girl

Letter P10

Commenter: Leslie Absher

Date: March 15, 2026

Response to Comment P10-1

The comment expresses opposition to the project because it would eradicate recreational activities.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* and Section 2.2.14, *Topical Response: Loss of Ferry Vessel Contro*l regarding impacts to existing recreational uses.

The Draft EIR does not conclude that existing recreational activities would be eradicated or eliminated. As discussed in the Topical Responses identified above, the Draft EIR recognizes existing water-based recreational uses, including sailing, kayaking, swimming, windsurfing, wing foiling, and other marina-related activities as part of the recreational baseline (see Draft EIR Section 3.11.1, *Environmental Setting*). Existing recreational access points, including the South Sailing Basin and the 199 Seawall launch area, would remain available, and the project would not physically eliminate these recreational uses. Ferry operations would occur north of the pier within defined navigation corridors and would not preclude continued recreational use of the Berkeley Waterfront. The Draft EIR concludes that existing recreational access would be maintained and that the project would provide additional recreational amenities, including a restored public pier, Bay Trail improvements, shoreline amenities, and other public access features (refer to Section 3.11.4, *Impacts Analysis*, Impact REC-1).

The analysis and significance conclusions presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further response is required.

Response to Comment P10-2

The comment states the author is a regular swimmer in the Marina and a member of the East Bay Open Water swim group.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P10-3

The comment states that the Draft EIR does not provide for existing long-standing recreational users (swimmers, boarders, windsurfers, etc.).

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding impacts to existing recreational uses.

The analyses, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No further revisions are necessary.

Response to Comment P10-4

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking management strategies, parking fees, and the role of parking under CEQA. As discussed therein, parking fees and parking pricing are operational and policy considerations rather than environmental impacts under CEQA. The Draft EIR evaluates potential secondary physical environmental effects associated with parking and concludes that no significant parking-related environmental impacts would occur. No revisions to the Draft EIR are required.

Response to Comment P10-5

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for the topic of swimming in the Bay.

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to in-car viewing spaces and views from Seawall Drive. The analyses, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No further revisions are necessary.

Response to Comment P10-6

The comment expresses concern regarding loss of recreational activities.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding impacts to existing recreational uses. The comment does not pertain to the analyses, significance conclusions, and mitigation measures presented in the Draft EIR. No further revisions are necessary.

Response to Comment P10-7

Section 3.9, *Land Use and Planning*, evaluates project consistency with adopted land use plans, including the Berkeley Marina Master Plan and BCDC San Francisco Bay Plan (refer to Impact LU-2, Pages 3.9-12 through 3.9-23 and 3.9-29 through 33). As concluded therein, the project would be consistent with both the Berkeley Marina Master Plan and BCDC San Francisco Bay Plan. To the extent that the project would conflict with an adopted policy (specifically, noise thresholds established by the Berkeley Municipal Code during project construction), such effects are analyzed and mitigated in the appropriate resource Section (refer to Section 3.9.4 Pages 3.9-34 and 3.9-35).

With respect to specific concerns regarding water access, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

The analysis, significance conclusions, and mitigation measures presented in Section 3.9, *Land Use and Planning*, and Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Response to Comment P10-8

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.20, *Topical Response: Parking,* for discussions regarding in-car viewing access and parking considerations. No further response is required.

Subject: comments on WETA ferry Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi,

Please hear me out on my comments on the city's WETA ferry draft EIR. I regularly swim at the Lordship's Restaurant entry point with Odyssey Swim Club. The recreation we enjoy there needs to be respected and given due consideration. Swimming in the ocean should not be considered illegal, as a Marina is meant to provide recreation opportunities for the general public. P11-1

Besides swimmers, many windsurfers also use the Marina as a launch point and their right to recreation needs to be protected too..

I understand that a Ferry would make public transportation possible around Berkeley and be a source of income for the city. This is a worthy purpose, there's no denying that. But please strike a balance with recreational users, we don't have many safe protected places to swim. P11-2

Sincerely,
Ives Humphreys
1730 Lacassie Ave, Unit 11
Walnut Creek, CA 94596

Letter P11

Commenter: Ives Humphreys

Date: March 15, 2026

Response to Comment P11-1

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of the Berkeley Municipal Code provision as it relates to the project and Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* for discussion of maintenance of existing 199 Seawall launch site.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P11-2

The comment supporting ferry service is not a comment pertaining to the CEQA analysis and has been included in the project record considered by decision makers.

With regard to preserving recreational swimming access, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, regarding existing recreational use and the benefit the project will provide to overall recreational use at the waterfront. Refer also to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* for discussion of maintenance of existing 199 Seawall launch site.

The analyses and significance conclusions presented under Impact REC-1 within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revision to the EIR is required.

Subject: recreational water use near proposed Berkeley Pier

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi,

I'm not sure I'm following. Is Berkeley is trying to limit non-motorized, healthy recreational use of the waters within 1500' of the proposed Berkeley pier? I hope not. People should still be able to continue use the water on the "left" side of the pier as looking at the pier from the land and in this "picture" as it shows people enjoying healthy activities. Please keep the waters open for healthy, non-motorized reacreational use! P12-1

Eugenia McCauley

P12-2

Letter P12

Commenter: Eugenia McCauley

Date: March 15, 2026

Response to Comment P12-1

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* which explains that the City is not limiting non-motorized use of the areas near the pier as part of the proposed project.

Response to Comment P12-2

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* which explains that the City is not limiting non-motorized use of the areas near the pier as part of the proposed project.

Letter P13

From: Kirk van Moon <kirk@vanmoon.com>
Sent: Sunday, March 15, 2026 6:00 PM
To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Comments on WETA ferry draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hello,

I am an avid windsports enthusiast who launches at the Berkeley Marina all year round. I am concerned about the proposed ferry situation and impacts for existing watersports use. P13-1

I have two areas of concern:

1. Access to the water on the south end of Seawall Drive, near the old Hs. Lordships building.

During low tides (twice a day), the ***docks in the South Sailing Basin do not provide enough water depth to launch most sailing or hydrofoiling vessels***. Even the swimmers (who draw very little water depth) often enter and exit the water from the small cove on the West side of the Hs. Lordships building, due to the shallow water at the docks. P13-2

It is imperative that access to this single and important launch area remain available for existing and future watersports users.

2. Parking along Seawall Drive.

It isn't yet clear from the City's plans, but limiting the existing parking (and SF viewing) areas along Seawall Drive would be unacceptable. P13-3

Please consider carefully the impacts on existing users when planning for modifications to the Berkeley Marina area and waterfront.

Many thanks,

Kirk out

Kirk van Moon
kirk@vanmoon.com

Letter P13

Commenter: Kirk van Moon

Date: March 15, 2026

Response to Comment P13-1

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* and Section 2.2.29, *Topical Response: Wind.* As discussed therein, existing launch points used by windsurfers, wingers, sailors, swimmers, and other water-based recreational users would remain available. Vessel activity associated with the project would be comparable to existing boat activity with minimal wake effects (see Impact REC-1, pages 3.11-19 and 3.11-20). Ferry operations would occur north of the pier within defined navigation corridors and would be subject to applicable navigation and safety requirements.

In addition, as described in Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* Section 3.11, *Recreation* (pages 3.11-19 and 3.11-20), has been revised to provide additional clarification regarding the continued compatibility of ferry operations and recreational water uses.

The analysis and conclusions presented therein remain valid as written, and no further clarifications are required.

Response to Comment P13-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for water-based recreation.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P13-3

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to in-car viewing spaces and views from Seawall Drive. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response is required.

Subject: Berkeley Marina feedback and request

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi Liza,

I am a long time Berkeley resident and active windsports enthusiast. I frequently launche at the Berkeley Marina all year round. I am writing about some recent things I have heard that concer me regarding the proposed ferry situation and impacts for existing watersports use. P15-1

The areas of concern I have are:

> Water Access - on the south end of Seawall Drive, near the old Hs. Lordships building. This is my most frequently used water access spot due to low tides making the docks in the South Sailing Basin un laudable, due to a need for at least 4 feet of water depth to launch hydrofoiling vessels. I also see swimmers often enter and exit the water from the small cove on the West side of the Hs. Lordships building, due to the shallow water at the docks. P15-2

It is imperative that access to this single and important launch area remain available for existing and future watersports users.

> Seawall Drive Parking - I am not sure yet what the City's plans are, but limiting the existing parking (and SF viewing) areas along Seawall Drive would be unacceptable in my view. P15-3

I am asking you to consider carefully the impacts on existing users when planning for modifications to the Berkeley Marina area and waterfront.

I am happy to discuss any questions or ideas also.

Thanks much,
Michael Evans

Subject: Proposed Berkeley Ferry Development Rules

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza McNulty,

I've been an active user of the public docs facing the Berkeley South Basin and SF Bay for almost a decade. I do windsports, stand up paddling and swimming several times a week along with the many other community members who enjoy using this space to enter the SF Bay.

P16-1

I am concerned about the proposed ferry situation and impacts for existing watersports use. There are two areas of concern I'd like to raise.

1. Access to the water on the south end of Seawall Drive, near the old Hs. Lordships building.

During low tides (twice a day), the **docks in the South Sailing Basin do not provide enough water depth to launch most sailing or hydrofoiling vessels.** Even the swimmers (who draw very little water depth) often enter and exit the water from the small cove on the West side of the Hs. Lordships building, due to the shallow water at the docks.

P16-2

It is imperative that access to this single and important launch area remain available for existing and future watersports users. There are very few alternative access points during low tide that are not actively used by motorized vessels. Mixing swimmers and board sports participants with powered vessels is very high risk.

2. Parking along Seawall Drive.

It isn't yet clear from the City's plans, but limiting the existing parking (and SF viewing) areas along Seawall Drive would be unacceptable.

P16-3

Please consider carefully the impacts on existing users when planning for modifications to the Berkeley Marina area and waterfront.

Thank you,

Ryan Linderman

Letter P16

Commenter: Ryan Linderman

Date: March 16, 2026

Response to Comment P16-1

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion of City regulations governing water-based recreational activities; and Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* regarding no significant impact to existing recreational uses.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P16-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P16-3

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to in-car viewing spaces and views from Seawall Drive.

Subject: Please read and then include as EIR comment

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi, Liza,

I think I have an important unintended consequence observation about the Waterfront Permit--please read the attached before you file it under EIR comments.

When I first saw the $500 annual parking pass, I decided I would get one if I get around to selling my boat. I hate parking tickets, and the Waterfront Permits are cost-effective for the city. Win-win.

But the South Cove West parking lot is ideally positioned for fishing charter customers, who are happy to pay about $100 or $200 for a day's fishing, and I expect would be delighted to buy Waterfront Permits and park just across the street from K-Dock. P17-1

Ferry customers would probably also be customers for Waterfront Permits, which would allow them to park in the South Cove West parking lot instead of waiting through the backup to get into the199 Seawall lot.

But it would only take twenty more cars to completely fill the South Cove West parking lot with all-day cars, by 9:00 am.

Ouch!

GordonS

Parking-TDM for Pier/Ferry EIR, Mar 16, 2026 G. Stout

Imagine you are a ferry commuter in Berkeley, not wanting to be late and miss your boat. Let's say the line for the Seawall parking lot is moving slowly. Rather than risk missing that ferry, you may well park in whatever lot looks quickest, even if it means a $100 parking ticket.

That is expensive, but the city has made it easy for you: for $500 per year, you can get a Waterfront Permit that exempts you from parking time limits. Such a deal! But what prevents Waterfront Permit holders from filling up the South Cove lots with all-day parking? P17-1

On many days this last year, the South Cove West lot was mostly full by 9:00 am with fishing charter boat patrons and riders of the small Genentech ferry. Add twenty Waterfront Permit holders from the much bigger WETA ferry, and that parking lot will get very full indeed, every day. The $500 Waterfront Permit will be useless for South Cove sailors or Adventure Playground families—the South Cove West lot will have no parking spaces available, short-term or all-day. They will all be full.

The Waterfront Permit program is a bad idea!

Even if there is no Waterfront Permit program, $100 tickets may not keep the South Cove West lot free from all-day parking. How long will it take to fill that 400-space Seawall lot? Use.ai suggests a maximum rate of one car every 5 seconds, which would take 33 minutes to fill the lot. Rather than joining the resulting stop-and-go traffic on University Avenue, our ferry rider may well decide to park in the South Cove, pay the $100 ticket, and be on time for the ferry and for work.

Despite an amazing amount of work, we still do not have a credible picture of parking utilization at the Marina, and the measures proposed to protect recreational parking from ferry riders are not at all convincing. We should not proceed with this project.

Letter P17

Commenter: Gordon Stout

Date: March 16, 2026

Response to Comment P17-1

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking management strategies and the role of parking under CEQA. Concerns regarding parking management programs, permit administration, speculations of potential user behavior, and parking convenience do not, by themselves, constitute environmental impacts under CEQA. The analyses and conclusions presented in the Draft EIR remain valid as written. No further response is necessary.

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hello,

I am actually going to copy a letter to you sent by my friend Kirk Van Moon because he said exactly what I would say to you but no doubt worded it better than I could have. So I'm copying his letter here. I agree with all of his points 100% and I plan to attend the Zoom meeting this afternoon. Thank you so much for your attention to the matter.
Madeleine King

P18-1

I am an avid windsports enthusiast who launches at the Berkeley Marina all year round. I am concerned about the proposed ferry situation and impacts for existing watersports use.

I have two areas of concern:

P18-2

1. Access to the water on the south end of Seawall Drive, near the old Hs. Lordships building.

During low tides (twice a day), the **docks in the South Sailing Basin do not provide enough water depth to launch most sailing or hydrofoiling vessels.** Even the swimmers (who draw very little water depth) often enter and exit the water from the small cove on the West side of the Hs. Lordships building, due to the shallow water at the docks.

It is imperative that access to this single and important launch area remain available for existing and future watersports users.

P18-3

2. Parking along Seawall Drive.

It isn't yet clear from the City's plans, but limiting the existing parking (and SF viewing) areas along Seawall Drive would be unacceptable.

Please consider carefully the impacts on existing users when planning for modifications to the Berkeley Marina area.

P18-4

Thank you so much,
Madeleine King
SFBA board member and wind enthusiast.

Subject: WETA change of use as per South Peninsula/Seawall

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To the Berkeley City Council and relevant planning authorities,

Preserving the South Peninsula and maintaining public access to the seawall for future generations must remain a priority. Retiring this area to accommodate ferry-terminal logistics is not what the public has asked for. Community comments have been consistent and unequivocal: people come to this stretch of shoreline to experience nature, watch birds, enjoy the Bay and the sunset, or simply take a quiet, romantic walk. P19-1 P19-2

This area also supports constant, year-round recreational use. Anglers rely on it daily. Those of us who windsurf, kayak, foil, or swim depend on the beachhead at the point for safe water access. There is no alternative access at low tide—or even at mid-ebb, depending on equipment. Attempting to reach the waterline from any of the docks along the South Sailing Basin requires slogging through hundreds of feet of deep, slippery mud, which is unsafe and effectively unusable. There is a reason the Cal Sailing Club cannot operate when water depth at the docks drops below two feet, which occurs roughly 40 percent of the time. P19-3 P19-4

The small cove at the foot of the former Hs. Lordships Restaurant is, quite literally, the only reliable low-tide access point for aquatic recreation in Berkeley, especially for anyone carrying gear such as boards or kayaks. P19-4

For these reasons, I urge you not to remove the already limited parking on the South Peninsula. Eliminating access—whether by restricting shoreline space or by removing the parking that makes it reachable—would effectively shut down one of Berkeley's most valued and irreplaceable public waterfront areas. P19-5 P19-6

Date: March 16, 2026

Response to Comment P19-1

The Draft EIR describes project components that provide continued public access and recreational opportunities, including a new public pier, breakwater, Bay Trail improvements, and a public plaza (refer to Chapter 2, *Project Description*). Recreational impacts, including Waterfront access, are evaluated in Section 3.11, *Recreation* (refer to Section 3.11.4, *Impacts Analysis*, beginning on Page 3.11-14 of the Draft EIR).

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P19-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P19-3

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a discussion of City regulations governing water-based recreational activities; and Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, regarding no significant impact to existing recreational uses.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P19-4

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

The analyses and significance conclusions presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment P19-5

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking supply, parking management, and the role of parking under CEQA.

Refer also to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, regarding modifications to Seawall Drive and continued public access to waterfront recreational resources. No revisions to the Draft EIR are required.

This comment opposing parking removal has been included in the project record considered by City decision makers.

Response to Comment P19-6

With respect to restricting shoreline access, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*, which provides further clarification on how the project would preserve water-based recreation access and Section 2.2.24, *Topical Response: Seawall Drive/View Access*, regarding parking on Seawall Drive. With respect to removing parking, refer to Section 2.2.20, *Topical Response: Parking.*

In response to this comment, page 3.11-20 of the Draft EIR (Section 3.11.4, *Impacts Analysis*), has been revised to include the following clarifying text confirming that the project would not remove or restrict shoreline access for water-based recreation:

> Operation of the ferry would not hinder existing and new physical access to recreational resources on the project site or adjacent areas. The project would not restrict shoreline areas used for water-based recreation within the South Sailing Basin, and existing access points to these areas would be maintained.
>
> While certain access points, circulation patterns, and parking configurations within the project vicinity would be modified, overall access to recreational resources would be maintained and enhanced. The proposed new pier and breakwater, Bay Trail Extension, and green space next to the Bay Trail Extension would be publicly accessible and access to such project-related recreational uses would not be hindered by ferry operation or riders commuting to and from the Berkeley Waterfront area to utilize ferry services. Furthermore, the proposed project would include amenities such as fish cleaning stations, seating, and public restrooms, which would enhance the experience of people visiting the pier and breakwater for recreation.

The Draft EIR demonstrates that the project would maintain and expand public access to recreational resources, and would not result in the loss of recreational facilities or shoreline access under CEQA thresholds.

The revision above is clarifying in nature and does not alter the analysis or conclusions of Impact REC-1. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No further revisions are required.

Subject: Proposed ban on recreation near Berkeley Pier/Marina

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hello Liza McNulty,

I am writing to express concern about the proposed ban on water-based recreation near the Berkeley Pier (by the Berkeley Marina). P20-1

As a Bay Area native, I have been using this area my entire life. I fished there as a child and I now wing-foil, kayak, and dockstart there on a regular basis. P20-2

The marina itself is significantly affected by tides. On many days, those of us wishing to wing-foil, wind-surf, or do related sports can only launch at Lordships due to the shallow depths at low tide. Putting a ban in place will effectively prohibit a large number of people from using the waters in/near the marina for recreation. P20-3

I am requesting that you and your team please ensure the waters in and near the Berkeley Marina and Pier remain open for all. P20-4

Thank you,

Cheong-Tseng

Subject: Berkeley Waterfront Access

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza

As a Berkeley resident, the Marina and waterfront are an essential part of my personal daily routine, as well as the routines of countless others in our community. I am writing to express my deep concern regarding the proposed ferry plans and the devastating impact they could have on our existing watersports use and our connection to nature. P21-1

For many of us, the San Francisco Bay is the largest and most dynamic wilderness we have access to Currently, When the tide is too low or the wind hasn't made it into the south sailing basin, then Hs. Lordships becomes an essential access point for us. If this project moves forward without careful consideration of existing users, we risk losing that connection. P21-2

I urge you to address the following areas of concern:

- Preserving the Hs. Lordships Launch Site: Access to the water on the south end of Seawall Drive, specifically the small cove on the west side of the old Hs. Lordships building, must remain open. During low tides (twice a day), the docks in the South Sailing Basin simply do not provide enough water depth to launch most sailing or hydrofoiling vessels. Because of this shallow water, even swimmers rely on this cove. It is a daily, indispensable launch point for our community. P21-3
- Maintaining Access Near and Through the Pier: I am highly concerned about any restrictions that would limit how close we can sail to the Berkeley Pier. Sailing near the pier—and frequently navigating right through it—is a fundamental part of how windsports enthusiasts experience the water here. Creating exclusion zones or restricting our proximity to the pier effectively limits our ability to engage with and navigate this incredible marine wilderness. P21-4
- Protecting Seawall Drive Parking: While the City's plans are still coming into focus, it is vital that existing parking and San Francisco viewing areas along Seawall Drive are not reduced. Limiting this infrastructure would severely restrict access for the diverse groups of people who come to enjoy the waterfront daily. P21-5

Please ensure that any modifications to the Berkeley Marina and waterfront enhance, rather than eliminate, the ways existing residents and watersports users interact with our local wilderness. P21-6

Thank you for your time and careful consideration.

Sincerely,

David Hermele

Subject: Comments on WETA Ferry draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza,

Thanks for the opportunity to comment on the draft EIR for the proposed WETA Ferry and Pier at the Berkeley Marina.

I'm a Berkeley resident for over 20 years and an SF Bay swimmer and paddleboarder. Access to SF Bay's waters from Berkeley's shoreline has been a boon to my health, my community, and my sense of connection to our amazing Bay. P23-1

The programming and land uses surrounding the proposed pier are overly focused on a commuter ferry, while public recreational access to SF Bay waters for human-propelled water sports is ignored. The proposal and EIR for this part of the Marina should not only retain low-tide access to the bay for open water swimmers and paddleboarders, but improve it. Reference to Berkeley Municipal Code Section 6.20.180 directly contradicts the long-standing use of the south side of the pier for recreational swimming during low tides. P23-2

Yes, the South Sailing Basin offers great access to swimming and water sports, but only during high tide -- about half of every day. At low tide, the safest access to the bay is from the functional launch ramp at H.S. Lordships -- not pretty, but it works!

I find it shameful to suggest that swimmers, paddleboarders, and windsurfers drive to Albany, Richmond or San Francisco when our City and region have invested so much to clean SF Bay water for safe swimming and open access to SF Bay shoreline in Berkeley! This access is a boon to our community. We now have two I-80 crossings for cyclists and pedestrians to reach the shoreline. Unlike other shoreline locations (e.g. Keller Beach in Richmond and its sewage leaks or beaches built on toxic/radioactive landfill), we have reliably swimmable water quality *and water levels* at the south side of the former pier during low tide. P23-3

The public-access pier at the Marina was a well-loved Berkeley destination and I'd welcome its return. The rebuild should NOT be at the expense of an actively-used local swim access point. Please consider how to improve the south end of the marina for the many well-loved EXISTING uses before displacing local, self-propelled water sport enthusiasts for a new commuter ferry service. I'm not sure who will make money from that service or who will use it (especially when public transit use has plummeted to the point of P23-4 P23-5 P23-6

financial insolvency), but I know that swimming in SF Bay should continue to be free and accessible to all from our Berkeley shoreline. No extra commute needed. P23-6

Please do not displace the swimmers who've been using ramped access to low tide swimming south of the pier for over a decade. P23-7

Thanks for considering my comment!
Jen Natali
94705 resident

Letter P23

Commenter: Jennifer Natalie

Date: March 16, 2026

Response to Comment P23-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P23-2

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* which explains that the City is not banning water-based recreation near the pier as part of the proposed project.

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall launch point for water-based recreation. The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further response is required.

Response to Comment P23-3

The City recognizes the importance of local shoreline access for recreation, and the project would not result in the displacement of such uses, although localized adjustments may occur during construction of project infrastructure. Although a summary of other water-based recreation sites within the region is provided in Section 3.11, *Recreation*, this is not intended to suggest that recreationalists should use these areas instead of the Berkeley Waterfront. They are provided for the purposes of analysis, to consider if the project would require the construction of new facilities, consistent with CEQA. Although the project would temporarily reduce waterfront access during construction, the Berkeley Waterfront area spans over approximately 100 acres with multiple access points at other locations that would not be impacted by construction, such as the South Sailing docks and Marina Basin (refer to Impact REC-1, Pages 3.11-16 through 3.11-20).

The analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions beyond the above clarification are required.

Response to Comment P23-4

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall launch point for water-based recreation. The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further response is required.

Response to Comment P23-5

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for water-based recreation.

The proposed project includes improvements to the south end of the Berkeley Waterfront, through its implementation of the new public plaza, Bay Trail Extension, improved parking lot, and proposed amenities. While the objective of this proposed project is to introduce ferry service, it is also to enhance recreational opportunities at the Berkeley Waterfront (see Section 2.3, *Project Objectives*, page 2-4 of the Draft EIR).

The analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions beyond the above clarification are required.

Response to Comment P23-6

Regarding the question about who will make money from the ferry service, WETA would operate the ferry service and WETA is a public agency. Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Regarding the comment that swimming should remain free, the comment may be referencing concerns about paid parking. Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is addressed under CEQA.

Regarding the comment that swimming should remain accessible, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which notes that access to this site would be maintained under the proposed project.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P23-7

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for water-based recreation. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Hello Liza,

I went to the public meeting today and wanted to say thank you! I appreciate you and and your teams hard work on the DEIR:) I understand this plan has been a long time coming. While I have concerns about the DEIR I wanted to recognize all the hard work that went into it.

P24-1

I will submit a written comment soon-

Best,
Zora

Subject: Berkeley Pier with Ferry Access Project public comment period for the Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To Whom It May Concern: I am submitting this comment in response to the WETA Ferry Terminal Draft Environmental Impact Report (DEIR). The DEIR's dismissal of recreational impacts—particularly those affecting wind-powered water sports such as windsurfing, winging, kiteboarding, and paddling—is based on a misinterpretation of Berkeley Municipal Code § 6.20.180, a misunderstanding of the ordinance's legislative history, and a disregard for decades of established public use of the Berkeley waterfront. The code clearly prohibits swimming and windsurfing only **within the marina**, and explicitly allows windsurfing in the South Sailing Basin; it does not regulate the open waters of the Bay west of the Berkeley Pier. The City's attempt to extend this prohibition by reinterpreting the term "personal watercraft" to include windsurfing, kiteboarding, kayaking, stand-up paddling, foiling, and winging is legally indefensible. The 1,500-foot "personal watercraft" provision was adopted in 2001 to address jet-ski use following litigation over municipal jet-ski bans, not to regulate human-powered or wind-powered recreation. At the time, foiling and winging did not exist, stand-up paddling was not mainstream, and windsurfing had already been occurring in these waters for decades. Under basic principles of statutory construction, different terms in an ordinance must be given different meanings; because the ordinance explicitly names windsurfing in one subsection, the City cannot credibly claim that "personal watercraft" was intended to include it. The City's reinterpretation contradicts more than forty years of continuous, well-documented public use of the open Bay for wind-powered sports, and appears designed to avoid CEQA's requirement to analyze the impacts of the proposed breakwater and marina basin expansion on existing recreational resources. CEQA does not permit agencies to redefine existing conditions to avoid acknowledging impacts. Furthermore, Article X, Section 4 of the California Constitution guarantees public access to navigable waters and prohibits exclusion of the public from such waters when needed for public purposes. The City's interpretation would create a de facto exclusion zone in navigable state waters, undermining constitutionally protected access rights. For these reasons, the DEIR must correct its misinterpretation of the Marina Code, acknowledge the long-standing recreational use of the open Bay by wind-powered and human-powered water sports, and fully analyze the impacts of the proposed structures on these activities as CEQA requires. Wind-powered water sports are a defining and legally protected component of the Berkeley waterfront, and the environmental review must reflect that reality. Respectfully submitted, Jeffrey Finn

Date: March 17, 2026

Response to Comment P25-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P25-2

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of this Berkeley Municipal Code provision and its role in relation to the project. For discussion regarding potential project impacts on wind-powered recreational uses, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access.*

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P25-3

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of this Berkeley Municipal Code provision and its role in relation to the project.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P25-4

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of this Berkeley Municipal Code provision and its role in relation to the project.

To the extent the comment is concerned with construction, refer to Response to Comment A3-55, which revises Section 3.11, *Recreation*, of the Draft EIR to clarify the analysis of temporary recreational impacts on recreational access. The revision presented therein is clarifying in nature, and does not alter the analysis or subsequent significance conclusion under Impact REC-1.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P25-5

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of this Berkeley Municipal Code provision and its role in relation to the project. For discussion regarding potential project impacts on wind-powered recreational uses, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access.*

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P25-6

The comment reflects a misunderstanding of the Draft EIR's analysis. The Draft EIR does not propose or assume the creation of new restrictions on water-based recreation. Rather, it describes existing regulatory conditions, including provisions of the Berkeley Municipal Code (BMC), as part of the environmental baseline used for analysis under CEQA.

As explained in Draft EIR Section 3.11, *Recreation*, and Section 3.12, *Transportation*, the discussion of compatibility between ferry operations and water-based recreation reflects the fact that certain activities are already regulated or restricted in specific areas of the Berkeley Marina for safety and navigation purposes. These conditions are part of the existing baseline, consistent with CEQA Guidelines Section 15125. The project does not expand the geographic extent of these restrictions or introduce new prohibitions on recreational uses. Please refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* which provide additional detail regarding recreational water access and the scope and application of BMC Section 6.20.180. As described therein, the ordinance establishes localized safety regulations applicable to specific areas of the marina (e.g., near the pier and navigation areas) and does not prohibit public access to navigable waters more broadly. The Draft EIR appropriately considers these existing conditions in evaluating whether the project would result in a physical conflict with water-based recreation.

Under CEQA, the relevant question is whether the project would result in a physical environmental impact, such as the loss or substantial impairment of recreational resources. As analyzed in Impact REC-1, the project would maintain and enhance recreational access, and would not result in a substantial adverse effect on water-based recreation. The commenter's statements regarding constitutional interpretation and public access rights raise legal and policy considerations outside the scope of CEQA environmental impact analysis.

In response to this comment, the City notes that page 3.11-19 of the Draft EIR (Section 3.11.4, *Impacts Analysis*), has been revised to clarify the discussion of ferry operations, existing recreational uses, and the applicability of Berkeley Municipal Code Section 6.20.180. The text revision addressing these topics is provided in Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*.

The revision presented under Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* ensures that the Draft EIR clearly distinguishes between existing regulatory conditions and potential project effects, and confirms that the project does not introduce new restrictions on water-based recreation or access to navigable waters.

The above revision is clarifying in nature and does not change the analysis or conclusions of Impact REC-1. The analyses and significance conclusions presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment P25-7

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* which discusses this Berkeley Municipal Code provision and its role in relation to the project. Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* presents a revision to the Draft EIR that ensures the analysis therein clearly distinguishes between existing regulatory conditions and potential project effects, and confirms that the project does not introduce new restrictions on water-based recreation or access to navigable waters. For discussion regarding potential project impacts on wind-powered recreational uses, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

The revision referenced above is clarifying in nature and does not change the analysis or conclusions of Impact REC-1. The analyses and significance conclusions presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment P25-8

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of the Berkeley Municipal Code provision and its role in relation to the project. For discussion regarding potential project impacts on wind-powered recreational uses, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access.* The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Letter P26

From: b c <coesurf@hotmail.com>

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: WETA Ferry Terminal DEIR and Berkeley waterfront windsport access

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To : Liza McNulty, PE, Project Manager
Parks, Recreation & Waterfront Department
2180 Milvia Street, 3rd Floor
Berkeley, CA 94704

To Whom It May Concern:

I am submitting this comment in response to the errant WETA Ferry Terminal Draft Environmental Impact Report (DEIR). P26-1

The DEIR's dismissal of recreational impacts—particularly those affecting wind-powered water sports such as windsurfing, winging, kiteboarding, and paddling—is based on a misinterpretation of Berkeley Municipal Code § 6.20.180, a misunderstanding of the ordinance's legislative history, and a denial of the *decades* of established public use of the Berkeley waterfront. P26-2 The code clearly prohibits swimming and windsurfing **only within the marina**, and *explicitly* allows windsurfing in the South Sailing Basin; it does not regulate the open waters of the Bay west of the Berkeley Pier. P26-3

The City's attempt to extend this prohibition by reinterpreting the term "personal watercraft" to include windsurfing, kiteboarding, kayaking, stand-up paddling, foiling, and winging is legally indefensible.
The 1,500-foot "personal watercraft" provision was adopted in 2001 to address jet-ski use following litigation over municipal jet-ski bans, not to regulate human-powered or wind-powered recreation. P26-4 At the time, foiling and winging did not exist, stand-up paddling was not mainstream, and windsurfing had already been occurring in these waters for decades. Under basic principles of statutory construction, different terms in an ordinance must be given different meanings. P26-5 When the ordinance explicitly names windsurfing in one subsection, the City cannot credibly claim that "personal watercraft" was intended to include it. The City's reinterpretation contradicts more than forty years of continuous, well-documented public use of the open Bay for wind-powered sports. The report appears designed to avoid CEQA's requirement to analyze the impacts of the proposed breakwater and marina basin expansion on existing recreational resources. P26-6
CEQA does not permit agencies to redefine existing conditions to avoid acknowledging impacts.

Furthermore, the California Constitution guarantees public access to navigable waters and prohibits exclusion of the public from such waters when needed for public purposes P26-7

(Article X, Section 4). The City's incorrect interpretation would create a de facto exclusion zone in navigable state waters, undermining constitutionally protected access rights. P26-7

For these reasons, the DEIR must correct its misinterpretation of the Marina Code, acknowledge the long-standing recreational use of the open Bay by wind-powered and human-powered water sports, and fully analyze the impacts of the proposed structures on these activities as CEQA requires. Wind-powered water sports are a defining and legally protected component of the Berkeley waterfront, and the environmental review must reflect that reality. P26-8 P26-9

Respectfully submitted,

Brian Coe

Letter P26

Commenter: Brian Coe

Date: March 17, 2026

Response to Comment P26-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P26-2

Draft EIR Section 3.11, *Recreation*, establishes that the activities identified by the commenter represent existing recreational uses of the Berkeley Waterfront and identifies the locations and conditions that support these uses within Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7). The Draft EIR also describes the applicable regulatory context, including local policies and ordinances governing waterfront uses such as BMC Section 6.20.180, in Section 3.11.3, *Regulatory Framework* (pages 3.11-7 through 3.11-14). Potential impacts to the recreational uses described in Draft EIR Section 3.11.2 are evaluated in Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), which considers whether the proposed project would result in a substantial physical deterioration of recreational resources or restrict physical access to such resources, consistent with CEQA Guidelines Appendix G. The analysis concludes that the project would maintain and enhance recreational access and facilities, and would not result in a substantial adverse impact on water-based recreation (Impact REC-1).

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of this Berkeley Municipal Code provision and its role in relation to the project. For discussion regarding potential project impacts on access at the 199 Seawall location, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

Accordingly, the Draft EIR adequately characterizes existing recreational uses, including wind-powered and equipment-dependent water sports, incorporates applicable regulatory conditions into the CEQA baseline, and evaluates potential impacts consistent with CEQA requirements. The analyses and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P26-3

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussion of this Berkeley Municipal Code provision and its role in relation to the project. For discussion regarding potential project impacts on wind-powered recreational access, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P26-4 to P26-9

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a discussion related to the definition of personal watercraft and a discussion of this Berkeley Municipal Code provision and its role in relation to the project and Draft EIR analyses. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Letter P27

From: Kathryn Fisher <f800gschic@hotmail.com>
Sent: Tuesday, March 17, 2026 11:04 AM
To: McNulty, Liza <lmcnulty@berkeleyca.gov>; Ferris, Scott <SFerris@berkeleyca.gov>; Berkeley Mayor's Office <Mayor@berkeleyca.gov>; All Council <council@berkeleyca.gov>
Subject: Berkeley Ferry Project- BWTPF EIR Public Comment

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear [Liza /Planning Team/Gov],

I am an avid windsports Enthusiast/Instructor/Past Pro-Competitor who regularly launches from the Berkeley Marina year-round. I'm writing to share concerns regarding the proposed ferry plans and their potential impacts on existing watersports use. P27-1

I have two primary areas of concern:

1. Water Access at the South End of Seawall Drive (near the former Hs. Lordships building)
During low tides, which occur twice daily, the docks in the South Sailing Basin do not provide sufficient water depth for many sailing or hydrofoiling vessels. Even swimmers—who require minimal depth—often rely on the small cove west of the former Hs. Lordships site due to the shallow conditions at the docks. P27-2

Maintaining access to this critical launch area is essential for both current and future watersports users. Any reduction or restriction in access would significantly impact safe and viable entry to the water.

2. Parking Along Seawall Drive
It remains unclear how the current plans will affect parking availability along Seawall Drive. Any reduction in existing parking—or loss of shoreline access and viewing areas—would be highly concerning. These spaces are heavily used and are an important part of the marina's accessibility and public enjoyment. P27-3

I strongly urge careful consideration of how proposed changes may affect long-standing recreational use of the Berkeley Marina. Preserving access and usability for the existing community should remain a priority in any development plans.

I also want to clarify some misused/misinterpreted terminology- this is US Boating Definition of the term PWC which is used extensively all over the USA and abroad -

A PWC (Personal Watercraft) is a small, jet-propelled motorboat designed for individuals to sit, stand, or kneel on rather than inside, such as jet skis or wet bikes. It is primarily used for recreation, fishing, or watersports. P27-4

Usage Examples & Synonyms of PWC (Personal Watercraft)

- Synonyms: Jet ski (brand name commonly used), wet bike, water scooter, jet bike.
- Usage Contexts: Recreational riding, racing, rental for tourists, towing skiers, and specialized fishing.
- Key Features: Operated on the water, inboard engine, usually under 16 feet, restricted to daytime use in many regions.

P27-4

Thank you for your time and consideration,

Avid Watersports Enthusiast & Bay Area Native,

Kathryn Fisher

Letter P27

Commenter: Kathryn Fisher

Date: March 17, 2026

Response to Comment P27-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P27-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P27-3

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to parking, in-car viewing spaces, and views from Seawall Drive. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P27-4

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a discussion related to the definition of personal watercraft. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Letter P28

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Public comments - Berkeley Ferry Draft Environmental Impact Report

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Liza McNulty, PE, Project Manager Parks,

I'm an area wing foiler (think surfboard with a hydrofoil on it and a sail in your hands) and have been using the area in front of the closed restaurant (Lordships) and the dock to launch with my family for the past three years. Sometimes we launch off the point in front of the abandoned restaurant due to lower tides making the dock unusable. The whole area is a great place to get a little break from the bustle and some exercise. We love to come over and enjoy and then grab dinner while the traffic dies down. P28-1

It's an important resource to access the water for us and we would love to see a plan that allows us to still park near the water at the closed restaurant with heavy gear and to get out on the water as well as at the docs. P28-2

Best,
Dave Spragg
davelist@spragg.com

Letter P28

Commenter: David Spragg

Date: March 17, 2026

Response to Comment P28-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P28-2

With respect to water access for recreationists carrying equipment, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which explains how shoreline and equipment-dependent access points are considered in the baseline and how such access would be maintained. In addition, refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* regarding parking and its role in the CEQA process, and regarding existing regulatory conditions that guide use of specific areas of the Marina for safety purposes.

Accordingly, the Draft EIR demonstrates that the project would continue to accommodate both recreational users and ferry patrons through maintained parking supply and improved multimodal access, and would not result in a significant impact to recreational access under CEQA.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Subject: Public Comment: WETA Ferry Terminal Draft Environmental Impact Report

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To Whom It May Concern:

I am submitting this comment in response to the WETA Ferry Terminal Draft Environmental Impact Report (DEIR). The DEIR's dismissal of recreational impacts—particularly those affecting wind-powered water sports such as windsurfing, winging, kiteboarding, and paddling—is based on a misinterpretation of Berkeley Municipal Code § 6.20.180, a misunderstanding of the ordinance's legislative history, and a disregard for decades of established public use of the Berkeley waterfront. I have **personally** been using these waters for windsurfing and winging for over 40 years. The San Francisco bay is one of the premier locations for these sports in the world and it is imperative that public access is maintained for these sports. P29-1 P29-2 P29-3

The code clearly prohibits swimming and windsurfing only within the marina, and explicitly allows windsurfing in the South Sailing Basin; it does not regulate the open waters of the Bay west of the Berkeley Pier. The City's attempt to extend this prohibition by reinterpreting the term "personal watercraft" to include windsurfing, kiteboarding, kayaking, stand-up paddling, foiling, and winging is legally indefensible. The 1,500-foot "personal watercraft" provision was adopted in 2001 to address jet-ski use following litigation over municipal jet-ski bans, not to regulate human-powered or wind-powered recreation. At the time, foiling and winging did not exist, stand-up paddling was not mainstream, and windsurfing had already been occurring in these waters for decades. Under basic principles of statutory construction, different terms in an ordinance must be given different meanings; because the ordinance explicitly names windsurfing in one subsection, the City cannot credibly claim that "personal watercraft" was intended to include it. The City's reinterpretation contradicts more than forty years of continuous, well-documented public use of the open Bay for wind-powered sports, and appears designed to avoid CEQA's requirement to analyze the impacts of the proposed breakwater and marina basin expansion on existing recreational resources. CEQA does not permit agencies to redefine existing conditions to avoid acknowledging impacts. Furthermore, Article X, Section 4 of the California Constitution guarantees public access to navigable waters and prohibits exclusion of the public from such waters when needed for public purposes. The City's interpretation would create a de facto exclusion zone in navigable state waters, undermining constitutionally protected access rights. For these reasons, the DEIR must correct its misinterpretation of the Marina Code, acknowledge the long-standing recreational use of the open Bay by wind-powered and human-powered water sports, and fully analyze the impacts of the proposed structures on these activities as CEQA requires. P29-4 P29-5 P29-6 P29-7 P29-8 P29-9

Wind-powered water sports are a defining and legally protected component of the Berkeley waterfront, and the environmental review must reflect that reality. P29-10

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Issues with 2003 WTA Program EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza,

I have been having a very hard time parsing the 2003 Program EIR. After struggling for several days on this important document I finally understand why. The pages are in the wrong order, with sections and subsections in reverse order. Moreover, the actual ordering of pages does not agree with the order listed in the Table of Contents. This reversed order of pages makes it impossible to efficiently read this important document, especially for members of the public, like myself, who are reading it for the first time.

Below is a summary of the actual page order of the DEIR currently posted on the COB Pier-Ferry webpage. Sections and subsections are in reverse order, making it virtually imposible to read the document.
(NB: Numbers in parens at the beginning of each bullet point refer to the actual page number, e.g, page # of 910 total)

The main document:

- (1) Title Page
- (2-9) Table of Contents
- (10 to 605) Sections 6 through 1 – **NOTE: Sections and Subsections presented with the reverse ordering**
- (606) Section 7 - Acronyms and Technical Terms

P30-1

The following important sections are included at the end of the document but not included in the Table of Contents or easily identified:

- (610) Technical Appendices
- (774) Executive Summary (including Table of Impacts and Mitigation Measures)
- (804) Eratta for the Final EIR and Public Comments and Responses
- (830) Statement of Overriding Consideration
- (880) Mitigation Monitoring Plan

Given the enormous amount of documentation we in the public are trying to review the misordering of the 2003 WTA Program EIR pages is a real hindrance.

Moreover, I cannot find a readable copy of this document on the SF Bay Ferry webpage. It took me quite a while to navigate to the specific page where I believe the 2003 WTA Program EIR should be located. I believe it should be on the "Our History" page (https://sanfranciscobayferry.com/our-history/) . Scroll down and click on "2003" in the timeline graphic. You should now see a page that has two identical paragraphs with the header "WTA Adopts Implementation and Operations Plan" followed by the text that includes a hyperlink to the desired 2003 EIR: P30-1

"WTA developed an Implementation and Operations Plan (IOP) and companion programmatic Environmental Impact Report...."

Unfortunately, clicking the hyperlink above, for the "Implementation and Operations Plan...", seems to be broken and takes the user to a generic "About Us" page. See attached screenshots

Finally, and perhaps most importantly, the current Berkeley Water Transportation Pier Ferry Project Draft EIR relies on the 2003 WTA Program EIR as a basis for tiering many documents of concern to me, especially those associated with conditions for birds, marine animals and vegetation in the Bay. Since the project disturbs habitat, and since recent studies have found declines in species of waterbirds regionally and beyond, and since there's an increased presence of gray whales in the Bay, and since the 2003 Program EIR is now over 20 years old, it is essential that the City also review whether or not there are changed circumstances that might require updating to disclose impacts that may no longer be insignificant or adequately mitigated. P30-2

In summary, the inability to access the 2003 WTA Program EIR on the SF Bay Ferry webpage because of the apparent broken link, and the manner in which the version is available on the COB Pier-Ferry webpage, with pages reversed and innacurately displayed, makes it impossible for the public to review this document in the alloted time.

I, therefore, respectfully request that the 2003 document be updated as quickly as possible, to correct the reversed page ordering so that it sequentially correct and agrees with the page ordering listed in the Table of Contents. In addition, since it has taken more than two weeks for this oversight to be identified, I respectfully request that the final date to submit public comment on the Berkeley Water Transportation Pier Ferry Project Draft EIR be extended by at least the amount of time it will take to update and correct the 2003 document. P30-3

Thank you for your assistance. I look forward to your response.

Respectfully,
Erin Diehm

Subject: Re: Issues with 2003 WTA Program EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza,

To clarify the final request in my prior email - since the 2003 Program EIR has been posted with problematic reversed page order for more than two weeks, I request that a compensatory extension be given to the public representing half of the number of days that will have passed from February 27 to the updated posting. For example, if the corrected 2003 document is posted this coming Monday March 23, that is 25 days after February 27. Half of 25 is approximately 13 which would push the due date roughtly 13 days later, or, from April 13 to approximately April 27.

P30-3

Thank you for your assistance.

Respectfully,
Erin Diehm

Letter P30

Response to Comment P30-1

The City acknowledges that the version of the 2003 WETA EIR initially posted to the project website on February 27, 2026, contained the complete document but was not organized in the intended sequential order. After the issue was brought to the City's attention, the document was corrected and re-posted in proper order on the project website. The corrected version is available at the following link: https://berkeleyca.gov/sites/default/files/2026-02/WETA-Program-EIR-2003.pdf.

Additionally, in response to concerns regarding public review of the document, the City also extended the Draft EIR public review period. As shown in the revised Notice of Availability, the original 45-day public review period ending on April 13, 2026, was extended to a 60-day public review period ending on April 28, 2026.[47]

The City therefore provided the public with additional time to review and comment on the Draft EIR and the documents incorporated by reference. No further response is required.

Response to Comment P30-2

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. Refer to Section 2.2.28, *Topical Response: Whale Strike* for a discussion specific to whale strikes.

Response to Comment P30-3

Regarding the request that the 2003 WETA EIR be re-uploaded so that the page order is reformatted, please refer to Response to Comment P30-1.

The City acknowledged this request for an extension of the Draft EIR comment deadline. The comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. No further response is required.

[47] Berkeley, City of. 2026. Updated Notice of Availability of a Draft EIR and Notice of Draft EIR Public Meeting for the Proposed Berkeley Water Transportation Pier Ferry. https://berkeleyca.gov/sites/default/files/2026-02/Pier-Ferry-Project-EIR-Notice-of-Availability.pdf (accessed July 2026).

Response to Comment P31-1

The City responded directly to this commenter and indicated that a transcript of the public meeting will be published with the Final EIR, to which the commenter replied that it would be too late if published in the Final EIR. CEQA requires that a lead agency provides public notice and an opportunity for public review and comment on a Draft EIR (per CEQA Guidelines Sections 15087 and 15105). Public meetings or hearings may be held to facilitate public participation; however, CEQA does not require that a public meeting be held or that transcripts of such meetings be published in advance of a Final EIR. Consistent with CEQA, the lead agency has provided a copy of all timely submitted comments and a response to each in this Final EIR. To the extent oral comments were provided at public meetings, those comments have been considered in the preparation of responses. No further response is required.

To: McNulty, Liza <lmcnulty@berkeleyca.gov>; All Council <council@berkeleyca.gov>
Subject: Public Comment in Support: Berkeley Water Transportation Pier Ferry Project Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty and Members of the Berkeley City Council,

I am writing to express my strong support for the Berkeley Water Transportation Pier Ferry Project.

As a frequent visitor to the Berkeley Marina — where I walk my dog regularly and sail out of Modern Sailing Berkeley — I have a deep appreciation for the waterfront and a personal stake in its future. The revitalization work at the marina over the past several years has been a tremendous success, and this project feels like the natural next step. P32-1

The existing pier is a genuine eyesore and, from a sailor's perspective, a navigational hazard. Replacing it with a modern, dual-purpose structure that restores public access and adds zero-emission ferry service to San Francisco would be a tremendous improvement for the waterfront and for the region's transportation network.

I also want to address the parking and access fee concerns that have been raised during this process. As a regular user of the marina, I am happy to pay reasonable usage or parking fees, and would welcome a frequent-visitor pass option. Modest fees that support world-class waterfront infrastructure seem like a fair trade. P32-2

I encourage the City and WETA to move this project forward. Please include this letter in the public record for the Draft EIR. P32-3

Thank you for your work on this project.

Igor Serebryany

Response to Comment P32-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P32-2

The comment does not identify a deficiency in the Draft EIR analysis, significance conclusions, or mitigation measures. Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of parking fees and parking management. The implementation of parking fees or access fees is an operational and policy matter and is not a physical environmental impact subject to analysis under CEQA. The comment is noted and has been included in the project record considered by City decision makers. No further response or revisions to the Draft EIR are required.

Response to Comment P32-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

re: https://berkeleyca.gov/your-government/our-work/capital-projects/berkeley-pier-ferry-access-project

The DEIR's dismissal of recreational impacts—particularly those affecting wind-powered water sports such as windsurfing winging kiteboarding and paddling—is based on a misinterpretation of Berkeley Municipal Code § 6.20.180 and a disregard for decades of established public use of the Berkeley waterfront. The ordinance does not regulate the open Bay west of the Berkeley Pier and the City's attempt to redefine "personal watercraft" to include human-powered and wind-powered recreation is inconsistent with its legislative history. CEQA requires an accurate baseline and a full analysis of impacts to existing recreational resources. The DEIR must correct these errors and acknowledge the long-standing legally protected recreational use of these waters. P33-1 P33-2 P33-3

On a personal note, this location is a much appreciated - and most importantly SAFE - location for wind sports. Limiting access may lead to unprepared riders venturing out from locations like Treasure Island and Crissy Fied, putting them in danger in challenging bay conditions. P33-4

Response to Comment P33-1

Refer to Response to Comment P26-2. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P33-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* for a discussion of potential project impacts on recreational water access, and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a discussion of City regulations governing water-based recreational activities.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P33-3

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* for discussion of the adequacy of the environmental baseline considered in the Draft EIR. For discussion of recreational water access under project implementation, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for further information regarding the role of BMC Section 6.20.180 in the assessment of recreational water access impacts.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P33-4

This comment is a summary of earlier comments, expressing concern about Berkeley Municipal Code Section 6.20.180.

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* which explains that the City is not banning water-based recreation near the pier as part of the proposed project. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

I took these pictures from Shorebird Park yesterday around 2:00. You can see that there is no wind. There were probably at least 200 people in that park and Adventure Playground. Nearly all parking spaces in South Cove East lot were occupied. And you can see that the lot at Seawall is heavily parked.

Consider these comments about existing recreational use on the EIR. The EIR does not include a quantitative baseline of such use.

Hi Lindsay, Thanks. I fixed a couple of typos in the text below so please use this later version.
I intended it as a public comment for the DEIR for city but it is relevant and important material for the upcoming May meetings of BCDC 's design review board and the engineering criteria review board on the WETA ferry/pier project in Berkeley, and so I'd like it included as a BCDC public comment and input into those meetings at BCDC. Please add me to the mailing list. Best regards, Nico

Hello thanks for the opportunity to provide feedback on the Berkeley ferry plan. P35-2
As a Berkeley resident and wind-sports practitioner I am concerned about the following:
1. The ferry commuter parking will cause parking problems for long-standing recreation uses of the marina area. P35-3
2. We will spend a great deal of money subsidizing a ferry based on estimated usage when other similar projects got much lower ridership than anticipated. Here's a sobering story: P35-4
When the BART connector to the airport was first conceived it replaced a very efficient shuttle bus--and probably saved about ten minutes. It was forecast to carry 10,000 passengers as the boosters believed traffic at the Airport would increase from 12 million annual passengers to 20 million annual passengers. It cost $500 million to build, costs about $6 million a year to maintain (not including opportunity cost or capital accumulation for replacement) and serves in the low hundreds of passengers. The most recent annual air traffic through OAK was 9.3 million passengers.
I agree that the backup/redundancy of a ferry is a good idea, as we saw after the 1989 earthquake, but there are other important bay transportation options that are overdue including a bike lane across the entire bridge and a second BART tube. P35-5

3. Please clarify in the Final EIR where the wind-sports, kayaks, and other small craft will be permitted to go. The area off of His Lordships is an excellent launch and a very popular spot during the summer windy season. Proficient sailors fly several miles west towards Treasure Island and surf swells back towards Berkeley. Your Draft EIR has big red boxes around the proposed Ferry Terminal pier and the southern box west of His Lordships overlaps with the prime wind sports area. P35-6

4. Finally, in consulting with a friend in the Coast Guard he writes: *it is already against the regulations for a vessel less than 20 Meters (wing sport vessels) to impede the passage of a vessel that can only navigate safely within a channel or fairway (Nav Rules, Rule 9). There is no need for a localized "buffer." USCG Nav Rules protects the ferry in many situations*. P35-7

Other ferry terminals around the Bay such as Richmond (near the Rosie the Riveter museum) do not have a specific closure adjacent the ferry despite being right next to an extremely popular sailing spot at Marina Bay. Wind users just stay out of the way of the ferry so there is no need for the city to add additional prohibitions. P35-8

If we're to invest in a ferry at this point my vote is to put the ferry inside the marina where other craft already moor and not interfere with existing uses.
Thank you

Letter P35

Commenter: Nico Tripcevich

Date: March 25, 2026

Response to Comment P35-1

The City has added the commenter's contact information to the project notification list and would provide future notices via email in accordance with CEQA and City procedures. No further response is required.

Response to Comment P35-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P35-3

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding the role of parking under CEQA. The Draft EIR evaluates potential effects on recreational access, recreational facility use, transportation, and plan consistency. As discussed in Sections 3.9, *Land Use and Planning* (Impact LU-2), 3.11, *Recreation* (Impact REC-1), and 3.12, *Transportation* (Impact TRA-2), the Draft EIR concludes that project implementation would not result in physical deterioration of recreational facilities, would maintain recreational access, and would not result in significant parking-related environmental impacts. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P35-4

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P35-5

This comment raises policy considerations regarding regional transportation planning and funding priorities that are beyond the scope of the proposed project and this Draft EIR. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P35-6

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which provides clarification regarding how recreational water access would be maintained with project implementation; and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* regarding location of watersports and the ferry route.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P35-7

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a discussion related to the definition of personal watercraft. The analysis, significance conclusions, and mitigation

measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P35-8

The “closure adjacent the ferry” appears to reference an earlier comment about buffer zones excluding recreational activities around the pier. Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The analysis and conclusions presented in Chapter 5, *Alternatives*, of the Draft EIR remain valid as written. No further revisions to the EIR are necessary.

Subject: Comments on Berkeley Water Transportation Pier Ferry Project draft EIR

Dear Ms. McNulty:

INTRODUCTION

On January 20, 1967, the Bay Conservation and Development Commission issued a permit to the City of Berkeley to dredge 40,000 cubic yards of material to fill 4.6 acres of open Bay in order to create land for a marina, a restaurant, a public beach, a park area, a relocated University of California sailing facility, and the parking to support those uses. That permit was approved in a public hearing on January 5, 1967, with support from Sylvia McLaughlin because it would implement the city's plan and its commitment that "..Berkeley's portion of the shoreline of the Bay should be **reserved exclusively for public recreation** and related public use." P36-1

Now the City of Berkeley proposes to break that commitment to public recreation and eliminate most of the existing public parking spaces and devote the land in question to a ferry terminal for commuters. We are expected to accept on faith that a ferry terminal that can easily accommodate 1600 passengers will work fine with 399 parking spaces—and look the other way when those parking spaces are made unavailable to those who now use them. But we have seen how Berkeley has artificially restricted recreational parking by P36-2 P36-3

locking the Seawall lot without a BCDC permit, by approving small ferry operations without coordinating with BCDC or considering Bay Plan policies, and by relocating the Parking Bureau, a non-trust use, into the marina. Those policies restricted the amount of parking so that recreational users were turned away, and the city failed to enforce the parking management promises they made to BCDC. This EIR does not evaluate whether there will be enough parking for a new ferry terminal, or what the impact would be on recreational uses. Instead, the city argues that despite this history and the promises the city made, and Bay Plan policies that protect recreational access, CEQA does not require them to address parking. With such analysis not available in the EIR, the city then blithely concludes that any impact on recreation would not be significant. The rationale and analysis behind that conclusion is inadequate, as I will explain in detail in the following comments.

P36-3

P36-4

CONFLICTS WITH ADOPTED PLAN POLICIES

Consistency with adopted plans is discussed in EIR Section 3.9, Land Use Planning

Under the California Environmental Quality Act, an EIR is required to discuss any inconsistencies between the proposed project and the applicable plans of regional agencies. (Section 15125(d) of the CEQA Guidelines.) Where a local or regional policy of general applicability, such as an ordinance, is adopted in order to avoid or mitigate environmental effects, a conflict with that policy indicates a potentially significant impact on the environment. (*Pocket Protectors v. Sacramento* (2005) 124 Cal.App.4th 903.) Any inconsistencies between a proposed project and applicable plans must be discussed in an EIR. (14 CCR § 15125(d); *City of Long Beach v. Los Angeles Unif. School Dist*. (2009) 176 Cal. App. 4th 889, 918; *Friends of the Eel River v. Sonoma County Water Agency* (2003) 108 Cal. App. 4th 859, 874 (EIR inadequate when Lead Agency failed to identify relationship of project to relevant local plans).) A Project's inconsistencies with local plans and policies constitute significant impacts under CEQA. (*Endangered Habitats League, Inc. v. County of Orange* (2005) 131 Cal.App.4th 777, 783-4, 32 Cal.Rptr.3d 177). Particular emphasis in the Guidelines is given to agencies—like BCDC—that are responsible for protection of San Francisco Bay and access to and along the Bay.

P36-5

The draft EIR cherry-picks policies within BCDC's Bay Plan, as well as policies in the City's own "Berkeley Marina Master Plan" (June 1, 2003), eliding any policy in those plans that does not support their view of the project. Instead of discussing the inconsistencies, the EIR ignores them, and without discussion or analysis concludes that there are no such inconsistencies. This approach is inadequate and requires a revised Draft EIR to disclose all inconsistencies between the proposed project and applicable plans and policies.

P36-6

RELEVANT BERKELEY PLANS, LAND USE DESIGNATIONS, AND POLICIES

P36-7

There are two directly applicable Berkeley plans, the Marina Master Plan cited above, and Measure L, passed as a citizen initiative in 1986. Rather than enumerate and analyze specific policies within those plans that appear to conflict with the proposed project, the EIR pivots to very general language in the city's General Plan. But that plan does not designate this site, or indeed any site in the marina for a ferry terminal, while the Marina Master Plan designates this site for access improvements and open space. (Figures 2.0 and 12.0) Berkeley has stalled its efforts to complete a revision to the Waterfront Planning Documents. This leaves in place the Berkeley Marina Master Plan (BMMP), dated June 1, 2003.

P36-7

P36-8

In both adopted policies and in land use designations, there are fundamental conflicts between the Berkeley Marina Master Plan (BMMP) and the project contemplated in the EIR. Most of these can be seen by reviewing the adopted map, Figure 2.0. Those conflicts include:

P36-9

- The only ferry site considered in the plan is located within the marina, and the plan adopts policies to make that site seismically safe.
- The site now proposed for a ferry terminal and ferry parking is designated for other recreational uses, including enhanced windsurfing access. An illustration of that concept is provided in Figure 12, that shows head in parking for public viewing, improvements to the windsurfing launch and staging area, and open space at the water's edge. The proposed project conflicts with this plan by eliminating much of the open space on the peninsula, not increasing it, eliminating the staging area for windsurfing, and eliminating most of the parking places that are currently used for fishing access and viewing the Bay. The EIR does not discuss any of these conflicts.
  The project entails removal of much of the green area and landscaping that now exists, including 40 trees (or perhaps 39; both numbers are provided) and makes no quantitative assessment of the impact on open space.

P36-10

P36-11

Among the other important BMMP policies elided from the EIR are:

P36-12

- Enhance open space and recreational opportunities
- Enhance and protect wildlife habitat
- Address the future viability of the Marina
- Protect scenic view and view corridors
- Increase green space
- Upgrade the Ferry Pier to comply with seismic regulations
- **Enhance Windsurfer Activities at the point immediately to the west of H's Lordships Restaurant. Includes a reference to staging areas**

P36-13

P36-14

P36-15

P36-16

P36-17

P36-18

The EIR concludes that providing a much shorter recreational pier, bikeway and plaza will enhance recreation. But this is simply provided as a conclusion, without any discussion of

P36-19

how the project might impact existing recreation. As we point out repeatedly, currently over 600,000 people visited this recreational area in the year that ended in May 2024. The EIR lacks any quantitative discussion of changes in green space or impacts to that recreation—while proposing to remove many of the scenic view parking spaces protected in the BMMP. Since the BMMP included discussion of a ferry terminal site within the marina, it cannot be said that this new location in the open Bay is consistent with that plan.

P36-19
P36-20
P36-21

The EIR doesn't merely ignore the need to address the fiscal viability of the marina, it avoids any discussion of the cost of the project or who would pay. Currently, the marina needs more than $100 million in repairs just to address existing problems. Many of those are within the commercial area of the marina, which provides about 2/3 of the revenue for the marina fund. Cost information that I obtained only through Public Records Act requests shows that the proposed project would cost about $170 million. No firm sources of revenue for those costs have been identified, but it appears that the city's share would be more than $30 million. Since there would be no direct revenue from the project, it is impossible to understand how making this site into a commuter terminal would address the future viability of the marina. It seems clear that it would divert funds, and land areas, that could be used to repair assets that generate the revenue needed to maintain the marina.

P36-22
P36-23
P36-24

As with the lack of discussion on the policies in the BMMP, the discussion of the 1986 Measure L is cursory and conclusory, without presenting the policy or discussing the provisions. Measure L was adopted by Berkeley voters on November 3, 1986. It is included in the city's laws as ORDINANCE NO. 5785-N.S. and titled THE BERKELEY PUBLIC PARKS AND OPEN SPACE PRESERVATION ORDINANCE. The specific provisions that are relevant to consideration in this part of an EIR include:

P36-25

> Section 1. **VOTER AUTHORIZATION PROCEDURE.**
>
> That **no** public parks (hereinafter defined) or **public open space** (hereinafter defined) owned or controlled or leased by the City of Berkeley or agency thereof, **shall be used for any other purpose** than public parks and open space, **without The Berkeley City Council first having submitted such use to the citizens for approval by a majority of registered Berkeley voters voting at the next general election**.
>
> Section 2. **FUNDING LEVELS TO ALLOW FULL USE**
>
> 2(a): That wherever public parks and open space currently exist in Berkeley, such use shall continue and be funded at least to allow the maintenance of the present condition and services. (b) **That all undedicated or unimproved open space owned or controlled by the City of Berkeley (including land held by the City in trust) shall be retained and funded by the Berkeley**

P36-26
P36-27
P36-28

P36-28

City Council to enable public recreational use of those lands. (c) That those census tracts containing less that the Master Plan provision of two acres of parks and open space per 1,000 population shall be singled out as having a high priority for funding the acquisition, development and maintenance of parks and recreational facilities.

P36-29

Section 3. **DEFINITIONS**

3(a): Public parks shall be defined as City of Berkeley parks, public school playgrounds or lands held in trust by a public entity, which have been formally dedicated to permanent recreational use by the City of Berkeley, and funded for recreational use by City of Berkeley public funds.

P36-30

3(b): **Public open space shall be defined as all City of Berkeley parks, public school playgrounds, and vacant public land, whether dedicated formally to park use or being used de facto as open space with recreational use or potential use on or after January 1, 1985**.

P36-31

This area clearly meets the definition of open space as it has been used for various recreational purposes since it was filled in about 1970. The EIR does not discuss the Measure in any detail or provide any quantitative analysis or discussion. Instead, the EIR claims that this area, designated a shoreline park in BCDC's Bay Plan and including landscaped areas of open space, is not open space. The EIR leaps to this conclusion:

P36-32

> Even if the improvements were located on public parks or open space as defined by Measure L, they would be Measure L compliant because they do not change the use or purpose of these areas but rather maintain their recreational nature and in fact enhance recreational opportunities there.

P36-33

The EIR is for a project that will regrade this area, filled to create a recreational area, eliminating trees, berms, and public parking spaces where people access the Bay and enjoy the view, to create additional space that will then be privatized for ferry or restaurant use. This will reduce open space and eliminate the parking now used for recreational access to the Bay and access to Shorebird Park. The EIR in essence argues that despite city policies which protect these uses, parking lies outside the scope of CEQA. A cursory discussion of city policies that argue that obvious open space is not really open space is fundamentally inadequate.

P36-34

P36-35

Pursuant to Section 1 of Measure L, the project must be presented to the voters for the city to comply with Measure L. Obviously, a city must comply with its own regulations. (*Pacifica Corp. v. City of Camarillo* (1983) 149 Cal.App.3d 168, 180-181.) Also, the city may not approve the project due to its conflict with Measure L. Under CEQA a city may not approve a project with significant unavoidable imposed unless it is "otherwise permissible under applicable laws and regulations." (CEQA §21002.1(c).) Since the project conflicts with Measure L, the city may not approve the project pursuant to CEQA.

P36-36

RELEVANT BCDC POLICIES

As I pointed out in my scoping comments of May 16, 2025, Section 15125(d) of the CEQA Guidelines requires discussion of inconsistencies between a proposed project and regional plans. There are multiple Bay Plan policies that govern any proposal to alter the peninsula of land filled in about 1967. Those policies establish protection for recreational uses, and a standard for consideration of a project like a ferry terminal. This site is unique; it was approved in the early days of the BCDC program to create a **permanent** recreational area, including parking to support those recreational uses. BCDC continues to have permit authority over the area, and its policies have more weight than normal EIR considerations of consistency with agency plans. The approach in the EIR cherry picks among BCDC's policies. For recreational access, which is protected by Bay Plan Policies, the EIR only considers policies 7 and 9, and limits analysis with a claim that an EIR need not consider parking, even if Local Plans require protection of recreational parking as an essential resource. The relevant Bay Plan policies include:

P36-37

P36-38

P36-39

P36-40

P36-41

Plan Map 4 includes the following guidance:

> Berkeley Waterfront - Cesar Chavez Park - Preserve marina, beach, small boat launch, windsurfing access, fishing pier, interpretive center and multi-use trails**. Possible ferry terminal. Allow if compatible with park and marina use**... (emphasis added)

P36-42

Recreation Policy 3(a)(6) states:

> **Sites, features or facilities within designated waterfront parks that provide optimal conditions for specific water-oriented recreational uses should be preserved and, where appropriate, enhanced for those uses**, consistent with natural and cultural resource preservation. (emphasis added)

P36-43

Recreation Policy 3(a)(7) states:

> Access to marinas, launch ramps, beaches, fishing piers, and other recreational facilities should be clearly posted with signs and **easily available from parking reserved for the public (**emphasis added)

P36-44

Recreation Policy 3(b)(4) states:

> marinas should include public amenities, **such as viewing areas**, restrooms, public mooring docks or floats and moorages for transient recreational boaters**, nonmotorized small boat launching facilities, public parking** (emphasis added)

P36-45

Recreation Policy 3(e)(3) states:

> **Sufficient, convenient parking** that accommodates expected **use should be provided** at sites improved for launching non-motorized small boats. (emphasis added)

P36-46

Finally, Recreational Policy 9 provides:

> Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes**, provided the development and operations of the ferry facilities do not interfere with current or future park and recreational uses,** and navigational safety can be assured. Terminal configuration and operation should not disrupt continuous shoreline access. **Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons**. Shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking. (emphasis added)

P36-47

While these policies emphasize protection of windsurfing and other non-motorizing boat access opportunities, the plain language of the policies protect all current recreational uses and require consideration of future recreational needs. Yet the draft EIR does not provide the required discussion or consider mitigation measures that would resolve these inconsistencies.

P36-48

THE CITY HAS REFUSED TO DOCUMENT EXISTING RECREATIONAL USES OR CONSIDER FUTURE RECREATIONAL NEEDS

Stakeholders representing the existing recreational users have documented current recreational uses. Specifically, we obtained a report from Placer AI using cell phone data to document visitation to the marina for the period from June 1, 2024, through May 31, 2025. Excluding the commercial areas, that report showed more than 600,000 annual visits—more than 1800 a day. It further showed a peak use of more than 4,000 visitors during summer months. A copy of a page of data from that report is attached.

P36-49

BCDC echoed our scoping comments that the planning effort needed to document existing recreational uses with this comment:

> **The EIR should document the recreational uses** of the Bay and shoreline in and around the Project site, identify the service area and service population for the recreational facilities serving those uses...

P36-50

Despite that comment, Berkeley has made no effort to document the current recreational uses and incorporate them into a baseline that could be used to evaluate the project's impacts. Existing uses are protected; therefore, a baseline of existing recreational use is essential to analyze consistency with the relevant Bay Plan policies. P36-51

Every CEQA document must start from a "baseline" assumption. The CEQA "baseline" is the set of environmental conditions against which to compare a project's anticipated impacts. (*Communities for a Better Environment v. So Coast Air Qual. Mgmnt. Dist*. (2010) 48 Cal. 4th 310, 321.) Section 15125(a) of the CEQA Guidelines (14 C.C.R., § 15125(a)) states in pertinent part that a lead agency's environmental review under CEQA:

> "...must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time [environmental analysis] is commenced, from both a local and regional perspective. This environmental setting will normally constitute the baseline physical conditions by which a Lead Agency determines whether an impact is significant." P36-52

(See, *Save Our Peninsula Committee v. County of Monterey* (2001) 87 Cal.App.4th 99, 124-125.) As the court of appeal has explained, "the impacts of the project must be measured against the 'real conditions on the ground,'" and not against hypothetical permitted levels. (*Save Our Peninsula*, 87 Cal.App.4th 99, 121-123.) As the court has explained, using such a skewed baseline "mislead(s) the public" and "draws a red herring across the path of public input." (*San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 656; *Woodward Park Homeowners v. City of Fresno* (2007) 150 Cal.App.4th 683, 708-711.) The EIR fails entirely to analyze the recreational use baseline.

Berkeley also fails to consider future recreational needs and the guidance provided in the BCDC scoping comments. Two on-site uses are obvious; re-opening of the old H's Lordships Restaurant and opening a pier that would provide recreational access. On the restaurant use—a protected commercial recreational use—the city has an exclusive negotiating agreement for that facility that would reserve 150 of what are now public parking spaces for that use. While the portion of the proposed pier suitable for fishing is much shorter than the closed section (580 feet compared to 3000 feet), the city has made no attempt to account for these two future uses—which are protected under Bay Plan Recreational Policy 9. P36-53 P36-54

Instead of providing an adequate analysis of whether the project meets Bay Plan policies, and provides for future *regional* recreational needs, as suggested in the BCDC scoping comments, the EIR considers only the future recreational needs of Berkeley. The city contends on page 3.11-19 that there is no need for future park facilities. While this may satisfy Berkeley's requirement, it ignores the provisions in the Bay Plan, which must consider regional needs for recreational access only available in a waterfront park. P36-55

The draft EIR is conclusory and fails to support its conclusions with analysis that links to existing recreational use or the Bay plan—because the city has not established what the protected uses are. Here is the limited information to be found on page 3.9-18 of the draft EIR:

> Consistent. The proposed ferry facility is located within a waterfront park priority use area and would be located at the proposed pier that will also be used for fishing, sight-seeing, and walking. The proposed ferry facility would not interfere with current or future park and recreational users. This project would actually enhance recreational use by providing a pier that can be used for recreation. Navigational safety would be assured through adherence to WETA safety protocols. The project would not disrupt shoreline access; in fact, the project would restore shoreline access that is not publicly available under existing conditions.
>
> Regarding parking facilities, **the City would implement a parking strategy to balance shared-use parking for both future ferry patrons and recreational users. The exact strategies that would be implemented would follow the guidelines established in the project Parking and TDM Plan19,20 and may be subject to approval from BCDC via the Project permitting process. It should be noted that consistency with this policy related to parking would not be considered an environmental impact under CEQA**. Please refer to Chapter 3, Environmental Impact Analysis, for a discussion about how parking is addressed in this EIR. This EIR has found no secondary environmental impacts related to parking.

P36-56

P36-57

In support of this position, the city cites, on page 3-11 in a footnote that impacts to parking cannot be a significant impact under CEQA, citing *San Franciscans Upholding the Downtown Plan v. City & County of San Francisco* (2002) 102 Cal.App. 656 at 697, "The social inconvenience of having to hunt for scarce parking spaces is not an environmental impact; the secondary effect of scarce parking on traffic and air quality is. Under CEQA, a project's social impacts need not be treated as significant impacts on the environment. An EIR need only address the secondary physical impacts that could be triggered by a social impact."

P36-58

This is an erroneous conclusion for the current proposal. Here, under BCDC's Bay Plan, a ferry terminal can only be considered for a waterfront park if it does not usurp recreational parking. This is not matter of parking becoming less convenient, but instead it is an inconsistency with the adopted plan of a responsible agency that has a mission to protect the recreational uses that it allowed Bay fill to create. CEQA continues to consider such inconsistencies significant impacts—particularly here where the Bay Plan policy is not merely an advisory land use policy where the city could adopt a finding of overriding circumstances, but a regulatory standard. Unlike here, the *San Francisco* case did not involve any plan inconsistency.

The second paragraph in the city's document promises that the city would, outside of this EIR, implement a parking strategy to protect recreational use. The language of this proposal is too vague to be acceptable as a mitigation measure. Further, in addressing the regulatory standard, the vague promise by the city is insufficient if it has not prepared an analysis that allows the public to comment on the sufficiency and enforceability of that program. This is contrary to CEQA guidance, which provides:

P36-59

> **Mitigation measures must be fully enforceable through permit conditions, agreements or other legally binding instruments**. 14 CCR § 15126.4(a)(2). *See Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal. App. 4th 683, 730 (project proponent's agreement to a mitigation by itself is insufficient; mitigation measure must be an enforceable requirement). (emphasis added)

CEQA disallows deferring the formulation of mitigation measures to post-approval studies. (CEQA Guidelines § 15126.4(a)(1)(B); *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 308-309.) An agency may only defer the formulation of mitigation measures when it possesses "'meaningful information' reasonably justifying an expectation of compliance." (*Sundstrom* at 308; see also, *Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 92.) A lead agency is precluded from making the required CEQA findings unless the record shows that all uncertainties regarding the mitigation of impacts have been resolved; an agency may not rely on mitigation measures of uncertain efficacy or feasibility (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 727 (finding groundwater purchase agreement inadequate mitigation because there was no evidence that replacement water was available).) This approach helps "insure the integrity of the process of decisionmaking by precluding stubborn problems or serious criticism from being swept under the rug." (*Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn.* (1986) 42 Cal.3d 929, 935.)

P36-60

We have seen that happen when Berkeley approved charters to let Prop SF and Tidelines start a private ferry service in December 2016. As the city's first transportation consultant, Nelson\Nygaard pointed out in their September 11, 2018, report, "Ferry customers continue to park in South Coast Eat, J&K, and L&M Lots due to a lack of enforcement. Since re-opening, South Cove East Lot experiences as much as 90% occupancy." So even the much smaller ferries were usurping recreational parking, and the city was not enforcing restrictions to prevent that. The city acknowledged that in response to concerns from BCDC, stating in a letter dated April 15, 2019, that "over 300 customers depart from K-dock in the early morning hours, occupying the majority of the 400 total parking spaces…" Examination of the ridership records show that a peak daily ridership by PropSF was 68 passengers per day, while Tidelines only served a higher of 71 passengers for their highest month

P36-61

during the period of March 2022 through October 2022. Even with thatlimited number of passengers, recreational parking was usurped. While the city adopted restrictions on such parking, and promised BCDC it would protect recreational parking, they failed to enforce those restrictions.

P36-61

PARKING FEES WILL NOT PROTECT RECREATIONAL PARKING

What little detail is provided about the city's intent to protect recreational parking from usurpation convinces us that it will not only be ineffective, but end much of the recreation that currently occurs. The City Council has endorsed a staff plan to initiate parking fees for the area south of University Avenue where BCDC has continuing jurisdiction. No details of that plan or its efficacy are included in the EIR; the EIR claims that CEQA allows them to experiment with parking in the marina without oversight under CEQA. But the report to the City Council contemplates an annual pass of $500 for parking. A regular ferry commuter could purchase such a pass; it represents a cost of only about $2 a day—less than the recently established parking fee in Alameda. With such a pass, a commuter who purchased a recreational pass could park anywhere in the recreational lots, knowing that the Seawall lot is likely to fill up. Since there are only 729 parking spaces in close proximity to the proposed terminal, and a capacity for 1600 departing passengers, it can readily be seen that initiating a ferry service under such a program could result in every parking space being occupied by 10:00 a.m., effectively displacing almost all recreational users.

P36-62

P36-63

P36-64

THE CITY HAS NOT COLLECTED AN ADEQUATE BASELINE OF EXISTING USE FOR RECREATIONAL PARKING THAT SHOULD BE PROTECTED FROM USURPATION

There are many different types of recreation that occur at Berkeley waterfront. It is not in dispute that the most heavily used parking lots are on the South side of University Avenue. Data provided by the city's consultant Kittelson & Associates in a March 7, 2025, report established that peak usage occurred at 2 pm on weekends and weekdays. The Placer AI data, which tracked cell phone movement into the marina has a similar peak. The peak season for use is summer after school ends for the summer. Parking utilization by ferry patrons is most critical on weekdays because ridership projections are highest on weekdays as a primarily commuter service.

P36-65

Kittelson had Quality Counts collect parking data on only two days that correspond to summer weekdays—Thursday August 1, 2024, and Thursday August 22, 2024. However, in their report they combined those counts with other remote areas and thus avoided providing even two days of data about peak use of the recreational lots where ferry riders might usurp recreational parking. This practice underestimates the potential for impact by diluting the data and is an improper statistical approach

P36-66

P36-66

to time series analysis. Other lot-by-lot counts were not included in the March 7, 2025, report or in subsequent Kittelson & Associates reports. As Kittelson informed the city in their May 7, 2025, report "The South Cove West Lot reaches peak occupancy between 1 and 3 pm on both weekdays and weekends." To be adequate, a statistically robust data set must be developed for the individual lots, and particularly those closest to the proposed terminal. I requested a copy of the Quality Counts report—and received a series of GPS readings of latitude and longitude that did not show the counts at the individual parking lots. The city has continued to hold that information away from public review. Whether intended to reverse engineer data collection to obscure actual use or not, no conclusions can be drawn about parking use at peak times from the information that the city has made public.

P36-67

This Kittelson & Associates approach uses 1,541 parking spaces as the total parking inventory, the denominator if you will. However, there is a much smaller inventory of parking spaces which support existing recreational use and are within easy walking distance of the proposed ferry terminal. Those lots include Seawall lot, filled under a BCDC permit to support recreational use at Shorebird Park and the former H's Lordships restaurant, 320 spaces; Seawall Drive, 90 spaces used for sightseeing and fishing; Skates/N lot, 137 spaces supporting a restaurant and overflow parking for the Yacht Club; South Cove East, 96 spaces; and South Cove West, 86 spaces. That is a total of 729 spaces, supporting most of the 600,000+ annual visitors. In effect, the approach by the City and Kittelson doubles the denominator and thus cuts the actual inventory of use at these sites by at least 50%.

P36-68

The city cites other parking counts to assert that there is plenty of parking. The city has had contract employees collect parking data for several years to determine whether there were cars or RV's parked overnight in the marina. Those counts were taken at 8:00 pm and 10:00 am and provide no useful information about recreational parking demand. City staff increased the frequency of counts for a brief period from July 23, 2024, through August 23, 2024. The parking area closest to the proposed ferry terminal is along Seawall Drive, and the next closest are the two South Cove lots. The Kittelson report noted that the peak use at the South Cove lots was earlier, between 1 and 3 pm. For those two lots, the city collected parking counts on only 12 weekdays, with all data taken at 4:00 pm, after the peak period. Even then that data showed the South Cove lots as much as 96% full. Only 8 days of use were counted for parking along Seawall Drive, again at 4:00. Those parking spaces support recreational access by swimmers, windsurfers, anglers, and people simply enjoying the view, and are protected in the City's Marina Plan. The city proposes, under the revised Kittelson Memorandum dated May 7, 2025, to provide 83 ferry parking spaces along Seawall Drive, where only 90 spaces are now present. It is not clear whether that would reduce the number of public parking to 7. The project description does not provide any details about this proposal, and states that the final design might provide between 400 and 450 spaces. While there is a drawing in

P36-69

P36-70

the EIR that shows some spaces still facing the water, no discussion or quantitative analysis of how that compares to existing available parking and use is provided. P36-70

This EIR uses 1160 departures as their projection for passengers leaving the terminal in 2040 and does not disclose expected passenger departures for 2050. As noted, if only 52% of those passengers drove to the waterfront that means that more than 600 people would be seeking parking spaces in an area where there are only 729. Even if all passengers parked in the now restricted lots, more than 200 drivers would be looking for spaces in the recreational areas. The risk of ferry parkers usurping recreational use is evident and must be considered as a significant impact because it conflicts with an adopted regulatory standard by an agency whose mission is to protect access to the shoreline. As noted later, substantially higher numbers for departures are given in WETA business plans. P36-71

THE CITY HAS RELIED ON ASSUMPTIONS RATHER THAN EXISTING PATTERNS TO UNDERESTIMATE THE MOST LIKELY CAR USE

Instead of using mode split information from similar terminals now in operation, Berkeley has used assumptions that underestimate car use and overestimate use by bicycles. WETA, or San Francisco Bay Ferry, published a summary report on November 2022 based on on-board passenger surveys. For Richmond, an existing terminal like Berkeley more than a mile from residential areas, 57% of passengers drove alone and 11% of passengers rode bicycles. More passengers carpooled and parked, but that number was combined with drop offs and transit. The 2021 and 2017 survey had Alameda with 57% and 58% of passengers driving alone. P36-72

Initial estimates on mode split for Berkeley were prepared by Nelson/Nygaard in a report date April 2021. That report estimated that 54% of passengers would drive alone. Another 9%, with an average of 2 passengers per vehicle, would carpool. That means that 58.5% of passengers would arrive by car and need a parking space. Berkeley hired a new parking consultant, and developed estimates based on assumptions rather than investigating the mode split that was occurring in the marina with the two small ferry operations. Without explanation or substantial evidence to counter existing practices, Berkeley now assumes that most people will not drive. P36-73

The court in the case *Stanislaus Audobon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144 rejected a county's argument that a revised initial study prepared by the county which contradicted the findings of the first initial study had "relegated the first initial study to oblivion." (Id. at 154.) The court stated, "We analogize such an untenable position to the unringing of a bell. The first initial study is part of the record. The fact that a revised initial study was later prepared does not make the first initial study any less a record entry nor does it diminish its significance, particularly when the revised study does not conclude that the project P36-74

would not be growth inducing but instead simply proceeds on the assumption that evaluation of future housing can be deferred until such housing is proposed." (Id. at 154) Similarly here, the city cannot simply pretend that the Nelson/Nygaard study does not exist and disregard its findings.

P36-74

If the Nelson\Nygaard estimate is applied to 955 passengers, nearly 560 drivers would be looking for parking with a supply of only 399 spaces. If the higher estimates of 1018 (2035) and 1055 (2040) from the WETA business plan, that means that 596 to 617 cars will arrive to encounter a supply of only 399 spaces. Clearly usurpation of recreational parking is an issue. The actual capacity of the proposed ferry system is even greater. WETA proposes to run 8 morning departures from Berkeley in 250 passenger ferries. WETA uses 80% occupancy as a practical estimate of capacity, giving a departure capacity of 1600 passengers. Berkeley cannot determine what equipment WETA uses on a new route, or restrict the number of departures, so the analysis is based on unrealistically low departures.

P36-75

P36-76

To meet the needs of these departing passengers, Berkeley initially proposed designating 250 of the existing 320 spaces in Seawall lot for ferry use instead of public use. Earlier proposals by WETA in a 2008 draft EIR were for at least 400 spaces. In an addendum dated May 7, 2025, Kittelson lays out the current, and revised proposal by the city and WETA. That proposal would provide 250 spaces in Seawall Lot, 83 spaces along Seawall Drive, and 66 spaces in the Skate's lot, for a total of 399 spaces to serve 1160 departing passengers. Currently, Seawall lot has only 320 spaces and the city proposes to reserve 150 spaces for a new restaurant lessee. To reach these numbers, it would be necessary to restripe Seawall lot, eliminating most of the existing landscaping. At present, the 90 spaces along Seawall Drive facing the Bay are used for access to the Bay and for viewing—uses protected by policies like Recreation Policy 3. The Kittelson addendum noted that peak use of those spaces (according to their limited counts) is 49 cars parked, while parking counts mentioned above show 63% of the 90 spaces, or 57 spaces occupied by recreational users so this proposal directly usurps existing recreational parking.

P36-77

BERKELEY'S ASSUMPTION OF 18% OF PASSENGERS ARRIVING BY BICYCLE IS NOT SUPPORTED BY SUBSTANTIAL EVIDENCE

Berkeley approved two small ferry operations which operated at times between 2017 and 2024. Nelson/Nygaard reported that passengers arriving by car usurped more than half of the parking spaces in the recreational lots in the South Basin. Berkeley has made no attempt to assess the number of passengers that arrived by bicycle. At least some information about use is readily available. Berkeley approved and helped fund installation of 20 bike lockers adjacent to the bait shop and on the way to the small ferry debarkation pier. Since those lockers can only be used with a

P36-78

cell phone app, data on usage is readily available—but Berkely has shown no interest in relying on data instead of assumptions. P36-78

Various reliable sources of bicycle use are available that suggest the estimate of 18% is wildly exaggerated. The American Community Survey, which uses census data, shows results for bicycle use in 2024 for Berkeley at 4%. https://censusreporter.org/profiles/16000US0606000-berkeley-ca/

The Metropolitan Transportation Commission recently released a draft EIR for Plan Bay Area 2050+. On page 3.15-10 they estimate travel to work by bicycle for 2023 at 1% of the total. They continue to indicate that bicycle use has been relatively steady at 1% since 1990 and has an average length of only 2.4 miles. Other sources have somewhat higher estimates of bicycle use—but still well below 18%. Data USA concluded that Berkeley's bicycle use in 2019 was 5.9%. MTC reports a similar number, perhaps relying on the Data Usa data. The Census American Community Service reported a 6.2% mode share for Berkeley for 2019—a very slight recovery. The 2019 CACS report is particularly valuable because it tracks trends. P36-79

For Berkeley to ignore readily available information based on prototypes and rely on assumptions that conclude that 18% of the passengers will access the ferry by bicycle, is unreasonable. It is not merely inadequate; it is evidence of the continued bias and reverse engineering of the analysis of recreational impacts. P36-80

THE CITY HAS FAILED TO ENFORCE PARKING RESTRICTIONS AND HAS NOT PRESENTED AN ENFORCEABLE PROGRAM TO PROTECT RECREATIONAL PARKING

The statement made on page 3.9-18 that the city would somehow develop and implement a parking management system that would protect recreational users is not supported by analysis or a draft workplan and budget. We have seen that the city failed to enforce parking restrictions for years after approving earlier and smaller ferries. While the city's first traffic consultant estimated the cost of the program to be $550,000 a year, the program has been substantially modified since then. There is no final budget for the program, an outline of what would be required to make it mandatory, or any indication of the potential source of funding. As noted in the introduction, the city has failed to enforce the parking restrictions now in place that might protect recreational users. P36-81

PROTECTION OF RECREATIONAL USE CANNOT BE ACHIEVED BY ADOPTING POLICIES INTENDED TO REDUCE ACCESS TO THE MARINA BY AUTOMOBILE WHEN THE CITY'S OWN SURVEYS SHOW THAT 90% OF THE VISITORS TO THE MARINA DO SO BY AUTOMOBILE P36-82

Rather than address the obvious issues raised by planning for more than 1000 passengers in an area where most of the existing parking is needed for recreational

use, the city pivoted to considering a transportation demand management approach. In effect, the city decided to charge recreational users enough money to drive some out of the marina's recreational area and make room for commuters. Berkeley has long been considering ways to discourage recreational activities that depend on car access—as about 90% of access presently does. As early as February 16, 2021, city recreation staff touted paid parking as a way of "disincentivizing car-based traffic to the Waterfront." City consultants seem to have been instructed to evaluate such approaches; the January 2022 Nelson\Nygaard report recommended paid parking and stated "Paid parking is an effective tool for managing demand and turnover in the most convenient, high-demand parking spaces." Rather than adopt a plan that will assure that ferry patrons do not usurp parking for protected recreational users, the city is proposing a system that would charge recreational users of this public trust park land enough to drive many away and make room for ferry parking.

P36-82

FEASIBILITY AND ALTERNATIVES

It is certainly unusual to see a project proponent ignore the scoping comments of a responsible agency. Yet in the cursory dismissal of alternatives and lack of discussion of costs and feasibility, that is exactly what this document does. BCDC provided scoping comments similar to those submitted by stakeholders and Save Berkeley Pier. BCDC's comments were clear and direct:

P36-83

> Therefore, the alternatives evaluated in the EIR should include at least one alternative that reduces or eliminates the amount of fill proposed.

BCDC's scoping letter identifies the specific Bay Plan policies that *compel* consideration of alternatives with less dredging and fill. Similar policies are included in the Clean Water Act, where Section 404(b) and its implementing regulations require analysis of alternatives that would avoid fill completely, further analysis of alternatives with less impact, and then mitigation only if there were no practicable alternatives.

P36-84

The EIR short circuits this process by insisting that there are no alternatives that would meet the city's objectives. In effect, they argue the city's objectives are superior to the regulatory standards for considering marine impacts, which don't merit discussion. That position can be found in this assertion:

P36-85

> For the purposes of this alternatives analysis, the City considers the two top bullets as the basic project objectives. In other words, for an alternative to meet the basic project objectives, they would need to meet of the following basic objectives: (1) enhance public access and recreational opportunities at the Berkeley Waterfront and (2) provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco.

The city cannot avoid considering alternatives by including some recreational benefits as mandatory elements of the city's objectives. The objectives of improving access and providing ferry service are independent objectives. Restoration of pier access and improvements to the Bay Trail are separate projects from establishment of a ferry service—although the city has consistently argued otherwise. Both are subject to feasibility and alternative tests.

P36-86

CEQA requires that an EIR provide a discussion of project alternatives that allows meaningful analysis. (*Laurel Heights Improvement Assn. v. Regents of Univ. of California* (1988) 47 Cal. 3d 376, 403.) An overly narrow definition of project objectives renders the alternatives analysis inadequate. To narrowly define the primary "objective" of the proposed project itself constitutes a violation of CEQA since such a restrictive formulation would improperly foreclose consideration of alternatives. (See, *City of Santee v. County of San Diego* (1989) 214 Cal.App.3d 1438) (holding that when project objectives are defined too narrowly an EIR's treatment of analysis may also be inadequate). It is an abuse of discretion for an agency to exclude a potentially feasible alternative that would substantially reduce significant impacts from analysis in the EIR simply because it does not meet all project objectives. (*Habitat & Watershed Caretakers v. City of Santa Cruz* (2013) 213 Cal.App.4th 1277, 1304 ["limited-water alternative could not be eliminated from consideration solely because it would impede to some extent the attainment of the project's objectives"]; *Watsonville Pilots Assn. v. City of Watsonville* (2010) 183 Cal. App. 4th 1059, 1087 [agency's refusal to analyze a reduced development alternative because it failed to meet two of 12 project objectives was legal error].)

P36-87

P36-88

The EIR's alternatives analysis is inadequate because it fails to consider a feasible reduced fill alternative suggested by BCDC, and it has defined the project alternatives so narrowly as to foreclose the consideration of environmentally superior alternatives.

P36-89

P36-90

RESTORATION OF BERKELEY PIER

Berkeley received a grant of $15 million that could have been used to restore Berkeley Pier. The most recent cost estimates, obtained through a Public Records Act request, estimate the total cost of 1080' feet of pier, including demolition, pilings, and a new deck, is about $14 million. I first pitched the idea of State funding for restoration of the pier to then Senator Nancy Skinner and then to newly elected Council Member Terry Taplin. The city requested a grant and received $15 million. It was not limited to construction of a pier and a new ferry service; the grant made no mention of a ferry service, the money was simply available for the pier and the marina. Senator Skinner wrote eloquently about the importance of a pier as a way to get people out onto the Bay without owning a boat—a sentiment I heartily support. Restoring the pier has a much easier regulatory path than the proposed

P36-91

project. Demolition of the old pier would be in-kind mitigation for a new pier. Construction of a new fishing pier, even if only 1080 feet long, would not entail new fill for a terminal breakwater or 400,000 cubic yards of dredging that would deepen the flats that have supported a pier fishery for decades. Even if not matched by the city, the $15 million grant was sufficient to restore a substantial recreational pier. The city chose not to do so; that is a policy choice, not evidence that a pier is only feasible in combination with a new, in-bay ferry terminal.

P36-91

A revised EIR should consider the restoration alternative as a "no project" alternative. It would clearly be environmentally superior to the proposed project.

P36-92

BUILDING A NEW PIER IN THE BAY REQUIRES CAREFUL ANALYSIS OF IMPACTS, ALTERNATIVES AND FEASIBILITY

Cost estimates obtained through a Public Records Act request, although not included in the EIR, estimate the cost of the current project, not including new ferries for operation, at $131,133,445. Previous estimates for the cost of ferries were $38 million, bringing the total cost of the project close to $170 million. A copy of that estimate is attached and incorporated by evidence. In contrast, the construction of a ferry terminal at Richmond, built inside the breakwater, was $20 million. As the City of Berkeley has admitted in their presentation to the Design Review Board at BCDC, there are no identified funding sources for the project—which undermines their argument that only the project and no cheaper alternatives are feasible. The city has not provided an update of the city's costs for construction or for management and maintenance of the landside improvements, but those costs appear to be in excess of $30 million just for the initial cost. That would fund restoration of a much longer recreational pier, with better fisheries resources, than the current proposal. A feasibility analysis would allow consideration of the considerable value of recreational access for fishing and other uses.

P36-93

P36-94

Feasibility, and the related term practicability, pose regulatory hurdles beyond simply finding $131 million. As noted above, the Bay Plan, the Clean Water Act, and the Porter-Cologne Act all require rigorous analysis of alternatives before new fill and 400,000 cubic yards of dredging can be permitted. Most of those hurdles disappear with a location inside the marina.

P36-95

Operation of the terminal would require ongoing costs and subsidies for direct subsidy of the passengers, and for parking management. While WETA has not updated its strategic vision document for 2050, a draft was prepared for the WETA Board. Dated April 12, 2023, and contained in Table 14: Route Summary Metrics, it estimates the annual operational subsidy required for a Berkeley service at $9 to $12 million a year.

P36-96

The EIR fails to adequately establish either the impacts of dredging or propose adequate, in-kind mitigation measures for the dredging impacts, as requested in

P36-97

BCDC's scoping comments. Those impacts need to be established to consider both alternatives and mitigation measures. The discussion in the EIR limits its consideration to the footprint of fill. The proposed mitigation approach is merely to remove of an equivalent amount of fill, with no consideration for mitigating the impacts of dredging and the permanent loss of benthic values. Again, the EIR is conclusory rather than analytical or transparent, limiting its analysis to broad statements like:

P36-97

> Because implementation of Mitigation Measures BIO-3 would result in no net loss of jurisdictional waters, impacts would be less than significant with mitigation. (Page 3.3-59)

P36-98

While replacement of an existing pier structure with a similar structure might be adequately mitigated by removal of an equivalent or greater area of pilings and best management practices, the proposed project involves construction of a terminal breakwater to shelter the proposed ferry berths, 400,000 cubic yards of dredging, and permanent maintenance of deeper water in an area historically used for fishing. These impacts are neither captured in analysis nor adequately mitigated, despite the directions in the BCDC scoping letter. Even the inadequate mitigation measure is proposed in general terms not acceptable for a draft EIR. The public and the regulatory agencies are entitled to see mitigation measures in sufficient detail to assess and comment upon their efficacy. This is the mitigation measure proposed:

P36-99

> The City **shall develop a mitigation plan** documenting the existing pier footprint, the proposed pier footprint, and the required additional demolition needed to meet the mitigation goal. This plan shall be developed by a qualified regulatory specialist prior to project construction and submitted to the appropriate agencies for review and approval during permitting. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

P36-100

This falls far short of the comment in the BCDC scoping letter:

P36-101

> Impacts to the subtidal habitat area should be discussed in the EIR analysis, and **it should also describe the mitigation** that will be required for those impacts.

As CEQA litigation has long held, a proposal for a future plan for mitigation does not provide for an effective or legally binding mitigation measure and does not allow the public to comment on those issues. Deferred mitigation is prohibited under CEQA. Mitigation measures must be set forth in the EIR so the public can assess the adequacy of the measure. (*Communities for a Better Environment v. City of Richmond* (2010) 184 Cal.App.4th 70, 92.)

P36-102

The BCDC scoping comment continues to direct that the EIR consider the impacts on sediment transport, erosion and accretion, and the Bay's bathymetry—a comment that has also been ignored in the document. Nothing in the EIR establishes a rationale that shows that removal of pilings is suitable mitigation for dredging impacts.

P36-103

The EIR ignores the direction of the BCDC scoping letter that it consider "...at least one alternative that reduces or eliminates the amount of fill proposed." As the project description continues to change, and there is no definitive design for the length of breakwater that would be required to provide sheltering for the ferry berths, the amount of fill proposed is not even certain. The approach in the EIR fails to meet the direction from BCDC in their scoping letter that:

> If all such alternatives are determined to be infeasible and not appropriate to include in the EIR analysis, please include a detailed discussion of why these alternatives are infeasible and how the determination was made.

P36-104

We believe that the City and WETA are required to consider a location within the marina, as well as an alternative design that entails less dredging. We have seen a report in the GHD Feasibility Study titled "Small scale Ferry Terminal Feasibility Study" that projected ferry service using aluminum catamarans that had only a 4'6" draft. It seems obvious that such equipment, considered in developing this project, would require substantially less dredging than is currently proposed and should be considered.

P36-105

ALTERNATIVE PARKING ARRANGEMENTS SHOULD BE CONSIDERED

Currently, the City of Berkely's parking division is located on public trust land just north of University Avenue. City facilities like parking for city vehicles of any sort is not a public trust use and is only allowable as an interim use. The EIR should consider leasing that land to WETA for parking, making WETA solely responsible for parking management and enforcement, and retaining the Seawall lot for recreational parking and for revenue generating recreational uses, as the city committed to when they received permission from BCDC to fill the bay.

P36-106

THE EIR LACKS A STABLE PROJECT DESCRIPTION

The description of the project has been in constant flux since the deadline for scoping comments. The project description for parking has changed number of total parking spaces and location, with the proposed parking devoted to ferry passengers increasing from 250 spaces to 399 spaces. The proposal now eliminates most of the public parking along Seawall Drive. The EIR does not bother to mention the city's exclusive negotiating agreement for leasing the old restaurant, which would reserve 150 of the existing public

P36-107

P36-108

parking spaces for the exclusive use of the restaurant lessee. The project description does not include a clear description of the project elements that would convert what are currently all public parking spaces to spaces reserved for ferry passengers, restaurant users and what might remain as public spaces. Nor does it compare what might remain as public spaces to current use. Instead, the document states: P36-108

> The existing Seawall Drive Parking lot includes approximately 320 parking spaces, and the parking off Seawall Drive adjacent to the Bay and south of the pier entrance includes approximately 84 parking spaces for a total of 404 existing parking spaces across the project site. **The proposed project would replace all of the existing parking spaces with 400 to 450 new parking spaces (pending final design)**, including ADA-accessible and EV parking spaces. P36-109

Depending on source, currently 84 to 90 spaces along Seawall Drive are used for recreational purposes. It is not clear how many spaces might remain, but the city proposes to end unrestricted public use for 400 of the public spaces on the peninsula filled under the BCDC permit to create parking for recreational users. The proposal would reserve 250 spaces for ferry passengers and 150 spaces for restaurant patrons. Such a vague project description does not meet the requirements for an adequate EIR. P36-110

The number of passengers, and associated ferry trips, are also apparently in flux. The city has used 955 departing passengers in presentations to the public and BCDC's Design Review Board and now uses 1,018 departing passengers for year ten and 1,055 departing passengers for year fifteen. A footnote on page 3.11-19 increases the number of departures to 1060. Those numbers are taken from WETA's 2022 Berkeley Ferry Service Plan, and are only found in an appendix, not the body of the EIR. P36-111

Different numbers of departures from Berkeley are also possible and must be analyzed. The EIR establishes that at least three departures would take place, (page 2-30) while the same 2022 WETA business plan forecasts 8 departures. Since WETA also forecasts using 250 seat ferries and an 80% load as a practical capacity, the proposed system might have a departure capacity of 1600 passengers. WETA in a plan dated April 12, 2023, considers an even higher number of 4000 total passengers, or 2000 departures. With only 399 parking spaces proposed, the document needs to provide clarity on what the project description really is, and what the potential impacts are. P36-112

Finally, in their presentation to the Engineering Criteria Review Board (ECRB), Berkeley and WETA now propose a shorter breakwater, 350 feet rather than 400 feet, with a different orientation. However, the wave climate provided to the public and the ECRB dismissed wave energy from the northwest, without using wind data from that direction. That issue will return to the ECRB—after closing of the EIR comment P36-113

period—and is only dealt with in the EIR by treating the shorter breakwater as an alternative. P36-113

"An accurate, stable and finite project description is the sine qua non of an informative and legally adequate EIR." (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 192.) "[A] curtailed or distorted project description," on the other hand, "may stultify the objectives of the reporting process. Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental costs, consider mitigation measures, assess the advantage of terminating the proposal (i.e., the "no project" alternative) and weigh other alternatives in the balance." (CEQA section 15124; *City of Santee v. County of San Diego*, 263 Cal.Rptr 340 (1989).) P36-114

All of these uncertainties affect impact analysis, and the right of the interested public to comment on the project and mitigation measures.

AIR QUALITY AND VMT

In my scoping letter I asked for an analysis of energy use normalized as British Thermal Units, (BTU's) per passenger, and a comparison of efficiency to BART and AC Transit as a carbon signature analysis. On page 3.2-21, Berkeley limits the EIR's consideration of air quality impacts to 4 factors, none of which consider carbon emissions from the whole of the project. A lack of analysis does not prevent Berkeley and the EIR from claiming, without providing enforceable implementation measures, that the project will be a zero-emission project that will reduce VMT. Such claims cannot be made without some substantial evidence and analysis that bridges the analytical gap to support the claim. Paul Kamen has prepared an analysis of energy use per passenger mile that shows the existing ferry fleet requiring 4 times as much energy (measured as BTU's/passenger mile) as AC Transit, and 40 times as much energy as BART. While that analysis may be subject to change in an adequate EIR, the very low efficiency of the ferry system and the fact that energy generation for charging batteries and for cars driving to the terminal still involves fossil fuel sources compels a more detailed analysis. P36-115 P36-116 P36-117 P36-118

Berkeley does not control the source of emissions from ferries, or the purchase practices of WETA. As I pointed out in my scoping comments, the Executive Director of WETA has qualified any commitment to electric ferry propulsion with the caveat of "if feasible." While WETA has entered into contracts for purchase of some electric ferries and retrofit of others, meeting agendas have made it clear that continued electrification depends on sources that are not now available. None of those ferries are intended for a new Berkeley route, and WETA Board reports make it clear that continued electrification depends on funding which is not now available. As such, electric ferries may not be feasible, and Berkeley cannot require their use if a terminal is built P36-119

Instead of analysis that shows certainty or feasibility, the EIR relies on unsubstantiated claims. For example, on page 3.6-43 the document asserts, without quantitative analysis, that the project would convert auto trips into ferry trips. The EIR claims, without substantiation, that the project would reduce VMT. That is an appropriate metric for consideration, the Bay Area Air Quality Management has issued advisory CEQA guidelines that suggest that a project might have a less than significant impact if the project "will achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average…" The air quality section does not include any quantitative discussion of the project's impact on VMT to address this guideline. The potential impacts on VMT are briefly discussed beginning on page 3.12-20, but proceeds from an assumption:

> Operation Transit projects typically reduce VMT and are therefore **presumed** to have a less-than-significant impact on transportation.

P36-120

No origin and destination information is provided, either for the anticipated passengers, or from analysis of other WETA terminals or on-board surveys. The analysis is assumption driven and concludes that VMT will be reduced if passengers on a ferry travel to the new ferry terminal instead of crossing the Bay Bridge.

P36-121

However, the practices and fare structure of WETA in recent years suggests another source for many passengers. In 2021, WETA reduced fares by 30% in order to increase ridership in the wake of the pandemic. An account of that can be found in an article in the Alameda Post dated March 7, 2023. Discussion at WETA Board meetings and on-board surveys established that fares were set at a level intended to compete with BART, and at least some of the increased ridership came from BART passengers. If some combination of elimination of parking at the North Berkeley and Ashby Bart stations, and cheaper fares or less crowded conditions on the ferry induce people to drive further to the ferry, or drive to the ferry instead of walking to BART or bus stops, VMT may increase. WETA has collected on-board surveys to determine why new passengers are now riding the ferry. Many passengers cited the lower fares as the reason they switched to the ferry and said they would return to BART if the fares increased. As WETA Executive Director is quoted in the Alameda Post, "San Francisco Bay Ferry is a premium option for travelers, but we can't charge premium prices if we want to rebuild ridership." WETA clearly attracted passengers away from BART with lower fares, on-board cocktails, and seats for all. The question is how many. Information from on-board surveys, rather than assumptions, should be used to determine whether a new ferry service in Berkeley will reduce VMT.

P36-122

P36-123

RECREATIONAL IMPACTS

In my scoping letter I pointed out that construction of a vertical breakwater in a highly used recreational area—one designated as part of a waterfront park—would

P36-124

alter wind and wave patterns. Those might in turn affect the safety of sailing near the proposed facilities. The response in the EIR is limited to 3 conclusory paragraphs on pages 3.11-19 and 3.11-20 that don't mention the impact of a breakwater on wind and waves. This not only avoids serious quantitative analysis and informed public input but is characteristic of what Berkeley calls a robust public process. Berkeley brags about the number of public meetings it has had on the project—but the experience of most users is that there is no response to that public input.

P36-124

There is no question that a vertical seawall would result in a physical change in the environment. There is no question that there are analytical tools in the coastal engineering profession that could assess the disruptions in the wind and wave fields that might result. To ignore the comment and replace analysis with pre-ordained conclusions is inadequate.

P36-125

The city dismisses scoping comments about recreational impacts being affected by a new breakwater or the presence of a marina basin occupying a section of the bay that is recreational by citing Berkeley Municipal Code Section 6.20.180. The interpretation of the city ignores the language of the code, the genesis of the language, and decades of practice. The language of the code prohibits swimming and windsurfing **in the marina**. The specific language makes that clear.

> It is unlawful for any person to swim, bathe, wade or **windsurf in any portion of the marina** except at Shorebird Park, and in South Sailing Basin.

P36-126

The city has defined the marina to include a very large area of open Bay outside the protective breakwaters and thus is arguing that the existing recreational use is illicit and they are not required to consider it in this EIR. The city further argues that neither windsurfing or similar activities can occur within 1500 feet of the Berkeley Pier—open waters of the bay outside the marina and where the city's jurisdiction is limited. The genesis of this section of the Marina Code was as an outcome from Berkeley's effort to ban jetskis that generated litigation. Berkeley and other cities which adopted ordinances banning jetskis were sued successfully. The genesis of the code is a result of this lawsuit, and its adoption in 2001, reflects this history. The literal language is:

P36-127

P36-128

> **No jetski or personal watercraft** of any kind may be operated within 1,500 feet of the Berkeley shoreline or the Berkeley Fishing Pier except in the 200-foot wide access corridor for personal watercraft designated by the Harbormaster from a boat launch at the marina to a point further than 1,500 feet from the shoreline

The city now attempts to argue that the term "personal watercraft" applies to uses that have long occurred in this area such as kayaking, windsurfing, kiteboarding, stand-up paddling, and winging. At the time, and to the present, personal watercraft is a synonym for jetski, reflecting the marketing approach of similar motorized craft. See for example https://boattests101.com/blog/2023/08/30/what-is-the-difference-between-a-boat-and-a-personal-watercraft-pwc

P36-128

From that source, "A **Personal Watercraft (PWC)**, often known as a jet ski, is a compact recreational watercraft propelled by an inboard jet drive system." The city uses a similar definition in its code, so this citation is clearly incorrect.

The application of this ordinance to windsurfing stands history on its head. This ordinance was adopted in 2001 after litigation successfully challenged a complete ban on jetskis and personal watercraft. In 2003, Berkeley adopted the Waterfront Master Plan, which recognized the launch adjacent to H's Lordships. After that, the city spent more than $100,000 developing a plan to improve that launch. In 2011, the US Windsurfing Nationals were held in Berkeley, after abandonment of the 2008 WETA plan for a new terminal, in the area where WETA had proposed that terminal. Berkeley Marina supported that effort. Berkeley was aware that windsurfing occurred within 1500 feet of the old pier and considered a project to enhance that use. Arguing now that such use is not allowed to avoid analyzing the physical impacts of the breakwater, shows both that Berkeley doesn't have much understanding of the industry or the users, and its overt hostility to protecting the uses that it recognized in the 2001 Waterfront Plan.

P36-129

For years, stakeholders at the marina have argued that the city must provide a baseline of recreational use in the marina. That viewpoint was shared by BCDC's Design Review Board, at two different hearings where they told city staff that they needed to identify recreational users—and work with them. The stakeholder community bolstered our comments by submitting a year's worth of data showing that there were more than 600,000 visits to the recreational part of the marina south of University. Placer AI data is based on cell phone geographical location records and provides the timing and location information necessary to understand recreational uses. As pointed out elsewhere in these comments, such recreational uses are protected by Bay Plan policies. In their scoping letter, BCDC make similar comments reflecting the direction of the Design Review Board:

> ...please note that the Bay itself function as a recreational facility ...The EIR should document the recreational uses in and around the Project site, identify the service area and service population for the recreational facilities serving those uses...

P36-130

The CEQA baseline must include the conditions as they actually exist, even if the baseline conditions include unauthorized uses. (*Lighthouse Field Beach Rescue v.*

P36-131

City of Santa Cruz (2005) 131 Cal. App. 4th 1170 (baseline includes current unlawful off-leash dog walking); *Fat v. Cnty. of Sacramento*, (2002) 97 Cal. App. 4th 1270; *Riverwatch v. Cnty. of San Diego* (1999) 76 Cal. App. 4th 1428). Clearly, the baseline currently includes recreational uses such as windsurfing in the Marina area.

P36-131

Further specifics about the intent of this scoping comment can be found in the minutes of the two DRB meetings. The EIR is inadequate because the city failed to develop any quantitative inventory of recreational activities or their physical location. Instead, on page 3.11-15 of the EIR, the city selectively quotes from the BCDC scoping letter, eliding the part about documenting the recreational uses. It then claims that Section 3.10.2 covers such uses. This is clearly a typo, Section 3.10 covers noise. There is a section in the discussion of recreation that provides only a general description of recreational activities without establishing the intensities at different locations, or applying Bay Plan Recreation Policy 3, which provides protection for all existing recreational uses and establishes that such uses shall be "easily available from parking reserved for the public." Indeed, the city proposes to eliminate nearly all such public parking.

P36-132

Finally, the EIR establishes unreasonably high thresholds for significant impacts, and thus avoids considering mitigation. This is clear in the discussion of construction, which would close much of the peninsula for project staging. The EIR argues that since that closure is temporary, and there are other areas in the marina, the impact would not be significant. Such truncated analysis ignores the language in the existing Marina Plan that protects access adjacent to the old restaurant and ignores Bay Plan policies which also protect those and other recreational uses like shoreline fishing and swimming.

P36-133

CUMULATIVE IMPACT

The city of Berkeley has issued a draft of the Waterfront Specific Plan, dated November 8, 2024. The City Council authorized environmental work under CEQA for that plan, which included a development scenario that would increase commercial development on the waterfront from 380,000 square feet to 1.215 million square feet. Yet a reviewer of this EIR would search in vain for any analysis of the cumulative impact of the city's development plans. Section 3.95, in land use, avoids any mention of this land use plan. The EIR devotes a short paragraph on page 1-5, section 1.2.3, that dismisses the need to consider their future plans, reasoning "Because the draft WSP is currently a draft document and has not yet been adopted by the City, policies in the Draft WSP would not apply to the proposed project unless the City adopts the WSP prior to approval of the proposed project." With that sentence the city tips us off that they have piecemealed their development plans to avoid providing any analysis of the cumulative impact of those plans.

P36-134

The city also avoids any discussion of their plans for redevelopment of the former H's Lordships restaurant. The city has entered into an exclusive negotiating agreement with a firm to market that site, including remodeling, CEQA clearance, and reserving 150 of the public parking spaces for that lease. This plan does not make it into the EIR.

P36-135

There is a fundamental problem with the city's approach. There is no existing land use plan for Berkeley that designates this site, and the adjacent parking lot, for a ferry terminal for commuters. Section 1.2.3 acknowledges that adoption of the WSP would provide such a designation, with the statement "As described in the Draft WSP, ferry access is a proposed allowable use in the Berkeley Waterfront." Rather than complete a land use planning process that is far advanced, the city has tabled the WSP and thereby argues that they don't have to consider cumulative impacts. Or, as the comedienne used to say, "Never mind." This approach is clearly inconsistent with CEQA case law.

P36-136

An EIR must discuss significant cumulative impacts. (CEQA Guidelines section 15130(a).) This requirement flows from CEQA section 21083, which requires a finding that a project may have a significant effect on the environment if "the possible effects of a project are individually limited but cumulatively considerable. . . . 'Cumulatively considerable' means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." "Cumulative impacts" are defined as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." CEQA Guidelines section 15355(a). "[I]ndividual effects may be changes resulting from a single project or a number of separate projects." CEQA Guidelines section 15355(a).

"The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (*Communities for a Better Environment v. Cal. Resources Agency ("CBE v. CRA")*, (2002) 103 Cal.App.4th 98, 117.) A legally adequate cumulative impacts analysis views a particular project over time and in conjunction with other related past, present, and reasonably foreseeable probable future projects whose impacts might compound or interrelate with those of the project at hand. "Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time." (CEQA Guidelines § 15355(b).)

P36-137

The city clearly ignores reasonably foreseeable future projects in the area, and the EIR therefore lacks an adequate cumulative impacts analysis.

CONCLUSION

The city has produced a wholly inadequate document. It needs to be amended and recirculated. P36-138

Very truly yours,

Jim McGrath

Letter P36

Commenter: Jim McGrath

Date: March 27, 2026

Response to Comment P36-1

As described in Chapter 2, *Project Description*, the objectives of the proposed project include enhancing public access and recreational opportunities at the waterfront and providing efficient, environmentally sustainable ferry service to support regional mobility and resiliency. Refer to Section 3.11.4, *Impacts Analysis*, of the Draft EIR for detailed information regarding the level of impacts to recreation.

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* regarding BCDC and its policies and processes. The City of Berkeley will obtain all necessary permits and approvals from BCDC and other relevant agencies prior to commencement of construction activities. Compliance with agency-specific requirements will be confirmed through the respective permitting processes. These permits will include conditions that ensure the project meets all applicable regulatory standards before construction begins. No revisions to the EIR are necessary.

Response to Comment P36-2

The comment questions adequacy of parking relative to ferry capacity.

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about parking adequacy. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-3

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance.* The City acknowledges the commenter's discussion of historical actions related to parking management at the Berkeley Waterfront. However, the environmental review conducted under CEQA is focused on the potential physical environmental impacts of the proposed project and the adequacy of the analysis presented in the Draft EIR. Prior actions, decisions, or disputes regarding parking management do not, by themselves, constitute evidence that the Draft EIR's analysis of the proposed project is deficient. Rather, the relevant question under CEQA is whether the proposed project would result in significant physical environmental impacts.

As discussed in the referenced topical responses, the Draft EIR evaluates parking-related secondary effects, recreational access, and consistency with applicable Bay Plan policies and concludes that the project would not result in significant parking-related environmental impacts. The commenter does not identify a deficiency in that analysis or provide evidence demonstrating that the Draft EIR's conclusions are incorrect. Accordingly, the analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-4

Refer to Section 2.2.20, *Topical Response: Parking.* As discussed therein, the analysis of whether parking changes could result in secondary physical environmental effects are addressed in Sections 3.2, *Air Quality*, 3.10, *Noise*, and 3.12, *Transportation*. Additionally, the Draft EIR evaluates potential effects on recreational access, recreational facility use, transportation, and plan consistency accordingly within Sections 3.9, *Land Use and Planning* (Impact LU-2), 3.11, *Recreation* (Impact REC-1), and 3.12, *Transportation* (Impact TRA-2), which conclude that project implementation would not result in physical deterioration of recreational facilities, would maintain recreational access, and would not result in

significant parking-related environmental impacts. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-5

The Draft EIR evaluates the project for consistency with all applicable land use plans and policies under Impact LU-2 within Section 3.9, *Land Use and Planning*. Therein, the Draft EIR identifies applicable plans and policies and discloses any potential inconsistencies in accordance with CEQA Guidelines. This includes a consistency analysis with the Bay Plan.

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The analyses and significance conclusions presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, and throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-6

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

Section 3.9, *Land Use and Planning*, of the Draft EIR includes a comprehensive evaluation of applicable policies under Impact LU-2. Specifically, Table 3.9-1 (pages 3.9-12 through 3.9-23) evaluates consistency with Bay Plan policies, and Table 3.9-4 (page 3.9-31) evaluates consistency with the Berkeley Marina Master Plan. These analyses identify applicable policy topics and assess consistency based on project design, including recreational access, shoreline access, and multimodal circulation improvements. Any potential inconsistencies with Bay Plan and Marina Master Plan policies are disclosed therein in accordance with CEQA Guidelines.

Regarding the statement that the Draft EIR selectively identifies policies, Section 3.9.4, *Impacts Analysis*, Approach to Analysis discussion explains that although the subsequent analysis discusses the most relevant policies from the applicable planning documents, the City's overall consistency conclusions are based upon the complete planning documents (see Draft EIR page 3.9-10). Additionally, some planning documents or policies omitted from Section 3.9 are addressed in other Draft EIR sections within Chapter 3, *Environmental Impact Analysis*, as summarized on Draft EIR page 3.9-10.

The analyses and significance conclusions presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, and throughout the Draft EIR remain valid as written. No revisions are required.

Refer to subsequent Responses to Comments for specific responses to the policies raised in the comments.

Response to Comment P36-7

The Draft EIR evaluates the project for consistency with all applicable land use plans and policies under Impact LU-2 within Section 3.9, *Land Use and Planning*. This includes a consistency analysis with the Berkeley Marina Master Plan (pages 3.9-29 to 3.9-33) and Measure L (page 3.9-33).

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*, for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

Refer to Section 2.2.16, *Topical Response: Measure L,* for a discussion related to how the project would not conflict with Measure L.

The analyses and significance conclusions presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-8

This statement is not accurate. The Draft EIR includes a consistency analysis of relevant policies in the Berkeley Marina Master Plan (see Table 3.9-3 in Section 3.9, *Land Use and Planning* of the Draft EIR, pages 3.9-31 to 3.9-33). For Measure L, the Draft EIR includes a robust discussion of why the project would not conflict with Measure L (see Section 3.9, *Land Use and Planning* of the Draft EIR, page 3.9-33). Refer also to Section 2.2.16, *Topical Response: Measure L*, for a discussion related to how the project would not conflict with Measure L.

Regarding the references to Figures 2.0 and 12.0 in the Berkeley Marina Master Plan, refer to Response to Comment P36-10.

The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further revisions to the EIR are required.

Response to Comment P36-9

The Draft EIR evaluates the project for consistency with all applicable land use plans and policies under Impact LU-2 within Section 3.9, *Land Use and Planning*. This includes a consistency analysis with the Berkeley Marina Master Plan (pages 3.9-29 to 3.9-33). Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

Regarding the statement that "the only ferry site considered in the plan is located within the marina, and the plan adopts policies to make that site seismically safe", the City has reviewed the Berkeley Marina Master Plan, including Figure 2.0, which is referenced in this comment, and has found no mention of a new ferry site. The Berkeley Marina Master Plan does reference an existing "ferry pier" when discussing compliance with seismic regulations, under Principle 3. The first policy under Principle 3 is to "update the ferry pier to comply with seismic regulations." Page 3.9-32 of the Draft EIR analyses consistency with this policy, and finds that the project would be consistent with this policy.

The comment does not provide evidence that "the only ferry site considered in the plan is located within the marina, and the plan adopts policies to make that site seismically safe." No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is required.

Response to Comment P36-10

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

First, as a matter of clarification, the comment incorrectly characterizes the project. The project would not eliminate much of the open space of the peninsula. As described in Chapter 2, *Project Description* of the Draft EIR, the project features on land are primarily within existing roadways or parking areas. While the project would eliminate a planter that consists of a raised berm with landscaped trees withing the Seawall Parking Lot, this is not considered open space and the project would not eliminate open space. In addition, as described in Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* the project would not eliminate the staging area for windsurfing, but rather the proposed amenities for the project would be supportive and consistent with goals in the Berkeley Marina Master Plan related to recreational activities and it would not preclude the development of future recreational amenities identified in the Berkeley Marina Master Plan. Furthermore, the comment incorrectly states that the project would eliminate most of the parking places that are currently used for fishing access and viewing the Bay. Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion of the parking spaces off Seawall Drive and Section 2.2.20, *Topical Response: Parking,* for a discussion about how parking is addressed under CEQA.

The Draft EIR considered relevant policies in the Berkeley Marina Master Plan related to recreation (see Impact LU-2 in Section 3.9, *Land Use and Planning* of the Draft EIR, page 3.9-32). Nonetheless, in response

to this comment and to provide additional clarification about the project, the EIR has been revised to include a discussion of Figure 2.0: Marina Master Plan. While the comment addresses Figure 12.0, it should be noted that Figure 12.0 is a concept plan. For that reason, the EIR considers Figure 2.0. The EIR has also been revised to include a discussion of a relevant policy in Principle 4, Item C.

Table 3.9-4 Berkeley Marina Master Plan Consistency

Policy	Consistency
Principle 4. Provide for appropriate recreational, commercial and nonprofit development that both encourages use and protects or enhances the natural resources of the Marina lands.	
Policy 4A. Promote the use of the Marina for boating and appropriate recreational activities and encourage appropriate commercial and non-profit uses that support marine and recreation functions. Encourage Inexpensive Food Vendors. The availability of inexpensive food at the Marina should be encouraged. Use of pushcarts and other mobile structures should be allowed, but should not be located in areas that will obstruct public access or views. Support Low Cost Water Activities and Education. The City should continue to support affordable programs such as Cal Sailing Club, Cal Adventures and the Nautilus Institute that provide a variety of low-cost water-related activities as well as educational programs for youth and the community.	**Consistent.** Overall, the project would create a more attractive area that would encourage and support marine and recreation functions. The proposed public plaza would facilitate the potential for inexpensive food at the Marina. Additionally, the ferry service would support low-cost water activities, and informative signs on the pier would support education for visitors.
Policy 4C. Preserve the areas devoted to marine operations and recreational activities and expand to new areas where feasible and without negatively impacting natural resources. • Enhance Windsurfer Activities at the point immediately to the west of H's Lordships Restaurant. Consider constructing large terraced stairs to improve windsurfer access. Consider low-maintenance materials for adjacent staging areas and screening these areas with landscaping. A new pedestrian path is needed that links with the existing pathway on the north side of the parking lot. New signage and benches should be installed.	**Consistent.** The project would not be located within the Marina Basin and would, therefore, not conflict with marine operations. Implementation of the enhanced pier and ferry infrastructure would not impact waterfront recreation as recreation is prohibited at this location. The project would expand recreational activities by provided a new pier. The project would also be consistent with the Policy 4C provision to enhance windsurfer activities west of H's Lordships Restaurant (199 Seawall Drive). The project would not eliminate shoreline access used by windsurfers or other non-motorized watercraft users and would not preclude future implementation of windsurfing-related improvements contemplated by the Marina Master Plan. Access to the existing launch area near 199 Seawall Drive would be maintained. In addition, the project would provide improvements that are consistent with the policy's objectives to enhance public access and shoreline amenities, including new pedestrian and bicycle facilities, Bay Trail improvements, wayfinding signage, seating areas, the public plaza and restroom, and shoreline access improvements. Accordingly, the project would improve access and recreational use of the Waterfront while remaining compatible with existing water-oriented recreational activities such as windsurfing.
Principle 5. Enhance access and use of the Marina, especially for members of special user groups such as elderly, economically disadvantaged or physically challenged persons.	
Provide new and renovate pedestrian pathways and bicycle trails to increase public access at the Marina. As needed, pedestrian paths should be resurfaced and widened to provide access for all members of the community. New paths and upgraded paths will comply with ADA requirements. Bicycle paths and improvements consistent with the Berkeley Bicycle Plan should be installed along Seawall Drive, University Avenue, Marina Boulevard, and Spinnaker Way. Bike racks should be installed at key locations along the bicycle paths. *Improve shoreline access by upgrading existing pedestrian pathways along the shoreline and, where feasible, providing new pathways at the shoreline edge.* Provide a pedestrian path along the entire length of Seawall Drive. The pedestrian pathway should be grade separated from parked cars and the roadway. Plantings and berms should be used to screen cars from the pedestrian path. New signage and benches should be installed along the path. *Improve Marina Boulevard/University Avenue intersection.* As part of the Marina Boulevard realignment, the intersection should be redesigned to improve safety and clarity for pedestrian and bicyclists.	**Consistent.** The proposed project would provide the infrastructure identified in this policy. The proposed project includes the installation of a cycle track on University Avenue and a portion of the Bay Trail Extension off Seawall Drive. Where the Bay Trail Extension or recreation amenities are adjacent to Seawall Drive, the City would implement safety measures to create a barrier between vehicles and pedestrians (such as parking areas, boulders, bollards, fence, or guardrail). In addition, benches, chairs, and signage are planned to be installed on the Bay Trail Extension. The project is being designed to be ADA compliant.
Principle 6. Pursue a fiscally responsible and sustainable implementation program for the Marina.	
Maintain the Plan's prioritized capital improvement program for the construction of boating facilities, roadways, restroom facilities, and other infrastructure facilities necessary to continue Marina operations. Identify funding options to pay for the improvements.	**Consistent.** The proposed project is identified as one of Berkeley's capital projects.
Figure 2.0, Marina Master Plan	
The Marina Master Plan concept diagram identifies numerous recreational enhancements throughout the Marina, including enhancement of pedestrian and bicycle circulation, recreational opportunities, shoreline access amenities, and of windsurfer activity in the vicinity of Seawall Drive and H's Lordships Restaurant.	**Consistent.** Figure 2.0 illustrates a conceptual vision for future improvements at the Berkeley Marina and Waterfront, including enhancement of windsurfer activity near Seawall Drive and H's Lordships Restaurant (199 Seawall Drive). The proposed project would not eliminate access to the existing shoreline areas used by windsurfers, wingers, swimmers, kayakers, paddleboarders, and other water-based recreational users. The project would maintain access to the existing 199 Seawall Drive launch area and would not preclude continued use of shoreline areas adjacent to the project site for water-oriented recreation. The project would also enhance public access through construction of the Bay Trail Extension, bicycle and pedestrian improvements, new public viewing areas, shoreline access improvements, and restoration of public access to the Berkeley Pier. Accordingly, the project would support and not conflict with the recreational access objectives depicted in Figure 2.0.

This page intentionally left blank.

The above revisions are clarifying in nature and would not affect the analysis or significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, or related sections of the Draft EIR. The analysis, significance conclusions, and mitigation measures identified therein remain valid as written. No further revisions are necessary.

Response to Comment P36-11

As stated in Draft EIR Chapter 2, *Project Description: Landside*, page 2-23, the proposed project would remove approximately 40 existing trees and would plant between 50 and 70 new trees. The Draft EIR analysis presented under Impact BIO-5 in Section 3.3.4, page 3.3-65 concluded that impacts to protected trees would be less than significant. In addition, see Response to Comment P36-10 for a discussion regarding open space. No Draft EIR changes are necessary in response to this comment.

Response to Comment P36-12 to P36-18

The Draft EIR evaluates the project for consistency with all applicable land use plans and policies under Impact LU-2 within Section 3.9, *Land Use and Planning*. This includes a consistency analysis with the Berkeley Marina Master Plan (pages 3.9-29 to 3.9-33). Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The comment provides a bulleted list of "policies"; however, these bullets appear to be the commenters own interpretation of policies and not the actual policies in the Berkeley Marina Master Plan. The consistency analysis in the Draft EIR (pages 3.9-29 to 3.9-33) includes the relevant policies from the Berkeley Marina Master Plan verbatim and cover the summarized list identified in the comment. For a discussion of windsurfer activities (comment P36-18), refer to Response to Comment P36-10.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-19

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* regarding how existing recreation would be affected by the project. The analysis and conclusions presented therein remain valid as written, and no further clarifications are required.

Response to Comment P36-20

For discussion of CEQA baseline adequacy, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*. For discussion of Seawall Drive in-car Bay viewing, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access.*

The Draft EIR appropriately characterizes existing recreational conditions, evaluates potential changes to recreational space and access, and demonstrates that scenic-view parking and recreational opportunities would be maintained. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-21

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

Refer to Response to Comment P36-9, which notes that the Berkeley Marina Master Plan does not include a discussion about a new ferry terminal site within the Marina. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-22

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-23

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-24

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-25 to P36-36

Draft EIR Section 3.9, *Land Use and Planning*, evaluates the project's consistency with all applicable land use plans, including the policies of the Berkeley Marina Master Plan (refer to Impact LU-2, pages 3.9-31 to 3.9-33). The analysis provided therein concludes that the project would not conflict with the Berkeley Marina Master Plan.

With respect to the comments regarding Measure L, refer to Section 2.2.16, *Topical Response: Measure L*, for a discussion related to how the project would not conflict with Measure L.

With respect to comments regarding Parking, refer to Section 2.2.20, *Topical Response: Parking.*

The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further revisions to the EIR are required.

Response to Comment P36-37

Refer to Section 2.2.13, *Topical Response: Land Use Plan/Consistency* for a discussion of how the Draft EIR complies with CEQA Guidelines Section 15125(d). Please refer to subsequent response to comments for responses to specific policies identified in the comment letter.

Response to Comment P36-38

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*, for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The Draft EIR evaluates the proposed project's consistency with applicable Bay Plan policies in Table 3.9-1 (BCDC Bay Plan Consistency) under Impact LU-2 in Section 3.9, *Land Use and Planning* (Draft EIR pages 3.9-12 through 3.9-23). Table 3.9-1 identifies relevant Bay Plan policies, including policies established for the protection of recreational resources and standard for a ferry terminal.

The analyses and significance conclusions presented under Impact LU-2 remain valid as written. No revisions are required.

Refer to subsequent responses to comments for specific responses on policies raised by the commenter.

Response to Comment P36-39

See Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* for a discussion of BCDC jurisdiction with respect to the project site as well as BCDC planning consistency and permit compliance with respect to recreational public access. BCDC jurisdiction is also discussed in

Draft EIR Section 3.3.3 Regulatory Framework, and appropriate permits would be required. The Draft EIR analysis under Impact BIO-3 in Section 3.3.4, Impacts Analysis, pages 3.3-59 through 3.3-62 concluding that impacts to State-protected wetlands and waters would be less than significant with implementation of Mitigation Measure BIO-3, remains valid. No Draft EIR changes are necessary in response to this comment.

Response to Comment P36-40

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The approach used in the Draft EIR is described in Section 3.9.4, *Impacts Analysis*. As discussed therein, consistency analysis under Impact LU-2 focuses on plans and policies that are relevant to the proposed project and the environmental issues evaluated in the Draft EIR, consistent with CEQA Guidelines Section 15125(d), which requires discussion of inconsistencies with plans adopted for environmental purposes. However, the City's overall consistency conclusions are based upon the planning documents in their entirety, rather than individual policies (see Draft EIR page 3.9-10). The Draft EIR further explains that some applicable plans or policies are evaluated in other sections within Chapter 3, *Environmental Impact Analysis*, where they are more directly related to the environmental topic being analyzed (see Draft EIR page 3.9-10).

Consistent with this approach, Impact LU-2 evaluates the project's consistency with applicable BCDC Bay Plan policies in Table 3.9-1 (pages 3.9-12 through 3.9-23). The table includes a broad range of Bay Plan policies addressing topics such as environmental justice, public access, recreation, transportation, climate change, shoreline protection, operational safety, water quality, marine resources, and special area plans. In addition, where specific Bay Plan policies relate to resource areas evaluated elsewhere in the Draft EIR, those issues are addressed in the corresponding environmental sections, including Section 3.3, *Biological Resources*; Section 3.8, *Hydrology and Water Quality*; Section 3.11, *Recreation*; and Section 3.12, *Transportation*. The City also notes that BCDC, the agency responsible for administering and enforcing the Bay Plan, reviewed the Draft EIR and provided extensive comments regarding project impacts, regulatory considerations, and areas where additional analysis or clarification would be beneficial. BCDC did not identify any Bay Plan policy that was improperly omitted from the Draft EIR's land use consistency analysis under Impact LU-2. Rather, BCDC acknowledged the Draft EIR's Bay Plan consistency analysis and noted that it would conduct its own independent review of project consistency with applicable Bay Plan policies as part of its permit review process.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-41

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies and Response to Comment P36-40. The Draft EIR evaluates project consistency with applicable policies of the BCDC San Francisco Bay Plan under Impact LU-2, including Recreation Policies 7 and 9 (see Draft EIR pages 3.9-12 through 3.9-23). In addition, recreational access, public access, and recreation-related issues are evaluated throughout the Draft EIR, including in Section 3.11, *Recreation*, which discusses the applicable regulatory framework and evaluates the project's potential effects on recreational facilities and opportunities. (see Section 3.11.3, Re*gulatory Framework*, pages 3.11-8 through 3.11-10). The Draft EIR's consideration of recreational issues is therefore not limited to the two policies identified by the commenter.

The Draft EIR does not improperly limit analysis of Bay Plan policies requiring recreational parking, which is addressed under the consistency analysis for Bay Plan Recreation Policy 9. For additional discussion on parking as it relates to CEQA requirements and Bay Plan policies, refer to Section 2.2.20, *Topical Response: Parking.*

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-42

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies. Refer also to Response to Comment O10-149, which indicates that the Draft EIR does consider consistency with this policy.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-43

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The Draft EIR evaluates the project for consistency with applicable BCDC Bay Plan policies under Impact LU-2 within Section 3.9, *Land Use and Planning* (see Table 3.9-1, pages 3.9-12 through 3.9-23). Although Recreation Policy 3(a)(6) was not specifically identified in Draft EIR Table 3.9-1, the Draft EIR's recreation and land use analyses address the policy's underlying objectives related to preservation and enhancement of water-oriented recreational uses. Notably, BCDC did not identify omission of Recreation Policy 3(a)(6) as a concern in its comment Letter on the Draft EIR. Nonetheless, in response to this comment, Table 3.9-1 within Draft EIR Section 3.9, *Land Use and Planning*, has been revised to expressly evaluate consistency with BCDC Bay Plan Recreation Policy 3(a)(6) as follows.

Table 3.9-1 BCDC San Francisco Bay Plan Consistency

Policy	Consistency
Recreation	
Policy 3(a)(6). Sites, features or facilities within designated waterfront parks that provide optimal conditions for specific water-oriented recreational uses should be preserved and, where appropriate, enhanced for those uses, consistent with natural and cultural resource preservation.	**Consistent.** The project site is located within a waterfront area that supports a variety of water-oriented recreational uses, including fishing, windsurfing, kayaking, sailing, wildlife viewing, and shoreline recreation. As described in Chapter 2, *Project Description*, and evaluated in Section 3.11, *Recreation*, the proposed project would preserve and enhance opportunities for water-oriented recreation by restoring public access to the Berkeley Pier, constructing a new publicly accessible pier and breakwater, implementing shoreline access improvements, extending the Bay Trail, and providing new public amenities including seating, viewing areas, bicycle facilities, and interpretive features. The project would also maintain access to existing marina facilities, windsurfing areas, boat launching facilities, and other water-oriented recreational resources. As discussed in Section 3.11, *Recreation*, the project would result in a net increase in recreational opportunities and facilities available to the public (Impact REC-1). Furthermore, the project has been designed to avoid substantial impacts on natural and cultural resources, and mitigation measures identified in Sections 3.3, *Biological Resources*, and 3.8, *Hydrology and Water Quality*, would ensure that project-related impacts remain less than significant or less than significant with mitigation.
Policy 3(a)(7). Access to marinas, launch ramps, beaches, fishing piers, and other recreational facilities should be clearly posted with signs and easily available from parking reserved for the public or from public streets or trails.	**Consistent.** As described in Chapter 2, *Project Description*, the proposed project would include wayfinding signage along University Avenue, Marina Boulevard, Seawall Drive, the Seawall Drive Parking Lot, portions of the Berkeley Waterfront, and Shorebird Park to direct visitors to the new pier, ferry facilities, parking areas, and other recreational destinations. The project would also include interpretive and educational signage along the pier, breakwater, and Bay Trail Extension. Final signage design and placement would be refined through final design and applicable permitting processes. The project would also provide continued public access to recreational facilities from public streets and trails, including University Avenue, Seawall Drive, and the Bay Trail, and would maintain and improve public parking access through renovation of the existing Seawall Drive parking lot, which would provide approximately 400 to 450 public parking spaces. In addition, the project would enhance pedestrian, bicycle, and transit access through construction of a new cycle track, Bay Trail improvements, bicycle parking facilities, and transit improvements. Accordingly, the project would be consistent with Recreation Policy 3(a)(7).
Policy 7. Because of the need to increase the recreational opportunities available to Bay Area residents, small amounts of Bay fill may be allowed for waterfront parks and recreational areas that provide substantial public benefits and that cannot be developed without some filling.	**Consistent.** The proposed pier and breakwater would provide recreational opportunities to the Bay. As such, the fill would be allowed if it provides substantial public benefits and cannot be developed without some filling. Since the proposed project will provide an alternative form of transportation that will reduce vehicle miles traveled and greenhouse gas emissions, as well as providing a new recreational opportunity to access the Bay, the proposed project will result in substantial public benefits.

This page intentionally left blank.

This revision is clarifying in nature and does not alter the analyses, significance conclusions, or mitigation measures presented in the Draft EIR. Accordingly, the analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No further revisions are required.

Response to Comment P36-44

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

Refer also to Response to Comment O10-51, which similarly addresses Bay Plan Recreation Policy 3(a)(7). As explained therein, although Recreation Policy 3(a)(7) was not specifically identified in the Bay Plan consistency analysis provided in Draft EIR Section 3.9, *Land Use and Planning* (see Impact LU-2, Table 3.9-1), the Draft EIR's overall Bay Plan consistency analysis addresses similar objectives related to public access, wayfinding, signage, parking, and multimodal access. Additionally, BCDC did not identify omission of Recreation Policy 3(a)(7) as a concern in its comment Letter on the Draft EIR. Nonetheless, in response to Comment O10-51, Table 3.9-1 within Draft EIR Section 3.9, *Land Use and Planning*, has been revised to expressly evaluate project consistency with BCDC Bay Plan Recreation Policy 3(a)(7).

The revisions described in Response to Comment O10-51 are clarifying in nature and do not alter the impact analysis or significance conclusions presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, or related sections of the Draft EIR. Accordingly, the analyses and significance conclusions presented therein remain valid as written in the Draft EIR. No additional revisions are required.

Response to Comment P36-45

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The City does not agree that Recreation Policy 3(b)(4) is directly applicable to the proposed project. As described in Draft EIR Section 3.9, *Land Use and Planning*, and Bay Plan Map No. 4 referenced therein, the project site is located within the Berkeley Waterfront/Cesar Chavez Park area, which is designated as a BCDC "Waterfront Park, Beach" priority use area. Although the Berkeley Marina is adjacent to the project site, the proposed project is not located within the marina itself and would not remove or substantially alter marina facilities or marina-related uses. Rather, the project would preserve existing marina uses while constructing a ferry terminal and associated public access and recreational improvements within the Berkeley Waterfront (see Impact LU-2).

The Draft EIR evaluates the project for consistency with applicable BCDC Bay Plan policies under Impact LU-2 within Section 3.9, *Land Use and Planning* (see Table 3.9-1, pages 3.9-12 through 3.9-23), including Bay Plan Map No. 4 Policy 15, which specifically identifies a ferry terminal as a potential use at the Berkeley Waterfront provided it remains compatible with park and marina uses. As discussed in Table 3.9-1, the project would maintain compatibility with existing marina and recreational uses while providing additional public amenities. Therefore, although Recreation Policy 3(b)(4) is not directly applicable to the proposed project, the Draft EIR demonstrates that the project would not preclude continued operation of adjacent marina facilities. Additionally, the City notes that BCDC reviewed and provided extensive comments on the Draft EIR but did not identify Recreation Policy 3(b)(4) as a policy requiring additional analysis or identify omission of the policy as a deficiency in the Draft EIR. As noted within Draft EIR Section 3.9, BCDC will independently review project consistency with applicable Bay Plan policies through its permitting process.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-46

For a detailed discussion of project consistency with applicable land use plans, refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*.

Recreation Policy 3(e)(3) is not directly applicable to the proposed project. As described in Draft EIR Chapter 2, *Project Description*, the proposed project would construct a public pier, ferry terminal, breakwater, public plaza, Bay Trail extension, bicycle and pedestrian facilities, and related infrastructure (see Section 2.5, *Proposed Project Components*). The project does not include construction of new non-motorized small boat launching facilities or improvements to existing non-motorized small boat launching facilities; however, such existing facilities would remain available for use with project implementation.

To the extent the comment concerns the availability of parking for users of existing recreational facilities such as non-motorized boating facilities, refer to Section 2.2.20, *Topical Response: Parking,* which includes discussion of the shared-use parking approach and parking demand management measures planned for the project, as well as the evaluation of parking impacts under CEQA. Refer also to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which provides discussion of the project's relationship to existing waterfront recreational uses and access opportunities. As discussed therein, the project would not eliminate small boat launching facilities or preclude continued use of those facilities.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-47

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies. Refer also to Response to Comment O10-116, which describes that the Draft EIR includes an analysis of consistency with Bay Plan Recreation Policy 9.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-48

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies. Refer also to Response to Comments P36-37 through P36-47, which indicate that the City has found no inconsistencies with Bay Plan policies. For that reason, no mitigation measures have been proposed.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-49

For discussion regarding the adequacy of the CEQA baseline and level of detail required, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

The Draft EIR provides an adequate description of existing recreational use consistent with CEQA requirements. The analyses and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-50

For discussion of the environmental baseline considered in the Draft EIR, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.*

The analyses and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-51

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, for a discussion of how the analysis performed in the Draft EIR is appropriate.

The analyses and significance conclusions presented in Draft EIR Section 3.11, *Recreation*, remain valid as written. No revisions are required.

Response to Comment P36-52

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, for a discussion of the baseline used to assess recreational impacts, according to CEQA. No further response is required.

Response to Comment P36-53

As explained in Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* the City has coordinated with BCDC and will continue to do so through the permitting process, where BCDC will independently evaluate consistency with its policies, including those related to recreational use and access to the Bay.

For discussion of CEQA baseline adequacy and level of detail, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.*

Accordingly, the Draft EIR appropriately considers recreational conditions and evaluates project impacts consistent with CEQA requirements. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-54

Under CEQA an EIR must evaluate a project's impacts relative to existing environmental conditions, which "normally constitute the baseline" for determining CEQA significance (CEQA Guidelines Section 15125(a)). The Guidelines further specify that the baseline shall not include hypothetical conditions that have not occurred, even if such uses could be allowed under existing plans or agreements. Consistent with these requirements, the Draft EIR evaluates environmental impacts based on existing conditions at the project site at the time of environmental review. The potential reopening of the restaurant at 199 Seawall and other future uses referenced by the commenter are not part of the proposed project and are not existing conditions; therefore, they are not treated as baseline conditions under CEQA. However, CEQA does require consideration of reasonably foreseeable future projects and development in a cumulative context. Accordingly, the Draft EIR evaluates the project's incremental contribution to cumulative impacts in each resource Chapter (Chapter 3), in combination with other past, present, and reasonably foreseeable future projects, consistent with CEQA Guidelines Section 15130. This cumulative analysis captures the combined effects of the proposed project and other anticipated development activities in the project vicinity.

With respect to the reopening of the 199 Seawall restaurant, refer to Response to Comment P36-108, which explains that the City does consider a potential new restaurant at the 199 Seawall Drive site as a cumulative project. Response to Comment P36-108 also includes a discussion of the City of Berkeley lease agreement providing 150 parking stalls to the new restaurant.

With respect to "opening a pier that would provide recreational access", this proposed project that has been analyzed in the Draft EIR proposed to create a new pier that would provide recreational access.

The Draft EIR appropriately evaluates project impacts based on existing environmental conditions and includes cumulative impact analysis that considers reasonably foreseeable future development.

Consistency with applicable Bay Plan policies is addressed in Sectio 3.9, *Land Use and Planning*. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no further revisions to the EIR are required.

Response to Comment P36-55

The Draft EIR evaluates recreational impacts consistent with CEQA, which focuses on a project's effects on existing physical environmental conditions at and in the vicinity of the project site (see Chapter 3, *Environmental Impact Analysis*, discussion of environmental baseline). Accordingly, Draft EIR Section 3.11, *Recreation*, appropriately focuses on recreational facilities, access, and use patterns at the Berkeley Waterfront and surrounding area to determine whether the project would result in a physical impact on those resources. At the same time, the Draft EIR does incorporate regional context where relevant. Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7), identifies San Francisco Bay as a regional recreational resource and describes water-based recreation occurring beyond the immediate project site, as well as the relationship to broader regional recreational opportunities. In addition, Section 3.11.5, *Cumulative Impacts*, considers the project's contribution to recreational demand in combination with other past, present, and reasonably foreseeable projects, which provides a regional perspective on recreational capacity.

As explained in Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* the City has coordinated with BCDC and will continue to do so through the permitting process, where BCDC will independently evaluate consistency with its policies, including those related to recreational use and access to the Bay.

Accordingly, the Draft EIR appropriately focuses its impact analysis on the project site and surrounding area as required under CEQA, while also incorporating regional considerations through the environmental setting, cumulative analysis, and policy consistency evaluation. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-56

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* for a discussion of how the analysis performed in the Draft EIR is appropriate.

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-57

Refer to Response to Comment O10-116, which discusses the Draft EIR consistency analysis for BCDC Bay Plan Recreation Policy 9. As explained therein, the proposed ferry facility is located within a waterfront park priority use area specifically contemplated by the policy, would maintain recreational access, and shared-use parking would accommodate both ferry patrons and recreational users while minimizing the amount of shoreline area devoted to parking (see Draft EIR Section 3.9, *Land Use and Planning*, Table 3.9-1, page 3.9-18).

With respect to the comment's specific concerns regarding the Draft EIR's discussion of parking, parking supply, demand, transportation demand management measures, shared-use parking strategies, and access considerations are evaluated throughout the Draft EIR, including Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Assessment*, as well as supporting documents such as the City's Parking and TDM plan. Refer to Section 2.2.20, *Topical Response: Parking,* which provides a detailed discussion of parking conditions, shared-use parking management, implementation of the Parking and TDM Plan, and the relationship between parking considerations, Bay Plan Recreation Policy 9, and CEQA Guidelines. As explained therein, CEQA requires the evaluation of physical environmental effects rather

than policy concerns regarding the allocation of parking resources. Accordingly, the Draft EIR evaluates potential physical environmental impacts associated with parking and circulation and does not identify secondary impacts resulting from parking demand.

The analyses and significance conclusions presented under Impact LU-2 within Section 3.9, *Land Use and Planning*, and related sections remain valid as written in the Draft EIR. No revisions are required.

Response to Comment P36-58

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*. The Draft EIR separately evaluates Bay Plan consistency under Section 3.9, *Land Use and Planning*, and concludes that the project would not conflict with applicable Bay Plan policies related to parking and recreational access (see Impact LU-2, Table 3.9-1, pages 3.9-12 through 3.9-23). The analyses and significance conclusions presented in the Draft EIR remain valid as written.

Response to Comment P36-59

Parking supply is not an impact under CEQA, and no mitigation measure was identified to prepare a parking management plan. Refer to Section 2.2.20, *Topical Response: Parking,* for more information on this topic. No further response is required.

Response to Comment P36-60

Refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, and Section 2.2.20, *Topical Response: Parking.* Parking is not an impact under CEQA and the Draft EIR does not include deferred mitigation. No further response is required.

Response to Comment P36-61 to P36-64

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how the City appropriately discusses parking in the Draft EIR, according to CEQA. This comment does not directly pertain to proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P36-65

Refer to Section 2.2.20, *Topical Response: Parking,* and Topical Response: CEQA Baseline/Baseline Recreation. As discussed therein, the Draft EIR uses the physical conditions existing at the time the Notice of Preparation was published as the CEQA baseline and evaluates potential secondary physical environmental effects associated with project-related parking conditions. The comment does not provide evidence demonstrating that the baseline used in the Draft EIR is inconsistent with CEQA requirements or that the analyses and significance conclusions are incorrect. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-66

Refer to Section 2.2.20, *Topical Response: Parking.* As discussed therein, the Draft EIR's parking analysis is based on parking utilization data and supporting technical studies prepared for the project. The comment does not provide evidence demonstrating that the parking data, methodology, or resulting analyses are inadequate for purposes of CEQA review. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-67

Refer to Section 2.2.20, *Topical Response: Parking.* The Draft EIR provides sufficient information regarding existing parking conditions, parking utilization, and proposed parking facilities to support the environmental analyses required by CEQA. The commenter does not identify a deficiency in the Draft EIR analysis, significance conclusions, or mitigation measures. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-68

Refer to Section 2.2.20, *Topical Response: Parking.* The Draft EIR provides sufficient information regarding existing parking conditions, parking utilization, and proposed parking facilities to support the environmental analyses required by CEQA.

The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-69

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-70

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* for a discussion of parking on Seawall Drive.

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is assed under CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-71

The comment does not identify an inadequacy in the environmental analysis. As described in the Draft EIR (pages 2-30 to 2-31 of the Draft EIR), the ridership assumptions used for the project were based on ridership forecasts developed through the WETA Berkeley Ferry Service Business Plan. The Business Plan includes ridership forecasts prepared by CDM Smith using accepted transportation planning and travel demand modeling methodologies developed to evaluate proposed ferry services. The forecasts estimate weekday, weekend, and special event ridership under multiple service scenarios and incorporate assumptions regarding travel demand, service characteristics, and phased ridership growth over time. The Business Plan also recognizes that new transit services typically experience a multi-year ridership ramp-up period and incorporates a service adoption factor into its evaluation of future service performance.

Under CEQA, an EIR must be supported by substantial evidence in the administrative record and may rely on reasonable assumptions, expert opinion, and facts to support its analysis (Pub. Resources Code, § 21080, subd. (e); CEQA Guidelines, §§ 15144, 15145, 15151). CEQA Guidelines Section 15151 expressly provides that "[d]isagreement among experts does not make an EIR inadequate," and that an EIR should be judged based on whether it reflects a good-faith effort at full disclosure rather than by a standard of absolute perfection. The ridership projections relied upon in the Draft EIR were prepared by qualified professionals using accepted transportation planning methodologies and constitute substantial evidence supporting the environmental analysis. While the commenter has provided an alternative estimate of future ridership, CEQA does not require the Lead Agency to adopt a commenter's assumptions or conclusions where the EIR relies on reasonable forecasting methodologies supported by substantial

evidence in the administrative record. A difference of opinion regarding future ridership projections does not demonstrate that the Draft EIR's analysis is inadequate.

In addition, higher ridership in the future represents an environmental benefit, through the reduction of VMT and GHG emissions. Insofar the comment is expressing concern about parking, refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of parking supply adequacy.

Accordingly, the comment has been noted. The information provided by the commenter does not alter the conclusions of the Draft EIR, and no revisions to the environmental analysis are required.

Response to Comment P36-72

Refer to Section 2.2.27, *Topical Response: VMT*, for a detailed discussion of the mode split assumptions used in the Draft EIR. Refer also to Response to Comment P36-73 for responses to additional comments related to the mode split assumptions.

Response to Comment P36-73 to P36-76

This comment is inaccurate. The Parking and TDM Plan, as well as the Draft EIR directly address the relationship between the prior and current mode share estimates. As documented in Section 3.0 of the Parking and TDM Plan (page 5), the City's Traffic Consultant (Kittelson and Associates) expressly reviewed the Berkeley Marina Ferry Parking & Transportation Demand Management Strategy (Nelson\Nygaard, October 2021) and the 2018 Short-Term Recommendations for Waterfront Parking Management on which it was based. Appendix F (page 2) of the Draft EIR identifies the 54 percent baseline as one of the sources used in developing the mode split. The City's Traffic Consultant also reviewed the WETA Business Service Plan (31 percent drive-alone) and updated WETA onboard survey data from 2022 (44 percent drive-alone) and derived a recommended baseline of 40 percent drive-alone, a figure that reflects more current observed travel behavior than the 2021 Feasibility Study estimate. This methodology is explained in Section 3.4 of the Parking and TDM Plan (page 10) and constitutes substantial evidence supporting the Draft EIR's analysis. The commenter's preferred 54 percent figure is not ignored; it is one data point among several that the City's Traffic Consultant weighed in arriving at a more current and comprehensive estimate.

The commenter's parking demand calculations in P36-75 similarly rely on the 54 percent figure and a parking supply figure of 399 spaces that does not reflect the full parking supply available to ferry riders under the project. As discussed in Section 2.2.20, *Topical Response: Parking,* the City's analysis demonstrates that sufficient parking capacity exists within the Berkeley Waterfront to accommodate projected ferry demand. While some commenters offered their own demand calculations, the City's conclusions are based on the Parking and TDM Plan prepared by the City's Traffic Consultant using empirical data and professional methodology. These mode split assumptions that have been substantiated in the Parking and TDM Plan are also identified in the Draft EIR, as part of Appendix F (subsection Mode Split Assumptions, page 2). Regarding potential ferry ridership, refer to Response to Comment P36-71.

The commenter's reliance on Stanislaus Audubon Society, Inc. v. County of Stanislaus (1995) 33 Cal.App.4th 144 is misplaced. In Stanislaus, the question at issue was whether there was substantial evidence in the record supporting a fair argument that the proposed project may have a significant impact on the environment, thus necessitating an EIR. Here, the City has prepared an EIR. Accordingly, no revision to the Draft EIR is warranted in response to these comments.

Response to Comment P36-77

Refer to Response to Comment P36-109, which explains that the City has not proposed parking allocation among users. Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is assed under CEQA, and how the City would provide sufficient parking to accommodate all users.

Response to Comment P36-78 and P36-79

First, as a matter of clarification, the Draft EIR uses a 16 percent mode split for bicycle use. Refer to Page 2 of Appendix F of the Draft EIR.

The data referenced in the comment (5.9% percent bicycle use in Berkeley, per Data USA) is for the entire city[48, 49] and not for the Berkeley Waterfront sub region. It is important to note that the data from the Census or Data USA is only based commuting characteristics, i.e., home-to-work trips, and does not include trips such as recreational trips or trips made for shopping and going to school. The data used for the analysis in the Draft EIR is 16 percent for the sub region and specifically looks at the bicyclist using ferry (see Table 2 in Appendix F of the Draft EIR). Other ferry terminals have documented over 10 percent of the users bicycling to the ferry terminals.[50] The WETA Business Plan estimated that approximately 16 percent of ferry passengers would access the terminal by bicycle, based on observed travel patterns at comparable WETA ferry terminals. The Berkeley Ferry Feasibility Study prepared by Nelson\Nygaard estimated a similar bicycle mode share of 18 percent. All of these sources have been identified on page 2 of Appendix F of the Draft EIR.

To further validate these assumptions, Kittelson reviewed the most recent WETA onboard survey data, including surveys conducted in 2022, and applied the methodology used in the WETA Business Plan. Based on the updated survey data, Kittelson estimated that approximately 11 percent of ferry passengers would access the terminal by bicycle.

The three estimates (11 percent, 16 percent, and 18 percent) were compared as part of the analysis. After considering the methodologies, underlying datasets, and consistency with previous WETA planning efforts, the 16 percent bicycle mode share from the WETA Business Plan was determined to be the most reasonable and defensible assumption for this environmental analysis because it is based on observed travel behavior at comparable ferry terminals and is consistent with WETA's planning assumptions.

The City concludes that the mode split assumptions used for the Draft EIR are supported by substantial evidence and appropriate for CEQA analysis. The analysis and conclusions in the Draft EIR remain valid. No further revisions to the EIR are necessary.

Response to Comment P36-80

Refer to Response to Comment P36-79 for a discussion related to the assumptions used for the percentage of people that would access the project site via bicycle.

For concerns related to recreational impacts due to parking capacity, please refer to Section 2.2.20, *Topical Response: Parking.* The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-81

This comment refers to the consistency discussion for Bay Plan Recreation Policy 9 found in Table 3.9-1, *BCDC San Francisco Bay Plan Consistency*, in Section 3.9, *Land Use and Planning*, of the Draft EIR. The

[48] U.S. Census Bureau. discussion in the table explains that the City would implement a parking strategy that would balance shared-use parking for ferry patrons and recreational users.

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the City's parking management, as well as how parking is addressed in this Draft EIR, according to CEQA.

Response to Comment P36-82

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of how parking is assed under CEQA, and how the City would provide sufficient parking to accommodate all users. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-83

The City has not disregarded BCDC's scoping comment. The Draft EIR considered comments received during the scoping process, including comments submitted by BCDC. With respect to alternatives, Chapter 5 evaluates alternatives that reduce Bay fill relative to the proposed project, including the Shortened Breakwater Alternative and Shortened Pier Alternative. In addition, alternatives intended to further reduce fill were considered during project planning. As discussed in Section 2.2.2, *Topical Response: Alternatives*, the alternatives analysis was developed using reasonable assumptions and screening criteria consistent with CEQA requirements. Additionally, as discussed in Section 5.9, *Alternatives Considered but Rejected*, and further addressed in Section 2.2.2, *Topical Response: Alternatives*, these alternatives were not carried forward because they would not attain most of the project objectives, would be infeasible (i.e., operational and navigational), or would not meaningfully reduce environmental impacts. For example, the in-marina alternative would still require substantial dredging and therefore would not significantly reduce the dredging footprint while meeting the project's operational requirements. For additional information about the In-Marina Alternative, refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*.

Accordingly, the Draft EIR satisfies CEQA's requirement to evaluate a reasonable range of feasible alternatives, and the analysis and conclusions presented in Chapter 5, *Alternatives* remain valid. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-84

The City acknowledges that BCDC Bay Plan policies and Clean Water Act Section 404(b)(1) Guidelines emphasize avoidance and minimization of Bay fill and other aquatic-resource impacts. Consistent with those principles, the Draft EIR evaluates alternatives that reduce Bay fill relative to the proposed project and discusses additional alternatives considered during project planning. Refer to Response to Comment P36-83 and P36-85, which describes the City's evaluation of alternatives, consistent with CEQA requirements.

The Draft EIR's purpose under CEQA is to evaluate a reasonable range of feasible alternatives and disclose their environmental consequences. Separate regulatory review and permitting processes administered by agencies such as BCDC and the U.S. Army Corps of Engineers may apply additional alternatives analyses and permitting standards. The analysis and conclusions presented in the Draft EIR remain valid, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-85

Refer to Section 2.2.2, *Topical Response: Alternatives* (Project Objectives Sub-section). As discussed therein, CEQA permits a lead agency to define reasonable project objectives and to evaluate alternatives based on their ability to attain most of those objectives. The Draft EIR evaluates a reasonable range of alternatives capable of attaining most of the project objectives while reducing environmental impacts.

Accordingly, the alternatives analysis presented in Chapter 5, *Alternatives* is consistent with CEQA requirements. No revisions to the Draft EIR are necessary.

Response to Comment P36-86

Refer to Response to Comment P36-85, which explains how the project objectives identified in the Draft EIR are in compliance with CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-87

Refer to Section 2.2.2, *Topical Response: Alternatives*, which explains that the project objectives are not overly narrow and describes how the Draft EIR provides for meaningful decision-making. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-88

The City agrees that CEQA requires evaluation of alternatives capable of attaining most, rather than all, project objectives. Consistent with that requirement, Chapter 5, *Alternatives* evaluates alternatives that vary in the degree to which they satisfy project objectives and reduce environmental impacts. Alternatives were not excluded solely because they failed to meet every project objective; rather, screening decisions reflected a combination of factors, including feasibility, reduction of significant environmental impacts, operational considerations as they relate to feasibility, and the ability to attain most project objectives. For further discussion of the City's evaluation of Alternatives, refer to Section 2.2.2, *Topical Response: Alternatives*. No revisions to the Draft EIR are necessary. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-89

Refer to Response to Comment P36-83, for a response to this same comment made earlier in the comment letter. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-90

Refer to Section 2.2.2, *Topical Response: Alternatives*. As discussed therein, the City has established reasonable project objectives consistent with CEQA and evaluated a reasonable range of alternatives capable of attaining most of those objectives. The Draft EIR identifies an environmentally superior alternative and evaluates alternatives with varying levels of environmental impact, public access benefits, and ferry-service functionality. Accordingly, the project objectives do not improperly constrain the alternatives analysis. No revisions to the Draft EIR are necessary.

Response to Comment P36-91

The City acknowledges the commenter's opinions regarding project funding and the desirability of a recreational-use pier without ferry service. However, the issues raised regarding grant funding, project costs, financing, and comparative economic feasibility are primarily financial and policy considerations rather than environmental impacts subject to CEQA review. Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for additional discussion.

To the extent the comment advocates for a pier-only alternative, refer to Response to Comment O10-215. As described therein, the City considered a No Ferry Service with New Pier Alternative in Draft EIR Section 5.9, Alternatives Considered but Rejected (page 5-27). The No Ferry Service with New Pier

Alternative would reconstruct the pier without providing ferry service, but was not carried forward for detailed evaluation because it would not attain one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission public ferry service between Berkeley and San Francisco. Refer also to Responses to Comments O10-216 and O10-217 for additional discussion regarding project funding and the recreational benefits associated with a pier-only alternative.

The City does not dispute that reconstruction of the pier without ferry service could provide public access and recreational benefits. However, CEQA does not require the City to select or evaluate in detail every alternative preferred by a commenter. Rather, CEQA requires evaluation of a reasonable range of feasible alternatives capable of attaining most of the project's objectives. The Draft EIR explains the basis for screening the No Ferry Service with New Pier Alternative from detailed evaluation and identifies the alternatives that were carried forward for analysis in Chapter 5. For more information of how the Draft EIR considers alternatives, refer to Section 2.2.2, *Topical Response: Alternatives*.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required. For further discussion of project alternatives, refer to Section 2.2.2, *Topical Response: Alternatives*.

Response to Comment P36-92

It is not accurate that restoration of the pier constitutes the No Project Alternative under CEQA. CEQA Guidelines Section 15126.6(e) requires that an EIR evaluate a No Project Alternative that describes the existing conditions and reasonably foreseeable future conditions if the proposed project is not approved. Consistent with this requirement, the Draft EIR's No Project Alternative assumes that the proposed project would not be implemented and that the existing pier would remain closed due to its deteriorated structural condition. As discussed in Chapter 5, *Alternatives*, the No Project Alternative therefore reflects continuation of existing conditions rather than implementation of a separate project involving repair or reconstruction of the pier. There are no planning documents, funding, or other evidence to suggest that the restoration of the pier, without ferry service, would be reasonably foreseeable.

Restoration or reconstruction of the pier would constitute a distinct project requiring discretionary approvals, funding, design, and construction activities. Accordingly, it is more appropriately considered an action alternative rather than a No Project Alternative. As discussed in Section 5.9, *Alternatives Considered but Rejected*, alternatives involving restoration of the pier without ferry service were considered but not carried forward because they would not attain most of the project's basic objectives, including provision of zero-emission ferry service. For further discussion, please refer to Response to Comment O10-215, as well as Section 2.2.2, *Topical Response: Alternatives*.

The comment's preference for a restored pier without ferry service is noted; however, that preference does not demonstrate that the Draft EIR's No Project Alternative is inconsistent with CEQA requirements. This comment has been included in the project record considered by City decision makers. The analysis and conclusions presented in Chapter 5 remain valid, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-93

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-94

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-95

Please refer to Responses to Comments P36-83 and P36-84 and to Section 2.2.2, *Topical Response: Alternatives*, and Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*.

The comment that regulatory requirements would largely be avoided by locating the project within the marina does not alter the Draft EIR's conclusion regarding the in-marina alternative. Accordingly, the alternatives analysis presented in Chapter 5 remains valid, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-96

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-97

The Draft EIR evaluates impacts due to various in-water construction activities, including dredging and pile installation, and provides mitigation measures in Section 3.3.4 Impacts Analysis on pages 3.3-45 through 3.3-57. See Mitigation Measures BIO-1(d) that requires use of “soft start” and “ramping up” techniques and sound curtains as well as a work window of June 1 through November 30 as impact avoidance to fish and marine mammals. Additionally, a significant portion of the construction-related dredging would occur within a former U.S. Army Corps of Engineers channel and the proposed project dredge depth would result in only short-term temporary impacts to water quality and benthic infaunal communities, as discussed in Section 3.3.4 under Impact BIO-1, page 3.3-46, and those impacts would be less than significant with implementation of Mitigation Measure HYD-1. See Response to Comment A3-28 for further discussion regarding construction-related impacts of dredging. The Draft EIR significance conclusion of less-than-significant special-status aquatic species impacts with incorporation of identified mitigation remains valid. No additional Draft EIR changes are necessary in response to this comment.

Response to Comment P36-98

The Draft EIR Mitigation Measure BIO-3 (page 3.3-66) 1:1 replacement ratio requirement to avoid net loss of jurisdictional waters is a minimum baseline mitigation commitment evaluated under CEQA and is not a fixed permit-stage outcome. The actual mitigation ratio and specific mitigation actions will be determined during agency permitting based on the final design, the results of a formal jurisdictional and functional assessment, and agency review. Draft EIR Mitigation Measure BIO-3 addresses impacts to jurisdictional waters discussed under Impact BIO-3. Impacts to aquatic and benthic habitat are discussed in Section 3.3.4 under Impact BIO-1, pages 3.3-45 through 3.3-54 and concluded to be less than significant with implementation of Mitigation Measures BIO-1(a), BIO-1(d), BIO-1(e), and HYD-1. See Response to Comment O5-36 for further discussion of impacts to aquatic habitat. No Draft EIR changes are necessary in response to this comment. However, refer to the errata in Chapter 3 of the Final EIR for changes to the wording of Mitigation Measure BIO-3.

Response to Comment P36-99

See Response to Comment P36-98 for a discussion of how the project will address impacts beyond no-net loss of jurisdictional waters within the project site. See Response to Comment O5-36 for discussion of dredging and in-water construction impacts. See Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, for further discussion of mitigation approach. No Draft EIR changes are necessary in response to this comment.

Response to Comment P36-100

Refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, which explains how Mitigation Measure BIO-3 fulfills CEQA requirements for mitigation. No further response is required.

Response to Comment P36-101

See Response to Comment O5-36 for discussion of dredging and in-water construction impacts. See Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, for further discussion of mitigation approach. No Draft EIR changes are necessary in response to this comment.

Response to Comment P36-102

Refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, which explains how the mitigation measures included in the Draft EIR are not considered deferred mitigation. No further response is required.

Response to Comment P36-103

See Response to Comment A3-21 for discussion of impacts to subtidal habitats from construction-related sediment disturbance. See Response to Comment A3-25 for discussion of fill removal as mitigation. See Response to Comment P36-99 for additional discussion regarding dredging in-water construction impacts and mitigation. No Draft EIR changes are necessary in response to this comment.

Response to Comment P36-104

Regarding the comment about evaluating alternatives per BCDC recommendations, refer to Response to Comment P36-83 for a response to this same comment made earlier in the comment letter.

This comment also suggests that the project description has changed, and points to the size of the breakwater. As indicated in Response to Comments P36-107 through P36-114, the Draft EIR includes a stable project description.

The Draft EIR both evaluates alternatives that reduce Bay fill and explains why additional alternatives were not selected for detailed analysis. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-105

Refer to Section 2.2.2, *Topical Response: Alternatives*, and Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*. The comment references a small-scale ferry concept described in the GHD Feasibility Study. The Draft EIR did consider a smaller-scale ferry service but ultimately rejected it from further consideration. For a discussion of the rationale for its rejection, refer to page 5-27 of the Draft EIR.

The City therefore concludes that the alternatives analysis presented in Chapter 5 satisfies CEQA requirements, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-106

The comment suggests a project design alternative related to parking management and facility location. Because neither the Draft EIR nor the comment identify a significant parking-related environmental impact pursuant to CEQA Guidelines, the analysis of additional parking alternatives for the purpose suggested by the commenter is not required. For further discussion of parking considerations related to the analysis presented in the Draft EIR, refer to Section 2.2.20, *Topical Response: Parking.* For additional information regarding the evaluation of alternatives, refer also to Section 2.2.2, *Topical Response: Alternatives*.

This comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P36-107

The Notice of Preparation (NOP), which initiates the CEQA process did not identify the specific number of parking spaces because those details were still being developed in the design process. The Draft EIR identified a range of 400 to 450 parking spaces (refer to page 2-18 of the Draft EIR). This has not changed in the Final EIR. As indicated in Response to Comments P36-107 through P36-114, the Draft EIR includes a stable project description.

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion of parking on Seawall Drive.

No supporting arguments, data, or analysis were provided to substantiate these comments. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P36-108

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which explains that the City does consider a potential new restaurant at the 199 Seawall Drive site as a cumulative project. The comment mentions 150 parking spaces, which is a reference to the City of Berkeley lease agreement providing 150 exclusive-use parking stalls at the Seawall Lot for 45 years.[51] As described in Section 2.2.20, *Topical Response: Parking,* parking scarcity alone does not constitute a significant impact on the environment. Rather, projects must be evaluated on a case-by-case basis to determine whether secondary physical impacts - such as increased VMT, roadway noise, or air quality impacts result from parking condition. The "Parking Availability Does Not Create Secondary Environmental Impacts" subsection of Section 2.2.20, *Topical Response: Parking,* explains that the Draft EIR and the supporting Parking and TDM Plan demonstrate that the Berkeley Waterfront parking supply is sufficient to accommodate project ferry parking demand without requiring drivers to circulate between parking lots or generate additional vehicle travel.

In addition, the future redevelopment of 199 Seawall Drive would be located within BCDC jurisdiction and any future redevelopment proposal would be required to demonstrate consistency with applicable BCDC policies during the BCDC permit review process. As discussed in Draft EIR Section 3.9, *Land Use and Planning*, the proposed project has been evaluated for consistency with applicable Bay Plan policies, including Bay Plan Recreation Policy 9 which provides that ferry terminals may be located within waterfront park priority use areas provided that facilities for park and marina patrons, such as parking, are not usurped by ferry users and that shared parking arrangements are provided to minimize the amount of shoreline area devoted to parking (refer to Impact LU-2, Table 3.9-1). The Bay Plan further provides that terminal parking facilities should be set back from the shoreline to allow for public access and enjoyment of the Bay, and that public access to and along the shoreline should be maintained. Likewise, any future restaurant redevelopment and associated parking arrangements would be subject to independent review by BCDC to demonstrate consistency with applicable Bay Plan policies concerning shared parking, public access, and recreational use of the Berkeley Waterfront. In addition, as described in Draft EIR Section 3.9, *Land Use and Planning*, the 199 Seawall Drive property is located within Berkeley's Unclassified (U) District, where establishment of a new use requires discretionary approval through a Use Permit process. As part of that process, the City may establish project-specific development standards, including standards related to off-street parking. Therefore, future redevelopment of 199 Seawall Drive and any associated parking allocation or management program would be subject to independent review and discretionary approval by both the City and BCDC, both of which would ensure development consistency

[51] City of Berkeley. 2026. Option Agreement with TSA Holding Group, LLC for 199 Seawall Drive. January 27. Available: https://berkeleyca.gov/sites/default/files/2026-01/2026-01-27%20Item%2006%20Option%20Agreement%20with%20TSA.pdf. (accessed July 2026).

with applicable land use plans related to public access and parking. To the extent redevelopment of 199 Seawall Drive could contribute to cumulative environmental effects, such effects were considered in the applicable cumulative impact analyses presented throughout the Draft EIR. As discussed in Section 2.2.20, *Topical Response: Parking,* the Draft EIR concludes that operation of the proposed project would not result in secondary physical environmental impacts associated with parking conditions. Therefore, the comment does not identify a new significant impact or substantial increase in the severity of a previously identified impact beyond those evaluated in the Draft EIR. No further response is required.

Response to Comment P36-109

The City has not proposed parking allocation among users. Rather, as explained in Section 2.2.20, *Topical Response: Parking,* the City has developed a Parking and TDM Plan, which identifies TDM strategies and ultimately demonstrates sufficient capacity to accommodate both ferry patrons and recreation users. The Parking and TDM Plan identifies a range of parking management regulations to manage the shared use of available parking stalls, and a range of TDM strategies, but does not propose allocation of specific stalls by user groups. Rather, it suggests various parking management regulations, generally time limits, to ensure a balance of parking availability in various parking lots, which can be utilized by any user group based on their needs (proximity, duration, cost, etc.). The information requested in the comment (i.e., clarification of parking allocation among users) is not included because it's not being proposed.

The analysis and significance conclusion presented in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment P36-110

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a clarification of parking details on Seawall Drive.

Refer to Response to Comment P36-109 for clarification that the project does not include parking allocation among users.

The description of parking in Chapter 2, *Project Description* in the Draft EIR remains valid and adequate as written. No further revisions to the EIR are necessary.

Response to Comment P36-111

First, as a matter of clarification, the statement that the number of passengers associated with the project is not on the body of the Draft EIR is not accurate. Table 2-4: Daily Ridership Projections (trips) in Chapter 2, *Project Description* of the Draft EIR (page 2-31) includes information about passenger demand. The comment references 955, 1,018, 1,055, and 1,060 passengers. These numbers aren't numbers in flux, but rather represent different scenarios for different years of service, or service to Mission Bay in addition to the Ferry Building. Most importantly, these numbers are all presented in the Chapter 2, *Project Description* of the Draft EIR. Please note that as explained in footnote 26 in Chapter 2, *Project Description* of the Draft EIR, Table 2-4 shows ridership projections in trips, so to calculate number of passengers, one would need to divide by two.

The description of parking in Chapter 2, *Project Description* in the Draft EIR remains valid and adequate as written. No further revisions to the EIR are necessary.

Response to Comment P36-112

Refer to Response to Comment P36-76 for a response to the ridership projections provided in the comment letter.

Regarding the comment that the Draft EIR should provide clarity on what the project description really is, the Draft EIR already provides a clear project description. The commenter appears to be referencing two items: parking and ridership. The parking proposed by the project is described on pages 2-18 to 2-22 of

the Draft EIR and includes graphics to identify the proposed parking. The ridership expected as a result of the project is described on pages 2-30 to 2-31 of the Draft EIR.

The description of parking in Chapter 2, *Project Description* in the Draft EIR remains valid and adequate as written. No further revisions to the EIR are necessary.

Response to Comment P36-113

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for how the City considered wave data for different configurations of the breakwater.

Response to Comment P36-114

Earlier Comments P36-107 through P36-113 include perceived changes related to parking, number of passengers associated with ferry operations, and size of the breakwater. The Draft EIR includes information about these project features in Chapter 2, *Project Description*. It is unclear what the commenter means by "changes." The Notice of Preparation (NOP), which initiates the CEQA process did not identify the specific number of parking spaces because those details were still being developed in the design process; did not identify the number of passengers associated with ferry operations; and did identify a proposed breakwater of 400 feet. The parking details identified in Chapter 2, *Project Description* have not changed in the Final EIR. The details about the number of passengers associated with ferry operations has not changed in the Final EIR. The size of the proposed breakwater has not changed in the Final EIR. However, it should be noted that the Draft EIR does identify an alternative that would reduce the size of the breakwater (Alternative 2, page 5-9 of the Draft EIR), and the decision-making body will make a decision on that alternative. No further response is required.

Response to Comment P36-115

A BTU-per-passenger measurement would mean the amount of heat energy per passenger anticipated to be consumed. The more BTUs consumed in general as well as per passenger could indicate a lower level of energy efficiency.

Air quality impacts analyze energy emissions project from natural gas use and not electricity. This is because use of natural gas results in criteria air pollutant emissions directly associated with onsite project activities, whereas the use of electricity does not result in air quality impacts directly generated at the project site. Specifically, for the proposed project, there would be no project-related natural gas use at the project site and, therefore, energy use from an air quality perspective is zero, because air quality emissions associated with electrical generation are assumed by the generating facility and are not part of an individual project's criteria pollutant emissions inventory.

From an energy and GHG standpoint, CEQA significance thresholds identified in the Draft EIR through either the CEQA Checklist or the Bay Area Air District thresholds do not use a BTU-per-passenger mile threshold nor do they require the comparison of project emissions to alternative modes of transportation not proposed as part of a project. Further, the Draft EIR Alternatives Section (Section 5.9) discussed alternative projects such as increasing Bay Area Rapid Transit (BART) capacity and improving access to BART, both of which were alternatives that were considered but rejected. The analysis in the Draft EIR accurately analyzes energy impacts with respect to CEQA Guidelines Appendix G significance criteria, specifically, would the proposed project result in a potentially significant environmental impact due to a wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; and would the proposed project conflict or obstruct a state or local plan for renewable energy or energy efficiency. Thresholds are discussed in Draft EIR *Section 3.6.4* on page 3.6-30. Since the Draft EIR used CEQA Guidelines and Public Resource Code methodology to analyze impacts related to energy efficiency and use, additional energy analysis is not required.

The Draft EIR under Impact GHG-2 (pages 3.6-43 through 3.6-44) concludes that the project would not result in wasteful, inefficient, or unnecessary consumption of energy resources. And the Draft EIR under

Impact GHG-3 (pages 3.6-45 through 3.6-46) concludes that the project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Therefore, additional energy analysis is not required.

Response to Comment P36-116

Carbon is not a criteria pollutant that is addressed under the federal or State Ambient Air Quality Standards and is, therefore, not analyzed as part of the air quality analysis as it does not have a State or federal threshold for which states or regions are required to comply with. The air quality analysis does include an analysis of direct carbon monoxide emissions associated with the construction and operation of the project. As discussed in Response to Comment P36-115, carbon monoxide emissions, along with the other criteria pollutants, from electrical consumption are not analyzed under air quality impacts. Carbon monoxide emissions from the mobile sources associated with the proposed project are included in Draft EIR Tables 3.2-9 and 3.2-10 on page 3.2-28 and result in 26 lbs per day or 5 tons per year of carbon monoxide emissions. There are no air district thresholds for carbon monoxide emissions at this time and, therefore, carbon monoxide emissions are less than significant.

See Section 2.2.10, *Topical Response: Electric Ferry,* for a discussion of how the proposed project includes and the Draft EIR analyses assume installation and operation of an electric ferry, and not a ferry that would be propelled by any other means of fuel or energy source. In addition, see Responses to Comments O5-18 and 05-19 that discuss the project's commitment to zero-emission ferry and 100 percent renewable energy consumption past 2030. The reference to a zero-emissions project is specific to zero GHG emissions associated with proposed all-electric ferry operation as well as ferry and recreational amenities that would use 100 percent renewable energy-sourced electricity past 2030.

See Section 2.2.27, *Topical Response: VMT*, for a discussion of how the proposed project would result in a net reduction in regional VMT. Draft EIR Section 3.12 *Transportation* page 3.12-21 details the VMT analysis and how the project would reduce vehicle miles traveled from the current 1,127 trips traveling into San Francisco at 25 miles to an 8 mile commute to the ferry terminal. The source of the information for determining trip lengths is Transportation Research Board of the National Academies. Coffel, K., Parks, J., Semler, C., Ryus, P., Bose, D., Vandehey, M., Petritsch, T., Proulx, F., & Chang, J. (2012). Guidelines for providing access to public transportation stations (TCRP Report 153) are available at https://nacto.org/wp-content/uploads/2016/04/1-4_Coffell-et-al_Guidelines-for-Providing-Access-to-Public-TransportationStations_TCRP-153_2012.pdf and the use of the information is summarized in Draft EIR Section 3.12 *Transportation*. Together, this Draft EIR analysis, information source, and guidelines document how the project would result in a net reduction in regional VMT. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P36-117

Refer to Section 2.2.2, *Topical Response: Alternatives* for a discussion of how the Draft EIR need only assess a reasonable range of alternatives that also meet the project objectives. A project objective is to construct and operate a new all-electric ferry from Berkeley to San Francisco. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P36-118

Refer to Response to Comment P36-115 for a discussion of the analysis on BTU-per-passenger comparisons in terms of energy use. In addition, see Response to Comment P36-116 for a discussion of how the reference to a zero-emissions project is specific to zero GHG emissions associated with proposed all-electric ferry operation as well as ferry and recreational amenities that would use 100 percent renewable energy-sourced electricity past 2030.

In addition, while the efficiency of a ferry may be lower than that of AC transit or BART, these systems are already in place and will continue to service transportation needs between Berkeley and San Francisco after and during operation of the ferry service. Since these other modes of regional transit are not part of

the proposed project, the efficiency of the ferry in comparison to these other regional modes of transit are not relevant to the project analysis.

Furthermore, see Section 2.2.27, *Topical Response: VMT,* for a discussion of how the proposed project would result in a net reduction in regional VMT. As demonstrated in the Draft EIR (Impact TRA-2, page 3.12-20) and discussed in Response to Comment P36-116, implementation of the project would reduce regional VMT compared to the existing condition by taking an additional 1,127 cars trips off of the roads between Berkeley and San Francisco. The Draft EIR Air Quality analysis in *Section 3.2* and the Greenhouse Gas and Energy analysis in *Section 3.6* discuss the impacts from the use of fossil fuels from the vehicles accessing the project site (see Impact AQ-2 and GHG-1 on pages 3.2-29 and 3.6-36).

Finally, as discussed in Response to Comments O5-18 and 05-19, the project objective and commitment is to zero-emission ferry fleet and participation in 100 percent renewable electricity post 2030 with the emissions from electricity generation for Greenhouse Gases analyzed in Draft EIR *Section 3.6 (page 3.6-31)*. See Response to Comment P36-115 discussion regarding why the air quality analysis does not include emissions from electrical consumption. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P36-119

See Section 2.2.10, *Topical Response: Electric Ferry,* for a discussion of how the proposed project includes and the Draft EIR analyses assume installation and operation of an electric ferry, and not a ferry that would be propelled by any other means of fuel or energy source. In addition, Response to Comment O5-19 details WETA's commitments to electrification of the ferries in the San Francisco Bay area as well as the expansion of the electrified fleet. While the City of Berkeley cannot mandate the types of ferries that will be used, WETA has demonstrated a commitment to electrification of the ferry system in the Bay Area including within the expansions of ferry services, and the use of all-electric ferry service between Berkeley and San Francisco is a project objective that the City intends to meet. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P36-120

See Section 2.2.27, *Topical Response: VMT*, for a discussion of how the proposed project would result in a net reduction in regional VMT. The air quality analysis for vehicle trips is based on the Kittelson Technical Memorandum dated January 16, 2026, and provided as Appendix F to the Draft EIR. This analysis is by a qualified traffic engineer that substantiates the vehicle trip assumptions used in the analysis. Additionally, Draft EIR Section 3.12 *Transportation* (page 3.1-21) documents the reduction in VMT that is used in the report.

The comment is correct in stating that the air quality analysis does not address the referenced VMT guideline. The referenced guideline is part of the Bay Area Air District Greenhouse Gas Thresholds and is used for the determination of significance from a project's GHG emissions. The discussion of the project's compliance with this regulation is detailed in Draft EIR Section 3.6 *2022 Scoping Plan* beginning on page 3.6-36 which inherently relies on the methodology discussion on page 3.6-32 that details how the VMT is quantified and that the existing conditions result in an average 25 mile per trip distance where the project would reduce that to an average 8 miles per trip. Further, the GHG emissions quantification for operations in Table 3.6-5 on page 3.6-36 shows that while 889 MT CO_2e is anticipated from the 1,127 trips to the project site, the existing commute results in 2,351 MT CO_2e that would be removed from the region with the implementation of the project. Therefore, the GHG analysis adequately analyzes and substantiates the reduction in VMT below regional average, as there is a reduction in overall VMT in the region with implementation of the project. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P36-121

The VMT analysis is based on the ridership projections identified in the WETA Business Plan. Page 13 of the WETA Business Plan includes the discussion about the ferry ridership projections. The ridership has been estimated using the Alameda Countywide Travel Demand Model which was developed for the Plan Bay Area 2040. The forecasts were compared against the unconstrained capacity (4,250 daily boardings). The ridership projections account for several factors such as headways, capacity, directional split, parking availability. The mode split were estimated using the on-board surveys at the existing East and North Bay Terminals.

Regarding origin and destinations, the business plan includes the information ferry catchment area which is where most of the origin and destination will be in Berkeley. A trip between the Berkeley Waterfront and San Francisco's Embarcadero is approximately 10 miles by car. When a traveler chooses the ferry instead of driving, those approximately 10 vehicle miles are eliminated from the roadway network, resulting in a direct reduction in VMT. Even if only a relatively small share of travelers who currently drive choose to switch to the ferry, each of those trips contributes to a measurable reduction in VMT. Because every diverted automobile trip removes vehicle travel from the roadway system, the cumulative effect of even modest mode shift from driving to ferry service will reduce overall VMT.

Response to Comment P36-122

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts.

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-123

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the VMT analysis under CEQA, as well as the mode split assumptions and how they relied on onboard surveys. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-124

Refer to Section 2.2.29, *Topical Response: Wind*, which provides additional detail demonstrating that the project design has been informed by technical analysis to ensure safe operation and compatibility with existing recreational uses. Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, regarding wave climate and breakwater effects.

With respect to public input, refer to Chapter 1, *Introduction* (Section 1.2.2), for a description of the City's public outreach efforts conducted during project development and environmental review. CEQA requires that agencies provide opportunities for public participation and consider comments received; it does not require that agencies agree with or adopt all comments or suggested changes. The Draft EIR acknowledges scoping input and incorporates relevant issues into the analysis, including within the *Approach to Analysis* discussions of each resource Section (e.g., Section 3.11.4, *Recreation*). This Final EIR provides written responses to comments received on the Draft EIR in accordance with CEQA Guidelines Sections 15086 and 15088.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further revisions to the Draft EIR are necessary.

Response to Comment P36-125

See Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for discussion of sedimentation transport patterns, wave energy, and effects of breakwater installation within the project site and beyond. No Draft EIR changes are necessary in response to this comment.

Response to Comment P36-126

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a detailed discussion of the relationship between Berkeley Municipal Code Section 6.20.180 and the proposed project analyzed in the Draft EIR.

The analysis, significance conclusions, and mitigation measures presented within Section 3.11, *Recreation*, and related sections in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-127

For discussion of the environmental baseline presented in the Draft EIR, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*. For analysis of potential project impacts to recreational water access beyond the breakwaters, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* regarding Berkeley Municipal Code restrictions.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No further response or revisions are required.

Response to Comment P36-128

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities).* As discussed therein, the Draft EIR does not conclude that all non-motorized recreation is prohibited in these areas, nor does it rely on a broad or expanded interpretation of "personal watercraft" to exclude traditional recreational uses such as windsurfing or kayaking. The project does not modify the ordinance or expand its applicability. To provide further clarification, Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* includes a text revision to Draft EIR page 3.11-19 to clarify the role of BMC Section 6.20.180 in the analysis presented under Impact REC-1.

The Draft EIR appropriately incorporates existing regulatory conditions into the CEQA baseline and evaluates impacts to water-based recreation based on physical environmental effects, rather than regulatory interpretation disputes. The analyses and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No further revisions to the Draft EIR are required.

Response to Comment P36-129

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions. Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* regarding windsurfing within 1,500 feet of the existing pier.

The analyses and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No further revisions to the Draft EIR are required.

Response to Comment P36-130

Regarding the comment's statement that the City neglected to work with stakeholders, as documented in Draft EIR Chapter 1, *Introduction* (Section 1.2.2), the City conducted extensive public outreach with recreational users, community organizations, and other stakeholders prior to preparation of the Draft EIR.

Input from this outreach informed the identification of key recreational uses and project features described in Chapter 2, *Project Description* (Section 2.3), and in Section 3.11, *Recreation*.

For discussion regarding the adequacy of the CEQA baseline and level of detail required, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

As described in Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance*, the City has coordinated with BCDC throughout project development, and final policy consistency determinations will be made by BCDC during the permitting process.

Accordingly, the Draft EIR includes an adequate description of existing recreational use and applies that baseline appropriately in evaluating project impacts. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P36-131

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, for a discussion of the baseline used to assess recreational impacts, according to CEQA. No further response is required.

Response to Comment P36-132

Regarding the comment that the Draft EIR failed to develop any quantitative inventory of recreational use, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, which provides additional clarification regarding the formulation of the environmental baseline and demonstrates that the baseline description in the Draft EIR is consistent with CEQA Guidelines Section 15125 and sufficient to support the impact analysis.

The commenter correctly identifies a typographical error referencing Draft EIR Section 3.10.2. As described in Response to Comment O10-51, the Draft EIR has been revised to correct this reference to Section 3.11.2. This change is clarifying in nature and does not affect the analysis or conclusions.

The comment that the project would eliminate nearly all public parking is not accurate. As described in Chapter 2, *Project Description*, the proposed project would replace approximately 404 existing parking spaces with approximately 400 to 450 parking spaces, including ADA-accessible and electric vehicle (EV) charging spaces. For additional discussion of parking-related considerations under CEQA, refer to Section 2.2.20, *Topical Response: Parking*.

The analyses, significance determinations, and mitigation measures presented throughout the Draft EIR remain valid as written, and no further revisions are required.

Response to Comment P36-133

The Draft EIR evaluates environmental impacts using the CEQA Appendix G Environmental Checklist (State CEQA Guidelines, Appendix G), which provides the standard thresholds of significance used by lead agencies throughout California. The impact analyses presented in Chapter 3 apply these thresholds consistently and include resource-specific evaluation criteria, supported by site-specific data and technical analysis, in accordance with CEQA Guidelines.

Construction-related impacts, including temporary effects on access and recreation, are evaluated in Section 3.11, *Recreation*, and other relevant sections of Chapter 3. The Draft EIR considers the nature, duration, and extent of temporary disruptions and applies CEQA significance criteria accordingly. The conclusion that certain temporary impacts would be less than significant is supported by the analysis provided and is consistent with CEQA practice, which distinguishes between temporary and permanent impacts. For further discussion, refer to Response to Comment A3-55, which revises Draft EIR Section 3.11, *Recreation*, to clarify the analysis of temporary construction impacts on recreational access. The revision presented therein is clarifying in nature, and does not alter the analysis or subsequent significance conclusion under Impact REC-1.

To the extent that conflict between the project and an applicable land use plan may result in physical adverse effects on the environment, those effects are evaluated and mitigated as appropriate throughout Chapter 3, *Environmental Impact Analysis*, of the Draft EIR. With respect to consistency with the Berkeley Marina Master Plan, the Draft EIR evaluates land use consistency in Section 3.9, *Land Use and Planning*. That Section evaluates the project's consistency with applicable local and regional plans, including policies related to recreational access and shoreline use within the Berkeley Marina Master Plan (refer to Impact LU-2, Pages 3.9-29 through 3.9-33). The Draft EIR concludes that the project would be consistent with the policies of the Marina Master Plan, and that related construction and operational impacts would be less than significant.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no further revisions are required.

Response to Comment P36-134

The Draft Waterfront Specific Plan (WSP) is a draft document that has not been adopted and therefore does not constitute an applicable land use plan or regulatory framework governing the project. Accordingly, the Draft EIR appropriately does not include an analysis of project consistency with the Draft WSP. As explained in Draft EIR Section 1.2.3, Draft Waterfront Specific Plan and General Plan/Zoning Background (page 1-5), policies in the Draft WSP would not apply to the proposed project unless the City adopts the WSP prior to project approval. This approach is consistent with CEQA Guidelines Section 15125(3), which provides that an existing conditions baseline "shall not include hypothetical conditions, such as those that might be allowed, but have never actually occurred, under existing permits or plans."

With respect to cumulative impacts, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which describes that the Draft EIR includes the Draft WSP as a cumulative project and is analyzed in the cumulative impacts analysis.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-135

Refer to Response to Comment P36-108. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-136

The Draft EIR does not rely on the Draft Waterfront Specific Plan as an adopted policy document for purposes of determining land use plan consistency. Rather, the Draft EIR establishes in Chapter 1, *Introduction*, that the Draft WSP would not apply to the proposed project unless adopted by the City prior to approval of the proposed project (see Draft EIR page 1-5) and subsequently elaborates in Chapter 3, *Environmental Impact Analysis*, that the proposed project can be built with or without the development associated with the Draft WSP, as the proposed project and Draft WSP are independent projects under CEQA, as the proposed project constitutes the "whole of an action," (see Draft EIR page 3-11).

As explained in Draft EIR Section 2.4, *Existing General Plan and Zoning* (pages 2-5 through 2-6 of Chapter 2, *Project Description*), the project site is zoned Unclassified (U) and is designated Waterfront/Marina under the City's General Plan, which allows water-oriented uses, including water transit facilities. As discussed in Draft EIR Section 3.9.3, *Environmental Setting* (page 3.9-2) and Section 3.9.3, *Regulatory Framework* (page 3.9-7), the proposed ferry terminal would be required to obtain a Use Permit from the City. The Draft EIR further explains that development within the Unclassified District is governed by Berkeley Municipal Code Section 23.208.020 and that establishment of the proposed ferry use would be subject to discretionary review and approval by the City. Accordingly, land use approvals would be

guided by regulations tied to its existing zoning designations, rather than hypothetical future designations presented in the Draft WSP.

In addition, regarding the statement that "the City has tabled the WSP and thereby argues that they don't have to consider cumulative impacts", this is not an accurate statement. The Draft EIR does consider the Draft WSP in its cumulative analysis. Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion related to how the Draft WSP is addressed in the Draft EIR.

For further discussion regarding the Draft EIR's evaluation of consistency with applicable land use policies, refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*.

The analyses and significance conclusions presented under Impact LU-2 in Section 3.9, *Land Use and Planning*, and throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment P36-137

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion about why the cumulative impact analysis included in the Draft EIR is sufficient and complies with CEQA requirements.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P36-138

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment P36-139

In earlier comments (P36-49, P36-65, and P36-130), the commenter identified comments related to the need for a baseline of recreational uses. Refer to those Response to Comments as well as Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, for a discussion of the baseline used to assess recreational impacts, according to CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-140

The commenter references this Figure once in comment P36-9. Based on comment P36-9, the commenter appears to reference this Figure to indicate that there are fundamental conflicts with the Berkeley Marina Master Plan. The City has appropriately disclosed the project's consistency with the Berkeley Marina Master Plan in Impact LU-2 in Section 3.9, *Land Use and Planning* of the Draft EIR. Refer to Response to Comments P36-9 through P36-18 for further discussion about the project's consistency with the Berkeley Marina Master Plan. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-141

In an earlier comment (P36-10), the commenter references this figure as it relates to perceived conflicts with the Berkeley Marina Master Plan. Refer to Response to Comment P36-10. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P36-142

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Letter P37

Subject: Berkeley Water Transportation Pier Ferry Project- public comment

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza and Committee members,

I know you've heard from a number of my fellow wind and water sport enthusiasts and, while I agree with everything they have said regarding the proposed Berkeley Water Transportation Pier Ferry Project, including how it will impinge on our access to our various chosen activities and parking to access those activities, to me your proposed project impacts something even more essential to my needs, and quintessential to our collective needs as human beings and that is COMMUNITY. At a time in our country that is as disconnected and disheartening as ours currently is, we need as many avenues as possible for a community to be born, grow, and thrive. What we don't need is another mode of commuter transportation that leaves us disconnected from each other, staring down at our phones; we have an underutilized BART and bus systems for that. P37-1 P37-2

If I may, I would love to share a little bit about this community I am advocating for. I began learning how to wing foil in earnest about 6 years ago. I was 50 at the time and it was the first and only sport I've ever done and I kinda really sucked at it, but I kept coming back. One of the main reasons for that is the COMMUNITY. In my entire life, I have never come across a group as welcoming, kind, and helpful as this community. I've had the honor to meet Mary, the 72-year-old, purple mustang-driving, long-time Berkeley resident who swims off Hs Lordships to stave off the aches and pains of old age. I've been cheered on by Domond, a 70-something-year-old OG of the surfing world who lends me his wisdom and support as I continue to try and try again. I've had the pleasure of watching a father and son team, Bob and Antonio, come together at the Berkeley waterfront, celebrating each other through each milestone and accomplishment achieved out on the water. I know of at least one couple that found love out on their boards during a lull in the wind. Anything can happen in this place where we commune, as it doesn't discriminate against age, race, gender, or religion. The only thing you're asked to bring is a love of the water and a good enough attitude. Almost any day of the week, on or off season, if you wander down to the Berkeley waterfront, you will find one of us, seeking out not just the sport we love to do but the COMMUNITY we love to do it with. P37-3

Liza, as a University of Vermont and Cal alum, my guess is you are no stranger to the magic of nature and how it can bring people together. I would love to invite you down to his Hs Lordships on one of these days, so you can meet these people: the wingers, the swimmers, the windsurfers, the fisher people. These are the communities we need to foster, not separate. These are the communities we need to invest in, not divest from. This is your community and mine, and the cost of not preserving it will be higher than any revenue you are seeking to get from your proposed project.

Let’s heed the warning of California’s adopted daughter, Joni Mitchell, and save what we have while we still have it.
”Don't it always seem to go
That you don't know what you got 'til it's gone
They paved paradise and put up a parking lot”

- Big Yellow Taxi

P37-3

Liza, I look forward to getting you or any member of the committee out there with us. as I know it’ll take you no time to see, feel and experience exactly what we are fighting for.

Thank you for your time.

Warmly

Kirsten Mahoney
Water Mama, Wing Sister!

Letter P37

Commenter: Kirsten Mahoney

Date: March 27, 2026

Response to Comment P37-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P37-2

Draft EIR Section 3.11, *Recreation*, evaluates changes in recreational access and facility availability (see Section 3.11.4, pages 3.11-14 through 3.11-24). The Draft EIR explains that while certain access patterns may change, the project would provide new and improved access to recreational facilities, including the reopened pier and improved shoreline access.

Refer to Response to Comment P19-6, which includes a clarifying revision to page 3.11-20 of the Draft EIR confirming that the project would not restrict shoreline areas used for water-based recreation within the South Sailing Basin, that existing access points to these areas would be maintained, and that overall access to recreational resources would be maintained and enhanced despite modifications to certain access points, circulation patterns, and parking configurations. Refer to Section 2.2.20, *Topical Response: Parking,* regarding parking under CEQA and parking effects on recreational access. Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, regarding impacts on existing recreational use.

The revision presented in Response to Comment 19-6 and referenced above is clarifying in nature and does not alter the analysis or significance conclusion presented under Impact REC-1. The analysis and conclusions presented therein remain valid as written, and no further clarifications are required.

Response to Comment P37-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

From: Jaine Gilbert <jainegilbert@gmail.com>
Sent: Saturday, April 4, 2026 11:40 AM
To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Save the Berkeley Marina

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza McNulty

As a lifelong Berkeley resident, I am deeply concerned and saddened that Berkeley may go ahead with the construction of a new pier and ferry terminal on our coastline. We must preserve this natural habitat as is or do work to restore the habitat based on sound environmental practices. As a lifelong Berkeley resident, I find it egregious that we are even considering such an environmentally unfriendly project. It is a shameless waste of money that would be better spent improving BART and AC Transit. The harm to what's left of the bayshore that is used by shorebirds and other wildlife is tragic. It is a wonderful area to explore on foot. Any upgrades to our marina must not impact bay waters and wildlife from the smallest crawlers that are food to the shorebirds. What a peaceful, beautiful thing it is to sit and watch the long legged birds so patiently forage for food. When my elders were too frail to walk unassisted, I could drive us to the marina, park and walk to a bench and just take in the fresh bay air, watch the birds and just sit. On my own or with biking friends, I can ride my bike there and enjoy a long sit for bird and bay watching and/or take a stroll.

The SF Bay already has plenty of ferries and ferry terminals that are underutilized. To reduce the harm caused by the existing ferries, replace or retrofit them to electric or less polluting motors! Improve bike paths along already paved areas. Under no circumstances should we reduce any of the limited natural habitat by any more pavement for bikes or walkers. Fixing existing paved areas for easier access is acceptable.

Sincerely,

P38-1

P38-5
P38-6
P38-7

Letter P38

Commenter: Jaine Gilbert

Date: April 4, 2026

Response to Comment P38-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P38-2

The comment's preference for preserving existing conditions or undertaking restoration in lieu of the proposed project is noted. As discussed in Section 5.5, *No Project Alternative* (pages 5-3 through 5-9), the Draft EIR evaluates the environmental effects of not implementing the proposed project. The Draft EIR concludes that, although the No Project Alternative would avoid certain construction-related impacts, it would not provide the long-term transportation, air quality, greenhouse gas reduction, and public access benefits associated with the proposed project and would not meet the project's basic objectives. Further, as discussed in Section 5.9, *Alternatives Considered but Rejected* (pages 5-25 through 5-28), alternatives that would not provide efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco were not carried forward because they would not attain most of the project's basic objectives. Please also refer to Section 2.2.2, *Topical Response: Alternatives*.

The comment's preference for preservation or restoration is acknowledged; however, the comment does not identify a deficiency in the Draft EIR's alternatives analysis. This comment has been included in the project record considered by City decision makers. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P38-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P38-4

Impacts to Bay waters and wildlife are discussed in Draft EIR Section 3.3.4 and were concluded to be less than significant with implementation of Mitigation Measures BIO-1, BIO-2, BIO-3, HYD-1, and AES-1. No Draft EIR changes are necessary in response to this comment.

Response to Comment P38-5

The recreational activities described by the comment are among the types of public access and recreational opportunities that the proposed project is intended to enhance. As described in Chapter 2, *Project Description*, the proposed project would provide a restored public pier, public-access breakwater, public plaza, Bay Trail Extension, dedicated cycle track, seating areas, interpretive signage, and other amenities intended to expand opportunities for walking, bicycling, sightseeing, fishing, and enjoying views of the Bay. The proposed pier and breakwater would also provide new public access to portions of the waterfront that are currently inaccessible due to the closure of the existing pier (see Draft EIR Section 2.5, *Proposed Project Components*). Consistent with these objectives, the Draft EIR analysis concludes that the project would result in a net increase in recreational facilities and opportunities at the Berkeley Waterfront (see Draft EIR Section 3.11, *Recreation*, Impact REC-1), which would enhance the activities described by the comment. As discussed in Chapter 5, *Alternatives*, the alternatives analysis considered

how each alternative would affect public access and recreational opportunities. The No Project Alternative (Alternative 1) would not provide these recreational improvements because the existing pier would remain closed and continue to deteriorate. Alternatives 2 (Shortened Breakwater), 3 (Shortened Pier), and 4 (Reduced Landside Facilities) would provide recreational benefits similar to the proposed project but to a lesser extent, due to reductions in public access facilities and recreational amenities.

Therefore, the recreational opportunities identified by the comment were considered in the development and evaluation of the Draft EIR. The comment does not identify a deficiency in the Draft EIR's analysis, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P38-6

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P38-7

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Letter P39

From: DAVID RICE <drice2@comcast.net>
Sent: Monday, April 6, 2026 7:45 AM
To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Re: Ferry Project

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty, PE, Project Manager,

As the ferry project moves forward, I am most concerned about parking fees at the marina. P39-1

On the one hand, if you build it, they will come, as they say, and maybe lots of people will end up riding the ferries to SF, and it will be a boom to the commute problem. (I'm assuming the ferries will be electric, or primarily electric; if not, I don't understand the project, since we need to use less oil, as you know, and because a lot of birds regularly use that area-- Least Terns (endangered) use the area in the spring and summer--and birds don't mix well with pollution.) P39-2 P39-3

On the other hand, once an area is developed, it will never be undeveloped, and the marina is a treasure, one of the few places on the edge of SF Bay where people can walk, bike, etc. P39-4

All that to say, if too much parking, which is now free, will require fees, fewer people will use the area, so the trade-off is parking fees for ferry commuters vs free parking for people using the marina. I don't know how to evaluate that issue, but I worry the city will overly prioritize parking fees, and fewer people will use the marina. P39-5

As you also know, there is not another marina that people can use. There are buses and BART that SF commuters can use. P39-6

Thank you for your attention.

David Rice

Berkeley

Letter P39

Commenter: David Rice

Date: April 6, 2026

Response to Comment P39-1

Refer to Section 2.2.20, *Topical Response: Parking.* As discussed therein, parking fees are operational and policy considerations rather than environmental impacts under CEQA. The comment has been included in the project record considered by City decision makers.

The comment expresses an opinion and does not identify a deficiency in the analysis presented in the Draft EIR. Accordingly, the analyses and significance conclusions presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment P39-2

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, which discusses that the ferry vessels being proposed in the Draft EIR are electric. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P39-3

See Section 2.2.10, *Topical Response: Electric Ferry,* for discussion regarding how no non-electric ferry vessels are proposed. Impacts to protected birds are analyzed in Draft EIR Section 3.3.4 under Impact BIO-1 on page 3.3-44, which concludes impacts to be less than significant with implementation of Mitigation Measures BIO-1(a), BIO-1(c), and AES-1. See also Response to Comment A2-35 to A2-38 for discussion of impacts to California least tern. No Draft EIR changes are necessary in response to this comment.

Response to Comment P39-4

As discussed in Draft EIR Chapter 2, *Project Description*, and Section 3.11, *Recreation*, the proposed project is intended to enhance public access and recreational opportunities at the Berkeley Waterfront through construction of a restored public pier, public-access breakwater, public plaza, Bay Trail Extension, dedicated cycle track, seating areas, and other public amenities (see Section 2.5, *Proposed Project Components*). The proposed project would provide new public access to portions of the waterfront that are currently inaccessible due to closure of the existing pier and would result in a net increase in recreational facilities and opportunities at the Berkeley Waterfront (see Section 3.11.4, *Impacts Analysis,* Impact REC-1).

The alternatives analysis in Chapter 5 specifically considered the project's recreational benefits. As discussed in the analysis of the No Project Alternative (Alternative 1), the existing pier would remain closed and continue to deteriorate, and none of the proposed public access, recreational, bicycle, pedestrian, or waterfront improvements would be implemented. The Draft EIR concludes that the No Project Alternative would not meet the project's objective of enhancing public access and recreational opportunities at the Berkeley Waterfront.

Accordingly, the recreational values identified by the comment were considered in the development and evaluation of project alternatives. The comment does not identify a deficiency in the Draft EIR's alternatives analysis, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P39-5

The comment expresses concern that parking fees could discourage marina use.

Refer to Section 2.2.20, *Topical Response: Parking.* As described therein, potential changes in user behavior associated with parking fees are social and economic considerations rather than environmental impacts under CEQA unless they result in a secondary physical environmental effect. The Draft EIR does not identify such impacts, nor does the comment present evidence of a deficiency in the Draft EIR analysis. The comment has been included in the project record considered by City decision makers. No revisions are required.

Response to Comment P39-6

The City acknowledges the comment's views regarding the relative value of marina recreational resources and alternative transportation options. The comment expresses a preference regarding the balance between recreational access and transportation improvements, which is a policy matter for City decision-makers to consider. The Draft EIR evaluates the environmental impacts of the proposed project and a reasonable range of alternatives, including the No Project Alternative, and provides information regarding the project's recreational and transportation benefits. As discussed in Draft EIR Chapter 5, *Alternatives*, the project's objectives include both enhancing public access and recreational opportunities at the Berkeley Waterfront and providing efficient, environmentally friendly zero-emission ferry service between Berkeley and San Francisco.

The comment's preference regarding how these objectives should be balanced has been noted and has been included in the project record considered by City decision-makers. No revisions to the Draft EIR are necessary in response to this comment.

Subject: Comment on Ferry Proposal

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Let's please not pretend that the ferry project will actually improve the transbay commute. Has anyone calculated how many single-passenger trips would be eliminated if those riders used the ferry? I doubt it would be anything more than five minutes' worth on the Bay Bridge. P40-1

State and municipal land intended for recreation will host all-day parking for commuters. P40-2

As one who commuted daily to the city for 15 years, even with a transit subsidy I could not afford to pay for a ferry. Nor would it deliver me to my destination at SF Civic Center Plaza. Instead of paying for bus and BART, I would have been paying for bus (with transfer), ferry, and SF Muni. P40-3

I also wish to express concern about the toxic waste generated by dredging. P40-4

I am a homeowner and resident of Berkeley since 1984. P40-5

Letter P40

Commenter: Fran Haselsteiner

Date: April 11, 2026

Response to Comment P40-1

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the evidence used to evaluate VMT impacts. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P40-2

With regard for policies about use of state and municipal land, refer to Draft EIR Section 3.9, *Land Use and Planning*, which analyzes the project for conflicts with applicable land use plans and policies and demonstrates that the project would be consistent with plans and policies intended to preserve and expand recreational access at the Waterfront (see Impact LU-2). With respect to the comment's concerns about project-related parking changes, refer to Section 2.2.20, *Topical Response: Parking*.

The analyses and significance conclusions presented throughout the Draft EIR remain valid as written. No further response or revisions are required.

Response to Comment P40-3

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P40-4

The Draft EIR considered the potential impacts related to hazardous materials in dredged materials in Impact HAZ-1 in Section 3.7, *Hazards and Hazardous Materials* of the Draft EIR. Pages 3.7-27 and 3.7-28 specifically discusses the results of sediment sampling and the potential impacts associated with dredging. The conclusions in Impact HAZ-1 in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment P40-5

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

BERKELEY FERRY PROJECT DRAFT EIR COMMENTS

THE BERKELEY FERRY PROJECT VIOLATES BERKELEY'S 1986 MEASURE 'L' –THE BERKELEY PUBLIC PARKS AND OPEN SPACE PRESERVATION ORDINANCE

By pursuing the massive Berkeley Ferry Project, the City is clearly violating the 1986 Citizens' Initiative Measure 'L'.

Measure 'L' - The Berkeley Parks and Open Space Preservation Ordinance, was adopted by Berkeley voters in November 1986 by a vote of 21,946 to 18,854. It is codified in BMC Chapter 6.42.

Measure 'L' states, "Shall an ordinance be adopted to require voter approval of non-recreational uses of parks or open space and require acquisition of open space controlled or leased by the City if acquisition is the only means of preserving the open space?"

I was one of the signers of the ballot argument in favor of Measure 'L'.

P42-1

Measure 'L' is still in effect today.

Measure 'L' thus requires approval by Berkeley's voters before any aspect of the Berkeley Ferry Project can be built.

In 1996, the City of Berkeley wanted to place temporary buildings on Civic Center (Provo) Park for various city bureaucratic functions while the Civic Center building on Milvia Street went through extensive renovations and a seismic upgrade. Because of Measure 'L', the City had to put a measure on the November 1996 ballot - Measure X - to get the public's approval.

The last of the "where as's" at the start of the Full Text of Measure X" states,

"Where as Measure 'L', BMC Chapter 6.42 requires voter approval to use public parks for purposes other than park or open space uses,"

"Shall the MLK Jr. Civic Center Park be used for a period to expire no later than June 30, 2001 for the purpose of temporarily housing City of Berkeley offices in portable buildings, as well as associated site preparation and maintenance activities in order to allow the abatement of seismic hazards at the site of the MLK Jr. Civic Center Building at 2180 Milvia Street if the Council finds after a public hearing that there is no other feasible alternative to relocate City employees during such seismic work?"

Measure X failed 17,476 to 23,151. The City could not install temporary offices in Civic Center Park, and thus leased commercial property around downtown instead.

Thus, Measure 'L' requires voter approval before any park or open space under the city's control can be used for other purposes.

P42-1

Measure 'L' is still in effect, & covers all City parks & city owned or controlled open space.

Councilmember Terry Taplin has cited Measure 'L' in insisting that the City preserve the open space at the former Lawn Bowling Club site.

Last year, Councilmember Cecilia Lunaparra cited Measure 'L' to insist that the City preserve the public open space at the Dwight - Telegraph triangle.

And in recent years, former Councilmember Kate Harrison cited Measure 'L' to designate the open space around old City Hall as a city park, so as to give it more protection.

THE FERRY PROJECT IS CLEARLY FOR TRANSPORTATION, NOT RECREATION

The Ferry Project would include a breakwater, a 1200 square foot gangway, 750 square foot gates and landings, and a 5700 square foot ferry charging/boarding float.

P42-2

The official description of the Project specifically states that it is for transportation, to take commuters to and from San Francisco.

REMOVING THE EXISTING LANDMARKED PIER WOULD VIOLATE MEASURE 'L'.

The landmarked and iconic Berkeley Pier was for many years used for open space and recreation. The Project would replace it with a much smaller Pier that would not be conducive the recreation.

It's not the public's fault that the Pier has been deemed unsafe to use for the last eleven years. By keeping the Pier closed and refusing to repair it for the last 11 years, the City has been violating Measure 'L'.

P42-3

Demolishing the existing pier and replacing it with a smaller and more officious pier should first require approval of the voters as per Measure 'L'.

All of the SF Bay that is within Berkeley's City Limits is as much City of Berkeley recreational open space as is the Aquatic Park Lagoon.

Any development on the SF Bay that is within Berkeley's City Limits is no less the destruction of recreational open space for non-recreational uses than would the dredging of the Aquatic Park Lagoon and constructing office buildings where the Lagoon once was. P42-3

The proposed Ferry Complex's gates, and landing, the gangway, and the ferry charging and boarding float would all destroy the incomparable view of the SF Bay looking out toward the Golden Gate that generations of Berkeley residents have long enjoyed. P42-4

The San Francisco Bay within Berkeley's City Limits is Berkeley public open space. It has been enjoyed by tens of thousands of Berkeley residents for over 100 years as passive recreation, and by many other people for recreational boating.

Transportation is not recreation. As the City's own official description of the Ferry Project clearly states, the purpose of the Project is Transportation.

Construction is construction, whether on land or water.

Measure 'L' should not be seen as an inconvenience, but as an opportunity to allow the public to vote on proposed changes to existing city parks and open space.

In 1996, city officials were not dismissive of Measure 'L' even though it would slow down the seismic upgrade of the 2180 Milvia Civic Center Building. They put approval of the temporary use of Civic Center Park for city offices on the ballot, because honoring the law and the will of the voters was the right thing to do. P42-5

Today in 2026, city officials should not be dismissive of Measure 'L' just because its implementation could delay construction of the Berkeley Ferry Project Complex.

If city officials could delay the seismic upgrade of the City of Berkeley offices at 2180 Milvia in 1996 to honor the will of the voters, city officials can certainly delay the construction of the Berkeley Ferry Project, to honor the will of the voters.

If city officials believe that taking away incomparable open space at the Waterfront is acceptable so as to construct the Ferry Project Complex, it can certainly make that argument in the ballot handbook and in campaign literature.

THE DRAFT EIR FAILS TO IDENTIFY AND ANALYZE REASONABLE ALTERNATIVE TO THE FERRY PROJECT P42-6

The DEIR should give equal weight to repairing and renovating the existing Pier so that the public and again enjoy walking on it and enjoying the views of the SF Bay from the Pier. P42-7

Equal weight should be given to a No Project Alternative. Why not continue to have ferry service to San Francisco from where the commuter ferries have been running the past several years. P42-8

What is the compelling reason for this massive new Project?
Serious considering and acknowledgement must be given to the rapid and on-going increase in Berkeley's population. Over ten thousand housing units have been constructed in the last several years, P42-9

and over ten thousand additional housing units are in the pipe line. The University is growing at an unprecedented pace, with new high rise dorms being approved on a regular basis.

Berkeley is now likely the most densely populated city in California. We need to maximize open space at the waterfront, and throughout Berkeley. Existing parking spaces at the waterfront should be converted to green open space. P42-9

We need to preserve all existing views from the waterfront of the SF Bay, the Golden Gate, San Francisco and of Marin County. P42-10

EMF STUDY NEED OF FERRY PROJECT CHARGING STATION

The EIR needs to analyze the EMF's that would be emitted from the Ferry Project Charging Station. With the proliferation of cell phones, 5G cell towers, and telecom satellites, we are being exposed to higher and higher levels of radiation in our day to day lives. Studies of the dangers of EMF radiation exposure can easily be found on the internet. P42-11

An independent analysis of the EMF radiation level from the proposed Ferry Project Charging Station is needed to determine is the cumulative radiation from the Charging Station and all other telecom radiation sources would pose an unacceptable health risk to Berkeley residents.

PEOPLE SHOULD BE ABLE TO USE THE FERRY BY PAYING WITH CASH OR CREDIT CARD AT TIME OF BOARDING

Not everyone is high tech. Not everyone has a smart phone. People should be able to use the ferry by paying with cash or a credit card at time of boarding. P42-12

Otherwise, the City would be discriminating against those who choose not to have smart phones, or cannot afford smart phone, or who are made ill by the EMF radiation from smart phones.

PROJECT APPROVAL PROCESS HAS BUILT IN BIAS

The Project applicant and project decision maker are both the City of Berkeley. P42-13

The Draft EIR comments need to be responded to by an impartial third party.
A determination as to whether or not Measure 'L' requires that the Ferry Project first be submitted to the voters for approval needs to be made by an impartial third party. P42-14

And the determination as to whether or not the Project should be approved should be made by an impartial third party. P42-15

DO NOT RUSH APPROVAL OF THE EIR OR OF THE PROJECT

Do not rush approval of the EIR or of the Project P42-16

A Revised Draft EIR should be prepared based on the comments received for the Draft EIR. P42-17

Any Final EIR should be approved separately from consideration of whether the Project itself should be approved. P42-18

Please put me on the notification list for all documents and meetings concerning the Ferry Project. P42-19

Please confirm receipt of these comments. P42-20

Clifford Fred

Letter P42

Commenter: Clifford Fred

Date: April 13, 2026

Response to Comment P42-1

Refer to Section 2.2.16, *Topical Response: Measure L*, for a discussion related to how the project would not conflict with Measure L. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P42-2

As described in Section 2.5, *Project Components*, of the Draft EIR, the project includes both ferry infrastructure and public recreational amenities. Section 2.3, *Project Objectives*, identifies dual objectives of enhancing recreation and providing ferry service. Accordingly, the environmental analysis presented throughout Chapter 3, *Environmental Impacts Analysis*, evaluates both aspects.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P42-3

Refer to Section 2.2.16, *Topical Response: Measure L*, for a discussion related to how the project would not conflict with Measure L. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P42-4

As described in Section 3.1, *Aesthetics (*Impact AES-1), views of the Bay and Golden Gate would not be obstructed by the proposed project. Environmental impacts associated with availability of scenic views and vistas are evaluated in Impact Evaluation, pages 3.1-20 through 3.1-36 of the Draft EIR. Such analyses are based on the assumptions described therein, and mitigation measures are identified as appropriate. Accordingly, the analysis of scenic views and vistas is adequate and consistent with CEQA Guidelines. The analysis and conclusions presented in the Draft EIR remain valid as written.

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, for a discussion related to availability of public views. The analysis and conclusions presented in the Draft EIR remain valid as written.

Response to Comment P42-5

The Draft EIR evaluates the project for consistency with all applicable land use plans and policies under Impact LU-2 within Section 3.9, *Land Use and Planning*. This includes a consistency analysis with Measure L (page 3.9-33). Refer to Section 2.2.16, *Topical Response: Measure L*, for a discussion related to how the project would not conflict with Measure L.

The analyses and significance conclusions presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment P42-6

Please refer to Section 2.2.2, *Topical Response: Alternatives*, which identifies that the City has identified a reasonable range of alternatives consistent with CEQA requirements. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P42-7

The City acknowledges the comment's support for restoration of public access to the pier. The proposed project includes reconstruction of the existing deteriorated pier and would restore public access opportunities that have been unavailable since the pier was closed. As discussed in Draft EIR Chapter 2, *Project Description*, the proposed project would provide a new public-access pier and breakwater, along with additional recreational amenities designed to enhance opportunities for walking, sightseeing, fishing, bicycling, and enjoyment of Bay views (see Section 2.5, *Proposed Project Components*).

To the extent the comment is advocating for reconstruction of the pier without ferry service, please refer to Response to Comment O10-215. As discussed therein, the City considered a "No Ferry Service with New Pier Alternative" and explains in Draft EIR Section 5.9, *Alternatives Considered but Rejected*, why that alternative was not carried forward for detailed analysis (refer to page 5-28). Specifically, while a pier-only alternative would provide recreation and public access benefits, it would not meet one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco. In addition, Chapter 5 evaluates the No Project Alternative and three action alternatives and concludes that the No Project Alternative would not restore public access because the existing pier would remain closed and continue to deteriorate, while alternatives with reduced project features would provide fewer public access and recreational benefits than the proposed project. For additional discussion regarding the assumptions, screening criteria, and requirements used in developing and evaluating alternatives, and alternatives considered but rejected, refer to Section 2.2.2, *Topical Response: Alternatives*.

Accordingly, the Draft EIR considered recreational and public-access objectives in formulating and evaluating alternatives. The comment does not identify a deficiency in the Draft EIR's alternatives analysis, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P42-8

Draft EIR Chapter 5, *Alternatives*, evaluates the No Project Alternative (Alternative 1), as required by CEQA Guidelines Section 15126.6(e), and compares its environmental impacts and ability to meet project objectives relative to the proposed project and other alternatives. The Draft EIR concludes that, under the No Project Alternative, the existing pier would remain closed and continue to deteriorate, no ferry service would be established from Berkeley, and none of the proposed public access, recreational, bicycle, pedestrian, or transportation improvements would occur. The Draft EIR further concludes that the No Project Alternative would not meet either of the project's basic objectives and would generally result in greater impacts related to air quality, greenhouse gas emissions, land use and planning, and transportation because it would not provide the transportation and environmental benefits associated with the proposed ferry service.

To the extent the comment suggests providing ferry service from another location, please refer to Section 2.2.2, *Topical Response: Alternatives*. As discussed in Draft EIR Section 5.9, *Alternatives Considered but Rejected*, the City considered alternative ferry terminal locations, including locations outside the Berkeley Waterfront, and determined that such alternatives would either not be feasible, would not attain most of the project's basic objectives, or were outside the City's jurisdiction. The project's objectives include both enhancing public access and recreational opportunities at the Berkeley Waterfront and providing efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco.

Accordingly, the City concludes that the Draft EIR evaluates a reasonable range of feasible alternatives, including the No Project Alternative, consistent with CEQA requirements. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P42-9

Section 2.3, *Project Objectives*, (Pages 2-7 and 2-8 of the Draft EIR) and Section 1.2.1, *Project Background*, (Page 1-3 and 1-4 of the Draft EIR) describe the objectives for the project, including enhancing public

access and recreational opportunities at the Berkeley Waterfront and providing zero-emission ferry service to improve regional mobility. The project would support ongoing growth by expanding multimodal transportation options and improving regional connectivity between Berkeley and major employment centers such as San Francisco, as well as within Berkeley itself. The proposed ferry service and associated landside improvements would support regional population and employment growth by providing an alternative to automobile travel, thereby enhancing transportation system efficiency and first- and last-mile connectivity through integration with pedestrian, bicycle, and transit facilities. In this way, the project functions as supporting infrastructure that helps accommodate planned growth in the region consistent with regional transportation and land use planning frameworks.

With respect to open space, the project would not eliminate open space nor public access to the waterfront. As described in Chapter 2, *Project Description*, the project includes new and enhanced recreational features, including a publicly accessible pier, breakwater walkway, public plaza, Bay Trail extension, and improved bicycle and pedestrian facilities. Section 3.11, *Recreation*, evaluates these features and concludes that the project would provide a net increase in recreational opportunities and public access at the Berkeley Waterfront.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P42-10

This comment is noted; however, it does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required. Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* for a discussion related to preservation of existing views.

Response to Comment P42-11

The environmental topics evaluated in the Draft EIR are based on CEQA Guidelines Appendix G, which does not explicitly identify EMF radiation exposure as a topic for consideration. Electric and magnetic fields are generally associated with power substations and utility facilities. For example, the California Energy Commission regularly approves electrical facilities. These are dedicated region-serving battery energy storage systems. In one such assessment, the CEC explicitly addressed EMF from the project's electrical facilities: “The construction and operation of the project’s new collector feeders, gen[eration]-tie line, on-site substation, and switchyard would not contribute to electromagnetic field (EMF) levels ... beyond acceptable standards.52” Staff further concluded that worker and public exposure would be short term and consistent with comparable PG&E facilities, and that grounding and field reduction measures would minimize nuisance-shock potential. The same assessment concluded that transmission-line safety and nuisance impacts, including EMF-related considerations, would be less than significant with proposed conditions of certification. The proposed conditions are in compliance with CPUC General Order 131-E. The project does not include components that require compliance with CPUC General Order 131-E. Consequently, an assessment of EMF effects was not provided. Accordingly, EMF is not included in the Draft EIR. No revision to the Draft EIR is required in response to this comment.

Response to Comment P42-12

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

[52] California Energy Commission. 2026. Potentia-Viridi Battery Energy Storage System Staff Assessment (24-OPT-04). CEC-700-2026-001-SA. TN 268314. January 2026.

Response to Comment P42-13

As discussed in Section 1.4.1, *Lead Agency*, of the Draft EIR, the City of Berkeley is the lead agency for the project as defined by CEQA Guidelines Section 15367 because it holds the principal responsibility for approving the proposed project. The City of Berkeley Parks, Recreation, and Waterfront Department is proposing the project. Section 1.1.4, *Legal Authority*, explains that the approval of the project cannot be considered until the EIR has been certified by the Berkeley City Council. Consistent with CEQA Guidelines Section 15084, the draft EIR reflects the independent judgement of the City as lead agency. It is common for a government agency to propose a project and act as CEQA lead. Even in cases where the lead agency is not a project's applicant, the lead agency still must review the Draft EIR and take responsibility for its contents. CEQA requires that led agencies exercise independent judgement and maintain objectivity in CEQA documentation. No further response is required.

Response to Comment P42-14

Refer to Section 2.2.16, *Topical Response: Measure L*, for a discussion related to how the project would not conflict with Measure L. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P42-15

This is not correct. Under CEQA, the lead agency (in this case, the City of Berkeley) is the entity responsible for preparing and certifying the EIR and for making the project approval decision. CEQA Guidelines Section 15050 designates the lead agency as the public agency with the greatest responsibility for carrying out or approving a project. The Berkeley City Council, as the lead agency's decision-making body, is vested by law with the authority and responsibility to: (a) certify that the Final EIR has been completed in compliance with CEQA; (b) consider the environmental information presented in the Final EIR; and (c) decide whether to approve, modify, or reject the proposed project (CEQA Guidelines Sections 15090–15096). There is no provision in CEQA or the CEQA Guidelines for delegation of this decision-making authority to an impartial third party. No revision to the Draft EIR is warranted on this basis.

Response to Comment P42-16

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P42-17

All comments on the Draft EIR have been responded to and are included in their respective responses to comments. Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment P42-18

The City notes that this is precisely what CEQA requires, and the project's approval process is designed accordingly. Section 1.1.4, *Legal Authority* in Chapter 1, *Introduction* of the Draft EIR (page 1-3) states the following: "Adoption of the proposed project may not be considered until this EIR has first been considered by the decision makers and certified by the approving body, in this case the Berkeley City Council." Similarly, Section 1.5, *Environmental Review Process* in Chapter 1, *Introduction* of the Draft EIR (page 1-15, bullet number 5) describes the Final EIR certification process as a prerequisite to any project

approval decision, consistent with CEQA Guidelines Section 15090, which requires the lead agency to certify the Final EIR before approving the project.

The City Council will first consider whether to certify the Final EIR as a complete and adequate environmental document, and only after certification may it consider whether to approve the project itself. Though both actions could occur sequentially at the same meeting, these are distinct actions with distinct legal standards. Certification requires findings that the EIR has been completed in compliance with CEQA, was reviewed and considered by the decision-making body prior to project approval, and reflects the lead agency's independent judgment and analysis, pursuant to CEQA Guidelines Section 15090. By contrast, project approval requires findings including that significant environmental impacts have been avoided, mitigated, or are outweighed by project benefits, pursuant to CEQA Guidelines Sections 15091 and 15093. The Draft EIR describes this sequence accurately, and the City's approval process will follow it (see Section 1.5, *Environmental Review Process* in Chapter 1, *Introduction* of the Draft EIR). No revision to the Draft EIR is warranted on this basis.

Response to Comment P42-19

The City has added the commenter's contact information to the project notification list and will provide future notices via email in accordance with CEQA and City procedures. No further response is required.

Response to Comment P42-20

This comment has been received. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Berkeley, CA 94704

BERKELEY FERRY PROJECT DRAFT EIR COMMENTS

THE BERKELEY FERRY PROJECT VIOLATES BERKELEY'S 1986 MEASURE 'L' –THE BERKELEY PUBLIC PARKS AND OPEN SPACE PRESERVATION ORDINANCE

By pursuing the massive Berkeley Ferry Project, the City is clearly violating the 1986 Citizens' Initiative Measure 'L'.

Measure 'L' - The Berkeley Parks and Open Space Preservation Ordinance, was adopted by Berkeley voters in November 1986 by a vote of 21,946 to 18,854. It is codified in BMC Chapter 6.42.

Measure 'L' states, "Shall an ordinance be adopted to require voter approval of non-recreational uses of parks or open space and require acquisition of open space controlled or leased by the City if acquisition is the only means of preserving the open space?"

P43-1

I was one of the signers of the ballot argument in favor of Measure 'L'.

Measure 'L' is still in effect today.

Measure 'L' thus requires approval by Berkeley's voters before any aspect of the Berkeley Ferry Project can be built.

In 1996, the City of Berkeley wanted to place temporary buildings on Civic Center (Provo) Park for various city bureaucratic functions while the Civic Center building on Milvia Street went through extensive renovations and a seismic upgrade. Because of Measure 'L', the City had to put a measure on the November 1996 ballot - Measure X - to get the public's approval.

The last of the "where as's" at the start of the Full Text of Measure X" states,

"Where as Measure 'L', BMC Chapter 6.42 requires voter approval to use public parks for purposes other than park or open space uses,"

"Shall the MLK Jr. Civic Center Park be used for a period to expire no later than June 30, 2001 for the purpose of temporarily housing City of Berkeley offices in portable buildings, as well as associated site preparation and maintenance activities in order to allow the abatement of seismic hazards at the site of the MLK Jr. Civic Center Building at 2180 Milvia Street if the Council finds after a public hearing that there is no other feasible alternative to relocate City employees during such seismic work?"

Measure X failed 17,476 to 23,151. The City could not install temporary offices in Civic Center Park, and thus leased commercial property around downtown instead.

Thus, Measure 'L' requires voter approval before any park or open space under the city's control can be used for other purposes

Measure 'L' is still in effect, & covers all City parks & city owned or controlled open space.

Councilmember Terry Taplin has cited Measure 'L' in insisting that the City preserve the open space at the former Lawn Bowling Club site.

Last year, Councilmember Cecilia Lunaparra cited Measure 'L' to insist that the City preserve the public open space at the Dwight - Telegraph triangle.

And in recent years, former Councilmember Kate Harrison cited Measure 'L' to designate the open space around old City Hall as a city park, so as to give it more protection.

P43-1

THE FERRY PROJECT IS CLEARLY FOR TRANSPORTATION, NOT RECREATION

The Ferry Project would include a breakwater, a 1200 square foot gangway, 750 square foot gates and landings, and a 5700 square foot ferry charging/boarding float.

The official description of the Project specifically states that it is for transportation, to take commuters to and from San Francisco.

REMOVING THE EXISTING LANDMARKED PIER WOULD VIOLATE MEASURE 'L'.

The landmarked and iconic Berkeley Pier was for many years used for open space and recreation. The Project would replace it with a much smaller Pier that would not be conducive the recreation.

It's not the public's fault that the Pier has been deemed unsafe to use for the last eleven years. By keeping the Pier closed and refusing to repair it for the last 11 years, the City has been violating Measure 'L'.

Demolishing the existing pier and replacing it with a smaller and more officious pier should first require approval of the voters as per Measure 'L'.

All of the SF Bay that is within Berkeley's City Limits is as much City of Berkeley recreational open space as is the Aquatic Park Lagoon.

Any development on the SF Bay that is within Berkeley's City Limits is no less the destruction of recreational open space for non-recreational uses than would the dredging of the Aquatic Park Lagoon and constructing office buildings where the Lagoon once was.

The proposed Ferry Complex's gates, and landing, the gangway, and the ferry charging and boarding float would all destroy the incomparable view of the SF Bay looking out toward the Golden Gate that generations of Berkeley residents have long enjoyed.

The San Francisco Bay within Berkeley's City Limits is Berkeley public open space. It has been enjoyed by tens of thousands of Berkeley residents for over 100 years as passive recreation, and by many other people for recreational boating.

Transportation is not recreation. As the City's own official description of the Ferry Project clearly states, the purpose of the Project is Transportation.

Construction is construction, whether on land or water.

Measure 'L' should not be seen as an inconvenience, but as an opportunity to allow the public to vote on proposed changes to existing city parks and open space.

In 1996, city officials were not dismissive of Measure 'L' even though it would slow down the seismic upgrade of the 2180 Milvia Civic Center Building. They put approval of the temporary use of Civic Center Park for city offices on the ballot, because honoring the law and the will of the voters was the right thing to do. P43-1

Today in 2026, city officials should not be dismissive of Measure 'L' just because its implementation could delay construction of the Berkeley Ferry Project Complex.

If city officials could delay the seismic upgrade of the City of Berkeley offices at 2180 Milvia in 1996 to honor the will of the voters, city officials can certainly delay the construction of the Berkeley Ferry Project, to honor the will of the voters.

If city officials believe that taking away incomparable open space at the Waterfront is acceptable so as to construct the Ferry Project Complex, it can certainly make that argument in the ballot handbook and in campaign literature.

THE DRAFT EIR FAILS TO IDENTIFY AND ANALYZE REASONABLE ALTERNATIVE TO THE FERRY PROJECT

The DEIR should give equal weight to repairing and renovating the existing Pier so that the public and again enjoy walking on it and enjoying the views of the SF Bay from the Pier.

Equal weight should be given to a No Project Alternative. Why not continue to have ferry service to San Francisco from where the commuter ferries have been running the past several years.

What is the compelling reason for this massive new Project?
Serious considering and acknowledgement must be given to the rapid and on-going increase in Berkeley's population. Over ten thousand housing units have been constructed in the last several

years, and over ten thousand additional housing units are in the pipe line. The University is growing at an unprecedented pace, with new high rise dorms being approved on a regular basis.

Berkeley is now likely the most densely populated city in California. We need to maximize open space at the waterfront, and throughout Berkeley. Existing parking spaces at the waterfront should be converted to green open space.

We need to preserve all existing views from the waterfront of the SF Bay, the Golden Gate, San Francisco and of Marin County.

EMF STUDY NEED OF FERRY PROJECT CHARGING STATION

The EIR needs to analyze the EMF's that would be emitted from the Ferry Project Charging Station. With the proliferation of cell phones, 5G cell towers, and telecom satellites, we are being exposed to higher and higher levels of radiation in our day to day lives. Studies of the dangers of EMF radiation exposure can easily be found on the internet.

An independent analysis of the EMF radiation level from the proposed Ferry Project Charging Station is needed to determine is the cumulative radiation from the Charging Station and all other telecom radiation sources would pose an unacceptable health risk to Berkeley residents.

PEOPLE SHOULD BE ABLE TO USE THE FERRY BY PAYING WITH CASH OR CREDIT CARD AT TIME OF BOARDING

Not everyone is high tech. Not everyone has a smart phone. People should be able to use the ferry by paying with cash or a credit card at time of boarding. P43-1

Otherwise, the City would be discriminating against those who choose not to have smart phones, or cannot afford smart phone, or who are made ill by the EMF radiation from smart phones.

PROJECT APPROVAL PROCESS HAS BUILT-IN BIAS

The Project applicant and project decision maker are both the City of Berkeley.

The Draft EIR comments need to be responded to by an impartial third party.
A determination as to whether or not Measure 'L' requires that the Ferry Project first be submitted to the voters for approval needs to be made by an impartial third party.

And the determination as to whether or not the Project should be approved should be made by an impartial third party.

DO NOT RUSH APPROVAL OF THE EIR OR OF THE PROJECT

Do not rush approval of the EIR or of the Project

A Revised Draft EIR should be prepared based on the comments received for the Draft EIR.

Any Final EIR should be approved separately from consideration of whether the Project itself should be approved.

Please put me on the notification list for all documents and meetings concerning the Ferry Project.

P43-1

Please confirm receipt of these comments.

Subject: bring the ferry to Berkeley!

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

I'm excited to ride the ferry! I bike to the marina often and would love to have a ferry to SF there. Reasons I'm excited about a berkeley ferry terminal

- more car free transit options to SF
- taking ferries is beautiful and fun. I always suggest that guests take the jack london ferry
- connect people to the waterfront
- rebuild the pier for fishing

P44-1

I don't drive, but maybe people's concerns about parking could be allayed if we told them parking would be paid and the funds used to improve the marina park facilities. I know how much people like it when you propose paid parking ;)

P44-2

There's also the 51 bus and nice bike paths to the park.

P44-3

Response to Comment P44-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P44-2

The comment does not identify a deficiency in the analysis presented in the Draft EIR but rather expresses an opinion regarding parking management and funding strategies. Refer to Section 2.2.20, *Topical Response: Parking,* for further discussion of parking evaluation and management strategies proposed by the City. Refer also to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, which explains that funding strategies such as those suggested by the comment represent policy considerations outside the scope of CEQA review. The comment is noted and has been included in the project record considered by City decision makers. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P44-3

The proposed project would include infrastructure improvements for both the existing AC Transit Route 51B and bicycle use. Refer to pages 2-12 through 2-18 of the Draft EIR.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

TO: Parks, Recreation & Waterfront Department

RE: Berkeley Pier-Ferry Project

I write to express opposition to the Berkeley Ferry project because this project would serve a very few commuters and tourists, compared to BART and buses, at a very significant environmental cost. P45-1

Additionally, it disregards the city's longtime commitment to use the Bay Shoreline "exclusively for public recreation and related public use." The mere designation of P45-2

Adding a ferry, even if electric, to the Bay will add noise and pollution to the Bay. P45-3

It will replace open space with parking for hundreds of cars, further degrading an area intended for local recreation. P45-4

It will be extremely costly without away to recover the investment which, as above, will serve a very small portion of Bay Area residents. P45-5

The city of Berkeley needs to find a less destructive means of raising money to rehabilitate our pier. P45-6

Sincerely,
Charlene M. Woodcock

Response to Comment P45-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P45-2

Draft EIR Section 3.9, *Land Use and Planning*, analyzes the project for conflicts with applicable land use plans and policies and demonstrates that the project would be consistent with plans and policies intended to preserve and expand recreational access at the Waterfront (see Impact LU-2). With respect to the comment's concerns about project-related parking changes, refer to Section 2.2.20, *Topical Response: Parking*.

The analyses and significance conclusions presented throughout the Draft EIR remain valid as written. No further response or revisions are required.

Response to Comment P45-3

Operational impacts to wildlife from noise and to water quality and sensitive natural communities are discussed in Draft EIR Section 3.3.4 under Impacts BIO-1, BIO-2, and BIO-3 (pages 3.3-52 through 3.3-63) and are determined to be less than significant with implementation of Mitigation Measures BIO-1, BIO-2, BIO-3, HYD-1, and AES-1. Cumulative impacts are discussed in Section 3.3.5 and were determined to be less than significant. No Draft EIR changes are necessary in response to this comment.

Response to Comment P45-4

With respect to project-related parking changes, refer to Section 2.2.20, *Topical Response: Parking*.

The analyses and significance conclusions presented throughout the Draft EIR remain valid as written. No further response or revisions are required.

Response to Comment P45-5

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P45-6

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. Nevertheless this comment has been included in the project record considered by City decision makers. No further response or revisions to the EIR are required.

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Ferry opposition

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza McNulty,

I write to express my strong opposition to the proposed Ferry/Pier project, as outlined in the Draft Environmental Impact Report (DEIR). The DEIR is fundamentally deficient and fails to adequately address critical environmental and community impacts. P46-1 P46-2

The project's environmental costs are substantial and unacceptable. The removal of approximately 14 trees at Seawall Drive for parking infrastructure, combined with the loss of 1,200 feet of the historic Berkeley fishing pier, represents irreversible damage to our waterfront ecosystem. The pier's tip currently serves as a crucial high-tide roosting habitat for shorebirds—a function that the DEIR inadequately evaluates. P46-3 P46-4

Additionally, ferries operating at 30-minute intervals will generate wake activity across a 650-foot swathe, unavoidably stirring up sediment and displacing waterbirds throughout the area. The cumulative environmental disruption contradicts any claimed benefits. P46-5 P46-6

On the community level, converting currently free parking at the marina into a fee-based system will burden local users who depend on this public resource. This shifts costs onto residents while creating traffic and congestion challenges. P46-7

For a $170 million investment, the project fails to justify its environmental cost or community benefit. I urge you to reject this proposal and return to the drawing board with a genuinely responsible plan. P46-8

Thank you,
Jennifer Chan
1228 Dwight Way,
Berkeley, CA 94702

Letter P46

Commenter: Jennifer Chan

Date: April 16, 2026

Response to Comment P46-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P46-2

Refer to Section 2.2.5, *Topical Response: CEQA Adequacy,* for a discussion about the Draft EIR's adequacy. Please also refer to subsequent Response to Comments for responses to the specific issues raised in the comment letter. No further response is required.

Response to Comment P46-3

The Draft EIR discusses tree removal and replacement under Impact BIO-5 in Section 3.3. (page 3.3-65) and concludes that impacts to protected trees would be less than significant. Impacts to wildlife, sensitive natural communities, and water quality due to removal of the existing pier are discussed in Draft EIR Section 3.3.4 under Impacts BIO-1, BIO-2, and BIO-3 (pages 3.3-43 through 3.3-63) and were determined to be less than significant with implementation of Mitigation Measures BIO-1, BIO-2, BIO-3, HYD-1, and AES-1. No Draft EIR changes are necessary in response to this comment.

Response to Comment P46-4

As discussed under Response to Comment O7-17, most roosting waterbird species are not considered special-status under CEQA, because they are common, widespread, and not listed as threatened, endangered, or otherwise protected under federal or State endangered species acts or CDFW special-status criteria. Therefore, such species are not evaluated individually as special-status species in the EIR. In response to this comment, the following clarification text revisions have been made to the Draft EIR:

Section 3.3.2 page 3.3-7:

> The California Essential Habitat Connectivity Project, commissioned by the California Department of Transportation (Caltrans) and CDFW, identifies "Natural Landscape Blocks" which support native biodiversity and the "Essential Connectivity Areas" which link them.[35]
>
> The Pacific Flyway is the westernmost of North America's four major migratory corridors. Each year millions of birds travel the Pacific Flyway between northern breeding areas and southern wintering grounds, relying on a chain of coastal and inland stopovers for feeding and rest. This migration corridor extends from Alaska through western North America to Central and South America, and is used by waterfowl, shorebirds, raptors, and passerines. The San Francisco Bay is one of the most important stopovers along the Pacific Flyway, as the largest estuary on the West Coast.
>
> [35.] Spencer, W.D., P. Beier, K. Penrod, K. Winters, C. Paulman, H. Rustigian-Romsos, J. Strittholt, M. Parisi, and A. Pettler. 2010. California Essential Habitat Connectivity Project: A Strategy for Conserving a Connected California. Prepared for California Department of Transportation, California Department of Fish and Game, and Federal Highways Administration.

Section 3.3.2 page 3.3-7:

> Most of the project site is developed and urbanized and does not provide for wildlife movement corridors. The project site is not located within an Essential Connectivity Area or Natural Landscape Block.[36] However, the project site is located within Baylands adjacent to marine foraging habitat, and trees within the project site may provide roosting habitat for migratory birds. The old pier and pilings also provide roosting and migration staging habitat for migratory waterfowl, seabirds, and shorebirds.
>
> [36.] CDFW. 2024. Biogeographic Information and Observation System (BIOS). Available: www.wildlife.ca.gov/data/BIOS (accessed September 2024).

Section 3.3.4 page 3.3-63:

> Operation of the project would include vehicles, bicycles, and pedestrians using University Avenue, Seawall Drive, and parking lots. These uses of the project site would be consistent with existing recreation and commercial uses. No new barriers or disturbances to terrestrial wildlife movement are proposed. Roosting birds and birds staging during migration may be temporarily displaced by removal of portions of the existing pier deck and pilings; however, the old wooden pilings at the west end where the majority of roosting birds occur would remain in place. Additionally, there are other roosting sites available in the project vicinity and wider bay, including a platform that was specifically constructed for cormorants on the new eastern span of the Bay Bridge. Therefore, there would be no operational impact related to terrestrial wildlife movement.

These clarification text changes do not change the Draft EIR significance conclusions in Section 3.3, *Biological Resources*.

Response to Comment P46-5

See Response to Comment O4-8 for discussion of effects of ferry operation, including wakes, on waterbirds and Response to Comment A3-20 for discussion of ferry wake with regard to sedimentation and water quality. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P46-6

This comment expresses an opinion on the merits of the project. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P46-7

Refer to Section 2.2.20, *Topical Response: Parking.* As discussed therein, parking fees and other parking management measures are policy considerations rather than environmental impacts under CEQA. This comment is noted and has been included in the project record considered by City decision makers. The analyses presented in the Draft EIR remain valid as written, and no revisions to the Draft EIR are required.

Response to Comment P46-8

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Subject: Comments on Berkeley Water Transportation Pier Ferry Project draft EIR

Dear Ms. McNulty:

The following are additional comments on the EIR which reflect my reading of the Final Program EIR by the Water Transit Authority "Expansion of Ferry Transit Service in the San Francisco Bay Area." That EIR was completed in June of 2003. While a programmatic FEIR prepared twenty-three years ago *may* still be used for preparation of a draft EIR for one of the projects contemplated in that document, it is essential to update the parts of that document that may no longer be accurate. The subject EIR relies on that FEIR for its consideration of environmental impacts, particularly operational impacts, but does not update the analysis to address the many significant differences between the project described in that document and the current proposal. Where those changes may constitute "changed circumstances" under the California Environmental Quality Act, or increase cumulative impacts, the current EIR is required to analyze and disclose those changes and impacts, and include feasible mitigation measures. Where there are conflicts between that adopted document and the current proposal, those conflicts may rise to the level of significant impacts. The current document fails to do that.

P47-1
P47-2
P47-3
P47-4

CHANGED PROJECT DESCRIPTION

The WTA Final EIR contemplates a very different project for expanding service to Berkeley, and includes mitigation measures that the current document has ignored. In describing the regional system, the Final EIR makes it clear that only limited dredging will be required,

P47-5
P47-6

and only for the Rodeo/Hercules service. The current proposal includes a proposal for up to 400,000 cubic yards of dredging. The rationale behind the Final EIR proposal can be found in this language from page 2-2:

> ...only the Hercules/Rodeo terminal would require additional dredging for implementation. **All other terminal sites** proposed for expanded ferry service **are within existing ports or marinas**.

The FEIR clearly contemplated a terminal site in Berkeley that would not require dredging. This language is included under Impact D-1: "Ferries have relatively low draft requirements (approximately 7 feet) and would not be deeper than those at existing marinas and ports." The associated mitigation measure D-21, ignored in the draft EIR states "**Dredging shall be minimized**." Additional information about the rationale for concluding that there would be little or no dredging required for initiating Berkeley ferry service can be found on page 2-6, where it indicates that the vessels that would be used would be "relatively shallow draft." Exhibits in the FEIR confirm that the programmatic document did not contemplate an open water site that would require massive dredging. Figure 5.1.1 and the related Table 5.1.5 conclude that a Berkeley marina terminal would only require 13,260 cubic yards of construction dredging—not the 400,000 cubic yards in the current draft EIR. P47-6

This is particularly relevant to the current proposal, which is fundamentally different from that contemplated in the 2003 FEIR, and that considered in the existing Berkeley Marina Master Plan, dated June 1, 2003, which also contemplated ferry service only inside the marina. That can be seen in Principle 3, which establishes a principle to "Upgrade the Ferry Pier to comply with seismic regulations." It is also relevant to the Bay Plan Recreation Policy 9, adopted in September 2006. At that time—and still—the adopted plans for ferry expansion and the adopted Marina Plan anticipated a ferry expansion staged out of the marina. As noted in my first letter, the current proposal is inconsistent with those adopted plans and clearly falls under the changed circumstances provisions of CEQA because it entails a different location that would require extensive dredging. Yet no discussion of those changes can be found in the draft EIR, and the discussion of the environmental effects of dredging is brief and conclusory. That issue will be discussed below. P47-7

It may be that the type of equipment currently contemplated for a new Berkeley service has also changed and that a deeper channel and berthing areas are required for that different equipment. But again, that would be a changed circumstance, limiting the degree to which the 2003 FEIR can be relied upon. The 2003 FEIR had an extensive discussion of ferry wakes, or wake wash in Section 3.3. The current draft EIR does not revisit that discussion and concludes that the analysis is still valid with the deeper draft vessels now proposed. P47-8

IMPACTS OF CONCERN WITH CHANGED CIRCUMSTANCES

Since the adoption of the FEIR in 2003, there are changes in the sensitivity of the marine environment that might be affected by a new service and substantial dredging. The FEIR concluded that whale strikes were unlikely but would be significant if they occurred. But whale visits to San Francisco Bay have become much more frequent, with clear evidence that whales are feeding in the Bay. No consideration of this as a changed circumstance is included in the draft EIR. P47-9

The longfin smelt was listed as endangered by the State of California in 2009, and as of August 29, 2024, is also listed under the Federal Endangered Species Act. Smelt can be entrained and killed in dredging operations. Both construction and operation of a ferry terminal might affect this species. P47-10

While the Green sturgeon was listed as endangered, and discussed in the program FEIR, additional research has been completed and NOAA formally adopted "take" provision rules for the species. Dredging may reduce benthic habitat value and operations may have greater impacts than previously disclosed in the program FEIR. P47-11

The increased presence of whales feeding in San Francisco Bay is yet another area where the changed circumstances warrant discussion in the draft EIR. Biologists are well aware of both whales feeding in the bay, and increasing deaths due to vessel strikes. Press media has reported this concern, for example
https://www.nytimes.com/2026/04/13/climate/gray-whales-san-francisco-bay.html

and the April 15, 2026 San Francisco Chronicle. Whale strikes are identified as a significant impact in the 2023 FEIR, but considered rare—a conclusion no longer tenable. Yet the current draft EIR makes no effort to analyze the impacts. P47-12

RECREATIONAL IMPACTS

As noted in my initial letter, Berkeley dismisses recreational impacts, concluding without providing substantial evidence that a ferry project would be beneficial to recreation. In doing so, the city ignores the concerns about impacts on parking, largely ignoring any quantitative effort to demonstrate compliance with Bay Plan Recreational Policy 9. The city's claim that parking analysis is not required flies in the face of impacts and mitigation measures contained in the program FEIR that they are relying on. I would note that the relocation of the ferry site from within the marina and the use of parts of the bay filled to create recreational uses and supporting parking make this impact much more significant than considered in 2003. The city also ignores the enactment of the Water Trail Act, enacted in 2005:
https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=200520060AB1296
That act establishes legislative policy that: " Water-oriented recreational uses of the San Francisco Bay... are of great benefit to the public welfare of the San Francisco Bay Area." Commuter ferries are not among the listed water-oriented uses. Berkeley has obtained grants through the Water Trail program but fails to use the standards of P47-13 P47-14 P47-15

that act for evaluation of recreational impacts. The FEIR recognizes the potential for recreational impacts and includes a mitigation provision to prevent significant impacts. P47-15

The Final EIR lists Impact LU-4 on page 3.7-16, recognizing that adverse impacts to shoreline access could occur. It establishes mitigation LU-4.1 that includes the phrase that incorporating public access at the next stage of planning "...may include trails, **parking set aside for shoreline users**, viewpoints, disabled access, etc." That Final EIR also establishes a very different mode split for access to the terminal, estimating that on an average day 24 would walk, 1789 would drive, and 344 would take transit. (Table 3.12.12) Table 3.12.13 forecasts a demand for at least 510 parking spaces to meet the estimated ridership. The current EIR simply casts aside all previous analyses of mode split without explanation, as well as the mitigation responsibilities established in the 2003 FEIR. P47-16

The draft EIR fails to follow up with a mitigation plan that implements the standard in the FEIR in a manner that provides full disclosure and allows public review of the sufficiency. Indeed, it is impossible to generate such a plan without developing an adequate baseline of existing recreational use and considering latent use and regional population growth. P47-17

ENERGY EFFICIENCY AND VMT REDUCTION

The 2003 FEIR discusses energy efficiency, as required by Public Resources Code Section 21100(b)(3). The analysis in that document presents energy use by transit modes using a metric of BTU's per passenger mile. That analysis showed that ferries use nearly 10 times as much energy as buses, and about 90 times as much energy as BART. The draft EIR includes no discussion of energy efficiency and assumes that all ferry passengers would be drivers at present, rather than considering the number that might be diverted from current bus and BART crossings. That despite the dedicated marketing efforts of WETA for exactly that purpose. Energy is of sufficient import to merit an appendix, F, in the CEQA Guidelines. Despite those guidelines and my scoping comments on the need for to update the efficiency analysis, the EIR fails to address this issue or include a CO2 emission comparison. This analysis is clearly inadequate. Among the many policies elided from the draft EIR is **Policy T-9 Ferry Service** from the General Plan: P47-18 P47-19 P47-20

> B. Prioritize transit, pedestrian, and bicycle public expenditures over expenditures of public funds for ferry service, and **ensure that new ferry service will not result in a reduction in public subsidies for existing transit services.**

FEASIBIILTY

Feasibility is an important term of art under CEQA, under BCDC's requirements for providing maximum feasible public access, and for consideration under the Clean Water Act. Yet a discussion of even the current cost of the project is absent from the current draft EIR. In my previous letter, I attached a copy of the cost estimates prepared by city P47-21

consultants, prepared on 7/11/2025, that showed the estimate for the project, not including ferries, was $131,133,445. The previous cost estimate for ferries, not updated to include the current costs, was $38 million, leaving a total cost of about $170 million. It appears that the City of Berkeley's share of that costs would be about $32 million.

P47-21

No sources for Berkeley's funding have been identified. Significantly, Berkeley's marina fund has struggled with a structural deficit, in part because boating revenues instead of Berkeley's parks tax have been used to maintain the waterfront parks. The most recent estimate of the deferred maintenance at the waterfront can be found in the recent Auditor's report. On page 15 of that report, the size of that problem was noted: "unfunded capital infrastructure needs at the waterfront still exceed an estimated $163 million."

P47-22

Berkeley relies on WETA's Berkeley Ferry Service Business Plan in numerous places in the draft EIR, but then avoids the discussion of local funding in that plan which concludes:

> One option would include a Transient Occupancy Tax surcharge on hotel night stays in the marina that would reinvest revenue in the Berkeley waterfront and support maintenance of the pier and shared parking facilities.

With revenues from the DoubleTree Hotel already reduced, and the hospitality industry continuing to contract, with bankruptcy of yet another Berkeley hotel reported in the news on April 16, 2026, the staff who prepared this EIR hardly need to be reminded of the infeasibility of such an approach.

P47-23

The current approach, avoiding any discussion of feasibility or costs, is a departure from the FEIR. That document included in Table 2.2 estimates of the capital cost per rider ($4) and the annual operating subsidy per rider ($5) to compare the feasibility of reducing VMT by improving ferry service as compared to rail and bus alternatives. WETA no longer reports either the capital cost or the operating subsidy per rider, and no discussion of feasibility of any depth is included in the draft EIR. Yet current operational subsidies for are more than $30 per passenger for a round trip and WETA documents have made it clear that the available subsidies will be exhausted to support the existing system..

P47-24

While many of the recreational activities that currently occur at the waterfront do not generate revenue into the marina fund, they have substantial economic value. Boating activities directly contribute about 2/3 of the funding for the marina fund. Other visitors from outside Berkeley visit the waterfront as part of other activities such as dining that indirectly generate revenue. If parking for those users is usurped by commuters, those activities would be reduced. If Berkeley leases the Seawall lot to WETA but does not collect revenue for that lease, there will be no opportunity to use that site for uses that might generate revenue. Further, if managing parking costs more than parking fees generate, or Berkeley agrees to devote some of the TOT funds from the marina to subsidies, a measure proposed by their consultants, the structural deficit in the marina fund will be increased.

P47-25

To put the cost of the proposed terminal into context, if there are an average of 955 occupied seats on the new service, the capital cost per seat is $178,000. At a 5% discounting rate, that is $8900 a year, or $35.60 a day as an opportunity cost. Well above the $4 in the programmatic document. The lower annual operating subsidy cost estimate by WETA is $9 million a year. Again using 955 seats, that is about $9,425 per seat of subsidy required, or $37.70 per seat per day. This does not include the cost to manage parking in an attempt to preserve some recreational use. Of course, if less than 955 passengers use the service the impacts on recreation will go down, but the subsidy required will go up proportionately. With the most recent East Bay terminal at Richmond constructed at a cost of $20 million, the need for analysis of alternatives becomes compelling. P47-26

No sources for city capital costs, WETA capital costs, or annual operating subsidies are identified—yet the EIR insists that only this project is feasible. Without analysis of the economic value of recreational uses that might be lost and might be improved on the land instead of a commuter terminal, this is a fatal flaw. Conclusions in an EIR must be supported by substantial evidence, and by analysis that links the facts to the conclusion. But in this EIR, feasibility does not warrant even a discussion. That is inadequate to support consideration of alternatives or answer questions of maximum feasible public access under BCDC's law. P47-27

Very truly yours,

Jim McGrath
Save Berkeley Pier

Letter P47

Commenter: Jim McGrath

Date: April 17, 2026

Response to Comment P47-1 to P47-4

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Berkeley Water Transportation Pier Ferry Project Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Please refer to Response to Comments P47-8 to P47-12 for responses to specific comments related to perceived changes in circumstances, and how the Draft EIR appropriately addresses these potential impacts. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P47-5

The 2003 WETA EIR was a programmatic EIR and did not result in the approval of a specific site for a ferry terminal in Berkeley. In fact, the 2003 WETA EIR included the following text on page 4 of the Errata for the Final Program Environmental Impact Report and Public Comments and Responses: "A future site specific EIR will need to evaluate the Berkeley route(s) and associated terminal. The project level EIR will consider those issues that could not be fully addressed at the general programmatic level, including potential ridership and catchment area and specific project impacts." The City has prepared a project-level Draft Environmental Impact Report based on their planning efforts. Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion of how the City uses the 2003 WETA EIR.

The analysis, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written, and no revisions are required.

Response to Comment P47-6

As described in Draft EIR Section 2.6, Construction Details (page 2-28), 400,000 cubic yards of dredge volume represents the maximum potential dredging extent and is a conservative upper bound that may be reduced as final design progresses. The project would primarily occur within the existing 100-foot-wide USACE federal navigation channel that parallels the closed pier. Dredging impacts are discussed in Draft EIR Section 3.3.4 under Impacts BIO-1 and BIO-3 (pages 3.3-46 through 3.3-51 and pages 3.3-60 through 3.3-61), respectively, and were determined to be less than significant with implementation of mitigation (see Mitigation Measures BIO-1[a], BIO-1[d], BIO-1[e], BIO-3, and HYD-1). See also Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for discussion of how analysis of project dredging impacts has been addressed independently in the Draft EIR. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P47-7

Refer to Response to Comment P47-1 through P47-6 regarding the 2003 WETA EIR.

Regarding the comment that the Berkeley Marina Master Plan "contemplated ferry service only inside the marina", this is not an accurate statement. Refer to Response to Comment P36-9, which explains that there is no meaningful mention of a ferry in the Berkeley Marina Master Plan and that it appropriately considered consistency with Berkeley Marina Master Plan Principle 3 in the Draft EIR.

Regarding Bay Plan Policy 9, refer to Response to Comment O10-116, which describes that the Draft EIR includes an analysis of consistency with Bay Plan Recreation Policy 9.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion about why the In-Marina Ferry Terminal Alternative was rejected from further evaluation by the City.

The City has found no inconsistencies with adopted plans and the City has prepared a project-level Draft EIR that addresses the environmental impacts from the proposed project that the City is proposing.

Response to Comment P47-8

The type of ferry equipment and volume of dredging proposed for project site may have changed since the 2003 WETA EIR; however, this does not represent a changed circumstance under CEQA. Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR, and that the Draft EIR provides a project-specific analyses regarding the potential impacts from dredging.

The 2003 WETA EIR evaluated a range of vessel types, operational speeds, and wake characteristics for regional ferry service, and its analysis was intentionally programmatic to accommodate future vessel design improvements, including variations in draft, propulsion systems, and hull form. The current vessels proposed for service to/from the project site fall within the performance envelope and operational assumptions evaluated in the 2003 WETA EIR, including wake generation, maneuvering behavior, and transit speeds. The Draft EIR discusses the impacts of ferry wake in Section 3.8.4. Impacts Analysis (on page 3.8-33) and concludes that water-side operational impacts related to water quality would be less than significant. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P47-9

As described in Draft EIR Section 3.3.4 (Impact BIO-1, pages 3.3-52 to -54), the analysis acknowledges that vessel strikes are a known source of mortality for whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay transit corridor, which includes substantial existing commercial, recreational, and ferry vessel operational levels. See Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P47-10

Impacts to longfin smelt are discussed in Draft EIR Section 3.3.4. The Draft EIR analysis and significance conclusion of less than significant impacts with implementation of mitigation (Mitigation Measure HYD-1) presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-46 remains valid. See Response to Comment A3-28 for discussion of and text clarification change with regard to dredge impacts to special status fish species. No additional changes to the Draft EIR are necessary in response to this comment.

Response to Comment P47-11

The comment does not provide the research cited. Impacts to green sturgeon are discussed in Draft EIR Section 3.3.4. The Draft EIR analysis and significance conclusion of less than significant impacts to water quality with implementation of mitigation (Mitigation Measure HYD-1) under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-46 remains valid. See also Response to Comment A3-28 for discussion regarding minimization of impacts to special-status fish species during construction dredging and Response to Comment O5-35 for further discussion of dredge impacts to special status fish species and benthic communities. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P47-12

As described in Draft EIR Section 3.3.4 under Impact BIO-1 (pages 3.3-52 to -54), the analysis acknowledges that vessel strikes are a known source of mortality for whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay transit corridor, which includes substantial commercial, recreational, and ferry vessel operational levels. See Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P47-13

With respect to the comment's claim that the City fails to provide substantial evidence that the proposed ferry would be beneficial to recreation, CEQA does not require an EIR to demonstrate that a project is affirmatively beneficial to recreation. Rather, CEQA requires evaluation of whether a project would result in significant adverse physical environmental impacts related to recreational facilities. Accordingly, Draft EIR Section 3.11, *Recreation*, evaluates recreation based on the applicable CEQA Guidelines Appendix G thresholds of significance, specifically analyzing whether the proposed project would (1) increase the use of existing recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated, or (2) require the construction or expansion of recreational facilities that might result in adverse physical environmental effects (see Section 3.11.4, *Impacts Analysis*). Based on the analysis therein, the Draft EIR concludes that the project would enhance recreational activities and would not result in substantial physical deterioration of recreational facilities (see Impact REC-1). Regarding concerns about parking, as it relates to consistency with Bay Plan Policy 9, refer to Section 2.2.20, *Topical Response: Parking,* for a detailed discussion related to how parking is considered consistent with CEQA.

The analysis, significance conclusions, and mitigation measures presented within Section 3.9, *Land Use and Planning*, and related sections in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P47-14

When referring to an increase in significant impacts, the comment is referring to the impacts compared to what was provided in the 2003 WETA EIR. However, the 2003 WETA EIR is a programmatic document that did not include a project-level analysis for a terminal at the Berkeley Waterfront. Page 2-2 of the WETA EIR states the following: "While the IOP does not represent a precisely fixed set of routes and terminal sites, the Proposed Project is based on the anticipated routes and terminals that would result from implementation of the IOP. The routes, terminals, and frequency of service (headways) associated with the Proposed Project are listed in Table 2.1. The routes and terminals are shown on Figure 2.1. Further site-specific studies and design would be necessary prior to IOP implementation to determine actual terminal sites and routes." The suggestion that the 2003 WETA EIR proposed a terminal within the marina is not accurate and the 2003 WETA EIR specifically identifies that additional studies will be needed to determine the actual terminal site. This Draft EIR provides that project-level analysis for a terminal site in the Berkeley Waterfront.

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The comment does not identify a deficiency in the Draft EIR's environmental analysis or alternatives evaluation. Therefore, no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P47-15

Refer to Response to Comments A3-57 and A3-58, which identify text changes to the Draft EIR identifying that the McAteer-Petris Act includes the San Francisco Bay Area Water Trail, which includes the South Sailing Basin and Marina as designated sites. The Water Trail Act is noted.

With regard to commuter ferries not included in the Bay Area Water Trail listed water-oriented uses, that is correct, the list is inclusive of **non-motorized** (emphasis added) small boaters and associated

launching and landing sites. The comment is noted that the Water Trail Act Final EIR recognizes recreational impacts and identifies mitigation for that Project. The analysis of recreational impacts related to the Berkeley Water Transportation Pier Ferry Project is included within this Draft EIR in Section 3.11, *Recreation*. The Draft EIR acknowledges the Berkeley Waterfront as a heavily used recreational resource in Section 3.11.2, Environmental Setting, and evaluates whether the project would adversely affect these uses in Section 3.11.4. The analysis concludes that the project would maintain and enhance recreational opportunities and access (Impact REC 1). Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding existing recreational uses and analysis of impacts. No further response is necessary.

Response to Comment P47-16

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion related to how the 2003 WETA EIR is used as part of the Draft EIR.

Regarding the comment about the mode split assumptions from the 2003 WETA EIR, the City acknowledges that previous planning documents evaluated a range of assumptions regarding mode split. As project planning advanced, additional information became available and the Draft EIR relies on the most current information available during preparation of the environmental analysis. Refer to Section 2.2.27, *Topical Response: VMT,* for a detailed discussion of the mode split assumptions used in the Draft EIR.

Regarding the comment about mitigation responsibilities from the 2003 WETA EIR, refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P47-17

Refer to Section 2.2.17, *Topical Response: Mitigation Measure Requirements,* for a discussion about how the mitigation in the Draft EIR is compliant with CEQA requirements.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, for a discussion of the baseline used to assess recreational impacts, according to CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P47-18

With respect to the commenter's comparison of the energy efficiency of ferry service relative to buses and BART as analyzed in the 2003 WETA EIR, the comment concerns the relative merits of different transportation modes and the policy decision to provide ferry service in Berkeley. CEQA does not require an EIR to determine whether the proposed project is the most energy-efficient transportation option available. Rather, CEQA requires disclosure and evaluation of a project's environmental impacts. The City acknowledges the commenter's opinion regarding the comparative efficiency of various transit modes and has included the comment in the project record provided to City decision-makers for consideration. The City also notes that the energy comparisons cited by the commenter were developed as part of the 2003 WETA EIR, which evaluated a substantially different ferry program and did not analyze the electric ferry vessels proposed as part of the Berkeley Water Transportation Pier Ferry Project. For additional discussion regarding the proposed project's electric ferry operations and the relationship between the Draft EIR and the 2003 WETA EIR, please refer to Section 2.2.10, *Topical Response: Electric Ferry,* and Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*.

The comment that the Draft EIR does not evaluate energy efficiency is not correct. Draft EIR Section 3.6, *Greenhouse Gas Emissions and Energy*, evaluates energy consumption associated with both project

construction and operation and assesses the project's consistency with applicable energy conservation goals and policies (see Impact GHG-2, pages 3.6-44 through 3.6-48). The analysis concludes that the proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources. In addition, the analysis evaluates project greenhouse gas emissions associated with operation of the proposed ferry service and associated transportation improvements. Accordingly, the Draft EIR includes an energy analysis consistent with CEQA requirements.

With respect to the comment regarding diversion of riders from existing transit services, refer to Section 2.2.27, *Topical Response: VMT,* for a discussion of transit-to-transit mode shifts.

Accordingly, the Draft EIR includes analyses of both energy consumption and transportation-related VMT effects supported by substantial evidence and technical documentation. The analyses and conclusions presented in Draft EIR Sections 3.6, *Greenhouse Gas Emissions and Energy*, and 3.12, *Transportation*, remain valid as written. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P47-19

The CEQA significance thresholds for GHG emissions and energy consumption do not have a requirement for comparing efficiencies from one form of transit to another. The project as proposed is not anticipating replacing existing forms of transit but rather including an additional option to remove passenger vehicles from the roadways. The current bus and BART operations would continue with or without the project, and the implementation of the project would not require a reduction in trips of these alternate modes of transit. Therefore, the GHG emissions and energy consumption from buses and BART are assumed to continue consistent with what they are consuming today. The analysis of the project in isolation of a GHG emissions and energy efficiency comparisons with other forms of transit is accurate. Further, Draft EIR Alternatives (Section 5.9) discussed alternative projects such as increasing Bay Area Rapid Transit (BART) capacity and improving access to BART, both of which were alternatives that were considered but rejected as they did not meet the project objective of provision of all-electric ferry service between Berkeley and San Francisco. The analysis in the Draft EIR accurately analyzes GHG emissions and energy consumption with respect to CEQA and Bay Area Air District methodologies and thresholds. Therefore, additional analysis is not required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P47-20

This statement is not accurate. The Draft EIR considered consistency with Policy T-9, including Action B, as part of its analysis in Section 3.9, *Land Use and Planning* (see Table 3.9-3 in Impact LU#2, page 3.9-26).

As stated in the EIR, page 3.9-26, the project would build infrastructure to facilitate regular ferry service and would be supported by nearby AC Transit routes and bus stops, as well as existing and proposed bicycle and pedestrian paths to encourage visitors to reduce vehicle miles travelled. The project includes substantial transit improvements to AC Transit, and bicycle and pedestrian pathways including the Bay Trail.

As concluded in Draft EIR Section 3.9, *Land Use and Planning*, Impact LU-2 (pages 3.9-12 through 3.9-35), the proposed project would be generally consistent with the goals and policies identified in applicable plans; however, because the project would generate noise that even after mitigated would exceed thresholds established in the Berkeley Municipal Code, impacts would be significant and unavoidable (due to noise impacts).

Furthermore, to the extent that an inconsistency with a land use plan or policy would result in a physical environmental effect, such effects are evaluated throughout the Draft EIR, and mitigation measures are identified as appropriate. Therefore, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to this comment.

Response to Comment P47-21 to P47-24

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P47-25

The issues raised regarding marina revenues, parking revenues, lease payments, tourism-related spending, subsidy levels, and the fiscal management of the Marina Fund are primarily economic, financial, and policy considerations for City decision-makers. CEQA focuses on the disclosure and evaluation of physical environmental impacts and does not generally require analysis of the economic effects identified by the comment. For additional discussion regarding project funding, costs, and financial feasibility considerations, please refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

Regarding concerns that parking used by recreationalists could be usurped by ferry commuters, refer to Section 2.2.2, *Topical Response: Alternatives,* and Section 2.2.20, *Topical Response: Parking*.

The comment has been noted and has been included in the project record considered by decision-makers. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P47-26

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P47-27

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations.

Regarding feasibility, before the CEQA process, the City considered the feasibility of the project through a feasibility study.[53]

Regarding maximum feasible public access, the project objectives includes the following: “Provide sufficient public access and recreational opportunities at the Berkeley Waterfront that meet regional needs, consistent with BCDC Bay Plan Policies maximizing access to the Bay” (refer to page 2-4 of the Draft EIR). The City will continue to work with BCDC, as it relates to BCDC’s regulatory authority.

[53] Berkeley, City of. 2023. Feasibility Study. Ferry Facility at Berkeley Municipal Pier. Available: https://berkeleyca.gov/sites/default/files/documents/FINAL_Ferry%20Terminal%20Facility%20Feasibility%20Study%20-%20Berkeley%20Municipal%20Pier.pdf (accessed February 2025)

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: 26 Berkeley ferries proposed

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To whom it may concern:

I am opposed to the new Berkeley Ferry Project. I am a daily swimmer in the SF bay and would like to protect the 1200' of pier for shorebirds and think that this project is not cost efficient and is not actually that green considering the low ridership, esp at ferries every 30 mins and a cost of $170 million. This stirs up sediment with this increased traffic, and does not allow the natural ecosystem to have time to grow and settle with all that disruption. I would like to keep free parking and access to beachfront free for low income families. Thank you! P48-1 P48-2 P48-3 P48-4 P48-5

Kally Price

Letter P48

Commenter: Kally Price

Date: April 17, 2026

Response to Comment P48-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P48-2

The City acknowledges the comment's views. To the extent the comment is advocating for an alternative that would preserve the existing pier without providing ferry service, please refer to Response to Comment O10-215. As discussed therein, the City considered alternatives that would not include ferry service but determined that such alternatives would not attain one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco. Draft EIR Section 5.9, *Alternatives Considered but Rejected*, explains the reasons such alternatives were not carried forward for detailed analysis. The Draft EIR also evaluates the No Project Alternative and alternatives with reduced project features and concludes that those alternatives would provide fewer public access and recreational benefits than the proposed project and, in the case of the No Project Alternative, would not provide the transportation, air quality, and greenhouse gas reduction benefits associated with ferry service.

The comment's concerns regarding project cost, ridership levels, and overall project value are noted. These issues are primarily economic, financial, and policy considerations for City decision-makers. This comment has been included in the project record considered by City decision makers. For additional discussion regarding project costs, funding, and economic feasibility considerations, please refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

The comment does not identify a deficiency in the Draft EIR's environmental analysis or alternatives evaluation. Therefore, no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P48-3

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P48-4

See Response to Comment O4-8 for discussion of ferry operational impacts. In addition, see Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of sedimentation and wave effects within the project site and beyond. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P48-5

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how parking is addressed under CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. Nevertheless the comment has been included in the project record considered by City decision makers. No further response or revisions to the EIR are required.

Letter P49

From: Libby Karolczak <libbyok@gmail.com>

Subject: The environmental impacts of the Ferry are not worth it

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

The wildlife it will disturb has no where else to go. - Libby Karolczak P49-1

Letter P49

Commenter: Libby Karolczak

Date: April 17, 2026

Response to Comment P49-1

Wildlife species temporarily displaced by project construction or operation have the wider San Francisco Bay to occupy. The Draft EIR analysis and significance conclusion of less than significant impacts to wildlife species with implementation of mitigation (Mitigation Measures BIO-1, HYD-1, and AES-1) presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-44 remains valid. No changes to the Draft EIR are necessary in response to this comment.

Letter P50

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Concerns re: Berkeley Water Transportation Pier Ferry construction

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Liza McNulty, PE, Project Manager
Parks, Recreation & Waterfront Department
2180 Milvia Street, 3rd Floor
Berkeley, CA 94704
Email: lmcnulty@berkeleyca.gov

Dear Ms. McNulty,

Reading the EIR City report on the Berkeley Water Transportation Pier Ferry, I have several concerns regarding subjects that are not mentioned: P50-1

1. Sea rise projections and their impact on the Berkeley shore, see this Berkeley report: P50-2

2019-8-30 Draft Sea Level Rise Assessment ..The City of Berkeley (.gov)
https://berkeleyca.gov › default › files › documents

2. Given our current severe budget limitations, the cost to the city, P50-3

3. Current BART ridership has drastically declined, The report states, based on old information, that P50-4

• Transbay **BART** and Bridges **Are at Capacity.** Several of the worst congestion points involve approaches to Bay Area bridges, and transbay bridge trips are expected to substantially increase.

4. Increased working from home with fewer commuters, P50-5

5. Outdated estimates from past years which do not anticipate climate changes: P50-6

3.3.1 Monthly Sustained Wind Wave Heights (m) for Selected Locations in San Francisco Bay **1992-1993**

3.3.2 Monthly Wave Energy (MJ/m) Reaching the Shore for Selected Locations in San Francisco Bay **1992-1993** P50-7

3.5.5 Acreage of Individual Eelgrass Beds in San Francisco/San Pablo Bay in **1989** P50-8

3.6.1 Ambient Air Quality **(1997-2000)**

3.6.7 Existing (**Year 2000**) Bay Area Emissions Inventory - Total Bay Area Summer Average Emissions (Tons/Day) P50-9

These outdated EIR considerations should cease implementation of Ferry construction until current data are examined and all implications pursued. P50-10

Letter P50

Commenter: Margot Smith

Date: April 18, 2026

Response to Comment P50-1

Refer to Response to Comments P50-2 through P50-10 for responses to individual comments. No further response is required.

Response to Comment P50-2

Refer to Section 2.2.23, *Topical Response: Sea Level Rise,* for a discussion of the sea level rise projections used in the project design. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P50-3

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P50-4

While transit ridership patterns have fluctuated in recent years, recent trends indicate that ridership on regional transit systems, including BART, has been steadily recovering as travel demand increases, fuel costs rise, and more employees return to in-person work. According to BART, average weekday ridership has continued to grow and is trending toward pre-pandemic levels.[54]

Transit infrastructure projects are planned and evaluated based on long-term transportation needs rather than short-term ridership fluctuations. The proposed ferry service is intended to provide an additional transportation option, improve regional mobility, provide emergency response and resiliency, and accommodate future travel demand. As population and employment continue to grow in the region, maintaining and expanding a diverse transit network helps ensure that residents and workers have access to reliable transportation choices.

The analysis performed in the Draft EIR is based on the best available information at the time. Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the information used to conduct the VMT analysis.

The Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment P50-5

Refer to Response to Comment P50-4. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P50-6

This comment is a reference to the 2003 WETA EIR. Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* regarding use of the 2003 WETA EIR in this EIR. Refer to Section 2.2.29, *Topical Response: Wind*, for discussion concerning CEQA and wind. Refer to Section 2.2.25, *Topical Response:*

[54] Metropolitan Transportation Commission. 2026. *Monthly Transportation Statistics.* Bay Area Metro. Available: https://mtc.ca.gov/tools-resources/data-tools/monthly-transportation-statistics. (accessed July 2026).

Siltation/Wave Climate, for discussion regarding wind and wave data prepared for the project. No further response is required.

Response to Comment P50-7

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of the wave data used for the project design. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P50-8

The comment is incorrect. The Draft EIR utilized the most up to date publicly available eelgrass spatial data (Merkel and Associates 2004, 2009, 2014). Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR where the 2004, 2009, and 2014 Baywide Eelgrass Inventories are cited. No revisions to the EIR are necessary.

Response to Comment P50-9

The comment does not explain the exact nature of the concerns with respect to the topics. Background information in the Draft EIR air quality analysis uses historic information where applicable to define the setting and regulatory environment that is applicable to the project. The analysis itself uses current emissions estimates based on current air district methodology and are not based on historical data. Emissions estimates in the Draft EIR are provided in Impact AQ-2 starting on page 3.2-27 and conclude that impacts were less than significant with mitigation. Therefore, the Draft EIR air quality analysis is adequate, and no changes to the Draft EIR are necessary in response to this comment.

Response to Comment P50-10

Refer to Response to Comments P50-2 through P50-9 for responses to individual comments. Regarding the project and EIR, refer to Section 2.2.5, *Topical Response: CEQA Adequacy,* for more information on this topic. No further response is required.

Letter P51

From: Eric J Schroeder <ejschroeder@ucdavis.edu>

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Opposition to the current proposal for the Berkeley/SF ferry

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

I am a resident of Berkeley and I oppose the proposed ferry legislation for five reasons: P51-1

1) the new parking lots will cause the removal of at least 14 trees on Seawall Drive; P51-2

2) the removal of a piece of the old Berkeley fishing pier will displace a large shorebird roost; P51-3

3) those of us who currently use the marina for recreational purposed will lose what is currently free parking; P51-4

4) the ferry wake will disturb waterbirds due to a wake that stirs up sediment in a 650 ft swathe; P51-5

5) ferries to SF from Berkeley are a great idea but running the service every 30 minutes is excessive by most standards. P51-6

Thank you for recording my opinion on this matter.

Eric Schroeder
1353 Francisco St., Berkeley, CA

massive parking lots (14 or so trees to be removed at Seawall Dr.)c P51-2
t is deficient--doesn't address the massive parking lots (14 or so trees to be removed at Seawall Dr.), the ferry wake stirring up sediment and disturbing waterbirds in a 650' P51-5
swathe (plans are to run ferries every 30 minutes), the loss of 1200' of the old Berkeley P51-3
fishing pier (tip harbors a large high tide shorebird roost), or the aggravation to us humans as a proportion of the currently free parking at the marina will become subject to fee. P51-4

Letter P51

Commenter: Eric Schroeder

Date: April 19, 2026

Response to Comment P51-1

Refer to Response to Comments P51-2 through P51-6 for responses to individual comments. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P51-2

The comment summarizes the project description with respect to tree removal. Because the comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR, no further response is required.

Response to Comment P51-3

See Response to Comment P46-4 for a discussion regarding impacts to roosting birds, as well as a revision to the Draft EIR which provides additional clarification regarding roosting birds and the potential for the project to affect roosting bird habitat. The revisions presented under Response to Comment 46-4 are clarifying in nature and do not alter the analysis or significance conclusions presented in Section 3.3, *Biological Resources*, of the Draft EIR. No further changes to the Draft EIR are necessary in response to this comment.

Response to Comment P51-4

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how parking is addressed under CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P51-5

See Response to Comment O7-17 for a discussion of and Draft EIR clarification text changes addressing ferry operations impacts on waterbirds. In addition, see Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of sedimentation and wave effects within the project site and beyond. No additional changes to the Draft EIR are necessary in response to this comment.

Response to Comment P51-6

Refer to page 2-30 of the Draft EIR, which clarifies that the headways, or the travel times between successive ferry departures would be 35 minutes during peak hours.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Letter P52

Subject: Berkeley Water Transportation Pier Ferry Project

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza,

I am writing to oppose the Berkeley Water Transportation Pier Ferry Project, for two separate reasons. This seems like a project designed to funnel public funds into construction company pockets to provide an unasked-for ferry system which will need to be kept afloat by higher and higher taxes, meanwhile destroying a much-loved and used public space. P52-1

First, I commuted by ferry from Oakland between the years 2021-2025 and found many downsides which ultimately led me back to driving. The cost to commute by ferry is more expensive than either BART or driving (if you don't have to pay for parking at work). Then, the ferries were usually not even close to capacity, and according to the people working on it, this was a concern of theirs as the ferries do not earn enough to pay their own costs, relying on public (taxpayer) subsidizing. The ferry was also unreliable, frequently getting cancelled without notice due to heavy rains, heavy winds, or when special event ferries were being run. For commuters, it is an unreliable mode of commuting. P52-2 Considering the wind tunnel that boaters know the Berkeley Marina area to be, I would expect ferries to have a lot of trouble docking reliably during high winds. P52-3

Right now, we see BART struggling due to lack of ridership which never returned post pandemic and is likely to require more ever taxpayer support to stay solvent. Who is the intended commuter expected to use a Berkeley ferry system placed within 2.5 miles of multiple BART systems but not walking distance from housing? This will only serve to further decrease an already limited commuter pool. P52-4

Secondly, the area around the Berkeley fishing pier is prized by locals as the best or only area for use for recreational use like learning how to sail, sailboarding, swimming and fishing. Walkers are there all day every day and prize the natural beauty, the birds, fish and mammals that will be destroyed by this project. P52-5

If the project goes through, it will be destroying an amazing natural space available to people and animals, while committing both the people of Berkeley and likely the larger Bay Area to increasingly larger subsidizing of costs for a niche ferry system used by very few people. It seems very elitist to go through with such a project. P52-6

Regards,
Carroll Henschel

Letter P52

Commenter: Caroll Henschel

Date: April 20, 2026

Response to Comment P52-1

Refer to Response to Comments P52-2 through P52-6 for responses to individual comments. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P52-2

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P52-3

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for a discussion of navigation safety. Refer to Section 2.2.29, *Topical Response: Wind*, for discussion concerning wind conditions and the safety of ferry docking in high wind events. No further response is required.

Response to Comment P52-4

Refer to Response to Comment P50-4 for a response regarding BART ridership.

Regarding the question of who the commuters would be, page 33 of the WETA Business Service Plan identifies that the resident from West Berkeley will be able to access the high paying jobs in San Francisco near Embarcadero and Mission Bay. In addition, it should be noted that redundancy in transit systems is important to ensure that the people using transit have an alternative.

The Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment P52-5

The Draft EIR evaluates impacts to natural resources such as the San Francisco Bay, birds, fish, and mammals within Section 3.3, *Biological Resources*, which concludes that impacts associated with project implementation would be less than significant with mitigation (see Section 3.3.4, Impacts Analysis), while Section 3.11, *Recreation*, evaluates impacts to natural resources with respect to their role in facilitating recreation and concludes that the project would be compatible with existing uses and enhance recreational access (see Section 3.1.4).

The comments regarding opposition to the project has been included in the project record considered by City decision makers.

The analyses and significance conclusions presented in the Draft EIR remain valid as written, and no revisions are required.

Response to Comment P52-6

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. Nevertheless, the comment has been included in the project record considered by City decision makers. No further response or revisions to the EIR are required.

Subject: Comments on Berkeley Water Transportation Pier Ferry Project draft EIR

Dear Ms. McNulty:

I have taken another look at the claim made by Berkeley in Section 3.11 that construction would not have a significant impact on recreational access. In support of that conclusion the draft EIR states:

> While construction of the proposed project may temporarily influence recreational users to seek alternative park facilities, the Berkeley Waterfront area spans approximately 100 acres with multiple access points at other locations that would not be affected by construction staging. Therefore, project construction would not preclude recreation at the Waterfront to such an extent that recreational facilities would physically deteriorate or new recreational facilities would be needed. There are other launch points within the Berkeley Waterfront area where access would not be affected for these recreational users during most tidal conditions such as the South Sailing docks for swimmers, windsurfers, and kayakers as well as the Marina Basin for sailors and kayakers. In addition, there are other launch points in

P53-1

adjacent cities where access would not be affected for these recreational users

Here the EIR repeats the flaws that permeate the document. It ignores adopted policies by both the city and BCDC that provide protection for recreational use in the area. Moreover, the language here is conclusory and does not consider the physical conditions available at the site that are not available at other sites. P53-1

Both the Berkeley Marina Master Plan (BMMP) and the Bay Plan Recreational Policy 9 are germane to impact analysis; neither is referenced in the language above. Language and maps in the BMMP repeatedly refer to this site, with language like "Enhance windsurfer activity", (Figure 2.0) and "Preserve the areas devoted to ...recreational activities [and] Enhance Windsurfer Activities at the point immediately to the west of H's Lordships Restaurant" (item C, page 37). P53-2

The Bay Plan Policy 9 is also clear that protection of access includes protection during construction. Recreational policy 9 which provides that ferry terminal may only be allowed if "development" does not interfere with current recreational uses. A project where development would terminate protected recreational uses for an indeterminate time is inconsistent with that policy and thus has a significant impact. Consideration of alternatives and mitigation is therefore required. P53-3

Finally, the claim that replacement access is available elsewhere in the marina ignores the physical reality of tides. Public meetings chaired by the city have repeatedly featured testimony from windsurfers and swimmers using the site that it is the only location in the marina where access is possible at low tides. P53-4

Earlier analysis in the document, e.g. the Table on page 3.9-32 that purports to analyze the consistency of the project with the BMMP provides no resolution for this issue. That table ignores the policies referenced in this letter and thus is inadequate on its face. P53-5

I've attached two photographs taken on April 19, 2026. They show the South Basin lot completely full of parked cars, with cars parked along the curbs as well. This shows activities well before the peak season for the marina—and the necessity of parking to support those activities. P53-6

Very truly yours.

Jim McGrath

P53-6

P53-6

Letter P53

Commenter: Jim McGrath

Date: April 20, 2026

Response to Comment P53-1

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding impacts during construction. Refer also to Response to Comment A3-55, which revises Section 3.11, *Recreation*, of the Draft EIR to clarify the analysis of temporary recreational impacts on recreational access. The revision presented therein is clarifying in nature, and does not alter the analysis or subsequent significance conclusion under Impact REC-1.

For additional discussion of shoreline and equipment-dependent access and how site-specific conditions are considered in the analysis, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access.* Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency,* regarding appropriate consideration of plans and policies.

Accordingly, the Draft EIR provides an appropriate evaluation of construction-related recreational impacts consistent with CEQA requirements. The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions to the Draft EIR are required.

Response to Comment P53-2

The comment that the Berkeley Marina Master Plan and Policy 9 of the Bay Plan are not referenced in the EIR is not accurate. A consistency analysis with the Berkeley Marina Master Plan is discussed on pages 3.9-29 to 3.9-33 of the Draft EIR. Recreation Policy 9 of the Bay Plan is discussed on page 3.9-18 of the Draft EIR.

The comment identifies two specific policies in the Berkeley Marina Master Plan. One is Figure 2.0, which includes a label that says “Enhance Windsurfer Activity.” The second is Item C under Principle 4, which states: “Enhance Windsurfer Activities at the point immediately west of H’s [sic] Lordships Restaurant.” Refer to Response to Comment P36-10 for a discussion of the project’s consistency with these policies.

Response to Comment P53-3

Construction-related impacts to recreation are evaluated in Section 3.11, *Recreation*, which considers temporary disruptions and concludes that impacts would be less than significant because construction effects are temporary and the project would provide long-term increases in recreational facilities (refer to Impact REC-1). While localized construction areas, staging areas, and temporary detours may affect access within portions of the project vicinity during construction, recreational access to the broader Berkeley Waterfront would remain available throughout the construction period.

As described in Chapter 2, *Project Description*, and Section 3.11, *Recreation*, construction would be managed to maintain recreational access to the maximum extent feasible. Access routes may be temporarily modified; however, the City would implement standard access management practices, including maintaining access where feasible, providing temporary detours around active construction areas, and installing temporary signage and wayfinding to direct recreational users to available waterfront facilities. In addition, the Berkeley Waterfront encompasses a large recreational area with multiple access points and numerous recreational resources that would remain available during construction. Under CEQA, the relevant question is whether temporary construction activities would result in a substantial adverse physical impact on recreational facilities or require the construction of new recreational facilities. As discussed in Impact REC-1, temporary construction-related access limitations would not result in substantial physical deterioration of recreational facilities, would not require construction of new

recreational facilities, and therefore would not result in a significant recreational impact. For further discussion of recreational access during project construction, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

To the extent the comment contends that temporary construction-related access limitations result in an inconsistency with Bay Plan Recreation Policy 9, refer to Response to Comment O10-116 regarding the Draft EIR's consistency analysis for Recreation Policy 9 and Section 2.2.13, *Topical Response: Land Use/Plan Consistency.* The Draft EIR concludes that the project would maintain and enhance long-term recreational access through restoration of public access to the Berkeley Pier, construction of a new public pier and breakwater, shoreline access improvements, Bay Trail improvements, public open space, and other recreational amenities (see Impact LU-2 and Impact REC-1). The temporary and phased nature of construction activities does not alter those conclusions.

The analysis, significance conclusions, and mitigation measures presented within Section 3.9, *Land Use and Planning*, Section 3.11, *Recreation*, and related sections in the Draft EIR remain valid as written. No revisions are required.

Response to Comment P53-4

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

The analyses, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written. No further response or revisions are necessary.

Response to Comment P53-5

Refer to Section 2.2.13, *Topical Response: Land Use/Plan Consistency*, for a discussion related to how the Draft EIR addresses inconsistencies with relevant land use plans and policies.

The comment identifies two specific policies in the Berkeley Marina Master Plan. One is Figure 2.0, which includes a label that says “Enhance Windsurfer Activity.” The second is Item C under Principle 4, which states: “Enhance Windsurfer Activities at the point immediately west of H’s [sic] Lordships Restaurant.”

Refer to Response to Comment P36-10 for a discussion of the project’s consistency with these policies.

Response to Comment P53-6

The City acknowledges the photographs and observations provided by the commenter. Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking inventories, parking utilization, recreational access, and the methodology used to evaluate parking conditions at the Berkeley Waterfront. While the photographs document parking demand at a particular location and point in time, they do not demonstrate that the methodology or conclusions presented in the Draft EIR are incorrect.

The Draft EIR evaluates whether project-related parking changes would result in secondary physical environmental impacts and concludes that recreational access would be maintained. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Subject: Comment on Draft EIR for Berkeley Pier with Ferry Access Project

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

As a member of the Bay Area Sea Kayakers, I have spent considerable time at the Berkeley Marina. Much of my time has been spent on the little gravelly beach south of the Shorebird Nature Center, practicing, and then teaching, kayaking skills. During the course of many hours of observation, I came to realize that the Berkeley Marina was one of the Bay Area's most successful parks, especially for low-income families with young children. I have seen multi-generational families pile out of a dilapidated car with their picnic baskets and coolers and kiddie bicycles, beaming with joy. Older kids head for the Adventure Playground. Toddlers are carried down to the beach to get their toes in the water for the very first time. Parents lay out the picnic or just walk around with big smiles. P54-1

What makes this miracle possible? Free parking with no one rushing about to find a parking space before the ferry leaves. There is no way that these families could use public transit because of their bulky picnic equipment, let alone the out-of-pocket expense.

My take on this proposed project is that its aim is to monetize a fantastic park experience that has benefitted Berkeley and regional residents for many years. The project is worthy of Ebenezer Scrooge, and as a former resident of Berkeley, I am deeply ashamed.

So how do you monetize a park? It is really pretty simple:

1. You ignore the debt owed by the Doubletree Hotel and the slip fee structure for boats at the Marina and continue to siphon off Marina-generated funds.. P54-2
2. You bring in a ferry that is sure to be undersubscribed.
3. You charge for everything, but especially for parking. After all, the ferry riders come first, and they need to have places to park.
4. Maybe there will even be a charge for the Adventure Playground?

Why is Berkeley's Marina required to run a profit? What other Berkeley Parks are accompanied by pay parking?

If the future holds more multi-unit housing, where can kids go to make noise without being shushed? I remember one boy having a glorious time pounding with a hammer in the Adventure Playground, and I realized that he probably would not have been able to make noise like that in his home. P54-3

If the City of Berkeley has its way, there will be no free and convenient Marina parking, no social justice, no families, no water sports, and no more fabulous park. P54-4

Personally, I am staking my hopes on BCDC to stop this downward spiral. BCDC has clear policy documents that prioritize recreational uses along the shoreline. If recreational activities will be impacted by a ferry, as in this proposed project that would transform a public park into a paid parking lot, their guidelines call for disapproval of the ferry. I hope they stick to their principles because the City of Berkeley has lost its way. P54-5

Sincerely,
Sally Tobin

Letter P54

Commenter: Sally Tobin

Date: April 20, 2026

Response to Comment P54-1

The City acknowledges the importance of Waterfront recreation accessibility for all residents. However, parking scarcity, as well as social, economic, and affordability considerations related to parking fees are not environmental impacts under CEQA. The Draft EIR accordingly evaluates the potential physical environmental impacts associated with parking conditions. For further discussion of the Draft EIR evaluation of parking considerations, please refer to Section 2.2.20, *Topical Response: Parking.*

While socioeconomic and affordability considerations are generally outside the scope of CEQA unless they result in a physical environmental impact, the City recognizes the importance of equitable access to public amenities and recreational resources. Accordingly, the City has undertaken separate efforts to evaluate environmental justice and equity considerations, including preparation of an Environmental Justice Technical Study[55] for the proposed project and ongoing development of the City's General Plan Environmental Justice Element[56]. These efforts provide additional opportunities for the City to consider issues related to accessibility, equity, and community benefits beyond the environmental review required under CEQA.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P54-2

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Response to Comment P54-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P54-4

The comment expressing opposition to the project has been included in the project record provided to decision makers for consideration.

Refer to Section 3.11, *Recreation*, in particular Section 3.11.2 (*Environmental Setting*, pages 3.11-1 through 3.11-7) and Section 3.11.4 (*Impacts Analysis*, pages 3.11-14 through 3.11-24), which describe existing recreational uses and evaluate whether the proposed project would result in a physical loss of recreational resources or restriction of access. As discussed therein, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and access, including new and improved shoreline access, a restored public pier, and additional amenities.

[55] Berkeley, City of. 2025. Berkeley Water Transportation Pier Ferry Environmental Justice Existing Conditions and Constraints Final Technical Study. Prepared by Rincon Consultants. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/Berkeley_2025_BWTPF-Environmental-Justice-Technical-Study.pdf (accessed July 2026).

[56] Berkeley, City of. 2025. City Council Report, Prepared, Safe and Healthy Berkeley: General Plan Disaster Preparedness and Safety Element and Environmental Justice Element. https://berkeleyca.gov/sites/default/files/documents/2025-01-17%20-%20Prepared%2C%20Safe%20and%20Healthy%20Berkeley%20-%20General%20Plan%20Disaster%20Preparedness%20and%20Safety%20Element%2C%20Environmental%20Justice%20.pdf (accessed July 2026).

With respect to parking and access, refer to Section 2.2.20, *Topical Response: Parking.* As described in Chapter 2, *Project Description*, the project would replace existing parking with a comparable number of spaces and maintain access to the waterfront for both recreational users and ferry patrons.

The comment's reference to "social justice" reflects broader policy considerations. While such considerations may be addressed by decision-makers through planning and policy processes, they are not, in themselves, environmental impacts under CEQA unless they would result in a physical change to the environment. The Draft EIR focuses on the physical environmental effects of the project, as required by CEQA.

The comment does not identify a specific deficiency in the Draft EIR's analysis of environmental impacts. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P54-5

The comment regarding opposition to the project has been included in the project record provided to decision makers for consideration.

Refer to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance,* regarding the BCDC permitting and approval process and consistency determinations.

For discussion of parking considerations, refer to Section 2.2.20, *Topical Response: Parking.*

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Subject: Comment on the DEIR for the Berkeley Ferry Terminal

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Comment: There is no analysis of economic feasibility, the true per-ride subsidy level, and realistic funding sources. P55-1

Here's the 'published 24-'25 WETA budget:

https://weta.bynder.com/share/85AFA60B-3C3F-43B9-A69010245CFBEC9D/

"The FY 2024/25 operating budget is made up of two primary components: a $69.2 million Ferry
Service Operating Budget and a $5.5 million Planning and Administration budget. Together those
two components result in a total Operating Budget of $74.7 million." P55-2

From Table 2: Fares = $14.1M; Ridership (projected) = 2.6M

Operating cost per ride = $74.4M / 2.6M = $28.8 per ride
Fare revenue per ride $14.1M / 2.6M = $5.4 per ride
Subsidy per ride = operating cost per ride - revenue per ride = $28.8 - $5.4 = $23.4 per ride

But omitting the capital budget is not a valid estimate of actual subsidy level. Boats need to be replaced, terminals need to be maintained, maintenance dredging is required. Capital expense from the '24-35 budget is $83M.

With capital budget included, the actual cost per one-way trip is $60.68.

The DEIR needs to justify this level of subsidy in the context of other public transportation modes that are far less expensive and have much greater impact on VMT and congestion. P55-3

Letter P55

Commenter: Paul Kamen

Date: April 21, 2026

Response to Comment P55-1

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P55-2

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P55-3

The issues raised regarding transportation subsidies, operating costs, cost-effectiveness, and the comparative allocation of public transportation funding are primarily economic and policy considerations for City and regional transportation decision-makers. CEQA focuses on disclosure and analysis of a project's physical environmental effects and does not require an EIR to determine whether a project represents the most cost-effective transportation investment. For additional discussion regarding project costs, funding, and financial feasibility considerations, please refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

To the extent the comment suggests that a different transportation alternative should have been evaluated, Chapter 5, *Alternatives*, evaluates a reasonable range of feasible alternatives consistent with CEQA requirements and explains the assumptions and criteria used to formulate and evaluate those alternatives. Please refer to Section 2.2.2, *Topical Response: Alternatives*, for additional discussion of how the Draft EIR considers alternatives in its analysis.

The comment has been noted and has been included in the project record considered by decision-makers. No revisions to the Draft EIR are necessary in response to this comment.

Subject: Re: Berkeley Pier Ferry Project EIR - Extension of Public Review Period

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

April 21, 2026

Dear Ms. McNulty,

I understand that you are still accepting public comments on the Berkeley Pier with Ferry Access Project and I am writing to do this very thing now. I have attended a couple of the planning meetings on Zoom and have even tried to articulate a parking plan at one of them, that I'd like to try to repeat in this note. P56-1

I am an open water swimmer that swims both in the Berkeley marina basin and the site at the defunct HsLordships for low tide swims. These are two precious swim sites that attract a loyal following of swimmers/users. I know that they are also used by a host of other water recreational users; windsurfers, wing boarders, kayakers, to name just a few. I am concerned that the Berkeley Pier/Ferry project will render these sites as unusable if nothing is done to protect access and parking access to them. I find this completely unacceptable. I'll let other more well-informed people speak to environmental and other aspects of the project. P56-2

I do have an idea for parking that I think could protect access to these sites. My idea is actually quite simple. At the entrance to the Berkeley marina, have a road to the left which includes present day Cal Adventures, Adventure Playground, Berkeley marina, HsLordships. To the right, another road leading to Berkeley Ferry and Pier. SEPARATE the two with a fence or wall, which could be as cheap and ugly or as beautiful and expensive as you want. Keep designated parking along the left side/recreational sites as limited or as extensive as you want, depending on placement of the fence/wall. Recreational users will not compete with ferry users for their spots to which they can carry heavy equipment and swimmers won't have to walk long ways in their cold, wet gear especially in the winter time. Ferry users won't be able to access these limited parking spots without having to climb the wall/fence. You can keep the lion's share of parking spaces for ferry users, as long as there are ample spaces for recreational users. I'm not sure if the description here is as clear for you to visualize as it is in my imagination. I am happy to expound on it if you'd like. In fact, I will follow-up with a hand drawing of this idea in the next few days. P56-3

The way that parking and access to recreation is currently planned does not respect and realistically address the needs of those who use it for this purpose. Please find an alternate way of addressing it. P56-4

Thank you,
Kerrily Kitano, PhD, MSW
Open water swimmer

Letter P56

Commenter: Kerrily Kitano

Date: April 21, 2026 (appended April 28, 2026)

Response to Comment P56-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Please refer to Response to Comment P56-6 for a response on the comment's parking plan.

Response to Comment P56-2

With respect to the specific concern regarding launch points for swimming and water-based recreation, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*; Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* and Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users.* Refer to Section 2.2.20, *Topical Response: Parking,* regarding adequate parking for recreational uses, access to the waterfront, and access with equipment.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P56-3

The comment suggests a project design alternative related to parking management, circulation, and facility layout. The comment does not identify a deficiency in the Draft EIR analysis, significance conclusions, or mitigation measures. As discussed in Section 2.2.20, *Topical Response: Parking,* the Draft EIR does not identify a significant parking-related physical environmental impact under CEQA. Accordingly, detailed analysis of the proposed parking configuration is not required. Decisions regarding parking management, parking allocation, access controls, and related design features are operational and policy considerations that may be considered by City decision-makers. Refer to Section 2.2.2, *Topical Response: Alternatives*, and Section 2.2.20, *Topical Response: Parking.* The Parking and TDM Plan analyzes parking demand based on observed usage patterns at the Berkeley Waterfront and WETA ridership projections and demonstrates that the Waterfront will have sufficient spaces to accommodate all users.

The comment has been included in the project record provided to City decision-makers for their consideration. No revisions to the Draft EIR are required.

Response to Comment P56-4

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how parking is addressed under CEQA. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P56-5

Please refer to Response to Comment P56-6 for a response on the commenter's parking plan.

Response to Comment P56-6

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how parking is addressed under CEQA. As discussed therein, the City has found that with implementation of the proposed project, there would be sufficient parking to accommodate all users. Refer also to Section 2.2.2, *Topical Response:*

Alternatives, for a discussion of how the City considered alternatives in the CEQA process. Because this parking concept would not reduce an environmental impact, the City has not considered it for further evaluation. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Letter P57

Subject: Public Comment on the Berkeley Pier and Ferry Project Draft EIR (April 2026)

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To the Berkeley Planning Division,

I am writing to express my formal opposition to the Berkeley Pier and Ferry Project as currently proposed in the Draft EIR. As a frequent user of the Berkeley waterfront for wind-powered water sports, I find the document's analysis of recreational impacts to be deeply flawed and legally insufficient. P57-1 P57-2

1. Misinterpretation of Berkeley Municipal Code § 6.20.180
The DEIR's dismissal of recreational impacts—particularly those affecting wind-powered water sports such as winging, kiteboarding, and paddling—is based on a misinterpretation of Berkeley Municipal Code § 6.20.180. This ordinance was never intended to regulate the open Bay west of the Berkeley Pier. Furthermore, the City's attempt to redefine "personal watercraft" to include human-powered and wind-powered recreation is inconsistent with the legislative history of the code, which was designed to address motorized craft. P57-3

2. Failure to Establish an Accurate CEQA Baseline CEQA requires an accurate baseline and a full analysis of impacts to existing recreational resources. By failing to acknowledge decades of established public use of these waters for wind sports, the DEIR fails to provide a truthful starting point for its impact analysis. The DEIR must be revised to acknowledge the long-standing, legally protected recreational use of these waters. P57-4

3. Direct Impacts to Launch Access and Safety
The proposed ferry terminal and security exclusion zones create a direct conflict with established launch sites at the South Basin. For sports like foiling and kiteboarding, which require specific wind angles and clear paths for safe launching, the introduction of large ferry traffic and physical barriers constitutes a significant "Loss of Recreational Resource" under CEQA that has not been adequately mitigated. P57-5

4. Transportation and Parking Impacts
The DEIR fails to account for the loss of parking near the water that is essential for participants transporting heavy, specialized equipment. Without dedicated, proximate parking for recreational users, the project effectively "prohibits" access for a large segment of the community. P57-6

I urge the City to recirculate the EIR with a corrected analysis that respects the rights of the existing water sports community and explores project alternatives that do not displace these historic uses. P57-7

Sincerely.

Letter P57

Commenter: Qiu Xie

Date: April 22, 2026

Response to Comment P57-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P57-2

For discussion of specific issues related to wind-powered water sports, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.29, *Topical Response: Wind.* For further discussion of the adequacy of the environmental baseline considered in the Draft EIR, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

The comment does not identify specific deficiencies in the Draft EIR's analysis beyond general concern with its conclusions. The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P57-3

Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for a detailed discussion of the relationship between Berkeley Municipal Code Section 6.20.180 and the proposed project analyzed in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P57-4

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, for a discussion of the baseline used to assess recreational impacts, according to CEQA. No further response is required.

Response to Comment P57-5

The comment is based on an incorrect description of the proposed project. The Draft EIR does not identify or assume the establishment of a permanent water-based "security exclusion zone" extending into surrounding waters. As confirmed by the project operator, WETA, applicable federal maritime security regulations (33 CFR Part 105) require facility security planning, access control, and operational procedures, but do not impose fixed exclusion zones of the type described by the comment. Operational ferries would be managed consistent with existing U.S. Coast Guard navigation requirements and standard maritime safety practices.[57]

Additionally, the comment conflates the location of proposed ferry infrastructure with existing recreational launch areas. The ferry terminal, pier, and approach areas are located north of the existing pier within the Berkeley Marina Basin, whereas the South Sailing Basin launch areas referenced by the comment are located south of the project site. As described in Section 3.11.2 and Section 2.5.1 of the Draft EIR, these areas are physically separated, and ferry vessels would not traverse the South Sailing

[57] Gerrity, Brian. 2026. Project Manager, Capital Planning, San Francisco Bay Ferry. Personal communication regarding maritime safety regulations with Liza McNulty, Capital Improvement Program Manager, City of Berkeley. May 20, 2026.

Basin. Accordingly, the project would not interfere with established launch areas used for windsurfing, kiteboarding, foiling, or similar activities.

Draft EIR Section 3.11.4, *Impacts Analysis*, further explains that ferry navigation would occur within defined approach and berthing areas, allowing continued compatibility with Marina related recreational boating and water-based activities. The analysis concludes that operation of the ferry would not hinder physical access to recreational resources, including water-based recreation, and would not result in a substantial adverse effect on such uses (see Impact REC-1).

Under CEQA, a "loss of recreational resource" is evaluated based on whether a project would cause a substantial physical deterioration of existing recreational facilities or require new facilities with resulting environmental effects. The Draft EIR concludes that the project would instead expand recreational access and facilities, including a restored public pier and improved shoreline access (Impact REC-1). The comment's concerns regarding user preferences, operational interactions among water users, or perceived reductions in convenience do not constitute a significant environmental impact under CEQA unless they would result in a physical degradation of the recreational resource. Therefore, the Draft EIR adequately evaluates potential interactions between ferry operations and water-based recreation and correctly concludes that impacts would be less than significant.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P57-6

For discussion of the analysis of water-based recreational impacts, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities)*.

Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, which includes a revision to page 3.11-6 of the Draft EIR to acknowledge that many Waterfront recreators require access to specific equipment. With respect to parking concerns, refer to Section 2.2.20, *Topical Response: Parking.*

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P57-7

Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Letter P58

Subject: EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Building a new facility in a location exposed to winds from the south at a cost of $170,000,000 is a big boondoggle. P58-1

When I read the EIR I assumed it was based on never reopening the old HIs Lordships since parking for established uses near the proposed ferry terminal is already over committed. A new ferry here without new dedicated parking for 900 cars will make it impossible to reopen His Lordships due to lack of adequate parking and will damage the viability of Skates on the Bay and the Berkeley Yacht Club by making parking woefully inadequate for them. P58-2

Letter P58

Commenter: Dick Maclay

Date: April 22, 2026

Response to Comment P58-1

Refer to Section 2.2.29, *Topical Response: Wind* (Sub-Section Breakwater Design, Wave Climate, and Ferry Operations), for discussion concerning ferry operation with existing wind conditions. Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a general response about project cost. No further response is required.

Response to Comment P58-2

Refer to Section 2.2.20, *Topical Response: Parking.* The Parking and TDM Plan analyzes parking demand based on observed usage patterns at the Berkeley Waterfront and WETA ridership projections and demonstrates that the Waterfront will have sufficient spaces to accommodate all users.

Also as discussed therein, the Draft EIR evaluates potential secondary physical environmental effects related to parking and concludes that recreational access would be maintained and that the project would not result in significant environmental impacts related to parking or recreational access. In addition, the Draft EIR's environmental baseline reflects existing conditions, including the closure of Hs. Lordships at 199 Seawall Drive, and the cumulative analysis accounts for the potential reopening of the facility as part of the Draft Waterfront Specific Plan cumulative scenario (see Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, Section 2.2.9, *Topical Response: Cumulative Impacts,* and Draft EIR Chapter 3, *Environmental Impact Analysis*, pages 3-1 through 3-11). The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Subject: Berkeley Pier Ferry Proposal EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

I read the draft EIR. With the ferry positioned at the pier, the parking would become untenable for walkers, water sports enthusiasts, live-aboards, and dock users. Your current parking usage survey is simply laughable. There is no way that a careful survey was conducted. P59-1

We walk four miles four times a week at the Marina starting near the pier and around to the North Side and hade done so for years. The survey reports are obviously well under actual usage. P59-2

Our other objection is ….what about the fisherman? The pier needs to be rebuilt to support fishing again. This is a low cost sport that the lowest income community members dearly love. It needs to be restored. P59-3

Laurie Nardinelli
834 Delaware Street

Letter P59

Commenter: Laurie Nardinelli

Date: April 22, 2026

Response to Comment P59-1

Refer to Section 2.2.20, *Topical Response: Parking.* The Parking and TDM Plan analyzes parking demand based on observed usage patterns at the Berkeley Waterfront and WETA ridership projections and demonstrates that the Waterfront will have sufficient spaces to accommodate all users. Also, as discussed therein, parking scarcity is not considered a significant environmental impact under CEQA unless it would result in a secondary physical environmental effect. Accordingly, the Draft EIR evaluates whether project-related parking changes would result in secondary physical environmental impacts within Sections 3.2, *Air Quality*, 3.10, *Noise*, and 3.12, *Transportation*, which conclude that no significant impacts related to parking changes would occur (see Draft EIR Chapter 3, *Environmental Impact Analysis*, page 3-11). The Draft EIR also evaluates effects on recreational facilities in Section 3.11, Recreation, and concludes that the project would not cause substantial physical deterioration of existing recreational facilities or require construction of new recreational facilities that would result in significant physical environmental effects (Impact REC-1). The comment does not provide evidence demonstrating that the parking utilization data, methodology, or resulting impact conclusions are inadequate or inconsistent with CEQA requirements. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P59-2

Refer to Section 2.2.20, *Topical Response: Parking.* The parking analysis presented in the Draft EIR relies upon parking utilization data and supporting technical analyses prepared by professional transportation engineers for the project. Personal observations regarding marina use do not demonstrate that the data or methodology underlying the Draft EIR analysis are inaccurate. Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding analysis of impacts on existing recreational uses. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P59-3

The project includes a new publicly accessible pier and amenities such as fish cleaning stations, as described in Section 2.5, beginning on Page 2-9 of Chapter 2, *Project Description*. Recreational benefits are evaluated in Section 3.11, Recreation (refer to Subsection 3.11.4, *Impacts Analysis*).

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, the comment has been included in the project record provided to decision makers for consideration. No further response is required.

Letter P60

From: Hawkeye King <hawkeye.king@gmail.com>
Sent: Wednesday, April 22, 2026 4:26 PM
To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Public Comment: Objection to Berkeley Water Transportation Pier Ferry Project Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

I am writing to submit my objections to the proposed Berkeley Water Transportation Pier Ferry Project as part of the public comment period on the Draft EIR. P60-1

I am an avid boater with a vessel berthed at the Berkeley Marina, and a father of two toddlers who regularly visits Shorebird Park, César Chávez Park, and Adventure Playground with my family. The Berkeley waterfront is one of the great public treasures of the East Bay, and I am deeply concerned that this project would irreparably harm the recreational communities and quality of life that define it. P60-2 P60-3

My key concerns are:

1. Threat to Recreational Access – The south side of the Berkeley Marina is home to an irreplaceable collection of recreational amenities: the Berkeley Yacht Club, Cal Sailing Club, Adventure Playground, Shorebird Park, kayaking, windsurfing, fishing, and open green space enjoyed by families, school groups, and people of all ages and incomes. Parking overflow from ferry commuters would directly displace these users, many of whom — including families with young children like mine — cannot easily arrive by bike or transit. P60-4

2. Parking Demand Is Severely Underestimated – The EIR estimates peak demand of 950+ cars on weekday mornings, yet identifies only 250–400 available spaces even with major redesign. Surveys missed peak recreational use periods, excluded fishing pier demand, and failed to account for the anticipated Hs. Lordships redevelopment. The result is a plan that will pit ferry commuters against the recreational users who have long made this waterfront their home. P60-5

3. Impact on the Berkeley Yacht Club and Marina Berthers – As a berther, I am concerned that ferry parking demand will directly compete with boating guest parking, adding administrative burdens and reducing the marina's revenue. Berthers currently provide approximately two-thirds of Marina Fund income. Undermining that base threatens the long-term financial health of the entire facility. Every Friday night through the summer, and Sundays through the winter, boatloads of sailors converge on this exact location! P60-6

4. This Waterfront Belongs to the Community – The Berkeley waterfront exists because it was filled for public recreation. Shorebird Park, Adventure Playground, Cal Sailing, and the Yacht Club are not incidental to the marina — they are its heart. A ferry project that P60-7

degrades parking, restricts access, and prioritizes commuter infrastructure over community recreation gets the priorities exactly backwards. P60-7

5. Funding Feasibility – With no identified funding sources and a potential $25M+ ongoing financial exposure for the City on top of construction costs, Berkeley taxpayers would be left holding the bill for a project that diminishes the very waterfront it claims to serve. P60-8

6. The proposed plan replaces the old Berkeley Pier with a mere 580-foot structure primarily designed to serve the ferry terminal. I grew up fishing and playing on that pier with my parents. It's a damn shame to go past it regularly and see that beautiful site closed to having fun on as I used to! P60-9

I urge the City to prioritize the recreational character of the Berkeley waterfront and to fully account for the impacts this project would have on the communities who depend on it daily. P60-10

Thank you for your consideration.

Sincerely,
H. Hawkeye King, Ph.D.
1907 Parker St., Berkeley, CA
hawkeye.king@gmail.com

Letter P60

Commenter: Hawkeye King

Date: April 22, 2026

Response to Comment P60-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P60-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Please refer to the following responses to the remaining comments submitted by this individual.

Response to Comment P60-3

Section 3.11, *Recreation*, of the Draft EIR describes existing recreational uses and facilities at the Berkeley Waterfront (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7) and evaluates potential impacts to those resources in Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24). As discussed therein, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and access, including improved shoreline access, a restored public pier, and additional amenities, and would not result in a substantial adverse effect on recreational resources (Impact REC-1).

These comments have been included in the project record considered by City decision makers.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P60-4

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA.

The parking analysis in the Parking and TDM Plan evaluated the potential effects of ferry-related parking demand on recreational users of the Waterfront and concluded that sufficient parking would remain available to accommodate recreational activities. On Page 34 of the Parking and TDM Plan, Weekday Parking Demand by Time of Day is presented both for existing and future uses including the ferry users. Existing uses include recreational visitors.

Response to Comment P60-5

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA.

To the extent the comment raises concerns regarding operational conflicts with the potential reopening of a restaurant, the analysis presented in the Draft EIR considers whether project-related changes to the environmental baseline would result in significant physical impacts consistent with CEQA Guidelines. As discussed in Draft EIR Chapter 3, *Environmental Impact Analysis* (pages 3-1 through 3-11) and in Topical Response: CEQA Baseline/Baseline Recreation, the environmental baseline reflects existing conditions, including the closure of the restaurant at 199 Seawall. The potential reopening of this restaurant is considered as part of the cumulative impact analysis associated with the Draft Waterfront Specific Plan. The commenter does not provide evidence demonstrating that the analyses or significance conclusions

presented in the Draft EIR are incorrect. The analyses and conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P60-6

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA.

In addition, as a matter of clarification, no changes have been proposed to the parking allocated to berthers as a part of the proposed project. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P60-7

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA.

Regarding impacts on restricted access and prioritization of commuter infrastructure over community recreation, the project has the dual objective of providing recreation and ferry service. The project would implement several recreational facilities that would enhance recreational access, including the reopening of the pier, the installation of the Bay Trail, public plaza, and cycle track. Insofar the commenter is concerned on impacts on the recreational experience due to access to parking, refer to Section 2.2.20, *Topical Response: Parking,* for a detailed discussion about parking supply.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P60-8

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P60-9

Section 2.5, *Project Components*, describes the proposed pier dimensions and design. As described therein on Page 2-9, the proposed pier would be approximately 1,080 feet in length and would incorporate amenities such as a fish cleaning station, seating, a shade canopy, and security gates, to support recreational fishing as well as ferry service. Project alternatives with different pier configurations are evaluated in Chapter 5, *Alternatives*.

The EIR evaluates recreational impacts associated with the project, including those related to fishing, in Section 3.11, *Recreation*.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P60-10

Section 3.11, *Recreation*, of the Draft EIR describes existing recreational uses and facilities at the Berkeley Waterfront (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7) and evaluates potential impacts to these resources in Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24). As discussed therein, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and access, including improved shoreline access, a restored public pier, and additional amenities, and would not result in a significant impact to recreational resources (Impact REC-1).

The comment's request reflects policy considerations regarding how recreational resources should be prioritized. These comments have been included in the project record considered by City decision makers.

The analysis and significance conclusions presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Subject: Comment on the DEIR for the Berkeley Ferry Terminal

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

The DEIR does not recognize the value of certain features of the South Cove sailing area. Considerable value is lost if any component of water-borne recreation is forced to relocate, or restricted by limited parking supply or parking fees. P61-1 P61-2

The ski resort analogy is appropriate here. A viable ski resort needs to accommodate multiple skill levels:The "bunny" slope, the intermediate runs, and the expert runs. This accommodates groups at various skill levels. Access to variable skill environments from a single facility adds much value. P61-3

The South Cove is unique among Bay Area windsurfing and small craft sailing sites in that it provides a range pf skill levels from a single launch site and a single social gathering area. the "Inner Daysailing Area" is well protected (in part by trees slated for removal if Seawall Drive parking is reconfigured) and is perfect for beginners, with steady but attenuated wind and very good wave protection.

Beyond the protection of the Hs. Lordships Peninsula, we have wind and waves from the open Bay in close proximity, but within easy range of rescue skiffs (made even more valuable by Cal Adventures and Cal Sailing Club duplicating some of the safety resources).

Farther west, the wind and waves increase significantly as the influence of the shoreline decreases. It's out of range and out of sight of the rescue options. This is the expert slope. P61-4

This unique feature of the South Cove sailing and windsurfing site is the source of much of its value for mixed-skill user groups, families, and sailors moving rapidly along their learning curves. This value would be seriously compromised if some categories of water users were to be displaced to other sites.

To maintain the recreational value of the South Cove site, the diversity of user skill should not be limited. Maximum access for all skill levels requires that the parking cannot be throttled back via time limits, time-of-day restrctions or fees. None of this diverse use of users and user environments can be relocated if the the unique value of South Cove sailing is to be maintained.

Letter P61

Commenter: Paul Kamen

Date: April 22, 2026

Response to Comment P61-1

Section 3.11, *Recreation*, of the Draft EIR describes the Berkeley Waterfront's recreational resources, including windsurfing, sailing, and other water-based activities occurring in the South Sailing Basin and adjacent areas (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7). This discussion identifies the physical characteristics and uses that make these areas important for recreation. Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), evaluates whether the proposed project would adversely affect these recreational resources or restrict access to them and concludes that the project would maintain and enhance recreational opportunities and access (Impact REC-1).

The Draft EIR's analysis is focused on physical environmental conditions and facility capacity, consistent with CEQA requirements, and therefore evaluates the functional aspects of recreational resources rather than subjective measures of value.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P61-2

Section 3.11, *Recreation*, of the Draft EIR evaluates whether the proposed project would result in the physical loss of recreational resources or restriction of access consistent with CEQA Guidelines Appendix G (see Section 3.11.4, pages 3.11-14 through 3.11-24). As discussed therein, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and physical access, and would not result in a substantial adverse effect on recreational resources (Impact REC-1).

The Draft EIR does not identify displacement of water-based recreational uses or removal of shoreline access areas that support such uses. For additional discussion of shoreline and equipment-dependent water access, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

With respect to parking, refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA. The Draft EIR evaluates potential secondary physical effects related to access and circulation and concludes that access to recreational resources would be maintained.

The comment's reference to changes in "value" reflects user preference and convenience rather than a physical environmental impact as defined under CEQA. The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P61-3

Section 3.11, *Recreation*, of the Draft EIR identifies windsurfing, sailing, and other water-dependent activities as key recreational uses of the Berkeley Waterfront and describes the physical conditions that support these uses (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7). Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), evaluates whether the proposed project would adversely affect these recreational resources and concludes that the project would maintain and enhance recreational opportunities and access, and would not substantially interfere with water-based recreation (Impact REC-1).

Potential effects to environmental conditions influencing water-based recreation, including wind and wave patterns, have been considered through engineering design and supporting technical analyses. As

discussed in Section 2.2.29, *Topical Response: Wind,* the project does not materially alter the suitability of the South Sailing Basin and surrounding areas for recreational uses. For additional discussion of recreational water access, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access*.

While the comment emphasizes the value of a range of conditions for different skill levels, CEQA requires evaluation of physical environmental impacts, such as loss of access or deterioration of recreational facilities. The Draft EIR demonstrates that these conditions would remain available and that water-based recreational opportunities would continue at the Berkeley Waterfront.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P61-4

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* for discussions regarding project-related parking considerations and analysis under CEQA, as well as water-based recreation access considerations. As discussed therein, the Draft EIR evaluates whether project-related changes would result in significant adverse impacts, such as physical restrictions to access or degradation of existing recreational facilities and concludes that recreational opportunities and access would be maintained and enhanced by the project. The commenter does not provide evidence demonstrating that the analyses or significance conclusions presented in the Draft EIR are incorrect. The analyses and conclusions remain valid as written. No revisions to the Draft EIR are required.

Subject: Comment on the Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

The Draft Environment Impact Report is deficient in its evaluation of carbon impacts because it considers the ferry as an isolated transportation link rather then a part of an integrated system. The DEIR must consider the door-to-door commute rather than the water-borne time in isolation. P63-1

For the anticipated primary commuter service, the "last mile" is adequately address by multiple public transit options near the SF Ferry Building (and the density of destinations within walking distance) P63-2

But the "first mile" is problematic. Dedicated ferry passenger parking in the Berkeley Marina is estimated to be only about one-third to on-quarter of anticipated demand. After the dedicated parking area fills, commuters will need to spend much additional time finding a place to park, legally or otherwise. Or walking back to the ferry terminal from a distant parking space. This extra time needs to be considered in the design of the system. Time spent parking adds to the target door-to-door commute time. P63-3

When there is uncertainty in the time required to complete the first mile, studies have shown that commuters will usually allow two standard deviations based on the variable extra time to insure reaching their destination on schedule. In simple language, insufficient convenient parking requires faster boats. Required ferry propulsion power is approximately proportional to speed cubed, so for the short route from Berkeley to SF, time spent finding parking, plus two times the variation in this additional time will add many extra minutes to the commute. This translates to additional required boat speed with an exaggerated effect on both first cost and carbon footprint. P63-4 P63-5

We note that even after electrification, there is still a significant remote carbon footprint proportional to the energy used to generate the electricity. This will be true far into the future, until the grid is entirely supplied by renewable power generation. P63-6

The DEIR also assumes an unrealistic first mile mode split not justified by applicable data. Typical parking requirement is 0.6 spaces per ferry passenger, and this will not be provided by the planned parking scheme. The result is wasted time, requiring faster boats if the ferry is to remain marketable to commuters. P63-7

An efficient system requires more parking, smaller ferries, or a massive expansion of local bus routes. The effect of the ferry service on vehicle miles driven must also be considered. Without more study, it's difficult to show that the ferry will not pull passengers away from thier narby BART station for a drive to the more distant ferry terminal. P63-8

We also note that the catchment area for bus service, where it exists at all, is patently impractical except for the minority of ferry passengers living near a marina bus line that serves the marina without a transfer. P63-9

The point is, the environmental impact of a ferry service must be as evaluated as a multi-modal system, and not in isolation as the DEIR appears to assume.

Letter P63

Commenter: Paul Kamen

Date: April 24, 2026

Response to Comment P63-1

The Draft EIR is a project-level EIR that is required to assess the GHG emissions impacts of the proposed project with respect to the thresholds of significance discussed on Draft EIR page 3.6-33. As discussed in Draft EIR Section 3.6.4 *Operations*, (page 3.6-32) the analysis includes the GHG emissions from mobile sources, cars, that are anticipated to access the site from the commuters that would use the ferry once it is operational. Therefore, the analysis does include an analysis of a door-to-door commute. It is anticipated that riders would use other forms of transit currently operational to reach their destination. There is no anticipated need to change the number of trips of these transit modes due to implementation of the project and, therefore, the GHG emissions from these modes would be incurred regardless of project implementation and is correctly not attributed to the project in the project-level Draft EIR. The GHG analysis is accurate as presented, and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P63-2

The EIR evaluates near shore impacts of implementing ferry service at the Berkeley waterfront. Last mile refers to the travel between a transit station and a user's ultimate destination. This EIR does not address last mile effects from implementing the project.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P63-3

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how the project is not expected to result in secondary impacts on the environment due to parking. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P63-4

Refer to Response to Comment P7-2. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P63-5

Refer to Response to Comment P7-2. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P63-6

The comment is accurate. However, as stated in Draft EIR Section 3.6.4 *Energy Sources,* on page 3.6-31, "The project would be serviced by the Ava Community Energy, which will source all of its power from renewable resources by 2030. The analysis conservatively assumes the CalEEMod estimated emissions from electrical consumption for the project operations in 2028 would also occur in 2029 with a jump to 100 percent renewable electricity in 2030. In addition, for purposes of energy-related GHG emissions

modeling, the project is assumed to stay in its initial automatically enrolled Ava Renewable 100 plan." Therefore, the analysis includes carbon emissions from non-renewable electrical sources for the two years where AVA energy would not be 100 percent renewable. The analysis conservatively assumes a carbon content for current year rather than estimating a future year. Therefore the analysis, as provided, accurately accounts for energy consumption emissions. No Draft EIR changes are necessary in response to this comment.

Response to Comment P63-7

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the mode split used for the project and the analysis in the Draft EIR.

Regarding the comment that ferry vessels will need to be faster to remain marketable, ferry vessels will not operate at higher speeds to compensate for time required to find a parking space. The analysis and significance conclusion presented in the Draft EIR remains valid as written in the Draft EIR. No revisions are required.

Response to Comment P63-8

Refer to Impact TRA-2 in Section 3.12, *Transportation* of the Draft EIR (pages 3.12-20 to 3.12-21) for a discussion of the VMT analysis performed in the Draft EIR. Refer also to Section 2.2.27, *Topical Response: VMT,* for a discussion related to transit-to-transit mode shifts.

Response to Comment P63-9

Refer to Table 2 in Appendix F of the Draft EIR, which identifies the various ways in which people are expected to access the project site.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Subject: Berkeley Engineering Students' Comment Letter on Berkeley Pier with Ferry Access Project

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza McNulty,

I hope you are well. I am Shyla, a freshman studying at Berkeley's College of Engineering. I am writing to you on behalf of my fellow engineering students and I. As a part of our course on Engineering, Ethics, and Society (ENGIN 125), we completed a Civic Engagement Project. Our group read the EIR for the "Berkeley Pier with Ferry Access Project" and wanted to submit our comments regarding some of the points of impact discussed in the report. Attached is our comment letter. Please let me know if you have any questions or thoughts. Thank you for your time.

P64-1

Best regards,
— Ardyn Henry, John Do, Kina Li, and Shyla Gupta

E125 Engineering Ethics — Public Comment Letter

Re: Public Comment on the Draft Environmental Impact Report for the Berkeley Water Transportation Pier Ferry Project

To the City of Berkeley and Responsible Agencies:

We are undergraduate engineering students at the University of California, Berkeley submitting this comment as part of a course on engineering, ethics and society (ENGIN 125). We have reviewed the Draft Environmental Impact Report for the Berkeley Water Transportation Pier Ferry Project and want to submit the following comments in the interest of improving the accuracy of the environmental review under the California Environmental Quality Act. We support the project's goals of reducing car dependency and expanding sustainable transportation. We hope to strengthen the analysis through our commentary, not oppose the project.

P64-2

Comment 1: Marine Life Impacts

Marine Life Impacts Section 3.3, Biological Resources, pp. 3.3-1 through 3.3-66

Claim 1: The eelgrass surveying method is outdated

Eelgrass (*Zostera marina*) are an extremely beneficial organism to marine ecosystems, especially in bays and estuaries (areas impacted by the ferry project). The EIR addresses this claim by stating that there was no Eelgrass in the project footprint as of baywide surveys in 2003, 2009, and 2014. However, the most recent survey data used to determine whether there is eelgrass is over a decade old, and does not represent the current state of the ecosystem. Small changes in water quality or temperature can change the distribution and growth of eelgrass. In fact, immediately after, the EIR states that there is a possibility that a portion of the project footprint that lies in sandy regions may be a potential site of eelgrass growth. This suggests that the city is unaware of what regions eelgrass actually currently inhabits. When harm can be reduced, it should be. This is a fundamental responsibility of engineers. The city shouldn't build upon this engineering project just because those who are affected cannot say so.

P64-3

We recommend that the city do a thorough, pre-construction survey of eelgrass, determining where it resides currently, and where are potential growth spots for it in the future. The city should only go forth with the plan if no significant eelgrass habitats are being affected.

If the construction footprint does in fact infringe on current eelgrass habitats, the city should modify the plan, or at least acknowledge the impact and try to mitigate the downsides of this in some other way. P64-4

Claim 2: The noise impact on marine mammals is inadequately analyzed

The EIR discusses how the noise levels of pile driving, an important step in the construction process, is "potentially significant" for marine mammals (such as seals, sea lions, porpoises, and dolphins). In order to decrease the impact to "less than significant", the EIR proposes that construction will begin slowly and that there will be exclusion zones around the construction site (BIO-1(d)). Essentially, the pile driving will start softly, slowly, and at low intensities, giving animals time to migrate. Additionally BIO-1(d) promises a Marine Mammal Mitigation Plan (MMMP): trained workers will watch for mammals who cross into the construction site and then halt construction accordingly. However, there is no concrete plan or details as to what the MMMP contains and how it will be carried out. P64-5

While the city has good intentions to protect marine mammals, we recommend that the Final EIR contain a detailed MMMP document, along with ways to enforce it, so we can ensure their safety and wellbeing. A sufficient MMMP will include the following at a minimum:

- Where the exclusion zones are and how large each zone is
- How many monitors are required (per site)
- The training/qualifications required for each monitor
- Specific instances and conditions under which pile driving construction must halt
- Conditions/timeframe under which construction can begin again
- Protocols and procedures for if a casualty or emergency occurs

P64-6

Without a detailed MMMP, the true reduction from "potentially significant" to "less than significant" cannot be justified.

Comment 2: Construction Impacts

Air Quality Section 3.2, pp. 3.2-27 to 3.2-28; Section 3.6, pp. 3.6-34 to 3.6-35; Table 3.2-7/3.2-8

Claim 1: Air quality analysis relies on averaged emissions that may underestimate peak impacts

P64-7

The EIR concludes that construction-related air pollutant emissions would not exceed what is reasonable and so results in less-than-significant impacts. This conclusion relies on annual and average daily emission estimates presented in Tables 3.2-7 and 3.2-8, which show

that modeled estimates of pollutants such as NOx, PM10, and PM2.5 remain below established thresholds. This conclusion relies on annual and average daily emission estimates, which may obscure short-term peak emissions generated during high-intensity construction activities such as pile driving, dredging, and demolition. These activities occur intermittently, but can produce concentrated bursts of pollutants over short time periods, particularly when multiple pieces of heavy equipment are operating simultaneously. Because the tables present emissions as averaged values, they do not clearly indicate whether emissions during specific constriction phases or peak activity periods exceed those thresholds. This is particularly relevant for pollutants such as PM2.5, which are associated with short-term exposure risks. Averaging emissions over longer timeframes may not accurately represent real-world exposure conditions, so as a result, the analysis may underestimate localized air quality impacts experienced by nearby people during certain phases of the project.

P64-7

Under the California Environmental Quality Act, conclusions of less-than-significant impacts must be supported by substantial evidence and a good faith effort at full disclosure. We recommend that the Final EIR evaluate worst-case, short-term emission scenarios during peak construction activity, including periods of simultaneous equipment operation. This analysis should also identify which construction phases contribute most significantly to emissions and compare those peak conditions to the applicable thresholds. Providing this analysis would improve transparency and ensure that temporary but potentially significant exposure events are adequately considered and mitigated.

P64-8

Claim 2: Construction noise analysis does not adequately address peak noise and vibration from pile driving

The EIR states that construction noise impacts would be less-than-significant with implementation of standard mitigation measures, and that vibration impacts would also be less-than-significant. The analysis describes general construction noise sources and identifies commonly used mitigation practices such as equipment controls and operational limits. In a similar issue as above, it appears to focus primarily on average noise levels and does not fully evaluate high-intensity, short-duration noise events such as impact pile driving. These activities are known to generate sharp, intermittent noise spikes and ground vibrations that can exceed established thresholds even if average noise levels remain within acceptable limits. For example, impact pile driving can generate peak noise levels exceeding 90 dBA at close distances, which are not reflected in average noise metrics. The EIR does not clearly quantify maximum noise levels, duration of peak events, or the extent of vibrational impacts.

P64-9

The Final EIR should quantify peak noise and vibrational levels from pile driving, including maximum sound levels, duration, and frequency of these events. This analysis should

P64-10

include estimated peak noise levels and vibration levels compared to the acceptable limits. It should also incorporate specific, enforceable mitigation measures, such as restrictions on pile driving hours, use of noise attenuation technologies, and vibrational monitoring, to ensure peak noise and vibration impacts are effectively reduced. P64-10 P64-11

Comment 3: Accessibility and Public Transit Connections

Transit Accessibility Section 2 (Project Description), pp. 2-12 to 2-13; Section 3.12, Transportation

Claim 1: The feasibility study relies on uncertain assumptions about ferry-bus coordination

The feasibility study suggests current infrastructure is sufficient, but adjustments must be made to improve public transit, such as the ones pertaining to the 51B line, in order to make the use of this transport an appealing and feasible option for riders departing from the proposed terminal. Given that this ferry has a main focus of providing an alternative to the typical commute with a personal vehicle, it still largely hinges on the coordination that can be made between the buses connecting to the terminal. However, with the inevitable inability to adhere to a strict schedule given the unforeseen or erratic events that happen on roadways, the syncing of the schedules with the bus and the ferry is a considerable hindrance for commuters who are under strict time constraints. The reliance on precise schedule coordination introduces uncertainty and may reduce the reliability of public transit as a viable alternative to personal vehicle use. P64-12

The Final EIR should evaluate bus-ferry coordination under real-world conditions, including delays, traffic variability, and schedule disruptions. This analysis should assess how these factors impact transit reliability and commuter wait times.

Claim 2: Bus waiting practices may increase emissions and create localized environmental impacts

The feasibility study of the project also proposes that buses should attempt to remain at the stop until the inbound ferry of passengers have disembarked, effectively making public transit more accessible, but this would incidentally create even more delays. This waiting idle at the marina poses an escalated risk factor pertaining to the ecosystem since the buses would be emitting harmful gases in immediate proximity to a waterfront simply to provide convenience to the commuters. These increased idling periods may result in additional localized air quality impacts that are not clearly accounted for in the EIR. In particular, emissions from P64-13

diesel-powered buses during extended dwell times could contribute to higher concentrations of pollutants such as particulate matter and nitrogen oxides.

The Final EIR should evaluate emissions associated with increased bus idling at the marina and quantify their contribution to localized air pollution. It should also incorporate mitigation measures such as strict idling limits or alternative passenger boarding strategies. These measures would help reduce emissions while maintaining accessibility to the terminal. P64-13

Claim 3: Assumptions about increased transit frequency and shuttle alternatives may be financially and operationally unrealistic

Although increasing the frequency of the 51B could be a potential mitigation approach, this seems to be operationally speculative given the recent budgeting issues as stated by an AC Transit press release which details a plan that "could result in considerable service cuts and layoffs"[1]. With this new information coming from the public transportation itself, the assumed compliance of the bus to the schedule of the ferry is not easily viable and could compromise the use of public transportation as a means of getting to the terminal. If this barrier of time constraints poses a big enough risk to the commuters, there might be an incentive to use some personal vehicles. Later in feasibility studies, there is a mention of using shuttles rather than the bus that runs to the marina; this in theory would increase frequency and avoid the reliance on a singular bus line to transport passengers. This could increase the productivity of the terminal; however, it also seems to not consider the potential high costs of opening a new shuttle line as the existing lines mentioned in the studies operate without fares and ultimately would require even more funding from the public on transportation. As a result, the EIR may overestimate the feasibility of and reliability of transit-based access to the terminal, which could undermine the project's goal of reducing personal vehicle use. P64-14

The Final EIR should include a realistic assessment of transit service improvements based on current funding and operational constraints, including whether increased bus frequency or shuttle services are financially feasible. This analysis should evaluate the likelihood of implementation and identify alternative access strategies if these improvements can not be achieved. P64-15

Comment 4: Greenhouse Gas Emissions and Energy

Section 3.6, Greenhouse Gas Emissions and Energy; Appendix B (CalEEMod calculations); Section 3.2, Air Quality, Tables 3.6-4 and 3.6-5; Section 5.9, Alternatives Considered but Rejected; Alternative 1 (No Project) GHG analysis

Claim 1: The feasibility study does not include embedded carbon of the construction materials in its greenhouse gas calculations, which underestimates the true GHG emissions of the project

The Draft EIR calculates construction-phase GHG emissions using CalEEMod, amortizes them over a 30-year project lifetime, and concludes that construction-related GHG impacts are less than significant when viewed alongside projected operational emission reductions attributable to replacing transbay vehicle trips with electric ferry service. The EIR states that GHG emissions from construction are primarily generated by internal combustion engines powering on-site equipment and by worker vehicle trips to and from the site. P64-16

The EIR's construction emissions analysis is materially incomplete because it accounts only for direct combustion emissions from construction equipment and worker commute trips. It does not assess the embodied carbon of the structural materials, such as concrete and reinforcing steel for 1,080 linear feet of pier, double-row pile foundations driven into the Bay floor, a breakwater structure, and associated floats and gangways. P64-17

The lifecycle greenhouse gas emissions associated with the extraction, manufacturing, transportation, and installation of construction materials is often a major source of GHG emissions from project construction, and may even exceed the cumulative operational emissions of construction equipment over the entire build period.

The EIR's net GHG benefit conclusion (that the project results in an overall reduction in greenhouse gas emissions) cannot be verified without embodied carbon data. The Final EIR should include a quantified embodied carbon analysis for all major structural materials, including concrete, reinforcing steel, composite decking, and pile materials, using a recognized lifecycle assessment methodology. This analysis should be incorporated into the net GHG emissions summary alongside construction equipment emissions and operational emission reductions. The City should also evaluate whether use of lower-carbon concrete mixes or recycled-content steel could meaningfully reduce the project's embodied carbon footprint, and commit to these material specifications as project conditions of approval where feasible. P64-18

Claim 2: The feasibility study does not adequately calculate the net reduction in GHG by overestimating the number of private automobile trips displaced from transbay drivers, and by not including GHG emissions from new drivers from induced demand caused by the ferry plaza. The EIR also assumes that Ava Community Energy will reach its 100% renewable goal by 2030 and that it will support the ferry project for its full operational lifespan. P64-19

The Draft EIR concludes that the project results in an overall net reduction in GHG emissions compared to the No Project alternative. This conclusion rests primarily on the finding that the 1,127 new daily trips to the project site represent vehicle trips displaced from transbay automobile travel — modeled as 1,127 round trips to San Francisco at an average of 25 miles per day each. The EIR also states that the project will be served by Ava Community Energy, which will source all power from renewable resources by 2030, and conservatively accounts for two years of non-renewable electricity consumption (2028–2029) before assuming 100% renewable generation for the remainder of the 30-year project life. On this basis, the EIR concludes that GHG and energy impacts are less than significant. P64-20

First, the EIR models all 1,127 daily ferry riders as having replaced private automobile round trips to San Francisco averaging 25 miles. However, the EIR's own transportation analysis acknowledges that "some of these trips might have shifted from commuters previously taking BART and Transbay bus services" (§3.12, p. 3.12-20). Despite this acknowledgment, the GHG model treats all 1,127 trips as fully displaced vehicle trips, with no adjustment for the share of riders who were already using zero-emission transit. Riders shifting from BART generate zero marginal GHG reduction, since BART operates on predominantly renewable electricity. The EIR should provide ridership survey data and comparable route mode-split analysis to support its modeling assumptions, and should adjust the net GHG benefit calculation to reflect the acknowledged share of transit-to-ferry shifts. P64-21

Second, the EIR does not address induced demand. The transportation section describes the project as generating "1,127 new trips per day to the project site" (§3.12, p. 3.12-20), while the GHG model treats those same 1,127 trips as eliminated San Francisco vehicle trips. New transit infrastructure (a public plaza, recreational pier, and enhanced waterfront access) will likely generate new trips that would not otherwise occur. Some portion of the 1,127 daily trips modeled as "ferry riders" will be people making entirely new transbay or waterfront trips, not people who were previously driving to San Francisco. New trips generate new VMT rather than displacing it. P64-22

Third, the EIR states that Ava Community Energy will achieve 100% renewable generation by 2030, and that for modeling purposes the project is assumed to remain enrolled in the Ava Renewable 100 plan for its entire operational life. However, the EIR should present sensitivity analysis showing what the net GHG outcome would be if Ava's renewable transition is delayed by two, five, or ten years, or if the project's electricity enrollment changes over time due to rate restructuring, regulatory changes, or policy shifts over the 30-year period. P64-23

The Final EIR should: (1) provide transparent modal shift assumptions supported by ridership survey data, WETA comparable-route mode-split analysis, or peer-reviewed transit P64-24

demand modeling and account for the share of riders likely shifting from BART or other zero-emission transit; (2) present a sensitivity analysis of net GHG outcomes under at a few scenario, such as 50%, 75%, and 100% of riders replacing private vehicle trips—to bracket a plausible range of climate benefit; (3) include an induced demand estimate quantifying the share of new ferry trips that represent entirely new transbay or waterfront travel rather than displaced vehicle trips; (4) present a renewable electricity sensitivity analysis showing net GHG emissions under delayed or partial Ava Community Energy renewable transition scenarios (2030, 2033, and 2037 transition dates); and (5) add a comparative GHG efficiency analysis benchmarking the project's cost-per-ton-of-CO_2-reduced against alternative transbay emission reduction strategies.

P64-28

Conclusion

We request that the Final EIR provide a substantive response to each comment raised above. If significant new analysis is added in response to these comments, we further request that the public be provided an opportunity to review the revised sections. We appreciate the City's commitment to environmental review and public participation in this process.

P64-29

Respectfully,

Ardyn Henry, John Do, Kina Li, and Shyla Gupta (UC Berkeley — ENGIN 125)
April 24, 2026

Letter P64

Commenter: Shyla Gupta, Ardyn Henry, John Do, Kina Li

Date: April 24, 2026

Response to Comment P64-1

These introductory statements provide context for the comments that follow. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P64-2

These introductory statements provide context for the subsequent comments. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P64-3

The Draft EIR utilized the most up to date publicly available eelgrass spatial data (Merkel and Associates 2004, 2009, 2014). Based on the best available data, there are no documented occurrences of eelgrass within the project site. No revisions to the EIR are necessary.

Response to Comment P64-4

The comment is noted; there are no reported eelgrass beds within 1,000 feet of the project site. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is required.

Response to Comment P64-5

The MMMP is described in Mitigation Measure BIO-1(e) *Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction*, and includes protection zones, vessel operation protocols, on-site monitoring and response, and adaptive management coordination. The Draft EIR discusses impacts to marine mammals under Impact BIO-1 in Section 3.3.4, Impacts Analysis (pages 3.3-48 through 3.3-54) and concludes that impacts would be less than significant with mitigation (Mitigation Measures BIO-1[a], BIO-1[d], and BIO-1[e]). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P64-6

The MMMP as described in Mitigation Measure BIO-1(e) is enforceable as part of the EIR MMRP, and details described above will be determined in consultation with NOAA NMFS during project permitting. The Draft EIR discusses impacts to marine mammals under Impact BIO-1 in Section 3.3.4, Impacts Analysis (pages 3.3-48 through 3.3-54) and concludes that impacts would be less than significant with mitigation (Mitigation Measures BIO-1[a], BIO-1[d], and BIO-1[e]). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P64-7

Table 3.2-7 and 3.2-8 show the estimated regional construction emissions to demonstrate significance with respect to cumulative considerable increases of criteria pollutants where the project is in a non-attainment area. These tables show the average daily emissions by year which is consistent with the thresholds of significance identified by the Bay Area Air District. The air quality analysis compares

construction emissions to the average daily and annual thresholds which are the thresholds designated by the Bay Area Air District in Table 3-1 *Air Quality Thresholds of Significance (Project Level)* in their 2022 CEQA Guidelines. The table specifically identifies thresholds for average daily emissions of construction related impacts. The Bay Area Air District states in Section 5.2.1 of the 2022 CEQA Guidelines: "The Air District provides project-level thresholds of significance for criteria air pollutants for which the SFBAAB is in non-attainment. These are the levels at which the Air District has determined that an individual project's contribution to the cumulative impact (non-attainment) is cumulatively considerable."

Tables 3.2-7 and 3.2-8 of the analysis are not intended to estimate localized impacts to air quality as the emissions of criteria pollutants identified in these tables satisfy the cumulatively considerable impacts question defined under CEQA, specifically question b which states would the project: "Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?" Therefore, the analysis is accurate as presented and no further analysis is needed.

Response to Comment P64-8

As discussed in Response to Comment P64-7, the Draft EIR air quality analysis compares project emissions with the recommended significance thresholds provided in the Bay Area Air District's 2022 CEQA Guidelines, which specifically refer to average daily emissions. The Draft EIR compares criteria pollutant emissions with regulatory thresholds in Impact AQ-2 starting on page 3.2-27 and concludes that emissions would be less than significant with the implementation of mitigation. The proposed project includes a conservative analysis of construction activities, assuming a conservative construction fleet and schedule that accounts for several construction phases occurring simultaneously. The proposed project's construction fleet can be found in Draft EIR Section 2.6.1 starting on page 2-25, and the construction schedule in Draft EIR Section 2.6.2 starting on page 2-28. Methodology for quantifying emissions is included in Draft EIR Section 3.2 starting on page 3.2-21. Therefore, the Draft EIR air quality analysis is accurate, and no changes to the Draft EIR air quality analysis, methodology approach, or significance conclusions is necessary in response to this comment.

Response to Comment P64-9

As shown on page 3.10-32 of the Draft EIR, construction noise impacts were determined to be Significant and Unavoidable, even with implementation of mitigation; therefore, this comment is inaccurate in stating that impacts were found to be less-than-significant. The construction noise analysis methodology in the Draft EIR was consistent with Federal Transit Administration (FTA) guidance. Nevertheless, to address this comment and to compare noise impacts to the City's maximum construction noise thresholds, maximum construction noise levels are presented as supplemental information. Maximum noise levels were calculated based on the loudest piece of equipment in each phase operating at the closest edge of respective work area relative to the nearest sensitive receptor using the FHWA Roadway Construction Noise Model (RCNM). Maximum noise levels for landside and waterside phases, as well as a comparison of noise levels before and after implementation of Mitigation Measure NOI-1 for each respective phase, are presented in the following tables. As shown in Tables 3.10-20 to 3.10-23, which have been added to the EIR (starting on Draft EIR page 3.10-28) for supplemental informational purposes, construction noise impacts would remain significant and unavoidable with Mitigation Measure NOI-1. The impact assessment, significance conclusions, and mitigation measure would be the same with the FTA and City's maximum construction noise thresholds. The analysis and significance conclusion presented under Impact NOI-1 in Section 3.10, *Noise*, of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Table 3.10-20 Maximum Landside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA L_{max})	Applicable Noise Threshold (dBA L_{max})[2]	Exceeds Threshold?
Demolition	10	At pier entrance	Skates on the Bay Restaurant[3]	215	72	70	**Yes**
			Nearest live-aboard boat[4]	620	63	65	No
Site Preparation	14	At Seawall Drive parking lot	Shorebird Park[5]	65	83	60	**Yes**
Grading	15	At public plaza	Shorebird Park[5]	150	75	60	**Yes**
			Nearest live-aboard boat[4]	640	63	65	No
Geotechnical Solutions	15	At public plaza	Shorebird Park[5]	100	79	60	**Yes**
			Nearest live-aboard boat[4]	615	63	65	No
Building Construction – Restroom	10	At public plaza	Shorebird Park[5]	100	79	60	**Yes**
			Nearest live-aboard boat[4]	615	63	65	No
Paving	20	Along University Avenue	Marina Offices[3]	35	93	70	**Yes**
			Nearest live-aboard boat[4]	295	75	65	**Yes**
Landscaping	15	Along Seawall Drive	Shorebird Park[5]	50	85	60	**Yes**
			Nearest live-aboard boat[4]	900	60	65	No
Amenities Installation	25	At public plaza	Shorebird Park[5]	100	84	60	**Yes**
			Nearest live-aboard boat[4]	615	68	65	**Yes**

dBA = A-weighted decibels; L_{max} = maximum sound level

[1] The distances from construction work areas to nearest sensitive receptors were determined from the closest edge of each work area relative to a nearby sensitive receptor.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime multi-family residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime multi-family residential and commercial limits are 65 dBA and 70 dBA, respectively.

[3] Note that while commercial uses (e.g., restaurants and offices) are not typically considered to be noise-sensitive receptors, these uses were included as sensitive receptors in the analysis as the City defines construction noise limits for commercial uses.

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA L_{max})	Applicable Noise Threshold (dBA L_{max})[2]	Exceeds Threshold?

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. This analysis conservatively assumes that the nearest live-aboard boat is situated at a location within the Marina that is nearest to proposed construction activity during each phase of construction.

[5] Note that the City does not define construction noise thresholds for parks or similar outdoor recreation spaces; however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., single-family residential land uses) of 60 dBA was used.

See Appendix E for construction noise modeling results.

Table 3.10-21 Comparison of Maximum Landside Construction Noise Levels at Nearby Sensitive Receptors by Phase With and Without Mitigation Measure NOI-1

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA L_{max})		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With MM NOI-1[1]		
Demolition	10	At pier entrance	Skates on the Bay Restaurant[3]	72	52	70	**Yes**
			Nearest live-aboard boat[4]	63	43	65	No
Site Preparation	14	At Seawall Drive parking lot	Shorebird Park[5]	83	63	60	**Yes**
Grading	15	At public plaza	Shorebird Park[5]	75	55	60	No
			Nearest live-aboard boat[4]	63	43	65	No
Geotechnical Solutions	15	At public plaza	Shorebird Park[5]	79	59	60	No
			Nearest live-aboard boat[4]	63	43	65	No
Building Construction – Restroom	10	At public plaza	Shorebird Park[5]	79	59	60	No
			Nearest live-aboard boat[4]	63	43	65	No
Paving	20	Along University Avenue	Marina Offices[3]	93	73	70	**Yes**
			Nearest live-aboard boat[4]	75	55	65	No
Landscaping	15	Along Seawall Drive	Shorebird Park[5]	85	65	60	**Yes**
			Nearest live-aboard boat[4]	60	40	65	No

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA L_{max})		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With MM NOI-1[1]		
Amenities Installation	25	At public plaza	Shorebird Park[5]	84	64	60	**Yes**
			Nearest live-aboard boat[4]	68	48	65	No

dBA = A-weighted decibels; MM = Mitigation Measure; L_{max} = maximum sound level

[1] Note that all noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for general construction activities.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime multi-family residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime multi-family residential and commercial limits are 65 dBA and 70 dBA, respectively.

[3] Note that while commercial uses (e.g., restaurants and offices) are not typically considered to be noise-sensitive receptors, these uses were included as sensitive receptors in the analysis as the City defines construction noise limits for commercial uses.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. This analysis conservatively assumes that the nearest live-aboard boat is situated at a location within the Marina that is nearest to proposed construction activity during each phase of construction.

[5] Note that the City does not define construction noise thresholds for parks or similar outdoor recreation spaces; however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., single-family residential land uses) of 60 dBA was used.

See Appendix E for construction noise modeling results.

Table 3.10-22 Maximum Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA L_{max})	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
Demolition	50	At pier entrance	Shorebird Park[3]	150	85	60	**Yes**
			Nearest live-aboard boat[4]	670	72	65	**Yes**
Dredging	83	At pier entrance	Shorebird Park[3]	150	75	60	**Yes**
			Nearest live-aboard boat[4]	670	62	65	No
Pile Installation	49	Along pier	Shorebird Park[3]	150	85	60	**Yes**
			Nearest live-aboard boat[4]	670	72	65	**Yes**
Deck, Float, and Gangway Construction	120	At pier entrance	Shorebird Park[3]	150	80	60	**Yes**
			Nearest live-aboard boat[4]	670	67	65	**Yes**

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA L_{max})	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
Amenities Installation	95	At pier entrance	Shorebird Park[3]	150	75	60	**Yes**
			Nearest live-aboard boat[4]	670	62	65	No

dBA = A-weighted decibels; L_{max} = maximum sound level

[1] All equipment in each waterside construction phase was conservatively assumed to operate near the pier entrance, as this represents the closest location where construction activity may occur relative to nearby sensitive receptors.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] Note that the City does not define construction noise thresholds for parks or similar outdoor recreation spaces; however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., single-family residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

See Appendix E for construction noise modeling results.

Table 3.10-23 Comparison of Maximum Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase With and Without Mitigation Measure NOI-1

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA L_{max})		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With MM NOI-1[1]		
Demolition	50	At pier entrance	Shorebird Park[3]	85	75	60	**Yes**
			Nearest live-aboard boat[4]	72	62	65	No
Dredging	83	At pier entrance	Shorebird Park[3]	75	55	60	No
			Nearest live-aboard boat[4]	62	42	65	No
Pile Installation	49	Along pier	Shorebird Park[3]	85	75	60	**Yes**
			Nearest live-aboard boat[4]	72	62	65	No
Deck, Float, and Gangway Construction	120	At pier entrance	Shorebird Park[3]	80	60	60	No
			Nearest live-aboard boat[4]	67	47	65	No

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA L_{max}) Unmitigated	With MM NOI-1[1]	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
Amenities Installation	95	At pier entrance	Shorebird Park[3]	75	55	60	No
			Nearest live-aboard boat[4]	62	42	65	No

dBA = A-weighted decibels; MM = Mitigation Measure; L_{max} = maximum sound level

[1] Note that all noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for phases consisting of general construction activities (i.e., dredging, deck, float, and gangway construction, and amenities installation) and 10 dBA of noise reduction for phases consisting of pile driving activities (i.e., demolition and pile installation).

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] Note that the City does not define construction noise thresholds for parks or similar outdoor recreation spaces; however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., single-family residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

See Appendix E for construction noise modeling results.

Response to Comment P64-10

As discussed in the Environmental Setting Section (page 3.10-5), the peak particle velocity (PPV) is a vibration metric used to describe the maximum peak of a vibration signal. All vibration levels presented in the construction vibration analysis are expressed in terms of PPV, therefore, already represent maximum vibration impacts. No revisions to the EIR are necessary.

Response to Comment P64-11

Mitigation Measure NOI-1 (discussed on pages 3.10-31 and 3.10-32 of the Draft EIR) to reduce construction noise impacts already includes such measures, which would also reduce construction vibration levels, including the following:

- With approval of the project structural engineer, landside pile holes shall be pre-drilled to minimize the number of impacts necessary to seat the pile, where feasible.
- Pile driving shall be scheduled to have the least impact on nearby live-aboards or houseboats.
- Applicable pile driving noise control devices shall be integrated to the extent feasible to conduct both landside and in-water pile driving. These may include, but are not limited to, shrouding the pile hammer point of impact, by placing resilient padding directly on top of the pile cap, and/or by reducing exhaust noise with a sound-absorbing muffler.
- Alternatives to impact hammers, such as oscillating or rotating pile installation systems, shall be used where possible for landside pile driving.

Due to the sufficient distance between areas where pile driving would be conducted and the nearest structures (200+ feet), adverse vibration impacts are not expected due to the fact that vibration levels rapidly attenuate with distance from the source (even assuming maximum equipment vibration levels). Vibration monitoring is not considered necessary in this case. The analysis and significance conclusion

presented under Impact NOI-1 in Section 3.10, Noise, of the Draft EIR remains valid as written. No revisions to the EIR are necessary.

Response to Comment P64-12

The City acknowledges the commenter's concern regarding coordination between ferry and bus services. However, CEQA requires an EIR to evaluate a project's potentially significant physical effects on the environment (CEQA Guidelines Sections 15126.2 and 15358). The comment concerns the operational reliability, scheduling, and convenience of transit connections, which are service-planning and operational considerations rather than physical environmental impacts. Accordingly, CEQA does not require the Draft EIR to model future bus-ferry wait times, transit scheduling adjustments, or the effects of routine traffic delays and schedule disruptions on individual transit users.

Nonetheless, the City recognizes the importance of providing effective multimodal connections to the proposed ferry service. As described in Draft EIR Chapter 2, *Project Description*, the proposed project includes improvements to AC Transit facilities serving the Waterfront, including an upgraded bus loading area, improved pedestrian connections between the bus stop and ferry terminal, enhanced bicycle and pedestrian infrastructure, and accommodations that would support future transit service enhancements (see Section 2.5.2, page 2-12 and Figures 2-7 through 2-10). The design of these facilities was developed in coordination with AC Transit and is intended to improve connections between existing bus service and the proposed ferry terminal.

Ferry and bus schedules would continue to be developed, adjusted, and coordinated by the respective agencies during implementation and operation of the project, and the City will continue coordination with AC Transit and other transportation providers as project design advances. While traffic incidents, delays, and other unforeseen events can affect transit operations, such conditions are inherent to transportation systems generally and are not environmental impacts caused by the proposed project.

The comment does not identify a physical environmental impact that was omitted from the Draft EIR. The Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment P64-13

The increased bus idling identified by the comment is associated with a feasibility study and is not part of the project as proposed. Bus frequency and timing is detailed in Draft EIR Section 2.5.2 on page 2-12 and shows that bus frequency would be two buses every hour at the waterfront between 7 a.m. and 9 p.m. The project as proposed provides updates to existing bus stops but does not identify or propose an increase or change in frequency of bus service or the extension of bus idling at this location. In addition, the bus fleet is currently 30 to 40 percent zero-emission buses with a plan in place to have a full zero-emission bus fleet by 2040 or sooner. Therefore, by the time the project starts operation in Year 2028, the number of zero-emission buses would be closer to 44 percent (assuming a straight-line progression and integration of zero emission buses between 2025 and 2040; this is a conservative assumption since AC transit is anticipating a full zero-emission bus fleet prior to 2040[58]. Therefore, as the project is not designed to increase bus on-road vehicle trips or extend the stop time for buses at this location, the Draft EIR air quality analysis as presented is accurate, and no changes to the Draft EIR are necessary in response to this comment.

Response to Comment P64-14

The City acknowledges the commenter's concerns regarding the long-term funding and operation of transit services. However, CEQA requires an EIR to evaluate a project's potentially significant physical effects on the environment in accordance with the impact significance thresholds presented in Appendix G of the CEQA Guidelines. The financial viability of third-party transit providers or future transit service funding decisions represent economic considerations outside of the scope of CEQA analysis (CEQA

[58] AC Transit 2026. *Zero Emission Program* https://www.actransit.org/zeb.

Guidelines Sections 15126.2 and 15358). Accordingly, the Draft EIR evaluates the environmental impacts of the proposed project and does not determine future funding decisions by AC Transit, WETA, or other transit operators. Such issues are not environmental impacts under CEQA unless they would result in a reasonably foreseeable physical environmental effect, and are appropriately not analyzed as such within the Draft EIR. For further discussion of CEQA's treatment of funding and economic considerations, please refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

As described in Chapter 2, *Project Description* (see Section 2.5.2, page 2-12 and Figures 2-7 through 2-10), the project includes improvements to transit facilities serving the Waterfront, including enhancements to AC Transit passenger facilities, improved pedestrian connections between transit stops and the ferry terminal, bicycle and pedestrian improvements, and design accommodations that would facilitate future transit service enhancements should they be implemented by the responsible agencies. These improvements were developed through coordination with AC Transit and are evaluated as part of the proposed project.

To the extent the comment references potential future shuttle service and increased bus service frequency, shuttle service is not part of the proposed project and as such is not evaluated within the impact analyses presented in the Draft EIR. As discussed in the City's Parkign and TDM Plan (page 29), shuttle service is identified only as a potential future transportation demand management (TDM) strategy that could be considered if warranted by future conditions, rather than a feature of the proposed project evaluated in the Draft EIR. Whether transit operators elect to implement increased service frequency, shuttle service, or other operational changes would be determined through separate planning, operational, and funding processes independent of the proposed project analyzed in the Draft EIR. However, the City continues to pursue strategies intended to reduce single-occupancy vehicle travel and support multimodal access to the Waterfront. These efforts are intended to support a range of transportation alternatives while maintaining flexibility as conditions evolve.

The comment does not identify a physical environmental impact that was omitted from the Draft EIR. The Draft EIR remains valid as written. No revisions are required.

Response to Comment P64-15

The City acknowledges the commenter's concern regarding the potential effect of future transit funding constraints on access to the proposed ferry terminal. However, as described in Response to Comment P64-14, CEQA requires an EIR to evaluate a project's potentially significant physical effects on the environment, rather than the future funding decisions, service levels, or operational priorities of third-party transit providers (CEQA Guidelines Sections 15126.2 and 15358).

Refer also to Responses to Comments P64-12 and P64-14 regarding transit service coordination and future service enhancements.

To the extent the comment requests that the Final EIR evaluate alternative access strategies should such future transit enhancements not occur, the Draft EIR does not assume shuttle service or increased AC Transit service frequency as components of the proposed project (see Response to Comment P64-14).

The comment does not identify a physical environmental impact that was omitted from the Draft EIR. The Draft EIR remains valid as written. No revisions are required.

Response to Comment P64-16

The comment is accurate as stated. The comment provides facts and a statement and does not ask a question or challenge the analysis. Therefore, no additional discussion is needed.

Response to Comment P64-17

According to the California Air Resources Board (CARB) and California Office of Land Use and Climate Innovation (LCI), a project under CEQA, is defined to include, "the whole of an action, which has a

potential for resulting in either a direct physical change in the environment or a reasonably foreseeable indirect physical change in the environment." (CEQA Guidelines, § 15378, subd. (a).[59]) Further the Guidelines state that construction emissions may include construction equipment onsite, trucks hauling materials to and from the site, and worker commute trips, all of which are included in the Draft EIR analysis (see methodology approach discussion on Draft EIR page 3.6-30 and specific thresholds of significance on Draft EIR page 3.6-33). The issue with lifecycle analysis in a project-level EIR is that emissions are then double counted and attributed to a project when it has already been attributed to the operational activities of the facility producing said material. Therefore, as the emissions sources used in the Draft EIR construction analysis are consistent with the sources recommended for use by CARB and LCI, the analysis is adequate as presented, and no further analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-18

As stated in Response to Comment 64-17, the emissions sources evaluated in the construction scenario are consistent with what is recommended by CARB and OPR. A lifecycle analysis is not required in a project-level EIR under CEQA, as it double counts emissions that are already attributed to other facilities. This would inappropriately overburden projects with reducing GHG emissions that a project has no direct influence over (such as the manufacturing process of materials). Further, the specific detailed type of material used during construction is typically decided by a construction contractor and needs of the individual project that do not typically occur until after a project has undergone CEQA approval, or a material type is a significant component of the project and, therefore, would be analyzed as part of follow-on analysis if could result in significantly greater environmental impacts during construction or operation. Given the nature of GHG emissions and following recommendations by CARB and LCI for GHG emissions sources to be analyzed during construction, the Draft EIR GHG analysis is adequate as identified and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-19

See Section 2.2.27, *Topical Response: VMT*, for a discussion of how the proposed project would result in a net reduction in regional VMT. The Draft EIR GHG emissions analysis for vehicle trips is based on the Technical Memorandum dated January 16, 2026, and provided as Draft EIR Appendix F. This analysis is by a qualified transportation engineer that substantiates the vehicle trip assumptions used in the analysis. Additionally, Draft EIR Section 3.12 *Transportation* documents the reduction in VMT that is used in the report as discussed in Response to Comment P36-116. The analysis is adequate as presented (see methodology approach discussion on Draft EIR page 3.6-32), and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-20

The comment is accurate as stated. The comment provides facts and a statement that the project GHG emissions and energy impacts would be less than significant and does not ask a question. Therefore, no additional discussion is needed. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-21

The discussion of accounting for the full 1,127 trips is detailed in Response to Comment O10-188. As discussed in the Kittleson report where the 1,127 trips is provided, shows that these trips do not include person trips that would change mode from BART or other non-personal vehicle transportation modes to the ferry. Therefore, the analysis is accurate as provided, and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

[59] OPR and CARB. 2023. *CEQA 202 Series Greenhouse Gas Emissions*. http://lci.ca.gov/wp-content/uploads/20230517-CEQA_202_GHGAnalysis_Slides.pdf, accessed June 18, 2026.

Response to Comment P64-22

The City of Berkeley VMT Guidelines generally do not consider trips associated with public parks to be a substantial contributor to VMT because such facilities primarily serve local residents and typically generate relatively short trips.[60] The underlying assumption is that the demand for parks already exists, but the residents are either going to parks elsewhere or the available park at the Waterfront. Expansion of public park facility at the waterfront, which already has parks will provide better service to the existing users. Therefore, the development will not result in VMT impacts. In contrast, the project would provide a ferry alternative for transbay commuters, many of whom would otherwise travel by personal vehicle. By shifting a portion of these longer-distance trips from automobiles to ferry service, the project would reduce vehicle travel and result in an overall reduction in VMT.

Response to Comment P64-23

The analysis is based on currently known and anticipated occurrences at the time the analysis was completed. Based on AVA's own information, they are on track to meet the 2030 100 percent renewable goal and therefore the analysis is adequate as presented. Additionally, CEQA requires the analysis of a project under current or known future conditions and does not require analysis of speculative occurrences. It would be speculative to try to predict future enrollment changes or shifts in regulatory programs over a thirty-year operational period. Therefore, the analysis is not required to provide additional analysis to account for potential speculative conditions. Therefore, the analysis is accurate as presented, and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-24

Refer to Section 2.2.27, *Topical Response: VMT*, for a detailed discussion of the mode split assumptions used in the Draft EIR, transit-to-transit mode shifts, and the data used to substantiate these topics. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P64-25

As detailed in Response to Comment O10-188, the analysis is based on a transportation analysis by Kittleson & Associates, Inc. The GHG analysis is consistent with the traffic study and therefore is consistent with the requirements under CEQA to adequately analyze a project's GHG emissions. The analysis identifies emissions reductions from the anticipated 1,127 vehicle trips that would be replaced with ferry trips and accounts for the net difference in VMT traveled. Therefore, the analysis is accurate as presented, and no additional analysis is required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-26

Refer to Response to Comment P64-22 and Section 2.2.27, *Topical Response: VMT*. As stated in page 3.12-21 of the Draft EIR, this project would contribute to a net reduction in vehicle based VMT. Because the project would reduce regional VMT, the project would result in no net increase in VMT impact and would in fact provide a regional benefit by reducing VMT. Few new trips are anticipated as the majority of trips would be displaced vehicle and other trips between Berkeley and San Francisco.

The comment does not identify a physical environmental impact that was omitted from the Draft EIR. The Draft EIR remains valid as written. No revisions are required.

[60] City of Berkeley. 2020. *Vehicle Miles Traveled (VMT) Criteria and Thresholds.* June 29, 2020. Available: https://berkeleyca.gov/sites/default/files/2022-02/VMT-Criteria-and-Thresholds.pdf (accessed July 10, 2026).

Response to Comment P64-27

As detailed under Response to Comment P64-23, the analysis is based on currently known and anticipated occurrences at the time the analysis was completed. Based on AVA's own information, they are on track to meet the 2030 100 percent renewable goal and, therefore, the analysis is adequate as presented. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-28

A discussion on why a comparative GHG efficiency analysis is not required is detailed in Response to Comment P47-19. As discussed in the Draft EIR analysis, GHG emissions and energy consumption impacts are analyzed with respect to CEQA and Bay Area Air District methodologies and thresholds (see methodology approach discussion on Draft EIR page 3.6-30). Therefore, additional analysis is not required. No Draft EIR changes are necessary in response to this comment.

Response to Comment P64-29

Refer to Response to Comments P64-1 through P64-28 for responses to individual comments. Prior to the City Council making a decision related to EIR certification and project approval, the Final EIR will be published, which will include response to all comments received during the Draft EIR public review period, as well as any changes made to the Draft EIR. The public will be afforded the opportunity to review responses to comments and changes to the EIR prior to the City Council making a decision.

Subject: Why do we need a Berkley-SF Ferry?

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi Liza

I really do not understand why we need yet another ferry service that is under-used to get to San Francisco. I speak as a home and car owner who lives in San Francisco and visits Berkley at least once a week. There is a decent BART station that is close enough to Berkley that gets to San Francisco pretty quickly. There are TWO OTHER ferry stops in East Bay Alameda & Jack London Square both of which go to Embarcadero and South San Francisco. What would this new service offer? P65-1

To think the city of Berkley is thinking of spending 170 MILLION dollars on this sounds UTTERLY wild. There were ~800 unhoused people in Berkley in 2024, can you imagine what 170 million dollars would mean in terms of building housing for these 800 people? It would be such a better use of the money. I know money is not interchange-able once allocated but it might even be put to work on offering some free shuttle services to the BART station for Berkley users instead of a Ferry! P65-2

I am also a birder and I cannot imagine displacing the only non-human spot that these birds have with even more frequent ferries between here and SF. I would highly recommend finding profitability for existing ferry services instead of offering yet another ferry service that nobody is going to use (I can guarantee the car owners are NEVER going to use it). P65-3

Letter P65

Commenter: Divya Manian

Date: April 24, 2026

Response to Comment P65-1

The need for the project is identified in the Project Objectives, which are included in page 2-4 of the Draft EIR. The Project Objectives identify that ferry service would help improve regional connectivity and resiliency with enhanced public transportation choices for East Bay residents, including for accessing jobs in San Francisco and other locations along the Bay for commerce and recreational purposes, and to address existing deficiencies in the Transbay transportation network; reduce the use of single-occupancy vehicles for Transbay trips, thereby reducing greenhouse gas and air quality emissions and decreasing congestion on the regional roadway system, consistent with regional and Statewide goals; and provide options for emergency response and transportation services in case of an emergency, such as a natural or human-caused event that disables roads, other transit, bridges, and/or tunnels.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P65-2

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. Nevertheless the comment has been included in the project record considered by City decision makers. No further response or revisions to the EIR are required.

Response to Comment P65-3

Wildlife species temporarily displaced by the project have the wider San Francisco Bay to occupy. The Draft EIR analysis presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-44, concludes less than significant impacts to wildlife species with implementation of mitigation (Mitigation Measures BIO-1, HYD-1, and AES-1) and remains valid. No changes to the Draft EIR are necessary in response to this comment.

max ebb **to the guillotine**

"The trouble with democracy is that there are never enough weekday evenings."

I'm not sure who first said that, but it rings true. My local Harbor Commission, Planning Commission, Transportation Commission, and City Council all expect citizens to exercise their right to participate in City government at evening sessions that fill up the calendar and usually run late.

Despite this state of affairs, there was a surprisingly good turn-out at the last Harbor Commission meeting. After I filled out a speaker's card and turned around to find a seat, I was surprised to see Lee Helm in the front row.

"Like, what brings you here?" she asked as I took the empty seat next to her. It seems that even when a meeting room is crowded, people tend to avoid that front row. But I like it, and so does Lee.

"Rate hikes in the marina," I said. "Someone needs to tell these people that if they're going to raise our fees, the least they can do is fix the broken docks. But Lee, you don't even have a boat, why are you here?"

"This is way more important than a few more pesos on your monthly marina bill," she answered. "It like, threatens the waterfront as we know it. We have a whole coalition mobilized to oppose this train wreck."

P66-2

"What train wreck?" I asked. "And why don't I know about it?"

"The ferry terminal," she sighed. "Don't you read the comments in the local online paper?"

Before Lee had a chance to explain what was so terrible about a new ferry terminal, the meeting came to order and small talk was cut off. After some formalities, the first speaker, Armanda Legg, was called to the lectern.

"The Ferry Authority says this is about equity," the young man began his commentary. "They say that it will open up the downtown job market to people in the non-wealthy neighborhoods near the harbor. That's pure fantasy. By the Ferry Authority's own data, 90% of their passengers earn above median income, and 40% are above two hundred K."

"I could have told them that," I whispered to Lee. "It's not the same crowd that rides the bus."

"Look at the per-ride subsidy level." Armanda continued. "The operating subsidy alone is 33 dollars per ride. That's per one-way ride. Every time some tech bro commutes to the City and back, it's like they get a check for 66 bucks. And that's just operating subsidy – crank in the capitalization of a 120 million dollar terminal, two fast diesel ferries at 30 million apiece, and about 15 million the City is expected to pay for shoreside improvements. Depending on the interest rate you choose, the total subsidy could top a Franklin each day. It's nuts. It's as far from equity as public policy could ever be. Especially when transit ridership all over the state is in trouble."

"But we need to reduce congestion on the bridges," one of the Commissioners interrupted, making a gesture with her hands that seemed to say "what else can we do?"

"Do what they did in New York," replied the speaker. "They changed one lane of the Holland Tunnel to Busses and carpool only, and peak throughput increased by 20,000 commuters per hour on that one lane. Think how many ferries it would take to do that! Want equity? Spend the money where it's needed and where it does some good, on buses and rail. Want poor folk to have a way to get out on the water? Fix the fishing pier. Don't choke off access to the pier and the low-cost boating clubs with a parking crunch. That will ruin water access for everyone who's not a ferry passenger. Thank you."

"We built a six million dollar bike overpass," remarked one of the Commissioners before the next speaker reached the microphone. "And there's excellent bus service to the Marina."

Lee was called up next.

This is, like, all about carbon," Lee began. "A typical modern fast ferry, the ones run by our Ferry Authority, uses fuel at a rate of about 2300 BTU per passenger-mile. For liquid petroleum fuels, carbon footprint is about proportional to fuel consumed, 2300 BTU per passenger mile," Lee repeated, then introduced herself to the Commission as a naval architect who loves ships, loves ferries, and can do this kind of math.

"Pop quiz," she challenged the Commissioners. "What do you think is the fossil fuel energy per mile for a transbay commuter bus? Anyone?"

The Commissioners were not used to having quizzes sprung on them during public comment sessions, but eventually one of them tried to answer.

"Probably less than half what the ferry burns," he conjectured thoughtfully. "If the ferry is at 2300, I'll say a thousand BTUs per passenger-mile for the bus."

"Too high," said Lee.

"Five hundred?" suggested another public servant. "That's closer to a fifth what a ferry uses." P66-2

"Still too high," Lee said. "The number is just 130 BTU per passenger-mile. And like, the new ferries on order, with two already delivered, have twin 2557 horsepower diesels and carry 320 passengers at 36 knots. Works out to 2719 BTU per passenger-mile. That's, like, 21 times the carbon footprint, per passenger, compared to the bus. Then there's rail transit at 68. Per passenger-mile, the ferry emits 38 times as much CO2 as a commuter train."

The numbers seemed exaggerated, but I was pretty sure Lee could back them up.

"How long do you think we'll be running these carbon-spewing beasts?" Lee continued. "A ferry has a useful life of like, 30-40 years. Can you think not-so-far into the future?" she asked the Commission. "Do you think in just 12 years when half of all cars sold in the state are supposed to be electric, or in 27 years when the state is supposed to be carbon-neutral, do you think those diesel boats will be anything but an embarrassment?"

"Now wait a minute," said the interrupting Commissioner. "The new boats have 'Tier 4' emission controls, the highest standard. And the Ferry Authority has promised electric boats on this route, not diesels."

"But all their projections for like, cost, performance, speed, and ridership are based on the diesel ferries. They refuse to do the math for electric, because they know it would require scaling things back a lot and in the short run cost more. Electric is not consistent with the big shiny new terminal and 300 passengers every half hour; It's what I call the 'Edifice Complex' that's driving this project. For sure, Tier 4 removes most of the particulates, but does nada about CO2. Our City is about to prove to the world that it can't follow it's own stated climate priorities."

Lee was not done with them, but she was almost out of time.

"And now, like, the worst part of this: There's this parking problem. They project 2,000 passengers a day, but only have 250 designated spaces for ferry passengers."

She was cut short by the bell that indicated her comment time was up, and as with other speakers who seemed to take an adversarial position, a Commissioner had to get in the last word: "People will just have to take the bus," he said.

Lee did not seem pleased when she returned to her seat. "I never got to the good stuff, about CEQA rules being bypassed and no viable alternatives considered, no feasibility study presented, no unified planning process. Or the a plan for the parking thing, which is, like the real reason we're here."

Next up was an older man named Cesar Kalm, who said he fishes from the shoreline. He brought props: Fishing rods, a tackle box, and an ice chest full of ice and a fresh-caught halibut, which he held up to show the Commission. "I often fish right where they want to put the ferry terminal," Cesar explained. "I need all this gear – it's important to keep fish cold after it's caught. I also need to park nearby. Tell me, where am I supposed to park when nine hundred ferry passengers are fighting for 250 spaces?"

A woman from the back of the public seating area cut in: "That's an old number," she shouted. "Now they say it's going to be two thousand passengers per day, but the City, for reasons we can guess, uses less than five hundred passengers in their parking analysis…"

"Please, no interruptions," scolded the Commission Chair.

The fisherman continued: "There's talk of time limits on all the other parking areas, to keep the ferry passengers out. Doesn't work for me, I fish all day. Doesn't work for people who go out on the charter fish boats, doesn't work for when I get an invite on a private fishing boat for the day. People need to park to use the park."

P66-2

"There's always the bus," one of the Commissioners repeated.

I was called up next, but by this time I had completely forgotten my complaint about berth fees. Instead I pointed out that the yacht club has all-day events that require all-day parking. And that while the club makes some money with commercial rentals, there are deep discounts for non-profits and charitable organizations that meet at the club on a regular basis. Even City departments get to use the club at rock-bottom prices for daytime events, and virtually everyone attending these events has to find a parking space.

"That big retirement party you had last week, during business hours? I suppose you could have chartered a bus to go from City Hall and all the other City offices to the marina… but that would have tripled your cost. "

If Lee had to leave out parking, the next speaker more than made up for it. Roxanne Scholes was called up next.

"I hate cars too," she began, "but this is the most popular park in the City, and it's not a park in a neighborhood that people can easily walk to. There are parents with small children who come here for picnics, there are people with big dogs who come for the dog park, there are kayakers, windsurfers and kiteboarders with their equipment, there are guests and crew on private boats. They want to manage it with restricted parking areas, time limits and time-of-day-restrictions. Okay, maybe the boat owners will get parking passes, maybe guest passes too. Think of the black market in parking passes, or other ways to game these rules. If I had a fancy job in the City and needed to avoid the traffic jam on the bridge, I'd just put a small boat in the harbor and use my boat owner parking pass.

Problem solved for about ten dollars a day. Maybe the whole thing is just a scheme to fill up those vacant small boat slips."

"I have to repeat again," said the Commissioner who likes to interrupt, after the "time's up" bell rang. "there's a bike overpass and pretty good bus service."

"You and Marie Antoinette," said the speaker. "Remember Marie Antoinette? When told that the peasants had no bread, she said "let them eat cake." Now those of us who can't bring our fishing gear on a bike, or are a little too old to pedal back up the hill, or have a big dog to run in the off-leash dog park, or have medical issues, or who don't happen live along the marina bus route and might have to take two busses when the schedule is infrequent and it would take an hour or more each way, now you're telling us to just 'take the bus' or bike. It's just as clueless and as detached from reality as old Marie A. telling the peasants to eat cake when they have no bread. Anyone remember what eventually happened to her?"

"The French revolutionaries sent her to the guillotine," volunteered one of the Commissioners.

"Correct," confirmed Roxanne. "Please everyone, tell the Councilmembers who appointed you that this thing needs to be scaled back. Back up and start a valid planning process, not hijacked by the Ferry Authority. Don't let our City Council put their heads on the block next to Marie Antoinette's. It's not a good look."

max ebb

P66-2

This all-electric fast ferry is in service in Norway, carrying 147 passengers at 23 knots. Electric ferry projects, designed for routes similar to the new proposed transbay routes, are springing up all over the world. Yet our local ferry authority still insists on ordering new diesel boats that will be spewing high levels of CO2 for decades.

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

I'm very concerned about the new proposed ferry plan. There seems to be no adequate parking or planning for this project. I'm against the ferry unless there is much better planning and an adequate amount of parking. P67-1 P67-2

Sincerely,
Leslie Aguilar

Letter P67

Commenter: Leslie Aguilar

Date: April 25, 2026

Response to Comment P67-1

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA. As discussed therein, the Draft EIR evaluates whether project-related parking conditions could result in secondary physical environmental impacts and concludes that no significant parking-related environmental impacts would occur. The Draft EIR provides sufficient detail regarding the proposed project, including parking facilities, access improvements, and associated planning efforts, to support the environmental analyses and conclusions presented therein.

The comment does not identify a specific deficiency in the Draft EIR analysis. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P67-2

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how the City appropriately discusses parking in the Draft EIR, according to CEQA. This comment does not directly pertain to proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, the comment has been included in the project record considered by City decision makers. No further response is required.

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Comment on the WETA Pier-Ferry Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Ever since my first year on the Berkeley Waterfront Commission, in 1999, I have been pointing out to the Commission and to Marina Staff that in-car viewing of the Bay from the west-facing parking spaces along Seawall Drive is a perfectly legitimate form of waterfront recreation. P68-1

It's usually cold and windy at our shoreline, and watching the Bay from inside the protection of a vehicle makes sense for people with limited options. P68-2

My unscientific impression was that people who park to watch the Bay from their cars are, in general, from a lower-income demographic than other identifiable user groups. Not exclusively of course, but the demographic mix is noticeably more low-income and non-white. These are not people who routinely eat at waterfront restaurants with dining room views. They do not belong to a yacht club. They do not have boats in the marina. This demographic bias has been recently confirmed more rigorously by the Placer.ai report found in the comments on the Draft EIR compiled by other commenters. P68-3

This comment addresses the parking reconfiguration plan that eliminates nearly all of these west-facing parking spaces. This plan smacks of elitism and blatant disregard for this lower-income non-white demographic. Unfortunately it seems to be a characteristic of other elements of the Pier-Ferry project: P68-4

See the City's stated intention to apply parking fees only to the South Cove West parking lot, which serves Shorebird Park, the Shorebird Nature Center, and low-cost water access.
Also see the proposed Waterfront Benefits District, "to collect fees from waterfront visitors to support marina and ferry infrastructure." P68-5

This is "reverse Robin Hood" at its worst: Charge fees paid by the lower-income marina visitors to help subsidize the ferry, which, by WETA's own estimate, serves passengers of which 90% are above median income.

PLEASE DO NOT REDUCE SHORELINE PARKING FOR IN-CAR VIEWING OF THE BAY. P68-6

Letter P68

Commenter: Paul Kamen

Date: April 26, 2026

Response to Comment P68-1 and P68-2

For discussion of Seawall Drive in-car viewing access, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*.

With respect to parking, refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA. The Draft EIR concludes that the project would maintain a comparable supply of parking and access to waterfront viewing opportunities.

Accordingly, the Draft EIR appropriately considers passive recreational uses, including scenic viewing, and demonstrates that such opportunities would continue to be available. The analyses and significance conclusions presented in Sections 3.11, *Recreation*, 3.1, *Aesthetics*, and 3.9, *Land Use and Planning*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P68-3

CEQA requires analysis of physical environmental impacts and does not require evaluation of demographic characteristics of users or distributional social effects, unless such effects would result in a physical environmental change. Accordingly, the Draft EIR does not rely on demographic characterization of user groups in its impact analysis. As described in Chapter 2, *Project Description* (refer to Section 2.5.2), and Section 3.11, *Recreation* (refer to Impact REC-1), the project would expand public access and introduce new recreational amenities, including a restored pier, public plaza, and improved shoreline access. These features are expected to benefit a diverse user base. Although socioeconomic considerations such as environmental justice are not a resource requiring evaluation under CEQA, the City continues to consider such issues through its broader planning and policy efforts, including the Environmental Justice Technical Report prepared for the project.

The Draft EIR and supporting Environmental Justice Technical Report rely on established data sources for demographic analysis, including CalEnviroScreen and U.S. Census data, which are widely used at the local, regional, and state levels. These sources provide consistent and replicable methodologies appropriate for public agency decision-making and are commonly relied upon in environmental review documents to ensure comparability across jurisdictions and projects. While the City may consider third-party proprietary tools such as Placer.ai for certain planning purposes, such tools are not typically used as primary data sources in CEQA documents due to limitations related to methodological transparency, replicability, and representativeness at broader geographic scales. Given that the proposed project serves a regional transportation function, including connectivity beyond the City of Berkeley, the use of standardized, regionally comparable datasets such as CalEnviroScreen and U.S. Census data is appropriate and ensures consistency with established CEQA practice.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are necessary.

Response to Comment P68-4

The comment appears to reference the parking spaces off Seawall Drive. Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, which identifies that while parking would be reconfigured, parking spaces that allow for views of the Bay would remain, and that there would also be an expansion of access to views for diverse user groups.

Regarding the comment about parking fees on the South Cove West Parking Lot, the implementation of fees at the South Cove West Parking Lot is not a part of this proposed project. Insofar that the comment

is concerned about parking in general, including equity considerations related to parking, refer to Section 2.2.20, *Topical Response: Parking.*

As described in Response to Comment P68-3, CEQA does not require analysis of social or demographic equity impacts unless such impacts would cause physical environmental changes. Although the comment's concerns regarding perceived inequity and allocation of parking resources are policy considerations that fall outside the scope of CEQA, the City's Environmental Justice Technical Report and ongoing development of a General Plan Environmental Justice Element address broader equity concerns at a project- and policy-level. Furthermore, as described in Chapter 2, *Project Description* (refer to Section 2.5.2), Section 3.11, *Recreation* (refer to Impact REC-1), and Section 3.12, *Transportation* (refer to Section 3.12.4), the project includes substantial public access and recreational improvements and would enhance overall access to the waterfront for all user groups.

The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written, and no revisions are necessary.

Response to Comment P68-5

The Waterfront Benefits District referenced by the comment is referenced as a future possible Transportation Demand Management (TDM) Measure in the Parking and TDM Plan. If implemented in the future, it would be a distinct City policy initiative that is not a component of the proposed Berkeley Water Transportation Pier Ferry Project evaluated in the Draft EIR. The proposed project consists of the physical improvements described in Chapter 2, Project Description. The Waterfront Benefits District is not proposed as part of this project, is not analyzed as a project component in the Draft EIR, and is not a condition of project approval. Whether and how to implement a Waterfront Benefits District in the future is a separate policy decision for the City Council through a separate public process. Comments regarding the Waterfront Benefits District are beyond the scope of this EIR.

To the extent the comment raises concerns about the distribution of costs and benefits among waterfront users of different income levels, these are policy considerations that the City Council will weigh in its deliberations on the project. However, the distribution of costs and benefits among different user groups does not constitute a physical environmental impact under CEQA. CEQA Guidelines Section 15131 provides that economic and social effects of a project shall not be treated as significant effects on the environment. The Draft EIR at Section 3.11, Recreation, analyzes whether the project would have physical impacts on recreational uses and access, and concludes that the project enhances rather than diminishes recreational opportunities at the Berkeley Waterfront. The equity implications of fee structures for marina and ferry infrastructure are policy matters appropriately addressed through the City's public deliberative process, not through the CEQA environmental review of the physical project. No revision to the Draft EIR is warranted on this basis.

Response to Comment P68-6

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, Section 2.2.20, *Topical Response: Parking*, and Response to Comments P68-1 and P68-2.

Accordingly, the Draft EIR appropriately considers passive recreational uses, including scenic viewing, and demonstrates that such opportunities would continue to be available. The analyses and significance conclusions presented in Sections 3.11, *Recreation*, 3.1, *Aesthetics*, and 3.9, *Land Use and Planning*, remain valid as written. No revisions to the Draft EIR are required.

Subject: Pier and Ferry proposal

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To the city council and decision makers … As a constituent/ resident and voter I am Alarmed that your committee is going to undertake this major project … first the parking is at issue … second, who can afford the time to drive out and catch a big ferry..there really aren't that many folks … We had the Tideline commuter ferry and Mayor Arreguin was the person who cut the ribbon way back in '16… but then City of Berkeley left the owner of Tideline Twisting in the wind unto bankruptcy when Covid happened … what a disappointment that the City didn't follow through as the other Bay communities did on behalf of their ferryboats… P69-1 P69-2

Even the Tideline's 'Osprey' and 'Heron' Seldom reached full capacity on the commute to the Ferry Building in San Francisco … P69-3

Why oh Why ?

As a swimmer I can see that the dredges would churn the under water tailings from the century of gold mining in the Sacramento and American Rivers …and so I have no confidence that the Bay water will be safe … P69-4

Thank you for taking the time to reconsider …

Letter P69

Commenter: Kat Schaaf

Date: April 26, 2026

Response to Comment P69-1

The comment expresses the commenter's opinion regarding the proposed project but does not identify a specific deficiency in the Draft EIR analysis, significance conclusions, or mitigation measures. To the extent the comment raises concerns related to parking, refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

This comment has been included in the project record considered by City decision makers.

Response to Comment P69-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P69-3

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P69-4

The Draft EIR considers potential impacts associated with potential hazardous materials in dredged materials. Refer to Impact HAZ-1 in Section 3.7 *Hazards and Hazardous Materials* (page 3.7-27) of the Draft EIR, which includes a summary of the results of sediment sampling conducted in the area where dredging would occur. Page 3.7-27 of the Draft EIR identifies that concentrations of various parameters do not exceed California or Federal hazardous waste criteria. The analysis and significance conclusion presented under Impact HAZ-1 in Section 3.7 *Hazards and Hazardous Materials* of the Draft EIR remains valid as written.

In addition, potential water quality effects associated with dredging, including temporary increases in turbidity and sediment disturbance, are evaluated in Impact HYD-1 of Section 3.8, *Hydrology and Water Quality* (pages 3.8-27 through 3.8-35). As discussed therein, dredging activities would be subject to permitting requirements, best management practices, and regulatory oversight by agencies including the Regional Water Quality Control Board and U.S. Army Corps of Engineers. With implementation of applicable regulatory requirements and project design features, the Draft EIR concludes that construction-related water quality impacts associated with dredging would be less than significant. The analysis and significance conclusion presented under Impact HYD-1 in Section 3.8, *Hydrology and Water Quality* of the Draft EIR remains valid as written.

No further revisions to the EIR are necessary.

Suggestion,

Increase 51B bus service to the Marina.
Promote it to the Public.

P70-1

Letter P70

Commenter: May

Date: April 26, 2026

Response to Comment P70-1

The City recognizes the importance of AC Transit 51B service. The proposed project includes improvements to bus facilities that would serve AC Transit route 51B, including improving facilities to allow for future expansion (see Chapter 2, *Project Description* page 2-12).

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Berkeley, CA 94704
Email: lmcnulty@berkeleyca.gov
Re Pier/Ferry Draft EIR

Dear Project Manager McNulty, Parks Director Scott Ferris, Parks, R&W Dept employees of City of Berkeley, Mayor, City Council members, Waterfront Commission Secty,

My comments on the March 7, 2025 Draft EIR for the present Pier/Ferry proposal are based upon my 57 years as a resident of Berkeley, my dedication to my family, compassion for our diverse local community, and influenced by my avid interest in and deference to wildlife and habitat, especially birds potentially impacted by the proposed project. I frequently visit the Bay shoreline from the Eastshore State Park in Berkeley north to Point Molate and south to Hayward by car, walking to experience and respectfully share these precious natural resources with all inhabitants of this unique environment. P71-1

I have only recently become aware that a pier/ferry proposal has moved this far to a a Draft EIR. The Parks&Waterfront division needs to do a better job of outreach to get more Community Engagement. Somehow, I am no longer receiving email notifications about waterfront activities and changes and I would like to be included in the future. P71-2

Why is a ferry being proposed? The need for a Berkeley to San Francisco ferry is based upon outdated assumptions. Workday commuters driving to SF downtown from the East Bay has reduced with the prevalence of Work From Home routines post-pandemic. BART was nearing capacity before the 2020 pandemic, but ridership has declined for Mon-Fri commuters, also from the trend to Work From Home employment. An emergency ferry route seemed urgent only briefly in the wake of the damage to the Bay Bridge 1987 Loma Prieta earthquake. That bridge was repaired and functional in 30 days and that cantilever section of the bridge has been replaced with a modern, seismically stable structure. P71-3

The environmental impacts on wildlife by the proposed Ferry Terminal location, support structures, required initial and future dredging are understated in the Draft EIR. The document dismisses the option of locating the Ferry Terminal and infrastructure within the available Marina area which would take advantage of the existing waterway and dredging routines, greatly reducing environmental impacts. P71-4 P71-5

In addition to meeting the Minimum requirements of Federal, State and local regulations, the proposed project must be designed to minimize rafting waterfowl and other wildlife disruption and habitat loss. Berkeley can and should demand a design that meets the recreation interests and needs of our community and region while protecting and enhancing wildlife. The SF Bay has suffered from development for 150 years, and we, the forward looking citizens and Berkeley Parks&Waterfront should not perpetuate this over urbanization. P71-6 P71-7

The Draft EIR does not acknowledge many current activities at the closed Berkeley Pier site and environs. The present conditions provide many view-oriented parking spaces on Seawall Drive for car based bay viewing. This project proposal deletes this recreation opportunity by the proposed parking layout and loss of Free access changes. (In contrast, for an example of successful integration of view parking and a bay shoreline pedestrian path, see the Emeryville bayfront west of their Marina Park.) P71-8

Through-travel via bicycles, e-bikes, e-scooters is overly emphasized in the proposed project, at the expense of mature trees and the wildlife they host. Pedestrians of limited mobility and disabled access should be prioritized and new shoreline walking paths should not be co-located with wheeled and powered-vehicle trails. Richmond shoreline Bay Trail (between Albany and Richmond Marina) is an example where pedestrians and elders do not feel safe while bicycle riders and e-vehicles race past at much higher speed. In Berkeley, the existing Bay Trail along Frontage Road is working fine for cyclists. The current roadways and paths of University Ave west of I-80 already provide sufficient access for cyclists and e-vehicles. P71-9 P71-10 P71-11

I am disappointed in this proposed project for many reasons, and the Draft EIR fails to address, protect or enhance many existing low-impact recreational uses, in favor of a commuter ferry that is likely not needed and will congest the waterfront park with empty cars for fees. This project should be limited to a lower impact re-building of the Berkeley Pier in some form, but must not include a Ferry attached to the pier. A commuter ferry is not primarily a 'recreational' enhancement as the DEIR contends. The proposed Ferry Terminal will instead demand parking and will exacerbate traffic for the benefit of non-recreational users of the Berkeley waterfront. No ferry should be permanently hosted at the Berkeley waterfront. If an Emergency Ferry is truly needed, it can be serviced on a much smaller dock within the existing Marina, possibly adjacent to the existing public boat launch and only in service when required. P71-12 P71-13 P71-14

I am in favor of Berkeley pursuing a more limited project to restore the amenities of the pier, but a more accurate and comprehensive EIR must be prepared. P71-15

Thank you for this opportunity to comment, and please keep me on the mailing list for this and other Berkeley Marina area development plans and activities. P71-16

Charley Paffenbarger
Resident of the City of Berkeley
Employee and Alum of UC Berkeley

Letter P71

Commenter: Charlie Paff

Date: April 27, 2026

Response to Comment P71-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P71-2

The City has added the commenter's contact information to the project notification list and would provide future notices via email in accordance with CEQA and City procedures. No further response is required.

Response to Comment P71-3

Refer to Section 2.3, Project Objectives, of the Draft EIR for a discussion about the objectives of the project. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P71-4

The comment does not specify how it believes impacts are understated. The Draft EIR analysis and significance conclusion of less than significant impacts to wildlife species with implementation of mitigation (Mitigation Measures BIO-1, HYD-1, and AES-1) presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-44 remains valid. In addition, see Section 2.2.25, *Topical Response: Siltation/Wave Climate,* for discussion of maintenance dredging. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P71-5

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The comment's preference regarding the location of the ferry terminal is a policy matter for decision-makers to consider. This comment has been included in the project record considered by City decision makers. The comment does not identify a deficiency in the Draft EIR's alternatives analysis, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P71-6

The project-related increase in ferry trips would be incremental relative to existing vessel operational levels in San Francisco Bay. Stating that a direct population-level impact would occur from this project alone is speculative without site-specific evidence linking the project's incremental disturbance to measurable declines in body condition, migration success, or reproductive output. The Draft EIR addresses impacts to wildlife movement in Section 3.3.4 under Impact BIO-4, page 3.3-63, and concludes that impacts would be less than significant. See Response to Comment O7-17 for a discussion of ferry operation impacts to waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P71-7

The comment's statements reflect general policy preferences regarding project design, recreational priorities, and regional environmental stewardship. These comments have been included in the project record considered by City decision makers.

The Draft EIR evaluates the proposed project consistent with CEQA, which requires analysis of physical environmental impacts. As described in Section 3.11, *Recreation*, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and access (see Impact REC-1, pages 3.11-14 through 3.11-24). In addition, Section 3.9, *Land Use and Planning* (Impact LU-2 and Table 3.9-1), evaluates consistency with applicable policies, including BCDC Bay Plan policies related to public access and protection of Bay resources, including both natural and recreational resources, and concludes that the project would be consistent with those policies.

The proposed project has also been designed to meet the recreational needs and priorities of the community, as informed by extensive public outreach conducted during project development (see Chapter 1, *Introduction*, Section 1.2.2). Input from stakeholders helped shape project features to maintain access and enhance recreational opportunities while supporting transportation improvements. The design of the ferry terminal, breakwater, and associated infrastructure has been informed by standard engineering practices and safety considerations to ensure safe integration of transportation and recreational uses at the waterfront.

Impacts to biological resources and wildlife are specifically evaluated in Section 3.3, *Biological Resources*, which analyzes potential effects on habitats and species and identifies mitigation measures to reduce impacts. As described therein, implementation of mitigation measures would reduce impacts to less-than-significant levels (see Section 3.3.4, *Impacts Analysis*).

Accordingly, the Draft EIR addresses both recreational access and environmental resource protection within the scope required by CEQA.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P71-8

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* and Section 2.2.20, *Topical Response: Parking.* As discussed therein, the Draft EIR evaluates existing recreational uses, public access opportunities, proposed parking configurations, and shoreline access improvements associated with the proposed project. The Draft EIR provides sufficient detail regarding existing conditions and proposed project features to support the environmental analyses required by CEQA. The commenter's reference to alternative parking and shoreline design concepts constitutes a project design recommendation that may be considered by City decision-makers. As discussed in Section 2.2.20, *Topical Response: Parking,* the Draft EIR evaluates whether project-related parking conditions could result in secondary physical environmental impacts and concludes that no significant parking-related environmental impacts would occur. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P71-9

The project would remove approximately 40 trees and plant between 50 and 70 new trees. The Draft EIR analysis and conclusion of less than significant impacts to protected trees presented under Impact BIO-5 in Section 3.3.4, Impacts Analysis, (page 3.3-65) remains valid. Additionally, impacts to nesting birds are discussed in Draft EIR Section 3.3.4 under Impact BIO-1 (page 3.3-44) and were determined to be less than significant with mitigation (Mitigation Measures BIO-1(a) and BIO-1(c)). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P71-10

The Richmond shoreline segment referenced by the comment is outside the project vicinity and does not reflect the design features of the proposed project. The Draft EIR evaluates pedestrian and bicycle circulation in Section 3.12, *Transportation*, and identifies the Bay Trail as a key recreational and circulation

feature in Section 3.11, *Recreation* (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7).

As described in Chapter 2, *Project Description*, the proposed project has been specifically designed to minimize conflicts between user groups and improve safety for all users, including pedestrians with limited mobility. The project would incorporate a raised cycle track, which would physically separate bicycle and micromobility traffic from pedestrian pathways and gathering areas, thereby reducing potential conflicts associated with speed differentials. In addition, pedestrian facilities, including the plazas, pathways, and shoreline access areas, would be designed to be ADA-accessible, with improved surfaces, grades, and circulation routes that enhance accessibility for individuals with mobility constraints. These design features represent an improvement over existing conditions by providing clear separation of travel modes and upgraded, accessible pedestrian infrastructure, and are intended to ensure safe and inclusive access for all waterfront users. The Draft EIR concludes that access and circulation conditions, including along the Bay Trail, would be maintained and enhanced (see Sections 3.11 and 3.12).

Accordingly, the conditions described by the comment at other shoreline locations do not indicate a deficiency in the Draft EIR's analysis, and the proposed project includes specific design measures to avoid the types of user conflicts identified. The analyses and significance conclusions presented in Sections 3.11, *Recreation*, and 3.12, *Transportation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P71-11

This comment does not raise an issue related to CEQA environmental impact analysis, but instead reflects preferences regarding project design and transportation improvements, which are matters for consideration by decision-makers. The comment has been included in the project record considered by City decision makers.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P71-12

Section 3.11, *Recreation*, of the Draft EIR describes the full range of existing recreational uses at the Berkeley Waterfront, including low-impact, water-based, and passive recreational activities (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7), and evaluates whether the project would adversely affect these uses in Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24). As discussed therein, the Draft EIR concludes that the project would **ma**intain and enhance recreational opportunities and access, including provision of new public amenities, shoreline access improvements, and restoration of public access to the Berkeley Pier (Impact REC-1).

With respect to the comment's concerns regarding congestion and parking, refer to Section 3.12, *Transportation*, and Section 2.2.20, *Topical Response: Parking,* which explains that parking and traffic conditions are evaluated for their physical environmental effects under CEQA. The Draft EIR concludes that access to the waterfront would be maintained and that the project would provide a comparable parking supply and improved multimodal access options.

The comment's statements regarding whether a ferry is "needed" and whether the project should be limited to pier improvements reflect policy preferences regarding project design and purpose, rather than CEQA environmental impact issues. This comment has been included in the project record considered by City decision makers.

Accordingly, the Draft EIR adequately evaluates impacts to recreational uses and access and demonstrates that these resources would not be adversely affected. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P71-13

As described in Section 2.5, *Project Components*, of the Draft EIR, the project includes both ferry infrastructure and public recreational amenities. Section 2.3, *Project Objectives*, identifies dual objectives of enhancing recreation and providing ferry service. Accordingly, the environmental analysis presented throughout Chapter 3, *Environmental Impacts Analysis*, evaluates both aspects.

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about parking adequacy.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P71-14

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

The comment's preference regarding the scale and location of ferry service is a policy matter for decision-makers to consider. This comment has been included in the project record considered by City decision makers. The comment does not identify a deficiency in the Draft EIR's alternatives analysis, and no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P71-15

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy*, the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment P71-16

The City has added the commenter’s contact information to the project notification list and would provide future notices via email in accordance with CEQA and City procedures. No further response is required.

Letter P72

From: Emilie <desertpeach2@earthlink.net>

To: McNulty, Liza <lmcnulty@berkeleyca.gov>
Subject: Strauss Comment Letter Pier & Ferry

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms McNulty--

Attached is a pdf with my pier/ferry comments. P72-1

Thank you!

Emilie Strauss

April 28, 2026

Liza McNulty, PE, Project Manager

Email: lmcnulty@berkeleyca.gov (mailto:lmcnulty@berkeleyca.gov)

Dear Ms. McNulty,

Herein I provide comments addressing the Draft Environmental Impact Report (DEIR) for the Proposed Berkeley Water Transportation Pier Ferry Project.

Thank you very much for the extension of the comment. I note that prior personal comment letters on the Specific Waterfront Plan and other City of Berkeley projects included a request for preparation of an environmental impact report due to significant impacts. I found the document deficient but am grateful that the effort was made. P72-2

I grew up in Berkeley and attended Berkeley High School. I visit the waterfront almost every month for birdwatching, nature bathing, and walking. I have led approximately four Golden Gate Bird Alliance field trips to the Berkeley waterfront/Eastshore State Park. The Berkeley waterfront is important!

After much thought, I advocate adoption of Alternative 1: No Project Alternative. P72-3

I have not read all 660 pages of the Draft Environmental Impact Report (DEIR), but sections I studied are deficient in (a) scope, (b) wildlife and San Francisco Bay ecological health data, and (c) cumulative impact analysis. In lieu of Alternative 1, a Subsequent EIR is required. A Supplemental EIR is generated when only minor additions are needed to revise the project EIR. A Subsequent EIR is required when the first EIR is no longer sufficient due to changes in the existing condition. There have been significant changes to San Francisco Bay baseline ecological health since the program EIR was written in 2003. See discussion below. A Subsequent EIR is essential for the general public to make an informed decision about the impacts from the project. P72-4 P72-5 P72-6 P72-7

On general grounds, I am opposed to construction of the ferry. I believe it is overly expensive, will do little to relieve congestion and will not reduce climate change. The ferry and pier as currently planned would sanitize/sterilize waterfront character, make access elitist via fees garnered at parking lots, tarnish the wild and scenic nature of the current view shed, and reduce both biodiversity and abundance of wildlife. Why do we have three BART stations and need a ferry? Berkeley is becoming denser. We need our wild spaces. P72-8

<u>Overview: DEIR's/CEQA Definition of "Sufficient Degree of Analysis".</u>

> "An EIR should be prepared with a sufficient degree of analysis to provide decision-makers with information which enables them to make a decision which intelligently P72-9

> takes account of environmental consequences. An evaluation of the environmental effects of the proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good faith effort at full disclosure." **DEIR**, 1.3.2.

P72-9

DEIR relies on a 23-year-old document/Synopsis of Changes to SF Bay Ecological Health.

The DEIR is inadequate because it depends on a 23-year-old document, "Expansion of Ferry Transit Service in the San Francisco Bay Area Program EIR" (2003 [please see DEIR for full citation]). Since 2003, there have been intensive and escalating negative impacts to wildlife of the San Francisco Bay. Wildlife has declined tremendously and sea surface rise has (already) altered San Francisco Bay shorelines. The Bay has been hammered by outbreaks of cyanobacteria causing fish kill. Shorebirds are in decline. Mercury and selenium continue to threaten health of fish and birds. Decreased freshwater flows through San Francisco Bay impact native fish and thus impacts many bird species (SFEI 2025). Not mentioned by SFEI, at least in the sections I read, is the relatively recent increase in utilization of San Francisco Bay by gray whales, recent devastating mortality of gray whales (likely by boat strike), and impacts to birds and marine mammals from avian flu.

P72-10

Baseline/DEIR Study Area Incomplete (DEIR, Fig. 3.3-1) (DEIR Section 3-1).

The Study Area "terrestrial polygon" is a narrow linear band running down University Avenue. The "terrrstrial polygon" thus neglects indirect impacts to a suite of rare and sensitive bird species discussed in the avian section below. The Study Area's similarly slender "aquatic polygon" does not include consequences to waterbirds and shorebirds from the ferry itself, the Ferry Wake 600' death zone to waterbirds, and smothering of benthic invertebrates by sediment.

P72-11

P72-12

The myopic Study Area does not address tree removal, increased lighting, and hardscape changes from parking. The document implies it does not need to address parking because need for parking is not part of CEQA:

> From DEIR (Section 3.1 – Baseline) regarding lack of inclusion of impacts from parking in the DEIR :"As part of the scoping process, the City received comments from the public requesting the use of a different baseline …. Lack of parking is not considered an environmental impact under CEQA. Given the guidance from CEQA Guidelines Section 15125 and that the main concern raised by the public requesting the use of a different baseline is for a non-CEQA topic, a baseline that differs from the existing condition at the time of the NOP publication is not used for this analysis."

P72-13

If I'm reading the document correctly, it denies the need to address parking reconfiguration and expansion of trails. Inconsistently, however, the DEIR discussed tree removal in preparation for parking! The DEIR explains that removal of trees at Seawall Drive (DEIR Figure 3.1.7) is mitigated by planting of new trees. Removal of mature old gnarled conifers such as planned is a habitat element that will not be available to birds within most of our lifetimes.

> Excerpt from Strauss comments regarding the Draft Specific Waterfront Plan to City of Berkeley circa September 2024: "The waterfront should include willow thickets/shrubs/habitat that do NOT allow for human access. There was massive tree loss during the March 2023 windstorm. The Berkeley waterfront conifers are home to fantastic flocks of chickadees, red-breasted nuthatch, and other species.

P72-13

Reconfiguring parking plus tree removal is an environmental consequence that must be included in the study scope.

DEIR Inadequately Relies on One Day of Field Surveys.

The DEIR is inadequate because field surveys were restricted to one day (19 September 2024) (DEIR, Appendix C, p. 37). This date avoids appropriate phenological windows for almost all of the rare plants and animals mentioned in Appendix C. A further discussion of survey requirements to obtain an adequate environmental baseline is provided below.

P72-14

Ferry Wake.

The impact of the ferry wake creating a "dead zone" of 600' width has been well-documented by Takekawa (circa 2004). Background from USGS biologists:

> Waterbirds such as shorebirds, waders, and ducks depend on healthy and productive estuaries to "fuel up" for long distance migrations along the Pacific flyway. As the largest estuary on the Pacific Coast of North America, California's San Francisco Bay-Delta is a critically important diving duck wintering area. Continentally, populations of Bay and sea duck species such as Lesser Scaup and Surf Scoters have declined dramatically over the past three decades… Several hypothetical reasons for these declines are changes in habitat quality and quantity at wintering and spring stop-over sites" (USGS 2026: (Https://www.usgs.gov/centers/werc/science/avian-studies-san-francisco-bay).

P72-15

Sediment.

The ferry wake, dredging to install new pier and ferry channel, redredging of ferry channel every 10 years or so, and pile driving will increase sedimentation. This could negatively affect eelgrass beds and reduce benthic prey critical to fish and birds.

P72-16

Additional Cumulative Impacts Not Fully Addressed in DEIR.

Not fully acknowledged in the DEIR are wildlife unfriendly projects proposed by City of Berkeley and Eastshore State Park including North Basin boat access and various projects proposed in the Waterfront Specific Plan including creation of a large bike “freeway” around the exterior of the "Berkeley Bulb". Also proposed are various climate resiliency projects that could include massive changes to the waterfront area. See DEIR: Table 3-1 Present and Reasonably Foreseeable Cumulative Projects List. 3-9. What is the projected paved footprint from each? What is “dead zone” wake from increased bike use? P72-17

The DEIR does not address cumulative impact generated by proposed build-out of 26 ferries across San Francisco Bay.

Demolition of Portions of Closed Pier.

It was disappointing that 1280’of the old Berkeley fishing pier was slated for removal See DEIR, Figure 2-2; Also Section 2.5.1. The old pilings support invertebrates (mussels, etc.) important for foraging waterbirds. The tip of the old pier supports a large high tide shorebird roost. Prior to the closure of the pier, it was common birdwatcher’s practice to walk the pier to westernmost end of the pier at high tide, look through the wooden slats, and search for rare shorebirds that might be present amongst the hundreds to low thousands of assembled waders. The data for my high counts are buried in old notebooks. I am slowly going through the data and entering it into EBird but did not have time to ferret it out. A photo in Anderson, Hart, and Rauzon 2021 illustrates the roost. Also see Rauzon’s comment letter on ferry impacts. High tide roosts for shorebirds are a limiting factor in the central Bay (Gary Page, Pt Blue Cons. Science senior biologist; personal communication). P72-18

What is the the relative densities of invertebrates on concrete versus old wooden piers? That should be addressed in the Subsequent DEIR. I have seen discussions of recent San Francisco Bay projects that create living shorelines using “slippery” hard substrate that encourages native versus non-native invertebrates to colonize. I am in favor of encouragement of native species, but the reality is that waterbirds and San Francisco Bay have intermittently benefited from massive invasions of non-native plants, etc. I believe I heard about this through a presentation by Susan De La Cruz (USGS)(https://www.usgs.gov/centers/werc/science/avian-studies-san-francisco-bay) at a State of the Estuary conference a few years ago. P72-19

Proposed EIR mitigations are incomplete.

Pigeon guillemot boxes as advocated by Mark Rauzon (see his comments on DEIR) should be installed (Anderson, Hart, and Rauzon 2021). P72-20

Impacts of the ferry wake to waterfowl, shorebird high tide roosts, and impacts to wildlife in general from increased sedimentation from dredging and piledriving are probably not P72-21

mitigatable. Dredging impacts to anadromous fish and green sturgeon may be partially mitigatable from limiting dredging and piledriving to narrow work windows, which is a standard and well-accepted boilerplate mitigation. Adoption of these work windows is mentioned in the DEIR (Mitigation Measure BIO-1(D). This establishes no work windows from June 1 to November 30. Note that this would concentrate piledriving and other SF Bay water disturbing activities to December 1 to May 31 which is also when there is peak waterbird abundance. Wintering shorebirds arrive earlier but would still be present and unprotected. P72-21

Trees should be replaced at a 3:1 ratio. A portion of the His Lordship's parking lot should be removed and a Miyawaki forest installed. P72-22

Incomplete assessment of Environmental Justice.

If parking lots were to require fees, it might challenge options for income-disadvantaged hominids to enjoy the currently free sensational views of the bay on Seawall Drive. Seawall Drive is used by many fishermen and is easy access for birdwatchers, older folks, disabled people, etc. When my father got older, we would park on Seawall Drive. Walking was not easy for him. By the time he was ready to venture forth, bay conditions were windy and cold. Both of us enjoyed watching the boats and the sensation of being close to the bay from the warm shelter of the car. Similarly, many people fish from the Seawall Drive bay shore and watch their rod tips from behind a windshield. P72-23

INSUFFICIENT ANALYSIS OF SENSITIVE AVIAN POPULATIONS AND CDFW RARE AND SENSITIVE AVIAN SPECIES WITH POTENTIAL TO OCCUR. P72-24

Impact of the proposed project to marine mammals is being addressed by other commenters. Herein, avian species are discussed in more or less taxonomic order.

Waterfowl/shorebirds.

Appropriate waterfowl and shorebird surveys, including high tide roosts surveys, need to be conducted. The last formal surveys that the author has knowledge of were completed circa 2005 for Berkeley's North Basin. P72-25

Of 11 central coast/SF Bay sites, North Basin supported the 2nd highest density of waterbirds (Avocet 2007, Table 7) (based on 20-30 year old data).

Surveys must include a comprehensive revisit of the Rafting Waterbirds Study (Avocet 2007) including an extension of the survey area to include that around the old Berkeley fishing pier, and any areas to be impacted by dredging, piledriving, ferry wake, and sedimentation. The Avocet 2007 study should be consulted –it was designed to capture P72-26 P72-27

waterbird disturbance in the North Basin of the Berkeley waterfront area as a component of planning a non-motorized watercraft impacts to wildlife.

P72-27

Some biologists might recommend utilizing EBird for waterfowl/shorebird data rather than conducting new studies. The author is familiar with the configuration of the EBird hotspots in the Berkeley waterfront area. Although Ebird has a hotspot for North Basin (NB), the tendency for most birders is to utilize either Berkeley Meadows or Cesar Chavez ("Farmworkers" Park) hotspots for observations. EBird is useful for preliminary assessment of presence of sensitive species (although absence would not be in lieu of formal surveys in search of aforesaid species) but EBird often is useless for tallying and documenting large avian assemblages. In preparation of a new Draft EIR, NB hotspots should be consulted but not used exclusively. New surveys must be conducted.

P72-28

<u>California Least Tern.</u>

California Least Terns are state and federally endangered (CDFW 2026). Appendix C states that "there are no known occurrences within 5 miles". This is incorrect. I myself have seen them foraging in North Basin and Cesar Chavez ("Farmworkers" Park). There are 75 observations of California least terns at Cesar Chavez Park ("Farmworkers" Park) documented in EBird. See: https://ebird.org/species/leater1/L285281 {eBird 2026]). Least Terns "occurred regularly" (Avocet 2007, Appendix D).

Surveys should be conducted for the species during the chick provisioning period to assess habitat utilization within the ferry travel lanes as well as North Basin and habitat west of the west end of the waterfront.

P72-29

Figure 1. Four Least Terns bobbing on a floating log, just offshore of "Farmworkers" (Cesar Chavez) Park. Photo courtesy of Jack Hayden.

P72-29

Brant and eelgrass.

Staging and wintering Brant, a species of small goose that depends on eelgrass (Zostera), have been recently documented just north of the proposed ferry route. There are probably many other records in the waterfront area in EBird. Brant are a California State Species of Special Concern (CDFW 2026). They do not nest in California. Brant staging and wintering habitat is protected. There are eelgrass beds in this locale. See comment letter by Mark Rauzon. Mark's letter includes an excellent photo of staging Brant taken in April 2026. This photo is an example of staging habitat utilization. Staging refers to dense gatherings of waterfowl or shorebirds prior to migrating north. The DEIR insufficiently addresses impacts to eelgrass beds. Appendix C describes eelgrass surveys in 2009 and 2014 (DEIR, Appendix C, p. 3.3-11). In fact, the DEIR maps that eelgrass beds (p. 3.3-9) as "historic" thus implying that the authors acknowledge that data should be updated. Eelgrass across central SF Bay should be re-surveyed by appropriate eelgrass experts. Sedimentation and sea surface rise in recent years may have redistributed eelgrass.

P72-30

P72-31

Snowy Plover.

Appendix C notes that this species would be "unexpected" and I would tentatively agree. There is a record for Western Snowy Plover (North Basin [Avocet 2007]). Although unlikely, Snowy Plovers might utilize mudflats at the Ferry/ Pier site at extreme low tide or the tip of the old fishing pier at high tide. I did not search EBird for occurrences.

P72-32

Osprey.

No mention of Osprey in Appendix C summary chart of sensitive species with potential to occur. The species, however, is indeed mentioned on page 181 of DEIR where it is incorrectly classified as a "seabird". Osprey have been sighted frequently at the Berkeley Waterfront. Osprey are on the California Department of Fish and Wildlife Watch List (CDFW 2026). They frequently nest in old piers around north/central San Francisco Bay (see publications by Tony Brake). I do not personally know of a nest on the old fishing pier and, by the way, as EBird is current configured it is difficult to query for nests. Surveys for nesting Osprey must be conducted.

P72-33

White-Tailed Kite.

Appendix C list only "two known occurrences". Construction along University Avenue would likely reduce foraging habitat. Under CDFW regulations, only nesting trees are protected but it is reasonable to complain that there may be some impact to foraging habitat. See CDFW 2026.

P72-34

Figure 2. A pair of White-Tailed Kites. Photo taken April 27, 2020 at “Farmworkers” (Cesar Chavez) Park by Emilie Strauss.

P72-34

Burrowing owl.

I thought authors of the DEIR had a good discussion in Appendix C. However, impacts from massive parking planned for project might take out burrowing owl habitat. Burrowing owls often use riprap.

P72-35

Bald Eagle. “No known occurrences”. Mining EBird data will no doubt show many observations in the general area,

P72-36

Bryant’s Savannah Sparrow.

No mention of Bryant’s Savannah Sparrow in Appendix C summary chart of sensitive species with potential to occur. Bryant’s Savannah Sparrow, a subspecies of the Savannah Sparrow, is a California State Species of Special Concern that potentially nests in the remnant unmowed grassland patches at Cesar Chavez (“Farmworkers” Park). Bryant’s Savannah Sparrow are in decline because they are restricted to coastal grasslands which have been heavily developed across its range. Identification of many Savannah Sparrow subspecies, including Bryant’s, is difficult in the field. Cesar Chavez (“Farmworkers” Park) harbors Savannah Sparrows in its grasslands that are likely nesting as they occupy territories (eg. sing) through spring and

P72-37

summer (E. Strauss, pers. observation). These *Passerculus* were not identified to the subspecies *P. sandwichensis alaudinus*. Appropriate nesting habitat is is present at the Berkeley waterfront. See: Bird Species of Special Concern (CDFW website accessed 2026) and scroll down to Bryant's Savannah Sparrow for further discussion of habitat requirements. P72-37

Willow thicket.

The willow thicket is in the southeast corner of the junction of University Avenue and Seawall Drive. The willow thicket is one of the waterfront's neotropical migrant patches. It has harbored Macgillivray's, Wilson's and Yellow Warblers. Wildlife utilizing the willow thicket, even if it survives pier/ferry construction, would have a reduced foraging area due to removal of Seawall Drive trees. P72-38

In closing, I do not believe the DEIR provides a sufficient discussion of the significant aspects of probable environmental consequences (paraphrase from DEIR 1.3.2). P72-39

I support adoption of Alternative 1: No Project Alternative. P72-40

Berkeley does not need another expensive white elephant like the research labs that sit empty at Aquatic Park. If Berkeley continues to pursue construction of the ferry/pier then a Subsequent EIR must be prepared. P72-41

Thank you for consideration of my views.

Emilie Strauss

P72-42

Letter P72

Commenter: Emilie Strauss

Date: April 27, 2026

Response to Comment P72-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P72-2

These statements generally provide context for the commenter's perspective but because no supporting arguments, data, or analysis were provided to substantiate the statement on the adequacy of the Draft EIR, a substantive response is unable to be prepared. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is required.

Response to Comment P72-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P72-4

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy*, the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment P72-5

The Draft EIR impacts analysis was based on a current literature review of publicly available agency databases and documents consistent with industry standards. The literature and database review conducted for the EIR is described in Draft EIR Section 3.3.1, Introduction (page 3.3-1) remains valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-6

The Draft EIR is not a supplemental or subsequent EIR to the 2003 WETA EIR. Rather, as stated in Draft EIR Section 1.1.2, *EIR Type*, this document has been prepared as a project-level EIR pursuant to CEQA Guidelines Section 15161, which focuses on the specific environmental effects of the proposed Berkeley Water Transportation Pier Ferry Project.

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* which explains that the Draft EIR does not tier from the 2003 WETA EIR, but rather incorporates it by reference. Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* also explains how the Draft EIR uses the 2003 WETA EIR, and where appropriate provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Because the Draft EIR constitutes a complete and independent project-level environmental review document, and not an update to the 2003 WETA EIR, preparation of a subsequent or supplemental EIR is not required. The Draft EIR's analysis, significance determinations, and mitigation measures are based on current conditions and substantial evidence in the record and remain valid as presented. Accordingly, no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P72-7

Refer to Response to Comment P72-6, which explains why a subsequent EIR is not needed.

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Response to Comment P72-8

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P72-9

Refer to Section 2.2.5, *Topical Response: CEQA Adequacy,* for a discussion of CEQA adequacy. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P72-10

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Response to Comment P72-11

The landside portion of the project site evaluated for the project includes all areas that may potentially be impacted by the project, including temporary staging and access, temporary disturbance, and permanent impacts. The project site is defined in Draft EIR Section 2.2, Existing Project Site Characteristics (page 3.3-7). Impacts to protected and special-status bird species are analyzed in Draft EIR Section 3.3.4 under Impact BIO-1 (page 3.3-44), which concludes impacts to be less than significant with implementation of Mitigation Measures BIO-1(a), BIO-1(c), and AES-1. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-12

The waterside portion of the project site evaluated for the project includes all areas that may potentially be impacted by the project, including temporary staging and access, temporary disturbance, and permanent impacts. The project site is defined in Draft EIR Section 2.2, Existing Project Site Characteristics (page 2.2-7). No specific information or documentation on the ferry “death zone” or what specific project activities the comment suggests would result in sedimentation are provided. Text clarification changes in Reponses to Comments O7-17 and P46-4 address operational impacts to migratory waterbirds and shorebirds, which would be less than significant. See also Response to Comment O4-8 for additional discussion of ferry operational impacts on waterbirds. No additional changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-13

Tree removal is proposed within landscaped upland areas that are not within any sensitive habitats such as riparian or jurisdictional areas. Thus, tree removal analysis was included in the Draft EIR in Section 3.3.4 under Impact BIO-5 (page 3.3-65) and concluded less-than-significant impact with regard to

protected trees. Separately, tree replacement is required by the Berkeley Municipal Code but not as mitigation for potential habitat loss. The analysis and significance conclusion presented under Impact BIO-5 remains valid. Additionally, impacts to nesting birds are discussed in Draft EIR Section 3.3.4 under Impact BIO-1(page 3.3-44) and were determined to be less than significant with implementation of Mitigation Measures BIO-1(a) and BIO-1(c)). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-14

See Response to Comment O9-3 for discussion of reconnaissance survey adequacy. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-15

As described in Draft EIR Section 3.3.4 under Impact BIO-1 (pages 3.3-46 to 3.3-52), the analysis evaluates operational disturbance in the context of the existing Central Bay transit corridor, which already includes substantial commercial, recreational, and ferry vessel operational levels. Adult waterbirds are highly mobile and able to avoid localized disturbance, and the incremental increase in ferry trips associated with the project would not constitute a substantial adverse effect under CEQA.

The study cited by the comment provides regional behavioral information, but it does not provide site-specific evidence demonstrating that the proposed project would result in population-level effects, exceed CEQA significance thresholds, or cause a substantial loss of foraging or resting habitat in the project vicinity. The Draft EIR evaluates operational impacts using current environmental conditions and concludes that the project would not result in significant impacts to rafting waterbirds.

See Response to Comment O4-8 for further discussion of operational impacts related to aquatic species, including waterbirds. The analysis and significance conclusions presented in Section 3.3 Biological Resources remain valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-16

Refer to Response to Comment O5-36 for a discussion of in-water construction impacts, including pile driving. See Response to Comment O10-183 for discussion of impacts on eelgrass beds and benthic communities from construction, ferry operations, and maintenance dredging.

Response to Comment P72-17

The Draft EIR includes a cumulative impacts analysis consistent with CEQA Guidelines Section 15130 and identifies present and reasonably foreseeable projects in Table 3-1 (pages 3-9 through 3-10). The cumulative analysis evaluates the project's incremental contribution to cumulative impacts for each environmental resource topic.

The comment references North Basin boat access. The City notes that the Berkeley North Basin Project is already included in the cumulative projects list in Draft EIR Table 3-1 as Project No. 15 (page 3-9). As described therein, the project includes habitat improvements and public access improvements within the North Basin area of McLaughlin Eastshore State Park. Accordingly, this project was considered as part of the cumulative scenario evaluated in the Draft EIR. To the extent the comment references projects proposed in the Draft Waterfront Specific Plan (WSP) and the potential for regional ferry expansion, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which explains that the Draft WSP is included in the Draft EIR cumulative impacts analysis (see Draft EIR page 3-9 and 3-11) and provides further clarification regarding the relationship between the Draft EIR cumulative analysis and the Draft WSP.

The comment also references creation of a large bicycle “freeway” around the exterior of the Berkeley Bulb. However, the comment does not identify a specific project by that name or provide information demonstrating that it is a separate reasonably foreseeable project not already captured within the Draft WSP or other projects listed in Draft EIR Table 3-1. The City is not aware of a cumulative project identified

as a bicycle freeway in the capital improvement projects lists reviewed during preparation of the Draft EIR. To the extent the comment is referring to future bicycle improvements that may be implemented as part of broader waterfront planning efforts, those efforts would either be encompassed within projects already included in the cumulative projects list or would be evaluated separately if and when they become reasonably foreseeable projects.

Additionally, the comment references climate resiliency projects that could result in changes to the waterfront area, but does not identify specific projects. However, the cumulative projects list provided in the Draft EIR (Table 3-1) includes several projects that could be responsive to this concern, including the César E. Chávez Park Pathway Restoration Project, Marina Boulevard Shoreline Resiliency and Public Access Improvements Project, Berkeley North Basin Project, and other shoreline restoration, habitat enhancement, and public access improvement projects that were reasonably foreseeable at the time the Draft EIR was prepared. These projects were considered in the cumulative impact analysis based on the best available project information. With respect to the question regarding the projected paved footprint of each cumulative project, CEQA does not require a cumulative analysis to quantify the paving area of every cumulative project. Rather, CEQA requires evaluation of the environmental effects of past, present, and reasonably foreseeable future projects. The Draft EIR relies on the available project descriptions and planning documents associated with cumulative projects to evaluate cumulative environmental conditions and determine whether the proposed project would make a cumulatively considerable contribution to identified impacts. The comment also asks about a "dead zone wake" from increased bicycle use. Increased bicycle use does not generate a wake and, by itself, is not a physical environmental impact under CEQA. To the extent new bicycle facilities require physical improvements, any associated environmental impacts would result from construction or operation of those facilities and would be evaluated as part of the applicable project. Increased bicycle use itself is generally associated with reduced reliance on motor vehicles and does not constitute a significant environmental impact.

Finally, the comment states that the Draft EIR does not address cumulative impacts associated with a buildout of 26 ferry terminals across San Francisco Bay. As discussed in Section 2.2.9, *Topical Response: Cumulative Impacts*, the 26-terminal scenario was a conceptual planning network considered during development of WETA's long-range planning efforts but was not adopted as part of WETA's 2050 Service Vision. Because the 26-terminal concept was not adopted and does not meet the Draft EIR's definition of a reasonably foreseeable project, it was appropriately not included in the cumulative projects analysis. The Draft EIR analyzes reasonably foreseeable ferry service expansion projects that meet the criteria identified on Page 3-6 of the Draft EIR.

The Draft EIR adequately evaluates cumulative conditions and the project's incremental contributions to cumulative impacts consistent with CEQA requirements. Therefore, the analysis, impact determinations, and mitigation measures remain valid as presented, and no revisions to the Draft EIR are required in response to this comment.

Response to Comment P72-18

The historic Berkeley Pier extended almost 4 miles out from the shore, and pier pilings will remain in place that will provide sufficient substrate for sessile invertebrate and roosting birds despite the pier pilings that will be removed to ensure no-net loss of jurisdictional waters due to project construction. As discussed in Draft EIR Section 3.3.2, Environmental Setting, page 3.3-10, invertebrate communities present on pier pilings are also present on the rip rap shoreline within the project site, providing alternate foraging opportunities for waterbirds. Removal of the pier pilings would be a temporary impact to invertebrate communities, as the breakwater and new piles that are to be installed would provide hard substrate that could be recolonized by these communities, as discussed in Section 3.3.4, Shading and Soft Bottom Habitat Impacts, page 3.3-61. See Responses to Comment O7-17 and P46-4 for further discussion of project impacts specific to foraging and roosting birds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-19

The density of invertebrates on the existing pilings is beyond the scope of the Draft EIR, because CEQA evaluates whether a project would cause a substantial, adverse change in biological resources or exceed established significance thresholds, not the absolute abundance of organisms on individual structural elements. A records review and the project reconnaissance found no evidence that the pilings support special-status species or constitute a unique or irreplaceable benthic habitat; thus, quantifying invertebrate density on pilings would not change the conclusion that impacts are unlikely to be significant. See Response to Comment P72-18 for additional discussion of invertebrate communities on pier pilings. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-20

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P72-21

See Response to Comment O4-8 for a discussion of ferry operational impacts on aquatic species. Refer to Response to Comment 05-27 for discussion of pile driving and dredging impacts to wildlife. Also see Response to Comment P46-4 for discussion of impacts to roosting birds. With respect to the work windows and potential conflicts with regard to species presence, construction impacts would be temporary, and waterbirds can move out of the project vicinity, whereas hydroacoustic impacts to fish may result in injury at greater distances. The Draft EIR addresses construction impacts to wildlife in Section 3.3.4 under Impact BIO-1 (pages 3.3-43 through 3.3-51) and concludes that impacts would be less than significant with implementation of Mitigation Measures BIO-1, HYD-1, and AES-1. The Draft EIR also addresses impacts to wildlife movement in Section 3.3.4 under Impact BIO-4 (pages 3.3-63 through 3.3-62) and concludes that impacts would be less than significant. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-22

Tree removal and replacement ratios will be determined by the City Urban Forestry Unit. The Draft EIR analysis presented under Impact BIO-5 in Section 3.3.4 (page 3.3-65) concluded that impacts to protected trees would be less than significant. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-23

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, and Section 2.2.20, *Topical Response: Parking,* for detailed discussions of parking conditions and access along Seawall Drive.

As explained within Draft EIR Chapter 3, *Environmental Impact Analysis*, CEQA does not require analysis of the economic effects of potential parking fees or user costs unless those effects would result in a physical environmental change (see Draft EIR page 3-11). Decisions regarding whether to implement parking fees, and how such fees would be structured, are policy decisions outside the scope of the CEQA analysis.

As described in Chapter 2, *Project Description*, the project includes improved public access features such as a new public plaza, accessible pathways, and enhanced recreational amenities (see Section 2.5.2). These improvements are intended to increase accessibility for all users, including those with mobility limitations. The Draft EIR evaluates these improvements accordingly, including parking supply and access, in Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Analysis*, and concludes that the project would maintain a parking supply comparable to existing conditions and improve site circulation and accessibility through its multimodal access improvements, which include enhanced pedestrian, bicycle, and transit infrastructure (refer to Section 3.12.4 and Appendix F).

The analysis and significance conclusions presented in the Draft EIR remain valid as written, and no revisions are necessary.

Response to Comment P72-24

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P72-25

The literature review and reconnaissance survey conducted for the Draft EIR are sufficient to document existing conditions, analyze special-status species potential to occur within the project site, and evaluate potential species impacts. Targeted or protocol-level surveys are only required only if the reconnaissance or agency consultation identifies the potential for special-status species or other conditions indicating potential significant impacts. See Responses to Comments O7-17 and P46-4 for further discussion of project impacts specific to waterbirds and use of pier structures for roosting, respectively. No additional analyses or surveys or changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-26

See Response to Comment P72-25 for a discussion of surveys required for the Draft EIR. See also Response to Comment O5-36 for discussion of dredging and in-water construction impacts and Response to Comment O7-17 for discussion of ferry operations on waterbirds. No additional analyses or surveys or changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-27

See Response to Comment P72-25 for a discussion of literature review and surveys required for the Draft EIR. See also Response to Comment O4-8 for discussion of operational impacts related to aquatic species, including waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-28

Public resources such as eBird were reviewed at a high-level to identify potential species occurrences within the project vicinity to provide additional information about the species potential to occur. The Draft EIR's primary biological analysis is not based on eBird presence/absence alone. The Draft EIR relies on a review of literature and publicly available databases described in Section 3.3.1, Introduction, page 3.3-1 and a habitat-suitability assessment as discussed in Section 3.3.2, Environmental Setting, pages 3.3-17 and 3.3-18. The reconnaissance survey conducted for the Draft EIR are sufficient to document existing conditions, analyze special-status species potential to occur within the project site, and evaluate potential species impacts. Targeted or protocol-level surveys are only required if the reconnaissance or agency consultation identifies the potential for special-status species or other conditions indicating potential significant impacts. No additional analyses or surveys or changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-29

The Draft EIR evaluated impacts to California least tern, and clarification text changes have been made to Draft EIR Section 3.3 Biological Resources, pages 3.3-18 (see Response to Comment A2-35 to A2-38 for details). See also Response to Comment P72-25 for a discussion of survey requirements. No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment P72-30

Although brant are a California species of special concern, there are no occurrences in the CNDDB. Thus, this species was not included in the literature review. There is potential for brant to forage over open

water within and adjacent to the project site. In response to the comment, potential for the species to occur within the project site has been added as low in Appendix C, and the following clarification text changes have been made to Draft EIR Section 3.3, *Biological Resources*, and Appendix C, *Supporting Biological Resources Information:*

Section 3.3.4, page 3.3-18:

Special-status Wildlife Species

Fifty-one ~~Forty-seven~~ (51 ~~47~~) terrestrial special-status wildlife species were assessed for their potential to occur within the project site (Appendix C), of which 12 ~~seven~~ have the potential to occur within the terrestrial portions of the project site. One species, double-crested cormorant (*Nannopterum auritum*, CDFW Watch List), was determined to have a moderate potential to occur and is discussed in further detail below.

In addition, the following ~~six~~ 11 species (one insect, one reptile, and ~~four~~ nine avian species) were determined to have a low potential to occur, and therefore, with the exception of Crotch's bumble bee and burrowing owl (due to their State candidate endangered status), least tern, and the northwestern pond turtle (which is discussed further due to the proximity of potential habitat near the project site), are not discussed further because they are unlikely to be affected by the project:

- Crotch's bumble bee (*Bombus crotchii*, State candidate endangered)
- Northwestern pond turtle (*Actinemys marmorata*, federally proposed threatened, State species of special concern [SSC])
- Cooper's hawk (*Accipiter cooperii*, CDFW Watch List)
- Burrowing owl (*Athene cunicularia*, State candidate)
- Common loon (*Gavia immer*, SSC)
- Brant (*Branta bernicla*, SSC)
- White-tailed kite (*Elanus leucurus*, State fully protected)…
- Alameda song sparrow (*Melospiza melodia pusillula*, SSC)
- Osprey (*Pandion haliaetus*, CDFW Watch List)
- Least tern (Sternula antillarum browni, Federally endangered, State endangered, State fully protected)
- Elegant tern (*Thalasseus elegans*, CDFW Watch List)

The remaining ~~40~~39 terrestrial species evaluated are not expected to occur in the project site or the immediate vicinity based on the absence of grassland, woodland, chaparral, vernal pool, or other…

Appendix C, page C-9:

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
Athene cunicularia burrowing owl	None/SC G4/S2 SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Low Potential	Although one occurrence has been documented within five miles of the project site and burrowing owls are known to overwinter at Cesar Chavez Park, the project site itself does not provide the habitat conditions required for overwintering. The site lacks open, low-stature annual

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
				grassland and protected foraging areas with sufficient insect prey, which are essential for sustaining overwintering individuals. Adjacent areas, including fragmented grasslands in Shorebird Park and along University Avenue, contain limited open space but do not provide suitable overwintering habitat. While some ground squirrel burrows are present, these grassland areas are routinely mowed for park use and subject to heavy recreational use and frequent human disturbance, which reduces prey availability and limits habitat suitability. In addition, the grassland areas along University Avenue are narrow and linear, lack refuge from disturbance due to regular trail use, recreation, and the presence of dogs, and are exposed to numerous tall perching structures that support hawks and other avian predators. A migrating or displaced individual could briefly land on the project site or within nearby areas during movement; however, sustained overwintering use is not expected. Accordingly, neither the project site nor immediately adjacent areas, provide suitable overwintering habitat for burrowing owl.
Branta bernicla brant	None/SC G5/S2 SSC	Requires well-protected, shallow marine waters with intertidal eel-grass beds, primarily within bays and estuaries. At high tide they need sheltered open water or protected beaches for loafing. Primary food is eelgrass. Brant often feed close to mudflats, sandbars, or spits used as gritting sites.	Low Potential	There are no known occurrences within five miles and this species does not breed in California; however, suitable foraging habitat may be present in the project vicinity.

Even with these Draft EIR clarification text changes, the analysis and significance conclusion presented in Section 3.3.4 under Impact BIO-1 (page 3.3-43) of no significant impacts to wildlife species with implementation of identified mitigation remains valid.

Response to Comment P72-31

Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR for information regarding eelgrass. The Draft EIR utilized the most up to date publicly available eelgrass spatial data (Merkel and Associates 2004, 2009, 2014). Based on the best available data, there are no documented occurrences of eelgrass within the project site. No revisions to the EIR are necessary.

Response to Comment P72-32

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P72-33

See Response to Comment O9-5 for a discussion related to osprey. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-34

See Response to Comment A2-10 for discussion of impacts related to white-tailed kite. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-35

There is low potential that burrowing owl will occur on or in the vicinity of the project site due to heavy anthropogenic disturbance and limited foraging habitat. However, as discussed in Response to Comment A2-28 to A2-31, clarification text changes have been made to Draft EIR Mitigation Measure BIO-1(c) in Section 3.3 Biological Resources (page 3.3-55). No additional Draft EIR clarification text changes are necessary in response to this comment.

Response to Comment P72-36

Bald eagle is addressed in Draft EIR Appendix C *Supporting Biological Resources Information*, page 3.3-C-10. It is not expected to occur due to lack of suitable nest trees within a mile of the project site. While foraging habitat does occur in the San Francisco Bay, high anthropogenic activity within the project site would discourage presence of bald eagle habitat within the developed project site. However, even if it were to occur on the project site, impacts would be less than significant with implementation of Mitigation Measures BIO-1 (a) and BIO-1(c). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-37

The Draft EIR Section 3.3.4 under Impact BIO-1, starting on page 3.3-44, discusses nesting birds and concludes that with implementation of Mitigation Measures BIO-1(a) and BIO-1(c), impacts would be less than significant. Bryant's savannah sparrow had no recorded database occurrences within the standard search area (nine USGS quadrangles) and, thus, was not included in Draft EIR Appendix C. This species requires low, tidally influenced pickleweed coastal marshes and associated coastal grasslands for breeding and foraging. Such habitat is not present within the project site, and there are no recorded occurrences in publicly available databases within five miles of the project site. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-38

The willow thicket referenced in this comment will not be impacted by the project. Removal of trees along Seawall Drive would include replacement plantings ratios to be determined by the City Urban Forestry Unit (see Impact BIO-5, page 3.3-65). The temporary loss of marginal habitat within urban landscaped areas would not create a significant impact. Larger areas of undeveloped habitats at Cesar Chavez "Farmworkers" Park and McLaughlin Eastshore State Park provide higher quality foraging habitat in the project vicinity. The Draft EIR analysis and significance conclusion that impacts to birds protected under the MBTA and CFGC would be less than significant with mitigation (Mitigation Measures BIO-1[a] and BIO-1[c]) under Impact BIO-1 in Section 3.3.4 (page 3.3-44) remains valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P72-39

Refer to Section 2.2.5, *Topical Response: CEQA Adequacy,* for more information on this topic. Refer also to earlier comments for responses to specific comments raised in the comment letter. No further response is required.

Response to Comment P72-40

The comment's preference for the No Project Alternative is a policy matter for City decision-makers to consider. This comment has been included in the project record considered by City decision makers. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P72-41

Refer to Response to Comment P72-6, which explains why a subsequent EIR is not needed. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P72-42

Insofar that these references are cited in earlier comments, refer to Response to Comments P72-1 through P72-41 for a discussion about specific comments raised by the commenter.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Subject: Berkeley Marina EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear City of Berkeley, you have a problem, making way for popular transportation project that is elbowing itself into a multitude of other popular and sensitive and existing facilities', recreation and outdoor uses. The main weakness of the proposed ferry is that there is a assumption that parking will be close the to the terminal. This is impossible without major disruption and destruction of the marina family of public use. Many transportation related projects rely on a shuttle for near by parking lots…I would support this. Steve Belcher, 80 year user. P73-1

Letter P73

Commenter: Steven Belcher

Date: April 27, 2026

Response to Comment P73-1

Section 3.11, *Recreation*, of the Draft EIR identifies existing recreational uses and facilities at the Berkeley Waterfront (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7) and evaluates whether the project would result in a physical loss of recreational resources or restrict access (Section 3.11.4, *Impacts Analysis*, pages 3.11-14 through 3.11-24). As discussed therein, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and access, including new and improved facilities and public amenities (Impact REC-1).

Parking and circulation are evaluated in Section 3.12, *Transportation*, and Chapter 2, *Project Description*, which describe that the project would provide a comparable parking supply while incorporating multimodal access improvements. For further discussion of parking considerations related to the Draft EIR analysis, refer to Section 2.2.20, *Topical Response: Parking.* The comment's suggestion regarding alternative parking strategies (e.g., shuttle services) represents a design preference. As described in the Parking and TDM Plan, such strategies are among the tools that could be implemented if needed as part of ongoing management. CEQA requires analysis of environmental impacts of the proposed project, but does not require adoption of specific alternative management strategies unless necessary to mitigate a significant environmental impact

The Draft EIR demonstrates that the proposed project would not result in a significant impact to recreational resources or access. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Re: Waterfront Transportation Pier Ferry Project DEIR
State Clearing House #2025040995

Dear Ms. McNulty,

Please accept the following comments on the Waterfront Transportation Pier Ferry Project DEIR. P74-1

PUBLIC ACCESS: Confusion Over Which Public Agency Will Manage Public Parking (Park and Ride Programs) in and near the Project Site P74-2

The DEIR is insufficient in describing the relationship between the following 4 parties associated with the Project site:

1. California State Park System

Eastshore State Park General Plan (from here on referred to as the General Plan), December 6, 2002, page III-2 thru page III-3 P74-3
https://www.parks.ca.gov/pages/21299/files/eastshorestatepark-generalplan.pdf
Last accessed: April 27, 2026

The Public Resources Code, Section 5003.03(h) has proposed that the Eastshore park project shall be:

"...a recreational facility harmonious with its natural setting."

To accomplish this purpose, the park project's resources will be managed by balancing its scenic and recreational resources with the protection and restoration of its natural resources. Opportunities to enjoy the on-shore breezes, the wildlife, as well as the world-renowned vistas of urban skylines and the Bay and Golden Gate Bridges shall be enhanced. **Public access to the San Francisco Bay and its shoreline shall be provided,** consistent with resource protection, to meet recreational needs through use of the Bay Trail and waterfront recreational areas. P74-3

The General Plan acknowledges there is limited space for public parking. Page II-73.

The limited amount of upland area means that land area for parking is at a premium. **Land set aside for parking with necessarily be competing with potential recreation and habitat uses**.

Since "…land area for parking is at a premium," it is essential that a Park and Ride Program or some other type of parking mitigation be established to protect public access to the limited number of public parking spaces set aside for visitors to the McLaughlin Eastshore State Park.

According to the *California Department of Parks and Recreation Policy Manual* it may in fact be necessary to warn ferry users that vehicles found illegally parked on State Park land may be subject to being towed.
https://www.parks.ca.gov/pages/937/files/Chapter_1_DPR_CA_Policy_Manual.pdf
Last accessed: April 23, 2026 P74-4

Law Enforcement Authority, Page 23

100.8 CALIFORNIA VEHICLE CODE

Although State Park Peace Officers enforce many sections of the California Vehicle Code, the following sections are of particular importance:

Vehicle Code § 21113 - Public Grounds - This section makes all provisions of the California Vehicle Code applicable to the traffic upon the driveways, paths, parking facilities, and grounds of the State Park System. (The complete text is contained in the California Vehicle Code.)

Vehicle Code §§ 22651 through 22656, and 22669 - These sections authorize the removal, towing, and storage of vehicles under certain conditions by State Park Peace Officers. The removal, towing, and storage of any vehicle by State Park Peace Officers shall be performed in accordance with these sections and with the procedures detailed in Sections 22850 through 22853. (The complete text is contained in the California Vehicle Code.)

Vehicle Report Form, CHP 180, shall be used when removing and storing vehicles. An owner of a vehicle placed in storage is entitled to a review process and may request a hearing. The CHP 180 is used to notify the owner of the vehicle of his/her entitlement to a hearing.

P74-4

2. California Department of Transportation (CalTrans) Commuter Park and Ride Program https://dot.ca.gov/programs/traffic-operations/park-ride
Last accessed April 27, 2026

P74-5

CalTrans operates Park and Ride Programs at many of the California State Parks but McLaughlin Eastshore Park does not show up on a search of their website.

3. City of Berkeley
https://berkeleyca.gov/city-services/parking
Last accessed: April 27, 2026

P74-6

The City of Berkeley website does not appear to operate any Park and Ride facilities.

4. Bay Regional Park District (EBRPD)
https://www.ebparks.org/parks/mclaughlin-eastshore

P74-7

Last accessed: April 27, 2026

A search of the EBRPD website revealed this information:

> The East Bay Regional Park District**, acting as agent for the State,** used funds from the Park District's 1988 Measure AA and state park bonds to acquire the property and clean up contaminated areas at a cost of more than $33 million. The McLaughlin Eastshore State Park General Plan identifies the future preservation, conservation, and recreation uses and improvements for the park.

P74-7

There is no indication on the EBRPD website that it operates any Park and Ride facilities for commuters.

The confusion over who does or doesn't have clear jurisdiction over the subject of parking in the Project area must be resolved in order to ensure public access to the recreational resources located at or adjacent to the Project site is maintained.

P74-8

Thank you for the opportunity to comment on this project.

Yvonne Watson

Environmental and Social Justice Leader
Disability Rights Activist

Letter P74

Commenter: Yvonne Watson

Date: April 27, 2026

Response to Comment P74-1

This request pertains to submission of materials for the administrative record and does not raise issues regarding the adequacy of the analysis, significance conclusions, or mitigation measures presented in the Draft EIR. The submitted material has been received and included in the record. No further response is required.

Response to Comment P74-2

First, as a matter of clarification, no park and ride programs have been proposed as part of the project. The project does include renovations to the Seawall Drive Parking Lot. This parking lot is within the City of Berkeley's jurisdiction and the City would manage the parking lot.

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the City's plan to maintain and protect access for recreational users.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P74-3

The proposed project is not located in the California State Park System, and the California State Park System would not be responsible for managing any of the parking associated with the proposed project. Refer to Response to comment P74-2. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P74-4

The proposed project would not infringe on the continued implementation of laws from California State Parks. Refer to Response to comment P74-2 and P74-3. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P74-5

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P74-6

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P74-7

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P74-8

Refer to Response to comment P74-2.

Subject: Comment on the WETA Pier-Ferry Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Please see attached. I would like to enter it into the record of comments on Draft EIR for the Pier-Ferry project. P75-1

Berkeley and WETA need to commit to electric ferries and only electric ferries for this route. Promises of electrification seem disingenuous when the costs, performance, schedule, and the initial business plan appear to based on diesel ferries. P75-2

Paul Kamen, Naval Architect, P.E.

Op Ed by Paul Kamen, Naval Architect
March 7, 2023

Why is Berkeley Going Backwards on Climate Change?

Berkeley is poised to embrace one of the dirtiest, highest-carbon, globally-destructive forms of transportation ever devised: Diesel Powered High Speed Commuter Ferries.

The numbers speak for themselves: A modern fast ferry is a carbon hog, using about 2300 BTU of liquid fossil fuel energy per passenger mile. Compare to commuter buss at 130 BTU per passenger-mile, lilght rail at 91, or BART at only 68. Even an older gasoline-powered car, 20 MPG in a four-person carpool, leaves a lighter carbon footprint than the ferry at 1750 BTU/passenger-mile.

Modern battery-electric cars, single-occupancy, have an energy consumption range from 853 to about 1180 BTU equivalent per passenger-mile. Also consider that with private vehicles there's no reverse commute; with public transportation, a half-load in the reverse commute direction doubles the per-mile carbon footprint. If our high speed diesel ferry averages 50% passenger load throughout the day (probably optimistic), then the ferry's actual carbon footprint per passenger-mile is doubled.

While it's true that modern "Tier 4" emission controls can remove particulates and other pollutants from diesel exhaust, they do nothing for carbon dioxide, the primary greenhouse gas produced when petroleum fuel is burned. The carbon footprint tracks closely with the energy content of the liquid fossil fuel burned, so BTU per passenger-mile is a good measure of the carbon footprint of a diesel ferry. (Electric vehicle energy is more commonly given as kilowatt-hours rather than British thermal units, but the conversion is easy: 1 kWh = 3412 BTU.) P75-3

Now look at the latest purchase by our local ferry authority, WETA: Two diesel engines of 2557 HP each, 36 knots at full load, 320 passengers. It works out to 2719 BTU per passenger-mile, assuming every seat is occupied in both commute directions.

Meanwhile, California is aggressively pursuing full electrification of our transportation fleet. New cars must be all electric by 2035. We are transitioning to zero-emission busses. Electric ferries are in the works all over the world (Seattle, Vancouver, New York, Europe, and Asia). Norway is particularly progressive: A new 27 knot, 150-passenger all-electric ferry is now operational, joining a fleet of 70 zero-emission ferries. It runs at a relatively efficient 927 BTU/passenger-mile. And their largest all-electric ferry transports 360 passengers plus 120 vehicles at about 12 knots on a 4 mile route. If we count each car as equivalent to four more passengers, carbon footprint is a very clean 305 BTU per passenger-mile.

Thailand is planning no less than 27 250-passenger electric ferries to serve routes on the Chao Phraya River in Bangkok. Other electrification projects are underway in Taiwan, New York and several European routes.

Closer to home, BC Ferries is already operating two Island Class hybrid car ferries in Puget Sound – capacity is 47 vehicles and up to 450 passengers.

Here in the U.S., the Federal Trade Commission recently awarded $97.6 million to fund the "Electric or Low-Emitting Ferry Pilot Program" in 7 states. Washington State Ferries, the largest ferry operator in the U.S., has initiated a $4B program to first hybridize and then electrify its fleet by 2040.

Even the humble old Tiburon-Angel Island ferry will be electrified next year, moving 400 passengers at only 256 BTU/passenger-mile. This is less than one-tenth of the per-passenger per-mile carbon footprint of WETA's newest diesel ferries.

The proposed Berkeley to San Francisco ferry service is well suited to electrification. It's a short route at only 6.5 miles, with a long enough dwell time at each end for useful recharge. (The SF-Jack London Square route if even shorter, at 6.2 miles.)

Before proceeding with plans for a major ferry terminal at the Berkeley Marina, Berkeley needs a firm contractual guarantee from WETA that ONLY electric ferries will operate from the new terminal. Yes, WETA has made this promise, but their cost projections are still based on diesel power. We need an enforceable agreement that we can hold them to. And we need to see realistic costs and revenue projections based on electric boats. P75-3

A ferry has a useful life of 30 to 40 years. In 2050 and beyond, do we really imagine that we will still be supporting a diesel fleet for the short run from Berkeley to San Francisco? Diesel will cost more, diesel will contribute to disastrous climate change, and adding more diesel exhaust is absolutely the wrong legacy to leave to those who come after us.

It's easy to see why the Berkeley City Council would love to take credit for bringing ferry service back to Berkeley. But if large diesel-powered boats come to Berkeley, the legacy will be regressive climate policy and an inexcusable disregard for the future.

Paul Kamen, Naval Architect

Response to Comment P75-1

The City confirms that subsequent comments have been entered into the record. Refer to Response to Comments P75-2 to P75-3.

Response to Comment P75-2

Refer to Section 2.2.10, *Topical Response: Electric Ferry*, which discusses that the ferry vessels being proposed in the Draft EIR are electric. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. Nevertheless, the comment has been included in the project record provided to decision makers for consideration. No further response or revisions to the EIR are required.

Response to Comment P75-3

Insofar that this opinion article discusses electric ferry vessels, refer to Section 2.2.10, *Topical Response: Electric Ferry*.

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Subject: Oppose ferry project

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Lisa

I am a long time Berkeley resident, a Cal graduate, and a senior on limited income. I am also disabled. I am a regular daily user of the Berkeley Marina for recreation and excercise. I strongly oppose the ferry project as it adversely affects parking. The marina offers a respite for recreation to Berkeley low income. I paddle on the bay and I am a member of Draggon max and of Berkeley yacht club. P77-1 P77-2

There is no planning for adequate parking. There are already two ferries nearby in Richmond and Oakland. I urge you to Please reconsider the ferry project. Thank you. P72-3 P72-4

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P77-2

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion about how the City appropriately discusses parking in the Draft EIR, according to CEQA.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P77-3

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to the City's plan to provide an adequate parking supply. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P77-4

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Subject: re: Berkeley Ferry Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

to Parks, Rec. Water Front Commission:
I am appalled at the proposal for the Berkeley Ferry
and concurrent changes to near shore areas.

As an Environmental Educator, past member of
Audubon and Sierra Club Conservation committees,
wildlife data provider for the planning of the
East Bay Regional Park, and long time
Berkeley resident, I am dismayed at the inadequate
and misleading Draft EIR. P78-1

1. Ferry wakes cause harmful disturbance to foraging, resting, courting of
resident and migrating water birds including Species of Special Concern
double Crested Cormorants and Clark's Grebes, that regularly display
courtship in this area. 16 Ferry trips would make this disturbance unrelenting. P78-2

2. Dredging for this endeavor will destroy existing and vital eel grass beds
and greatly disturb shoreline habitat that provides feeding for both
water birds and shorebirds. P78-3

3. Eliminating historically free bay view parking in favor of
monetizing this area for Ferry parking discriminates against
income limited people, goes against the accepted practice of
free coastal access (the bay is essentially an extension of the coast),
and is actually a social justice issue. P78-4

4. Emphasizing creating trails for bikes, e-bikes creates danger
for disabled or elderly walkers, casual strollers wanting a peaceful nature experience,
birders..... the multi-use trail along the Richmond shoreline is filled with speeding
bikes that are perilous for pedestrians P78-5

5. Ferry will be high cost for users, not reduce gridlock freeway traffic,
in itself will be a costly boondagle for taxpayers, is not really a
recreational activity, and will cause harm that no mitigation can correct
and adequately substitute. P78-6

6. Re=creating an ecologically sound Berkeley Pier is possible without
long term dredging and establishing a Ferry. P78-7

sincerely, Corinne Louise Greenberg MA, DTR

Letter P78

Commenter: Corinne Louise Greenberg

Date: April 28, 2026

Response to Comment P78-1

Refer to Section 2.2.5, *Topical Response: CEQA Adequacy*, for more information on this topic. No further response is required.

Response to Comment P78-2

Double crested cormorant (*Nannopterum auritum*) is on the CDFW Watch List for nesting colonies, but is not a Species of Special Concern, and Clark's grebe (*Aechmophorus clarkii*) is currently listed as Least Concern by the International Union for Conservation of Nature (IUCN). Sixteen (16) new ferry trips daily (eight in the morning and eight in the afternoon) would not contribute significantly to existing levels of vessel operational levels on the Bay. The analysis and significance conclusion presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, Page 3.3-56 of the Draft EIR remains valid as written. The Draft EIR discusses the impacts of ferry wake in Section 3.8.4. Impacts Analysis on page 3.8-33. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P78-3

Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR for information regarding eelgrass. There are no documented occurrences of eelgrass within the project site. Therefore, the proposed project is not expected to impact eelgrass habitat. No further revisions to the EIR are necessary.

Response to Comment P78-4

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of parking supply, demand, and transportation demand management project elements that would maximize accessibility of the Berkeley Waterfront for all users.

To the extent the comment raises concerns about the distribution of costs and benefits among waterfront users of different income levels, these are important policy considerations that the City Council should weigh in its deliberations on the project. However, the distribution of costs and benefits among different user groups does not constitute a physical environmental impact under CEQA. CEQA Guidelines Section 15131 provides that economic and social effects of a project shall not be treated as significant effects on the environment. The Draft EIR at Section 3.11, Recreation, analyzes whether the project would have physical impacts on recreational uses and access, and concludes that the project enhances rather than diminishes recreational opportunities at the Berkeley Waterfront. The equity implications of fee structures for marina and ferry infrastructure are policy matters appropriately addressed through the City's public deliberative process, not through the CEQA environmental review of the physical project. No revision to the Draft EIR is warranted on this basis. The project would provide a range of public benefits, including expanded public access, improved recreational facilities, and enhanced multimodal transportation options, which are intended to support continued public use of the waterfront. The Draft EIR appropriately evaluates the physical environmental effects of all project features, including potential impacts related to changes to parking configuration and supply, and concludes based on substantial recorded evidence that impacts related to transportation and related impacts to recreational access would be less than significant, as described in Section 3.11, *Recreation* (refer to Impact REC-1), and Section 3.12, *Transportation* (refer to Impact TRA-1).

Accordingly, the analysis and significance conclusions presented in the Draft EIR remain valid as written, and no revisions are necessary.

Response to Comment P78-5

Conditions along the Richmond shoreline are outside the project vicinity and do not reflect the design approach of the proposed project at the Berkeley Waterfront. The Draft EIR evaluates pedestrian and bicycle circulation in Section 3.12, *Transportation*, and identifies the Bay Trail as a key recreational and circulation feature in Section 3.11, *Recreation* (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7).

As described in Chapter 2, *Project Description*, the proposed project has been specifically designed to reduce conflicts between different user groups and improve safety and accessibility for all users, including those with limited mobility. The project would incorporate a raised cycle track, which would physically separate bicycle and micromobility traffic from pedestrian pathways and public spaces. In addition, pedestrian routes, the public plaza, and shoreline access areas would be designed to be ADA-accessible, with improved surfaces, grades, and circulation that enhance usability for individuals with mobility constraints (see Section 2.5, *Proposed Project Components*). These features represent an improvement over existing shared-use conditions by providing clear separation of travel modes and upgraded accessible infrastructure, thereby addressing potential safety conflicts such as those described by the comment. The Draft EIR concludes that access and circulation conditions for recreation and transportation users would be maintained and enhanced (see Sections 3.11 and 3.12).

Accordingly, the comment's concerns regarding conditions at other shoreline locations do not indicate a deficiency in the Draft EIR's analysis, and the proposed project includes design measures specifically intended to improve safety for pedestrians, including disabled and elderly users.

The analyses and significance conclusions presented in Sections 3.11, *Recreation*, and 3.12, *Transportation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P78-6

For comments about cost, refer to Section 2.2.22, *Topical Response*: *Project Cost/Financial Feasibility,* for a discussion related to economic considerations.

For comments about traffic, pursuant to California SB 743, transportation impacts in CEQA documents are evaluated using vehicle miles traveled (VMT) rather than roadway congestion measures such as Level of Service (LOS). The project is expected to increase traffic volumes on certain roadways leading to the terminal because additional users would travel to the Waterfront to access the ferry. However, existing roadway segments, including University Avenue between Frontage Road and Marina Boulevard, would continue to operate within acceptable capacity conditions (LOS A). At the same time, many ferry users would replace longer automobile trips with ferry travel. As a result, the overall amount of driving per person is reduced, leading to a decrease in VMT on a per capita basis.

Regarding the comment about mitigation, the Draft EIR has appropriately identified potentially significant environmental impacts and feasible mitigation measures to reduce those impacts. Refer to page 4-1 of the Draft EIR, which discloses the significant and unavoidable impacts from the project.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P78-7

The City acknowledges the comment's preference for a pier restoration project without ferry service. This comment has been included in the project record considered by City decision makers.

As discussed in Draft EIR Section 5.9, *Alternatives Considered but Rejected*, the City considered a "No Ferry Service with New Pier Alternative" but did not carry it forward for detailed analysis because it would not meet one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco. The Draft EIR further explains that funding available through WETA is tied to implementation of ferry service.

For additional discussion regarding the no-ferry-service pier alternative and other alternatives considered but rejected from further analysis, please refer to Response to Comment O10-215.

Accordingly, the City concludes that the Draft EIR evaluates a reasonable range of feasible alternatives consistent with CEQA requirements. No revisions to the Draft EIR are necessary in response to this comment.

Subject: Response to DEIR for Pier Ferry Project

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

To state the obvious, the purpose for an environmental impact report is to identify the impact of a project on the environment, plan mitigations and assess the damage to the environment of those impacts which cannot be mitigated. P79-1

Since the environmental impacts to wildlife are significant and cannot be mitigated, the scope and framing of the DEIR are severely limited to avoid identifying the unmitigable impacts to wildlife and the bay. Studies to support the desired conclusions are also limited as are the alternatives. P79-2

The glaring alternative never studied is portrayed in this flyer P79-3

The best solution to ferry service was never proposed or analyzed as an option. Instead the alternatives were a shortened breakwater and a shortened pier at the planned location. The fourth alternative of reduced landside facilities has already been reduced in the planning and stripped down to a small plaza in the last presentation to the public.

Reaching back to a 2003 EIR is out of place in the science and analysis that has developed in the last 23 years. This 2026 DEIR needed to be a completely fresh start. P79-4

The premise that the ferry will reduce commuters on the bridge upends the purpose of the ferry as enhancing recreation. An in depth study needs to be performed on the impact of a ferry on BART ridership. BART is the superior mode of transportation in moving people with the least environmental impact. Competing with and diverting ridership from BART to the ferry has been a WETA practice in establishing fare price points for other routes. P79-5

The impact on nature needs fresh study for the entire marina, waterfront and surrounding area. Berkeley including the marina/waterfront is on the Pacific Flyway. The impact of a ferry on migrating birds is significant. A thorough study needs to be completed during winter migration and during spring and summer nesting. Between 1970 and 2020 numerous studies documented the loss of greater than 30% of birds in North America. The decline in bird populations continues at an accelerated pace. https://www.stateofthebirds.org/2025/ P79-6

The mortality of gray whales in the bay from boat strikes is on the increase, well documented in local papers. This needs fresh review. Adding more ferries and ferry routes will only add to this crisis. Somehow the DEIR didn't find any whales, but this absence of findings appears in the DEIR to be absent due to the small constrained area and time of study in the DEIR. P79-7

Kelly Hammargren

Letter P79

Commenter: Kelly Hammargren

Date: April 28, 2026

Response to Comment P79-1

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P79-2

The comment does not identify what impacts are significant that cannot be mitigated. The comment also does not provide supporting information about how the scope and framing of the Draft EIR are limited. Studies prepared for the Draft EIR include a literature and database review included publicly available agency databases and documents consistent with industry standards. The literature and database review conducted for the EIR is described in Section 3.3.1, Introduction, Page 3.3-1 of the Draft EIR remains valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P79-3

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

Refer to Section 2.2.2, *Topical Response: Alternatives*, which describes the overall alternatives analysis in the Draft EIR, including consideration of alternatives, consideration of off-site alternatives, and why the Alternatives analyzed in the Draft EIR are not minor variations, but alternatives with sufficient variation to allow for meaningful decision-making.

The comment's preference for a different ferry terminal location or project configuration is noted; however, the comment does not identify a deficiency in the Draft EIR's alternatives analysis. This comment has been included in the project record considered by City decision makers. No revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P79-4

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Response to Comment P79-5

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P79-6

The Central Bay already supports dense commercial, recreational, and ferry operational levels; the EIR compares the incremental ferry operations to this existing baseline rather than to an undisturbed Bay. The research cited does not identify reasons for the decline in birds of North America, but does suggest sea-level rise, predation, and warming or changing climates affecting foraging habitat as potential causes for the decline in seabirds, none of which would be exacerbated by the proposed project. The EIR impacts

analysis was based on a current literature review of publicly available agency databases and documents consistent with industry standards. The literature and database review conducted for the EIR is described in Section 3.3.1, Introduction, Page 3.3-1 of the Draft EIR remains valid as written. See Response to Comment P46-4 for a discussion regarding the Pacific Flyway. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P79-7

As described in Draft EIR Section 3.3.4 (Impact BIO-1, pages 52 to 54), the analysis acknowledges that vessel strikes are a known source of mortality for whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay baseline, which includes substantial commercial, recreational, and ferry vessel operational levels. See Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Subject: Objection to ferry terminal in Berkeley marina

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

I am a resident of Berkeley, a registered voter and a taxpayer. P80-1

I am appalled by the city proposal to build a ferry terminal in Berkeley Marina P80-2

1) due to massive expense and poor planning, which will be paid for by us the taxpayers at the expense of Berkeley schools and other much higher priorities P80-3

2) it is a huge de facto subsidy of riders at the expense of the rest of the community

3) it steamrolls over years of active community use of the waterfront for nonprofit recreational and educational activities, for example Cal Sailing club which is open to the community, families picnicking, kayaks, and other recreational use P80-4

4) wasting a whole parking lot in the marina on meter maid vehicles was not disgraceful enough, this massively disruptive project takes disregard for the community to a whole new level P80-5

5) I am in the marina daily for hiking
and have observed Community use in the marina for years P80-6

Please vote NO for this massively wasteful proposal. P80-7

C.Rubio
Berkeley, California

Letter P80

Commenter: Casilda Rubio

Date: April 28, 2026

Response to Comment P80-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P80-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P80-3

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P80-4

The Draft EIR identifies and describes existing recreational uses at the Berkeley Waterfront, including community-serving and nonprofit recreational activities, in Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7). These uses include sailing, kayaking, boating, shoreline recreation, and passive recreational activities, many of which are supported by organizations such as the Cal Sailing Club. Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), evaluates whether the proposed project would result in a physical loss of recreational resources or restrict access to these uses (see Impact REC-1). As discussed therein, the Draft EIR concludes that the proposed project would maintain and enhance recreational opportunities and access, including through improved shoreline access, restoration of public access to the Berkeley Pier, and the addition of new public amenities. The project does not eliminate recreational facilities or preclude the continuation of nonprofit and community-based recreational uses at the waterfront.

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which explains how these continued uses of the unimproved water access near 199 Seawall is maintained under the project.

Accordingly, the Draft EIR does not support the statement that the project would displace or "steamroll" existing recreational uses. The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P80-5

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P80-6

The Draft EIR recognizes the Berkeley Waterfront as a heavily used recreational resource and describes a wide range of existing recreational activities, including walking, hiking, and passive enjoyment of the shoreline, in Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7). These observed uses

are reflected in the baseline conditions used to evaluate the project. Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), evaluates whether the project would result in a physical loss of recreational resources or restriction of access and concludes that the project would maintain and enhance access to these resources, including improvements to shoreline access, the Bay Trail, and related recreational infrastructure (Impact REC-1).

Accordingly, the comment's observations regarding existing community use are consistent with the baseline conditions described in the Draft EIR, and the analysis concludes that these uses would continue to be accommodated. This comment has been included in the project record considered by City decision makers.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P80-7

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Subject: Revision comment to DEIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

HI Liza
Sorry but I had to add another sentence to my previous comment about the whales. Sorry about the confusion. But it is important to note that the majority of whales in the Bay are NEW to the area, hence cannot be acclimated to it. P81-1

Date: **April 28, 2026**
To: **Liza McNulty, PE, Project Manager**
City of Berkeley, Parks, Recreation, and Waterfront Department
From: **Claudia Kawczynska**
Re: **Berkeley Water Transportation Pier Ferry Draft EIR Comments**
Thank you for providing the opportunity to respond to the Draft EIR, I will be addressing only two aspects of this study, the equity issue in parking and the potential impacts to whales: P81-2
Biological Resources:
Potential Impacts to Whales
In your document you analyzed potential impacts to whales but I believe this merits a more in-depth analysis and should not just rely on the very dated WETA's 23 year old programmatic EIR that determined the following:
"Given the existing setting of the Central Bay, and WETA's ongoing implementation of best practices to reduce the potential for whale strikes per the Mitigation Measures in the 2003 Program EIR, impacts would be less than significant."
But yet according to the National Oceanic and Atmospheric Association, 18% of gray whales that enter the SF Bay die there, with fast moving vessel traffic and resulting strikes being a primary cause. Just a few days ago another body of a gray whale, the 8th so far this season, was spotted in the Bay. And while the EIR does cite the "WETA Marine Mammal Protection & Whale Avoidance Memorandum" that document is not fully reproduced in the EIR. This makes WETA's internal whale-protection guidance less than transparent. P81-3
Since vessel speed is the major concern in avoiding striking whales, it is of great concern that this DEIR does not support imposing mandatory ferry speed reductions, and simply relies on "personal communication regarding ferry speeds." So the reduction of the speed is NOT regulated but simply dependent on "conditional" observations. P81-4

Outside of the SF Bay NOAA etc promotes a 10 knot slow zone in whale habitats, but there is no equivalent enforceable standard with ferry operators. The DEIR asserts that "marine mammal activity, particularly for whales, is expected to be lower in the project vicinity than elsewhere in the Bay." But a whale protection approach must analyze cumulative impacts of the ferry system, not just individually. P81-5
In reaching the conclusion that "No mitigation would be required" around this issue, the DEIR states that "Special-status fish and marine mammals, specifically whales, are likely habituated to existing levels of boat trip levels and would avoid new ferry boat service." This certainly sounds more like "wishful" thinking than any in-depth analysis that this important matter merits. In fact many of the whales that come into the Bay are new to the area, so don't have any memory of it to acclimate to it. It is hoped that the deficiencies in the environmental review of valuable resources, such as protection of the whales, be further explored so that the public and policymakers can make an informed judgment regarding the project. P81-6
DEIR Parking and Parking Fee Program
For more "wishful" thinking there is the DEIR's analysis around providing parking for both ferry riders and to the many other users and recreationists who visit the waterfront. I realize that you have already received many comments about the deficiencies of the DEIR's plan to provide sufficient parking for ferry riders, especially since it relies mostly on data collected from other terminals in non-park settings in the Bay Area. So while I do not have much more to add to those comments except to provide a short recent history of how the city of Berkeley, in anticipating the advent of a ferry, thought to impose paid parking on some of the most popular areas, for recreationists, in the waterfront area.
On May 14, 2025, the idea of paid parking first came to the Parks, Recreation and Waterfront Commission, on which I served as vice chair (for the previous 2 years I was its chair). At that time the idea of exploring added revenue generation was extremely important, partially due to the fact that the Doubletree hotel had not paid its lease payments for quite some time, so the PRW formed a subcommittee to study this issue. P81-7
The commission had heard from a wide range of Waterfront users and stakeholders about how this proposed parking fee would have an insurmountable impact on their and others' ability to use the waterfront. This ran counter to one of the state goals of the Waterfront Planning process (WSP) to attract a wider range of users. It was thought that a parking fee would do quite the opposite. According to the Kittelson report parking data found that a third of visitors made less than $75K/yr. The commission requested that it be "fully integrated into the City's evaluation of any trial program of parking fees", and also appointed me to speak for the commission at the June 24 city council meeting regarding this issue.

At that meeting the PRW staff presented its quickly developed paid parking program, that was NOT included in the agenda packet for public review, and with little time given to any further analysis, or acknowledgement of the concerns of the public (who had written hundreds of letters on this issue), the council approved this paid parking plan. The PRW commission was not informed beforehand either.

P81-7

Frankly it is hard to imagine that this parking fee program would not have happened if it hadn't been to create a parking plan for this DEIR that was thought to discourage ferry riders from using those lots that were most popular with recreationists. Although by offering a $500/annual fee that would allow "free" daily parking, that in itself seems to be an attractive alternative to a higher income level ferry rider than to those in the recreational community. (Because of the "behind closed doors" decision making from policymakers, I tendered my resignation from the PRW commission. Equity and fairness were at the heart of my concerns.)

There should be more analysis of how the DEIR's parking plan will affect current waterfront users (not just the patrons of the ferry) and how programs that are designed to help implement this plan, like the paid parking one, will affect future usage of Berkeley's waterfront.

P81-8

Re: **Berkeley Water Transportation Pier Ferry Draft EIR Comments**

Thank you for providing the opportunity to respond to the Draft EIR, I will be addressing only two aspects of this study, the equity issue in parking and the potential impacts to whales:

Biological Resources:
Potential Impacts to Whales

In your document you analyzed potential impacts to whales but I believe this merits a more in-depth analysis and should not just rely on the very dated WETA's 23 year old programmatic EIR that determined the following:

"Given the existing setting of the Central Bay, and WETA's ongoing implementation of best practices to reduce the potential for whale strikes per the Mitigation Measures in the 2003 Program EIR, impacts would be less than significant." P81-9

But yet according to the National Oceanic and Atmospheric Association, 18% of gray whales that enter the SF Bay die there, with fast moving vessel traffic and resulting strikes being a primary cause. Just a few days ago another body of a gray whale, the 8th so far this season, was spotted in the Bay. And while the EIR does cite the "WETA Marine Mammal Protection & Whale Avoidance Memorandum" that document is not fully reproduced in the EIR. This makes WETA's internal whale-protection guidance less than transparent.

Since vessel speed is the major concern in avoiding striking whales, it is of great concern that this DEIR does not support imposing mandatory ferry speed reductions, and simply relies on "personal communication regarding ferry speeds." So the reduction of the speed is NOT regulated but simply dependent on "conditional" observations.

Outside of the SF Bay NOAA etc promotes a 10 knot slow zone in whale habitats, but there is no equivalent enforceable standard with ferry operators. The DEIR asserts that "marine mammal activity, particularly for whales, is expected to be lower in the project vicinity than elsewhere in the Bay." But a whale protection approach must analyze cumulative impacts of the ferry system, not just individually.

In reaching the conclusion that "No mitigation would be required" around this issue, the DEIR states that "Special-status fish and marine mammals, specifically whales, are likely habituated to existing levels of boat trip levels and would avoid new ferry boat service." This certainly sounds more like "wishful" thinking than any in-depth analysis that this important matter merits. In fact many of the whales that come into the Bay are new to the area, so don't have any memory of it to acclimate to it. It is hoped that the deficiencies in the environmental review of valuable resources, such as protection of the whales, be further explored so that the public and policymakers can make an informed judgment regarding the project.

DEIR Parking and Parking Fee Program

For more "wishful" thinking there is the DEIR's analysis around providing parking for both ferry riders and to the many other users and recreationists who visit the waterfront. I realize that you have already received many comments about the deficiencies of the DEIR's plan to provide sufficient parking for ferry riders, especially since it relies mostly on data collected from other terminals in non-park settings in the Bay Area. So while I do not have much more to add to those comments except to provide a short recent history of how the city of Berkeley, in anticipating the advent of a ferry, thought to impose paid parking on some of the most popular areas, for recreationists, in the waterfront area.

P81-9

On May 14, 2025, the idea of paid parking first came to the Parks, Recreation and Waterfront Commission, on which I served as vice chair (for the previous 2 years I was its chair). At that time the idea of exploring added revenue generation was extremely important, partially due to the fact that the Doubletree hotel had not paid its lease payments for quite some time, so the PRW formed a subcommittee to study this issue.

The commission had heard from a wide range of Waterfront users and stakeholders about how this proposed parking fee would have an insurmountable impact on their and others' ability to use the waterfront. This ran counter to one of the state goals of the Waterfront Planning process (WSP) to attract a wider range of users. It was thought that a parking fee would do quite the opposite. According to the Kittelson report parking data found that a third of visitors made less than $75K/yr. The commission requested that it be "fully integrated into the City's evaluation of any trial program of parking fees", and also appointed me to speak for the commission at the June 24 city council meeting regarding this issue.

At that meeting the PRW staff presented its quickly developed paid parking program, that was NOT included in the agenda packet for public review, and with little time given to any further analysis, or acknowledgement of the concerns of the public (who had written hundreds of letters on this issue), the council approved this paid parking plan. The PRW commission was not informed beforehand either.

Frankly it is hard to imagine that this parking fee program would not have happened if it hadn't been to create a parking plan for this DEIR that was thought to discourage ferry riders from using those lots that were most popular with recreationists. Although by offering a $500/annual fee that would allow "free" daily parking, that in itself seems to be an attractive alternative to a higher income level ferry rider than to those in the recreational community. P81-9

There should be more analysis of how the DEIR's parking plan will affect current waterfront users (not just the patrons of the ferry) and how programs that are designed to help implement this plan, like the paid parking one, will affect future usage of Berkeley's waterfront.

Letter P81

Commenter: Claudia Kawczynska

Date: April 28, 2026

Response to Comment P81-1

As described in Draft EIR Section 3.3.4 (Impact BIO-1, pages 52–54), the analysis does not rely on an assumption that whales are acclimated to ferry operational levels. Instead, the EIR evaluates the project's incremental contribution to an already heavily trafficked Central Bay environment and relies on WETA's established marine mammal protection protocols, which are based on NOAA guidance and ongoing coordination with the Marine Mammal Center. Refer to Section 2.2.28, *Topical Response: Whale Strike*, and Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P81-2

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P81-3

As described on Draft EIR page 3.3-53, WETA works closely with the Marine Mammal Center to implement a multi-layered marine mammal protection protocol that reflects current scientific understanding and updated NOAA guidance. The memorandum referenced by the comment is summarized in the Draft EIR as part of the regulatory and operational framework. CEQA does not require full reproduction of external operational documents within an EIR. In addition, see Section 2.2.28, *Topical Response: Whale Strike*, and Response to Comment O7-13 for discussion regarding potential whale strike. With respect to the comment's concern regarding the Draft EIR's incorporation of the 2003 WETA EIR, refer also to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* which clarifies the role of that document in the environmental review and the basis for the Draft EIR's project-specific analysis. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P81-4

As described on Draft EIR page 3.3-53, WETA works closely with the Marine Mammal Center to implement a multi-layered marine mammal protection protocol that reflects current scientific understanding and updated NOAA guidance, including speed reduction. The memorandum referenced by the comment is summarized in the Draft EIR as part of the regulatory and operational framework; CEQA does not require full reproduction of external operational documents within the EIR. See Section 2.2.28, *Topical Response: Whale Strike,* and Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P81-5

As described in Draft EIR Section 3.3.5, Cumulative Impacts (page 3.3-66), the EIR evaluates the project's incremental contribution to cumulative marine mammal impacts in the context of existing commercial, recreational, and ferry vessel operational levels in the Central Bay. The analysis concludes that the project would not make a cumulatively considerable contribution to whale strike risk, because WETA operational protocols developed in coordination with NOAA and the Marine Mammal Center apply to all WETA vessels, including those operated as part of the proposed project. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P81-6

This comment quotes the analysis of operational impacts on movement of marine species in Draft EIR Section 3.3.4 under Impact BIO-4, page 3.3-66, which determined that impacts would be less than significant. In addition, the Draft EIR addresses operational impacts to special-status fish and marine mammals in Section 3.3.4, under Impact BIO-1 (pages 3.3-52 through 3.3-54). See Section 2.2.11, *Topical Response: Ferry Operations*, for additional discussion of vessel interaction with aquatic species to support the less than significant effects determination Section 2.2.4, *Topical Response: Biological/Underwater Noise*, for discussion of effects of noise made by ferries on aquatic species. In addition, see Section 2.2.28, *Topical Response: Whale Strike*, for discussion of ferry operations and its impacts to whales. Finally, see Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability*, for discussion of how WETA would avoid impacts to aquatic species, including whales. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P81-7

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P81-8

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed under CEQA.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P81-9

Refer to Response to Comments P81-1 through P81-8.

Subject: Re: Comment on the WETA Pier-Ferry Draft EIR

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

The Draft EIR is seriously deficient in its estimation of the environmental effects of dredging and land fill. This is because the required size and extent of the breakwater is grossly underestimated. P82-1

The problem is not the methodology, it is the omission of complete wind and wave data, specifically the occurrence of winter gale force north or north-west winds. These wind events produce waves that leave the ferry float entirely unprotected by the proposed breakwater design. P82-2

The same mistake was made in 1965 when the Berkeley Marina was designed.
The original design only included the rip-ra[breakwater, which was insufficient protection. During winter northerlies, the wave action INSIDE the marina was enough to repeatedly damage the docks on O-Dock that were in the waves' path. One section of boat berths had to be abandoned. P82-3

In the early '70s, the required fix was to add the sheet pile breakwater to the north of the original rip-rap breakwater, at great expense. The missing berths were replaced.

The problem then, as now, was that none of the wind measurement stations used for the wave analysis were accurately recording these north or north-west wind events. When these conditions are considered in the wave analysis for the proposed ferry terminal, it will be found that the breakwater must be much longer. Siltation and maintenance dredging requirements will increase beyond current estimates. P82-4 With the longer breakwater protecting the ferry float from the north, the location of the breakwater and the ferry floats may have to move farther west to allow sufficient maneuvering room for the ferry. P82-5

The analysis must include more extensive fill for a longer breakwater, a new assessment of landfill and maintenance dredging and related costs and impacts, and possible upgrades to the ferry float design or allowance for more frequent repairs after north wind events. P82-6

These costs should be considered as part of the feasibility assessment of the project as proposed, otherwise the City, WETA, and other funding agencies will be responsible for another expensive retrofit, similar to what happened in the same location more than 50 years ago. P82-7

Response to Comment P82-1

In subsequent comments, the commenter provides specific concerns. Refer to Response to Comments P82-2 to P82-7 for a response to the specific comments raised.

Response to Comment P82-2

Refer to Section 2.2.29, *Topical Response: Wind*, for discussion concerning ferry operation with existing wind conditions. Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate* for discussion concerning wind and wave data produced for the project. No further response is required.

Response to Comment P82-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P82-4

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of the wind data used in the project design. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P82-5

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, and Section 2.2.15, *Topical Response: Maintenance Dredging,* for a discussion of the modeling conducted to identify maintenance dredging.

For a discussion of how maintenance dredging is treated in the CEQA document, refer to Section 2.2.15, *Topical Response: Maintenance Dredging.* The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P82-6

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a response to the specific issues raised in Comments P82-4 and P82-5, as it relates to the design of the project. Based on the data, modeling, and design gathered and prepared by the City's licensed professional coastal engineers, updates to the design are not needed, and updated analysis on the amount of fill and dredging is not required. The comment does not identify a specific deficiency in the analysis presented. No revisions to the Draft EIR are required.

Response to Comment P82-7

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Subject: Concerns Regarding Proposed Ferry Project and Impact on Cal Sailing Club

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Liza McNulty,

I am writing to express my serious concerns regarding the proposed ferry project and the direct impact it may have on the Cal Sailing Club and the surrounding recreational waterfront community.

The Cal Sailing Club is a unique and valuable part of Berkeley's waterfront, providing affordable public access to sailing, windsurfing, kayaking, and other water recreation for a wide range of residents. Many of us rely on this area not only for recreation, but for community, wellness, and connection to the Bay. P83-1

There are several major concerns with the current proposal that I hope the City will carefully consider:

• Loss of parking for recreational users, which would significantly reduce accessibility for those who regularly use the marina and Cal Sailing Club. P83-2

• Degradation of wind quality, wind strength, and water conditions on the leeward side of the proposed breakwater. This could severely impact sailing and windsurfing conditions, which depend heavily on the natural wind flow and water state. P83-3

• Restriction of the sailing zone south of the pier, limiting safe and usable space for sailors and other small craft users. P83-4

• Disruption of the sea floor during dredging, which may increase siltation and further reduce access to the south sailing basin during low tides—an area already sensitive to tidal limitations. P83-5

• Increased congestion on University Avenue during ferry arrival and departure times, creating additional traffic challenges for both recreational users and the surrounding community. P83-6

I strongly urge the City to fully evaluate these impacts and work closely with the Cal Sailing Club and the local waterfront community before moving forward. Once these environmental and recreational conditions are altered, they may not be easily restored. P83-7

Please ensure that preserving public recreation, sailing access, and the character of Berkeley's waterfront remains a top priority in this decision. P83-8

Thank you for your time and consideration.

Sincerely,
Michael Freeman
Cal Sailing Club Member

Letter P83

Commenter: Michael Freeman

Date: April 28, 2026

Response to Comment P83-1

The Draft EIR recognizes the Cal Sailing Club and similar community-serving recreational uses as important components of the Berkeley Waterfront. Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7), identifies sailing, windsurfing, kayaking, and other water-based activities as key existing uses, including those supported by nonprofit organizations that provide public access and educational opportunities.

Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), evaluates whether the proposed project would result in a physical loss of recreational resources or restrict access to these uses. As discussed therein, the Draft EIR concludes that the project would maintain and enhance recreational opportunities and access, including improved shoreline access, restoration of public access to the Berkeley Pier, and the addition of new amenities (Impact REC-1). The project does not remove or preclude continued use of facilities such as the Cal Sailing Club.

For additional discussion of shoreline and equipment-dependent access for activities such as sailing and kayaking, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities).*

Accordingly, the Draft EIR does not support the statement that the project would adversely affect or displace the recreational community referenced by the comment. The analyses and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P83-2

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking availability and convenience are not environmental impacts under CEQA in themselves, but are evaluated for potential secondary effects on access. The Draft EIR concludes that access to recreational resources, including facilities such as the Cal Sailing Club, would be maintained.

Accordingly, the Draft EIR does not support the statement that the project would significantly reduce accessibility for recreational users. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P83-3

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users,* for information on these topics. No further response is required.

Response to Comment P83-4

For discussion of the regulations surrounding the waterfront, refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities).* Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* regarding analysis of impacts on existing recreational access, including any limitations.

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment P83-5

Refer to Section 3.8, *Hydrology and Water Quality*, of the Draft EIR and Section 2.2.25, *Topical Response: Siltation/Wave Climate*. As discussed therein, any increase in turbidity associated with dredging activities would be temporary and limited to the construction period. Suspended sediments generated during dredging would be expected to settle following completion of the work, and standard construction best management practices would be implemented to minimize sediment dispersion beyond the immediate work area. Sediment transport analyses prepared for the project indicate that the highest sedimentation rates would occur within the dredged navigation channel, where natural sediment transport processes would tend to gradually infill the dredged area over time.

Although the South Sailing Basin was not specifically evaluated as part of the sediment transport modeling, the basin is shallower and more sheltered from wave action than the navigation channel, resulting in different hydrodynamic and sediment transport conditions. Given the localized nature of dredging activities and the expected settling of suspended sediments near the dredged area, the project is not anticipated to result in a measurable increase in sediment deposition within the South Sailing Basin or a reduction in access beyond existing tidal limitations.

To provide additional clarification, the following text has been added to Impact HYD-1 in Section 3.8, *Hydrology and Water Quality* (page 3.8-30):

> Dredging activities have the potential to temporarily degrade water quality by resuspending bottom sediments into the water column. As described previously, in 2025, sediment sampling and analysis was conducted within five dredge units in the project vicinity and sediment samples were found to contain metals, organochlorine pesticides, polynuclear aromatic hydrocarbons, PCBs, and dioxins/furans. Although contaminants were present, the concentrations of such contaminants indicate that sediments are not likely to pose significant hazards if managed according to reuse site requirements.
>
> Any increase in suspended sediment concentrations resulting from dredging activities would be temporary and limited to the construction period. Suspended sediments generated during dredging would be expected to settle following completion of the work, and standard construction best management practices would be implemented to minimize sediment dispersion beyond the immediate work area. The sediment transport assessment indicates that the highest sedimentation rates would occur within the dredged navigation channel as natural sediment transport processes gradually infill dredged areas over time.[48] Given the localized nature of dredging activities and the expected settling of suspended sediments near the dredged area, the project is not expected to result in a measurable increase in sediment deposition within the South Sailing Basin or a reduction in access beyond existing tidal limitations.
>
> [48.] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed July 2026).

This revision is clarifying in nature and does not alter the impact analysis, significance determinations, or mitigation measures presented in the Draft EIR. Therefore, the analysis and significance conclusions presented in Section 3.8, *Hydrology and Water Quality*, remain valid as written. No further revisions to the EIR are necessary.

Response to Comment P83-6

Refer to Response to Comment O10-156 regarding congestion and impacts on recreational users. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P83-7

Refer to Response to Comments P83-1 through P83-6 for responses to individual comments. This comment has been included in the project record considered by City decision makers. This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P83-8

As described in Chapter 2, *Project Description*, the City's project objectives include goals to preserve and enhance public recreational access to the waterfront while improving regional transportation connectivity (see Section 2.3, *Project Objectives*). These objectives reflect the City's intent to balance transportation improvements with continued support for recreational uses.

Section 3.11, *Recreation*, of the Draft EIR accordingly describes existing recreational uses at the Berkeley Waterfront, including sailing, windsurfing, kayaking, and other water-based and passive recreational activities (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7), and subsequently evaluates whether the proposed project would result in a loss of recreational resources or restrict access (see Section 3.11.4, *Impacts Analysis*, pages 3.11-14 through 3.11-24). The analysis therein concludes that the project would maintain and enhance recreational opportunities and access (Impact REC-1). In addition, Draft EIR Section 3.9, *Land Use and Planning* (Impact LU-2 and Table 3.9-1), further evaluates consistency with applicable policies, including BCDC Bay Plan policies that prioritize public access, recreation, and preservation of the waterfront setting, and concludes that the project would be consistent with those policies.

The comment's statement reflects a policy preference regarding project priorities. This comment has been included in the project record provided to decision makers for consideration.

The Draft EIR evaluates the physical environmental effects of the project as required by CEQA and demonstrates that recreational uses, access, and the overall character of the waterfront would be maintained and enhanced.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

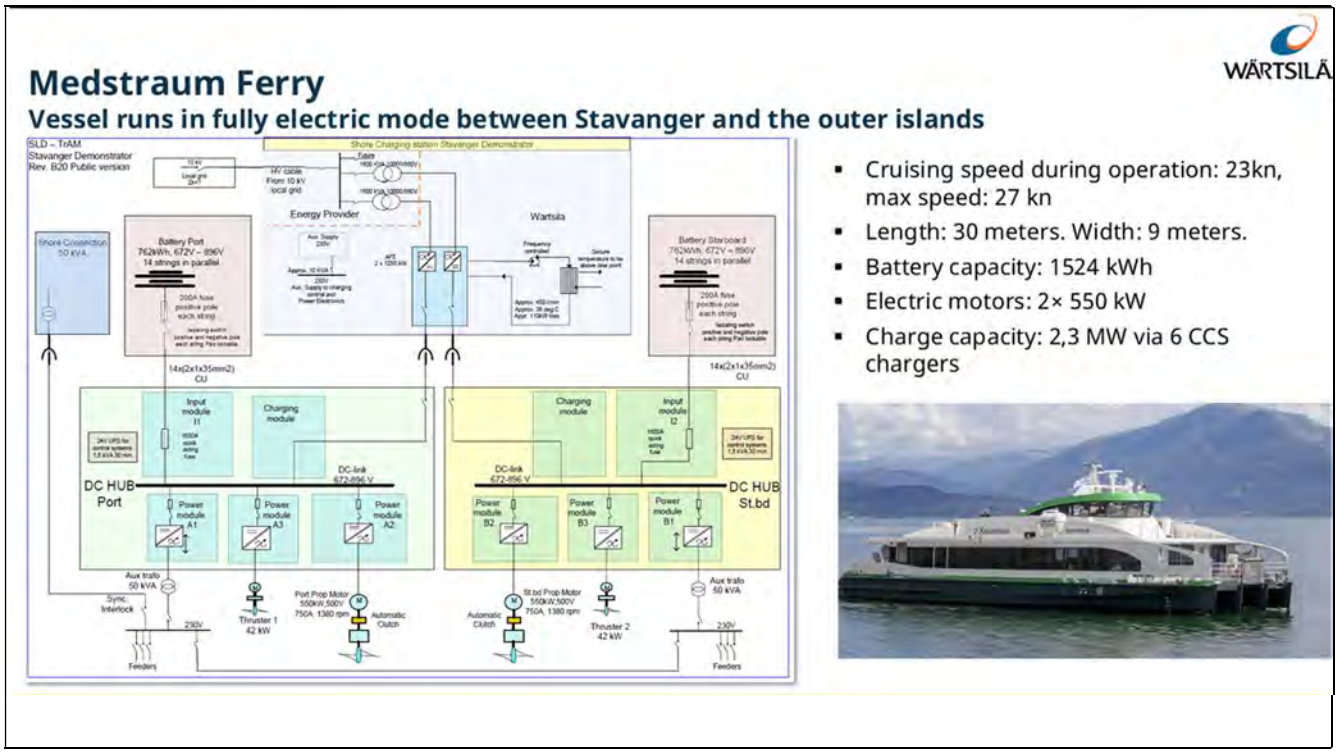
Subject: EIR Docking Safety Questions

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Please read the attached file *EIR Docking Safety Questions.pdf*

It responds to the *Berkeley-Water-Transportation-Pier-Ferry-Project-Draft-EIR* P84-1

Also attached are the two previous files that describe the ferry docking situation.



Thanks, all!

Gordon Stout

Draft EIR statement: "The project would introduce battery-electric ferry vessels operating on the project site. In the unlikely event of a loss of propulsion on an electric vessel, multiple layers of redundancy would be in place to prevent a complete failure. The vessel would be equipped with independent electric motors and multiple battery banks, each with isolated controls and protection systems, ensuring that a single point of failure does not disable the entire system."

Response: See below, the diagram shows one battery per side (port and starboard) each with an input and charging module and a DC Hub (output bus). Not quite per the rosy description above— "Multiple battery banks" is actually only two battery assemblies, one for port and one for starboard, and you probably only get limp-along capability with one bank out. These will be new prototype designs with as yet no operational track record—understand that the failure modes expected from a novel, very complex system will require careful analysis, way beyond what a paragraph or two can do. We trust that Wartsila will provide WETA with a very detailed failure mode and effect analysis that will guide our thinking.

At the end of the day, please don't bet 400 lives on the assumption that the control system will never fail—the system must have a backup, a foolproof way to stop the ferry if there is a control failure that leaves the ferry adrift. The consequences of a ferry being blown onto the Berkeley rocks or the Skates restaurant are much too serious to take risks with. P84-2

Draft EIR statement: "Crew members are trained regularly to respond to such scenarios, including loss of propulsion drills. In the rare case that all propulsion is lost, the crew would deploy the vessel's anchor to maintain position and initiate protocols to ensure passenger safety." **Response:** Such drills are indeed essential, and should be based on scenarios that include actual windy-day anchoring in response to surprise control failures. Drills should also cover simulated evacuation of passengers. The drills should follow well thought out protocols that are described in detail. A simulator, such as the one at the Cal Poly Maritime Academy, could be very useful in developing protocols. P84-3

Draft EIR statement: "WETA and its contracted operator proactively monitor weather forecasts. In the event of an approaching storm, senior staff coordinate with vessel crews to evaluate the safety of continuing ferry service on affected routes." **Response:** Fair enough, but will WETA help getting stranded passengers to their jobs across the bay? Not a trivial problem for passengers who find themselves stranded at the Marina without transit options. The EIR needs to consider what to do with weather-stranded passengers. P84-4

Draft EIR statement: "It should be noted that other marine vessels regularly operate near the project site, given that the project site is next to an active Marina. Similar to other vessels, ferry vessels would operate safely. For example, when approaching the ferry floats, ferry vessels would slow down significantly and adhere to speed limits and docking safety procedures. For these reasons, the operation of ferry vessels would not increase transportation safety use hazards due to the introduction of a new use on the project site (i.e., operation of ferry vessels)." **Response:** There are indeed many fishing charter boats that transit the area safely, but they do not brave wind and waves several times per day to make the ferry's amazing 180-degree turn and docking in the middle of a very windy high-traffic area. And these new ferries will be prototypes with as yet no operational track record, so we should be prepared for some failures. P84-5

In the end, a large, 400-passenger ferry blown onto Skates or the shore would do much more damage, and risk many more lives, than a grounding of any of the Berkeley fishing charter boats. We need to be very sure we can stop a ferry with any foreseeable control failure.

Harbor Safety Committee Reports of Loss of Propulsion Jan and Feb 2025
G. Stout 1/30/2026

What will be the reliability of the WETA electric ferry? We don't have data—perhaps referring to experience with other ferries on the bay may give some insight. Check out the HSC minutes, Marine Exchange of the San Francisco Bay Region

Draft Minutes Harbor Safety Committee of the San Francisco Bay Region February 13, 2025
https://www.sfmx.org/wp-content/uploads/2025-02_HSCMinutes_DRAFT.pdf
Total of 29 entries, the four below were LOP for passenger vessels

Loss of Propulsion (17DEC2024): A U.S. flag passenger vessel experienced a Loss of Propulsion on the port engine. Vessel moored safely at San Francisco Gate B and received permission for a one-time transit from San Francisco to Larkspur for repairs. Coast Guard issued the vessel an Operational Control, rectify Prior to Carriage of Passengers (Code 701). On 07JAN2025, vessel operator reported the root cause of the loss of propulsion as a failed fuel injector. On 21JAN2025, Coast Guard received a report that the vessel propulsion system operated as intended following satisfactory sea trials. Deficiency Cleared. Case pends.

Loss of Propulsion (23DEC2024): A U.S. flag passenger vessel experienced a reduction in propulsion on the starboard engine due to a low fuel oil pressure alarm. Vessel received permission from the Coast Guard for one time transit to Alameda facility to identify root cause, provide tech report, and conduct sea trials. Coast Guard issued an Operational Control, rectify Prior to Carriage of Passengers (Code 701). On 01JAN2025, Coast Guard received an email outlining the root cause of the reduction in propulsion to be from an issue with the ECU connecting to the starboard main engine. Vessel replaced the ECU and completed satisfactory sea trials. Operational Control Cleared. Case Pends.

P84-6

Loss of Propulsion (27DEC2024): A U.S. flag passenger vessel experienced an engine stall while transiting in the San Francisco Bay. Vessel returned to Pier 3 in Alameda and determined the engine stall occurred due to a leaky fuel fitting. Vessel crew also found a loose connection at a fuel hardline which caused air intrusion into the fuel system. Coast Guard issued an operational control, rectify Prior to Carriage of Passengers (Code 701). Crew repaired the faulty connection and engine reached full RPM during satisfactory sea trials. Operational Control Cleared. Case Pends.

Operational Control (23DEC2024): A U.S. flag passenger vessel received an operational control, rectify Prior to Carriage of Passengers (Code 701). Vessel reported loss of throttle control to port and starboard propulsion drives while mooring at Pier 41. On 26DEC2024, operator submitted a tech report that no abnormalities were found, sea trials conducted satisfactorily, and all systems operational. Operational Control Cleared. On 27DEC2024, during transit, the vessel experienced loss of throttle control to the port and starboard propulsion drives. Vessel moored at Pier 41. Coast Guard issued an operational control, rectify Prior to Carriage of Passengers (Code 701). Vessel received authorization for one-time transit to Pier 9 for maintenance and repairs. On 10JAN2025, the vessel conducted sea trials. While underway the operator completed several propulsion tests, including full ahead followed by full astern. On 14JAN2025, technicians reported that the throttles were calibrated to disable themselves until RPMs reduced below 70 when going from ahead to astern. Vessel installed new throttle controls. Operational control Cleared. Case Closed.

Harbor Safety Committee Reports of Loss of Propulsion Jan and Feb 2025

G. Stout 1/30/2026

Draft Minutes Harbor Safety Committee of the San Francisco Bay Region January 9, 2024

https://www.sfmx.org/wp-content/uploads/2025-01_HSCMinutes_DRAFT.pdf

Total of 19 entries, the three below were LOP for passenger vessels

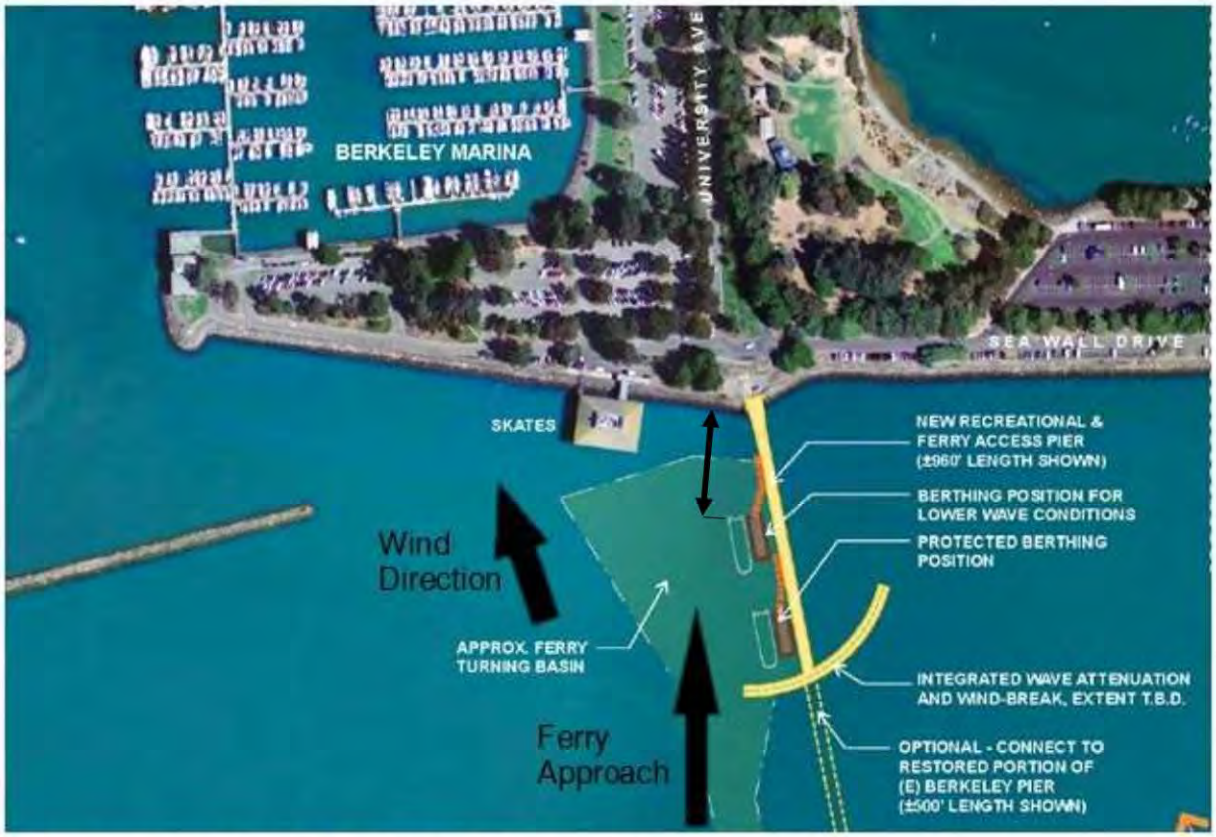
Loss of Propulsion (10NOV2024): A U.S. flag passenger vessel experienced a loss of propulsion on their STBD engine due to loss of propeller while transiting to Richmond. The vessel returned to the pier and offloaded all passengers. Coast Guard issued the vessel an operational control (Code 60, Prior to Movement), with a one-time transit to Alameda for drydock. At drydock damage was found to have occurred to the strut, shaft, rudder, and cutless (sic) bearing. On 17NOV2024, Coast Guard attended vessel for sea trials, sea trials conducted satisfactorily. Operational Control Cleared. Case Closed.

Loss of Steering (22NOV2024): A U.S. flag passenger vessel experienced a loss of steering; vessel operator reported issues with the STBD steering system while underway, with alternate jet propulsion available. Vessel returned to the pier. Coast Guard issued an operational control (Code 701, Prior to Carraige of Passengers). On 24NOV2024, vessel operator submitted tech report attesting to satisfactory repairs. Vessel conducted satisfactory sea trial. Operational Control Cleared. Case Pends.

P84-6

Operational Control (02NOV2024): A U.S. flag passenger vessel was issued an Operational Control (Code 70, Prior to Carraige of Passengers). While departing the pier, the vessel lost power from one of two generators, reducing propulsion to approximately 66% power. Vessel safely moored and was issued the operational control. On 03NOV2024, operator notified Coast Guard that the issue had been resolved. Identified a failure of two electrical relays that send the key switch signal to the control system. Both relays were replaced, and sea trials conducted. Coast Guard received satisfactory tech report. Operational Control Cleared. Case Closed.

Lee Shore Hazard at the Proposed Berkeley Ferry Dock



P84-7

On November 23, 2018 a Golden Gate Ferry rammed a dock at the San Francisco Ferry building, check out the bow damage in the picture above and this video. Fortunately, there were no serious injuries and damage was relatively minor. The cause of the accident appears to have been the captain's unfamiliarity with a recently upgraded control system.

Consider the possibility of a loss of control incident occurring in a ferry approaching the dock proposed for the Berkeley WETA ferry (see below). An inbound ferry will normally arrive downwind roughly along the "Ferry Approach" arrow, then make a 180° turn in the "Ferry Turning Basin" so the ferry ends up pointed upwind when it arrives at the dock. The summer afternoon winds are often well above 20 mph, the chop is significant, and most of the marina's boat traffic leaves and arrives through this area. The 180° turn and docking will be demanding even with perfectly functioning equipment.

FINAL_Ferry Terminal Facility Feasibility Study - Berkeley Municipal Pier See Page 34 (arrows added)

P84-8

Zoomed-in image showing Dorado-sized (~300 passenger) ferry halfway through a 180° turn.

This is a very tight situation in which to suffer a control or propulsion loss. The inshore end of the ferry's dock is only 200 feet upwind of the rocky shore, and a 20- or 25-mph wind would soon push a disabled ferry downwind onto the rocks or the Skates restaurant. Skates is built on

tall, slender pilings (see next page) and might not survive wind and waves pushing a 135-foot-long ferry against and perhaps underneath it. Injuries and damage in such an accident would be very likely.

P84-8

Information with some bearing on how likely a control loss event might be:

1. The meeting minutes of the Harbor Safety Committee of the San Francisco Bay Region for January and February 2025 described seven instances of loss of propulsion or steering in passenger vessels on the Bay. (see Harbor Safety Committee Reports of Loss of Propulsion Jan and Feb 2025.pdf, attached with this document).
2. Hyundai, Kia, and Genesis are recalling over 146,000 electric vehicles because a faulty part may cause them to lose power while driving. What will be the reliability of the new WETA electric ferries?
3. After the Baltimore bridge collapse caused by a power loss in a big container ship, USA Today summarized US Coast Guard data showing that at least 6,000 times in the past 22 years – an average of more than five times a week – crews on board large cargo ships, oil tankers, container barges and even cruise vessels have reported what befell the Dali, a loss of propulsion and/or steering.

Docking Maneuvers:

- The ferry battery will be at a low state of charge when the ferry arrives at Berkeley, which may exacerbate some system failure modes.
- To the extent that the docking maneuvers involve dramatic steering or propulsion inputs, they may stress the control system and cause an incipient control failure to manifest as a hard failure during the docking.
- The 180° turn requires the skipper to shift attention from starboard to port, which adds to the skipper's workload. A Dorado's beam is 34.5 feet.
- If the final approach requires the ferry to drop backwards into position, the helmsman must look backwards to the dock, again adding to workload.
- Marina traffic needs to use the South entrance when the tide is low, and even if the ferry has the right of way, someone aboard will need to watch for approaching vessels. Boats leaving the marina will not be visible until they are close to the turning basin.
- If the loss of control occurs before the ferry slows for the 180° turn, the ferry's downwind speed will greatly reduce the available time to respond.

P84-9

Anchoring:

The best response to a loss of control event would probably be to drop an anchor, though better solutions might be found. An anchor would need to be dropped very quickly or the ferry will not stop before it hits the restaurant or shore.

- What kind of anchor should be used, and how much scope will the anchor need?
- Will the anchor be dropped off the stern or bow? There might need to be two protocols, one for a loss of control (LOC) event before the 180° turn and another for a (LOC) after the turn.
- Will the seabed be free of debris that might keep the anchor from biting into the mud?

- Is there anything on the underside of the ferry (e.g. rudder. skeg, propellor) that the anchor line could foul?
- Will additional crew be needed to deploy the anchor quickly?
- When the anchor line comes tight, is there potential for injury to people near it, on the ferry or the docking float?

P84-9

The approach of the ferry to the dock and the dropping of the anchor would need carefully thought-out protocols, which ferry personnel would need to be well-trained to execute rapidly if a loss of control event occurs.

In my opinion, the dock should be positioned in a less exposed site, for example inside the Marina or in a purpose-designed facility on the Golden Gate Fields shoreline.

P84-10

This is a matter that should be carefully considered in the ferry project EIR.

Skates Restaurant Would Skates survive being hit by a 135-foot, 169-ton ferry?

P84-11

Letter P84

Commenter: Gordon Stout

Date: April 28, 2026

Response to Comment P84-1

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P84-2

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for discussion regarding vessel maneuverability, propulsion redundancy, loss-of-control scenarios, emergency response procedures, marine safety features, regulatory oversight, and the conclusions presented under Impact TRA-3 in Draft EIR Section 3.12, *Transportation* (pages 3.12-23 through 3.12-24). The Topical Response also includes clarifying revisions to the Draft EIR in response to comments received regarding ferry vessel control, docking safety, loss-of-propulsion scenarios, and emergency response procedures and a design adjustment that has been made to the proposed project to include fender piles and donut fenders within the project site in the water area to provide an additional passive safety measure by helping to absorb or deflect vessel movement in the unlikely event of a loss of control during approach or docking. For additional discussion related to electric ferry vessel assumptions, electric propulsion systems, vessel procurement, and the environmental analysis of electric ferry operations and supporting infrastructure, refer to Section 2.2.10, *Topical Response: Electric Ferry*.

The City acknowledges the commenter's observations regarding a representative electric ferry system and suggestion that failure analyses should be conducted or vessel systems. However, the City notes that the diagram included in the comment depicts a vessel configuration operated by a separate ferry operator and does not represent the final vessel design proposed for the Berkeley Water Transportation Pier Ferry Project. As discussed in Section 2.2.10, *Topical Response: Electric Ferry,* the specific ferry vessel model has not yet been procured or finalized. Accordingly, the Draft EIR does not rely on the design, battery architecture, or operational characteristics of any particular third-party vessel. Rather, the environmental analysis is based on the project description and operational assumptions evaluated in Draft EIR Chapter 2, *Project Description* (refer to Section 2.7, *Operational Details*, pages 2-30 through 2-33). Future vessel designs would be required to comply with applicable U.S. Coast Guard requirements, vessel certification standards, WETA operational requirements, and all other applicable maritime safety regulations. Therefore, statements regarding the configuration, reliability, or failure characteristics of a specific third-party vessel design do not demonstrate a deficiency in the environmental analysis presented in the Draft EIR.

The analyses and significance conclusions presented in the Draft EIR, including Impact TRA-3 in Section 3.12, *Transportation*, remain valid as written. No further revisions to the EIR are necessary.

Response to Comment P84-3

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for discussion of ferry vessel safety systems, emergency response procedures, crew training requirements, vessel redundancy, and regulatory oversight. As discussed therein, ferry vessels would be operated by trained and licensed personnel in accordance with applicable U.S. Coast Guard requirements and WETA operational procedures.

The City acknowledges the commenter's recommendations regarding emergency preparedness and training. Specific training curricula, simulator use, drill frequency, and operating procedures are matters

determined by the ferry operator and applicable maritime regulatory authorities. These operational considerations do not constitute physical environmental impacts requiring analysis under CEQA.

The comment does not identify a deficiency in the environmental impact analysis presented in the Draft EIR. Therefore, no revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P84-4

As described in Draft EIR Section 3.12, *Transportation*, WETA would monitor weather conditions and make operational decisions regarding ferry service based on passenger and crew safety considerations (see Impact TRA-3, pages 3.12-24 and 3.12-24). However, the availability of alternative transportation for passengers during weather-related service disruptions is an operational and customer service matter rather than a physical environmental impact subject to analysis under CEQA.

Pursuant to CEQA Guidelines Sections 15064, 15360, and 15382, CEQA focuses on physical changes to the environment and the resulting environmental effects of a project. Potential inconvenience to passengers, including delays, cancellations, or the need to make alternative travel arrangements during weather-related service disruptions, would constitute a social or operational effect and would not, in itself, result in a physical impact on the environment requiring analysis in an EIR.

The comment does not identify a deficiency in the environmental analysis presented in the Draft EIR. Therefore, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to this comment.

Response to Comment P84-5

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* which discusses vessel maneuverability, docking operations, emergency response procedures, propulsion and control system redundancy, regulatory oversight, and transportation hazard analysis under Impact TRA-3 in Draft EIR Section 3.12, *Transportation* (pages 3.12-23 through 3.12-24). The Topical Response also includes clarifying revisions to the Draft EIR in response to comments received regarding ferry vessel control, docking safety, loss-of-propulsion scenarios, and emergency response procedures. As discussed therein, ferry operations were evaluated with consideration of navigation conditions, vessel maneuvering requirements, and potential vessel emergency scenarios.

The Draft EIR concludes that operation of the proposed ferry service would not substantially increase transportation hazards. While the City acknowledges the commenter's concern that ferry vessels differ from recreational or charter vessels and that the consequences of a loss-of-control event could be more substantial, the comment does not provide substantial evidence demonstrating that the analysis, methodology, or significance conclusions presented in the Draft EIR are inadequate.

Accordingly, the analysis and significance conclusions presented in the Draft EIR, as supplemented and clarified in Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*, remain valid, and no further revisions to the EIR are necessary in response to this comment.

Response to Comment P84-6

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for discussion regarding ferry vessel maneuverability, loss-of-propulsion scenarios, vessel redundancy, emergency response procedures, U.S. Coast Guard oversight, and transportation safety analysis under Impact TRA-3 in Draft EIR Section 3.12, *Transportation* (pages 3.12-23 through 3.12-24). As discussed therein, the Draft EIR concludes that ferry operations would not substantially increase transportation hazards.

The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further revisions to the EIR are necessary in response to this comment.

Response to Comment P84-7

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for discussion regarding control system failure and related considerations.

The incident identified by the commenter has been noted; however, isolated incidents involving other ferry systems do not demonstrate a deficiency in the environmental analysis prepared for the proposed project. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P84-8

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for discussion regarding vessel maneuverability, loss-of-propulsion scenarios, ferry approach and docking operations, emergency response procedures, vessel redundancy, project design features, and applicable regulatory oversight. As discussed therein, Draft EIR Section 3.12, *Transportation*, evaluates ferry navigation and vessel maneuverability under Impact TRA-3 (pages 3.12-23 through 3.12-24) and concludes that operation of the proposed project would not substantially increase transportation hazards.

The analysis and significance conclusions presented in the Draft EIR remain valid as written. No further revisions to the EIR are necessary in response to this comment.

Response to Comment P84-9

The Draft EIR evaluates the environmental impacts associated with operation of the proposed ferry service and includes analysis of vessel safety considerations, including vessel emergencies and loss-of-control scenarios (refer to Section 3.12, *Transportation*). Please refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* which discusses the safeguards, operational procedures, and vessel safety requirements applicable to ferry operations, and includes clarifying revisions to the Draft EIR related to ferry vessel control, docking safety, emergency response procedures, and potential loss of control scenarios. As discussed therein, ferry vessels would be operated by trained and licensed personnel in accordance with applicable U.S. Coast Guard requirements and WETA operational procedures.

The City acknowledges the commenter's observations regarding vessel failures that have occurred elsewhere, the importance of emergency response planning and crew training, and the need to consider a range of potential loss-of-control scenarios when evaluating ferry safety. The commenter raises several examples of operational and emergency-response considerations, including emergency anchoring procedures, crew responsibilities, and personnel safety during vessel emergencies, which may be evaluated during vessel design, operational planning, crew training, and development of emergency response procedures. The specific crew requirements and emergency operating procedures for anchor deployment are operational matters that would be determined by the ferry operator and are not environmental impacts subject to CEQA review. The comment does not identify a deficiency in the Draft EIR's environmental analysis. Accordingly, the analysis and significance conclusions presented in the Draft EIR, as revised and clarified in Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*, remain valid, and no further revisions to the Draft EIR are necessary in response to this comment.

Response to Comment P84-10

Refer to Section 2.2.29, *Topical Response: Wind,* for a discussion of the design and ferry operations, as it relates to wind conditions.

The City considered a range of alternatives and terminal locations during project planning and environmental review. Refer to Chapter 5, *Alternatives*, of the Draft EIR, including the discussion of alternatives considered but rejected from detailed analysis (Section 5.9, pages 5-25 through 5-28). Refer also to Section 2.2.2, *Topical Response: Alternatives*, and Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* which discusses comments suggesting that a ferry terminal be located within the Berkeley Marina rather than at the proposed project site. As discussed therein, the Draft EIR evaluated the

proposed project and a reasonable range of alternatives consistent with CEQA requirements and project objectives.

To the extent the comment raises concerns regarding the project location with respect to potential vessel loss of control scenarios, refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*.

The comment does not provide evidence demonstrating that the environmental analysis presented in the Draft EIR is inadequate or that an alternative terminal location would avoid or substantially lessen significant environmental impacts while meeting most of the project's objectives. Accordingly, the analysis and significance conclusions presented in the Draft EIR remain valid, and no revisions to the EIR are necessary in response to this comment.

Response to Comment P84-11

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* for a discussion of how the EIR considers loss of control events, including a design adjustment that has been made to the proposed project to include fender piles and donut fenders within the project site in the water area to provide an additional passive safety measure by helping to absorb or deflect vessel movement in the unlikely event of a loss of control during approach or docking. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Re: Berkeley Waterfront Transportation Pier Ferry Project DEIR,
State Clearing house #2025040995

Dear Ms. McNulty:

As a Berkeley resident and waterfront user since 1972, I have an interest in the ferry project as it might impact my access to recreational opportunities such as walking, visiting restaurants, and sailing, all of which I have enjoyed over the years. I may also use the ferry as I have in the past when service from Berkeley was available. My usual transportation option to the waterfront is my car, as that is the most convenient for a person my age (83) and abilities. In the past I have served as a parks commissioner and Sierra Club officer, so I am familiar with many of the marina issues besides my own interests. I have read the DEIR with both personal and community concerns in mind. P85-1

The EIR must analyze ferry terminals parking and include a parking management plan as an enforceable mitigation measure P85-2

The DEIR reiterates that parking is not an environmental impact under CEQA but that VMTs (vehicle miles traveled) are an impact because VMTs produce emissions and greenhouse gases. But parking and VMTs are intricately connected. The more parking, the more trips from home to the parking space. The less parking, the greater the need for alternative strategies to arrive at one's destination. None of these contingencies are adequately explored in the DEIR to demonstrate that: P85-3

"Because the project would result in no impact related to VMT and would in fact reduce regional VMT, the project would not contribute to a cumulative impact related to VMT." (3.12.25)

P85-3

If the parking is adequate to meet the demand of ferry riders, the DEIR provides no data that shows the drivers would otherwise choose to drive across the bridge to San Francisco, the most frequent route. They could alternately have chosen BART or a cross-Bay bus as transportation options that would get them to work on time. There are three BART stations to the north of University Avenue: Richmond, El Cerrito, and North Berkeley and several cross-Bay bus routes with frequent service.

P85-4

If parking is inadequate for ferry riders, they would likely choose public transit over driving if they wish to avoid driving across the bridge and paying for parking in San Francisco. The EIR relies on assumptions of reduced VMT rather than quantitative analysis. This approach ignores the potential for this new ferry route to divert passengers from BART, AC Transit, and other ferry operations. Attracting passengers from BART by lowering fares could be used by Bay Ferry to increase ridership, which does not decrease VMT.

P85-5

If parking is inadequate for ferry use, how can displacement of parking intended for recreational uses, including visits to McLaughlin State Park, and for a future visits to a restaurant at the now closed H's. Lordship's be prevented? Who will enforce the rules and pay for enforcement? How practical are such enforcement strategies given that they would be in effect most days all day and therefore require constant surveillance? If the EIR relies on a parking management program both to protect recreational uses and assure that the project reduces VMT, that program must be presented as an enforceable mitigation measure.

P85-6

P85-7

The DEIR therefore should analyze data on transportation options gathered from other WETA routes including:

- **Richmond:** Daily service between Richmond and SF Ferry Building.
- **Vallejo:** Daily service between Vallejo/Mare Island and SF Ferry Building.
- **Oakland & Alameda:** Daily service connecting Oakland (Jack London Square), Alameda (Main St), and SF Ferry Building.
- **Harbor Bay:** Weekday service between Bay Farm Island and SF Ferry Building.
- **Alameda Seaplane:** Weekday service between Alameda Seaplane Lagoon and SF Ferry Building.

P85-8

- **South San Francisco:** Weekday commute service between Oyster Point, Alameda, and Oakland.

P85-8

Data including the mode of travel to and from the ferry parking, distances traveled to the ferry parking, and availability of transit for each terminal would test the assumption that indeed the VMTs will be reduced and that only 40% of Berkeley users will arrive at the ferry in single occupancy vehicles. The EIR does not use data from other ferry terminals to support the assumption of 40% with substantial evidence.

P85-9

The EIR should study the transportation impacts of an expected increase in Berkeley population due to planning initiatives

The City of Berkeley is currently engaged in a multi-zone increase in housing capacity to meet the goals of its Housing Element. The EIR should analyze the increase in population projected by the Adeline Corridor Plan (completed), the middle housing zonings (completed), the Corridors zoning (in progress), and the San Pablo Avenue Specific Plan (in progress).

P85-10

What will be the demand for ferry and recreational parking from these various initiatives? What will likely be the mode of transport from these neighborhoods to the marina for various uses, given bus routes, bike lanes, proximity to the waterfront, and population cohorts (students, workforce, elderly, families, etc.)? Major investments such as this should be supported by quantitative analysis of the origins and destinations of projected passengers, not general assumptions.

The EIR should explain how the University Avenue Overcrossing Project impacts the transportation alternatives conceived by the ferry project.

The Overcrossing project is depicted on page 9 of the Transportation Impact Assessment technical memorandum. What are the timelines for completion of this CalTrans project and the ferry improvements such as construction of bike lanes? How will one project affect the other? Are they compatible in structure and continuity? Which agency is responsible for ensuring the completion such improvements so they connect in a practical way since the jurisdictions differ?

P85-11

Finally, a tiny technical mistake that should be corrected: in several tables (5,6, and 9) in the segment ADT, San Pablo Avenue is called San Pablo Drive.

P85-12

Thank you for your attention to my comments

P85-13

Re: Berkeley Waterfront Transportation Pier Ferry Project DEIR,
State Clearing house #2025040995

Dear Ms. McNulty:

As a Berkeley resident and waterfront user since 1972, I have an interest in the ferry project as it might impact my access to recreational opportunities such as walking, visiting restaurants, and sailing, all of which I have enjoyed over the years. I may also use the ferry as I have in the past when service from Berkeley was available. My usual transportation option to the waterfront is my car, as that is the most convenient for a person my age (83) and abilities. In the past I have served as a parks commissioner and Sierra Club officer, so I am familiar with many of the marina issues besides my own interests. I have read the DEIR with both personal and community concerns in mind.

The EIR must analyze ferry terminals parking and include a parking management plan as an enforceable mitigation measure

The DEIR reiterates that parking is not an environmental impact under CEQA but that VMTs (vehicle miles traveled) are an impact because VMTs produce emissions and greenhouse gases. But parking and VMTs are intricately connected. The more parking, the more trips from home to the parking space. The less parking, the greater the need for alternative strategies to arrive at one's destination. None of these contingencies are adequately explored in the DEIR to demonstrate that: P85-14

"Because the project would result in no impact related to VMT and would in fact reduce regional VMT, the project would not contribute to a cumulative impact related to VMT." (3.12.25)

If the parking is adequate to meet the demand of ferry riders, the DEIR provides no data that shows the drivers would otherwise choose to drive

across the bridge to San Francisco, the most frequent route. They could alternately have chosen BART or a cross-Bay bus as transportation options that would get them to work on time. There are three BART stations to the north of University Avenue: Richmond, El Cerrito, and North Berkeley and several cross-Bay bus routes with frequent service.

If parking is inadequate for ferry riders, they would likely choose public transit over driving if they wish to avoid driving across the bridge and paying for parking in San Francisco. The EIR relies on assumptions of reduced VMT rather than quantitative analysis. This approach ignores the potential for this new ferry route to divert passengers from BART, AC Transit, and other ferry operations. Attracting passengers from BART by lowering fares could be used by Bay Ferry to increase ridership, which does not decrease VMT.

If parking is inadequate for ferry use, how can displacement of parking intended for recreational uses, including visits to McLaughlin State Park, and for a future visits to a restaurant at the now closed H's. Lordship's be prevented? Who will enforce the rules and pay for enforcement? How practical are such enforcement strategies given that they would be in effect most days all day and therefore require constant surveillance? If the EIR relies on a parking management program both to protect recreational uses and assure that the project reduces VMT, that program must be presented as an enforceable mitigation measure.

P85-14

The DEIR therefore should analyze data on transportation options gathered from other WETA routes including:

- **Richmond:** Daily service between Richmond and SF Ferry Building.
- **Vallejo:** Daily service between Vallejo/Mare Island and SF Ferry Building.
- **Oakland & Alameda:** Daily service connecting Oakland (Jack London Square), Alameda (Main St), and SF Ferry Building.
- **Harbor Bay:** Weekday service between Bay Farm Island and SF Ferry Building.
- **Alameda Seaplane:** Weekday service between Alameda Seaplane Lagoon and SF Ferry Building.
- **South San Francisco:** Weekday commute service between Oyster Point, Alameda, and Oakland.

Data including the mode of travel to and from the ferry parking, distances traveled to the ferry parking, and availability of transit for each terminal would

test the assumption that indeed the VMTs will be reduced and that only 40% of Berkeley users will arrive at the ferry in single occupancy vehicles. The EIR does not use data from other ferry terminals to support the assumption of 40% with substantial evidence.

The EIR must study the transportation impacts of an expected increase in Berkeley population due to planning initiatives

The City of Berkeley is currently engaged in a multi-zone increase in housing capacity to meet the goals of its Housing Element. The EIR should analyze the increase in population projected by the Adeline Corridor Plan (completed), the middle housing zonings (completed), the Corridors zoning (in progress), and the San Pablo Avenue Specific Plan (in progress).

What will be the demand for ferry and recreational parking from these various initiatives? What will likely be the mode of transport from these neighborhoods to the marina for various uses, given bus routes, bike lanes, proximity to the waterfront, and population cohorts (students, workforce, elderly, families, etc.)? Major investments such as this should be supported by quantitative analysis of the origins and destinations of projected passengers, not general assumptions. P85-14

The EIR should explain how the University Avenue Overcrossing Project impacts the transportation alternatives conceived by the ferry project.

The Overcrossing project is depicted on page 9 of the Transportation Impact Assessment technical memorandum. What are the timelines for completion of this CalTrans project and the ferry improvements such as construction of bike lanes? How will one project affect the other? Are they compatible in structure and continuity? Which agency is responsible for ensuring the completion such improvements so they connect in a practical way since the jurisdictions differ?

Finally, a tiny technical mistake that should be corrected: in several tables (5,6, and 9) in the segment ADT, San Pablo Avenue is called San Pablo Drive.

Thank you for your attention to my comments

Letter P85

Commenter: Toni Mester

Date: April 28, 2026

Response to Comment P85-1

These statements provide background information and context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P85-2

Parking supply is not considered an impact under CEQA; therefore, a mitigation measure to include a parking management plan would not be required, and would not be an appropriate CEQA mitigation measure. Nonetheless, separate to the CEQA process, the City has prepared a Parking and TDM Plan.[61] Refer to Section 2.2.20, *Topical Response: Parking,* for a detailed discussion related to how parking is addressed in the Draft EIR, and how the City plans to address parking, as a matter of policy.

Response to Comment P85-3

The Draft EIR does consider the relationship between parking and VMT. Section 3.12, *Transportation* (page 3.12-21) states in part: "The project is overall resulting in a reduction in VMT, and potential VMT increases due to searching for parking are expected to be nominal given the availability of parking (see Appendix F). For these reasons there would be no secondary impacts on VMT due to scarcity of parking." For additional information about the lack of secondary impacts on VMT from parking, refer to Section 2.2.20, *Topical Response: Parking.*

Response to Comment P85-4

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion of parking adequacy.

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to the data and methodology used to analyze VMT impacts. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P85-5

Refer to Section 2.2.27, *Topical Response: VMT*, for a discussion related to transit-to-transit mode shifts. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P85-6

Refer to Section 2.2.20, *Topical Response: Parking,* which clarifies the role of parking as it relates to CEQA analysis and clarifies the analysis of secondary impacts related to parking. No displacement of parking at McLaughlin State Park or at future 199 Seawall restaurant has been identified.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

[61] Berkeley, City of. 2025. Water Transportation Pier-Ferry Project Parking and TDM Plan. https://berkeleyca.gov/sites/default/files/documents/Berkeley-WTPF-Parking-and-TDM-Plan-March-2025-Public-Draft.pdf (accessed July 2026).

Response to Comment P85-7

Regarding the comment about parking, including the need for parking to protect recreational use, refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to how parking is addressed according to CEQA in the Draft EIR.

Regarding the comment about parking mitigation and whether the Draft EIR relies on a parking management plan to reduce VMT, refer to Section 2.2.20, *Topical Response: Parking,* which explains that adequate parking supply is available for shared use with recreation, ferry rider, and other waterfront visitors. Parking supply is not an impact under CEQA and no mitigation measure was identified to prepare a parking management plan, and the parking management plan is not used to reduce VMT (refer to Section 2.2.27, *Topical Response: VMT*). The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P85-8

Refer to Section 2.2.27, *Topical Response: VMT*, for a detailed discussion of the mode split assumptions used in the Draft EIR, including the data used to make these assumptions, including existing data from other WETA routes. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P85-9

Refer to Section 2.2.27, *Topical Response: VMT*, for a detailed discussion of the mode split assumptions used in the Draft EIR. Refer also to Response to Comment P36-73 for a discussion about how the City determined the 40 percent mode split. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P85-10

The cumulative conditions analyzed in the EIR reflect projected growth over the approximately 15-year planning horizon, including population and development associated with recently completed housing projects, planned developments, the Corridors Zoning Program, the San Pablo Avenue Specific Plan, and other future land uses identified by the City. The Year 15 travel demand forecasts were developed using the travel demand model that was updated to support the City of Berkeley Housing Element. That model incorporates planned development projects, including planning initiatives that were underway and identified potential housing opportunity sites at the time the model was prepared.

While these planning initiatives are not individually identified in the EIR, they are reflected in the land use assumptions incorporated into the travel demand model. Accordingly, the Year 15 forecasts are consistent with the growth assumptions developed as part of the Housing Element update and account for the anticipated development associated with those planning efforts.

The analysis and significance conclusion presented in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment P85-11

The Transportation Impact Assessment (TIA) Memorandum (Appendix F) discusses the University Avenue Overcrossing Project in the context of existing and future traffic operations at the intersection of University Avenue and Frontage Road. As described therein, the University Avenue Overcrossing Project includes a preferred alternative that would convert the intersection of University Avenue and Frontage Road to a roundabout. The TIA Memorandum notes that the intersection currently experiences queuing associated with an existing deficiency and states that the proposed roundabout would be expected to

reduce queuing and improve operational and safety conditions at the intersection. However, the TIA Memorandum also notes that implementation of the Overcrossing Project is uncertain because it requires coordination with Caltrans and is not expected to be completed prior to the opening year of the proposed ferry project (Appendix F, pages 8 and 9).

The University Avenue Overcrossing Project is a separate project from the proposed Berkeley Water Transportation Pier Ferry Project and is not part of the project description analyzed in this Draft EIR. Accordingly, specific decisions regarding the design, funding, schedule, construction, and implementation of the Overcrossing Project are outside the scope of this environmental review and would be addressed through the planning, design, permitting, and environmental review processes applicable to that project.

With respect to bicycle and pedestrian facilities, the proposed project includes improvements intended to enhance multimodal access to the ferry terminal and Berkeley Waterfront, including a two-way cycle track along University Avenue, Bay Trail improvements, enhanced bicycle facilities, and improved pedestrian access (see Appendix F, pages 3 and 4; Draft EIR Chapter 2, *Project Description*, Section 2.5). These improvements were developed to function under existing and reasonably foreseeable future transportation conditions. The City will continue to coordinate with Caltrans and other affected agencies, as appropriate, during project implementation and as separate transportation projects advance. Any future connections between facilities located within different jurisdictions would be addressed through the applicable interagency coordination and permitting processes.

The comment does not identify a deficiency in the environmental analysis presented in the Draft EIR. Therefore, no changes to the Draft EIR conclusions or mitigation measures are necessary in response to this comment.

Response to Comment P85-12

The City acknowledges the comment. The comment references Tables 5, 6, and 9 within Appendix F of the Draft EIR, where the segment limits for University Avenue are identified as extending to "San Pablo Drive," rather than "San Pablo Avenue." The City acknowledges the comment and concurs that the correct segment limit is San Pablo Avenue. In response to this comment, Tables 5, 6, and 9 have been revised as follows:

Table 5: Corridor Segment LOS Evaluation

#	Roadway Name	Segment Limits	Existing Weekday ADT	LOS	Year 1 Project Conditions	LOS	Year 15 Project Conditions	LOS
1	University Avenue[1]	Seawall Drive to Marina Blvd	NA	NA	2,551	A	5,222	A
2	University Avenue	Marina Blvd to Frontage Road	9,350	D	10,439	A	15,285	A
3	University Avenue	Frontage Road to Sixth Street	NA	NA	27,653	D	35,583	**F**
4	University Avenue	Sixth Street to San Pablo ~~Drive~~ Avenue	29,753	E	30,415	E	40,741	**F**

Notes: ADT- Average Daily Traffic Volume; LOS – Level of Service.
[1]Segment 1- University Avenue between Seawall Drive to Marina Blvd is evaluated as a two-lane arterial. The remaining segments are evaluated as four-lane divided arterial.
Bold indicates volumes-to-capacity ratio higher than 1 i.e., volume exceeds capacity.
Source: Kittelson & Associates, Inc. 2025

Table 6: Existing Conditions Intersection LOS Summary (No Project Conditions)

#	Intersection	Control	Weekday				Weekend Peak Hour	
			AM Peak Hour		PM Peak Hour			
			Delay	LOS	Delay	LOS	Delay	LOS
1	University Avenue & Frontage Road	All Way Stop	**58.5**	**F**	**98**	**F**	**78.6**	**F**

Table 9: Year 1 and Year 15 Segment Volumes

#	Roadway Name	Segment Limits	Lane Configuration	Posted Speed Limit (mph)	Existing Weekday ADT	Year 1 No-Project	Year 1 Plus-Project	Year 15 No-Project	Year 15 Plus-Project
1	University Avenue	Seawall Drive to Marina Blvd	2U	25	NA	1,471	2,551	4,142	5,222
2	University Avenue	Marina Blvd to Frontage Road	4D	30	9,350	9,359	10,439	14,205	15,285
3	University Avenue	Frontage Road to Sixth Street	4D	30	NA	27,005	27,653	34,935	35,583
4	University Avenue	Sixth Street to San Pablo ~~Drive~~ Avenue	4D	25	29,753	29,875	30,415	40,201	40,741

These revisions correct typographical errors and are clerical in nature, and accordingly do not change the analysis, findings, or conclusions presented in the Draft EIR. No further revisions are required.

Response to Comment P85-13

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment P85-14

Refer to Response to Comments P85-1 through P85-13 for responses to individual comments. No further response is required.

Letter P86

Subject: Berkeley Water Transportation Pier Ferry and is requesting comments on the Draft EIR.

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Attn: Liza McNulty, PE – Project Manager
Parks, Recreation & Waterfront Department
2180 Milvia Street, 3rd Floor
Berkeley, CA 94704

I am submitting these comments in response to the WETA Ferry Terminal Draft Environmental Impact Report (DEIR). P86-1

The report has a number of misrepresentations about the various types and of activities that occur in the park, too many to mention here. I will focus on two concerns:

1. Access to the park for recreational activities- specifically access to the water for wind and other water sport recreation that require equipment, particularly at the south end of Seawall Drive. P86-2
2. Safety on the water. P86-3

Access to the park for recreational activities.

The report talks about supporting recreational activities but does not define what type of recreational activities are being referenced. It implies that recreational activities are things people do on land while dismissing the negative impacts to water sports recreational activities that require equipment and access to the water. My understanding is that this park was developed, in large part, specifically for water activities. One of these water accessible areas is the launch site at the south end of Seawall Drive. This is the only water accessible site in the East Bay when the tide level is below 2 feet. Any disruption or restriction to parking in this area has a very big negative impact. P86-4 P86-5

The report also states that there is currently sufficient public access (parking) and that the commuter parking would not cause a problem. The report does not define “sufficient public access”. The issue of parking has been misrepresented. Currently there are many days and times when parking for access to the water for people with wind sport equipment is extremely limited. Additional commuter cars will cause additional limitations to all users of the park. P86-6

Safety on the waters

I believe the report stated that there is no water/wind sport activity west of the south sailing basin. This is not true. On any day you can find windsurfers, wingers, parawinger, paddlers, small sailboats,and swimmers west of the south sailing basin and primarily south of the pier. Operating on the notion that there is no recreational activity west of the south sailing basin poses a serious safety concern for all of us in these waters. On a personal note, I was nearly struck by a ferry boat on two occasions while windsurfing slowly on the south side of the pier. The boats in question were operated by the private ferry service operating dark blue boats out P86-7

of the marina. Safety, Safety, Safety for water sports recreationalists. If the pier is removed there will be wind sport participants everywhere west of the marina because the pier will no longer be a limiting line for wind sport activities.

P86-7

In closing, I would like to remind the decision makers that the mission for the use of this land is as a park for water access and activities and not as a transportation and commuter vehicle storage hub. Consideration of this project is perhaps inappropriate because it does not fit the mission.

P86-8

Respectfully submitted, Lynn Olinger - 415 238-6500, euclyptus@gmail.com

Letter P86

Commenter: Lynn Olinger

Date: April 28, 2026

Response to Comment P86-1

These statements provide introductory context and a general statement without supporting arguments, data, or analysis. As such, they do not present specific information regarding the adequacy of the analysis, significance conclusions, or mitigation measures in the Draft EIR. Therefore, a substantive response cannot be provided. No changes are warranted to the Draft EIR analysis, conclusions, or mitigation measures. No further response is required.

Response to Comment P86-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

The analysis and significance conclusion presented under Impact REC-1 in Section 3.11, *Recreation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P86-3

Draft EIR Section 3.12, *Transportation*, evaluates navigation safety and concludes that ferry operations would comply with U.S. Coast Guard requirements and include standard safety measures to avoid conflicts with other users (Impact TRA-3, pages 3.12-23 through 3.12-24). Operational compatibility with water-based recreation is similarly addressed in Draft EIR Section 3.11, *Recreation*, which explains that ferry vessels would not interfere with water-based recreation (Impact REC-1, pages 3.11-16 through 3.11-20).

Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control*, regarding safety of ferry vessels.

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment P86-4

Draft EIR Section 3.11, *Recreation*, explicitly identifies water-based recreational uses, including sailing, kayaking, swimming, and wind sports occurring in the Berkeley Marina and adjacent waters (see Section 3.11.2, pages 3.11-1 through 3.11-7) and evaluates impacts to these uses consistent with CEQA Guidelines Appendix G thresholds of significance (see Section 3.11.4, pages 3.11-14 through 3.11-24).

For discussion of the analysis of water-based recreational impacts, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities).*

The analysis, significance conclusions, and mitigation measures presented in Section 3.11, *Recreation*, and related sections of the Draft EIR remain valid as written. No further revisions are required.

Response to Comment P86-5

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

Refer to Section 2.2.20, *Topical Response: Parking,* regarding the analysis of parking and of circulation.

The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P86-6

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access.* The Parking and TDM Plan analyzes parking demand based on observed usage patterns at the Berkeley Waterfront and WETA ridership projections and demonstrates that the Waterfront will have sufficient spaces to accommodate all users.

Draft EIR Section 3.11, *Recreation*, evaluates recreational access and use of existing recreational facilities, including whether project-related changes could result in physical restrictions on recreational access or the physical deterioration of recreational facilities. The Draft EIR concludes that recreational access would be maintained and that impacts related to increased use of existing recreational facilities would be less than significant (see Impact REC-1). Sections 3.2, *Air Quality*, 3.10, *Noise*, and 3.12, *Transportation*, of the Draft EIR also evaluate potential secondary physical environmental effects associated with project-related parking conditions and conclude that no significant parking-related environmental impacts would occur. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Response to Comment P86-7

The Draft EIR does not rely on an assumption that water-based recreation is absent west of the South Sailing Basin. Rather, Section 3.11, *Recreation*, identifies the Berkeley Waterfront and adjacent Bay waters as supporting a range of water-based recreational activities, including windsurfing, sailing, paddling, and swimming (see Section 3.11.2, *Environmental Setting*, pages 3.11-1 through 3.11-7). These activities are described in connection with established use areas such as the South Sailing Basin as well as surrounding Bay waters. Section 3.11.4, *Impacts Analysis* (pages 3.11-16 through 3.11-20), evaluates whether the project would result in a physical restriction of access to recreational resources or create incompatibilities with these uses and concludes that recreational opportunities would be maintained (Impact REC-1). The project does not preclude water-based recreation in areas west of the South Sailing Basin, and such uses would continue to occur consistent with existing navigation practices and regulatory requirements. Refer to Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* regarding permitted uses throughout the waterfront.

With respect to safety concerns, the Draft EIR evaluates navigation, maneuverability, and operational safety in Section 3.12, *Transportation* (Impact TRA-3). As described therein, ferry vessels would operate within designated approach and berthing areas and would comply with applicable maritime navigation rules, safety standards, and operational procedures, which are intended to ensure compatibility with other water users. The analysis concludes that operation of ferry vessels would not increase transportation safety hazards. Potential effects related to vessel movement, wave conditions, and user interaction are further addressed through project design, engineering, and operational controls. Refer to Section 2.2.14, *Topical Response: Loss of Ferry Vessel Control,* which explains that potential vessel maneuverability risks, including low-probability loss-of-control scenarios, are addressed through vessel design, redundant propulsion systems, crew training, regulatory oversight, and additional passive safety features. That response also revises Section 3.12 of the Draft EIR to explicitly incorporate by reference the 2003 WETA EIR, which provides a program-level framework for ferry navigation safety, including established procedures and mitigation measures to minimize navigation conflicts.

Regarding the comment's concern that removal of the pier could change patterns of recreational use, refer to Section 2.2.29, *Topical Response: Wind*.

Accordingly, the Draft EIR adequately evaluates existing water-based recreational uses, navigation safety, and potential interactions between ferry operations and recreational users, and demonstrates that the project would not introduce unsafe conditions or preclude continued recreational use of the Bay.

The analyses and significance conclusions presented in Section 3.11, *Recreation*, and Section 3.12, *Transportation*, remain valid as written. No further revisions to the Draft EIR are required.

Response to Comment P86-8

Refer to Section 3.9, *Land Use and Planning*, of the Draft EIR for a discussion of land use characteristics of the project site and adjacent areas. This Section also analyzes how the project aligns with existing land use plans and policies. As discussed therein, the project site is designated Waterfront/Marina under the City of Berkeley General Plan, which allows water-oriented uses, including water transportation facilities. The site is zoned Unclassified (U), and proposed uses are subject to discretionary review and approval by the City. As discussed in Draft EIR Section 3.9.2, *Environmental Setting* (page 3.9-2), and Section 3.9.3, *Regulatory Framework* (page 3.9-7), development within the Unclassified District is governed by Berkeley Municipal Code Section 23.208.020, and the proposed ferry terminal would be required to obtain a Use Permit from the City. The Draft EIR explains that the establishment of a public ferry use is subject to the City's discretionary review process, through which the City evaluates compatibility with surrounding uses and applicable land use regulations. Accordingly, whether the project is an appropriate use at this location is governed through the City's adopted land use designations, zoning regulations, and Use Permit process.

The Draft EIR evaluates the project's consistency with applicable plans and policies, including the Berkeley General Plan, Berkeley Marina Master Plan, BCDC Bay Plan, and other applicable land use regulations under Impact LU-2 in Section 3.9, *Land Use and Planning*. The analysis concludes that the project would be consistent with applicable land use plans and policies and would not physically divide an established community. The project would also continue to provide water access and recreational opportunities through restoration of public access to the Berkeley Pier, construction of a new public pier and breakwater, shoreline access improvements, the Bay Trail Extension, and other public amenities.

The analyses, significance conclusions, and mitigation measures throughout the Draft EIR, including Impact LU-2 in Section 3.9, *Land Use and Planning*, remain valid as written. No revisions are required.

Subject: Public Comment on the Berkeley Pier-Ferry Draft Environmental Impact Report

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Dear Ms. McNulty,

Please find attached my public commit submitted on the Draft Environmental Impact Report (DEIR) for the Berkeley Water Pier-Ferry Project. Today (4/28/26) at 5pm is the due date. Confirmation of receipt would be greatly appreciated. P87-1

Thank you for your assistance.

Respectfully,
Erin Diehm

RE: Comments on DraY Berkeley Water Transportaon Pier F erry Project Dra EIR

Dear Ms. McNulty

Please accept the following public comment on the Dra En vironmental Impact Report (dEIR) for the Berkeley Water Transportaon Pier F erry Project, as part of the California Environmental Quality Act (CEQA). The 2026 Dra Pr oject EIR is er ed on the 2003 Program FEIR (FEIR) so both documents were reviewed. The 2003 FEIR was approved almost 25 year ago. Many substanal changes have occurred since, raising the queson if it is no w outdated. The Dra EIR f ails to incorporate into its analyses many of the changes relevant to this project. My comments below address updates needed to remedy those omissions, as well as inadequacies of the scope and on-site survey, failure to address the impact of the ferry within the context of the larger waterfront area, and inadequacies in the evaluaon of ligh t polluon.

P87-2

P87-3

P87-4

Changed Circumstances and New Information: Overview

The 2026 Project dra EIR (dEIR) is er ed on the 2003 Program FEIR. More than 23 years have passed. Many significant changes have happened and new informaon learned since assessments were made in 2003. Those changes are not reflected in the dEIR. Updated analyses are needed before determinaons on mig aons and signific ance can be made.

P87-5

Arcl e 11, Seco n 15162 Subsequent EIRS and Nega#ve Declara#ons of the 2026 CEQA Guidelines Statue & Guidelines defines when a previously cerfied EIR is no long er adequate and a subsequent or supplement to that EIR must be prepared. Specifically, an update to an exisng EIR mus t be prepared if:

- **Changed Circumstances 15162(a)(2)**: "Substanal chang es occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR... due to the involvement of new significant environmental effects or a substanal incr ease in the severity of previously idenfied signific ant effects."

P87-6

- **New Informa#on 15162(a)(3)):** "New informaon of sub stanal import ance, which was not known and could not have been known with the exercise of reasonable diligence at the me the pr evious EIR was cerfied... sho ws any of the following:
    - (A) The project will have one or more significant effects not discussed in the previous EIR;
    - (B) Significant effects previously examined will be substanally mor e severe than shown in the previous EIR."

In addion, **Sec#on 15168 Program EIR** explains how a Program EIR should be used for later acvies, like the Berkeley Pier-Ferry dEIR. Specifically, "Later acvies in the pr ogram must be examined in the light of the Program EIR to determine whether an addional **environmental** document must be prepared," stang

- **15168(c)(1):** "If the later acvity w ould have effects that were not examined in the program EIR, a new Inial Study w ould need to be prepared..."

Lastly, **Sec#on 15152 Tiering** (under **15151 Standards for Adequacy of an EIR**) states:

- **Tiering 15152(f)** A later EIR shall be required when the inial s tudy or other analysis finds that the later project may cause significant effects on the environment that were not adequately address in the prior EIR."

P87-6

The 2003 Program EIR is now deficient as it does not adequately address impacts on Biological Resources, of Dredging, and more. Since its compleon, more than 23 years ago, there have been **substan#al changes with respect to circumstances** and **new informa#on of substan#al importance**. The following secons pr ovide details for a subset of the Biological Resources impacted.

P87-7

Changed Circumstances and New Information: Whales

Since the 2003 FEIR was completed circumstances for Gray Whales have changed significantly and new informaon of sub stanal import is a vailable. These changes meet the criteria of "changed circumstances" and "new informaon" tha t trigger a subsequent or supplemental EIR to address the deficiencies in the er ed 2003 FEIR and 2026 dEIR.

P87-8

The 2003 FEIR states that:

a) **Gray Whale populao ns were recovering** ("*the gray whale population in the Pacific has returned to historic level*" (3.5-44)),
b) **they were uncommon** ("*... gray whales rarely use the Bay...*" (3.11-15)),
c) **the average amount of me spen t in the Bay unknown** *("...the length of time whales stay in the Bay... are not well known...*" (3.5-44)), and
d) **the likelihood of vessel strike not reliably quan#fied** ("*...An attempt to statistically estimate the probability of a vessel making contact with whales was made...*" (3.5-44)).

P87-9

P87-9

These statements were made to approve the expanded ferry system. **All are outdated.**

Current research published in *Frontiers in Marine Science* this month (April 2026)[1] describes completely changed circumstances, including:

a) **their popula#ons are now in decline** ("*...the ENP gray whale population... has declined by 52% since 2016."*)
b) **they now frequent the Bay** (*"Novel to known migration phenology, gray whales have been observed seasonally since 2018 in SF Bay... in 2025... an increased volume of gray whale sighting reports.")*
c) **the length of stay in the Bay is measured** ("*the average minimum length of stay was 27.6 days for 2023... 5 days for 2024... and 24.2 days for 2025."*)
d) **and the likelihood of vessel strike mortality is high** ("*This work confirms that gray whales entering SF Bay are highly susceptible to vessel strike mortality*.")

That same research in *Frontiers* summarizes the cumulav e negav e impacts that increased human presence in the Bay has on coastal species, even cing high-spe ed ferries - especially in the Central Bay - and the direct-cause mortality that can be aribut ed to vessel strikes, as the following quotes show (emphasis added):

- "*Negative impacts on coastal species are amplified by the pressure of increased human presence, associated **direct mortality from vessel traffic**... and the **interaction of multiple stressors**..."*
- *"Additionally, high-speed ferries... frequent the entire bay but are most prevalent in the **central bay**."*

P87-10

The *Frontiers* research also describes the increasing mortal threat that vessel traffic poses to Gray Whales as a result of altered feeding/migraon pa j erns due to Climate Change:

- *"gray whales entering the SF Bay are highly susceptible to vessel strike mortality"*
- *"Determined causes of death during the 2019-2023 UME [Unusual Mortality Event] were primarily malnutrition (26%) and vessel strike (18%)... poor body condition during a UME may additionally impact whales' probability of vessel interaction and should be investigated further"*
- *"Blunt and/or sharp force trauma consistent with vessel strikes was determined to be the cause of death for 30 of 70 carcasses"*
- "*Despite frequent mitigation efforts, the interaction of threats from human presence and global climate change make coastal ecosystems and the species that rely on them particularly vulnerable."*

[1] Slaathaug JM, Lane RS, Keener W, Pérez A, Flannery M, Webber MA, Grimes A, Wilkin AM, O'Hern JE, Duignan PJ, Calambokidis J and Crocker DE (2026) Gray whales (EschrichNus robustus) in San Francisco Bay experience high mortality and have limited affiliaNon to known foraging groups. Front. Mar. Sci. 13:1775666. doi: 10.3389/fmars.2026.1775666

The findings are also being reported in the press, nong tha t whales may be foraging in the Bay mud and the threat of high-speed ferries:

> "*[The authors] had reason to believe that something close to half of the whales that come to the Bay Area are hit by ships and die," and "Researchers... say the whales might be foraging in the mud at the bottom of the Bay." and "The waters of the Bay Area are relatively confined and crowded... large and fast-moving vessels that can hit whales... there's just not a lot of room to coexist." and "Some boats in the Bay, like high-speed ferries on tight schedules travel at around 30 knots... whales... are more likely to survive collisions with ships moving slower than 10 knots."*
>
> from "More Gray Whales Are VisiNng San Francisco Bay, and Many Die There." *NY Times*
> h ps://www.nyTmes.com/2026/04/13/climate/gray-whales-san-francisco-bay.html

P87-11

> "*...gray whales in the bay have been dying at alarming rates, largely due to collisions with vessels." and "at least 18% of gray whales that entered the bay from 2018 to 2025 have died... for more than 40% of the whale carcasses, the cause of death was blunt force trauma consistent with vessel strikes..."*
>
> from "Gray whales, once rare in San Francisco Bay, dying there at alarming rates." *Guardian*
> hp s://www.theguardian.com/us-news/2026/apr/15/gray-whales-san-francisco-bay

The whales are now so frequent that a wind surfer even collided with one recently, all caught on video:

> in "Windsurfer collides into whale in SF Bay as mulple w ash up dead." *SF Gate*
> hp s://www.sfgate.com/bayarea/arcle/ gray-whale-death-22162140.php
> in "Unsuspecng windsurf er collides with gray whale in San Francisco Bay." *Guardian*
> hp s://www.theguardian.com/us-news/2026/apr/01/windsurfer-hits-gray-whale-san-francisco

SUMMARY

The 2026 Project EIR is er ed on the 2003 Program EIR. Both fail to incorporate into their analyses the significant recent changes affecng Gr ay Whales and, therefore, are deficient. Per CEQA provisions on changed circumstances and new informaon, updated analyses are necessary.

P87-12

Changed Circumstances and New Information: Waterfowl Populations

The 2026 dEIR is er ed on the 23-yr-old 2003 FEIR. At least two new reports about birds in the Bay that are directly relevant have been published since the old 2003 FEIR was completed, including:

P87-13

- the 2004 USGS Study on the "Effects of Ferry Traffic on Migratory Waterbirds in the San Francisco Bay" by John Y. Takekawa, Natalie R. Wilson, Susan W. De La Cruz, and Jane O. Anfison. (for the Abstract, see 2026 dEIR Appendix 1, pg 102)
- the "2025 San Francisco State of the Birds" report (h ps://s aystateoY hebirds.org)

P87-13

P87-14

Both reports provide "new informaon" essen al f or evaluang impacts of the Berk eley and larger Program ferry routes on Biological Resources. In addion, the 2025 State of the Birds documents "changed circumstances" in bird populaons, notably in the Central Bay. But newer informaon hasn't been inc orporated into the 2026 dEIR or included in the Administrav e Record, making the findings on Impacts on waterbirds inadequate.

P87-15

The first study - the 2004 USGS Study on the "Effects of Ferry Traffic on Migratory Waterbirds in the San Francisco Bay" - was a direct outcome of the 2003 EIR process which stated:

> **Impact B-11** that "*it is assumed that waterfowl within 100 meters of a ferry route would be disturbed as a ferry passe*s," but further study was needed ("*shall be evaluated*") to confirm the assumpon. (2003 FEIR , 5.5-12 and 5.5-13)

P87-16

The 2003 IOP confirmed the need for addional s tudy:

> **"Birds.** *After extensive consultation, experts determined that this impact [on Rafting Birds] could not be effectively evaluated within the short time frame of the Program FEIR. Additional site-specific studies will be needed...* ***Ongoing environmental study connected to this plan will continue to examine these issues before any new routes are implemented****."*(emphasis added) (2003 IOP, pg. 53)

P87-17

The IOP explicitly stated that environmental issues would connue t o be examined "**before any new routes are implemented"** (emphasis added). Yet the 2026 dEIR was wrij en without incorporang findings from the 2004 USGS Study, another area where the EIRs are inadequate and addional analy ses must be conducted to address insufficiencies.

It's worth nong tha t **Impact B-11** implies there's no limit to the number of disturbances birds can withstand, as if they can be disturbed over and over again, with no negav e outcomes:

> "*The disturbance does not represent a permanent loss of habitat but rather the area of habitat where disturbance may take place. Waterfowl may use these when ferries are not present."* (2003, 5.5-12)

P87-18

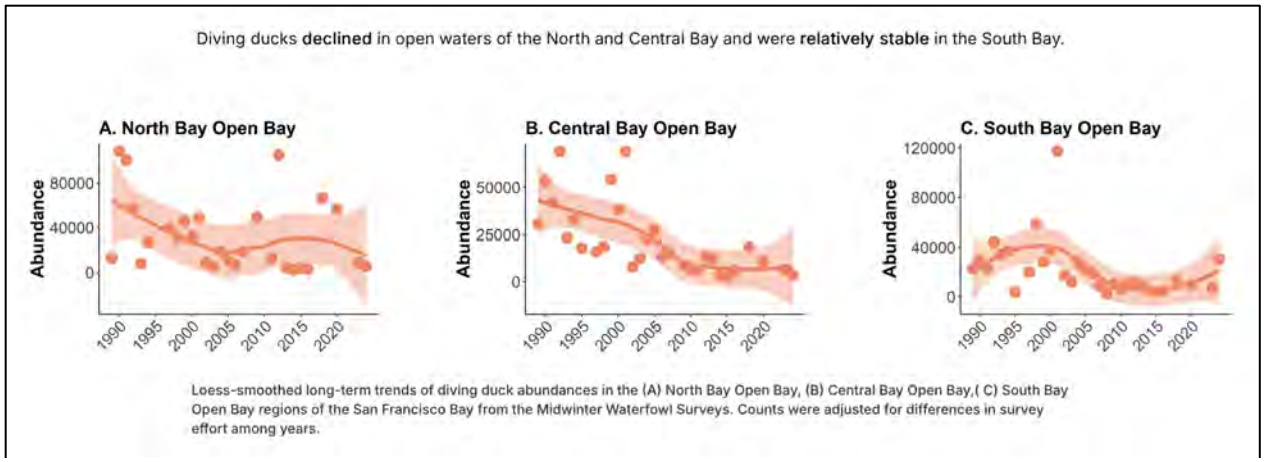
But what if a ferry passes by every 10 minutes, approaching a desna on lik e the SF Ferry Building from different Terminals? The cumulav e impacts of the exisng and e xpanded ferry system, flushing and exhausng bir ds repeatedly. Each new ferry route will create more dead zones in the Bay, effecv ely represenng a *"permanent loss of habitat"*, reducing even more the areas where waterfowl can reliably rest and forage. Analyses on cumulav e impacts of ferry

operaon on r aing bir d foraging should be added to the 2026 dEIR to make up for this deficiency.

Relevant findings from the 2004 USGS Study include:

- Generalizaons
  - Larger birds are less tolerant than smaller ones
  - Larger flocks flush at greater distances than smaller flocks or individuals
  - Flight distance is correlated posiv ely with flock size and species diversity. Flight distances are longer for species that are foraging
  - Waterbirds may relocate to less profitable areas or emigrate to compensate for disturbance
- Conclusions
  - Diving birds alter their behavior in response to commuter ferries
  - Response distance depends on species but is typically 300 m for scoters
  - Duraon of the dis turbance with ferry passage is difficult to measure, given habituaon occur s in early in winter
  - Disturbance zones suggest indirect loss of habitat several km^2 of open water habitats

P87-18



THUS, THE 2004 USGS Study found that increased ferry traffic may cause waterbirds to relocate to less profitable areas, will cause an indirect loss of open water habitats, and waterfowl are disturbed at greater distances than what was assumed in the 2003 FEIR. Instead of 100 meters (m) the average response distance of 300 m, and scoters can be disturbed at 500+m

FAST FORWARD TO 2025 and the "SF Bay State of the Birds" (h ps://s aystateoY hebirds.org) Their longitudinal analyses of Bay bird populaons find c oncerning declines in the Central Bay:

> "***The State of Bay Area Birds...*** *Bird indicators for tidal flats and open bay subtidal areas showed the most concerning declines,* ***especially in the Central Bay****.*" (emphasis added)

P87-19

In fact, while Diving Duck populaon w ere relav ely stable in the South Bay, <u>they've declined in the North and Central Bay</u>:

Diving ducks populao ns declined in open water in the North and Central Bay.
from "SubNdal – Waterfowl", h ps://sd aystateoe hebirds.org/subNdal-waterfowl/ P87-19

Regarding declines in Scoters and Scaups:

> "*Diving ducks are the most abundant waterfowl in San Francisco Bay, using open bay and pond habitats for resting and feeding. Historically, nearly half of the Lesser and Greater Scaup and Surf Scoters in the lower Pacific Flyway have overwintered in the SF Bay. However, some species have declined significantly across the bay over the last 30 years, with* ***scaup populations now below the targets set by the San Francisco Bay Joint Venture****."* (from "Subdal – Waterfowl")(emphasis added)
>
> "*The reason for the decline in scoter and scaup are unclear, likely stemming from changes in both their breeding and wintering grounds. Improving food availability and* ***creating undisturbed resting areas*** ***in the bay's open water*** *and pond habitats could improve conditions for these species in SF Bay."* (from "Subdal – Waterfowl")(emphasis added)

How will the proposed new ferry routes - in Berkeley and addion ones iden fied in the 2003 Program EIR - affect Scoters, Scaups, and other Diving Ducks in the Central Bay? Will the increased presence of ferries, including wakes generated, during **opera#on** - every 30 minutes between S.F. and Berkeley - negav ely impact diving ducks further, causing addional populaon declines? The 2026 dEIR f ails to address these essenal ques ons. Mor eover, note that **2026 Impact BIO-1** and **Mig aon B IO-1(e)** analyze vessel impacts only on marine mammals, and only during construcon. **Impacts of ongoing vessel opera#on on waterbirds is missing from the 2026 dEIR.** The 2026 document completely ignores the impact of vessel operaon , with frequent trips between Berkeley and Larkspur on waterbirds, relying on the outdated 2003 FEIR instead. P87-20 P87-21

SUMMARY

The 2004 USGS Takegawa and 2025 SF Bay State of the Birds reports provide "new informaon" and document "changed circumstances". Per CEQA provisions, the 2026 dEIR must be updated to analyze the impacts of vessel operaon on w aterbirds and other species, incorporang the most recent data on bird populaon tr ends (from the 2025 SF Bay State of the Birds) and the impacts of vessel traffic (from 2004 USGS Takekawa). Unl those analy ses are added, the 2026 dEIR assessments of waterbirds is deficient. P87-22

Changed Circumstances: Dredging

The 2026 Dra En vironmental Impact Report (dEIR) improperly er s its analysis on the 2003 Program FEIR by failing to acknowledge a fundamental change in the project's dredging scope. The 2003 FEIR was predicated on the commitment to minimize environmental disturbance by ulizing e xisng marime in frastructure. Specifically, in the very first impact statement on dredging the 2003 FEIR stated:

> "***Impact D-1.*** *A relatively small amount of dredging would be required for implementation of the Proposed Project. Of the sixteen ferry terminal locations included, seven currently have ferry service and would, therefore, not require additional dredging. All but one of the nine new terminal locations (Hercules/Rodeo) already have port or maritime land uses at the site and have water depths, either naturally or through maintenance dredging, capable of accommodating ferries. Ferries have relatively low draft requirements (approximately 7 feet) and would not require channels deeper than those at existing marinas and ports. Therefore, new channel dredging would only be required at Hercules/Rodeo."* (2003, 3.1-16) P87-23

The current proposal for nearly 400,000 cubic yards of new dredging at the Berkeley site–nearly ten mes the v olume originally analyzed for the enr e program in 2003–contradicts this foundaonal assump on. Furthermor e, the 2003 Berkeley Marina Master Plan, which remains the effecv e planning document for the area, contemplated ferry service only within the exisng Marina basin. B y moving the project to a new pier locaon r equiring massive dredging, the dEIR introduces environmental stressors never contemplated in the original program-level review. P87-24

Under **CEQA Guidelines Sec#on 15162**, these shis c onstut e "substanal chang es" and "changed circumstances" that require addional environmental review. The 2003 FEIR's finding of minimal impact was explicitly ed t o the absence of new dredging at sites like Berkeley. Proposing a massive new deep-water channel in a previously un-dredged area represents a "substanal incr ease in the severity of previously idenfied e ffects" on water quality, biological resources, and benthic habitats. Addionally , the 2026 dEIR fails to address the frequency and volume of required ongoing maintenance dredging. P87-25

SUMMARY

To address the deficiencies and changed circumstances described above, addional analy ses are needed, including:

- **Supplemental EIR:** Conduct a supplemental analysis that addresses the 400,000 cubic yards of dredging and the associated maintenance requirements as a new, significant environmental impact not covered by the 2003 Program FEIR.
- **Update Environmental Baselines and Impact Thresholds:** Re-evaluate all biological, hydrological, and water quality impact assessments using current site-specific data to reflect the vastly increased scale of dredging and its long-term cumulav e effects on the San Francisco Bay ecosystem.

P87-26

P87-27

Change Circumstances: Underwater Radiated Noise of proposed EV Vessels

> "*Underwater Radiated Noise (URN) from shipping has grown significantly over the past few decades due to increases in both the size and number of commercial vessels. In the past, URN has primarily been a concern for naval vessels... However, as the detrimental impacts on marine life become clearer, there is a need to understand and reduce the noise produced by commercial and recreational vessels as well.... As well as large commercial vessels, the role of smaller vessels and ferries is being increasingly scrutinized, with studies finding that the noise from smaller recreational vessels and* ***ferries can dominate the soundscape in shallow coastal waters****."*[2] (emphasis added)
>
> "*Ship underwater noise affects marine life and can cause both behavioral and physiological effects depending on the noise level and* ***frequency distribution****."*[3] (emphasis added)

P87-28

It is well established that marine animals rely on their ability to use sound underwater to communicate, find food, navigate and more. Both volume and frequency range of underwater noise maj ers. Different marine species use different frequency ranges to survive. It is therefore essenal tha t all assessment for the introducon of high-speed f erries evaluate not only the underwater noise levels (loudness) of the proposed ferries, but also the frequency footprints (spectral signature or paj ern), generated at different speeds.

P87-29

When discussing underwater noise generated by ferries, the 2003 FEIR acknowledges the lack of data and describes how esma tes were made instead, using worst-case condions:

P87-30

> "*Underwater noise data of existing ferries throughout the world is* ***virtually nonexistent, especially for the types of fast ferries proposed for this project****. Therefore,* ***the expected***

[2] Tom A. Smith, Jake Rigby. "Underwater radiated noise from marine vessels: A review of noise reducNon methods and technology." Ocean Engineering, Volume 266, Part 1, 2022, 112863, ISSN 0029-8018, hc ps://doi.org/10.1016/j.oceaneng.2022.112863.

[3] pg. 9 in the 2024 Silent@Sea Report, part of the 2026 dEIR AdministraNve Record

P87-28

> ***range of underwater noise levels is unknown**... Therefore, an estimate of 177 dB (re 1µPa at 1 meter) would be considered a worst-case condition."* (2003, 3.11-6 and 2003, 3.11-6)

P87-30

SPEED and NOISE LEVEL

The 2026 dEIR relies on the *Silent@Sea* study (January 2024) for inial da ta on volume levels generated underwater by several different kinds of ferries[4] and cites a reducon of under water noise levels up to 10dB for the hybrid-electric vessels studied (2026, 3.3-52). TesTng reported in the Silent@Sea paper was done at much slower speeds than what is expected for the proposed WETA ferries. Importantly, the study authors state:

> "*Both Tellus and Neptunus were also measured in two speeds, targeting propeller rotation rates of 240 RPM and 190 RPM. This corresponds to a normal "daytime" cruising **speeds of 8** knots and a normal "nighttime" **speed of 6.5 knots**." (emphasis added)*[5]

P87-31

These are much lower speeds than what is ancipa ted for the Berkeley vessels which will operate up to speeds of **up to 25, and maybe even 30 knots or more**. Therefore, reliance on the Silent@Sea study is inappropriate in evaluang the noise of the pr oposed Berkeley vessels.

While electric ferries are significantly quieter underwater at low speeds, at high speeds the volume gap narrows or even disappears because propulsion, like propeller cavitaon , rather than engine noise, becomes the dominant noise source for both convenonal and ele ctric vessels.

P87-32

> "*The total URN of a vessel is often split up into machinery noise, propeller and flow noise, and cavitation (see Fig. 1). The contribution of each component will differ from one vessel to the next and is also strongly dependent on the vessel's speed. **Studies have***

---

[4] Between Sweden and Denmark

- Hamlet - diesel
- Aurora - converted to electrical hybrid propulsion ferry
- Tycho Brahe - converted to electrical hybrid propulsion ferry

Road ferry crossing fyord in western Sweden

- Neptunus - diesel
- Tellus - electrical hybrid

Public transport in Gothenburg

- Elvy - electric hybrid passenger ferry - (appears to be most similar to WETA proposal)

Swedish tankers

- Fure, Ramanda, or Ramona - LNG or diesel

[5] "Noise from ships powered by LNG or electricity and its effects: a cross-domain inves Wga Won", from the 2026 dEIR Administra Won Record. hZ ps://berkeleypierferryproject.com/wp-content/uploads/2026/02/Johansson-et-al-2024-Noise-from-ships.pdf

P87-31

shown that the signature tends to be dominated by machinery noise at low speed, with cavitation becoming the dominant source at higher speeds."[6]

P87-32

When traveling at high speed, will the proposed WETA all-electric ferries s ll be significantly quieter than conven#onal ones? The discussion in the 2026 dEIR is insufficient and doesn't answer this important queson . Addional analy ses are needed to provide reliable measurements of the underwater noise levels generated by all-electric ferries, at a variety of speeds expected for operaTon – for example at Idle, Maneuvering, and Transit. Data from these addional analy ses can then be used to reassess impacts to evaluate if significance thresholds are exceeded.

P87-33

ELECTRIC, DIESEL and ACOUSTIC FOOTPRINT

It is well established that different groups of marine animals uliz e different frequency ranges to communicate. For example, whales communicate at lower frequencies; porpoises and dolphins uliz e higher ones. (See the leY-most column in Table 3.3-2, below, idenTfying groups like "Low-Frequency Cetaceans" vs. "High-Frequency Cetaceans".)

Table 3.3-2 NOAA Fisheries Marine Mammal Permanent Threshold Shifts – Level A Injury Limits

Hearing Group (Hearing Range/Weighting)	Accumulated SEL (cSEL)Limit		PeakLimit
	Impulsive[1]	Non-impulsive[2]	Impulsive[1]
Low-Frequency Cetaceans (LF 7 Hz. to 35 kHz.)	183 dB	199 dB	219 dB
Mid-Frequency Cetaceans (MF 150 Hz. to 160 kHz.)	185 dB	198 dB	230 dB
High-Frequency Cetaceans (HF 275 Hz. to 160 kHz.)	155 dB	173 dB	202 dB
Phocid Pinnipeds (PW 50 Hz. to 86kHz.)	185 dB	201 dB	218 dB
Otariid Pinnipeds (OW 60 Hz. 39 kHz.)	203 dB	219 dB	232 dB

Table 3.3-2, from the 2026 dEIR illustraNng the acousNc ranges uNlized by different guilds of marine animals

P87-34

Electric (EV) and diesel ferry vessels differ in their underwater acousc signa tures. Diesel vessels generate underwater noise that is primarily low-frequency. This low-frequency noise can overlap with the same frequency band large marine mammals, like whales, use to communicate and perform essenal lif e funcons. EV vessels, on the other hand, don't generate low-frequency noise but can introduce &/or emphasize higher-frequencies, introducing a kind of "whine" or other sounds further up the spectrum which can overlap with communicaon of some marine animals, like porpoises and dolphin. Thus, changing from diesel to EV ferries may facilitate whale communicaons but in terfere with dolphins and porpoises.

P87-35

[6] Tom A. Smith, Jake Rigby. "Underwater radiated noise from marine vessels: A review of noise reducWon methods and technology." Ocean Engineering, Volume 266, Part 1, 2022, 112863, ISSN 0029-8018. hZps://doi.org/10.1016/j.oceaneng.2022.112863

P87-32

Harbor porpoises have recently returned to the SF Bay and face many threats. From the Marine Mammal Center webpage:

> "*Harbor porpoises have returned to San Francisco Bay after an absence of approximately 65 years... Today, harbor porpoises around the world face many threats, such as entanglement in commercial fishing gear... as well as* ***underwater noise pollution*** *that interferes with their communication*." (emphasis added)
> hp s://www.marinemammalcenter.org/animal-care/learn-about-marine-mammals/cetaceans/harbor-porpoise

P87-36

It's worth nong tha t recreaonal sailor s at the Berkeley Waterfront have seen harbor porpoises and seals recently in the South Sailing Basin. If EV vessels are introduced in the vicinity and significant noise at higher frequencies is introduced, could these same vessels negav ely impact these and other higher-frequency groups of marine animals?

P87-37

Many important quesons r emain unanswered in the 2026 dEIR regarding Underwater Radiated Noise and a transion t o all-electric vessels:

P87-38

- Do we know that the EV vessels WETA will purchase will be significantly quieter than diesel ones when operated at cruising speed (e.g. 25 knots? 30 knots? more?)? Which brand and model will be purchased? What are the specificaons of the ac ousc pr ofile underwater at various speeds?
- With the eliminaTon of low-frequency noise (diesel vessel) and the introducon of high-frequency noise (EV vessel) how does the EV underwater frequency profile impact marine animals that uliz e high-frequencies for communicaon, like porpoises and dolphins? in the Project area? in larger Program area? (the 2026 dEIR relies on the 2003 FEIR for Operaons impacts and mig aons. cf . from the 2026 dEIR, "*As noted above, WETA adopted the Expansion of Ferry Transit Service in the San Francisco Bay Area Proram Mitigation Monitoring Plan which addresses operation of ferry vessels through San Francisco Bay.*" (2026 dEIR, 3.3-51))

P87-39

- Are studies on URN of electric ferries cited in the 2026 dEIR comparable to the operaon of EV vessels in the Bay, with its shallow depths? (cf. "*Shallow, confined water bodies typically have lower sound attenuation rates as compared to the deeper open ocean*." (2026 dEIR, 3.3-14) See footnote #5 above for an summary of the ferry locaons s tudied. They appear to be in Scandinavia and may represent deeper water than the Bay.

P87-40

- "Fast, silent, and deadly" - assuming the EV ferries are quieter at cruising speed, with low-frequencies removed, will animals that rely on lower-frequencies be able to detect oncoming high-speed ferry traffic early enough to take evasive measures and swim away to avoid a ship strike? does pung this onus on marine animals c onstut e "harassment"? what happens aYer 14, 18 or 26 total new terminals are online and

P87-41

operang with EV ferries traveling at high speed? (as illustrated in the WETA 2050 Service and Business Plan)[7]

P87-41

Lastly, **CEQA Secon 15140. WRITING** dictates that documents must be wri en so we in the public can understand the informaon: " *EIRs shall be written in **plain language** and may use appropriate graphics so that decision makers and **the public can rapidly understand** the documents.*" (emphasis added) When discussing underwater noise of vessels the dEIR failed to provide easy-to-understand data tables and, therefore, did not comply with this requirement.

P87-42

SUMMARY

While electric ferries are quieter than convenonal f erries at lower speeds, that advantage decreases and may even disappear at faster cruising speeds. All-electric ferries have different underwater acousc signa tures than diesel ferries. While this difference may benefit marine animals that uliz e low-frequencies (e.g. whales) it could negav ely impact species that hear and uliz e higher frequencies (e.g. porpoises). The 2026 dEIR relies on the older 2003 FEIR for many of the Operaonal impacts assessmen t. Per **CEQA Secon 15162(a),** and provisions of "changed circumstances" and "new informaon", subsequent analyses and informaon ar e needed to answer the important quesons outlined abo ve, and more. Moreover, to adhere to **CEQA Secon 15140** , the informaon should be presented with clear graphs and illustraons that make it easy for us in the public to understand the informaon shar ed. We in the public want to understand the real impacts the proposed all-electric ferry vessel(s) will have on the environment.

P87-43

Scope: Timing and methodology of on-site survey

As the largest estuary on the U.S. Pacific Coast, the San Francisco Bay is a cric al stopover and wintering site of hemispheric importance for millions of migratory shorebirds and waterfowl traveling the Pacific Flyway. It is serves as a vital refuge, supporng o ver 1,000 species of fish, marine mammals and plants, including many threatened and endangered species. Designated a Ramsar Wetland of Internaonal Import ance, its extensive wetlands and mudflats provide unmatched foraging habitats for birds migrang be tween arcc br eeding grounds and southern wintering areas.

P87-44

The single on-site survey conducted on September 19, 2024 for a duraon of only 5.5 hour s (8:00am to 1:30pm) is inadequate for assessing biological resources and impacts of the proposed construcon and oper aon of the f erry terminal. Moreover, it appears all assessments were made on the land, using "Binoculars (10x42)" when needed, including for the assessment of water porons of the pr oject site. Under **CEQA Guidelines 15125(a)**, an EIR must include a

P87-45

[7] 17 terminals were approved in the 2003 FEIR (2003 FEIR, Figure 2.1); 26 terminals are documented in the WETA as the "Coverage Network" in the "2050 Service Vision & Business Plan", see slide 10 in the PresentaNon (hc ps://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240919065553/b041723aDECK.pdf)

P87-41

descripon of the ph ysical environmental condions as the y exist at the me of the N oce of Preparaon is published.

P87-45

A single "snapshot" survey in mid-September, conducted only on and from the land, is legally and scienfic ally insufficient to establish a baseline for a locaon of global signific ance for migratory birds within the San Francisco Bay. Moreover, September represents a "shoulder season" – a period of relav e dormancy between the peak spring breeding season and the arrival of hundreds of thousands of wintering waterfowl and shorebirds. By failing to survey nearby water areas (including extents of the old pier; rip rap nearby including entrance to marina, etc.) and by failing to survey during the peak migratory and peak breeding windows, the dEIR ignores the presence of numerous special-status species that uliz e the Berkeley waterfront. Consequently, the impact analysis is based on a truncated baseline that does not reflect the actual biological diversity of the project site.

P87-46

P87-47

P87-48

The dEIR's conclusion that the project will have a "Less Than Significant" impact on biological resources is not supported by **substan#al evidence**. Under **CEQA Guideliens § 15384**, substanal e vidence must include "enough relevant informaon and r easonable inferences from this informaon tha t a fair argument can be made to support a conclusion."

P87-49

A 5.5-hour terrestrial observaon c annot constut e substanal e vidence for a project that introduces high-speed ferry transit into open water at all mes of the y ear. Specifically:

- **Methodological Flaws**: the survey team conducted observaons f or marine species from land using binoculars. This methodology is incapable of assessing the presence or behavior of diving birds, marine mammals, or benthic organisms that may be impacted by vessel traffic, wakes and underwater noise.
- **Temporal Flaws**: Observaons limit ed to a single morning window fail to account for migratory paj erns and changes, crepuscular (dawn/dusk) acvity pa j erns, or the dal variaons tha t dictate habitat use in the Berkeley pier area.

P87-50

The project site is located within the largest estuary on the Pacific Coast of the US. It is "*recognized as one of North America's most ecologically important estuaries... noted for hosting more wintering shorebirds than any other estuary along the US Pacific Coast south of Alaska .*"[8] The dEIR fails to sufficiently analyze how the introducon of high-spe ed ferry frequencies will disrupt the foraging and energec budg ets of migratory birds that rely on the water habitats adjacent to and in the vicinity of the pier. By oming mul -season data, the lead agency has effecv ely shielded the project's potenal impacts fr om public review.

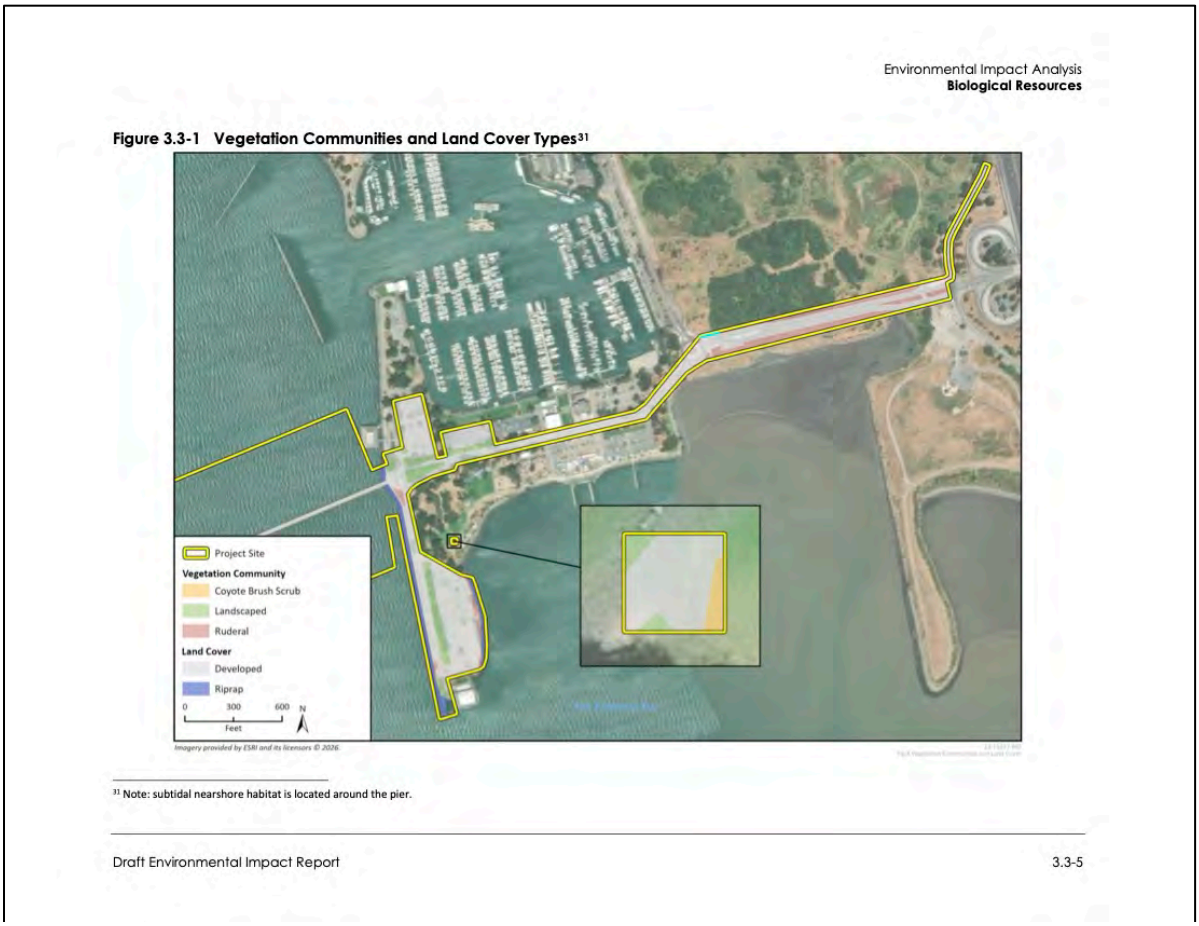
P87-51

[8] from descripNon of the San Francisco Bay/Estuary (SFBE) webpage of Ramsar Sites InformaNon Service, associated with the 2013 designaNon of the SFBE as a Ramsar Wetland of InternaNonal Importance. hc ps://rsis.ramsar.org/ris/2097

SUMMARY

Because the current biological analysis is fundamentally flawed, the dEIR does not provide the "sufficient degree of analysis to provide decision-makers with informaon which enables them to make a decision which intelligently takes account of environmental consequences" (**CEQA Guidelines § 15151 Standards of Adequacy**). To remedy these deficiencies, addional analy ses must be completed, including: P87-52

- **Mul- Season Surveys:** biological surveys during the wintering and spring breeding seasons.
- **Aquac-B ased Monitoring:** U lize on-water surveys and hydroacousc monit oring to accurately assess the project's impacts and extent of influence regarding underwater noise and wake impacts P87-53
- **Recirculate the dEIR**: Because the current dEIR omi ed these significant data points, the introducon of ne w mul-season sur vey results will constut e "significant new informaon" under **CEQA Guidelines § 15088.5**, requiring recirculaon of the Biologic al Resources secon f or public comment. P87-54



Scope: Geographic coverage of scope

The geographic scope in the 2026 dEIR is arficially narr ow and inadequate, parcularly f or a region of global biodiversity significance. Between the periods of the NOP and dEIR the scope was made even smaller: Shorebird Park was excluded, even though it is surrounded by the Project on the north, west, and south sides. While CEQA allows a reducTon of geographic scope between these two phases, the scope is now so small that real impacts to the biological resources immediately adjacent to and "in the vicinity" of the project are missing, even though those resources will be impacted by the project. The area of analysis in an EIR should be dictated by the reach of the environmental impact, not just the project's transit corridor spaces. The arficially narr ow geographic scope makes it impossible to idenf y and disclose the actual impacts of the project on Biological Resources in the vicinity, is deficient and should be expanded. P87-55

Under CEQA Guidelines **Sec#on 15125(a)** "*An EIR must include a description of the physical environmental conditions **in the vicinity of the project**.*" (emphasis added). In their response to an NOP of a DEIR (April 2021), CDFW recommends, *"...providing a complete assessment and impact analysis of the flora and fauna within and **adjacent to the Project area**...."*[9] P87-56

Page 3.3-5 of the 2026 dEIR documents the Vegetaon Communies e valuated. Shorebird Park is not included, even though it is immediately abuts and is surrounded by the project on the north, west, and south sides. P87-57

[9] CDFW. "Paseo Montril Project, NoNce of PreparaNon of a Drae Environmental Impact Report, SCH #2021030038. April 21, 2021. hc ps://files.ceqanet.lci.ca.gov/267970-1/ac achment/exICRIViTVCEUPgfBFxKYlCO_IwwXAab-zTmCYjIKy04GRN_AokRSBKNTwXX31wzgvu5OZE02B8LZkhQ0 P87-56

Shorebird Park and its rich habitat was is excluded from analysis (except for the Nny square noted).
Figure 3.3-1 Vegetaon Communies and Land Cover Types (2026 dEIR, 3.3-5)

Shorebird Park, though not large in size, contains the richest habitat area on the south side of the marina area (including a dense willow thicket) and **is in the vicinity of the project**. Yet it was excluded from the analysis.

The Project will directly impact the Biological Resources in Shorebird Park. During Construcon, 40 mature trees will be cut down on the west side of the parking lot, most of them tall, removing valuable roosTng, foraging, and nesng habit at. Iconic species like the White-tailed Kite and Hummingbirds will be negav ely impacted. Ferry operaon will a r act thousands of new vehicles daily, traversing University Ave, coming to park in the ~450 parking spaces at the reopened Seawall Dr parking lot and beyond. LED vehicle headlights, a significant known biological disruptor, will spill out in all direcons. Dark Sky In ternaonal describes the issue:

P87-57

P87-58

P87-59

> "*...headlights are mobile, intense and projected horizontally, allowing light to penetrate deep into habitats that would otherwise remain dark. This moving, horizontal light reaches places untouched by permanent lighting, including... undeveloped land. "*[10]

Note, too, that the current design of the parking lot stripes the parking spaces around the perimeter (see pink arrows below) with vehicles poinng their o en-intensely-bright headlights directly into Shorebird Park or the open water.

Proposed parking lot design for Seawall Drive, with perimeter parking spaces (indicated with pink arrows) direc ng the headlights of parking cars into Shorebird Park or towards water. (2026, 2-21)

Terrestrial and aquac species, in Shorebird Park and the open water will be disrupted by headlights from thousands of new cars daily. (See the further discussion below, in Secon 3, under "Arficial Ligh t At Night (ALAN)")

SUMMARY

CEQA **Secon 15151 (Standards for Adequacy)** state that "*An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences."*

P87-59

P87-60

[10] "A driving source of light polluNon: How car headlights are reshaping the nighw me environment" by Drew Reagan, January 8 2026. Dark Sky InternaNonal. h ps://darksky.org/news/a-driving-source-of-light-pollu on-how-car-headlights-are-reshaping-the-nighw me-environment/

P87-59

The narrow geographic scope excludes Shorebird Park, obscuring the true consequences of the project from decision makers and is inadequate. To provide an adequate evaluaon of pr oject impacts that meet the CEQA standard of Adequacy, **Sec#on 15151**, the Final EIR must broaden its geographic scope to include the enr ety of Shorebird Park and the Biological Resources within, and expand its analyses to include habitat loss and arficial ligh t at night introduced by thousands of new vehicles (many with LED headlamps) and hundreds of new light fixtures.

P87-60

Procedure: Bifurcation and piecemealing

CEQA Guidelines **Sec#on 15378(a)** defines a Project as "*the whole of an action, which has a potential for resulting in either a direct physical change in the environment or a reasonably foreseeable indirect physical change in the environment...*" By defining a project as the "whole of an acon, " the law ensures that agencies cannot overlook the cumulav e impacts of a large undertaking by breaking it into smaller, seemingly insignificant pieces.

The City of Berkeley bifurcated the Waterfront Specific Plan (WSP)[11] and Pier/Ferry Planning projects early-on in the planning processes. This segmentaon is pr oblemac as the Pier/F erry project lies geographically within the overall waterfront, the focus of the WSP. While the WSP and Pier/Ferry are two separate projects run by the same Lead Agency, the City of Berkeley, separang the analy sis of the environmental impacts of the two projects into two disnct phases will make the immediate impacts of each Project look smaller. The reduced geographic footprint of the Pier/Ferry scope represents piecemealing.

P87-61

While the dEIR defends the bifurcaon – stang tha t the WSP and Pier/Ferry are separate projects (pg. 3-11) and that the dEIR will consider Cumulav e Impacts of the pending WSP – when it comes to real-world impacts, the bifurcaon of the W SP and Pier/Ferry violate sCEQA's requirement that the "whole of the acon" be r eviewed.

SUMMARY

To adhere to **CEQA Secon 15378(a),** the evaluaon of the Pier/Ferry Project EIR should be delayed unl the W aterfront Specific Plan (WSP) effort is complete. Only then is it appropriate for the EIR to be undertaken, covering the enr e waterfront area, to ensure that cumulav e impacts for all waterfront development are accurately evaluated and disclosed to the public.

P87-62

Artificial Light at Night (ALAN): New fixtures and impacts of vehicles

Arficial Ligh t At Night (ALAN) is a significant biological disrupter at all trophic levels and is growing globally at 2% per year. It interferes with bird migraon and nesng acvity , insect lifecycles. It penetrates the upper layers of soil and water to disrupt microbial acvity . It disrupts plants' seasonal rhythms. It interferes with marine animal movements, disrupng phot otaxis in

P87-63

[11] formerly known as the "Berkeley Marina Area Specific Plan (BMASP)"

P87-61

fish and other marine animals, altering their natural behaviors such as feeding and migraon. It's associated with cancer in humans, disrupng cir cadian rhythms and melatonin producon. **In short, ALAN a serious, pervasive pollutant.** Any proposal to install new outdoor light fixtures, even if they're Dark Sky Compliant, must be carefully considered, to determine if the proposed light will (a) result in a net increase of ALAN and (b) if new lighng should even be added. These concerns are especially relevant to biologically significant locaons lik e the San Francisco Bay, including the proposed project area of the Berkeley Pier/Ferry (staonar y pier and dynamic ferry route).

P87-63

Sadly, there aren't any caps on the cumulav e amount of light polluon tha t can be added to the Bay sky. Moreover, sadly and quite surprisingly, per the dEIR, the enr e waterfront area is allowed to have the same levels of light-polluon as do wntown Berkeley, LZ3, which is zoned for "moderately high" amounts of light:

> "*City of Berkeley falls under the "urban" standard and thus, is designated LZ3*." (2026, 3.3-10)

P87-64

BCDC guidelines do, however, define some restricons, and/ or goals, related to lighng designs and light polluon (emphasis added):

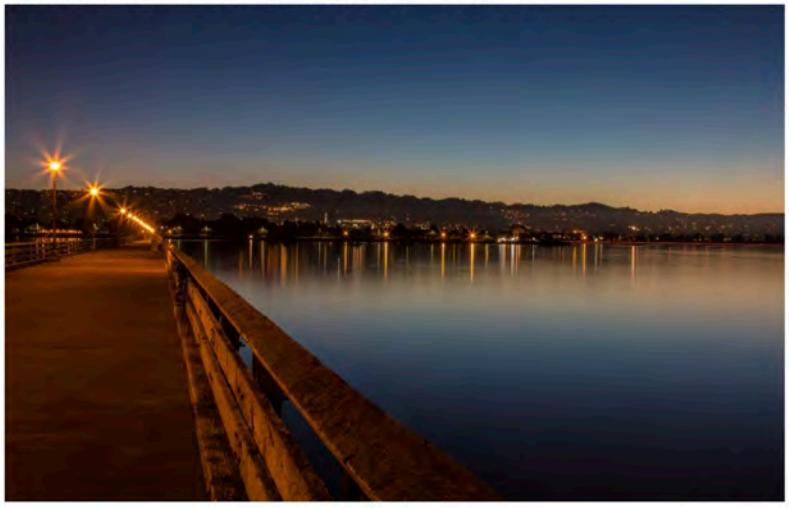
- *"Public access should be sited, designed and managed **to prevent significant adverse effects on wildlife**."* (BCDC SF Bay Plan. p.77)
- "*1. To enhance the visual quality of the Bay... shores shall be developed in accordance with the Public Access Design Guidelines.*" (BCDC SF Bay Plan. p. 80)
    - "*7. Sight Furnishings. Provide enough lighting to create a sense of safety, but design to **control intensity, glare and spillover**.*" (BCDC Shoreline Spaces: Public Access Guidelines. pg 20)

P87-65

The dEIR also commits to quanf y the magnitude of proposed changes in light and glare.

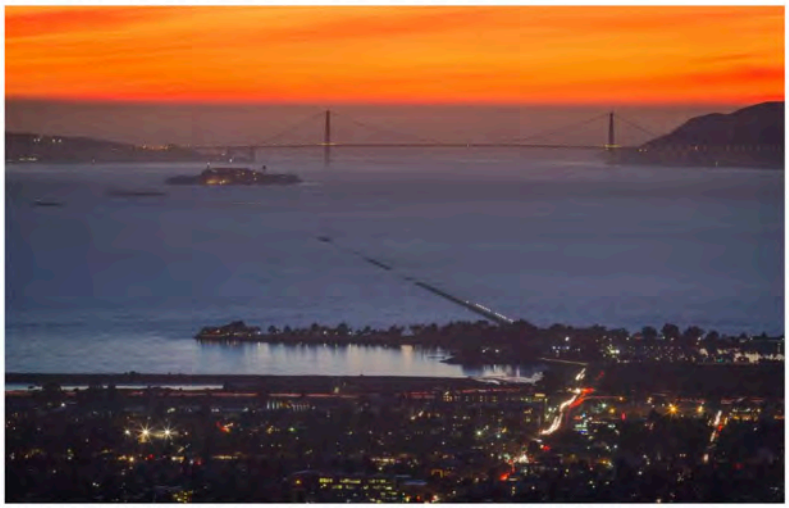
> "*The analysis of light and glare impacts focuses on the nature and **magnitude of changes in light and glare conditions***", and,
> *"Similarly, the City considers whether a proposed project would **increase nighttime light**."* (2026, 3.1-19)(emphasis added)

P87-66



However, no "*analysis of light and glare impacts*" (as cited above) was conducted. No measurements were made to evaluate the "*increase [in] nighttime light"* (as cited above). Instead, analysis of light polluon w as relegated to **Secon 3.1 Aes thecs** , a secon tha t uses Levels of Significance that are only subjecv e and descripv e in nature.

P87-67



For example, to establish the current baseline of ALAN at the project site, 2 photographs are submi ed (pasted below). It's noteworthy that these photos were taken at dusk, when sunlight was sll visible, making it impossible to establish an approximate qualitav e (subjecv e) baseline of current levels of light at night, much less a reliable quant av e (measurable) one.

P87-68

Figure 3.1-2 Nighttime Lighting Photographs at the Project Site

Photograph 1: Existing Nighttime Lighting on the Berkeley Pier

Photograph 2: Existing Nighttime Lighting on the Berkeley Pier and Seawall Drive Parking Lot

Draft Environmental Impact Report 3.1-9

The only evidence provided by the 2026 dEIR of the Baseline level of light at the project site. Photos were taken at dusk and are inadequate. No measurements with a light meter were made. (2026, 3.1-9)

P87-68

No measurements were made with a light meter to establish actual light levels at night. Furthermore, descripon s of the proposed lighng in **Impact statement AES-4** do not even aj empt to quanf y the total number of proposed fixtures or the cumulav e amount of nighme ligh t that will be emi ed.

P87-69

By relegang the analy sis of light polluon t o Secon 3.1 Aes thecs, a sec#on that relies on qualita#ve assessments, the dEIR fails to provide substanal evidence to supports its significance findings regarding ligh#ng.

P87-70

THE TOTAL NUMBER OF PROPOSED LIGHT FIXTURES ISN'T STATED AND WILL TRIPLE OR QUADRUPLE IN NUMBER

Current light. The dEIR idenfie s 36 total light fixtures (28 on the pier, 8 in the parking island island):

> "*Lighting already exists on the closed pier (**28 lights spaced approximately 110 feet apart** from each other on the north side of the closed pier), as well as the existing Seawall Drive parking lot (eight lights in parking islands). The proposed project would remove the existing lighting from the pier and the parking lot during construction of the proposed project."* (2026, 2-22) (emphasis added)

Proposed Wayfinding Signage. Illuminated signage is now being proposed for our parks.

> *"Wayfinding signage would be installed at various points along University Ave, Marina Boulevard, and Seawall Drive & Parking Lot. In addition, wayfinding signage would also be installed in a small portion of Shorebird Park, as shown in Figure 2-2, and within existing parking lots at the Waterfront. The purpose of this signage would be to direct visitors to the new pier, ferry vessels, and Seawall Drive parking lot as well as other recreational locations throughout the Berkeley Waterfront. **These wayfinding signs may be lighted at night**. Interpretive/educational signage regarding the history of the Berkeley Waterfront and notable environmental or geographic landmarks would be installed at locations along the Pier, Breakwater, and/or the new Bay Trail Extension. These interpretive/educational signs would not be lighted at night."* (2026, 2-22)(emphasis added)

Proposed Ligh#ng. The dEIR doesn't idenf y the total (or even approximate) number of proposed light fixtures.

P87-71

> *New lighting is proposed for University Avenue and the Plaza, parking lot, pier, and ferry terminal, and additional lighting poles would be provided for the proposed Bay Trail Extension along Seawall Drive. LED lighting would be installed for the pier/breakwater, gangway walkway, and railings. Down-cast LED lights would be placed approximately **every 50-feet along the Pier and Breakwater on 16-foot tall poles**. The pier canopy structure would be fitted with LED linear downlights attached to the roof and wall sconces attached to the columns. Stainless steel guardrails on the pier would contain LED handrail point lighting aimed at the deck, which would also to be used for emergency egress lighting. A solar-powered marine navigational signal lights and emergency LED path of egress lighting would be installed on the ferry float system and the central charging inverter.* (2026, 2-22)

> *All Project lighting would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements. As such, full cut-off photocell fixtures with side shields and visors would be used for roadway and street lighting. The ferry terminal photocell lighting fixtures would be dimmable and controlled by a timer. The Pier, plaza, and parking lot would include a bi-level lighting system comprised of full cut-off photocell fixtures equipped with shields, guards to the seaside, and controlled by a timer.* (2026, 2-22)

> and

"The proposed project would include the following lighting features:

- *Wayfinding signage lighting along University Avenue, Seawall Drive, and the proposed Bay Trail Extension*
- *Lighting at the Seawall Drive parking lot*
- *Lighting on the new pier, breakwater, gangways, and floats*
- *Lighting at the new public plaza*

Down-cast LED lights would be placed approximately every 50-feet along the Pier and Breakwater on 16-foot tall poles. The pier canopy structure would be fitted with LED linear downlights attached to the roof and wall sconces attached to the columns. Stainless steel guardrails on the pier would contain LED handrail point lighting aimed at the deck, which would also be used for emergency egress lighting. A solar-powered marine signal light would be installed on the float. Emergency LED path of egress lighting would also be installed on the central inverter.

Furthermore, lighting would be photocell-controlled area lighting in compliance with illuminating Engineering Society (IES) and DarkSky recommendation... (2026, Impact AES-4, 3.1-33 to -34)

P87-71

It is appreciated that Dark Sky fixtures will be used, but it isn't enough to ensure significant amounts of light won't be added, the visual quality of the Bay won't be degraded and Biological Resources won't be harmed.

P87-72

With a doubling of the spacing of fixtures on the pier/breakwater (instead of every 100-, fixtures will be every 50) and an unquan fied but high number of ne w fixtures throughout the park, based descripons in the dEIR, **the total number of light fixtures will triple or quadruple**, adding significant amounts of nighme ligh t to project site and be visible from the Bay waters.

P87-73

As noted above, the dEIR fails to establish a baseline level of nighme ligh t at the waterfront on which a determinaon of the le vel of significance can be based. The dEIR also failed to establish a quanfiable le vel of significance. Instead, it used an arbitrary threshold of significance (cf. **Impact AES-4**). As such, the impacts of the proposed lighng ar en't quanfied, making it impossible to evaluate the criteria of the "*magnitude of changes in light and glare conditions*" and the "*increase nighttime light*" and is, therefore, deficient. Given the BCDC policies to "*prevent significant adverse effects on wildlife*" and prevent "*glare and spillover*", and given the understanding that ALAN is a form of polluon, and given the easily-measured nature of light and the significance of ALAN on biological resources and aesthecs, **a quan#fied baseline and jusfied threshold level of significance are missing and must be defined.**

P87-74

Nighme ligh t levels should be measured and quanfied with a ligh t meter during the current baseline situaon (tha t is, the pier and Seawall Dr parking lot aren't in use). Those findings should then be compared with the proposed amount of nighme ligh t levels, to quanf y the change in light levels and change in total number of individual fixtures visible, from land and from the water..

P87-75

To reiterate, to comply with BCDC requirements to "prevent significant adverse effects on wildlife, "enhance the visual quality" of the Bay and "control intensity, glare and spillover"

P87-76

addi onal analysis is necessary. Those analyses should document the current baseline light levels at night, total proposed number of new light fixtures (and for each loca#on, if the fixture is a new loca#on or upda#ng an exis#ng one), broken down by type (including height, spectrum, intensity, shielding, mes -of-use, and jus#fica#on for inclusion[12])

P87-76

THE FIXTURES PROPOSED FOR THE PIER/BREAKWATER WILL BE SPACED 2x CLOSER, ON 16'-TALL POLES, CREATING GLARE AND SPILLOVER

While the dEIR proposes to use Dark Sky fixtures, the ones proposed for the pier/breakwater will be on 16-foot tall poles, creaTng glare and spillover onto the surface of the water below and disturbing the marine ecosystem.

P87-77

To comply with BCDC Public Access Guidelines that prohibit glare and spillover (above), the Final EIR should evaluate the feasibility of lower mounn g heights (e.g. 3-to-4-foot bollards) and increased spacing on all pier, breakwater and shoreline lighng , to minimize the project's "light footprint" while sl l maintaining pedestrian safety.

LED LIGHTING ON THE GUARDRAILS AND OTHER STRUCTURES WILL SHINE DOWNWARD, CREATING GLARE AND SPILLOVER ONTO THE WATER

The dEIR describes "*The pier canopy structure would be fitted with LED linear downlights attached to the roof and wall sconces attached to the columns. Stainless steel guardrails on the pier would contain LED handrail point lighting aimed at the deck...*" It is not enough to have down-cast, fully-shielded fixtures. If the light fixtures are mounted to the canopy, columns or underneath the guardrails, the light will create glare, spilling down to the water below, introducing light polluon into the water column, disturbing marine wildlife, and out into the atmosphere, creang glar e.

P87-78

As an example of what not to do, see the photos of the WETA Richmond Ferry Terminal below. They show disrupv e, unacceptable levels of light polluon emanang brigh t-white from the place-name sign, and bright-blue light from the enr e pier structure, shining out into the Bay atmosphere and entering the water column below. The lighng on the Richmond pier is an example of exactly the kind of lighng t o be avoided.

P87-79

[12] See the "Five Principles for Responsible Outdoor LighNng" by Dark Sky InternaNonal. hc ps://darksky.org/resources/guides-and-how-tos/lighNng-principles/

P87-76

Photos of the Richmond WETA Terminal, illustran g irresponsible lighn g that disrupts wildlife

P87-79

Photos of the Richmond WETA Terminal, illustran g irresponsible lighn g that disrupts wildlife

Photos of the Richmond WETA Terminal, illustran g irresponsible lighn g that disrupts wildlife

P87-79

To comply with BCDC SF Bay Plan to "prevent significant adverse effects on wildlife", addi onal details on ligh#ng must be added to the dEIR. It must document how all light spillage will be eliminated on the pier and breakwater, to ensure no light pollu on enters the surrounding atmosphere or the water column below.

P87-80

SHIELDED ISN'T ENOUGH. NEED A LIGHTING PLAN, WITH SPECTRUM, INTENSITY AND MORE

Fully-shielded fixtures isn't enough to prevent light polluon. T o minimize biological disrupon, lighng should be added only when ab solutely necessary. All lighng should use w armer spectrum lighng (<2, 700 Kelvin) at the minimum intensity.

P87-81

The dEIR descripon of ne w lighng cit es the use of Dark Sky fixtures but fails to describe other essen#al features of responsible outdoor ligh#ng and is inadequate. To comply with BCDC SF Bay Plan to "*prevent significant adverse effects on wildlife*", the Final EIR should include a ligh#ng plan, that addresses ques#ons raised above, including spectrum, intensity, and details of the place-name signage (if one is proposed).

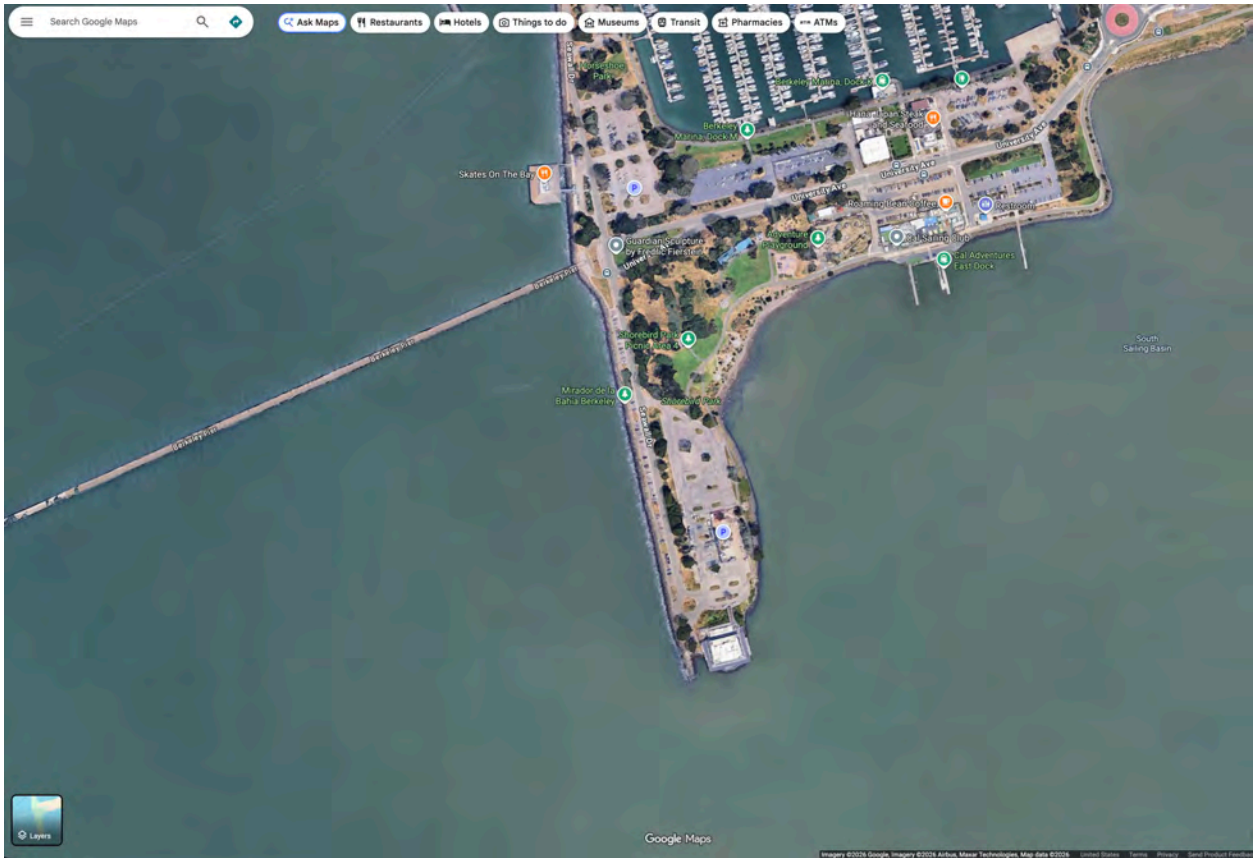
P87-82

THE IMPACT OF INCREASED VEHICLE HEADLIGHTS ON BIOLOGICAL RESOURCES WAS NOT EVALUATED. THE ASSOCATED FINDINGS OF IMPACT AES-4 ARE DEFICIENT and OUTDATED.

P87-83

The dEIR fails to evaluate the impacts on Biological Resources of bright automobile headlights from increased vehicle traffic generated by the proposed project during the Operaonal phase . **Sec#on 3.1, Environmental Sen g, Light and Glare** briefly menons aut omobile headlights, emphasizing the temporary nature of the light and how it touches terrestrial spaces. However, the statement fails to acknowledge that vehicle headlight can also illuminate the surface of surrounding Bay water:

> "*Automobile headlights also create temporary mobile sources of light along proximate roadways and within on-site and nearby parking lots*". (2026, 3.1-8).



Only later in the dEIR, in **Secon 3.1 Aes thecs** , are the impacts of introduced nighme ligh t during the Operaonal phase discussed (not in Biological Resources, where such an analysis belongs). That analysis is within **Impact AES-4**. It assesses light only from staonar y fixtures; mobile sources, like automobile headlights, are missing. Though it isn't stated directly, **Impact AES-4** also seem to make the important assumpon tha t the number vehicles visin g the Seawall Dr. area won't increase (relaTve to the exisng Baseline c ondions). This assump on is flawed.

If the pier/ferry project is completed, the number of vehicles coming to the Seawall Drive area will increase. Why? Because the number of vehicles present during exisTng Baseline condions is arficially lo w. Those condions w ere set only aYer the pier was closed and available parking spaces had been closed to the public. P87-83

> "**EIR Baseline.** *This baseline includes the closure of the existing pier, the closure of the HS Lordship restaurant located at 199 Seawall Drive, and intermittent closure of the Seawall Drive parking lot."* (2026, 3-2)

If the pier/ferry project is developed, once it's completed and the ferry operang , more cars will be parking at the waterfront and impacts will have changed, too.

To help explain the net increase in the number of vehicles expected let's look at the number ferry patrons who will drive. The dEIR describes up to "*450 (or 475) new parking spaces*" (2026, 2-18 or 3.6-37) in the Seawall Dr. area. The expected ferry ridership in 2040 is projected at 1,160, with 52% of them driving. **This means at least 600 <u>new</u> vehicles are projected to be coming down to the project site to park.** These will be cars <u>in addion t o</u> the ones that already park at the waterfront. These addional f erry patron drivers will circulate, looking for a place to park in the Seawall Dr. area. At early morning and late evening hours, and especially during winter, these drivers will have headlights turned on. O en these headlights will be extremely intense, blue-spectrum LED lights that will temporarily blind and incapacitate wildlife. (Do these chronic disrupons c onstut e "harassment"?) As a reminder, the parking lot proposed for ferry patrons is surrounded on Bay water on 3 sides – west, south, and east. See screenshot below.

Screenshot of parking lot documenNng that it is surrounded by Bay water on 3 sides. ALAN from vehicle headlights circulaNng in the parking lot - which is currently closed (the "baseline condiNon") - will shine onto the surrounding surfaces of the water.

P87-83

Thus, the vehicle headlights will illuminate not only terrestrial surroundings but shine onto and illuminate the Bay waters, too, causing increased glare and spillage. Repeated exposure to these bright lights, even if each exposure is brief, causes harmful cumulav e impacts on Biological Resources and degrades the character of the project site. The quality of vehicle headlights has even changed in recent years, becoming more disrupv e to sensiTve receptors. With headlights in newer cars, the light emij ed has shi ed from a warmer lower-spectrum to more disrupv e blue higher-spectrum. Addional ligh t polluon fr om ferry patrons driving to the project site will add to the harmful cumulav e impacts of ALAN on Biological Resources and degrade the visual character of the project site and adversely affect nighme vie ws for sensiv e receptors near the project.

P87-84

The **Impact AES-4** analysis ignores the impacts of all of these changes – the increased number of vehicle and the associated increased harmful headlight glare and spillover into the surrounding land and water, as if light polluon fr om vehicle headlights doesn't require quanfied analy sis. Nothing could be further from the truth.

P87-85

The quarterly publicaon of Dark Sky In ternaonal recently highlighted the significant, negav e impacts of light polluon fr om car headlights on wildlife. The arcle describes how tradional analyses focus on fixed sources of light, ignoring the impacts of automobiles (emphasis added):

> "*Artificial light at night is a well-documented environmental pressure. It disrupts wildlife behavior, alters ecosystems, and interferes with biological rhythms that have evolved over millions of years.* ***Yet most research, policy, and mitigation efforts have focused on fixed sources of light, such as streetlights, buildings, and sports facilities...*** *Many modern LED and xenon headlights emit blue-rich, cool-white light. Blue light is particularly disruptive at night, suppressing the production of melatonin and disrupting circadian rhythms in many species. In ecological terms, not all light is equal, and blue-rich light causes greater harm after dark... For nocturnal insects, especially, this is a serious problem. Many species cannot quickly adjust their vision after exposure, leaving them disoriented, exhausted, or vulnerable to predators long after the car has passed."*[13]

P87-86

SUMMARY

The analysis and findings of the impacts of new sources of nighme ligh t at the project site is grossly deficient, lacking quanfic aon and based on an unr easonable, arbitrary significance threshold. The analysis of the impact of lighng has been r elegated to Secon 3.1 Aes thecs where there are no measurable thresholds of significance. Yet the amounts of exisTng and proposed changes in Arficial Ligh t At Night (ALAN) are easily quanfied. The dEIR didn't establish a Baseline condion of actual nigh me ligh t to then establish the "magnitude of change" to determine if the project "would increase nighme ligh t" (as stated in the Approach to Analysis (2026, 3.1-17)) . The number of fixtures on the pier/breakwater will at least double, with light mounted on 16-foot high poles. The total number of new fixtures across the project site will triple or quadruple. The number of expected vehicles will increase during Operaon, aYer parking areas nearby are reopened to the public (a change from the Baseline), spilling intense blue-spectrum light from increased vehicle traffic onto vegetaon and the w ater surface in all three direcons ar ound the parking lot (west towards the Bay, south, and east towards the S. Sailing Basin). Under CEQA this intermi ent light polluon c onstut es a significant impact on the "exisng visual char acter" and "biological resources" of the site.

P87-87

P87-88

P87-89

To ensure that proposed lighng a t the project site adheres to BCDC SF Bay Plan Policy 4 (Public Access) and Shoreline Spaces Policy 7 (Site Specific Improvements), and doesn't violate any of the CEQA tests of significance for Aesthecs and Biologic al Resources, addional analy ses must be performed, including (but not limited to):

- A new, separate and quanfied analy sis of lighng impacts added t o the Biological Resources SecTon 3.3., to ensure that impacts on biological resources are sufficiently analyzed. Those updates should include new photos - ones taken at night (not dusk) -

P87-90

[13] "A driving source of light polluNon: How car headlights are reshaping the nighw me environment." by Drew Reagan. January 8, 2026. Dark Sky InternaNonal. hc ps://darksky.org/news/a-driving-source-of-light-polluNon-how-car-headlights-are-reshaping-the-nighw me-environment/

and measurements of nighme ligh t taken with a light meter at night (not dusk). Those findings will establish an exisng Baseline of nigh me ligh t.

- Essenal addional in formaon about the pr oposed light fixtures should be included in the aforemenoned secon, including (but not limited to): ancipa ted total number of fixtures (e.g. spectrum, intensity, mes of oper aon), how much of the nighme ligh t emij ed from fixtures on the pier/breakwater will add spillage and glare onto the Bay waters and into the atmosphere, if placename signage will be installed and amount of glare and spillover introduced, and more. Based on this addional in formaTon, a project-level assessment of lighng impacts c an be quanfied and c ompared with the Baseline.
- An analysis of the increase of vehicle headlights and vehicle circulaon should be included, drawing from the most recent research to assess the adverse effects of blue-spectrum LED headlights sweeping through and across the surroundings (terrestrial and aquac) and biologic al resources within.

P87-90

CONCLUSION

The Dra EIR f ails to address new informaon and chang ed circumstance, and offers deficient analyses. In its current form, the Dra EIR does not pr ovide "a sufficient degree of analysis to provide decision makers with informaon which enables them t o make a decision which intelligently takes account of environmental consequences." (CEQA Guidelines § 15151). To remedy these deficiencies updates are necessary and an updated Dra EIR r ecirculated.

P87-91

Thank you for the opportunity to submit comments on the proposed Project.

P87-92

Respectfully,
Erin Diehm

Letter P87

Commenter: Erin Diehm

Date: April 28, 2026

Response to Comment P87-1

This statement pertains to administrative processing of the comment and does not address the adequacy of the analysis, significance conclusions, or mitigation measures in the Draft EIR. The comment has been received. No further response is required.

Response to Comment P87-2

These introductory statements provide context for the commenter's subsequent remarks. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P87-3

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Response to Comment P87-4

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for more information about this topic. Refer to Response to Comments P 98-5 through P87-92 for responses to individual comments. No further response is required.

Response to Comment P87-5

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

Response to Comment P87-6

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P87-7

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion of the 2003 WETA EIR relevance to the Draft EIR. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-8

The Draft EIR is not tiered to, nor is a supplemental or subsequent EIR to the 2003 WETA EIR. Rather, as stated in Draft EIR Section 1.1.2, *EIR Type*, this document has been prepared as a project-level EIR pursuant to CEQA Guidelines Section 15161, which focuses on the specific environmental effects of the proposed Berkeley Water Transportation Pier Ferry Project.

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* which explains that the Draft EIR does not tier from the 2003 WETA EIR, but rather incorporates it by reference. Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* also explains how the Draft EIR uses the 2003 WETA EIR, and where appropriate provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Regarding gray whales, refer to Response to Comments P87-8 through P87-12 for responses to specific comments about gray whales.

Response to Comment P87-9

As described in Draft EIR Section 3.3.4 under Impact BIO-1 (pages 52 to 54), the analysis evaluates potential impacts to gray whales and other marine mammals based on current environmental conditions, including increased whale presence in the Bay in recent years. The Draft EIR does not rely on 2003 assumptions regarding whale rarity or population trends. Instead, the analysis considers the existing Central Bay transit corridor, which includes substantial commercial, recreational, and ferry vessel operational levels, and evaluates the project's incremental contribution to vessel-strike risk. See Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion of Draft EIR references to the 2003 WETA EIR. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-10

As described in Draft EIR Section 3.3.4 under Impact BIO-1 (pages 52 to 54), the analysis evaluates potential impacts to gray whales based on current environmental conditions, including increased whale observations in the Bay in recent years. The Draft EIR acknowledges that vessel strikes are a known source of mortality for gray whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay baseline, which includes substantial commercial, recreational, and ferry vessel operational levels. In addition, see Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-11

As described in Draft EIR Section 3.3.4 (Impact BIO-1, pages 52 to 54), the analysis acknowledges that vessel strikes are a known source of mortality for gray whales and evaluates the project's incremental contribution to this risk in the context of the existing Central Bay baseline, which includes substantial commercial, recreational, and ferry vessel operational levels. The Draft EIR evaluates current whale presence in the Bay and does not rely on assumptions from the 2003 WETA EIR regarding whale rarity or population trends. In addition, see Section 2.2.28, *Topical Response: Whale Strike*, and Response to Comment O7-13 for a discussion regarding potential whale strike. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-12

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

Response to Comment P87-13

The EIR impacts analysis was based on a current literature review of publicly available agency databases and documents consistent with industry standards. With respect to the conference presentation cited in this comment, the analysis in the Draft EIR considers impacts to migratory waterbirds; see Response to Comment O7-17 for a discussion of operational impacts on waterbirds. The literature and database

review conducted for the Draft EIR described in Section 3.3.1, *Introduction*, (page 3.3-1) of the Draft EIR remains valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-14

The "2025 San Francisco State of the Birds" report is noted. The EIR impacts analysis was based on a current literature review of publicly available agency databases and documents consistent with industry standards. The State of the Birds report tracks trends in bird populations in the San Francisco Bay that are informative but do not change the analysis or conclusions of the Draft EIR Section 3.3, *Biological Resources*. The literature and database review conducted for the Draft EIR described in Section 3.3.1, Introduction, (page 3.3-1) remains valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-15

As described in Draft EIR Section 3.3.4 (Impact BIO-1, pages 3.3-44 to 3.3-54), the project site does not provide significant roosting or natal habitat for diving ducks or other rafting waterbirds. The analysis evaluates potential disturbance from ferry operation in the context of the existing Central Bay transit corridor, which already includes substantial commercial, recreational, and ferry vessel operational levels. Adult waterbirds are highly mobile and able to avoid localized disturbance, and the incremental increase in ferry trips associated with the project would not constitute a substantial adverse effect under CEQA. In addition, see Response to Comment P46-4 for a discussion of and text changes related to roosting and migration of waterbirds. With respect to “new information” from the 2004 USGS study, the analysis in the Draft EIR already considers impacts to migratory waterbirds from operational and cumulative impacts of ferry operation as discussed in Response to Comment O7-17. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-16

As described in Draft EIR Section 3.3.5, Cumulative Impacts (page 3.3-66), the analysis evaluates the project’s incremental contribution to cumulative biological impacts in the context of the existing Central Bay transit corridor, which already includes substantial commercial, recreational, and ferry vessel operational levels. The Draft EIR concludes that the addition of the Berkeley service would not make a cumulatively considerable contribution to regional waterbird disturbance because adult waterbirds are highly mobile and able to avoid localized disturbance; and the incremental increase in ferry trips associated with the project would be small relative to existing vessel activity in the Central Bay. For additional discussion of cumulative impacts to waterbirds, see Response to Comment O7-17.

The comment does not provide site-specific evidence demonstrating that the proposed project would result in population-level effects, exceed CEQA significance thresholds, or cause a substantial loss of foraging or resting habitat in the project vicinity. The analysis and significance conclusions presented in Section 3.3 Biological Resources remain valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-17

As described in Draft EIR Section 3.3.4 under Impact BIO-1 (pages 46 to 52), and in text clarification changes in Response to Comment P46-4 describing impacts to wildlife movement, the analysis evaluates operational disturbance in the context of the existing Central Bay transit corridor, which already includes substantial commercial, recreational, and ferry vessel operational levels. Adult waterbirds are highly mobile and able to avoid localized disturbance, and the incremental increase in ferry trips associated with the project would not constitute a substantial adverse effect under CEQA.

The 2004 USGS study cited in the comment provides regional behavioral information, but it does not provide site-specific evidence demonstrating that the proposed project would result in population-level effects, exceed CEQA significance thresholds, or cause a substantial loss of foraging or resting habitat in

the project vicinity. The Draft EIR evaluates operational impacts using current environmental conditions and concludes that the project would not result in significant impacts to rafting waterbirds. For further discussion of operational impacts to waterbirds, see Response to Comment O7-17.

The analysis and significance conclusions presented in Section 3.3 Biological Resources remain valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-18

The Draft EIR evaluates the project's incremental contribution to regional biological impacts and explicitly considers cumulative effects in Section 3.3.5, Cumulative Impacts, using the existing Central Bay vessel operational levels as the comparable existing condition. The analysis recognizes that repeated disturbance can affect bird behavior at some locations, and it relies on the best available, site-specific information to determine whether the Berkeley route would cause a substantial, long-term loss of foraging or roosting habitat. See Response to Comment O7-17 for further discussion of operational impacts on waterbirds.

The comment has not provided site-specific evidence showing that the Berkeley service would convert usable habitat into a permanent "dead zone" or cause population-level declines. Therefore, the analysis and significance conclusions in Section 3.3 Biological Resources remains valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-19

See Response to Comment 7-17 for discussion of operational and cumulative impacts to waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-20

The proposed increase in ferry trips would be incremental relative to existing vessel operations in San Francisco Bay. Stating that a direct population-level impact from this project alone is speculative without site-specific evidence linking the project's incremental disturbance to measurable declines in body condition, migration success, or reproductive output. The Draft EIR addresses impacts to wildlife movement in Section 3.3.4 Impacts analysis under Impact BIO-4 (page 3.3-63) and concludes that impacts would be less than significant. In addition, see Response to Comment P46-4 for text clarification changes addressing migratory birds, Response to Comment O7-17 for a discussion of operational impacts to waterbirds, and Section 2.2.25, *Topical Response: Siltation/Wave Climate,* for a discussion of wave climate and sedimentation/turbidity. The Draft EIR discusses the impacts of ferry wake in Section 3.8.4. Impacts Analysis on page 3.8-33. No additional analysis or changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-21

See Response to Comment O7-17 for discussion of operational and cumulative impacts to waterbirds. No additional analysis or changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-22

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

Regarding gray whales, refer to Response to Comments P87-13 through P87-21 for responses to specific comments about waterbirds.

Response to Comment P87-23

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

Response to Comment P87-24

Regarding the comment that "the 2003 Berkeley Marina Master Plan, which remains the effective planning document for the area, contemplated ferry service only within the existing Marina basin", this is not an accurate statement. The City has reviewed the Berkeley Marina Master Plan, including Figure 2.0, which is referenced in this comment, and has found that the only references to a ferry in the document are cost estimates related to seismic retrofit of an existing (as of 2003) "ferry pier". Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion of why the City considered an In-Marina Ferry Terminal Alternative, but ultimately rejected it, consistent with CEQA.

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR. A supplemental analysis of the potential impacts from dredging approximately 400,000 cubic yards is not needed because the Draft EIR already analyzes the potential impacts from dredging 400,000 cubic yards.

Response to Comment P87-25

Refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* which discusses how potential future maintenance dredging is addressed in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P87-26

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. This Topical Response also clarifies that the Draft EIR does not tier from the 2003 WETA EIR.

A supplemental analysis of the potential impacts from dredging approximately 400,000 cubic yards is not needed because the Draft EIR already analyzes the potential impacts from dredging 400,000 cubic yards. Draft EIR Chapter 2, *Project Description*, identifies the anticipated dredging quantities (see Section 2.6, page 2-28), and potential dredging impacts are evaluated in Section 3.3, *Biological Resources* (see Section 3.3.4, Impacts BIO-1 through BIO-1), and Section 3.8, *Hydrology and Water Quality* (see Section 3.8.4, Impact HYD-1), of the Draft EIR.

With respect to maintenance dredging, refer to Section 2.2.15, *Topical Response: Maintenance Dredging,* and Section 2.2.25, *Topical Response: Siltation/Wave Climate*. As discussed therein, the Draft EIR evaluates post-construction sedimentation conditions through the project-specific Coastal Study and associated sediment transport modeling. The referenced responses to comments further explain that based on the sedimentation rates identified in the Coastal Study, maintenance dredging would not be anticipated for approximately 10 to 15 years within the approach channel and approximately 22 to 33 years within the turning basin and berth areas. Because the timing, extent, volume, methods, disposal requirements, and regulatory framework associated with any future maintenance dredging cannot

presently be determined and would depend on future site conditions, detailed environmental analysis of such activities would be speculative. Accordingly, any future maintenance dredging would constitute a separate action subject to future regulatory review, permitting, and environmental review, as appropriate.

The analyses, significance conclusions, and mitigation measures presented in the Draft EIR remain valid as written. No revisions to or recirculation of the Draft EIR, or preparation of a supplemental EIR, are required in response to this comment.

Response to Comment P87-27

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P87-28

Because the comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR, no further response is required. Nonetheless, see Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of noise produced by electric ferries.

Response to Comment P87-29 to P87-33

Refer to Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of operational ferry vessel speed, power, and noise impacts on marine mammal species. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-34

The comment restates the various marine species communication frequency range information included in Draft EIR Table 3.3-2 (page 3.3-.51). Because the comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR, no further response is required.

Response to Comment P87-35 to P87-39

Refer to Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of operational ferry vessel speed, power, and noise impacts on marine mammal species. In addition, refer to Section 2.2.10, *Topical Response: Electric Ferry,* for a discussion regarding the timing and availability of electric ferry models. No changes to the Draft EIR are necessary in response to these comments.

Response to Comment P87-40

See Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of operational ferry vessel speed, power, and noise impacts on marine mammal species. With respect to comments about the noise studies cited in the Draft EIR being for different types of water bodies, the statement referenced in this comment from Draft EIR Section 3.3.2, Environmental Setting, (page 3.3-14) specifically cites a sound monitoring study conducted in the central San Francisco Bay. When calculating safe zones for construction work to avoid impacts to fish and marine mammals, the most recent NMFS guidelines will be used, as described in Mitigation Measure BIO-1(d). These safe zones and avoidance measures will be developed and approved in coordination with NMFS, USFWS, and CDFW during permitting. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-41

See Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of operational ferry vessel speed, power, and noise impacts on marine mammal species. In addition, see Section 2.2.28, *Topical Response: Whale Strike*, for a more specific discussion related to potential for operation of ferry vessels to come into contact with whales. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-42

The comment does not specify what was not written in plain language and/or information was not easy to understand. Therfore a substantive response is unable to be prepared. Nonetheless, see Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of operational ferry vessel speed, power, and noise impacts on marine mammal species. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-43

Refer to Section 2.2.4, *Topical Response: Biological/Underwater Noise*, for a discussion about how the EIR addresses underwater noise impacts on biological resources from the operation of electric ferry vessels.

Response to Comment P87-44

A reconnaissance-level field survey, when combined with targeted database and literature review and the application of standard CEQA avoidance/minimization measures, provides sufficient, project-specific information to map and evaluate potential species habitats and sensitive biological resources and to support the CEQA impact analysis. CEQA requires enough information to evaluate environmental effects and to adopt feasible mitigation; it does not require exhaustive scientific research or the generation of new baseline science beyond what is necessary to make an informed determination. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-45

See Response to Comment P87-44 for a discussion regarding survey adequacy. Existing conditions are adequately described for the purposes of CEQA analysis in Draft EIR Section 3.3.2. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-46

Refer to Response to Comment O9-3 for a response to this comment. No further response is required.

Response to Comment P87-47

See Response to Comment P87-44 for a discussion regarding survey adequacy. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-48

See Response to Comment P87-44 for a discussion regarding survey adequacy. In addition, the reconnaissance survey, while terrestrial, covered a larger area than the current project site in the Draft EIR. Surveyors were provided access to the closed pier and walked its length, and surveyed the riprap shoreline surrounding the project site, including the Marina edge outside of the current project site. The comment does not specify what special-status species were omitted, so a substantive response is unable to be prepared for that portion of the comment. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-49

Refer to Response to Comments P87-44 to P87-48 for responses to specific issues raised by the commenter. As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. The commenter does not identify any particular impact or conclusion within the biological resources Section that is not supported by substantial evidence. No further response is required.

Response to Comment P87-50

See Response to Comment P87-44 with regard to survey adequacy. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-51

See Response to Comment O5-36 for discussion of dredging and in-water construction impacts and Response to Comment O7-17 for discussion of ferry operations on waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-52

See Response to Comment P87-44 for a discussion regarding survey adequacy. In addition, see Response to Comment O7-17 for a discussion of long-term and cumulative impacts to waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-53

See Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of how the existing underwater noise environment has been identified and related project impacts have been assessed and would be less than significant with incorporation of Mitigation Measures BIO-1(d) and BIO-1(e). With regard to comment request for aquatic-based monitoring, Draft EIR Mitigation Measures BIO-1(e) (page 3.3-60) requires preparation of a marine mammal monitoring plan prior to construction and implementation of recommendations during construction. In addition, refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate* for a discussion of project impacts with respect to wave climate and effects within and beyond the project site. No changes to the Draft EIR are necessary in response to this comment

Response to Comment P87-54

No additional research or multi-season bird, on-water, or hydroacoustic monitoring surveys are proposed or required. See Response to Comment P87-44 for a discussion regarding survey requirements. The Draft EIR analysis and significance conclusion of less than significant with mitigation (Mitigation Measures BIO-1, HYD-1, and AES-1) related to special status wildlife, including birds and aquatic species, presented under Impact BIO-1 in Section 3.3.4, Impacts Analysis, starting on page 3.3-44 remain valid. In addition, see Section 2.2.7, *Topical Response: CEQA Process,* for discussion of how recirculation of the Draft EIR is not required. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-55

The project site evaluated for the project includes all areas that may potentially be impacted by the project, including temporary staging and access, temporary disturbance, and permanent impacts. The project site is defined in Draft EIR Section 2.2, Existing Project Site Characteristics, page 3.3-7. Review of biological occurrence data extended beyond the project site, utilizing an industry-standard nine USGS 7.5-minute quadrangle search of databases described in Draft EIR Section 3.3.1, Introduction, (page 3.3-1). The analysis under Impact BIO-1, starting on page 3.3-44, and BIO-2, starting on page 3.3-58, evaluated the project's potential to impact species and sensitive habitats, respectively, both within the project site

and in the project vicinity (within approximately five miles of the project site), as well as water quality, noise, lighting, etc. impacts to biological resources with the immediate project vicinity and encompassing Shorebird Park. In addition, see Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting and its effects on the shoreline. The Draft EIR analysis and significance conclusions of less than significant with mitigation (Mitigation Measures BIO-1, BIO-2, HYD-1, and AES-1) under Impacts BIO-1 and BIO-2 in Section 3.3.4, Impacts Analysis, starting on page 3.3-46 and 3.3-58, respectively, remain valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-56

Refer to Response to comment P87-55 for a discussion about how the Draft EIR accurately addresses the physical environment, including impacts on areas in the vicinity and adjacent to the project.

Response to Comment P87-57

The project site evaluated for the project includes all areas that may potentially be impacted by the project, including temporary staging and access, temporary disturbance, and permanent impacts. The project site is defined in Draft EIR Section 2.2, Existing Project Site Characteristics, page 3.3-7. The Draft EIR analysis under BIO-1, starting on page 3.3-44, and BIO-2, starting on page 3.3-58, evaluated the projects potential to impact species and sensitive habitats both within the project site and in the project vicinity (within approximately five miles of the project site), as well as water quality, noise, lighting, etc. impacts to vegetation communities with the immediate project vicinity and encompassing Shorebird Park. The Draft EIR analysis and significance conclusions of less than significant with mitigation (Mitigation Measures BIO-1, BIO-2, HYD-1, and AES-1) under Impact BIO-1 and BIO-2 in Section 3.3.4, Impacts Analysis, starting on page 3.3-46 and 3.3-58, respectively, remain valid. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-58

Project-related tree removal near Shorebird Park are limited to landscaped ornamentals and are not part of a natural vegetation community. Impacts to protected bird species, including nesting birds, are analyzed in Draft EIR Section 3.3.4 under Impact BIO-1 on page 3.3-44, which concludes impacts to be less than significant with implementation of Mitigation Measures BIO-1(a), BIO-1(c), and AES-1. Impacts of increased vehicle use of existing roads in this already disturbed area immediately adjacent to Interstate 80 would not vary greatly from existing conditions. Refer to Response to Comment A2-10 for discussion of impacts on white-tailed kite. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-59

The Draft EIR addresses impacts to nesting birds as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy mitigation requirements. See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects, including vehicle headlights. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-60

Regarding Shorebird Park, the Draft EIR considers Shorebird Park as part of the environmental setting and surrounding biological context for the project vicinity. As discussed in Responses to Comments O10-64, P87-55, P87-57, and P87-58, the Draft EIR identifies and describes Shorebird Park as part of the existing environmental setting and evaluates the project's potential direct and indirect effects on nearby biological and recreational resources. The project would not result in direct habitat loss within Shorebird Park

because project construction and operation would occur outside the park. The Draft EIR further evaluates potential indirect effects, including effects related to lighting and biological resources, consistent with the applicable CEQA thresholds.

Regarding the geographic scope for biological resources, CEQA does not require analysis of biological resources over an unlimited geographic area. Rather, the scope of analysis must be tailored to the area within which project-related impacts could reasonably occur. The Draft EIR evaluates biological resources within the project site and surrounding areas where direct or indirect effects could occur and includes consideration of adjacent habitats and species that could potentially use the project vicinity. As discussed in Responses to Comments P87-55, P87-57, and P87-58, the City concludes that the geographic scope of the biological resources analysis is appropriate and sufficient to disclose the project's potential environmental effects.

Regarding the artificial light at night (ALAN), the Draft EIR evaluates potential operational lighting effects on biological resources in Section 3.3.4, *Biological Resources* (pages 3.3-51 and 3.3-52). As discussed in Response to Comment O4-19, existing stationary sources of lighting are already present within the project site and vicinity, including streetlights, parking lot lighting, pier lighting, and building lighting. Project lighting would be designed in accordance with applicable lighting standards, including DarkSky principles and glare reduction measures. In addition, refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* which provides a detailed discussion of lighting-related concerns, including biological resource considerations. As discussed therein, the project would not result in significant impacts related to ALAN.

Regarding Shorebird Park, habitat loss, and artificial light at night, refer to Response to Comments O4-19, P87-55, P87-57, P87-58, P87-63, and Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for additional discussion of these topics.

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy*, the City has concluded that the Draft EIR provides sufficient information to allow decision makers to understand and consider the environmental consequences of the project, consistent with CEQA Guidelines Section 15151. No further revision is required.

Response to Comment P87-61

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion related to how the Draft WSP is addressed in the Draft EIR.

Response to Comment P87-62

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for a discussion related to how the Draft WSP is addressed in the Draft EIR. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment P87-63

The Draft EIR addresses impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy mitigation requirements. See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-64

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding nighttime lighting analysis methodology.

Response to Comment P87-65

Both policies provided in the comment have been addressed in the Draft EIR. Refer to Impact LU-2 in Section 3.9, *Land Use and Planning* of the Draft EIR. Draft EIR page 3.9-18 includes a consistency analysis with Public Access Policy 4 and Appearance, Design, and Scenic Views Policy 1.

As described in Section 3.1, Aesthetics, construction activities would largely occur during the daytime; nighttime illumination would be restricted to the minimum needed for safety during piledriving and for security at staging yards. Mitigation Measure AES-1 commits to lighting details that minimize lighting impacts, and impacts were found to be less than significant after mitigation.

Draft EIR Section 3.10, Land Use and Planning, discusses consistency with BCDC's Bay Plan policies. Additionally, the statutory mandates for BCDC and other permitting agencies are reviewed under Regulatory Framework in each Draft EIR Chapter 3, *Environmental Impact Analysis*, section. Compliance with agency-specific requirements will be confirmed through the respective permitting processes. These permits will include conditions that ensure the project meets all applicable regulatory standards before construction begins. No further response is required.

Regarding lighting impacts on wildlife, the Draft EIR address impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements.

See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-66

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding baseline and analysis of lighting impacts. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-67

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts with regard to quantification. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-68

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding baseline and analysis of lighting impacts. Environmental impact analysis associated with light and glare evaluated in Draft EIR Section 3.1, *Aesthetics*, is based on the lighting infrastructure and design assumptions described in Draft EIR Chapter 2, *Project Description*, (pages 2-22 through 2-23) and implementation of required Mitigation Measure AES-1. The light and glare impact (Impact AES-4, refer topages 3.1-33 through 3.1-34) was determined to be less-than-significant-with mitigation. For the following reasons, modelling future lighting is not reasonable or required for assessment of environmental impacts related to the proposed project:

- Project lighting would occur within an already developed area along already developed roadways, trails, paths, piers, and other public uses;

- Project lighting would primarily replace or enhance existing lighting;
- Project lighting would be primarily to provide for safe use of the waterfront and to extend the public hours of such use; and
- Project lighting would be designed to avoid glare and in conformance with DarkSky recommendations.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-69

Refer to Response to Comment P87-68 regarding quantitative lighting analysis. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-70

Refer to Response to Comment P87-68 regarding quantitative lighting analysis. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-71

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding proposed light fixtures. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-72

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts with regard to scenic Bay views and lighting. Regarding lighting impacts on wildlife, the Draft EIR address impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-73

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-74

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts consistent with CEQA thresholds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-75

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts with regard to quantification. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-76

Refer to Response to Comment P87-65 regarding BCDC policies on lighting. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-77

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts. Regarding lighting impacts on wildlife, the Draft EIR address impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-78

The comment states that the proposed LED lighting on the pier could create glare and spill light onto the water and surrounding environment, downward-directed, shielded fixtures alone may not prevent light pollution, and the Draft EIR should evaluate potential effects of lighting on marine wildlife and other biological resources.

The Draft EIR addresses impacts from operational lighting in Section 3.3.4 Impacts Analysis (page 3.3-51). Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy mitigation requirements. See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects, including on biological resources. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-79

This comment is noted; however, it does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment P87-80

The Draft EIR address impacts to nesting birds as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements. See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects, including on biological resources. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-81

The Draft EIR address impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements. See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects, including on biological resources. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-82

See Response to Comments P87-65 and P87-80 for a discussion of nighttime lighting consistency with BCDC SF Bay Plan, including with respect to biological resources. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-83

The Draft EIR address impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements. Impacts of increased vehicles on existing roads in this already disturbed area immediately adjacent to Interstate 80 would not vary greatly from existing conditions. See also Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* for a discussion of nighttime lighting effects, including on biological resources. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-84

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts with regard to glare, visual character, and nighttime views. Regarding lighting impacts on wildlife, the Draft EIR address impacts as a result of operational lighting in Section 3.3.4 Impacts Analysis on page 3.3-51. Existing stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Project lighting would be similar in scope to existing conditions, the minimum necessary for safe access and egress, and would be designed in compliance with Illuminating Engineering Society recommendation and DarkSky Policy glare mitigation requirements.

No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-85 to P87-88

Refer to Section 2.2.18, *Topical Response: Nighttime Lighting/ALAN,* regarding analysis of lighting impacts with regard to increased vehicle headlights.

No changes to the Draft EIR are necessary in response to these comments.

Response to Comment P87-89

Refer to Response Comment P87-84 regarding impacts on visual character and biological resources. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-90

See Draft EIR Impact AES-4 in Chapter 3.1.4 (page 3.1-41) that determines that the operational levels of light and glare would be minor, similar to existing conditions. The same page details lighting needs, duration, and potential impacts. Refer to Section 3.1, Aesthetics, and Section 3.3, Biological Resources, of the Draft EIR, which evaluate potential impacts associated with project lighting, including light and glare, spillover, and potential effects on sensitive receptors and biological resources.

CEQA does not require that environmental analyses rely on specific quantitative field measurements where sufficient information exists to evaluate impacts based on accepted methodologies, regulatory standards, and professional judgment. The Draft EIR's analysis of lighting impacts is based on the project description, applicable design standards (e.g., shielding, directionality, and intensity controls), and compliance with local and regional policies, including applicable BCDC policies. The Draft EIR provides sufficient information to evaluate lighting-related impacts under CEQA, and the requested additional

analyses and data collection are not required to support the adequacy of the document. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment P87-91

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy*, the City has concluded that the Draft EIR is sufficient from a CEQA perspective. Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Response to Comment P87-92

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Subject: Seawall Drive View parking

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Liza,

In your spare time:

Open each of the attached files, then hit page-up and page-down to scan through, watching in particular the parking along Seawall (and elsewhere, it's interesting).

P88-1

This isn't a perfect picture set, but it nonetheless does a pretty good job of showing how much this parking gets used.

Check them out! WE need those spaces with the great views, rank-and-file Berkeley has been voting via Google Earth!

Gordon

Letter P88

Commenter: Gordon Stout

Date: April 28, 2026

Response to Comment P88-1

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access*, and Section 2.2.20, *Topical Response: Parking*. As discussed therein, the Draft EIR evaluates the proposed project's shoreline access improvements, view opportunities, and parking configurations. The commenter's preference regarding retention of existing view-oriented parking spaces constitutes a project design recommendation that has been included in the project record considered by City decision makers. The comment does not identify a deficiency in the Draft EIR analysis, significance conclusions, or mitigation measures. No revisions to the Draft EIR are required.

Response to Comment P88-2

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*. The Draft EIR's parking analysis is based on parking utilization data and supporting technical studies prepared for the project. As discussed therein, the Draft EIR uses the physical conditions existing at the time the Notice of Preparation was published as the CEQA baseline; therefore, historical parking conditions depicted in the commenter’s aerial imagery do not represent the baseline against which project impacts are analyzed and do not alter the conclusions of the Draft EIR. The Draft EIR evaluates potential secondary physical environmental effects associated with project-related parking conditions and concludes that no significant parking-related environmental impacts would occur. The comment does not provide evidence demonstrating that the analyses or significance conclusions presented in the Draft EIR are incorrect. The analyses and significance conclusions remain valid as written. No revisions to the Draft EIR are required.

Berkeley Pier-Ferry Draft EIR Public Comment Zoom Meeting – 2026-03-16

TRANSCRIPT

[Liza McNulty, City of Berkeley] 18:01:18
Hi, folks joining us. We're just going to give it a few minutes for everyone to get logged on here.

[Liza McNulty, City of Berkeley] 18:01:25
And then we will start the meeting at 6:01 right now. I think we'll give it about two or three minutes, and then we'll get started just to make sure that everybody is able to get out of the waiting room and into the meeting.

[kelly hammargren] 18:01:43
Thank you for letting us have the transcript.

[Liza McNulty, City of Berkeley] 18:01:48
So we're taking a transcript now, and then that will become part of the public record, and I'll cover that as part of our presentation today.

[Liza McNulty, City of Berkeley] 18:02:07
All right. I'm seeing 2 more folks in the waiting room. I'm going to give 3.

[Liza McNulty, City of Berkeley] 18:02:12
Give them all a chance to make their way here. If everybody could please keep yourself muted.

[Liza McNulty, City of Berkeley] 18:02:44
Okay.

[David] 18:02:45
Okay.

[Liza McNulty, City of Berkeley] 18:02:48
So I'm going to get started. Even as we have a few folks joining us, again, if everyone on the call can please mute yourself.

[Liza McNulty, City of Berkeley] 18:02:58
I do want to warn you that we will do it if necessary. But if you could please keep yourself muted except when you're called on to speak, that would be great. I'm going to get started. My name is Liza McNulty. I am the City of Berkeley.

[Liza McNulty, City of Berkeley] 18:03:15
Parks and recreation. Parks, Recreation and waterfront Capital Improvement Program Manager. That is a mouthful, but the takeaway is that I'm the project manager for the Berkeley Pier Ferry Project. Joining me from the city today is Roger Miller, a senior systems analyst, and he is going to be running a lot of the behind the scenes.

[Liza McNulty, City of Berkeley] 18:03:39

Zoom work here. This meeting is being transcribed, and that transcription, including all comments made today, will become part of the public record, and so will be published with the final Eir.

[Liza McNulty, City of Berkeley] 18:03:55
We're here today to talk, uh, to receive comments on the Berkeley Water Transportation Pier ferry draft environmental impact report.

[Liza McNulty, City of Berkeley] 18:04:04
Slide, please.

[Liza McNulty, City of Berkeley] 18:04:09
Thank you. So our goal here today is to receive your public comments on the draft report that was published on the city's website. I did put into the chat window a link to the city's website where you can download the report.

[Liza McNulty, City of Berkeley] 18:04:27
As well as the notifications and other background documents about the report.

[Liza McNulty, City of Berkeley] 18:04:33
We're not here today to respond to comments. So in general, you will give us your comment. We will thank you for your comment, and then we'll call on the next person. The comments will be published in the final EIR, and that is where you will see a response to your comment in that final EIR document.

[Liza McNulty, City of Berkeley] 18:04:52
Um, again, please reminder to be muted, except when we call on you. We're going to go through a brief presentation here, and then we'll open the public comment period, and we'll talk about the sort of rules of engagement.

[Liza McNulty, City of Berkeley] 18:05:09
public comment period when we get there. I believe. Oh, one other thing I wanted to say, giving a verbal comment here does not mean that you cannot also submit a written comment. So you are welcome and encouraged to do both, particularly if you want to be sure that you have as much time and space to make your comment. There's no limit on.

[Liza McNulty, City of Berkeley] 18:05:34
on written comment length. You can take as much space as you want in a written comment. We will have a 3-minute time period for our comments today to keep this meeting to a reasonable length.

[Liza McNulty, City of Berkeley] 18:05:46
Um, okay, and with that, I'm going to turn it over to Leo Mina, our project manager from Rincon, who helped prepare the draft document.

[Leo Mena (he/him)] 18:05:55
Thank you, Liza. Good evening, everyone. To begin. I just want to go over the purpose of the Eir or environmental impact report under CEQA or

California Environmental Quality Act. So under CEQA, the purpose of an Eir is to disclose.

[Leo Mena (he/him)] 18:06:11
significant environmental effects of the proposed project. Identify ways to avoid or reduce environmental impacts. Consider feasible alternatives to the proposed project and involve public participation in the planning process. So that's why we're here today.

[Leo Mena (he/him)] 18:06:26
So we've prepared a project level Eir, which provides a site-specific analysis of the proposed project. Our Eir is focused on the impacts from construction and operation of the project, as well as the cumulative impacts. And we also include alternatives.

[Leo Mena (he/him)] 18:06:42
Um, that were developed, considered, and evaluated. So on the screen here, we have the project objectives. The project objectives are to enhance public access and recreational opportunities at the Berkeley waterfront and to provide efficient and environmentally friendly zero emission public ferry service between Berkeley and San Francisco.

[Leo Mena (he/him)] 18:07:03
So here is our project. So the project involves the demolition of portions of the closed pier.

[Leo Mena (he/him)] 18:07:10
the installation of a 1,080-foot-long pier, as well as a 400-foot breakwater, both of which will provide pedestrian access and recreational amenities.

[Leo Mena (he/him)] 18:07:20
Such as interpretive and educational signs, benches, shade canopy, um, and a fish cleaning station.

[Ray Yep] 18:07:28
Berkeley Ferry.

[Leo Mena (he/him)] 18:07:28
Okay, and I'm going to mute somebody who has a little bit background noise. Sorry.

[Leo Mena (he/him)] 18:07:34
Um, and I just wanted to note that the EIR does include two alternatives that consider both a shorter peer and a shorter breakwater. I'll talk about that in a bit.

[Leo Mena (he/him)] 18:07:43
The project includes the infrastructure for the ferry vessels, including a universal charging and board floats, landings, gangways, and security entrance. And I did want to note that on the screen here, we see two ferry terminals being shown. And as described in the EIR, the city expects to initially permit and construct.

[Leo Mena (he/him)] 18:08:02
a single terminal, and then the second terminal would be constructed at a later phase.

[Leo Mena (he/him)] 18:08:07
Uh, the project also includes dredging along the 100 foot wide existing US Army Corps of Engineer navigation channel, which parallels the existing pier.

[Leo Mena (he/him)] 18:08:17
Um, the project includes a new plaza with a public restroom, benches, and bicycle parking.

[Leo Mena (he/him)] 18:08:24
It also includes improvements along roadways, including on University Avenue, repaving and restriping between the intersections of seawall and Marina, and a new cycle track, passenger drop-off zone, and public bus infrastructure.

[Leo Mena (he/him)] 18:08:37
And on Seawall Drive, we would have realignment, restriping, and repaving.

[Leo Mena (he/him)] 18:08:43
For parking, the project would renovate the Seawall Drive parking lot with new pavement, surfacing, striping, lighting, stormwater treatment, and electric vehicle charging stalls.

[Leo Mena (he/him)] 18:08:54
And then along 300 feet, let me go to the next slide along 300 feet of the shoreline, kind of on the eastern side of the peninsula, right by His Lordship, just right there where my cursor is, the project includes repairing a portion of that shoreline.

[Leo Mena (he/him)] 18:09:09
that's been eroded. The project is also going to include landscaping, wayfinding, and infrastructure for utilities, including electrical infrastructure for the charging of the ferry vessels, and the connections for water and wastewater. And then finally, the project includes operation of a new zero-emission electric passenger ferry service between Berkeley.

[Leo Mena (he/him)] 18:09:28
San Francisco and Larkspur. I did also just want to note that there's been a lot of public interest and concern regarding the existing and improved water access location near the old His Lordship's restaurant. So this project description does not include any modifications to that existing access in that location.

[Leo Mena (he/him)] 18:09:47
And then, finally, the city is still considering adding solar panels in the parking lot. The draft Eir does analyze the potential potential environmental impacts associated with the solar panels. However, the city is still considering this project feature.

[Leo Mena (he/him)] 18:10:02
And then here we have an overview of our secret process to date. So we started with a notice of preparation and a scoping period between April 18th and May 19th of 2025.

[Leo Mena (he/him)] 18:10:12
The city considered the scoping comments that were received and then prepared the draft environmental impact report. That's where we are now with the with the red star.

[Leo Mena (he/him)] 18:10:20
So we're currently in the comment period. And once that common period closes, the city will prepare the final EIR, including responding to all of the comments received, publishing that final EIR, and then the city council will make a decision on the EIR and the project.

[Leo Mena (he/him)] 18:10:35
Here we just have an overview of all of the topics considered in the EIR. I'm not going to read them all, but you can see that it covers everything from aesthetics to wildfire.

[Leo Mena (he/him)] 18:10:47
Okay? So before I jump into the summary of the draft Eir findings, I just wanted to give some overall context of some terms that we're going to use. So when we talk about no impact, that indicates that the project would cause no physical change to the environment and would have no effect on environmental resources or conditions.

[Leo Mena (he/him)] 18:11:04
A less than significant impact means that the project would have a minimal effect on the environment, but it's below the sequel thresholds of significance without mitigation.

[Leo Mena (he/him)] 18:11:12
And then a finding of less than significant with mitigation means that the project would have a potentially significant impact, but there is feasible mitigation measures that reduce that effect to a less significant. And then, finally, our significant and avoidable impacts. Those are those where we've identified a mitigation.

[Leo Mena (he/him)] 18:11:28
But still, it cannot achieve that level of less than significance.

[Leo Mena (he/him)] 18:11:33
Okay. And then I'm going to jump into some of the conclusions. But I do encourage everyone to review the draft environmental impact report for specific issues that you're concerned about. This is just going to be, you know, a high level overview.

[Leo Mena (he/him)] 18:11:46
So the draft EIR did identify a couple of significant and unavoidable impacts, all having to do with construction noise. So let's begin with that.

[Leo Mena (he/him)] 18:11:54
Um, even with the implementation of a construction noise management plan, we did find significant and unavoidable noise impacts during construction, primarily as a result of pile driving activities associated with the pier.

[Leo Mena (he/him)] 18:12:07
And because we have that significant unavoidable construction impact, we also have impacts on land use and recreation, and I'll explain that in just a sec.

[Leo Mena (he/him)] 18:12:15
So going one by one during construction, the noise impacts would exceed standards established in the city of Berkeley Municipal code. And given that impact, the draft Eir concluded that the project would also have a significant and unavoidable land use impact, given the conflicts with the policy for the purpose of avoiding an environmental effect in this case.

[Leo Mena (he/him)] 18:12:34
the Muni code. And because the construction noise impacts are a result of constructing a recreational facility, a recreational pier. The draft Eir concluded that the project would also have a significant and unavoidable impact from the construction of a recreational facility.

[Leo Mena (he/him)] 18:12:51
So in addition to those significant and unavoidable impacts, the project included potential impacts that could be mitigated to a less than significant level, and these included aesthetics impacts due to nighttime lighting.

[Leo Mena (he/him)] 18:13:03
air quality impacts associated with the construction. biological resources impacts during construction due to impacts on special status species, potential impacts associated with invasive species, and then the loss of jurisdictional waters.

[Leo Mena (he/him)] 18:13:18
And as well, unanticipated cultural, tribal cultural, and paleontological resources during construction. That's if anything were discovered during construction. We also had less than significant impacts with mitigation for construction related water quality, and then environmental impacts from the construction of the utility connections.

[Leo Mena (he/him)] 18:13:35
So next, I'll go over some of the mitigation measures that we've included in this EIR.

[Leo Mena (he/him)] 18:13:40
So for aesthetics, we identified a mitigation measure to shield nighttime lighting.

[Leo Mena (he/him)] 18:13:46

For air quality requirements to reduce air quality emissions, such as using tier 4 engines, so stuff having to do with the construction equipment.

[Leo Mena (he/him)] 18:13:55
For bio, a worker environmental awareness program, pre-construction surveys for special status species, avoidance protocols for special set of species and nesting birds, pile driving impact avoidance for fish and marine mammals. So that's to minimize the impacts from the noise on fish and mammals.

[Leo Mena (he/him)] 18:14:12
A marine mammal monitoring plan. Invasive species prevention.

[Leo Mena (he/him)] 18:14:17
Um, and then compensatory mitigation for the loss of jurisdictional waters.

[Leo Mena (he/him)] 18:14:22
So for cultural and paleo, we also identified protocols for the unanticipated discovery of paleontological resources.

[Leo Mena (he/him)] 18:14:32
So for water quality, we included a mitigation requiring additional best management practices in the stormwater pollution prevention plan during the pier demolition to avoid debris or spills from entering the bay during that demolition.

[Leo Mena (he/him)] 18:14:45
Um, and then finally, we did include a suite of mitigation measures that we developed in consultation with Native American tribes, including cultural resources, sensitivity training, providing signage, acknowledging Native American history, Native American monitoring.

[Leo Mena (he/him)] 18:15:00
And following protocols of a tribal cultural resource is found, and then finally, providing respectful treatment of Native American human remains if those are discovered.

[Leo Mena (he/him)] 18:15:09
All mitigation measures that were developed in consultation with tribes.

[Leo Mena (he/him)] 18:15:13
So now, turning our attention to alternatives, the city conducted an analysis of these 4 alternatives and compared their environmental impacts against each other.

[Leo Mena (he/him)] 18:15:22
First, the city considered the no project alternative, which is a CEQA requirement. Under this alternative, none of the improvements that I discussed about the project, that long list would occur.

[Leo Mena (he/him)] 18:15:32

Under alternative two, the shortened breakwater, the breakwater length would be reduced. Under alternative three, the length of the pier would be reduced and under alternative four, the length of the pier and the breakwater would remain the same, but most of the amenities on the land side would be removed.

[Leo Mena (he/him)] 18:15:48
Not that wouldn't be the renovation of the parking lot or improvements on on University Avenue. All that would be retained would be that pier abutment and retaining wall required to complete the pier.

[Leo Mena (he/him)] 18:15:59
So, at a high level, these alternatives would reduce construction level impacts. So, for example, less noise, less air quality due to a shortened breakwater, a shortened pier, less facilities.

[Leo Mena (he/him)] 18:16:11
due to that reduced scale, but they would also have reduced benefits, such as less recreational access and less recreational amenities. So I do encourage everyone to take a look at the alternatives analysis. It has a lot of information in there.

[Jim McGrath] 18:16:24
I think if Jose would have liked him to chair

[Leo Mena (he/him)] 18:16:26
Okay. And then here are the instructions for how to submit a public comment.

[Leo Mena (he/him)] 18:16:33
So, umâ€¦ The comment period is open till April 13th of this year. By April 13th at 5:00 PM, please submit your comments. You can submit them via mail or via email. I'll just read it really quickly via mail, you can send it to Liza McNulty.

[Leo Mena (he/him)] 18:16:49
City of Berkeley Parks, waterfront and Recreation Division 2180 Milvia Street, third floor, Berkeley, California, 94704, or via email, lmcnulty, lmcnul@berkeleyca.gov.

[Leo Mena (he/him)] 18:17:05
And that is the link to our website, which I believe Eliza posted in the chat.

[Leo Mena (he/him)] 18:17:10
So next, I am going to turn it over to Liza.

[Liza McNulty, City of Berkeley] 18:17:14
Thanks, Leo. So what happens next in this process after the public review period closes is that the city and our our team of consultants take a look at every single comment that we receive, whether verbal or written, and prepare a response to that comment that may include revisions to the draft Eir.

[Liza McNulty, City of Berkeley] 18:17:37
Those comments, the final Eir is then published, which is which includes every comment and the response to that comment and any changes to the draft Eir that was made as a result.

[Liza McNulty, City of Berkeley] 18:17:49
That is published, and then the city council will make a decision on whether or not to certify the final Eir to adopt the final Eir. Our expectation is that this will come to Council in either July or September of this year. City Council takes a recess in August, and so.

[Liza McNulty, City of Berkeley] 18:18:10
Um, either prior to or just after that recess.

[Liza McNulty, City of Berkeley] 18:18:14
Next slide, please.

[Liza McNulty, City of Berkeley] 18:18:19
Okay, so we're now going to open the the comment period. What's going to happen is, once I finish getting through this slide, we'll stop sharing the screen. The way to make a comment is to raise your hand. So at the bottom of your screen there is a react button. It looks. It has sort of a heart.

[Liza McNulty, City of Berkeley] 18:18:42
Um, above it, if you click on that, then the second line up says raise hand. So you will raise your hand if you'd like to make a comment. I will begin, um, calling on people with raised hands in the order in which they raise them, and I will ask them to unmute themselves.

[Liza McNulty, City of Berkeley] 18:19:00
At that time, Roger will start the 3-minute timer. As you can see, we have 30-plus folks here, and so we're going to limit people to three minutes per verbal comment.

[Liza McNulty, City of Berkeley] 18:19:14
And I will call, you know, I'll give you a little bit of grace, but then we'll ask you to quickly when we reach that three-minute mark. As a reminder, if you feel as though you didn't have time to make your comment, you may certainly follow it up in writing.

[Liza McNulty, City of Berkeley] 18:19:30
You do not need to, um, submit a comment in writing in order for it to be captured. Making a comment at this meeting means that we will be transcribing and responding to that comment in the final EIR document. Again, we will not be responding to comments in this meeting. Our goal is to simply capture your comment.

[Liza McNulty, City of Berkeley] 18:19:50
And we will not be responding to questions, except insofar as there are clarifying questions related to the process that are relevant.

[Liza McNulty, City of Berkeley] 18:20:01

Umâ€¦ I believe that is it. Let me checking my notes to make sure. Oh, I'm sorry. One last thing. Please make sure at the beginning of your comment, because we are transcribing this to state your name in full, and whether you're speaking.

[Liza McNulty, City of Berkeley] 18:20:19
As an individual or on behalf of an organization.

[Liza McNulty, City of Berkeley] 18:20:24
Andâ€¦ I believe I hit on all my notes. So.

[Liza McNulty, City of Berkeley] 18:20:32
Leo, you can stop sharing. Roger, please let me know when you are ready to go with the timer.

[Roger Miller] 18:20:40
All set. So, when you start, I'll just press the timer.

[Liza McNulty, City of Berkeley] 18:20:43
Great. Thank you. I'm going to start with Paul Kamen. Paul, please feel free to give your comment.

[Paul Kamen] 18:20:50
Hi. Again, I'm Paul Kamen, a naval architect and professional engineer. I've been at the Marina almost every day since 1973 when I came for graduate school.

TR1.1-1

[Paul Kamen] 18:21:01
And I'll add that the Cal Salin Club is the reason I don't have a PhD. I think we're about to grossly underestimate the amount of fill, the amount of dredging, and the amount of money required to build a breakwater that will protect the ferry dock and the open bay.

TR1.1-2

[Paul Kamen] 18:21:18
Uh, this is similar to what happened in the 60s, when theâ€¦ when the marina was first designed, and it was a classic case of garbage in, garbage out. The science was good, but the wind data was inadequate, because then, as now, the wind reporting stations.

[Paul Kamen] 18:21:34
were mostly blocked from some of the intermittent, strong northerly winds we have, especially in the winter.

[Paul Kamen] 18:21:40
Uh, so the marina was built with only the riprap breakwater, the, uh, the second sheepile breakwater was not there. Uh, when the wind was from the north, the wave condition in the harbor was so bad that some of theâ€¦ there was a whole block of marina berths that had to be dismantled because they kept.

TR1.1-3

[Paul Kamen] 18:21:58
They kept getting damaged in the north winds. In the 70s, uh, the city spent a lot of money, or maybe it was the Corps of Engineers, a lot of

money was spent building the additional sheet pile breakwater so the marina could actually be finished.

[Paul Kamen] 18:22:13
With all the births that were planned. We're making exactly the same mistake now. We don't have good data for northerly wind.

TR1.1-3

[Paul Kamen] 18:22:21
The science using the wind data you had was fine, but it's garbage in, garbage out. And the ferry terminal will not survive the strong northerly gales that we get in winter.

[Paul Kamen] 18:22:35
Without seriously upgrading the, uh, the length of the breakwater and.

[Paul Kamen] 18:22:41
and the design of the floats and the gangways. I don't know how you can consider a shorter breakwater to be a viable alternative to look at when the existing design is still too short. It's going to have to curve around the ferry dock further.

TR1.1-4

[Paul Kamen] 18:22:58
More fill, more dredging, because there will be more sedimentation inside that larger breakwater.

[Paul Kamen] 18:23:03
to allow maneuvering room for the ferry to get in and out without getting dangerously close to the restaurant. Uh, the whole breakwater and float facility might have to be located further west to allow more maneuvering room.

TR1.1-5

[Paul Kamen] 18:23:18
Uh So I'd rather go into this knowing what those high costs and high environmental impacts are going to be instead of discovering after the fact, where it's too late to make a better decision. The better decision being the alternative we should have been looking at.

[Paul Kamen] 18:23:35
A long time ago, considering a much more economical and much more practical location inside the harbor. Not where the old ferry dock is. That took 5 or 6 minutes to get in and out, but something closer to the harbor mouth.

[Paul Kamen] 18:23:50
We're behind the Doubletree where the Yang at a time and maneuvering.

TR1.1-6

[Paul Kamen] 18:23:56
be a lot less. Okay, that must be my time signal. Okay.

[Liza McNulty, City of Berkeley] 18:24:00
Oh, that's I I that it must be. I was just just wondering what how you might know. Thank you, Paul.

[Paul Kamen] 18:24:08

Thank you very much. There's a lot more to say. Please look at my written comments.

TR1.1-6

[Liza McNulty, City of Berkeley] 18:24:13
Thank you, Hua. Um, and Roger's gonna try to share his screen in such a way that we can all see the timer, because I'm sure that would be helpful to folks as they're making comments.

[Liza McNulty, City of Berkeley] 18:24:25
Roger, do you want me to pause on calling on the next person while you try to work on that?

[Roger Miller] 18:24:29
No, I've clicked on show the timer to all and it's not working, so I'll have to check the back end and see, but it'll show up on my screen.

[Liza McNulty, City of Berkeley] 18:24:32
Okay. Okay, well, we'll keep working on that. And in the meantime, what I will do for the participants is.

[Liza McNulty, City of Berkeley] 18:24:43
I'll let you know when you have one minute left, just as a heads up. So I'll just say one minute. Feel free to keep going and ignore me there. Okay, I'm going to lower your hand, Paul, and next up we have Gordon Stout. Gordon Stout, go ahead.

[Gordon Stout] 18:25:03
Okay. Thank you. My name is Gordon Stout. I've been around the marina a long, long time as the windsurfer and a boat sailor.

TR1.2-1

[Gordon Stout] 18:25:12
And here's my thing, I can actually read it in two minutes. I'll go a little slow.

[Gordon Stout] 18:25:18
Imagine you are a ferry commuter in Berkeley, not wanting to be late and miss your ferry. Let's say the line at the Seawall parking lot is moving slowly. Rather than risk missing that ferry, you may well park in whatever lot looks quickest, even if it means a $100 parking ticket.

[Gordon Stout] 18:25:35
$100 is expensive, but the city has made it easy for you. For $500 per year, you can get a waterfront permit that exempts you from parking time limits. Such a deal.

TR1.2-2

[Gordon Stout] 18:25:46
But what prevents waterfront permit holders from filling up the South Cove lots with all-day parking?

[Gordon Stout] 18:25:53
Well, nothing. On many days this last winter, the South Cove West lot was mostly full by 9:00 AM.

[Gordon Stout] 18:26:01

with fishing charter boat patrons and riders of the small Genentech ferry. If you were to add 20 waterfront permit holders from the much bigger WIDA Ferry, that parking lot will get very full indeed every day.

[Gordon Stout] 18:26:15
The waterfront permit is not a good deal for South Coast Sailors or adventure playground families. South Cove West will have no parking spaces available for short-term or all-day use. All the spaces will be full.

[Gordon Stout] 18:26:27
The waterfront permit program is a bad idea. Even if we got rid of the waterfront permit program, $100 tickets may not keep the South Cove West lot free from all day parking. How long will it take to fill that 400-space seawall lot? TR1.2-2

[Gordon Stout] 18:26:44
Use .ai suggests a maximum rate of one car every five seconds, which would take 33 minutes to fill the lot.

[Gordon Stout] 18:26:51
Rather than joining the resulting stop-and-go traffic on University Avenue, our ferry rider may well decide to park in the South Cove, pay the $100 ticket, and be on time for the ferry.

[Gordon Stout] 18:27:04
and for work. Mingo, the lot will be full again.

[Liza McNulty, City of Berkeley] 18:27:09
I have 1 min. Thank you.

[Gordon Stout] 18:27:09
Despite an amazing amount of effort, we still do not have a credible picture of parking utilization of the marina. TR1.2-3

[Gordon Stout] 18:27:17
And the measures proposed to protect recreational parking from ferry riders are not at all convincing. People who use the marina are telling you that the WIDA Ferry project will be bad for the marina. It will change this amazing place to something that is a lot less amazing. TR1.2-4

[Gordon Stout] 18:27:34
Please listen, do not proceed with this project. That's done. I sell my remaining.

[Gordon Stout] 18:27:42
10 seconds to somebody else.

[Liza McNulty, City of Berkeley] 18:27:44
Thank you, Gordon.

[Liza McNulty, City of Berkeley] 18:27:49
Next up, I have Kirk Van Moon. Kirk, please unmute yourself.

[Gordon Stout] 18:27:49
Oh.

[Kirk van Moon] 18:27:56
And you hear me?

[Liza McNulty, City of Berkeley] 18:27:59
I can't. Yep.

[Kirk van Moon] 18:28:00
Hi, uh, my name is Kirk Van Moon, uh, I'm an individual.

[Kirk van Moon] 18:28:05
Althoughâ€¦

[Liza McNulty, City of Berkeley] 18:28:06
Oh, sorry, hang on. Sorry about that, Kirk. That's from the prior. That's Gordon's extra time there.

[Kirk van Moon] 18:28:07
That's it.

[Liza McNulty, City of Berkeley] 18:28:12
Hang on. Let's. Okay, we ready, Roger?

[Roger Miller] 18:28:17
Uh, yes.

[Liza McNulty, City of Berkeley] 18:28:19
Okay, my apologies. Go ahead, Kirk.

[Kirk van Moon] 18:28:20
All good, thanks. Um, so, my name is Kirk Van Moon, I'm an individual, um, I'm a water sports user,

TR1.3-1

[Kirk van Moon] 18:28:28
Sailing, kayaking, windsurfing, wing foiling.

[Kirk van Moon] 18:28:31
Uh, I've been in and around the Berkeley Marina for almost 40 years.

[Kirk van Moon] 18:28:37
Um, we use it year-round. Um, it's a situation that I want to make really clear that

TR1.3-2

[Kirk van Moon] 18:28:43
The peers and the docks in the South Sailing Basin

[Kirk van Moon] 18:28:47
Do not allow most sailing vessels, including sailboats with any sort of removable or permanent keel,

[Kirk van Moon] 18:28:55

Hydrofoiling craft of any kind, whether they're windsurfers or wingboards or any of that.

[Kirk van Moon] 18:29:00
The tide gets too low in that area, and there's no access to the water.

[Kirk van Moon] 18:29:06
And so, I think it's really important that the city and the people who are looking at the environmental impact

[Kirk van Moon] 18:29:12
understand the only, and I repeat that, the only access to the water at low tides

[Kirk van Moon] 18:29:18
For all of the water sports enthusiasts, uh, is the location at the south end of, I believe you're calling it Seawall Drive. TR1.3-2

[Kirk van Moon] 18:29:26
Um, right next to the west of His Lordship's restaurant.

[Kirk van Moon] 18:29:30
And I've noted recently, even the swimmers who draw very little water,

[Kirk van Moon] 18:29:35
The swimmers are accessing the water out there at low tides. So, I just want to make it really clear that the docks in the south sailing basin are not useful,

[Kirk van Moon] 18:29:45
And not available for, uh, any watercraft launching other than very limited draw of kayaks.

[Kirk van Moon] 18:29:52

I'm sure the parking issues along Seawall Drive are being addressed.

[Kirk van Moon] 18:30:01
Um, I also just wanted to repeat that, um, I think reducing those parking spaces along that area where people can see the beautiful bay and the Golden Gate,

TR1.3-3

[Kirk van Moon] 18:30:10
Um, San Francisco City Front, um, I think reducing those parking spaces would be a crime.

[Kirk van Moon] 18:30:16
Uh, so I'd like to just say thank you and yield the rest of my time to whoever else might need it.

[Liza McNulty, City of Berkeley] 18:30:23
Thank you. Okay, next hand raised is, and I apologize if I mispronounce this Shreyas Shand or Chand from Cal Sailing Club.

[Shreyas Chand, Cal Sailing Club] 18:30:37
Hey there.

[Liza McNulty, City of Berkeley] 18:30:39
Hey. Go ahead.

[Shreyas Chand, Cal Sailing Club] 18:30:42
All right. Thank you so much for this opportunity to comment on the draft EIR. My name is Shreyas John. I'm the Commodore or the chairman of the Board of Directors for the Cal Sailing Club, and I'm speaking on behalf of the Cal Sailing Club this evening. We have called the Berkeley Waterfront home for over half a century. TR1.4-1

[Shreyas Chand, Cal Sailing Club] 18:30:59
We're excited for the potential of having expanded transportation options to make the Bay more accessible, including our own members, but we share collective interest in ensuring that the EIR provides a thorough analysis of.

[Shreyas Chand, Cal Sailing Club] 18:31:10
uh, impact, particularly to the waterfront's recreational uses. Um, the South Salem Basin in particular is the foundation of our educational and recreation programs, and a number of questions about the effects on that area, we believe are not fully addressed in the draft EIR. TR1.4-2

[Shreyas Chand, Cal Sailing Club] 18:31:25
Uh, we request further extendation in three key areas.

[Shreyas Chand, Cal Sailing Club] 18:31:29
As has been mentioned. The siltation and sediment transport in that area. Again, sort of touched on previously, and wind shadow effects from the peninsula and berm changes along South Seawall Drive down by his lordships. Umâ€¦

[Shreyas Chand, Cal Sailing Club] 18:31:45
First, on the parking point, CSC attracts volunteers and guests from across the wider Bay area who depend on the nearby parking to participate in sailing and windsurfing programs. The draft Eir acknowledges a net reduction in available parking, but does not fully assess the impact on recreational users. TR1.4-3

[Shreyas Chand, Cal Sailing Club] 18:32:02
Um, we request that it address compliance with the 2025 San Francisco Bay Plan, which calls for conveniently located parking at Waterfront recreational facilities, and identify mitigation measures if ferry ridership is projected to increase demand beyond the current capacity.

[Shreyas Chand, Cal Sailing Club] 18:32:17
Second, the South Sailing Basin benefits from wind shelter provided by existing landforms along Seawall Drive, and this protected environment is essential to our ability to teach beginners before they venture out into the more challenging open bay. We request further analysis of potential wind pattern changes in particular, including how some of the new TR1.4-4

landscaping there may affect those conditions over time as that landscaping.

TR1.4-4

[Shreyas Chand, Cal Sailing Club] 18:32:41
Uh, grows. Um, the third around silting and sediment transport, the construction and ongoing ferry operations have the potential to disturb sediment and affect siltation patterns, including in the South Sailing Basin, particularly when north winds, um.

[Shreyas Chand, Cal Sailing Club] 18:32:58
Pick up during the winter. Um, and this can seriously impact the navigability of the already really shallow water, as was mentioned, that's used for beginner instruction and non-motorized watercraft.

TR1.4-5

[Shreyas Chand, Cal Sailing Club] 18:33:09
Um, I also want to take the last few seconds here to recognize, you know, there's a lot of additional technical study and so on, um, that we think is necessary, and we would love to offer Cal Sailing Clubs institutional knowledge of the South Sailing Basin as a resource in the project team.

[Shreyas Chand, Cal Sailing Club] 18:33:25
Um, you know, we're really hope that the project can move forward. If it does in a way that actually benefits the entire Berkeley waterfront community, including the existing recreational stakeholders in that waterfront. Thank you.

TR1.4-6

[Liza McNulty, City of Berkeley] 18:33:41
Thank you.

[Liza McNulty, City of Berkeley] 18:33:49
Okay. I really like that music. next step, Roger, did you want to take an attempt to share your screen so everyone can see the timer or?

[Roger Miller] 18:34:00
It doesn't. It won't when I share, it won't go like that. But I've clicked a button that shares it to all and should appear in everyone's screen.

[Liza McNulty, City of Berkeley] 18:34:02
It's not working. Okay.

[Roger Miller] 18:34:08
But I'm not sure if that's working, but it definitely appears in my screen when I turn on my video. So you can look at myâ€¦ Yeah.

[Liza McNulty, City of Berkeley] 18:34:13
Great. I think if folks look in the chat.

[kelly hammargren] 18:34:16
The timer is showing.

[Liza McNulty, City of Berkeley] 18:34:18
Oh, great. Thank you so much. Thanks for confirming that. Great. Okay. Sadly Tobin.

[Roger Miller] 18:34:20
Great

[Liza McNulty, City of Berkeley] 18:34:27
Please unmute yourself and provide your comments.

[Sally Tobin] 18:34:29
There we go. Okay, and I can see the timer, though, a little bitâ€¦ it's not reset right now.

[Liza McNulty, City of Berkeley] 18:34:33
Great. That's.

[Sally Tobin] 18:34:38
Can you reset it?

[Liza McNulty, City of Berkeley] 18:34:39
Yeah, give us just one moment.

[Sally Tobin] 18:34:41
Thank you.

[Sally Tobin] 18:34:44
Oh, I got 5 minutes. Oh, sorry. Back.

[Liza McNulty, City of Berkeley] 18:34:46
There we go.

[Sally Tobin] 18:34:47
Okay, thanks, thanks very much. I'm Sally Tobin, I'm commenting as an individual.

[Sally Tobin] 18:34:52
Um, and I'm commenting mostly from my experience at the Berkeley Marina.

[Sally Tobin] 18:34:58
When I was with my friend Sharon Fleming, the, um, the Bay Area Sea Kayakers, um,

[Sally Tobin] 18:35:07
education and, um, and, um, and safety.

TR1.5-1

[Sally Tobin] 18:35:12
chairs. And so we used to run a lot of our programs on that little gravel beach, um, by the Shorebird Center,

[Sally Tobin] 18:35:22
And you can really observe a lot, even when you're lying on the gravel,

[Sally Tobin] 18:35:27
Trying to demonstrate the heel hook re-entry technique.

[Sally Tobin] 18:35:31

Um, andâ€¦ and one thing that Iâ€¦ that I really saw at the Berkeley Marina

[Sally Tobin] 18:35:38
was that that is a fabulous park. People were having the kind of joyful faces that I really only have seen otherwise at, like, crossing the Golden Gate Bridge, or, umâ€¦

[Sally Tobin] 18:35:56
tourists along the Embarcadero. It is really a special place, and I would really hate to see that changed in any way.

TR1.5-1

[Sally Tobin] 18:36:04
And, in particular, having grown up in Port Angeles, Washington, which is where the ferry boat leaves for Victoria,

[Sally Tobin] 18:36:13
British Columbia, I would hate to have that absolutely fabulous park

[Sally Tobin] 18:36:19
transformed into a parking lot by ferry boat patrons.

[Sally Tobin] 18:36:25
I mean, that's not to suggest that ferry boat patrons don't deserve parking.

TR1.5-2

[Sally Tobin] 18:36:30
Um, but I haven't heard anything about some kind of parking structure being built around 4th Street and a shuttle bus, so that people would

[Sally Tobin] 18:36:42
continue to be able to bring their families out to the Berkeley Marina. Now, sometimes people say, well,

[Sally Tobin] 18:36:49
you know, they could take public transit, butâ€¦

[Sally Tobin] 18:36:53
Public transit is kind of the equivalent of Marie Antoinette saying, let them eat cake, because public transit is really very expensive

[Sally Tobin] 18:37:03
for children, and you can't bring their little bicycles and their tricycles with any kind of, umâ€¦ or their beach, uh, their beach buckets and their little shovels. I mean, it really is a whole experience if you just sit out at the Berkeley Marina,

TR1.5-3

[Sally Tobin] 18:37:22
And watch families pile out of cars with big smiles on their faces and picnic baskets and everything else. It's absolutely fabulous. And that's just a completely different experience from

[Sally Tobin] 18:37:37
some, um, commuter trying to, um, or driving carelessly in the marina in

[Sally Tobin] 18:37:46
Our friends need, um, search for a parking place.

[Liza McNulty, City of Berkeley] 18:37:51
Thank you, Sally.

[Liza McNulty, City of Berkeley] 18:37:56
Okay, I'm gonna. Can we add the timer? Okay, the timer is ready. David.

[Liza McNulty, City of Berkeley] 18:38:05
I'm asking you to unmute and provide your comments.

[David] 18:38:09
All right, can you hear me? Okay, then we'll keep my comments brief. I am a water sports enthusiast. I use the South Sailing Basin.

[Liza McNulty, City of Berkeley] 18:38:10
We can. Yes.

[David] 18:38:24
When the tide is high for doc start hydrofoiling, and I'm also a wing foiler. TR1.6-1

[David] 18:38:33
Like Kirk said. Oftentimes, when the tide is low, we can't use the South Saline basin, and when the winds are variable.

[David] 18:38:45
A lot of times we need to launch from that area by his lordships because the wind doesn't always make it into the Cal Sailing Club area, Berkeley Marina.

[David] 18:38:56
Uh, but really, what I want to do is echo what Sally was just talking about with regards to the parking and access to that little strip there that seemsâ€¦ It seems like nothing to a lot of people, but it's everything to so many to just be able to go there and connect with what is the largest wilderness area that we have here in the Bay, and that is the Bay. TR1.6-2

[David] 18:39:20
And to take that away from people and put a price tag on it for parking, it just it just feels wrong. So.

[David] 18:39:28
I personally feel saddened by the prospect of losing that area, and I hope, umâ€¦ I think it was Paul that was saying that this this project doesn't go forward. And also with regards to access placing a buffer zone around the pier seems like a huge blow to the wind sports community in that we travel close to the pier regularly. TR1.6-3

[David] 18:39:58

We pass through the pier, you know, when transiting from if, say, we would launch from Lordships and we want to go up to at Point Isabel or Brooks Island, we'll definitely go through the pier. And so to all of a sudden take that away.

[David] 18:40:15
from this, uh, you know, with the implementation of this project seems justâ€¦ profoundly sad, you know?

TR1.6-3

[David] 18:40:24
So, again, please do not go forward with this project. I yield my time to whoever is going to need it, and that's it for me.

TR1.6-4

[Liza McNulty, City of Berkeley] 18:40:34
Thank you, David.

[Liza McNulty, City of Berkeley] 18:40:41
Okay. Um.

[Liza McNulty, City of Berkeley] 18:40:45
Emily Strauss, I have you next up. I've asked you to unmute.

[Emilie Strauss] 18:40:54
Hi, greetings! This is Emily Strauss speaking on behalf of myself.

[Emilie Strauss] 18:41:00
My video is broken, sorry. But, um, I am a long-time Berkeley resident, uh, Berkeley Waterfront birdwatcher, and a wildlife biologist.

TR1.7-1

[Emilie Strauss] 18:41:10
So, because there are a thousand pages to review, uh, these are my preliminary thoughts.

[Emilie Strauss] 18:41:18
So, Ms. McNulty, I have already contacted you by email, but I would respectfully ask orally that perhaps we could extend the comment deadline.

[Emilie Strauss] 18:41:29
beyond April 13, due to the length of the document. And I'm sure you will eventually respond to my

TR1.7-2

[Emilie Strauss] 18:41:36
Uh, email. So, studies thus far by meâ€¦

[Emilie Strauss] 18:41:42
uhâ€¦ makeâ€¦

[Emilie Strauss] 18:41:44
me believe the project scope is too restrictive,

[Emilie Strauss] 18:41:49
Uh, as far as I can tell, the proposed massive parking changes and the impacts of the movement of the ferry

TR1.7-3

[Emilie Strauss] 18:41:57
are not addressed in the draft EIR.

[Emilie Strauss] 18:42:02
Uh, impacts from the ferry movement, uh, include a dead zone to rafts of wintering

[Emilie Strauss] 18:42:07
Waterfowl extending hundreds of feet on either side of the wake.

[Emilie Strauss] 18:42:12
See John Takakawa's PowerPoint. He was a USGS biologist, and that is entitled,

[Emilie Strauss] 18:42:18
Summary effects of ferry traffic on migratory waterbirds on San Francisco Bay.

[Emilie Strauss] 18:42:25
And there used to be a, uh, and probably still is, a large high-tide shorebird roost at the end of the old pier.

[Emilie Strauss] 18:42:33
That could well be disturbed when the ferry goes by it. Back in the day, when birders could walk to the end of the public pier, very fun, we would see hundreds of shorebirds and terns roosting there.

[Emilie Strauss] 18:42:45
Umâ€¦

[Emilie Strauss] 18:42:49
There's two species that could nest there, probably others. One is addressed a little bit in the draft EIR, that is double-crested cormorant. This is to nest on the old pier, and both of these species are California Department Fish and Wildlife watchlist species.

[Emilie Strauss] 18:43:05
Uh, the other is Osprey. Osprey frequently nests on old piers, uh, around San Francisco Bay, and the only mention of osprey in the document is of them foraging.

[Emilie Strauss] 18:43:16
Then, uh, there'sâ€¦

[Emilie Strauss] 18:43:18
Other impacts from ferry movement, such as dredging, which affects aquatic invertebrates,

[Emilie Strauss] 18:43:24
Uh, through sediment disruption, and if I scaled out the length of the, uh, dredging, it looks like it'sâ€¦

[Emilie Strauss] 18:43:33

TR1.7-3

TR1.7-4

TR1.7-5

TR1.7-6

TR1.7-7

TR1.7-8

Oh, almost 2 miles long? That's a huge dredging window, I think. And, uhâ€¦

TR1.7-8

[Emilie Strauss] 18:43:41
Uh, theâ€¦

[Emilie Strauss] 18:43:42
Eelgrass surveys areâ€¦

[Emilie Strauss] 18:43:44
very old, dating to 2014. Those need to be redone.

[Emilie Strauss] 18:43:49
project-specific eelgrass surveys.

TR1.7-9

[Emilie Strauss] 18:43:51
Uh, and, um, the only site visit I could find by biologists was 19 September 2024.

[Emilie Strauss] 18:43:59
Uh, I think most people will recognize Nada.

[Emilie Strauss] 18:44:03
we need, uh, appropriate spring surveys.

TR1.7-10

[Emilie Strauss] 18:44:06
So, uh, and as a Berkeley resident, I'm opposed.

[Emilie Strauss] 18:44:10
to the project, and it gobbles money. Thank you.

TR1.7-11

[Liza McNulty, City of Berkeley] 18:44:14
Thank you, Emily. I did receive your prior written comment as well, just confirming that, and I will respond and let you know once we make a determination about the timeline for the review period.

[Liza McNulty, City of Berkeley] 18:44:29
Okay, next up I have Camille. with Berkeley waterfront community.

[Liza McNulty, City of Berkeley] 18:44:38
Go ahead. Oh, sorry. Yeah.

[Camille - Berkeley Waterfront Community Coalition] 18:44:38
coalition. Yeah, I know, it doesn't fit on the screen. Thank you. Yeah, um, yeah, my name is Camellia Antonori.

[Camille - Berkeley Waterfront Community Coalition] 18:44:46
And, um, I'm speaking this evening from the, uh, for the Berkeley Waterfront Community Coalition,

TR1.8-1

[Camille - Berkeley Waterfront Community Coalition] 18:44:53
We're a group of about 50 people, um, who are interested in supporting the community of waterfront users and visitors.

[Camille - Berkeley Waterfront Community Coalition] 18:45:01
Um, I'll start with, um, the description of the project itself in order to understand its full impact. For CEQA purposes.

[Camille - Berkeley Waterfront Community Coalition] 18:45:12
Um, we've noticed that the planâ€¦ a number of planning documents, um, submitted to the city and to the, um, BCDC

[Camille - Berkeley Waterfront Community Coalition] 18:45:20
have mentioned that Seawall Drive would be taken out.

[Camille - Berkeley Waterfront Community Coalition] 18:45:25
Itâ€¦ the descriptions vary, um, but I've seen all the seawall Drive parking lot spaces going from 90 to 20 spaces.

TR1.8-2

[Camille - Berkeley Waterfront Community Coalition] 18:45:35
Other places, it says going from 90 down to 7, or else completely removed, and possibly just for the ferry parking patrons.

[Camille - Berkeley Waterfront Community Coalition] 18:45:44
Um, this really needs to be, um, reflected in the, um, EIR document.

[Camille - Berkeley Waterfront Community Coalition] 18:45:50
And, um, and part of the project for us to fully assess what these impacts are going to be.

[Camille - Berkeley Waterfront Community Coalition] 18:45:56
I've spoke to a lot of people at the, umâ€¦

[Camille - Berkeley Waterfront Community Coalition] 18:46:00
Along Seawall Drive, both casually and in my role as a researcher doing surveys there, and I'm happy to provide that research to you.

TR1.8-3

[Camille - Berkeley Waterfront Community Coalition] 18:46:09
Um, but many people, um, as somebody mentioned earlier, would be incredibly saddened and upset.

[Camille - Berkeley Waterfront Community Coalition] 18:46:16
Um, my second comment has to do with the way that, um, alternatives are characterized.

[Camille - Berkeley Waterfront Community Coalition] 18:46:24
In the document, we think that they do need to be updated.

[Camille - Berkeley Waterfront Community Coalition] 18:46:28
For example, under the no-project alternative,

TR1.8-4

[Camille - Berkeley Waterfront Community Coalition] 18:46:31
It's not correct to say that none of the improvements would be made without this WIDA Ferry plan.

[Camille - Berkeley Waterfront Community Coalition] 18:46:37
For example, the Bay Trail, um, the Bay Trail that exists in the marina now, over in the South Basin,

[Camille - Berkeley Waterfront Community Coalition] 18:46:44
was a stand-alone project funded by State Coastal Conservancy federal funds and regional funds, and the City of Berkeley as a stand-alone project.

[Camille - Berkeley Waterfront Community Coalition] 18:46:53
Um, it's certainly reasonable to expect that it could be funded as a standalone project again in the future.

TR1.8-4

[Camille - Berkeley Waterfront Community Coalition] 18:46:58
Um, that His Lordship site parking lot, um, we also think the EIR needs to state that the city is in agreement with a company now

[Camille - Berkeley Waterfront Community Coalition] 18:47:06
To renovate that building, and as part of that agreement, uh, fix up that seawall lot.

[Camille - Berkeley Waterfront Community Coalition] 18:47:13
parking lot, and possibly even Seawall Drive.

TR1.8-5

[Camille - Berkeley Waterfront Community Coalition] 18:47:17
In whatever form, and the Bay Trail.

[Camille - Berkeley Waterfront Community Coalition] 18:47:19
This is a current document, current agreement.

[Camille - Berkeley Waterfront Community Coalition] 18:47:23
And, uh, that does need to be part of characterizing that no project alternative.

[Camille - Berkeley Waterfront Community Coalition] 18:47:29
Um, thirdly, the state, the city has received state and federal funding for the pier and harbor,

[Camille - Berkeley Waterfront Community Coalition] 18:47:35
before for recreational use. It's received state money within the last 10 years for infrastructure funding

TR1.8-6

[Camille - Berkeley Waterfront Community Coalition] 18:47:41
at the marina. It's quite conceivable that it can find the funds to do so again,

[Camille - Berkeley Waterfront Community Coalition] 18:47:46
Just like it has to find the funds for, um, for this WIDA Ferry plan.

[Camille - Berkeley Waterfront Community Coalition] 18:47:51
Um, and, um, I realized that my time is up. I'll just say two more things, one sent two sentences.

TR1.8-7

[Camille - Berkeley Waterfront Community Coalition] 18:47:58
What's the probability in the other alternatives? It sounds like theâ€¦ not putting that recreational extensionâ€¦

[Camille - Berkeley Waterfront Community Coalition] 18:48:05
It's almost talked about as another version of this project, and we'd like clarifications. Is that an alternative, or just another version that's possible?

TR1.8-7

[Camille - Berkeley Waterfront Community Coalition] 18:48:13
And lastly, to reiterate, there are new eelgrass inventories and new eelgrass

[Camille - Berkeley Waterfront Community Coalition] 18:48:18
data that needs to be cited and referenced correctly. Thank you.

TR1.8-8

[Liza McNulty, City of Berkeley] 18:48:24
Thank you, Camille. Okay, next up I see Edward.

[Liza McNulty, City of Berkeley] 18:48:34
Edward. Go ahead.

[Edward (he/him/Ã©l)] 18:48:37
Thank you. Good evening. My name is Edward Schlesinger. I'm speaking as an individual, and I am a recreational user of the Berkeley Marina.

TR1.9-1

[Edward (he/him/Ã©l)] 18:48:48
My comment is about the environmental impact on bringing commuter vehicles into the marina.

[Edward (he/him/Ã©l)] 18:48:56
On page 55 the draft Eir States, this project is estimated to generate 1,127 daily vehicle trips.

[Edward (he/him/Ã©l)] 18:49:10
The EIR has a lot of data, but if I understood it correctly, it is saying that the reduction of car trips by ferry commuters.

TR1.9-2

[Edward (he/him/Ã©l)] 18:49:20
offsets the impact of new vehicle trips into the marina.

[Edward (he/him/Ã©l)] 18:49:24
I disagree. Bringing over a thousand cars into the marina is going to affect traffic.

[Edward (he/him/Ã©l)] 18:49:32
It's going to affect air quality and it's going to affect safety.

TR1.9-3

TR1.9-4

[Edward (he/him/Ã©l)] 18:49:36
The marina is a very tranquil place where you rarely see people rushing around.

[Edward (he/him/Ã©l)] 18:49:43
Consider the speed which people drive when they are late for work.

TR1.9-5

[Edward (he/him/Ã©l)] 18:49:48
and now consider the speed they may drive when they are going for a swim or for another recreational activity.

[Edward (he/him/Ã©l)] 18:49:55
We come to the marina to get away from stress.

[Edward (he/him/Ã©l)] 18:49:59
And my request is for specific mitigation plans to address the impact of these new vehicles to keep the marina a safe.

[Edward (he/him/Ã©l)] 18:50:10
enjoyable place for all the community. Thank you.

TR1.9-6

[Liza McNulty, City of Berkeley] 18:50:14
Thank you, Edward.

[Liza McNulty, City of Berkeley] 18:50:21
Okay. Next up, Jeff Lomax.

[Liza McNulty, City of Berkeley] 18:50:29
Jeff, you are.

[Geoff Lomax - KK6IZS] 18:50:31
Thank you. Jeff Lomax, Berkeley resident commenting on behalf of myself as an individual.

[Geoff Lomax - KK6IZS] 18:50:38
I want to preface by saying I am a regular commuter from Jack London to South San Francisco, and I mention that because I recognize how integral ferry service is to our transportation future, and it's an important and vital piece of infrastructure.

TR1.10-1

[Geoff Lomax - KK6IZS] 18:50:54
for the bay. With that said, our existing network is already massively subsidized, and again, that's to be expected if you look at ferry systems across the United States. They do, in fact, receive subsidies, um, and that those subsidies are vital, because the broader benefit of such services are worth the investment.

[Geoff Lomax - KK6IZS] 18:51:18
With that said, the WITA system is the most expensive system that I've been able to identify in the United States, and this proposed project would further stretch those costs.

TR1.10-2

[Geoff Lomax - KK6IZS] 18:51:33
to a point where one needs to consider the impacts on the broader regional transportation ecosystem, including AC Transit and BART.

[Geoff Lomax - KK6IZS] 18:51:44
I was only able to identify two sentences in the EIR that discuss this, and it suggested that theyâ€¦ I will read them. It is anticipated that most of the trips are not new trips and were originally headed to South San Francisco by driving across the Bay Bridge. Some of these trips might have shifted from consumers previously taking BART.

TR1.10-3

[Geoff Lomax - KK6IZS] 18:52:05

and trans-based services, and it doesn't even reference existing WITA services out of Jack London. This is a mistake. It needs the Eir needs to understand and better forecast what the impacts will be on existing transit infrastructure.

TR1.10-3

[Geoff Lomax - KK6IZS] 18:52:21
Because all those systems are highly stressed, they're in debt, and this simply creates another capital risk to our regional transit infrastructure system, which is critical for environmental and quality of life issues. Further, the report seems to almost go out of the way to not forecast revenue.

[Geoff Lomax - KK6IZS] 18:52:41
from the Berkeley Ferry. The only reference I could find was a sub-reference in a footnote to a UITA business plan that suggested a 52% cost recovery at the fare box, which is impossible, because the only service that even comes close is Vallejo at 44%.

TR1.10-4

[Geoff Lomax - KK6IZS] 18:53:00
And the system overall only recovers. 24% of its operating expenses at the fare box. So, again, you need to understand, analyze, and present the economics of this proposed service in the context of the broader system, which is critical to our environment and our health.

[Geoff Lomax - KK6IZS] 18:53:20
and I was not able to find any such data in the report, and I will follow up with written comments documenting these deficiencies. Thank you.

[Liza McNulty, City of Berkeley] 18:53:31
Thank you, Jeff.

[Liza McNulty, City of Berkeley] 18:53:40
Okay, next Bill. I apologize. I don't know how to.

[Liza McNulty, City of Berkeley] 18:53:48
That's the last name, but I've asked you to unmute Bill.

[Bill feucht] 18:54:00
Most likely to be unmute. Can you hear me?

[Liza McNulty, City of Berkeley] 18:54:02
Yes, we can. Thank you.

[Bill feucht] 18:54:03
What I'd like to talk about is how selfish we are here in Berkeley by only talking about the effects that appear on the city of Berkeley and the Berkeley Marina. But in fact, if I understand things correctly, the ferry terminal will be built, and a ferry will be.

TR1.11-1

[Bill feucht] 18:54:18
brought to the ferry terminal, but it's not going to sit there. It's going to go out into the bay, over and over again, daily, every day. And thoseâ€¦ those environmental effects will affect the entire bay, not just the Berkeley Marina. And we haven't talked about any of that.

[Bill feucht] 18:54:34
And the real question here for me is, how many of these ferries are going to happen? I mean, maybe if the Berkeley ferry was, we considered aâ€¦ We would we give up the Berkeley Marina so that we could have this ferry, but how many ferries does we plan to make? I heard someone say up to 26 ferry lines in the city in the bay. And at that point, people are going to say.

TR1.11-2

[Bill feucht] 18:54:59
Berkeley caused this cascade effect of ferries being built in the bay, and having these outrageous effects. And I would like to point out that the Save the Bay Foundation back in the 1960s was formed.

[Bill feucht] 18:55:14
to stop landfill. The unscrupulous people were doing to monetize the bay for their own reasons, and we don't allow that kind of thing to happen anymore. So the bay now faces a new threat, which I would call ferry fill. And that ferry fill.

TR1.11-3

[Bill feucht] 18:55:32
could be very destructive, even more destructive than landfill, because those ferries are very disruptive as they move through the bay, and our habitat, rather than being a natural beauty, will become a freeway.

[Bill feucht] 18:55:43
And Berkeley can be the leader in that if they want to be, or they could put their foot down and say, no, it's not going to happen, and we're going to stop it right here.

[Bill feucht] 18:55:51
So that would be my suggestion, because I, as the user of the marina, I'm a swimmer mainly, but I use it for all sorts of things, and I've lived in the city of Berkeley for 35 years.

TR1.11-4

[Bill feucht] 18:56:00
Don't want to see that to happen. So I'd like to raise the specter of the Save the Bay. I believe it was a group of women who chose to put their foot down and say, wait a second, we have toâ€¦ we have this wonderful thing in ourâ€¦ that is part of our community that we sometimes lose fact that it's because it's always there.

[Bill feucht] 18:56:16
And we can save it or we can destroy it with landfill. And I would say that we can right now, make the same decision about ferries. Are we going to save the bay by restricting ferry access and ferries in the bay? Or are we going to just let them run rampant? I would like to know what Rita's plans are.

TR1.11-5

[Bill feucht] 18:56:32
in the long term for ferries in the bay, because I think that affects how Berkeley looks at their particular.

[Bill feucht] 18:56:38

Very, very pure. That's it.

TR1.11-5

[Liza McNulty, City of Berkeley] 18:56:42
Thank you, Bill. And Bill, just to confirm, you're speaking on behalf of yourself as an individual, correct?

TR1.11-6

[Bill feucht] 18:56:48
Yeah, myself as an individual, yes.

[Liza McNulty, City of Berkeley] 18:56:49
Thank you so much. Okay.

[Liza McNulty, City of Berkeley] 18:56:57
Next up, Julie Allen. Julie, please go ahead and unmute yourself and provide your comments.

[Julie Allen] 18:57:18
Hello! Thank you for hosting this. Um, excuse me, I was eating my sober.

[Julie Allen] 18:57:20
I'm Julie Allen, I live in Berkeley. I've lived here for more than 20 years.

[Julie Allen] 18:57:25
I've been swimming in the bay for 6 years now.

TR1.12-1

[Julie Allen] 18:57:27
And I'm part of, um, I'm speaking on behalf of myself only, but I will note that I'm part of a very large and growing open water swim group called the East Bay Open Water Swimmers.

[Julie Allen] 18:57:39
And, um, we swim all over the Bay, we swim at the Berkeley Marina.

[Julie Allen] 18:57:39
And as others have noted,

[Julie Allen] 18:57:41
The Lordship's entry is the only place where we can get in,

[Julie Allen] 18:57:49
About half the time. Um, anytime the water is under 3 feet, it's muck and, you know,

TR1.12-2

[Julie Allen] 18:57:54
it's really unusable to us. So, the saline basin is so silted in,

[Julie Allen] 18:58:00
that right now, lordships is our launch spot.

[Julie Allen] 18:58:01
And I was surprised to see that even though theâ€¦

[Julie Allen] 18:58:03

marina master plan, andâ€¦

[Julie Allen] 18:58:06
2003, I think.

[Julie Allen] 18:58:09
had noted that LaunchSot, even then, in use, and now 23 years later, still in use,

[Julie Allen] 18:58:17
Um, I was surprised that the ferry EIR, uh, doesn't make any mention of that, treats it like it is not really, like, an actual spot.

[Julie Allen] 18:58:27
that people use, but it is very much a spot that people use. People use it all day long.

TR1.12-2

[Julie Allen] 18:58:30
Um, so I think that there needs to be a little bit more recognition of the on-the-ground

[Julie Allen] 18:58:38
recreational uses, um, recreational use seems to be one of the main goals of this project, so it should not really be in opposition to theâ€¦

[Julie Allen] 18:58:46
current recreational use. Um, and recreational users have been

TR1.12-3

[Julie Allen] 18:58:51
not really drawn into thisâ€¦

[Julie Allen] 18:58:54
conversation until recently, and only those of us who have

[Julie Allen] 18:58:58
bought for that, and knew enough

[Julie Allen] 18:59:00
to say something. Most people who use the marina seem to not actually know, and it makes me wonder what kind of outreach the city did that

[Julie Allen] 18:59:08
people that go there all the time are unaware that they're about to lose access to this really terrific spot.

[Julie Allen] 18:59:15
Um, that is all. Thank you.

TR1.12-4

[Liza McNulty, City of Berkeley] 18:59:18
Thank you, Julie.

[Liza McNulty, City of Berkeley] 18:59:26
Okay. Next up, Erin.

[Liza McNulty, City of Berkeley] 18:59:32
going to invite you to unmute. Yes, we can.

[Erin Diehm] 18:59:36
Okay, can you hear me?

[Erin Diehm] 18:59:39
Okay, um, this is Aaron D. Am I speaking as an individual, and I want to begin by echoing what a prior speaker said to ask for an extension.

[Erin Diehm] 18:59:49
beyond the April 13th.

[Erin Diehm] 18:59:51
The, um, the currentâ€¦

TR1.13-1

[Erin Diehm] 18:59:53
EIR, DEIR is, I think, 661 pages, plus one or two appendices.

[Erin Diehm] 18:59:58
But maybe more importantly is a 2003 program, EIR, which is several thousand

[Erin Diehm] 19:00:05
pages long, and for those of us who are really concerned about the environment, we need time to look at those documents.

[Erin Diehm] 19:00:10
I also want to say that a program EIR, that was done 23 years ago to evaluate the cumulative impacts of the ferry, in my opinion, is deficient and needs to be revisited.

TR1.13-2

[Erin Diehm] 19:00:22
I do hope that the preparers of this document think about that we are now in the sixth

[Erin Diehm] 19:00:28
mass extinction, and the recent state of the birds report for the San Francisco Bay Area has found that water birds are in decline, especially ducks,

TR1.13-3

[Erin Diehm] 19:00:37
And I hope that that is kept in mind. I asked the scope is too narrow, both spatially and temporarily.

[Erin Diehm] 19:00:44
We know that there are birds that live out on the pier, and we know that there are birds that live in other parts of the waterfront area that would come over and forage near shore Bird Nature Center, for example.

TR1.13-4

[Erin Diehm] 19:00:56
They were not considered as spatially the only area considered is along University Avenue, and then around the terminal area.

[Erin Diehm] 19:01:04
So we need to look at adjacent areas.

TR1.13-4

[Erin Diehm] 19:01:08
Also, temporarily, I heard on this call that only one day of monitoring was considered.

[Erin Diehm] 19:01:13
We need, uh, uh, many more visits, especially

TR1.13-5

[Erin Diehm] 19:01:16
Throughout the migration period, as we are on the Pacific Flyway, and we know that birds will be here sometimes only certain months of the year.

[Erin Diehm] 19:01:23
Maybe most importantly, I was really just shocked, frankly, that the environmental impacts were only

TR1.13-6

[Erin Diehm] 19:01:29
during construction. I mean, that's just insane.

[Erin Diehm] 19:01:32
First thing, energy efficiency. We have never been able to actually get any numbers on how energy efficient our ferries compare to other forms of transit.

TR1.13-7

[Erin Diehm] 19:01:42
they are not efficient, because water is thick and air is thin.

[Erin Diehm] 19:01:46
noise, we need to know noise. It's true that the ferries are actually all electric ferries are quiet when they're going at slow speed, but at high speed, they are almost as loud as diesel ferries, and that impacts marine life.

TR1.13-8

[Erin Diehm] 19:01:59
We know that the wake that comes off the ferries will interfere with diving ducts, and none of thatâ€¦ I didn't see any of that so far in the DEIR that I read.

TR1.13-9

[Erin Diehm] 19:02:08
We need to understand about ongoing impacts, like turbidity, whenever the ferry comes in and actually docks, it's going to completely stir up all of the soil on the bottom of the bay, make it cloudy, and the organisms that live there will not be able to survive.

TR1.13-10

[Erin Diehm] 19:02:22
And of course, what about dredging? 440,000 cubic yards, I think, is the latest. That's a huge amount. Think of all the billions of organisms that are going to actually be shoveled up and

TR1.13-11

[Erin Diehm] 19:02:34

God knows where they're going to be sent. I don't know. And I didn't see that in there either. And that's ongoing, because dredging is not going to happen just this one time. It's going to have to happen overâ€¦

[Erin Diehm] 19:02:44
at periodic times.

[Erin Diehm] 19:02:45
Um, soâ€¦

TR1.13-11

[Erin Diehm] 19:02:49
When I look at, actually, the cumulative impacts of this system,

[Erin Diehm] 19:02:53
Okay? It isâ€¦ what I see, the goal isâ€¦

[Erin Diehm] 19:02:56
Okay, I heard the music, thank you, is 26 total terminals, and I really appreciate what the prior speaker said, is that, don't let Berkeley be the cascade to build this new highway on the water. Put the funds into our existing transit agencies before they fail. Thank you.

TR1.13-12

[Liza McNulty, City of Berkeley] 19:03:13
Thank you, Erin. Okay.

[Liza McNulty, City of Berkeley] 19:03:21
Okay, Jim McGrath, you are up.

[Jim McGrath] 19:03:25
Uh, thank you. Umâ€¦

[Jim McGrath] 19:03:27
I am near the end of a 22-page draft comment letter,

[Jim McGrath] 19:03:32
I'm obviously not going to talk about that now.

[Jim McGrath] 19:03:35
The CIR is grossly inadequate. It makes almost no quantitative analysis of any of the issues.

TR1.14-1

[Jim McGrath] 19:03:42
It ignores scoping comments from responsible agencies like BCDC,

[Jim McGrath] 19:03:47
And for that reason, it will not suffice for permitting purposes for BCDC, the Corps of Engineers,

[Jim McGrath] 19:03:52
or the Regional Water Quality Control Board. It ignores the comments that they said were needed.

TR1.14-2

[Jim McGrath] 19:03:58

Um, I'm going to focus on just a couple of things. First of all, there's no analysis of the biological, habitat,

[Jim McGrath] 19:04:05
And fishing impacts of dredging.

TR1.14-3

[Jim McGrath] 19:04:07
It is 400,000 cubic yards of dredging. No alternatives have been evaluated.

TR1.14-4

[Jim McGrath] 19:04:12
And the impact mitigation program is, well, we'll prepare a plan.

[Jim McGrath] 19:04:18
And that is not legally sufficient.

TR1.14-5

[Jim McGrath] 19:04:20
On parking. I was at the marina today, and on Seawall Drive, there were 20 people parked.

[Jim McGrath] 19:04:28
There was nobody swimming.

[Jim McGrath] 19:04:30
There's no wind, so nobody wasâ€¦ was using water sports. 20 people parked.

[Jim McGrath] 19:04:35
And, uh, 4 people fishing.

TR1.14-5

[Jim McGrath] 19:04:38
Um, I asked them if they knew that the city was going to restrict all of that parking.

[Jim McGrath] 19:04:43
The 320 in the seawall lot and the 80â€¦

[Jim McGrath] 19:04:47
along the Seawall Drive to 7.

[Jim McGrath] 19:04:50
They thought that was nuts. I believe it's nuts. It's a direct usurpation

[Jim McGrath] 19:04:56
of recreational parking.

TR1.14-6

[Jim McGrath] 19:04:58
Then I want to hit the last issue that I'm going to hit here, which is the cost of this. You won't find this in the document.

[Jim McGrath] 19:05:04
You won't find it on the website. You have to submit a public records act request to get the city to cough up virtually anything.

TR1.14-7

TR1.14-7

[Jim McGrath] 19:05:11
The cost is nearly $170 million.

[Jim McGrath] 19:05:15
As Paul said, uh,

[Jim McGrath] 19:05:17
The only place that you can put the marina in that doesn't raise these biological impacts, and these recreational impacts,

[Jim McGrath] 19:05:24
is within the marina.

[Jim McGrath] 19:05:27
You would save in the process, $100 million, or more.

[Jim McGrath] 19:05:30
That would certainly be enough to fix all

[Jim McGrath] 19:05:32
all the remaining infrastructure problems at the marina.

[Jim McGrath] 19:05:35
Which, in my mind, are both more pressing and higher priority. $170 million. The public has been told about the $170 million.

TR1.14-8

[Jim McGrath] 19:05:43
And if you look on the website for, uhâ€¦

[Jim McGrath] 19:05:46
You know, the city doesn't put this in the document either.

[Jim McGrath] 19:05:50
The estimated cost for subsidy for operationalists, and this doesn't consider any of the capital cost, and it doesn't consider

[Jim McGrath] 19:05:57
Parking management, or landscape management,

[Jim McGrath] 19:06:01
9 to 12 million dollars. So you've got

[Jim McGrath] 19:06:03
Something that you've declared as feasible,

[Jim McGrath] 19:06:06
But it costs $170 million that you don't have,

[Jim McGrath] 19:06:10
And it cost $9 to $12 billion a year that you don't know where it's coming from.

[Jim McGrath] 19:06:14
I will submit my 22-page letter.

TR1.14-9

[Jim McGrath] 19:06:17
And I expect that you will recirculate this document, and hopefully you'll do a better job the next time.

TR1.14

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

I took this picture today at 2:30. A sunny winter day with no swimmers or board sports use. There are twenty cars parked--all for recreational use. Reducing public parking from 400 or so spaces to 7 spaces will obviously usurp existing recreational use.

Jim McGrath

TR1.14-10

[Liza McNulty, City of Berkeley] 19:06:25
Thank you, Jim. Okay, next up we have Zora Whitfield.

[Zora Whitfield] 19:06:37
Hello. Hi. Nice to speak with you today. My name is Zora. I'm a liveaboard resident and regular user of the marina. First, I want to say that while the ferry plan identifies potential benefits for regional connectivity, environmental gains, reduced vehicle use and environmental response for emergency response.

[Liza McNulty, City of Berkeley] 19:06:37
Zora. Hi.

TR1.15-1

[Zora Whitfield] 19:06:57
It does not adequately account for existing conditions at the marina, or whether the ferry is necessary to achieve these goals without negatively impacting current residents and users, recreational use, live aboard residency and operational activities.

TR1.15-2

[Zora Whitfield] 19:07:13
could coexist with the ferry plan, but it seems like some parts of the plan have them in opposition and I just think that there could be other ways for the city to meet these goals of environmental just improving the environment and reduce vehicle use. However, there's not another way.

[Zora Whitfield] 19:07:31
to replace these current uses at the marina, including housing, recreation, and fishing. So if I had to choose one, if they were in opposition, I would choose these current uses.

TR1.15-3

[Zora Whitfield] 19:07:42
Second, I want to say that while the DER mentions liveaboard residents as part of the setting, it doesn't adequately represent other communities or fully adequate the lived experience or the impact that this will have on live aboard residents.

TR1.15-4

[Zora Whitfield] 19:07:58
And I believe that this is an issue. When I was looking at some of the mitigation impacts for things like air pollution. I did see that there were solutions put in place to mitigate the impacts. However.

[Zora Whitfield] 19:08:13
As someone who lives there, it does kind of feel like I would like a say in how you would mitigate. Additionally, I would like to have a say, like, as the project's going on, not just through the construction, but also through the implementation on like.

TR1.15-5

[Zora Whitfield] 19:08:29

like, let's say there was an issue with how you decided to mitigate that was impacting the community. How are you going to be held accountable while this is going on? I would like that to be added to the plan. Umâ€¦ Additionally, I wanted to point out that this is really important that you do this if this ends up going through, because during the feasibility and design stages, when looking at your engagement, community engagement was you didn't really engage people in the marina that much.

[Zora Whitfield] 19:08:54
like specific specifically like communities who are directly impacted. In fact, 7 of the engagements. I think there are about 12 engagements with people at the Marina specifically, and 7 of those were parking surveys, which means that that topic was limited to parking. So the majority of engagements were limited to parking as opposed to what would implementation look like? What are alternatives?

TR1.15-6

[Zora Whitfield] 19:09:16
Next, I know I'm running out of time. I want to say that, um.

[Zora Whitfield] 19:09:21
Whileâ€¦ well, I guess I will just say what I want to urge the city to do. I urge the city to strengthen engagement and outreach, just for any project, not just this one, with all communities who are impacted by projects. I also urge for the review of this plan to be extended, because I know a lot of people don't know about it.

TR1.15-7

[Zora Whitfield] 19:09:36
And a lot of people who are directly impacted don't know about it. And also, it's a really confusing document.

[Zora Whitfield] 19:09:42
And I also want more accountability for mitigation measures and to explore alternatives for mitigations. Thank you

TR1.15-8

[Liza McNulty, City of Berkeley] 19:09:49
Thank you, Zora. Okay, next up. I'm sure this timer is reset. We have Kelly Hammergren.

[kelly hammargren] 19:10:06
Okay, I just have a few comments. I appreciate all the prior comments.

[kelly hammargren] 19:10:14
And the, umâ€¦ just to reiterate, the EIR, the draft EIR, is really too narrow in scope. It's not looking at.

TR1.16-1

[kelly hammargren] 19:10:25
the long-term impacts. It's not looking at the breakwater impacts to the rest of the bay. It's not really covering enough of the waterfront. And we're not looking at the impact on on nature and ecosystems.

[kelly hammargren] 19:10:42
Um, there's also the assumption that the ferry is going to take passengers drivers off the bay.

TR1.16-2

[kelly hammargren] 19:10:52
off the Bay Bridge. But as far as I've gotten, there's no analysis of the impact on raiding passengers from BART or from other ferries. So I think that justifying this by saying you're going to take.

[kelly hammargren] 19:11:09
people off the bridge when it's more likely that some passengers will be coming from taking the ferry instead of Bart. So that really isn't.

TR1.16-2

[kelly hammargren] 19:11:24
a sound argument. Um, in terms ofâ€¦ the environment.

[kelly hammargren] 19:11:30
So that that's really all I have to say. Thank you.

[Liza McNulty, City of Berkeley] 19:11:35
Thank you, Kelly.

[Liza McNulty, City of Berkeley] 19:11:43
Okay, next up we have Noah Sadarski.

[Noah Sudarsky] 19:11:50
Mute. All right, am I unmuted? I believe so.

[Liza McNulty, City of Berkeley] 19:11:53
Yes, I can hear you.

[Noah Sudarsky] 19:11:54
Hi, um, my name is Noah Szdarski. I have been living in Berkeley now for 15 years.

[Noah Sudarsky] 19:12:00
I'm speaking on my own behalf and also on behalf of the Center for Environmental Structure, of which I am a project coordinator. The center is not as active as it once was, but it is a pioneer in user-based.

[Noah Sudarsky] 19:12:17
design and building the whole point of CS was to reclaim the built environment and allow lay people to take control of expensive building processes that were determined by developers and people with vested interests in other things other than quality of life.

TR1.17-1

[Noah Sudarsky] 19:12:34
So, CS built Julian Street Inn, which is a homeless shelter in San Jose. They've built multi-service centers in the Bronx and other places in the world.

[Noah Sudarsky] 19:12:45
Uh, as far as Japan. So the point of this premise is to say that.

[Noah Sudarsky] 19:12:52
We've all heard people talk fromâ€¦ Recreators, uh, to people who are obviously way more specialized and way more competent than I in analyzing these complicated.

TR1.17-2

[Noah Sudarsky] 19:13:08
Documents and DER and all sorts of stuff. I haven't heard anybody in favor of this.

[Noah Sudarsky] 19:13:16
But it will probably still happen. Why? Because of the dogma of top-down management, which is that the city thinks that by hiring a few experts and having people who have financial incentive to build a project, it's okay to go ahead and steamroll everybody and do whatever the heck it wants, and that's what's going to happen here.

[Noah Sudarsky] 19:13:36
Despite this overwhelming and obvious. and quality opposition.

[Noah Sudarsky] 19:13:44
And that is a sad, a really sad and ironic turn for a city like Berkeley.

TR1.17-2

[Noah Sudarsky] 19:13:49
So I think that the mayor and the entire city council and everybody involved in this project take a long, hard look at themselves to see what it is that they're actually doing with this and with other projects like it. But this is the most egregious example that I can think of.

[Noah Sudarsky] 19:14:04
Nobody wants this. Thank you.

[Liza McNulty, City of Berkeley] 19:14:08
Thank you, Noah.

[Liza McNulty, City of Berkeley] 19:14:16
Okay, next up. We have Tony.

[Liza McNulty, City of Berkeley] 19:14:23
Start home.

[Toni Mester] 19:14:23
Good evening. And I'd like to wish my good friend Jim McGrath happy St. Patrick's Day tomorrow and your family.

[Toni Mester] 19:14:35
And I would have given you my three minutes had I gotten my hand up before you.

[Jim McGrath] 19:14:41
you play some tunes for you, Tony

[Toni Mester] 19:14:42
Um, uhâ€¦ So, um, I think we need a little bit more time. It's over 600 pages. I have macular degeneration, and I can't stare at a screen for that long. Um, there's a lot to digest in the DEIR. I did go through the impacts and looked at some things I was interested in.

TR1.18-1

[Toni Mester] 19:15:02

So here are my comments. I think that the impacts are overly optimistic. I think the impacts will be much greater than the consultants have admitted to. I think they've overlooked several aspects that other people have commented on, so I won't repeat. TR1.18-2

[Toni Mester] 19:15:22
Um, but I would like to add some new observations.

[Toni Mester] 19:15:29
In regards to the traffic impacts, there's sections on the.

[Toni Mester] 19:15:38
a greenhouse gas emissions and so forth. But there really isn't a traffic analysis. And I think there needs to be another. In other words, where are the ferry riders coming from? What are the patterns of travel? TR1.18-3

[Toni Mester] 19:15:54
are the expectations that it will serve the city of Berkeley or.

[Toni Mester] 19:16:01
What is the, umâ€¦ where are the riders coming from? And that's important to understand some of the comments that Jeff Lomax made in regards to the impacts on.

[Toni Mester] 19:16:16
Um, other, uh, transportation modes and services that we rely on.

[Toni Mester] 19:16:24
So, I don't thinkâ€¦ I think it needs a traffic, a real traffic analysis.

[Toni Mester] 19:16:30
Um, I think that it passes over the city's planned. TR1.18-4

[Toni Mester] 19:16:36
drainage plan and the impacts on the creeks north and south.

[Toni Mester] 19:16:44
The economic impacts areâ€¦ there's no, umâ€¦ there's no business model here. It should be summarized, like, how much is this going to cost? Who is going to pay for it, and how long is this construction going to go on? TR1.18-5

[Toni Mester] 19:17:00
Finally, on my 27 seconds left, I'd like to say completely ignores the San Pablo Avenue specific plan, and all of the construction that's going on in West Berkeley, and these people are going to probably want recreational facilities more than they're going to want a water ride to the city. TR1.18-6

[Toni Mester] 19:17:20
So that's it. Get with the plans that aren't included and make sure that you are inclusive. Thank you.

[Liza McNulty, City of Berkeley] 19:17:32
Thank you, Tony. Okay, next up, I see we have Larry version 3.1.0.

[Larry v3.1.0] 19:17:44
Yeah, trying to change that name. My name is Larry Molstein.

[Larry v3.1.0] 19:17:50
I'm speaking for myself as an individual. I have been.

[Larry v3.1.0] 19:17:55
blown away. This is my first time attending one of these public comment sessions, and I've been blown away by just the quality and care of everyone who's come to participate, as well as you all who are holding the space for this meeting, and I share the concern. TR1.19-1

[Larry v3.1.0] 19:18:13
That was just voiced, I believe, by Noah about the structure of this decision process, where.

[Larry v3.1.0] 19:18:21
I mean, Iâ€¦ I tend to agree with basically everything that everyone said, and in a way that is a lot less informed. But.

[Larry v3.1.0] 19:18:30
How Iâ€¦ my questions are reallyâ€¦ How do our comments make their way to city council? How can they be held accountable to actually responding and integrating what we're saying? So they're making a decision that is really.

[Larry v3.1.0] 19:18:47
you know, for the people, um, by the people, in a way that is not just.

[Larry v3.1.0] 19:18:52
You know, Iâ€¦ I don't have an understanding fully of what you'reâ€¦ mechanism for transmitting these comments is, but I'm concerned that they might be. TR1.19-2

[Larry v3.1.0] 19:19:04
see buried in some way amongst the. quite staggering amount of literature, andâ€¦ You know, other information that I'm sure the city council members need to digest in order to make these decisions.

[Larry v3.1.0] 19:19:16
And so my questions, umâ€¦ Simply, what is the process by which you are making this decision? How are you intending to?

[Larry v3.1.0] 19:19:28
Um, really represent all of us who are impacted by the decision.

[Larry v3.1.0] 19:19:35
And if you do not feel that this process isâ€¦ sufficient for a decision that has such a substantial impact, not only on. TR1.19-3

[Larry v3.1.0] 19:19:49
our city today, but our entire trajectory of our city, entire trajectory of our San Francisco Bay area. Shouldn't we?

[Larry v3.1.0] 19:19:59
not. Isn't it a lot better to not do something and to direct our resources towards the.

[Larry v3.1.0] 19:20:05
you know, myriad number of other pressing issues that we need them for. So, you know, I share also this question of.

[Larry v3.1.0] 19:20:16
We seem to have a lot that we need to do. We seem to have a limit of resources. I don't really see who's asking for.

[Larry v3.1.0] 19:20:25
this thing to happen. Perhaps they haven't shown up to the meeting, but if they really cared, maybe they would.

TR1.19-3

[Larry v3.1.0] 19:20:32
Um, andâ€¦ Yeah, I meanâ€¦ I'm just echo what everybody else is saying, likeâ€¦ BART needs resources. Our.

[Larry v3.1.0] 19:20:46
Our other public transportation methods need resources are environment needs resources. Our city needs resources. Let's direct towards caring for what we have instead of creating the new vision that we just might.

TR1.19-4

[Larry v3.1.0] 19:20:59
you know, be imagining.

[Liza McNulty, City of Berkeley] 19:21:02
Thank you, Larry. There are no other hands raised. And so it's a good opportunity for me to take the time to answer Larry's question about.

[Camille] 19:21:09
I thinkâ€¦ I'm sorry, Liza. A woman named Carol looks like she's, uh, looking like she's raising her hand.

[Camille] 19:21:19
But I don't think she used the tool, but in case you want to recognize her.

[Liza McNulty, City of Berkeley] 19:21:20
Umâ€¦

[Liza McNulty, City of Berkeley] 19:21:23
Thank you. I don't see that on my end. Is there a Carol on the line who would like to make comments who hasn't had the opportunity to?

[Liza McNulty, City of Berkeley] 19:21:32
If. Oh, okay, we can hear you, Carol. Go ahead. You've got 3 min.

[carolvalk] 19:21:33
I didn't I didn't find a place to click for chatting.

[kelly hammargren] 19:21:33
It'sâ€¦

[carolvalk] 19:21:40
Okay, I really, I really think that something like this needs to be put on a bond issue so that the people in Berkeley know what they're getting into.

TR1.20-1

[Liza McNulty, City of Berkeley] 19:21:42
Thank you, Camille.

[carolvalk] 19:21:52
I know it's difficult, but I think if you've got a good idea, you should be able to convince people. For those of us who are passionately against this.

[carolvalk] 19:22:05
I'm speaking for myself as a windsurfer who's been using the Berkeley Marina since the mid 80s.

TR1.20-2

[carolvalk] 19:22:13
And we're being asked to give up a world-class view.

[carolvalk] 19:22:17
We're being asked to become indebted to this fairy business. We're being asked to have our marina turned into a parking lot. We're also, as people who use the water, being asked to somehow carry our equipment for I don't know how far.

[carolvalk] 19:22:34
you know, because we can't park where we normally park on Seawall Drive, which has been essential.

TR1.20-3

[carolvalk] 19:22:40
And you're taking over as lordships, that's one thing, but to take away Seawall Drive is just a disaster. I can't carry my stuff save from, you know, scopes or farther down or in other places. I can't carry my gear that far.

[carolvalk] 19:22:58
I mean, this stuff is heavy. The other thing I'd like to say is that if you really want to know what this is going to look like, go to go to Larkspur.

[carolvalk] 19:23:07
You know, nobodyâ€¦ nobody goes there for picnics. Nobody swims there. Nobody sails there. Even the ducks have left. It's a big, dirty mud puddle. And so the bay is shallow, sandy, muddy.

TR1.20-4

[carolvalk] 19:23:23
And when those theories come in and go out, they churn like crazy. It's going to need dredging all the time, which is nasty. It's going to fill the little cove where cal sailing is even worse than it is, and it's going to muck up the boats.

[carolvalk] 19:23:40
I mean, I don't think, you know, Berkeley talks about ecology, but I'm shocked.

[carolvalk] 19:23:46
And also, one of the beauties of that place is that million dollar view that hasn't been spoiled by architecture.

TR1.20-5

[carolvalk] 19:23:55
I mean, why would you want to mess with that?

[carolvalk] 19:23:59
So I'm I vote very strongly against this, and I really do think it should be presented to the people in Berkeley to vote on. Because you're indebted them, and you're taking away their marina.

TR1.20-6

[carolvalk] 19:24:15
Done. Thank you.

[Liza McNulty, City of Berkeley] 19:24:16
Thank you, Carol. Okay. I'm going to speak for a few moments during which time, if anyone who has not commented on yet is would like to raise their hand. The way to do that is on the very.

[Liza McNulty, City of Berkeley] 19:24:34
There's a react button that has a heart on it. If you click on that button, you should see a raise hand. It's like the second button up just above be right back. So please feel free to do that.

[Liza McNulty, City of Berkeley] 19:24:50
While we give it a few moments to see if anyone else would like to make a comment, I'll respond to Larry's questions as far as sort of what happens next and what happens to these comments that we've received. This meeting is being transcribed, and so every comment that we've received will appear word for word.

[Liza McNulty, City of Berkeley] 19:25:08
In the final EIR document and a response to each comment will be provided in that final document. That applies both to the verbal comments that we've received tonight, and to the written comments that we receive, that I received via email. So.

[Liza McNulty, City of Berkeley] 19:25:26
Every comment is produced in the final EIR word for word. We do not attempt to, umâ€¦ summarize or present people's comments on their behalf. All the decision about adoption of the final EIR will be made by Council. As I mentioned at the beginning of the meeting, our expectation is that we'll be bringing this to Council in July.

[Liza McNulty, City of Berkeley] 19:25:51
or September of this year, and of course that would be noticed as council meetings generally are. And when the final Eir is available for public review, we will be sending a notice of that to.

[Liza McNulty, City of Berkeley] 19:26:07
All of the email lists that we have, that includes anyone who submits a comment on the draft EIR by submitting a comment on the draft EIR, I will automatically add you to my email list to send notifications.

[Liza McNulty, City of Berkeley] 19:26:20
That's a good reminder that we're not capturing emails tonight, so if you made a verbal comment tonight and do not intend to submit a written comment, that's fine, but if you would like to make sure you receive project updates and information when I send them out, please go ahead and send me.

[Liza McNulty, City of Berkeley] 19:26:38
An email, so that I can add you to the list. And again, my email address is lmcnulty.

[Liza McNulty, City of Berkeley] 19:26:45
MCNULTY. at berkeleyca.gov, and I will drop that into the chat window so that everyone has it.

[Liza McNulty, City of Berkeley] 19:26:55
Okay, while I was speaking, I see we have a few more hands raised. So next up we have C.

[Liza McNulty, City of Berkeley] 19:27:03
PAF? Go ahead and unmute yourself and your comments. Hi, we can hear you.

[C Paff] 19:27:07
Hello?

[C Paff] 19:27:10
Okay. Uh, my name is Charlie Paffenbarger.

[C Paff] 19:27:14
long-time resident of Berkeley since the 60s, late 60s.

[C Paff] 19:27:17
When my family moved here, I speak for myself and my personal experience with the Berkeley

TR1.21-1

[C Paff] 19:27:23
Marina, which is extensive andâ€¦

[C Paff] 19:27:25
Various ways. Cal Sailing Club, when I was a youngster.

[C Paff] 19:27:31
And a birder in the last 25 or so years, 30 maybe.

[C Paff] 19:27:36
As presented, I think the draft EIR is woefully insufficient.

TR1.21-2

[C Paff] 19:27:41

endorse 90% of what people have expressed today.

TR1.21-2

[C Paff] 19:27:45
I will submit a written document, but I just wanted to raise my hand and say,

[C Paff] 19:27:49
I'm opposed with the project as proposed.

TR1.21-3

[C Paff] 19:27:53
alternatives of putting the ferry back inside the marina.

[C Paff] 19:27:56
would perhaps be better, but uhâ€¦

TR1.21-4

[C Paff] 19:27:59
I think all the other impacts that are not covered yet.

[C Paff] 19:28:02
People have raised, I think, areâ€¦

[C Paff] 19:28:04
germane and important to review.

TR1.21-5

[C Paff] 19:28:06
Soâ€¦ thank you.

[Liza McNulty, City of Berkeley] 19:28:09
Thank you.

[Liza McNulty, City of Berkeley] 19:28:15
Okay. Next up we have Doug Yamamoto.

[Liza McNulty, City of Berkeley] 19:28:26
Doug, go ahead.

[Doug Yamamoto] 19:28:28
My name is Doug Yamamoto, and I've been a long time.

[Doug Yamamoto] 19:28:34
User, enjoyer of the marina. I can remember walking on the Berkeley Pier as a child.

[Doug Yamamoto] 19:28:44
Uh, walking, it seems like, uhâ€¦ Halfway across the bay to San Francisco.

TR1.22-1

[Doug Yamamoto] 19:28:52
Uh, taking myâ€¦ my children there. Well, I want to, as a child.

[Doug Yamamoto] 19:28:57
And taking my children there, fishing. Uh, thisâ€¦ this project.

[Doug Yamamoto] 19:29:06

To me isâ€¦ something that's been, as some of the other comments have stated, someâ€¦ it was almost predetermined, because I've been coming to these meetings and.

[Doug Yamamoto] 19:29:20
participating in the city's efforts to get public comment, but I never.

[Doug Yamamoto] 19:29:28
Oh. I never got the sense that the city was interested in rebuilding the old pier, just the way it was.

[Doug Yamamoto] 19:29:40
When there's storms knock the pier down in Capitola. TR1.22-2

[Doug Yamamoto] 19:29:46
That city valued their peer. They rebuilt it in 2 years.

[Doug Yamamoto] 19:29:53
Our peer has beenâ€¦ A dead zone, except for the birds that live there forâ€¦ I guess we're going on nine years now.

[Doug Yamamoto] 19:30:07
This project here, as envisioned. is just going to turn it turn our our our marina into a parking lot.

[Doug Yamamoto] 19:30:18
for commuters. One of the things that I've noticed as a long-time user.

[Doug Yamamoto] 19:30:27
of a visitor of the pier is that the wide variety of people.

[Doug Yamamoto] 19:30:32
who come down every day. And none of that is addressed in this report.

[Doug Yamamoto] 19:30:40
People come down on their lunch hour. to just park their cars on Seawall Drive and look at the view. TR1.22-3

[Doug Yamamoto] 19:30:52
Other people come down when they're having someâ€¦ some conflict or issue in their life. And once again just sit there.

[Doug Yamamoto] 19:31:04
Umâ€¦ And Iâ€¦ this impact review doesn't give any value to that.

[Doug Yamamoto] 19:31:14
It only sees those spaces as spaces for commuters.

[Doug Yamamoto] 19:31:21
And I think that's wrong. It shouldâ€¦ Take into consideration.

[Doug Yamamoto] 19:31:30
The users today. as well asâ€¦ The increased use.

[Doug Yamamoto] 19:31:39
Uh, whenâ€¦ When things, uh, whenâ€¦ when there are improvements to the existing marine.

[Doug Yamamoto] 19:31:47
And it doesn't do that at all. It's going to beâ€¦ Andâ€¦ Okay.

TR1.22-3

[Liza McNulty, City of Berkeley] 19:31:58
Thank you, Dad.

[Liza McNulty, City of Berkeley] 19:32:05
Okay. I believe that we've received comment from everyone who's raised their hand.

[Kirk van Moon] 19:32:11
I'm seeing, uh, looks like Madeline King wants to speak. She's raising her hand in the video.

[Liza McNulty, City of Berkeley] 19:32:17
Oh, thank you. Madeleine. Hi, go ahead. Thank you for noticing that.

[Madeleine King] 19:32:22
Hi. Yeah, I apologize. I don'tâ€¦ I apologize, I'm on my cell phone, and Iâ€¦ I don't see the little hand raise emoji on here.

[Liza McNulty, City of Berkeley] 19:32:31
No, that'sâ€¦ that's fine. I can't see all the faces at once withâ€¦ All the little mini screens. Go ahead.

[Madeleine King] 19:32:38
I'm justâ€¦ I'm gonna make this really brief. I just want to register my comment that I echo a lot of what I've heard here. I want to thank everybody for yourself included, for all of the thoughtful input people have.

TR1.23-1

[Madeleine King] 19:32:54
mentioned, I come on here as an individual, but I also am on the SFBA, the San Francisco Board Sailing Association Board. I'm not speaking, um.

[Madeleine King] 19:33:06
I'm not speaking on behalf of them, I'm speaking for myself, but just to register that as well. Um, I came on here wanting to speak as a, um, recreational user, a wind sport enthusiast, but after hearing all of the comments, Iâ€¦ so many things resonated with me besides my own personal concerns. But my own personal concern, um, is as a wind sports enthusiast, uh, echoing what some other people said, theâ€¦ the use.

TR1.23-2

[Madeleine King] 19:33:40
of the launch site, uh, at the end of Seawall Drive by His Lordship's restaurant is indeed, as was mentioned earlier, the only launch site at low tide for many of us, not just.

[Madeleine King] 19:33:58

Um, the sport I do, which is wing foiling, but the swimmers andâ€¦ and etc, etc.

TR1.23-2

[Madeleine King] 19:34:05
Um, the docs are not always accessible. The parking, I think, is aâ€¦ huge issue that along Seawall Drive. There were some really interesting comments made by people about how, you know, people do just go down there just to park and look at the beautiful view, and.

TR1.23-3

[Madeleine King] 19:34:29
not only those of us who use it as a launch site, and there's lots of us, umâ€¦ So I can't even imagine that parking being diminished from.

[Madeleine King] 19:34:41
What's there currently? Uhâ€¦ And again, there were so many other comments that interested me and were concerning, like the dredging, um, and the impact on the bay, and umâ€¦ And the Berkeley Marina being turned into a parking lot, um, basically. I've been a user of that marina for a long time, and in various ways over the years, and it's a special, special place.

TR1.23-4

[Madeleine King] 19:35:12
Also concerning is something that NOAA first brought up, and then another person, I can't remember, Larry, maybe, um, the notion of, of.

[Madeleine King] 19:35:21
How do our comments make their way to the ears they need to make their way to? I also would be concerned that despite all of these comments, that it's just going to be pushed through anyway. I would hope that's not the case. And the other thing is, all of the people in Berkeley who don't know anything about.

TR1.23-5

[Madeleine King] 19:35:40
Those people who sit in their cars down there on Seawall Drive, and that somebody said they asked them if they knew anything about it. They don't know anything about it. It justâ€¦ it seemsâ€¦ I'm a post, and so I just want to register that. Thank you for the time.

[Liza McNulty, City of Berkeley] 19:35:57
Thank you, Madeleine. Okay.

[Liza McNulty, City of Berkeley] 19:36:05
If anyone sees someone who is indicating they'd like to make a comment, please do feel free to call that to my attention.

[Liza McNulty, City of Berkeley] 19:36:14
I don't see any other hands raised and looking to see other emojis to see if there are any hands floating.

[Liza McNulty, City of Berkeley] 19:36:25
So I believe we have reached everyone who would like to make a comment. So thank you, everyone, for participating in tonight.

[Liza McNulty, City of Berkeley] 19:36:36

The next steps will be for us to continue to receive comments through the public review period. And then as noted, we will be then working on the draft. I'm sorry, then working on the final document that will include.

[Liza McNulty, City of Berkeley] 19:36:53
Um, every comment that we receive in a response to that comment.

[Liza McNulty, City of Berkeley] 19:36:59
both verbally and and in writing. With that, I will wish you all a good evening. And again, thank you for your time.

[Camille] 19:37:18
Thank you.

[Kirk van Moon] 19:37:21
Thank you

[Paul Kamen] 19:37:26
Is there a next meeting planned for the community group?

[Liza McNulty, City of Berkeley] 19:37:31
Um, Paul, I don't have any specific meetings scheduled yet.

[Paul Kamen] 19:37:36
I was asking Camille, hoping she was still listening.

[Liza McNulty, City of Berkeley] 19:37:40
Sorry, I thought you were asking me. Well, I'll be quiet, um, and if Camille answers before the meeting ends.

[Paul Kamen] 19:37:48
I think she's off already.

[Liza McNulty, City of Berkeley] 19:37:50
All right.

/// END OF TRANSCRIPT ///

Verbal Comment TR1.1

Commenter: Paul Kamen

Date: March 16, 2026

Response to Comment TR1.1-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.1-2

The project design, including the proposed breakwater and the amount of fill and dredging required for the project, has been developed by qualified coastal engineering professionals based on site-specific studies, technical analyses, and engineering modeling prepared for the project. The design and supporting analyses are documented in the Coastal Study prepared by COWI, which evaluated wave conditions, sediment transport, operational requirements, and breakwater design criteria for the proposed ferry terminal. The comment does not provide evidence, engineering analyses, or other factual information demonstrating that the quantities of fill, dredging, or breakwater construction requirements described in the Draft EIR are underestimated.

With respect to the comment's concern regarding the cost of the breakwater, refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

No further response is required.

Response to Comment TR1.1-3

Refer to Section 2.2.29, *Topical Response: Wind*, which discusses the engineering studies, wind and wave modeling, and design assumptions used to evaluate the proposed ferry facilities. As discussed therein, the ferry terminal, breakwater, gangway, and associated marine infrastructure were designed based on site-specific engineering analyses and are subject to detailed design review by qualified engineers and review by applicable permitting and regulatory agencies.

The comment expresses concern with the adequacy of the wind data and engineering assumptions used during project planning; however, the comment does not provide technical analyses demonstrating that the wind and wave studies relied upon for project design are inaccurate or that the proposed facilities would fail to perform under the design conditions evaluated for the project.

To the extent the comment concerns the engineering design, feasibility, or operational performance of the ferry facilities, those issues are engineering and design considerations rather than environmental impacts addressed under CEQA. The Draft EIR evaluates the physical environmental effects of constructing and operating the proposed project and relies on the project design and supporting technical studies prepared for the project.

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment TR1.1-4

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of the data used to design the project. Based on the data, modeling, and design gathered and prepared by the City's licensed professional coastal engineers, updates to the design are not needed, and updated analysis on the amount of fill and dredging is not required. Pages 5-9 through 5-10 of the Draft EIR state the following: "The exact length of the breakwater under this Alternative would depend on future engineering to identify the shortened length that would still maintain the necessary safe harbor conditions for ferry vessels to

dock next to the proposed pier." Any reductions in the breakwater would maintain necessary safe harbor conditions. The comment does not identify a specific deficiency in the analysis presented. No revisions to the Draft EIR are required.

Response to Comment TR1.1-5

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of the data used to design the project. Based on the data, modeling, and design gathered and prepared by the City's licensed professional coastal engineers, updates to the design are not needed, and updated analysis on the amount of fill and dredging is not required. The comment does not identify a specific deficiency in the analysis presented. No revisions to the Draft EIR are required.

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations.

Response to Comment TR1.1-6

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

To the extent the comment's reference to a more "economical" alternative reflects concerns regarding project costs or funding, refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

The comment's preference for an in-marina ferry terminal location is noted and has been included in the project record considered by decision-makers. The comment expresses an opinion regarding project location and does not identify a deficiency in the Draft EIR's environmental analysis. The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are required in response to this comment.

Verbal Comment TR1.2

Commenter: Gordon Stout

Date: March 16, 2026

Response to Comment TR1.2-1

These statements provide background information. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.2-2

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking demand and adequacy. The Draft EIR evaluates whether project-related parking conditions would result in secondary physical environmental impacts and concludes that recreational access would be maintained. The Parking and TDM Plan analyzes parking demand based on observed usage patterns at the Berkeley Waterfront and WETA ridership projections and demonstrates that the Waterfront will have sufficient spaces to accommodate all users. The analyses and significance conclusions presented in the Draft EIR remain valid as written.

Response to Comment TR1.2-3

Refer to Section 2.2.20, *Topical Response: Parking,* which discusses parking supply and adequacy and Response to Comment TR1.2-2. The Draft EIR contains sufficient information to evaluate potential secondary environmental effects associated with parking and access consistent with CEQA requirements. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions are required.

Response to Comment TR1.2-4

Refer to Section 2.2.20, *Topical Response: Parking,* and Response to Comment TR1.2-2. The analyses and significance conclusions presented in the Draft EIR remain valid as written.

The commenter's opposition to the project is noted and has been included in the project record considered by City decision makers. However, the comment does not provide evidence demonstrating that the proposed parking management strategies would result in a secondary physical environmental impact or otherwise invalidate the analyses presented in the Draft EIR. Accordingly, no further response or revision to the Draft EIR is required.

Verbal Comment TR1.3

Commenter: Kirk van Moon

Date: March 16, 2026

Response to Comment TR1.3-1

These statements provide context. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.3-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

The analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.3-3

Refer to Section 2.2.20, *Topical Response: Parking,* and Section 2.2.24, *Topical Response: Seawall Drive/View Access.* The analyses and significance conclusions remain valid as written.

Verbal Comment TR1.4

Commenter: Shreyas Chand, Cal Sailing Club

Date: March 16, 2026

Response to Comment TR1.4-1

These statements are introductory in nature and provide context for subsequent comments. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.4-2

Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate* for discussion regarding sedimentation and siltation and impacts from the project. Refer to Section 2.2.29, *Topical Response: Wind,* regarding effects of the project on wind conditions and effects on nearby facilities including South Sailing Basin.

The analysis and significance conclusions presented in Draft EIR Sections 3.3, 3.8, and 3.11 remain valid as written, and no revisions to the Draft EIR are required.

Response to Comment TR1.4-3

Refer to Section 2.2.20, *Topical Response: Parking,* and to Section 2.2.3, *Topical Response: BCDC Jurisdiction, Planning Consistency, and Permit Compliance.*

As discussed therein, parking availability and parking convenience are not environmental impacts under CEQA in themselves. The Draft EIR evaluates whether project-related parking changes could result in secondary physical environmental impacts and concludes that recreational access would be maintained. In addition, Draft EIR Section 3.9, *Land Use and Planning*, evaluates consistency with applicable Bay Plan policies and concludes that the project would not conflict with those policies (see Impact LU-2, Table 3.9-1).

Because the Draft EIR does not identify a significant parking-related environmental impact, additional mitigation is not required under CEQA. The analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment TR1.4-4

Refer to Section 2.2.29, *Topical Response: Wind* (Sub-Section Wind Shelter Effects of Tree and Berm Removal), for discussion concerning CEQA and wind. No revisions to the EIR are required. No further response is required.

Response to Comment TR1.4-5

The Draft EIR discusses the impacts of ferry wake and Section 3.8.4. Impacts Analysis on page 3.8-33, and wave action and sea level rise concerns are addressed in Section 3.8.4 page 3.8-40. Drainage patterns alteration and erosion are addressed in Section 3.8.4 page 3.8-43 and 3.3-44. See Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for further discussion of sediment transport and siltation. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.4-6

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Verbal Comment TR1.5

Commenter: Sally Tobin

Date: March 16, 2026

Response to Comment TR1.5-1

The Draft EIR acknowledges the Berkeley Waterfront as a heavily used recreational resource in Section 3.11.2, *Environmental Setting*, and evaluates whether the project would adversely affect these uses in Section 3.11.4. The analysis concludes that the project would maintain and enhance recreational opportunities and access (Impact REC-1). Refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, regarding existing recreational uses and analysis of impacts.

The comment does not identify a specific environmental impact or deficiency in the analysis presented. Accordingly, the analysis and significance conclusions in Section 3.11, *Recreation*, remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.5-2

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking supply and demand. The Draft EIR evaluates the proposed project and concludes that project-related parking conditions would not result in significant environmental impacts. The suggestions to use remote parking facilities and shuttle services have been included in the project record considered by City decision makers. The analyses and significance conclusions presented in the Draft EIR remain valid as written.

Response to Comment TR1.5-3

Refer to Section 2.2.20, *Topical Response: Parking,* for a discussion related to parking availability, parking management, and recreational access.

The comment does not identify a deficiency in the environmental analysis presented in the Draft EIR. No revisions to the Draft EIR are necessary.

Verbal Comment TR1.6

Commenter: David

Date: March 16, 2026

Response to Comment TR1.6-1

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

Accordingly, the analysis and significance conclusions presented in Section 3.11, *Recreation*, remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.6-2

The comment appears to reference the parking along Seawall Drive. Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* for a discussion of parking in this location. Refer also to Section 2.2.20, *Topical Response: Parking,* for a discussion regarding the analysis of parking under CEQA.

Response to Comment TR1.6-3

Section 3.11, *Recreation*, evaluates whether the project would physically restrict access to recreational resources and concludes that access would be maintained and enhanced (Impact REC-1). Section 3.12, *Transportation*, evaluates parking and circulation, consistent with CEQA requirements.

For additional discussion of shoreline access and regulatory framework for water uses, refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* respectively. For further clarification regarding parking considerations, refer to Section 2.2.20, *Topical Response: Parking.*

The comment raises concerns related to access and user experience but does not demonstrate that the project would result in a physical loss or degradation of recreational resources under CEQA.

Accordingly, the analyses and significance conclusions presented in Sections 3.11 and 3.12 of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.6-4

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Verbal Comment TR1.7

Commenter: Emilie Strauss

Date: March 16, 2026

Response to Comment TR1.7-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.7-2

The City acknowledged this request for an extension of the Draft EIR comment deadline. The comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. No further response is required.

Response to Comment TR1.7-3

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking availability, parking-related secondary effects, and compliance with CEQA requirements. As discussed therein, the Draft EIR evaluates whether project-related parking changes would result in secondary physical environmental impacts and concludes that no significant parking-related environmental impacts would occur.

With respect to ferry operations, the Draft EIR evaluates operational impacts associated with vessel movement, navigation, transportation safety, biological resources, hydrology and water quality, noise, recreation, and other environmental issue areas throughout Chapter 3. Refer to the Topical Responses related to Loss of Control, Electric Ferry, and Ferry Operations for additional discussion of ferry vessel operations, navigation, maneuverability, safety considerations, and operational assumptions incorporated into the environmental analysis.

The comment does not identify a deficiency in the environmental analysis or provide evidence demonstrating that the project scope is inadequate for purposes of CEQA review. Accordingly, the analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment TR1.7-4

The proposed increase in ferry trips would be incremental relative to existing vessel operational levels in San Francisco Bay. Stating that a direct population-level impact from this project alone is speculative without site-specific evidence linking the project's incremental disturbance to measurable declines in body condition, migration success, or reproductive output. The Draft EIR addresses impacts to wildlife movement in Section 3.3.4, Impacts Analysis under Impact BIO-4, pages 3.3-63 through 3.3-62, and concludes that impacts would be less than significant. In addition, see Response to Comment O7-17 for a discussion of ferry operation impacts to waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.7-5

The Draft EIR addresses impacts to wildlife movement in Section 3.3.4 Impacts analysis. See Response to Comment O7-17 for a discussion of ferry operation impacts to waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.7-6

The Draft EIR addresses impacts to nesting birds in Section 3.3.4 Impacts Analysis (page 3.3-51). No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.7-7

Impacts to nesting birds are analyzed in Draft EIR Section 3.3.4 under Impact BIO-1 (page 3.3-44), which concludes impacts to be less than significant with implementation of Mitigation Measures BIO-1(a), BIO-1(c), and AES-1. In addition, see Response to Comment O9-5 for a discussion related to osprey. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.7-8

The Draft EIR evaluates impacts due to in-water construction activities, including dredging and pile installation, in Section 3.3.4 Impacts Analysis (pages 3.3-45 through 3.3-50) and concludes impacts would be less than significant with implementation of Mitigation Measures BIO-1(a), BIO-1(d), and HYD-1. Additionally, dredging would occur within an existing U.S. Army Corps of Engineers channel that was previously dredged, and the project-related dredge depth would result in only short-term temporary impacts to water quality and benthic infaunal communities. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.7-9

Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR for information regarding eelgrass. The Draft EIR utilized the most up to date publicly available eelgrass spatial data (Merkel and Associates 2004, 2009, 2014). Based on the best available data, there are no documented occurrences of eelgrass within the project site. No revisions to the EIR are necessary.

Response to Comment TR1.7-10

See Response to Comment O9-3 for discussion of reconnaissance survey adequacy. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.7-11

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Verbal Comment TR1.8

Commenter: Camille Antinori, Berkeley Waterfront Community Coalition

Date: March 16, 2026

Response to Comment TR1.8-1

These statements provide background and context. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.8-2

Refer to Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking supply, parking management, and the role of parking under CEQA. Refer also to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* regarding modifications to Seawall Drive and continued public access to waterfront recreational resources.

The Draft EIR includes a description of the proposed project and associated parking improvements in Chapter 2, *Project Description*, including the reconfiguration of parking facilities within the project site and replacement of existing parking spaces as part of the Seawall Drive parking lot improvements (see Section 2.5, *Proposed Project Components*). The environmental analysis evaluates the proposed project based on the project description presented in the Draft EIR and assesses whether project-related parking changes could result in secondary physical environmental impacts. Consistent with CEQA Guidelines, parking availability is not considered an environmental impact in itself; rather, the relevant inquiry is whether parking-related changes could result in physical environmental effects. Accordingly, the Draft EIR evaluates potential effects on recreational access, recreational facility use, transportation, and plan consistency. As discussed in Sections 3.9, *Land Use and Planning* (Impact LU-2), 3.11, *Recreation* (Impact REC-1), and 3.12, *Transportation* (Impact TRA-2), the Draft EIR concludes that project implementation would not result in physical deterioration of recreational facilities, would maintain recreational access, and would not result in significant parking-related environmental impacts.

To the extent that the commenter references differing parking counts contained in other planning or conceptual project documents, those references do not alter the project description evaluated in the Draft EIR or demonstrate a deficiency in the environmental analysis. The Draft EIR evaluates the proposed project as described in Chapter 2 and provides sufficient information to assess the environmental impacts associated with parking and access under CEQA.

Accordingly, the analyses and significance conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are required.

Response to Comment TR1.8-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.8-4

Refer to Response to Comment O10-202, which explains that the Draft EIR does not assume that no development or improvements could ever occur elsewhere within the project vicinity. As described therein, the Draft EIR has been revised to indicate that, under the No Project Alternative, reasonably foreseeable projects identified in Table 3-1 would continue to be implemented independent of the proposed project and, Draft EIR Table 3-1 identified some but not all potential pieces of the Bay Trail Extension(e.g., the Cesar Chavez Path). Accordingly, Table 3-1 has been revised to also include the Bay

Trail Extension in the Berkeley Marina as a reasonably foreseeable cumulative project, as it is described in the Bay Trail Extension To The Berkeley Marina Design Plan and Final Initial Study/Mitigated Negative Declaration prepared by the City of Berkeley Department of Parks, Recreation, and Waterfront in 2003.[62] Rrefer to Response to Comment O10-43, which includes this revision. The clarification presented under Responses to Comments O10-43 and O10-202 do not alter the conclusions of the No Project Alternative analysis presented in Draft EIR Chapter 5, *Alternatives*. Construction-related impacts under the No Project Alternative would remain less than those associated with proposed project implementation, because the ferry terminal, reconstructed pier, breakwater, ferry operations, and associated landside improvements would not be developed. The operational comparison presented in Chapter 5 similarly remains valid, because the No Project Alternative would not provide the proposed ferry service or associated transportation improvements that would improve regional connectivity and reduce reliance on single-occupancy vehicle travel. The clarification also does not alter the cumulative impact analysis. The Bay Trail Extension project would complement existing and planned recreational and active transportation facilities within the Berkeley Waterfront by improving connectivity and public access. Operationally, implementation of the Bay Trail Extension would support walking and bicycling opportunities and would not result in new significant cumulative operational impacts. Construction of the Bay Trail Extension would be comparatively limited in scale and duration and would not materially change the Draft EIR conclusions regarding cumulative construction impacts.

This clarification does not change the impact analysis or conclusions of the No Project Alternative. No further revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.8-5

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which explains that the Draft EIR includes the reopening of a restaurant at 199 Seawall Drive as a cumulative project. Refer to Response to Comment P36-108 for a discussion about this cumulative project, as it relates to parking.

Regarding the comment about the No Project Alternative, refer to Response to Comment O10-130.

The analysis and significance conclusion presented under Impact the Draft EIR remains valid as written. No revisions to the EIR are necessary.

Response to Comment TR1.8-6

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment TR1.8-7

As discussed in Draft EIR Chapter 5, *Alternatives*, the City developed and screened alternatives based on their ability to feasibly attain most of the project's basic objectives while potentially reducing environmental impacts. The alternatives evaluated in the Draft EIR and the rationale for eliminating other alternatives from detailed consideration are described in Chapter 5 and are discussed further in Section 2.2.2, *Topical Response: Alternatives*.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are required in response to this comment.

[62] Berkeley, City of. 2003. Bay Trail Extension To The Berkeley Marina Design Plan and Final Initial Study/Mitigated Negative Declaration. https://ceqanet.lci.ca.gov/2003092068 (accessed September 2026).

Response to Comment TR1.8-8

The comment is noted. However, because no supporting arguments, data, or analysis were provided to substantiate these statements, a substantive response is unable to be prepared. Refer to Section 3.3.2, *Environmental Setting*, of the Draft EIR for information regarding eelgrass. The Draft EIR utilized the most up to date publicly available eelgrass spatial data (Merkel and Associates 2004, 2009, 2014). Based on the best available data, there are no documented occurrences of eelgrass within the project site. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation. No further response is required.

Verbal Comment TR1.9

Commenter: Edward S.

Date: March 16, 2026

Response to Comment TR1.9-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.9-2

Transportation impacts under CEQA are evaluated consistent with CEQA Guidelines Section 15064.3 and applicable Office of Planning and Research guidance, which focus on vehicle miles traveled (VMT) rather than congestion or level of service. As discussed in Draft EIR Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Assessment Memorandum*, the project's transportation impacts were evaluated using the methodology required under current CEQA requirements. The Draft EIR concludes that the project would not result in a significant transportation impact under CEQA and would contribute to a reduction in regional VMT.

The analysis and significance conclusion presented in the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment TR1.9-3

The comment does not provide specific questions regarding the Draft EIR air quality analysis nor provide additional information to inform the analysis. Impacts related to air quality are discussed in detail in Draft EIR Section 3.2 Air Quality. The analysis concludes that air quality impacts would be reduced to less than significant levels with the implementation of Mitigation Measure AQ-1 (see Impacts AQ-1 through AQ-4 on pages 3.2-25 through 3.2-35). The Draft EIR air quality significance conclusions and mitigation measures remain the same, and no Draft EIR text changes are necessary in response to this comment.

Response to Comment TR1.9-4

Roadway safety is evaluated in Draft EIR Section 3.12, *Transportation*, under Impact TRA-3. As discussed therein, the project would not substantially increase hazards due to a geometric design feature or incompatible uses and would not result in a significant transportation safety impact. The analysis considered project-generated traffic, circulation patterns, and proposed multimodal improvements, including bicycle and pedestrian facilities. The analysis and significance conclusion presented under Impact TRA-3 remain valid as written. No revisions to the Draft EIR are necessary.

Response to Comment TR1.9-5

University Avenue is currently subject to posted speed limits and existing traffic control measures. In addition, the project includes multimodal transportation improvements intended to improve pedestrian, bicycle, transit, and vehicle circulation. As discussed under Impact TRA-3 in Draft EIR Section 3.12, *Transportation*, the proposed project would not introduce roadway features that would create a transportation safety hazard. Enforcement of traffic laws and management of vehicle speeds are ongoing City operational responsibilities and are not environmental impacts of the proposed project requiring mitigation under CEQA. The Draft EIR remains valid as written.

Response to Comment TR1.9-6

Roadway safety is evaluated under Impact TRA-3 in Draft EIR Section 3.12, *Transportation*. As discussed therein, the project would comply with applicable City and State design standards and would not introduce roadway features that would adversely affect the safety of motorists, bicyclists, pedestrians, transit users, or other roadway users. In addition, Draft EIR Section 3.11, *Recreation*, evaluates whether the project would increase the use of existing recreational facilities such that substantial physical deterioration would occur or require the construction or expansion of recreational facilities. The Draft EIR concludes that operation of the project would maintain and enhance recreational opportunities and access and would not result in a significant impact to existing recreational facilities (Impact REC-1). Concerns regarding changes in user experience or the recreational character of the Waterfront are not, by themselves, environmental impacts under CEQA. Accordingly, no significant transportation safety impact or significant operational recreation impact has been identified that would require mitigation.

The analyses and significance conclusions presented in the Draft EIR remain valid as written.

Verbal Comment TR1.10

Commenter: Geoff Lomax

Date: March 16, 2026

Response to Comment TR1.10-1

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment TR1.10-2

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. Nevertheless, the comment has been included in the project record provided to decision makers for consideration. No further response or revisions to the EIR are required.

Response to Comment TR1.10-3

Refer to Response to Comment O2-2 and Section 2.2.27, *Topical Response: VMT,* for discussion regarding transit-to-transit mode shifts, regional transportation assumptions, and the transportation analysis prepared for the project. The analyses and conclusions presented in the Draft EIR remain valid as written. No further revisions are necessary.

Response to Comment TR1.10-4

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Verbal Comment TR1.11

Commenter: Bill Feucht

Date: March 16, 2026

Response to Comment TR1.11-1

The Draft EIR evaluates operational impacts to the Bay in Section 3.3.4 Impacts Analysis, starting on page 3.3-39. See Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion regarding how the EIR does not need to address Baywide ferry route impacts that were previously addressed in the 2003 WETA EIR. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.11-2

Refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, for more information about this topic. No further response is required.

Response to Comment TR1.11-3

Because no supporting arguments, data, or analysis were provided to substantiate the comment statements, a substantive response is unable to be prepared. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation.

Response to Comment TR1.11-4

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.11-5

To the extent the comment concerns the cumulative environmental effects of existing and reasonably foreseeable future ferry projects, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which discusses the methodology used to identify cumulative projects and evaluate cumulative impacts consistent with CEQA Guidelines Section 15130. As explained therein, the Draft EIR evaluates the project's incremental contribution to cumulative impacts in combination with past, present, and reasonably foreseeable probable future projects. The Draft EIR also considers regional ferry planning documents where appropriate and incorporates relevant information from the Water Emergency Transportation Authority (WETA) planning efforts and the 2003 WETA EIR.

The comment appears to request information regarding future regional ferry planning and the long-term expansion of ferry service in San Francisco Bay. To the extent the comment concerns future policy decisions or service expansion plans that are outside the scope of the proposed project, such issues do not identify a deficiency in the environmental analysis presented in the Draft EIR. The Draft EIR evaluates the environmental impacts associated with the proposed Berkeley Water Transportation Pier Ferry Project based on the project description and reasonably foreseeable future conditions.

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No revisions are required.

Response to Comment TR1.11-6

Because the comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR, no further response is required.

Verbal Comment TR1.12

Commenter: Julie Allen

Date: March 16, 2026

Response to Comment TR1.12-1

These statements provide background information and context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.12-2

The Draft EIR discusses the 199 Seawall launch point on page 3.11-7 of the Draft EIR. Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any changes to the accessibility of the 199 Seawall Drive launch point for water-based recreation.

Response to Comment TR1.12-3

The Draft EIR describes existing recreational uses at the Berkeley Waterfront, including both formal and informal activities, in Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7). These include walking, picnicking, boating, and water-based recreation such as sailing, kayaking, and wind-based sports. As discussed in Section 3.11.4, *Impacts Analysis* (pages 3.11-14 through 3.11-24), the impact analysis evaluates whether the proposed project would result in a physical loss of recreational resources or restrict access and concludes that the project would maintain and enhance recreational opportunities and access (Impact REC-1).

For additional discussion of on the ground recreational uses, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*; Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* regarding continuation of existing uses and access points; and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* regarding permitted uses.

The Draft EIR does not identify a significant conflict between project implementation and recreational use. In addition, the comment does not identify a specific deficiency in the Draft EIR's analysis or demonstrate how the project would result in a physical impact to recreational resources. Accordingly, the analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.12-4

Refer to Sections 1.2.2, *Public Outreach*, 1.2.4, *EIR Notice of Preparation*, and 1.5, *Environmental Review Process*, of the Draft EIR for a summary of the public outreach conducted between 2021 and 2025. Additionally, the Draft EIR public comment period was held from February 27, 2026, to April 26, 2026, a total of 60 days.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Verbal Comment TR1.13

Commenter: Erin Diehm

Date: March 16, 2026

Response to Comment TR1.13-1

The City acknowledged this request for an extension of the Draft EIR comment deadline. The comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. No further response is required.

Response to Comment TR1.13-2

Refer to Section 2.2.1, *Topical Response: 2003 WETA EIR Applicability,* for a discussion about how the 2003 WETA EIR is used in the Draft EIR, and an explanation of how the Draft EIR, where appropriate, provides new and current background setting information and analyses based on the latest information available at the time of EIR Notice of Preparation.

Response to Comment TR1.13-3

The Draft EIR evaluates operational impacts to the Bay in Section 3.3.4 Impacts Analysis, starting on page 3.3-39. See also Section 2.2.2, *Topical Response: Alternatives*, for a discussion of project objectives and scope of the Draft EIR. Because no supporting arguments, data, or analysis were provided to substantiate the comment statements, a substantive response is unable to be prepared. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation.

Response to Comment TR1.13-4

The Draft EIR evaluates operational impacts to the Bay and impacts to nesting birds in Section 3.3.4 Impacts Analysis, starting on page 3.3-39. Because no supporting arguments, data, or analysis were provided to substantiate these statements, a substantive response is unable to be prepared. No changes are warranted related to the Draft EIR analysis, conclusions, or mitigation.

Response to Comment TR1.13-5

A reconnaissance-level field survey, when combined with targeted database and literature review and the application of standard CEQA avoidance/minimization measures, provides sufficient, project-specific information to map and evaluate potential species habitats and sensitive biological resources and to support the CEQA impact analysis. CEQA requires enough information to evaluate environmental effects and to adopt feasible mitigation; it does not require exhaustive scientific research or the generation of new baseline science beyond what is necessary to make an informed determination. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.13-6

This is not an accurate statement. The Draft EIR considers the potential impacts from construction, operation, and maintenance of the proposed project. As an example, refer to Impact Discussion AES-1 in Section 3.1.4, *Impacts Analysis*, of the Draft EIR. This section, like others throughout the document, separates the impact discussion into two separate headings – one for construction and one for operation. No further response is required.

Response to Comment TR1.13-7

The CEQA significance thresholds for energy consumption do not have requirement for comparing efficiencies from one form of transit to another. The project as proposed is not anticipating replacing existing forms of transit but rather including an additional option to remove passenger vehicles from the roadways. The current bus and BART operations would continue with or without the project, and the implementation of the project would not require or result in a change in trips of these alternate modes of transit. Therefore, the energy consumption from buses and BART would continue consistent with what they are consuming today. Therefore, the analysis of the project in isolation of an energy efficiency comparison with other forms of transit is accurate. Further, Draft EIR Alternatives (Section 5.9) discussed alternative projects such as increasing Bay Area Rapid Transit (BART) capacity and improving access to BART, both of which were alternatives that were considered but rejected as they did not meet the project objective of provision of all-electric ferry service between Berkeley and San Francisco. The analysis in the Draft EIR accurately analyzes energy consumption with respect to CEQA and Bay Area Air District methodologies and thresholds (see methodology approach discussion on Draft EIR page3.6-30 and specific thresholds of significance on Draft EIR page 3.6-33). Therefore, additional analysis is not required. No Draft EIR changes are necessary in response to this comment.

Response to Comment TR1.13-8

See Section 2.2.4, *Topical Response: Biological/Underwater Noise,* for a discussion of operational ferry vessel speed, power, and noise impacts on marine mammal species. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.13-9

The project-related increase in ferry trips would be incremental relative to existing vessel operational levels in San Francisco Bay. Stating that a direct population-level impact from this project alone is speculative without site-specific evidence linking the project's incremental disturbance to measurable declines in body condition, migration success, or reproductive output. The Draft EIR addresses impacts to wildlife movement in Section 3.3.4 Impacts analysis. In addition, see Response to Comment O7-17 for a discussion of impacts of ferry service on waterbirds. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.13-10

Refer to Impact HYD-1 in Section 3.8 *Hydrology and Water Quality* of the Draft EIR (pages 3.8-33 to 3.8-34) for a discussion of water quality impacts from the operation of ferry vessels. Impact HYD-1 found that the water quality impacts from the operation of ferry vessels would be less than significant with compliance with existing regulations. The analysis and significance conclusion presented under Impact HYD-1 in Section 3.8, *Hydrology and Water Quality* remains valid as written.

The analysis and significance conclusion presented under Impact HYD-1 in Section 3.8, *Hydrology and Water Quality,* remain valid as written. No further revisions to the EIR are necessary.

Response to Comment TR1.13-11

The Draft EIR evaluates impacts due to dredging and pile installation and provides mitigation measures in Section 3.3.4 Impacts Analysis on pages 3.3-45 through 3.3-50 Specifically, Mitigation Measure BIO-1(d) would require aquatic species avoidance techniques and would reduce construction-related (including dredging and pile driving) impacts to less than significant with mitigation. Additionally, dredging would occur primarily within a former U.S. Army Corps of Engineers channel, which was previously dredged, and the proposed design dredge depth would result in only short-term temporary impacts to water quality and benthic infaunal communities. In addition, see Response to Comment O5-36 for a discussion of impacts of dredging on aquatic habitat and Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a

discussion of maintenance dredging No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.13-12

Please refer to Section 2.2.9, *Topical Response: Cumulative Impacts*, which clarifies that the development of 26 ferry terminals is not a cumulative impact.

Regarding the comment's suggestion to reallocate project funding to existing transit agencies, CEQA does not require the evaluation of funding allocation, fiscal policy decisions, or the comparative prioritization of unrelated public infrastructure investments. As explained in Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* economic considerations and funding decisions are not environmental impacts under CEQA and are outside the scope of environmental analysis. Such considerations are appropriately addressed by decision-makers as part of the broader project approval process, rather than as part of the environmental impact analysis. As described in Chapter 2, *Project Description*, of the Draft EIR, the project includes multimodal access improvements, including enhancements to pedestrian, bicycle, and transit infrastructure, and improvements to AC Transit facilities serving the project site (refer to Draft EIR Section 2.5.2). Additionally, one of the stated project objectives is to improve regional connectivity and provide efficient, environmentally friendly, zero-emission ferry service that supports multimodal transportation options and reduces reliance on single-occupancy vehicle travel (refer to Draft EIR Section 2.3).

The Draft EIR adequately evaluates cumulative impacts consistent with CEQA requirements and appropriately scopes the analysis to environmental issues. Therefore, the analysis, significance determinations, and mitigation measures remain valid as presented, and no revisions to the Draft EIR are necessary in response to this comment.

Verbal Comment TR1.14

Commenter: Jim McGrath

Date: March 16, 2026

Response to Comment TR1.14-1

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. CEQA does not require quantitative analysis in all cases. In general, an EIR must provide substantial evidence and a good-faith effort at full disclosure, which may be quantitative or qualitative. Nonetheless, quantitative analyses are provided throughout the Draft EIR, including in the Air Quality, Biological Resources, Greenhouse Gas Emissions, Hydrology and Water Quality, Noise, Recreation, and Transportation sections. No further response is required.

Response to Comment TR1.14-2

This is incorrect. BCDC scoping comments were considered and addressed throughout the Draft EIR. Section 1.2.4, *EIR Notice of Preparation*, and Table 1-1, *EIR Scoping Comments and EIR Location Information*, of the Draft EIR, provides a summary of the scoping comments received during the 2025 notice of preparation public review period and where in the Draft EIR the comments were addressed by the City. Page 1-7 of the Draft EIR identifies the a summary of the comments raised by BCDC, as well as the sections of the Draft EIR where those scoping comments were considered.

Throughout the CEQA process, the City has engaged with relevant regulatory agencies to address those potential concerns in the Draft EIR. During the scoping period, the City held an interagency meeting on May 8, 2025, with staff from the U.S. Army Corps of Engineers, RWQCB, and CDFW who provided their input on the project. In addition, the City has presented the project to the BCDC Design Review Board on three dates (May 12, 2025, November 3, 2025, and May 11, 2026), as well as the Engineering Criteria Review Board on two dates (February 26, 2025, and May 27, 2026).

No further response is required.

Response to Comment TR1.14-3

Impacts on biological resources from dredging are addressed in Section 3.3, *Biological Resources* of the Draft EIR. Specifically, refer to Impact BIO-1 and 3, which includes specific subheadings that discuss potential dredging impacts (refer to subsection “Pile Driving and Dredging Water Quality” on page 3-45 and 3-50, “Dredging Noise” on page 3-46 and 3-50, and “Fill and Dredging Impacts” on page 3.3-59.

Regarding the comment on impacts to fishing, refer to Response to Comment O10-135.

Because no supporting arguments, data, or analysis were provided to substantiate these statements, a substantive response is unable to be prepared. No further response is required.

Response to Comment TR1.14-4

Refer to Section 2.2.2, *Topical Response: Alternatives*, for a discussion of how the Draft EIR adequately considered alternatives in its Draft EIR.

The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.14-5

The comment incorrectly characterizes the mitigation included in the Draft EIR. The comment appears to be referencing mitigation that include the development of plans, such as Mitigation Measure BIO-3. Refer

to Section 2.2.17, *Topical Response: Mitigation Measure Requirements*, for a discussion about how the mitigation in the Draft EIR is compliant with CEQA requirements.

To the extent the comment raises concerns regarding parking availability and the potential displacement of recreational users by ferry patrons, refer to Section 2.2.20, *Topical Response: Parking*.

The Draft EIR adequately addresses both mitigation requirements and parking-related concerns. The analyses and conclusions presented in the Draft EIR remain valid as written. Therefore, no revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.14-6

The statement that the project would reduce parking to seven parking spaces is not supported by the Draft EIR, which states in Chapter 2, *Project Description*, that the project would replace the 404 total existing parking spaces, including the 320 spaces at Seawall Drive, with 400 to 450 new parking spaces pending final design (see Section 2.5, *Proposed Project Components*, page 2-18), and states that the project would maintain a shared-use approach to maintain parking availability for both recreational users and ferry patrons (see Impact LU-2, Table 3.9-1).

Refer to Section 2.2.20, *Topical Response: Parking,* for further discussion regarding parking availability, parking management, and the role of parking under CEQA. For additional discussion regarding parking along Seawall Drive and continued public access, refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access.* As discussed therein, parking availability and parking convenience are not environmental impacts under CEQA in themselves. The Draft EIR evaluates whether project-related parking changes would result in secondary physical environmental impacts, including restrictions on access to recreational resources. The Draft EIR concludes that recreational access would be maintained and that implementation of the project would not result in a significant impact to recreational resources or access. The analyses and significance conclusions presented in the Draft EIR remain valid as written.

Response to Comment TR1.14-7

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility,* for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment TR1.14-8

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

To the extent the comment's reference to a project costs, operating subsidies, and funding priorities reflects concerns regarding project costs or funding, refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*.

The comment's preference for an in-marina ferry terminal location is noted and has been included in the project record considered by decision-makers. The comment expresses an opinion regarding project location and does not identify a deficiency in the Draft EIR's environmental analysis. The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.14-9

Refer to Section 2.2.7, *Topical Response: CEQA Process*, which describes that although clarifying edits have been made to the Draft EIR in response to comments, none of the edits have affected the impact conclusions or mitigation measures in a substantive manner. Recirculation of the Draft EIR is not required.

Verbal Comment TR1.15

Commenter: Zora Whitfield

Date: March 16, 2026

Response to Comment TR1.15-1

Section 3.11.2, *Environmental Setting* (pages 3.11-1 through 3.11-7), describes existing recreational conditions at the Berkeley Waterfront, including the range of user groups, activities, and locations where recreation occurs. This includes both land-based and water-based uses and reflects the environmental baseline used for impact analysis. The level of detail provided is consistent with CEQA requirements, which require a reasonable description of baseline physical conditions sufficient to evaluate environmental impacts. For discussion of baseline recreational conditions and CEQA requirements, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*.

The comment does not identify specific deficiencies in the baseline description or demonstrate how additional detail would change the impact analysis or conclusions. Accordingly, the analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.15-2

The Draft EIR evaluates the environmental impacts of the proposed project on recreation, transportation, biological resources, noise, and other CEQA Guidelines Appendix G resource areas throughout Chapter 3, *Environmental Impact Analysis*. As discussed in Draft EIR Section 3.11, *Recreation*, the project would result in a net increase in recreational facilities and opportunities at the Berkeley Waterfront, including a restored public-access pier, public-access breakwater, Bay Trail Extension, cycle track, public plaza, and related amenities (see Section 3.11.4, *Impacts Analysis*, Impact REC-1).

Additionally, Draft EIR Chapter 5, *Alternatives*, evaluates alternatives and compares their ability to meet the project's objectives while reducing environmental impacts. As discussed in Section 5.5, *No Project Alternative*, the No Project Alternative would not provide ferry service, public access improvements, or recreational enhancements because the existing pier would remain closed and continue to deteriorate. The Draft EIR further concludes that the No Project Alternative would generally result in greater impacts related to air quality, greenhouse gas emissions, land use and planning, and transportation because it would not provide the transportation and environmental benefits associated with the proposed ferry service. Section 5.10, *Environmentally Superior Alternative*, also concludes that Alternatives 2 through 4 would provide public access and recreational benefits, but to a lesser extent than the proposed project. Accordingly, the Draft EIR specifically evaluates whether the project's objectives can be achieved through alternatives with reduced facilities or through the No Project Alternative and concludes that those alternatives either would not meet the project's basic objectives or would do so to a lesser extent than the proposed project.

To the extent the comment is suggesting a restored pier without ferry service, please refer to Response to Comment O10-215. As discussed therein, the City considered a "No Ferry Service with New Pier Alternative" but did not carry it forward for detailed analysis because it would not meet one of the project's two basic objectives: providing efficient and environmentally friendly zero-emission ferry service between Berkeley and San Francisco.

The comment does not identify a deficiency in the Draft EIR's environmental analysis or alternatives analysis, but instead questions whether ferry service is necessary to achieve the project's objectives. The Draft EIR evaluates that question through its analysis of the No Project Alternative, the reduced-feature action alternatives, and alternatives considered but rejected, and concludes that the proposed project best achieves the project's objectives while providing greater public access and recreational benefits and transportation-related environmental benefits than the alternatives considered. Therefore, the analysis

and conclusions presented in Chapter 5, *Alternatives*, remain valid as written, and no revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.15-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.15-4

As noted in Chapter 1, *Introduction*, the City led several public outreach efforts with various groups within the Berkeley community, prior to preparation of the Draft EIR (refer to Draft EIR Section 1.1.2, *Public Outreach*). These efforts, which involved engagement with Marina liveaboard residents, helped the City to refine the project design and identify key issues to address in the Draft EIR. As noted in the comment, the presence of liveaboard residents is included in the environmental setting presented in Draft EIR. Further, refer to Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users* regarding construction and operation impacts on the entire marina community, including liveaboard residents. The City of Berkeley maintains standards relating to pedestrian access during construction projects, which would require safe and accessible paths of travel for pedestrians throughout the construction period. Prior to the beginning of construction, the contractor will be required to implement the traffic control plan. Adopted standards require that recreational and vehicular access be maintained during construction to the maximum extent feasible. Accordingly, construction traffic control plans would maintain, to the maximum extent feasible: (1) vehicular and recreational access to the South Cove area; (2) vehicular access along University Avenue to Seawall Drive; and (3) access to the Bay Trail and adjacent recreational areas. Pedestrian access along Seawall Drive and the shoreline would be maintained except when actual construction of the Bay Trail was occurring, and pedestrian detours would be provided during those periods.

With regard to operations, the Draft EIR for the proposed project evaluates project-specific and proximate environmental effects associated with ferry operations at the Berkeley Waterfront using representative operational assumptions (see Chapter 2, Section 2.7). These analyses focus on nearshore and localized conditions, including terminal approach and docking, vessel presence within the project viewshed, and project-related contributions to vessel traffic in the immediate vicinity. As described in Section 3.3, *Biological Resources*, and 3.8, *Hydrology and Water Quality*, the Draft EIR concludes that operational impacts associated with ferries, including vessel traffic, underwater noise, wake, and water quality effects would be less than significant or less than significant with mitigation (see Sections 3.3.4 and 3.3.5).

The analyses, significance conclusions, and mitigation measures presented throughout the Draft EIR remain valid as written. No revisions are required. The City will continue public outreach and engagement efforts as the project progresses through implementation.

Response to Comment TR1.15-5

Refer to Section 1.5, *Environmental Review Process*, of the Draft EIR for a summary of the CEQA process and where public input could be garnered. Future additional opportunities to provide input after the CEQA process could be possible during the permitting phase of the proposed project, but would be separate from the CEQA comment period altogether and is not defined in the EIR as it would not pertain to CEQA. No further response is required. Generally, this comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.15-6

Refer to Sections 1.2.2, *Public Outreach*, 1.2.4, *EIR Notice of Preparation*, and 1.5, *Environmental Review Process*, of the Draft EIR for a summary of the public outreach conducted between 2021 and 2025.

Additionally, the Draft EIR public comment period was held from February 27, 2026 to April 26, 2026, a total of 60 days.

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.15-7

The City acknowledged this request for an extension of the Draft EIR comment deadline. The comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. No further response is required.

Response to Comment TR1.15-8

The Draft EIR identifies mitigation measures in accordance with CEQA Guidelines Section 15126.4 and presents them in Table ES-1 and throughout Chapter 3, including clear descriptions of performance standards and implementation actions. As shown within Table ES-1 (refer to Draft EIR, *Executive Summary*, pages ES-5 through ES-15) and throughout Chapter 3, *Environmental Impact Analysis*, in the Draft EIR, mitigation measures reduce impacts to less than significant levels in most cases. Where impacts remain significant, the Draft EIR clearly identifies them as such, consistent with CEQA's disclosure requirements. Mitigation measures are formulated to achieve standards that reduce impacts, consistent with CEQA Guidelines Section 15126.4(a)(1), and reflect substantial evidence in the record, regulatory compliance measures, industry best practices, and the professional judgment of qualified subject-matter experts. Regarding accountability, the City of Berkeley, as lead agency, would adopt a Mitigation Monitoring and Reporting Program (MMRP) at the time of Final EIR certification to ensure implementation of all mitigation measures, as required by CEQA Guidelines Section 15097.

Accordingly, mitigation measures in the Draft EIR are supported by substantial evidence, grounded in accepted professional practice and regulatory standards, and consistent with CEQA requirements. The analysis, significance conclusions, and mitigation measures presented in the Draft EIR remain valid. No revisions to the EIR are required.

Verbal Comment TR1.16

Commenter: Kelly Hammargren

Date: March 16, 2026

Response to Comment TR1.16-1

See Section 2.2.2, *Topical Response: Alternatives*, for a discussion of Draft EIR scope and Section 2.2.25, *Topical Response: Siltation/Wave Climate*, for a discussion of wave climate and breakwater effects beyond the project site. In addition, because no supporting arguments, data, or analysis were provided in the comment to substantiate statements with respect to breakwater impacts on aquatic resources, a substantive response is unable to be prepared. No changes to the Draft EIR are necessary in response to this comment.

Response to Comment TR1.16-2

Refer to Section 2.2.27, *Topical Response: VMT*, for discussion regarding ridership assumptions, transit-to-transit mode shifts, and the basis for the transportation analysis conducted in the Draft EIR. The Draft EIR remains valid as written. No further revisions are necessary.

Verbal Comment TR1.17

Commenter: Noah Sudarsky

Date: March 16, 2026

Response to Comment TR1.17-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.17-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Verbal Comment TR1.18

Commenter: Toni Mester

Date: March 16, 2026

Response to Comment TR1.18-1

The City acknowledged this request for an extension of the Draft EIR comment deadline. The comment period was originally scheduled for 45 days, from February 27, 2026, to April 13, 2026. On April 1, 2026, the City extended the comment period by 15 days, thereby ending on April 28, 2026. No further response is required.

Response to Comment TR1.18-2

Based on the best available information, the Draft EIR has identified environmental impacts from the proposed project that range from no impact to significant and unavoidable impacts. Refer to page 4-1 of the Draft EIR, which identifies that the project would result in significant and unavoidable impacts related to construction noise.

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment TR1.18-3

Transportation impacts under CEQA are evaluated consistent with CEQA Guidelines Section 15064.3 and applicable Office of Planning and Research guidance, which focus on vehicle miles traveled (VMT) rather than congestion or level of service. As discussed in Draft EIR Section 3.12, *Transportation*, and Appendix F, *Transportation Impact Assessment Memorandum*, the project's transportation impacts were evaluated using the methodology required under current CEQA requirements. The Draft EIR concludes that the project would not result in a significant transportation impact under CEQA and would contribute to a reduction in regional VMT.

Refer to Section 2.2.27, *Topical Response: VMT*, for discussion of ridership forecasts, mode split assumptions, regional travel behavior, and transit-to-transit mode shifts. The analyses and conclusions presented in the Draft EIR remain valid as written. No revisions to the Draft EIR are necessary.

Response to Comment TR1.18-4

Refer to Impact HYD-3 in Section 3.8, *Hydrology and Water Quality* of the Draft EIR (pages 3.8-36 to 3.8-39), which found that the proposed project would result in less than significant impacts related to drainage patterns. The analysis and significance conclusion presented under Impact HYD-3 in Section 3.8, *Hydrology and Water Quality* of the Draft EIR remains valid as written. No further revisions to the EIR are necessary.

Response to Comment TR1.18-5

Refer to Section 2.2.22, *Topical Response: Project Cost/Financial Feasibility*, for a discussion related to economic considerations. The analysis, significance conclusions, and mitigation measures presented within the Draft EIR remain valid as written. No further response or revisions to the EIR are required.

Response to Comment TR1.18-6

Regarding the San Pablo Avenue Specific Plan and construction projects occurring in West Berkeley, the Draft EIR identifies and evaluates cumulative projects consistent with CEQA Guidelines Section 15130 and based on the methodology described in Chapter 3, *Environmental Impact Analysis*. As discussed in

Section 2.2.9, *Topical Response: Cumulative Impacts*, cumulative projects were identified based on publicly available information and evaluated according to the geographic scope and impact pathways applicable to each environmental resource topic. The Draft EIR does not include every project occurring within the City of Berkeley; rather, it includes projects that are reasonably foreseeable and that could combine with the proposed project to contribute to a particular cumulative environmental effect.

The San Pablo Avenue Specific Plan area is located inland and outside of the Berkeley Waterfront and project vicinity. The comment has not identified a specific project within the San Pablo Avenue Specific Plan area that would combine with the proposed project to result in a cumulative environmental impact. Moreover, because cumulative impacts are evaluated separately for each resource area based on the relevant geographic scope of potential impacts, inland development occurring along the San Pablo Avenue corridor would generally not combine with the proposed project's waterfront-related impacts involving resources such as recreation, biological resources, hydrology and water quality, waterfront access, or shoreline conditions. Accordingly, the City determined that the San Pablo Avenue Specific Plan did not constitute a cumulative project requiring inclusion in Draft EIR Table 3-1. For additional discussion regarding the cumulative impact assessment methodology, including the criteria used to identify and evaluate cumulative projects, refer to Section 2.2.9, *Topical Response: Cumulative Impacts*.

With respect to the comment's preference for recreational improvements in lieu of ferry service, the Draft EIR recognizes the importance of recreational resources and evaluates both existing conditions and project-related changes in detail. As described in Chapter 2, *Project Description*, the proposed project includes substantial recreational enhancements, including a new publicly accessible pier, public plaza, Bay Trail improvements, bicycle and pedestrian facilities, and related amenities designed to improve public access to the waterfront (see Draft EIR Section 2.5.2). The environmental effects of these improvements are fully analyzed in the Draft EIR.

As discussed in Section 3.11, *Recreation*, the City currently maintains a high ratio of parkland and open space relative to population (34.5 acres per 1,000 residents, see Draft EIR page 3.11-1), and even with projected population growth, the City's park acreage per resident would remain well above established City targets. As analyzed under Impact REC-1, assuming an estimated population of 141,000 residents by 2040, the citywide parkland to persons ratio would be 31.6 acres per 1,000 residents, approximately eighteen times the established City target of at least 2 acres of parkland per 1,000 residents (see Draft EIR page 3.11-19).

The proposed project does not present a binary choice between recreation and transit improvements. Rather, it is designed to achieve multiple, complementary objectives, including expanding recreational opportunities at the waterfront while also providing new zero-emission ferry service and improving multimodal access (see Draft EIR Section 2.3, *Project Objectives*). As such, the project would both enhance recreational resources and contribute to regional transportation goals, consistent with the City's broader planning objectives.

Accordingly, the Draft EIR adequately evaluates cumulative impacts and recreational effects consistent with CEQA, and no revisions to the analysis are required in response to this comment.

Verbal Comment TR1.19

Commenter: Larry Molstein

Date: March 16, 2026

Response to Comment TR1.19-1

These introductory statements provide context. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.19-2

Refer to Section 1.5, *Environmental Review Process*, for a summary of the CEQA process. Page 1-15 of the Draft EIR states the following: "Prior to making a decision on the proposed project, the lead agency must certify that: a) the Final EIR has been completed in compliance with CEQA; b) the Final EIR was presented to the decision-making body of the lead agency (i.e., Berkeley City Council); and c) the decision-making body reviewed and considered the information in the Final EIR prior to approving the proposed project (CEQA Guidelines Section 15090)." The comments provided on the Draft EIR, and the response to those comments have been included as a part of the Final EIR. Therefore, the City Council will see these public comments when they review the Final EIR prior to their decision to certify the EIR. No further response is required.

Response to Comment TR1.19-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.19-4

The comment expresses an opinion regarding public policy, funding priorities, and whether the proposed project should be implemented. Such comments do not address the adequacy of the environmental analysis presented in the Draft EIR and do not identify a specific environmental impact requiring further analysis under CEQA. The comment has been noted and included in the project record provided to City decision-makers for their consideration. No revisions to the Draft EIR are required.

Verbal Comment TR1.20

Commenter: Carol Valk

Date: March 16, 2026

Response to Comment TR1.20-1

This comment does not pertain to the proposed project or the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.20-2

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.20-3

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* for discussion regarding modifications to Seawall Drive and continued public access to Waterfront recreational resources. Refer also to Section 2.2.20, *Topical Response: Parking,* Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* Section 2.2.6, *Topical Response: CEQA Baseline/Baseline Recreation Users*, and Section 2.2.19, *Topical Response: Ordinance (Prohibited Recreational Activities),* for discussions regarding parking availability, equipment-dependent recreational uses, and shoreline access. As discussed therein, the Draft EIR recognizes that certain recreational activities require specialized equipment and evaluates whether the proposed project would physically restrict access to recreational resources. The Draft EIR concludes that recreational access would be maintained and enhanced and that the project would not result in a significant impact to existing recreational resources (Impact REC-1).

The comment's concerns regarding parking location preferences and the distance required to transport recreational equipment do not, in themselves, constitute significant environmental impacts under CEQA unless they result in a physical degradation of recreational resources or loss of physical access. The Draft EIR does not identify such impacts. Accordingly, the analyses and significance conclusions presented in Sections 3.11, *Recreation*, and 3.12, *Transportation*, remain valid as written. No revisions to the Draft EIR are required.

Response to Comment TR1.20-4

The Draft EIR evaluates environmental conditions and project impacts based on site-specific characteristics of the Berkeley Waterfront. Sections 3.3 (*Biological Resources*), 3.8 (*Hydrology and Water Quality*), and 3.11 (*Recreation*) evaluate potential effects related to sediment disturbance, dredging, vessel wake, and water-based recreation using project-specific data and technical analysis. Refer to Section 2.2.25, *Topical Response: Siltation/Wave Climate,* for a discussion regarding analysis of sediment disturbance.

Conditions at other ferry terminals reflect different environmental settings, infrastructure, and operational characteristics, and are not determinative of impacts at the project site. The Draft EIR relies on site-specific analysis rather than comparison to unrelated facilities.

The comment does not identify a specific deficiency in the technical analysis presented in the Draft EIR or provide substantial evidence demonstrating that similar impacts would occur under the project conditions analyzed. Accordingly, the analyses and significance conclusions presented in Sections 3.3, 3.8, and 3.11 of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.20-5

This comment is noted; however, it does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.20-6

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Verbal Comment TR1.21

Commenter: Charley Paffenbarger

Date: March 16, 2026

Response to Comment TR1.21-1

These statements provide context for the commenter's perspective. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.21-2

As discussed in Section 2.2.5, *Topical Response: CEQA Adequacy,* the City has concluded that the Draft EIR is sufficient from a CEQA perspective. No further response is required.

Response to Comment TR1.21-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Response to Comment TR1.21-4

Refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative,* for a discussion related to why the City rejected the In-Marina Ferry Terminal Alternative from further evaluation.

No revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.21-5

All comments on the Draft EIR have been responded to and are included in their respective responses to comments. No further response is required.

Verbal Comment TR1.22

Commenter: Doug Yamamoto

Date: March 16, 2026

Response to Comment TR1.22-1

These statements provide background information and context. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.22-2

As discussed in Draft EIR Section 5.9, *Alternatives Considered but Rejected* (pages 5-25 through 5-28), the City considered an alternative involving repair of the existing pier in its historic form. As described on page 5-27 of the Draft EIR, this alternative was not carried forward for detailed evaluation because the existing pier has substantially deteriorated and reconstruction of the pier in its historic configuration was determined to be infeasible. The Draft EIR explains the basis for eliminating this alternative from further consideration and identifies the factors used to evaluate alternatives during project planning. For additional discussion regarding the assumptions used to develop and evaluate project alternatives, as well as how alternatives were dismissed from further evaluation, refer to Section 2.2.2, *Topical Response: Alternatives*.

The comment does not identify a specific deficiency in the environmental analysis presented in the Draft EIR. The analysis and conclusions presented in Chapter 5, *Alternatives*, remain valid as written. No revisions to the Draft EIR are required in response to this comment.

Response to Comment TR1.22-3

This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. Nevertheless, this comment has been included in the project record considered by City decision makers. No further response is required.

Verbal Comment TR1.23

Commenter: Madeleine King

Date: March 16, 2026

Response to Comment TR1.23-1

These statements provide background information and context. This comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.23-2

Refer to Section 2.2.21, *Topical Response: Potential Impacts on Existing Recreational Water Access,* which clarifies that the project would not result in any permanent changes to the accessibility of the 199 Seawall Drive launch point for watersports during low tide conditions.

Accordingly, the analysis and significance conclusions presented in Section 3.11, *Recreation*, of the Draft EIR remain valid as written, and no further revisions to the Draft EIR are required.

Response to Comment TR1.23-3

Refer to Section 2.2.24, *Topical Response: Seawall Drive/View Access,* for discussion regarding waterfront viewing opportunities and Seawall Drive access, and Section 2.2.20, *Topical Response: Parking,* for discussion regarding parking availability and recreational access.

Response to Comment TR1.23-4

The comment does not pertain to the adequacy, significance conclusions, or mitigation in the Draft EIR. No further response is required.

Response to Comment TR1.23-5

Refer to Response to Comment TR 1.19-2 for a response to this comment. No further response is required.

This page intentionally left blank.

3 Errata

The following are revisions to the Draft Environmental Impact Report (EIR) for the Berkeley Water Transportation Pier Ferry Project. These revisions are minor modifications and clarifications to the document and do not change the significance of the environmental issue conclusions within the Draft EIR. The revisions are listed by the Draft EIR section and page number. All additions to the text are underlined (underlined), and all deletions from the text are stricken (~~stricken~~).

3.1 Changes in Response to Comments

Executive Summary

Areas of Known Controversy

Draft EIR Page ES-3:

> During the EIR scoping process, members of the public identified concerns related to the potential for the proposed project to affect parking availability for recreationalists, continued recreational access to the Berkeley Waterfront, potential impacts on biological resources including whales and other marine species, and the project's consistency with broader waterfront planning efforts. Chapter 3, *Environmental Impact Analysis* (see *Secondary Impacts* subsection) identifies the approach for addressing parking impacts under CEQA for the proposed project and describes the relationship between the proposed project and other waterfront planning efforts (see *Relationship with Draft Waterfront Specific Plan* subsection). In addition, each environmental resource section within Chapter 3 includes an *EIR Scoping Comments Consideration* subsection that identifies resource-specific concerns raised during scoping and explains how those issues are addressed in the environmental analysis. Public responses to the Notice of Preparation of a Draft EIR as well as public input received at the EIR scoping meeting held by the City are summarized in Chapter 1, *Introduction*.

Summary of Impacts and Mitigation Measures

This page intentionally left blank.

Draft EIR Page ES-7:

Table ES-1 Summary of Environmental Impacts, Mitigation Measures, and Residual Impacts

Impact Statement	Mitigation Measure(s)	Residual Impact
Biological Resources		
Impact BIO-1. The project could result in direct or indirect impacts to special-status species or their associated habitats including impacts to migratory bird nest sites. Impacts would be less than significant with mitigation.	**BIO-1(a): Implement Worker Environmental Awareness Program Prior to and During Construction.** Prior to initiation of all construction activities (including staging and mobilization), all personnel associated with project construction shall attend a Worker Environmental Awareness Program training, conducted by a City-approved qualified biologist, to aid workers in recognizing special-status biological resources that may occur in the project ~~area~~ site. This training will include information about northwestern pond turtle, special-status fish, marine mammals, and nesting birds potentially occurring in the project site. The specifics of this program shall include identification of special-status species and habitats, a description of the regulatory status and general ecological characteristics of special-status resources, and review of the limits of construction and measures required to avoid and minimize impacts to biological resources within the work area. A fact sheet conveying this information shall also be prepared for distribution to all contractors, their employees, and other personnel involved with construction of the project. All employees shall sign a form provided by the trainer documenting they have attended the Worker Environmental Awareness Program and understand the information presented to them. The crew foreman shall be responsible for ensuring crew members adhere to the guidelines and restrictions designed to avoid impacts to special-status species. **BIO-1(b): Conduct Northwestern Pond Turtle Survey and Avoidance Prior to Construction.** No less than seven days prior to the start of any construction activities within 500 feet of Strawberry Creek (including staging and mobilization), a City-approved qualified biologist will conduct a preconstruction survey for northwestern pond turtle within suitable habitat on the project site as feasible. If any northwestern pond turtle are identified within the work area, they will be allowed to leave the work site on their own. CNDDB Field Survey Forms will be submitted to the CDFW for all special-status animal species observed. If any northwestern pond turtles are observed by construction personnel within or adjacent to (within 50 feet) the project site, all work within the vicinity of the observation will be halted and the~~ qualified biologist will be notified immediately to evaluate the occurrence and relocate the animal as necessary~~ City will contact CDFW immediately for guidance. Only a ~~qualified~~ CDFW-approved biologist will capture and relocate wildlife. Construction personnel are not permitted to handle said animals. If northwestern pond turtles become federally-listed at the time of construction, no individuals shall be handled without approval from USFWS. A report of all pre-construction survey efforts will be submitted to the City within 30 days of completion of the survey effort to document compliance. The report will include the dates, times, weather conditions, and personnel involved in the surveys and monitoring. The report will also include for each captured special-status animal, the Universal Transverse Mercator (UTM) coordinates and habitat descriptions of the capture and release sites (in UTM coordinates), the length of time between capture and release, and the general health of the individual(s). This measure may be modified or supplemented by permit conditions from applicable regulatory agencies. **BIO-1(c): Conduct Burrowing Owl and Nesting Bird Survey and Avoidance Prior to Construction.** **Burrowing Owl** Prior to project construction, a qualified biologist will conduct a habitat assessment to determine if potential habitat for burrowing owl is present in or near the project site. If potential habitat is present in or within 500 feet of the project site, a qualified biologist will conduct a pre-construction survey of the project site (plus a 500-foot buffer as access allows) for the presence of burrowing owl. The survey will be conducted no more than 14 days prior to ground disturbing activities and will conform to CDFW guidelines for burrowing owl Take Avoidance Surveys as described in Appendix D of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.[100] A report of pre-construction survey efforts and results will be submitted to the City within 30 days of completion of the survey. The report will include the dates, times, weather conditions, and personnel involved in the survey. Depending on survey results, the report will also include observations of burrowing owl or potential burrows, and the location and habitat description of the observations. If burrowing owl, active burrows, or their sign (i.e., tracks or pellets) are not observed in the project site, no additional measures related to impact avoidance and minimization of the absent species are recommended. If burrowing owl, active burrows, or their sign are observed within the project site, CDFW will be notified and the following measures will be implemented: • A qualified biological monitor will be present during landside construction on the project site to document burrowing owl observations, burrow statuses, and require that construction activities do not negatively affect burrowing owl. The duration and frequency of monitoring will be determined at the discretion of the qualified biologist and a monitoring report detailing monitoring results will be submitted to the City within 30 days of the completion of project activities or breeding season (February 1 to August 31), if applicable. • The biological monitor will visually inspect any pipes, debris piles, culverts, or similar structures for burrowing owl before the material is moved, buried, or capped. Open holes and trenches within the project site will be inspected at the beginning and end of each landside construction workday and immediately prior to backfilling. At the end of each such workday, trenches and holes will be ramped so that any animals that may have become trapped in the trench or hole can climb out. The ramp may be constructed of dirt fill or wood planking or other suitable material at an angle no greater than 30-45 degrees. If a burrowing owl is trapped in a trench or hole, work will stop and the qualified biologist will be notified immediately. The burrowing owl will be allowed to escape unimpeded. • If active burrows are observed on the project site, a non-disturbance buffer will be established restricting all ground-disturbing activities from occurring within the buffer and a qualified biological monitor will be present at the initiation of project activities. The buffer will be established by a qualified biologist and range from 330 ft. to 1,500 ft. depending on project activity, line of sight, and local topography during the breeding season. During the non-breeding season (September 1 to January 31), the buffer will range from 165 ft. to 330 ft. The buffer will be demarcated using brightly colored flagging and may only be reduced at the discretion of a qualified biologist based on the factors listed above and potential use of sound and visual barriers (i.e., hay bales). Removal of the buffer will only occur if a qualified biologist determines burrowing owl are not present in the vicinity and any potential burrows are inactive.	Less Than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact

- If active burrow avoidance is infeasible during the non-breeding season or during the breeding season, where resident owls have not yet begun egg laying or incubation, or where the juveniles are foraging independently and capable of independent survival, the City in coordination with a qualified biologist will consult with CDFW to prepare, authorize, and implement a passive relocation program consistent with Appendix E of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.
- A habitat mitigation plan will be developed in coordination with the City and CDFW for loss of active burrowing owl burrow sites if implementation of a passive relocation plan is necessary and/or burrowing owl are documented to nest on site or within 500 feet of the project site. This would be based upon the portion of the project site that overlaps with the primary foraging area around the burrow site (approximately 500-foot buffer) to be replaced at a minimum 1:1 ratio.

Nesting Birds

Project construction activities, including but not limited to vegetation removal and ground disturbance that result in noise or disturbance affecting potential nesting bird habitat, should commence outside of the nesting season (February 1 through September 15), if feasible. If construction begins outside the nesting season, a nesting bird survey is not required.

If ground disturbing project activities begin within the nesting season (February 1 through ~~August 31~~ September 15), then no more than seven days prior to the initiation of project activities, a nesting bird pre-construction survey shall be conducted by a City-approved qualified biologist within the disturbance footprint, plus a 300-foot buffer for passerines and a 1,000-foot buffer for raptors. During construction within the nesting season, an additional focused survey shall be conducted prior to tree removal to identify active nests with the subject tree(s). If no active nests are observed, no further action would be required. Ground-disturbing project activities that are initiated outside of the nesting season may continue into the nesting season without requiring new nesting bird surveys.

Pre-construction nesting bird surveys shall be conducted by a qualified biologist during the time of day when birds are most active and should be of sufficient duration to reliably conclude presence or absence of nesting birds on the project site and within the designated buffer. A report of the nesting bird surveys results shall be submitted to the City for review and approval prior to clearance for mobilizing equipment. If nests are found, their locations shall be flagged (if possible) and recorded with the use of a GPS unit. Avoidance buffers shall be established around active nests. Depending upon the species, suitable minimum buffers may be 50 feet for non-raptor species and 300 feet for raptor species, or as determined by the qualified biologist in consultation with CDFW based on species sensitivity, construction activities, and other factors.

If active nests are present, all project work shall be conducted outside the established avoidance buffer zone from the nest until it is no longer active. No staging of large equipment shall occur within the avoidance buffer until the qualified biologist confirms that breeding/nesting is complete and all the young have fledged. If buffer zones are determined to be infeasible, a City-approved qualified biological monitor shall be on site to monitor project activities within the avoidance buffer zones to ensure active nests and nesting birds are not impacted. Nesting bird surveys are not required for project activities that occur between September 16 and January 31. A report of all survey results and any proposed avoidance buffers shall be submitted to the City for review and approval.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

[100] California Department of Fish and Game (CDFG). 2012. Staff Report on Burrowing Owl Mitigation. Department of Fish and Game. March 7, 2012. Available at: http://www.dfg.ca.gov/wildlife/nongame/docs/BUOWStaffReport.pdf2 (accessed July 2026).

BIO-1(d): Conduct Pile Driving Impact Avoidance to Fish and Marine Mammals Prior to and During Construction. In-water work, including pile driving and dredging, shall be limited to the window of June 1 through November 30. The soft-start, ramp-up, exclusion-zone and sound attenuation procedures described below apply to pile-driving and pile-extraction activities. A "soft-start" technique will be used to allow fish and marine mammals to vacate the area before the pile driver reaches full power. For vibratory hammers, the contractor will initiate the driving for 15 seconds at reduced energy, followed by a 1-minute waiting period when there has been downtime of 30 minutes or more. This procedure shall be repeated two additional times before continuous driving is started. This procedure would also apply to vibratory pile extraction. For impact driving, an initial set of three strikes would be made by the hammer at 40 percent energy, followed by a 1-minute waiting period, then two subsequent three-strike sets before initiating continuous driving. Pile-driving activity shall not begin at any location if any marine mammal is observed within the applicable safe-zone distance for its hearing group, as defined for the specific pile-driving method (e.g., pile diameter, vibratory or impact installation, and number of piles installed per day). Safe-zone distances shall follow the most current NMFS-approved guidance and the Marine Mammal Monitoring Plan prepared pursuant to Mitigation Measure BIO-1(E). In all cases, a minimum exclusion distance of no less than 10 meters shall be maintained around the pile-driving location. If a marine mammal moves within the safe zone after pile driving has begun, the contractor shall implement the appropriate delay or shutdown as described in Mitigation Measure BIO-1(E). A sound curtain, or bubble curtain, shall be employed during impact pile driving to break up sound waves, as feasible. The sound curtain would consist of a perforated hose laid in a circle to release air bubbles around the pile and diesel impact hammer. Jetting methods using pressurized water and/or wood cushion block methods shall also be employed as feasible to minimize impacts.

If the intensity of the pile-driving activity needs to be increased or a marine mammal is within the safe zone buffer for the activity, pile-driving shall be "ramped-up", which is a slow increase in the intensity of pile-driving. At the start of pile-driving for each pile at all locations, the pile shall be struck once with the hammer and the second pile strike delayed long enough to permit adequate time for any marine mammals within the safe zone to leave the area prior to the start of sustained pile-driving activities.

This measure, including the technique and the size of the safe zone, may be modified or supplemented by permit conditions from applicable regulatory agencies.

BIO-1(e): Prepare Marine Mammal Monitoring Plan Prior to Construction and Implement Recommendations During Construction

Prior to construction, the City shall prepare a Marine Mammal Monitoring Plan (MMMP) to avoid and minimize potential adverse impacts on marine mammals during pile driving and tug operations. The MMMP shall implement general guidelines set forth in the MMPA and incorporate the hydroacoustic modeling results developed for the project to define site-specific protection zones and avoid exposure of marine mammals to underwater sound levels exceeding the most up to date Level A (injury) thresholds identified by NOAA Fisheries. The MMMP shall include the following:

- **Protection and Monitoring Zones:** Using the hydroacoustic modeling results, the MMMP shall define shutdown and disturbance zones for each marine mammal hearing group. These zones will be tailored to the pile type, size, and driving method and will correspond to the Level A and Level B effect distances developed for the project. The plan will describe how these protection zones will be verified and monitored in the field, integrating them with the soft-start and observation procedures described in Mitigation Measure BIO-1(d).

Impact Statement	Mitigation Measure(s)	Residual Impact
	• **Vessel Operation Protocols:** The MMMP shall include vessel-operation measures consistent with the MMPA. Construction vessels under power shall remain at least 300 feet from whales and 150 feet from dolphins, porpoises, seals, and sea lions. When marine mammals are encountered, vessel operators shall reduce speed to no-wake, shift to neutral, and allow the animals to pass safely before resuming operations. • **On-Site Monitoring and Response:** A qualified biologist shall be present on site, either observing from the pier or aboard a vessel, during all pile-driving and tug operations. The biologist shall document all marine-mammal observations, note behavioral responses, and immediately alert project personnel if a whale enters the modeled harassment distance or comes within 300 feet, or if any other marine mammal enters the modeled harassment distance or comes within 150 feet, whichever is greater. Upon such an observation, the contractor shall implement the appropriate delay or shutdown procedures identified in the MMMP. • **Adaptive Management and Coordination:** The MMMP shall outline communication and reporting protocols, including stop-work notification procedures and coordination with NMFS Protected Species Division. Results from daily monitoring will be used to assess the effectiveness of the protection zones and adjust them, if needed, in consultation with NMFS. • **Nighttime Pile Driving:** Nighttime pile driving shall be limited to situations where safety concerns or significant schedule delays require that pile driving started during daytime hours extend beyond typical work hours. For instances where nighttime pile driving is required, the MMMP shall include non-visual monitoring protocols, such as passive acoustic monitoring, thermal/infrared cameras, and night-vision optics, as well as larger nighttime exclusion/shutdown zones, extended soft-start procedures, and the most effective feasible hydroacoustic attenuation. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies. **HYD-1: Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition.** See Section 3.8, *Hydrology and Water Quality,* for mitigation measure details. **AES-1: Reduce Night Lighting During Construction of Facilities.** See Section 3.1, *Aesthetics*, for mitigation measure details.	
Crotch's bumblebee has a low likelihood to be present in undeveloped portions of the project site. Based on the low likelihood for this species to occur, the low quality of habitat in the project site, and the distance from the known occurrence of this species, potential impacts to Crotch's bumblebee are less than significant. Nonetheless, the City would implement Mitigation Measure 1(f), as recommended by CDFW. Implementation of this mitigation, however, does not change the conclusion that impacts to this species is less than significant without mitigation.	**BIO-1(f): Implement CDFW-Requested Measure for Crotch's Bumble Bee Prior to Construction.** A formal habitat assessment of the project site landside project disturbance areas shall be performed by a qualified biologist prior to initiating ground disturbing activities to determine if suitable nesting or foraging habitat is present within the project site. The assessment shall include: • Review of occurrence record data • Analysis of foraging, nesting, and overwintering resources • Documentation of plant species observed (including what is blooming at the time of the survey and percent cover) The locations of nesting resources, including rodent burrows, cavities, thatched grasses, brush, rock piles, fallen logs, and manmade structures, shall be mapped during the assessment. Areas adjacent (within 50 feet) to the project site shall also be considered, if accessible, to determine if there is suitable nesting or foraging habitat. If suitable nesting and foraging resources are detected during the habitat assessment, they will be avoided by a minimum 50-foot buffer, where possible. If avoidance is not possible, protocol-surveys following the CDFW *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species* (CDFW 2023) will be conducted to determine if Crotch's bumble bee is present within the project site. A minimum of three visits will be conducted during the colony active season (April – August) and will be spaced 2-4 weeks apart. Surveys will be conducted each year that construction activities occur within suitable nesting habitat, because bumble bees move their nests each year. If no Crotch's bumble bees are detected on the project site, no further mitigation actions will be required. If Crotch's bumble bees are detected, consultation with CDFW will be initiated to determine the most appropriate strategy to avoid impacts to bumble bees on the project site. If full take avoidance is not feasible, the City will apply to CDFW for take authorization under an Incidental Take Permit.	N/A

Chapter 1, Introduction

Sub-Section 1.1.3, Incorporation by Reference

Draft EIR Page 1-2:

> This EIR hereby incorporates by reference the Final Program EIR for the Expansion of Ferry Transit Service in the San Francisco Bay Area (State Clearinghouse Number 2001112048; WETA Program EIR).

Chapter 2, Project Description

Sub-Section 2.5.1, Waterside

Draft EIR Page 2-6:

> The new pier and breakwater would have safety railings, public amenities (fish cleaning station, seating, shade canopy, and security gates). In addition, at the entrance to the pier, the City is proposing a gate that would remain open to the public, except in cases where public safety requires closure, such as during a tsunami evacuation, high wind advisory, or other emergency situations. The proposed pier would be a maximum of 1,080 feet in length and would have a width of 22 feet. The reinforced concrete deck comprising the pier would be an approximately 2-foot-thick slab. Piles for the pier are discussed in Section 2.6.1 ~~2.7.2~~ below.
>
> The proposed new breakwater would create a safe harbor from the predominant southwesterly wind and waves for ferry vessel charging and boarding on the north side of the new pier. The breakwater would also offer recreational pedestrian access. The proposed breakwater would be approximately 400 feet in length and would have a width of 15 feet. The reinforced concrete deck comprising the breakwater would be an approximately 2-foot-thick slab. Piles for the breakwater are discussed in Section 2.6.1 ~~2.7.2~~ below.

Draft EIR Page 2-8:

> The project would include a Universal Charging Float or UCF featuring a 1.351 MWh Echandia battery weighing approximately 47,554 pounds. The UCF has not yet been designed and is not included in this rendering. UCF dimensions may differ from what is shown in this rendering; however, the environmental analysis in this EIR assumes a conservative maximum design envelope that encompasses potential variations in size, equipment, and operation.

Draft EIR Page 2-10:

> In accordance with standards as set by the American Society of Civil Engineers (ASCE), the proposed pier would comply with ASCE Risk Category IV requirements and base design loads. The project design ~~takes into account projected sea level rise~~ incorporates sea level rise adaptation considerations through the design of the pier, breakwater, ferry infrastructure, and related facilities.[7] Design elevations and structural elements were developed to account for projected increases in surface water levels and coastal flood conditions over the life of the project, while floating ferry facilities and gangway connections have been designed to accommodate a range of future tidal and water surface elevations. Refer to Section 3.8, *Hydrology and Water Quality*, for an evaluation of the project with respect to future flooding and sea level rise. The City prepared a Coastal Study, including a project-specific sea level rise risk assessment, consistent with applicable BCDC permit requirements.[8]

[8.] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed July 2026).

Draft EIR Page 2-11:

In addition, the UCF would include a fire suppression system for the batteries comprised of a primary fire suppression (direct foam injection system), secondary fire suppression (aerosol fire suppression), and tertiary fire suppression (freshwater deluge system). Although the final engineering design and dimensions of the UCF are not yet complete, this EIR evaluates a conservative maximum design envelope that includes all major structural, electrical, and safety components. The final UCF configuration, dimensions, and layout would be determined during final design and permitting but would not exceed the scope or introduce impacts beyond those analyzed in this EIR.

Sub-Section 2.5.2, Landside

Draft EIR Page 2-18:

… The proposed project would replace all of the existing parking spaces with 400 to 450 new parking spaces (pending final design), including ADA-accessible and EV parking spaces.

Project access is anticipated to occur via a combination of travel modes, including private vehicles, transit, bicycle, and pedestrian connections. Parking supply and demand assumptions, including the role of TDM measures, are evaluated in Section 3.12, *Transportation*, and in Appendix F, *Transportation Impact Assessment*.

Sub-Section 2.5.3, Proposed Wayfinding Signage, Lighting, and Landscaping

Draft EIR Page 2-23:

Proposed Landscaping

The proposed project would require the removal of vegetation, such as shrubs and trees from the Seawall Drive eastern berm and the eastern parking lot to accommodate the new Bay Trail Extension. Vegetation and trees would also be removed in the vicinity of the plaza and in the median at the intersection of University Avenue and Seawall Drive. In total, approximately 39 ~~40~~ trees would be removed for the proposed project, the majority of which are in poor health and include species such as Monterey Cypress, Monterey Pine, Italian Stone Pine, Japanese Black Pine, Soapwood, Blackwood Acacia, Coast Reedwood, Cataline Ironwood, and New Zealand Christmas Tree.

Sub-Section 2.6.1, Construction Activities and Equipment

Draft EIR Page 2-28:

Dredged materials and demolition debris would all be transported via barge that have a capacity of between 3,000 and 6,000 cubic yards. The location for disposal of dredged materials would depend on the sampling results of the dredged materials, as well as permitting requirements. However, based on the recently completed Berkeley Marina Dredging Project of 2024 to 2025, it is expected that disposal would occur at Montezuma Wetland Restoration Project (Beneficial Reuse), Alcatraz Disposal Site, or another disposal site in the San Francisco Bay. The dredging described above represents one-time, project-specific dredging required to establish navigable depths for ferry operations. This dredging would be conducted on behalf of the City of Berkeley and/or WETA, subject to all applicable permits and approvals from the United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), San Francisco Bay Conservation and Development Commission (BCDC), and the Dredged Material Management Office (DMMO). Although dredging would occur within the alignment of an existing USACE-designated federal navigation channel, this portion of the channel has not been maintained by USACE in recent decades and is not currently

included in an active federal maintenance dredging program. Accordingly, dredging at this location would constitute new work dredging, and the proposed project does not assume that USACE would conduct or be responsible for this initial dredging.

Sediment transport modeling prepared for the project estimates that maintenance dredging, if required, would occur infrequently. Based on modeled sedimentation rates, maintenance dredging within the approach channel may not be needed for approximately 10 to 15 years, while maintenance dredging within berth pockets may not be needed for approximately 22 to 33 years, depending on operational depth requirements.[23] Because the timing, extent, volume, methods, and regulatory requirements associated with any future maintenance dredging are presently unknown, no maintenance dredging program is proposed as part of the project at this time. Any future maintenance dredging activities would be evaluated and permitted, as required, based on the circumstances existing at that time.

[23] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf

Sub-Section 2.7.1, Operational Scenario and Ridership[23]

Draft EIR Page 2-30:

A conceptual plan for ferry service has been provided in the 2022 San Francisco Bay Area Water Emergency Transportation Authority (WETA) Berkeley Ferry Service Business Plan, Version 1.0.[24] This is a living document and updates to the Business Plan and contemplated ferry service will be ~~captured~~ described in future updates. The following ferry operation is proposed in the current Berkeley Ferry Service Business Plan, Version 1.0:

- WETA would operate two 250-passenger electric zero-emission vessels on the weekday route between Berkeley and San Francisco.
- Weekend service would operate ~~a single 250-passenger vessel to Larkspur and~~ a single 250-passenger vessel to San Francisco.
- At least three round-trip services would be completed during peak hours for the Berkeley/San Francisco weekday service, pursuant to WETA Board-adopted standards.
- The Berkeley-San Francisco service would travel 6.7 miles between the Berkeley Ferry Terminal and the San Francisco Ferry Terminal. The total one-way travel time would be 25 minutes, door-to-door. Weekday peak-direction headways[25] would be approximately 35 minutes. Weekend headways would be 70 to 110 minutes, depending on the time of day.
- ~~The Berkeley-Larkspur service would travel 11.8 miles between the terminal at the Berkeley Marina and the Larkspur Ferry Terminal. The one-way travel time would be 35 minutes, door-to-door. Weekend headways would be 90 to 150 minutes, depending on the time of day.~~
- Special event service may operate between Berkeley and San Francisco or Mission Bay (e.g., for events at the Chase Center or Oracle Park or future events at the Berkeley Marina)~~, as well as between Larkspur and Berkeley~~.

[23] As described in Chapter 1, *Introduction* of this EIR, operation of ferry vessels serving Berkeley has been analyzed by WETA in the Expansion of Ferry Transit Service in the San Francisco Bay Area Program EIR in 2003. WETA's Program EIR has been incorporated by reference.

[24] WETA. 2022. WETA Berkeley Ferry Service Business Plan, Version 1.0. March 17, 2022. Available: https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf (accessed August 2024).

[25] A headway refers to the time interval between successive ferry departures.

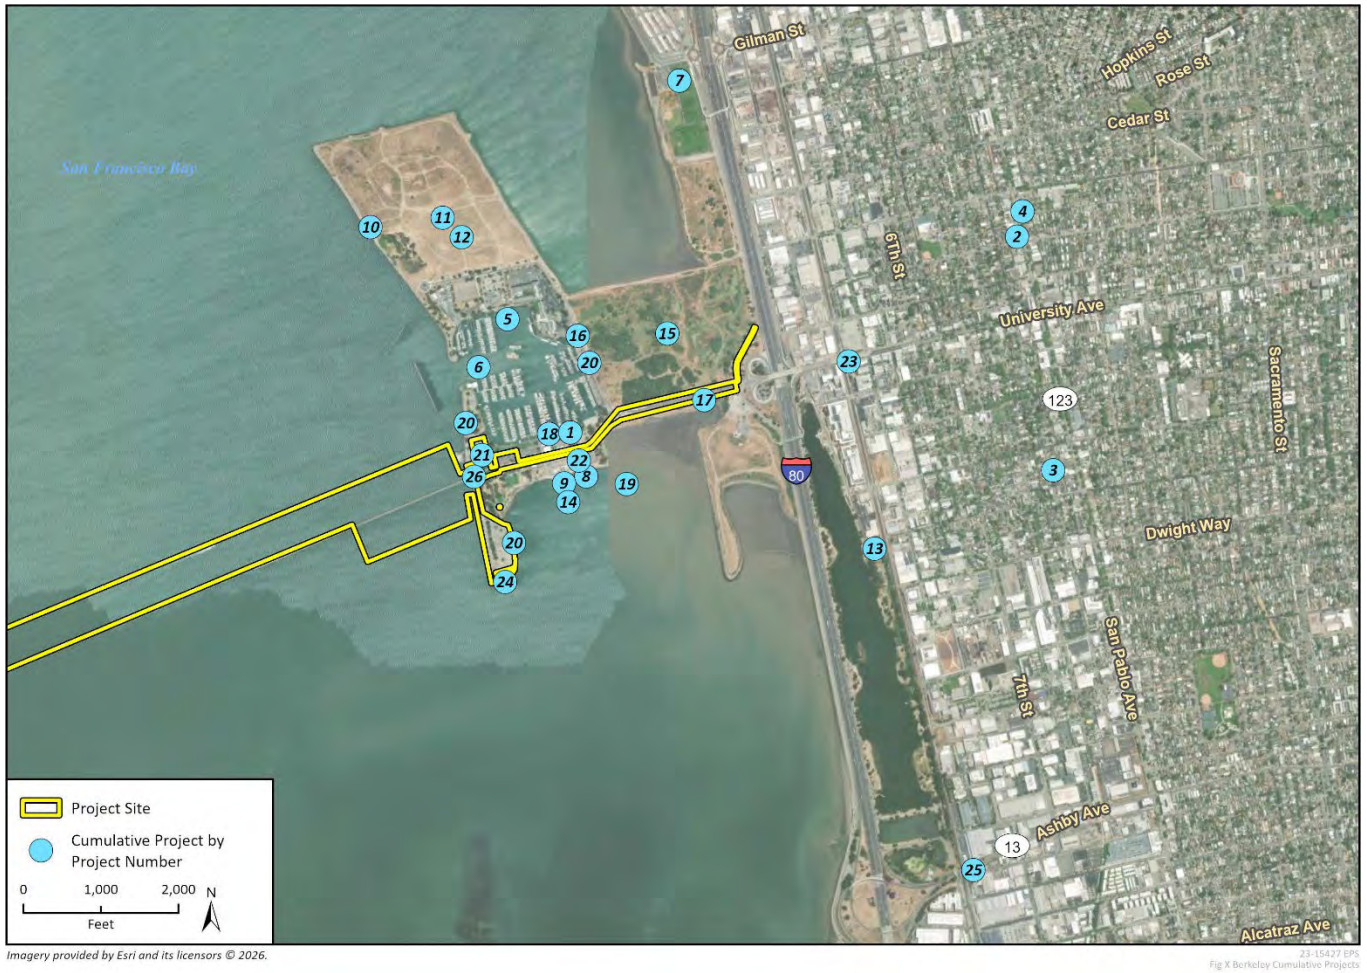
Draft EIR Page 2-31:

Table 2-4 Daily Ridership Projections (trips)

Destination	Weekday	Weekend Day	Special Events
Projected First Year of Service			
San Francisco	1,910	1,367	209
Mission Bay[1]	2,106	1,503	209
~~Larkspur[2]~~	~~–~~	~~515~~	~~104~~
Estimated Fifteenth Year of Service[1]			
San Francisco	2,110	1,510	230
Mission Bay[1]	2,320	1,660	230
~~Larkspur[2]~~	~~–~~	~~580~~	~~115~~

[1] Total trips (including stop at San Francisco Ferry Terminal) (i.e., ridership estimate is additive of Berkeley to San Francisco passengers)

~~[2] Weekend service only~~



[2] Ridership projections were developed after the onset of the COVID-19 pandemic using pre-pandemic ridership assumptions and demand data that were adjusted to reflect pandemic-related changes in travel behavior, fare structures, and ferry service demand.

Chapter 3, Environmental Impacts Analysis

Draft EIR Page 3-8:

Figure 3-1 Present and Reasonably Foreseeable Cumulative Projects Locations (Revised)[3]

[3] Figure 3-1 has been revised to reflect updates to the cumulative projects list presented in revised Table 3-1. Revisions in this Figure include: adding the Bay Trail Extension as a cumulative project (Project Number 20) and updating the numbering of Project Numbers 20 to 25 in the Draft EIR, to Project Numbers 21 to 26, to correspond with the revised cumulative projects list as shown in the revised Table 3-1.

This page intentionally left blank.

Draft EIR Pages 3-9 and 3-10:

Table 3-1 Present and Reasonably Foreseeable Cumulative Projects List

Cumulative Project Number	Name	Jurisdiction	Land Uses	Cumulative Project Characteristics			
				Cumulative Project Use	Location	Status	Brief Description
Recreation and Marina Projects							
5	D & E Dock Replacement Project [a]	Berkeley	Waterfront/Marina	Docks	Berkeley Marina Basin	~~Under Construction~~ Substantially complete. Remaining contract work anticipated to be completed by September 30, 2026.[i]	Replacement of docks, concrete piles, utilities, gangway, and gate structure. Installation of a concrete wall, slope protection, and landslide improvements. The replacement dock system consisting of 79 slips has been installed. Minor repairs and restroom improvements remain to be completed under the construction contract.
…							
7	Tom Bates Regional Sports Complex Restroom & Community Space [a]	Berkeley	Waterfront/Marina	Park facilities	400-408 Gilman Street	Design	Installation of a restroom, meeting room, storage area, one youth soccer field, and six pickle ball courts.
8	South Cove East Dock Pier Piling Repairs [a]	Berkeley	Waterfront/Marina	Docks	Easternmost public dock within the South Cove Sailing Basin	~~Design~~ Completed September 2025	Structural rehabilitation of deteriorated pier structure that leads to East Dock.
9	Replacement of South Cove Middle Dock ADA Gangway Float [a]	Berkeley	Waterfront/Marina	Docks	Connected to the middle public dock within the South Cove Sailing Basin	Design	Replacement of damaged ADA-compliant dock.
…							
20	Bay Trail Extension to the Berkeley Marina [j]	Berkeley	Waterfront/Marina	Active transportation facilities	Extends from the Bay Trail and I-80 bicycle/pedestrian overcrossing west of Frontage Road through the southern Berkeley Marina to the Berkeley Yacht Club at the north end of Seawall Drive	Partially completed	Multi-use Bay Trail extension approximately 1.2 to 1.3 miles in length. Trail implementation has occurred in phases, with initial segments completed in 2014 and Segment 3 completed in 2020. Remaining segments south of Adventure Playground toward Seawall Drive and the Berkeley Yacht Club remain dependent on future funding. [k]
Infrastructure Projects							
~~20~~21	N-Lot Parking Lot Improvements [c]	Berkeley	Parking	Parking	Berkeley Marina near Skates	Design	Parking lot improvements
~~21~~22	South Cove West Parking Lot [a]	Berkeley	Parking	Parking	South side of University Ave at the Berkeley Waterfront by Cal Adventures Club	~~Construction (expected completion date is Summer 2026)~~ Completed April 2026	~~Renovated p~~Parking lot ~~with~~ improvements including new asphalt, storm water treatment system, and new safety elements.
~~22~~23	Climate Action Plan [d]	Berkeley	Infrastructure	Mixed uses	Berkeley	Adopted	Strategic plan to improve sustainability in Berkeley through increased energy efficiency and renewable energy, improved active and public transportation, reduced waste and improved accessibility to locally produced food.
~~23~~24	199 Seawall Structural Repair Project [e]	Berkeley	Waterfront/Marina	Improved structural integrity	199 Seawall Drive	Planning	Installation of new pilings to reinforce concrete on eastern side of the building, repairs to a failed beam support, and repairs to existing pilings.
~~24~~25	Interstate 80/Ashby Avenue (SR-13) Interchange Improvements [f]	Alameda County Transportation Commission, Caltrans	Transportation Infrastructure	Transportation	I-80 and Ashby Avenue interchange	Design	Reconstruct the interchange to improve traffic flow, safety, and multimodal access, including a separate pedestrian and bicycle overcrossing connecting Shellmound Street to the Bay Trail.

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Cumulative Project Number	Name	Jurisdiction	Land Uses	Cumulative Project Characteristics			
				Cumulative Project Use	Location	Status	Brief Description
~~25~~26	Local Bus Service Frequency Upgrades | AC Transit | Systemwide [f]	Alameda County Transit	Infrastructure, Transportation	Enhanced transit access and frequency in high-demand corridors	Alameda; Routes 72/72M/72R and 51B	Implementation	Upgrades bus frequency to 5-10-minute peak headways on routes 72, 72M, 72R, and 51B, which serve key access points to the Berkeley Waterfront.

Section 3.1, Aesthetics

Sub-Section 3.1.2, Environmental Setting

Draft EIR Page 3.1-8:

Primary stationary sources of light at the project site include streetlights, parking lot and safety lighting, pier lighting, and exterior building lights. Automobile headlights also create temporary, mobile sources of light along proximate roadways and within on-site and nearby parking lots. Refer to Figure 3.1-2, Photograph 1 for a representative photograph of the existing lighting on the pier. Refer to Figure 3.1-2, Photograph 2 for a photograph of the Berkeley Waterfront, which shows the nighttime lighting on the pier, as well as the Seawall Drive Parking lot (refer to the middle of the photograph, to the peninsula located to the left of the pier).

As described in Chapter 2, *Project Description*, existing lighting is present on the closed pier (28 lights spaced approximately 110 feet apart from each other on the north side of the closed pier), as well as the existing Seawall Drive parking lot (eight lights in parking islands).

Sub-Section 3.1.3, Regulatory Framework

Draft EIR Page 3.1-16:

San Francisco Bay Plan

The San Francisco Bay Plan[8] developed by the San Francisco Bay Conservation and Development Commission (BCDC) aims to maintain and enhance the Bay as a body of water that affords scenic enjoyment. Key aesthetics objectives in the form of findings and policies applicable to the proposed project include the following:

…

- Transportation Policies
  - Policy 4. Transportation projects on the Bay shoreline and bridges over the Bay or certain waterways should include pedestrian and bicycle paths that will either be a part of the Bay Trail or connect the Bay Trail with other regional and community trails. Transportation projects should be designed to maintain and enhance visual and physical access to the Bay and along the Bay shoreline.

Public Access Design Guidelines for Shoreline Spaces[9]

The BCDC Public Access Design Guidelines for Shoreline Spaces (BCDC 2005) provides guidelines for shoreline design. Guidelines related to visual resources are listed below.

- Taking advantage of existing site characteristics and opportunities, such as fishing, viewing, picnicking, swimming or boating.
- Locating buildings, structures, parking lots and landscaping of new shoreline projects such that they enhance and dramatize views of the Bay and the shoreline from public thoroughfares and other public spaces.
- Organizing shoreline development to allow Bay views and access between buildings. • In hilly areas, designing and locating shoreline buildings to allow for upland views down to the Bay and to Bay access areas.
- In hilly areas, employing split-level roads to increase viewing and landscaping potential.
- Designing towers, bridges or other structures as landmarks that suggest the location of the waterfront, even when the Bay itself is not visible.
- Providing visual interest and architectural variety in massing and height to new buildings along the shoreline.

- Using building footprints to create a diversity of public spaces along the Bay.
- Articulating shoreline building facades with human-scale elements.
- Using forms, materials, colors and textures that are compatible with the Bay and adjacent development.
- Locating service areas, such as garbage facilities and loading docks, away from the shoreline or screen them with suitable fencing or landscaping.
- Utilizing the shoreline for Bay-related land uses as much as possible; uses that do not complement the Bay should be set back from and not impact the shoreline.
- Orienting the development to Bay views and providing physical connections to the Bay at every opportunity.
- Orienting public access areas and improvements to take advantage of views of opposite shores, landmarks (such as islands and bridges) and adjacent maritime activities such as boat launching, gas docks, ferry landings or other marine-related uses.
- Utilizing the shoreline for Bay-related uses. Uses that do not orient to the Bay should be set well back from the Bay and be sited, designed and managed so as to not impact the shoreline.
- Provide buffers between roadways and public access areas, such as planting, low berms or roadside parking, and maintain views to the Bay.
- Provide parking for shoreline access areas where appropriate, but keep parking areas reasonably sized, away from the Bay and adequately screened.
- Provide small bayside parking areas or pull-offs for limited in-car Bay viewing, where compatible with existing roads and adjacent uses.
- Provide elevated places for viewing the Bay.
- Use site furnishings, such as benches, trash containers and lighting, to provide visual cues that the shoreline space is available for public use.
- Use lighting to extend the hours of shoreline use.
- Locate night lighting away from sensitive habitat areas.
- Provide enough lighting to create a sense of safety, but designing to control intensity, glare, and spillover.

[8.] BCDC. 1969. San Francisco Bay Plan. Available: https://bcdc.ca.gov/resources/plans/san-francisco-bay-plan/#introduction. (accessed September 2024).

[9.] BCDC. 2005. Shoreline Spaces: Public Access Design Guidelines for the San Francisco Bay. Available at: https://www.bcdc.ca.gov/wp-content/uploads/sites/354/2023/09/Public-Access-Design-Guidelines-Shoreline-Spaces-PDF.pdf. Accessed June 2026.

Sub-Section 3.1.4, Impacts Analysis

Draft EIR Page 3.1-30:

As shown in Figure 3.1-4 and Figure 3.1-5, the proposed ferry infrastructure would introduce a series of linear horizontal and vertical features and planes which would be visually consistent with the proposed pier infrastructure, but would be contrasted against the surrounding water in the Bay. These features would be most visually prominent on the north side of the proposed pier; when viewed from the south (Figure 3.1-5), views of the proposed ferry infrastructure would be interrupted and partially obscured by the sequence of evenly-spaced pier pilings. When viewed from a distance (Figure 3.1-6 and Figure 3.1-8), the proposed ferry infrastructure would not present as a prominent visual feature, and would not exceed the height of the proposed pier infrastructure in a manner that would result in the degradation of surrounding views. Individual ferry vessel(s) would also be similar in size, and

perform similar functions, to those already present in the vicinity; and thus, would integrate with existing boat traffic.

As described in Chapter 2, *Project Description*, ferry operations are evaluated using a representative weekday and weekend service scenario that reflects the maximum reasonably foreseeable level of service for purposes of environmental review (refer to Section 2.7, pages 2-30 through 2-33). While specific schedules, frequencies, and operational details may vary over time, the analysis evaluates vessel presence and activity within the viewshed based on these planning-level assumptions.

While the visual character of the proposed ferry infrastructure would introduce new materials and massing, and additional vessels would be intermittently present in the viewshed, these components would be consistent with visual character of the surrounding infrastructure and development. Impacts would be less than significant.

Draft EIR Page 3.1-32:

As shown in Figure 3.1-7, the existing shoreline is characterized by natural elements; specifically, the mature tree canopy provides a soft, variable tree line which largely dominates the view as it contrasts against the sky. The proposed solar panels over the parking area present a distinct, solid horizontal line against the sky that is generally only visible from KVP 4; all other viewpoints discussed herein lack prominent views of the proposed solar panels due to their location and angle of view. Distant structures and development across the Bay are vaguely visible through the series of vertical lines created by the solar support columns. The solar shade structures introduce new linear elements and repetitive architectural forms, replacing previously organic shapes and softened skyline with geometric forms and engineered materials. The proposed redevelopment of this area introduces more distinct built elements that would contrast with the existing naturalized features. While the proposed project would result in visual changes to this area, the proposed updates to the Seawall Drive parking lot would be compatible with existing uses, would enhance the site's functionality while incorporating clean energy solutions, and would be designed and implemented in adherence to the BCDC Public Access Design Guidelines for Shoreline Spaces[10] and the City's goals, policies, and development review criteria related to the maintenance and enhancement of visual character, while also aligning with the City's renewable energy goals. For these reasons, impacts would be less than significant.

[10.] San Francisco Bay Conservation and Development Commission (BCDC). 2005. Public Access Design Guidelines for the San Francisco Bay: Shoreline Spaces. https://www.bcdc.ca.gov/wp-content/uploads/sites/354/2023/09/Public-Access-Design-Guidelines-Shoreline-Spaces-PDF.pdf (accessed July 2026).

Draft EIR Page 3.1-33:

Operation

The BCDC Public Access Design Guidelines for Shoreline Spaces (BCDC 2005) provides guidelines for shoreline design. Guidelines related to lighting include:

- Using site furnishings, such as benches, trash containers and lighting, to provide visual cues that the shoreline space is available for public use;
- Using lighting to extend the hours of shoreline use;
- Locating night lighting away from sensitive habitat areas; and
- Providing enough lighting to create a sense of safety, but designing to control intensity, glare, and spillover.

The proposed project would include the following lighting features:

- Wayfinding signage lighting along University Avenue, Seawall Drive, and the proposed Bay Trail Extension

- Lighting at the Seawall Drive parking lot
- Lighting on the new pier, breakwater, gangways, and floats
- Lighting at the new public plaza

Down-cast LED lights would be placed approximately every 50-feet along the Pier and Breakwater on 16-foot tall poles. The pier canopy structure would be fitted with LED linear downlights attached to the roof and wall sconces attached to the columns. Stainless steel guardrails on the pier would contain LED handrail point lighting aimed at the deck, which would also to be used for emergency egress lighting. A solar-powered marine signal light would be installed on the float. Emergency LED path of egress lighting would also be installed on the central inverter. The proposed project lighting is required to support safe nighttime use of University Avenue, Seawall Drive, the proposed Bay Trail Extension, Seawall Drive parking lot, and pier by providing adequate visibility for pedestrian circulation, wayfinding, vehicle maneuvering, and hazard avoidance during hours of darkness, as required by the BCDC. ~~Furthermore, lighting~~ All project light fixtures would be photocell-controlled area lighting in compliance with Illuminating Engineering Society (IES) and DarkSky recommendation to minimize glare, reduce light trespass, and avoid light pollution. With utilization of DarkSky approved light fixtures, operational impacts related to new sources of light would be less than significant.

Vehicular traffic from the proposed project would result in an increase in mobile light sources (i.e., vehicle headlights) in the project vicinity. The existing visual setting is characterized by developed land uses, established roadway infrastructure, and ongoing vehicular activity that already introduces intermittent headlight illumination and associated glare during nighttime hours; thus, the baseline environment includes regular exposure to such light sources. As described in Section 3.12, *Transportation*, and Appendix F, the Project is estimated to generate 1,127 daily vehicle trips; however, it is anticipated that most of these trips are not new trips, and were originally headed to San Francisco by driving across the Bay Bridge. Project-generated traffic would incrementally increase the number of vehicles on nearby roadways, increasing the frequency of headlight visibility within the viewshed. However, this increase would be minor and dispersed, occurring within existing roadway corridors and parking areas already defined by vehicular movement and associated lighting. Vehicle headlights are inherently transient, directional, and mobile, producing short-duration illumination rather than static or concentrated light sources. Accordingly, the project would not substantially increase ambient nighttime illumination or introduce new patterns of light spill or glare beyond existing conditions. This impact would be less than significant.

It is not anticipated that significant operational daytime glare would occur from proposed project structures (e.g. pier, breakwater, ferry infrastructure), given the lack of reflective materials in the proposed facility. While the surface of water is reflective, this would not be a change from existing conditions and, thus, would not introduce new sources of daytime glare. Potential glare resulting from Bay water would appear similar in character to existing, surrounding Bay water at the project site. Therefore, operational glare impacts related to new sources of glare would be less than significant.

Discussion of project impacts to biological resources associated with proposed project lighting is included in Section 3.3, *Biological Resources*.

Section 3.2, Air Quality

Sub-Section 3.2.4, Impacts Analysis

Draft EIR Page 3.2-21:

This analysis uses the Bay Area Air District ~~May 2017~~ 2022 CEQA Air Quality Guidelines to evaluate air quality. Air pollutant emissions generated by project construction and operation were estimated using the California Emissions Estimator Model (CalEEMod), version 2022.1. CalEEMod uses project-specific information, including the project's land uses, square footage for different uses (e.g.,

restroom building and parking), and location, to model a project's construction and operational emissions. The analysis reflects the construction and operation of the proposed project as described under Section 2, Project Description.

Draft EIR Page 3.2-24:

The Bay Area Air District ~~May 2017~~ 2022 *CEQA Air Quality Guidelines* include project-level thresholds for construction-related and long-term operational emissions of air pollutants. These thresholds represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. Construction emissions associated with plan implementation are discussed qualitatively to evaluate potential air quality impacts.

For health risks associated with TAC and $PM_{2.5}$ emissions, the Bay Area Air District ~~May 2017~~ 2022 *CEQA Air Quality Guidelines* state a project would result in a significant impact if ~~the~~ any of the following thresholds are exceeded:

Section 3.3, Biological Resources

Sub-Section 3.3.2, Environmental Setting

Draft EIR Page 3.3-7:

The California Essential Habitat Connectivity Project, commissioned by the California Department of Transportation (Caltrans) and CDFW, identifies "Natural Landscape Blocks" which support native biodiversity and the "Essential Connectivity Areas" which link them.[35]

The Pacific Flyway is the westernmost of North America's four major migratory corridors. Each year millions of birds travel the Pacific Flyway between northern breeding areas and southern wintering grounds, relying on a chain of coastal and inland stopovers for feeding and rest. This migration corridor extends from Alaska through western North America to Central and South America, and is used by waterfowl, shorebirds, raptors, and passerines. The San Francisco Bay is one of the most important stopovers along the Pacific Flyway, as the largest estuary on the West Coast.

PROJECT SITE

Most of the project site is developed and urbanized and does not provide for wildlife movement corridors. The project site is not located within an Essential Connectivity Area or Natural Landscape Block.[36] However, the project site is located within Baylands adjacent to marine foraging habitat, and trees within the project site may provide roosting habitat for migratory birds. The old pier and pilings also provide roosting and migration staging habitat for migratory waterfowl, seabirds, and shorebirds.

Draft EIR Page 3.3-8:

Water temperature in San Francisco Bay ranges from 53 °F to 60 °F. According to 2022 U.S. Environmental Protection Agency (USEPA) Waterbody Reports, water quality in the San Francisco Bay Estuaries watershed is considered a CWA Section 303d impaired waterbody. Salinity in the vicinity of the project site is estuarine and seasonally variable, influenced by tidal exchange and freshwater inflow from the Delta, and typically ranges between 10 to 20 ppt.[38] Ambient levels of turbidity in the San Francisco Bay are naturally elevated and highly variable due to tides, wind, and vessel traffic;

resuspension of fine bay mud is common. Water quality is monitored for physical, chemical, and biological factors. The assessment of the water quality is analyzed against USEPA-approved water standards or thresholds, and water quality can either be categorized as good or impaired. The water quality parameters evaluated along the San Francisco Bay shoreline included dioxins, mercury, polychlorinated biphenyls, pesticides, foreign plants and/or animals, and trash. Bathymetric data indicates maximum depth within the project site at the end of the pier is approximately ten feet at mean lower low water (MLLW), and less than five feet at MLLW within the South Sailing Basin (Figure 3.3 2).

Draft EIR Page 3.3-9:

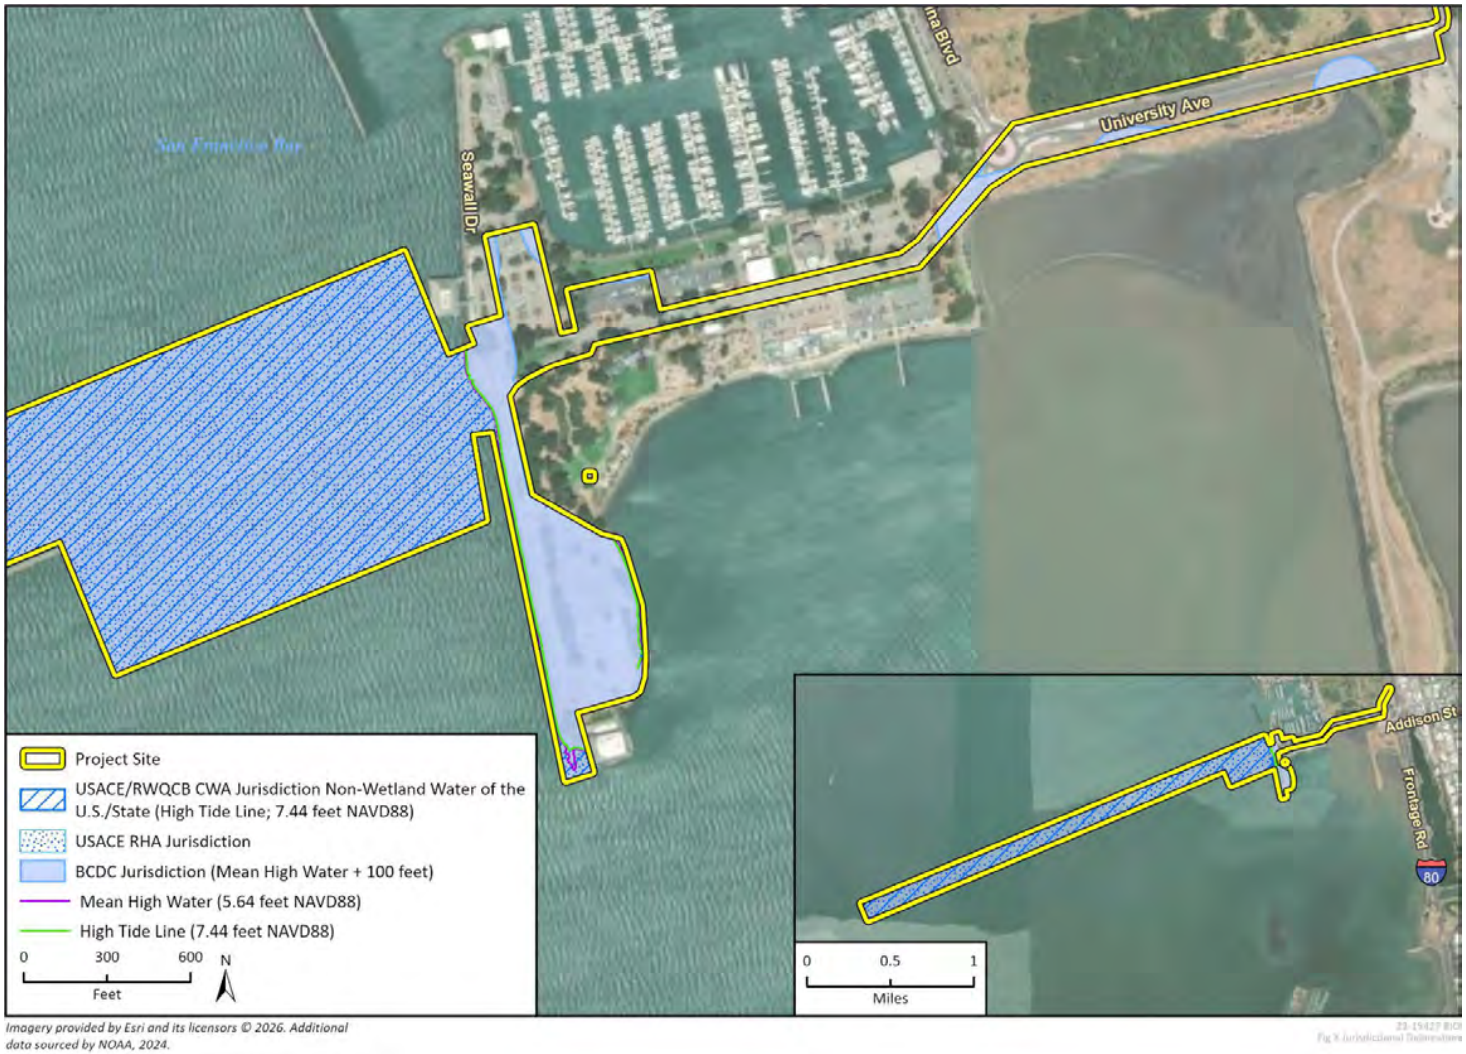

Figure 3.3-2 Marine Habitat Types Within and Proximate to the Project ~~Footprint~~ Site (Revised)[39]

[39] Figure 3.3-2 has been revised to reflect the updated project footprint and to clarify the marine habitat types and structural features within and adjacent to the project site. The revised figure separately depicts subtidal nearshore marine habitat, riprap, and pier pilings and other structures; updates mapped San Francisco Bay Eelgrass based on BCDC 2020 data; removes the previously shown bathymetric contours; and improves the map extent and inset to enhance the visibility of marine habitat features.

Draft EIR Page 3.3-16:

Figure 3.3-3 BCDC Jurisdiction Limits (Revised)[56]

[56] Figure 3.3-3 ~~shows the City's current understanding of~~ has been revised to reflect updated BCDC jurisdictional boundaries, ~~based on available information~~ as confirmed by BCDC staff on April 9, 2026. The revision incorporates an updated project footprint and adjusts the mapped BCDC Shoreline Band jurisdiction near Seawall Drive and University Avenue, including approximately 20,930 square feet east of Seawall Drive.

Draft EIR Page 3.3-17 and 3.3-18:

Fifty-one ~~Forty-seven~~ (~~47~~ 51) terrestrial special-status wildlife species were assessed for their potential to occur within the project site (Appendix C), of which 12 ~~seven~~ have the potential to occur within the terrestrial portions of the project site. One species, double-crested cormorant (*Nannopterum auritum*, CDFW Watch List), was determined to have a moderate potential to occur and is discussed in further detail below.

In addition, the following ~~six~~ 11 species (one insect, one reptile, and ~~four~~ nine avian species) were determined to have a low potential to occur, and therefore, with the exception of Crotch's bumble bee and burrowing owl (due to their State candidate endangered status), least tern, and the northwestern pond turtle (which is discussed further due to the proximity of potential habitat near the project site), are not discussed further because they are unlikely to be affected by the project:

- Crotch's bumble bee (*Bombus crotchii*, State candidate endangered)
- Northwestern pond turtle (*Actinemys marmorata*, federally proposed threatened, State species of special concern [SSC])
- Cooper's hawk (*Accipiter cooperii*, CDFW Watch List)
- Burrowing owl (*Athene cunicularia*, State candidate)
- Common loon (*Gavia immer*, SSC)
- Brant (*Branta bernicla*, SSC)
- White-tailed kite (*Elanus leucurus*, State fully protected)
- Alameda song sparrow (*Melospiza melodia pusillula*, SSC)
- Osprey (*Pandion haliaetus*, CDFW Watch List)
- Least tern (*Sternula antillarum browni*, Federally endangered, State endangered, State fully protected)
- Elegant tern (*Thalasseus elegans*, CDFW Watch List)

The remaining ~~40~~39 terrestrial species evaluated are not expected to occur in the project site or the immediate vicinity based on the absence of grassland, woodland, chaparral, vernal pool, or other suitable natural habitats or vegetation communities and/or because the range of the species does not overlap with the project site.

[…]

Burrowing Owl

Burrowing owl occupy open, dry habitats such as grasslands, coastal dunes, salt marsh edges, and sparsely vegetated disturbed sites that support abundant small mammal and insect prey. The species relies on a mix of invertebrates and small vertebrates for foraging, with peak activity at dawn and dusk. Nesting and roosting typically occur in underground burrows—often those excavated by ground squirrels, pocket gophers, or other fossorial mammals—or in artificial burrows and cavities with loose soil for excavation, while nonbreeding individuals favor undisturbed, low-vegetation areas for shelter and foraging.

Although one occurrence has been documented within five miles of the project site and burrowing owls are known to overwinter at Cesar Chavez Park ("Farmworkers Park"), the project site itself does not provide the habitat conditions required for overwintering. The site lacks open, low-stature annual grassland and protected foraging areas with sufficient insect prey, which are essential for sustaining overwintering individuals.

Adjacent areas, including fragmented grasslands in Shorebird Park and along University Avenue, contain limited open space but do not provide suitable overwintering habitat. While some ground

squirrel burrows are present, these grassland areas are routinely mowed for park use and subject to heavy recreational use and frequent human disturbance, which reduces prey availability and limits habitat suitability. In addition, the grassland areas along University Avenue are narrow and linear, lack refuge from disturbance due to regular trail use, recreation, and the presence of dogs, and are exposed to numerous tall perching structures that support hawks and other avian predators.

A migrating or displaced individual could briefly land on the project site or within nearby areas during movement; therefore, this species has a low potential to occur.

Crotch's Bumble Bee

Crotch's bumble bee occupies open, dry habitats such as coastal scrub, grasslands, chaparral margins, and sparsely vegetated alluvial terraces that support abundant spring and early summer blooming plants. The species relies on diverse nectar and pollen resources. Nesting typically occurs in abandoned rodent burrows or concealed upland cavities with sufficient thatch or loose soil, while overwintering queens select undisturbed, well drained areas.

Crotch's bumble bee has only one known occurrence recorded within five miles of the project site. Suitable habitat on the project site is of low quality because most terrestrial areas of the project site are paved or landscaped with sparse floral resources for foraging. Although small mammal burrows on the project site may provide suitable nesting habitat and floral resources for foraging occur adjacent to the site, the highly developed character of the project site and associated anthropogenic disturbance reduce the availability and connectivity of habitat needed to support the species. Therefore, there is low potential for this species to occur within the project site.

Draft EIR Page 3.3-19:

Least Tern

California least tern is a small tern with a distinctive black-capped head and is federally endangered, State endangered, and a State fully protected species. This species nests along the California coast and breeds colonially on bare or sparsely vegetated areas.[62] The California least tern nests during summer from Baja California north to the San Francisco Bay. Least terns are migratory and spend winter months in coastal areas of Mexico and Central America. Least terns forage primarily on silversides (e.g., topsmelt), northern anchovies, Pacific herring, and surfperches.[63] This species nests in colonies on bare or sparsely vegetated flat substrates, including beaches, alkali flats, or paved areas.

California least terns have a low potential to forage over open water within and adjacent to the project site. This species has no potential to nest within the project site despite the presence of bare or sparsely vegetated areas due to the heavy recreational use and disturbed nature of the project site.

[…]

MARINE AND ANADROMOUS WILDLIFE SPECIES

Twenty-three ~~two~~ (~~22~~ 23) special-status marine species were evaluated for their potential to occur within the project site (Appendix C), of which 13~~2~~ have high to moderate potential to occur within the marine areas of the project site. The species that can be reasonably anticipated to occur were determined based on the published ranges of the species, and the type, extent, and condition of habitat available at the project site.

Seven species have a high potential to occur in the project site:

- Green sturgeon – Southern DPS (*Acipenser medirostris*, pop. 1 federally threatened, SSC)
- White sturgeon (*Acipenser transmontanus*, State candidate threatened) non-breeding
- Chinook salmon – Sacramento River Winter-Run Evolutionarily Significant Unit (ESU) (*Oncorhynchus tshawytscha*, pop. 7 federally and State endangered) non-breeding

- Pacific lamprey (*Entosphenus tridentatus*, SSC)
- Longfin smelt – San Francisco Bay-Delta DPS (*Spirinchus thaleichthys,* pop. 2 federally endangered and State threatened)
- Harbor seal (*Phoca vitulina richardii*, MMPA)
- California sea lion (*Zalophus californianus*, MMPA)

~~Five~~ Six species have a moderate potential to occur within the project site:

- Steelhead – Central California coast DPS (*Oncorhynchus mykiss irideus*, pop. 8 federally threatened) non-breeding
- Steelhead – Central Valley DPS (*Oncorhynchus mykiss irideus*, pop. 11 federally threatened) non-breeding
- Chinook salmon – Central Valley spring-run ESU (*Oncorhynchus tshawytscha*, pop. 11 federally threatened) non-breeding
- Chinook salmon – Central Valley fall/late fall-run ESU (*Oncorhynchus tshawytscha*, pop. 13, SSC) non-breeding
- Harbor porpoise (*Phocoena phocoena*, MMPA)
- Common bottlenose dolphin (*Tursiops truncates*, MMPA)

Draft EIR Page 3.3-22:

Chinook Salmon - Central Valley Spring-Run ESU

The Chinook salmon - Central Valley spring-run ESU is federally threatened. Chinook salmon is an anadromous fish spending most of its life in coastal waters. This population of chinook salmon spawns in the Sacramento River and its tributaries. Juveniles are reared in the San Joaquin Delta and migrate to the ocean between December, January, and February, and adult immigration through the delta and into the lower Sacramento River occurs from late January to early February.[67] Therefore, there is a moderate potential for individuals to migrate, forage, and transit within the project site.

Chinook Salmon – Central Valley fall/late-fall-run ESU

The Chinook salmon - Central Valley fall/late-fall-run ESU includes both fall-run and late-fall-run Chinook salmon; however, only the fall-run is a CDFW SSC. Chinook salmon are anadromous, spending the majority of their life cycle in marine waters before returning to freshwater systems to spawn. Fall-run Chinook salmon migrate upstream through the San Joaquin Delta from July through December and spawn from early October through late December, with the timing of runs varying by stream.[68] Late fall-run Chinook salmon migrate through the San Joaquin Delta from mid-October through December and spawn from January through mid-April. Following emergence, most juvenile fall-run and late-fall-run Chinook salmon rear in freshwater for approximately one to seven months before emigrating to the ocean, while a smaller proportion remain in freshwater and migrate as yearlings. Among the Central Valley Chinook salmon populations, the fall-run is the most abundant and exhibits a life history strategy characterized by a relatively short freshwater residence period. The fall-run population emigrates to the ocean during the spring, prior to the onset of elevated summer

water temperatures, allowing juveniles to utilize lower-elevation reaches of Central Valley rivers during outmigration. This life history strategy, combined with the population's relative abundance, has resulted in fall-run Chinook salmon being the primary stock propagated at the five major Central Valley hatcheries.[69] Based on the species' migration ecology, habitat use, and the location of the project site within a potential migratory corridor, there is moderate potential for Central Valley fall-run/late-fall-run Chinook salmon to occur within the project site and vicinity during migration or dispersal periods. Individuals may use aquatic habitats within or adjacent to the project site for passage and transient foraging; however, the project site does not provide suitable spawning or long-term rearing habitat.

Sub-Section 3.3.3, Regulatory Framework

Draft EIR Page 3.3-32:

The SWRCB and RWQCBs have not currently established regulations for field determinations of waters of the State except for wetlands. In many cases, the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM unless isolated conditions or ephemeral waters are present. However, in the absence of statewide guidance, each RWQCB may interpret jurisdictional boundaries within their region, and the SWRCB has encouraged applicants to confirm jurisdictional limits with their RWQCB before submitting applications. As determined by the RWQCB, waters of the State may include riparian areas or other locations outside the OHWM, leading to a larger jurisdictional area over a given water body compared to USACE. The San Francisco Regional Water Quality Control Board has indicated that along creeks and rivers, they would assert jurisdiction up to at least the top of bank and along the Bay shoreline, and they consider that areas of the bank below the epochal high tide line to be regulated waters of the State. For the purposes of this EIR, the one-year extreme high tide line was used to delineate the extent of jurisdictional waters, in line with USACE guidance, and assumed to encompass both waters of the U.S. and waters of the State. Further coordination with the SFRWQCB will be conducted during the permitting process.

Sub-Section 3.3.4, Impacts Analysis

Draft EIR Page 3.3-43:

Special-status Wildlife

Crotch's Bumblebee, Northwestern Pond Turtle, Burrowing Owl, Double-Crested Cormorant, Least Tern, and Nesting Birds

Crotch's bumblebee (state candidate endangered), ~~Northwestern~~ northwestern pond turtle (federally proposed threatened, SSC), burrowing owl (state candidate), and least tern (federally endangered, state endangered, and state fully protected) ~~has~~ have a low potential and double-crested cormorant (CDFW Watch List) has a moderate potential to occur in terrestrial portions…during the nesting season.

Crotch's bumblebee has a low likelihood to be present in undeveloped portions of the project site. Based on the low likelihood for this species to occur, the low quality of habitat in the project site, and the distance from the known occurrence of this species, potential impacts to Crotch's bumblebee are less than significant. Nonetheless, the City would implement Mitigation Measure 1(f), as recommended by CDFW. Implementation of this agency-requested mitigation, however, does not change the conclusion that impacts to this species is less than significant without mitigation due to the low likelihood of occurrence.

…Impacts to northwestern pond turtle would be potentially significant and Mitigation Measures BIO-1(a) and BIO-1(b) would be required.

California least tern may forage over open water portions of the project site but does not have potential to breed within the project site. Temporary impacts during construction would occur within open water areas, temporarily excluding least tern from a small portion of their greater foraging area, that is, open water within the San Francisco Bay. Similar foraging habitat is available along the shoreline to the north and south of areas to be temporarily impacted by the project, thus impacts to least tern would be less than significant.

[…]

However, implementation of Mitigation Measures BIO-1(a), BIO-1(b), and BIO-1(c) would require a Worker Environmental Awareness Program (WEAP), as well as preconstruction surveys for and avoidance of northwestern pond turtle, burrowing owl, and nesting birds. Biologists responsible for implementing Mitigation Measure BIO-1(a) and other biological mitigation measures would be required to meet any qualifications for approval requirements established by applicable resource agencies through project permits and authorizations. Mitigation Measure BIO-1(a) would include Crotch's Bumble Bee as part of the WEAP; however, this does not change the conclusion that impacts to this species would be less than significant without mitigation. These mitigation measures would reduce construction related impacts to terrestrial special-status species (i.e., northwestern pond turtle) and birds protected under the MBTA and CFGC to less than significant after mitigation.

Draft EIR Page 3.3-44:

Marine

Special-status Fish

The following analysis applies for the following species: green sturgeon - Southern DPS; white sturgeon non-breeding; chinook salmon - Sacramento River Winter-Run ESU non-breeding; Pacific lamprey; longfin smelt - San Francisco Bay-Delta DPS; steelhead - Central California coast DPS non-breeding; steelhead - Central Valley DPS non-breeding; ~~and~~ chinook salmon - Central Valley spring-run ESU non-breeding; and chinook salmon - Central Valley fall/late-fall-run ESU non-breeding.

Draft EIR Page 3.3-45:

However, Mitigation Measure BIO-1(a) and BIO-1(d) would be required. Mitigation Measure BIO-1(a), which requires a Worker Environmental Awareness Program (in part to support implementation of Mitigation Measure BIO-1(d)), and Mitigation Measure BIO-1(d), which dictates seasonal work windows, soft-start and ramp-up procedures, exclusion zones, and sound attenuation measures during pile driving, would reduce impacts related to special-status fish to less than significant with mitigation. Soft-start procedures would occur when pile driving and pile-extraction activities commence during daytime hours, allowing marine mammals to leave the vicinity of the construction site before pile driving reaches full power. Nighttime pile driving, if required, would only occur as a continuation of work initiated during the daytime after implementation of the daytime soft-start procedures. In addition, the City would consult with NOAA Fisheries and CDFW during the permitting process.

Draft EIR Page 3.3-46:

In addition, the City would consult with NOAA Fisheries, USFWS, SFRWQCB, and CDFW during the permitting process.

Draft EIR Page 3.3-47:

In addition, the City would consult with NOAA Fisheries, USFWS, SFRWQCB, and CDFW during the permitting process.

Draft EIR Page 3.3-48:

However, Mitigation Measure BIO-1(a) and BIO-1(d) would be required. Mitigation Measure BIO-1(d) requires implementation of soft-start and ramp-up procedures, monitoring, and exclusion zones based on the most current NMFS-approved guidance to avoid and minimize marine mammal exposure to pile-driving noise. Soft-start procedures would occur when pile driving and pile-extraction activities commence during daytime hours, allowing marine mammals to leave the vicinity of the construction site before pile driving reaches full power. Nighttime pile driving, if required, would only occur as a continuation of work initiated during the daytime after implementation of the daytime soft-start procedures. Implementation of these measures would reduce construction related, pile-driving noise impacts related to special-status marine mammals to less than significant with mitigation.

Draft EIR Page 3.3-50:

In addition to the Worker Environmental Awareness Program required under Mitigation Measures BIO-1(a), implementation of BIO-1(d), BIO-1(e), and HYD-1 would also be required to mitigate impacts on marine mammals during construction. The MMMP developed under BIO-1(e) would apply the project's hydroacoustic analysis to establish Level A and Level B protection zones and integrate these with the soft-start procedures and observation protocols identified in Mitigation Measure BIO-1(d). These measures would require soft-start techniques, a sound curtain, buffer zones, and biological monitoring to address impacts due to pile driving noise. Soft-start procedures would be implemented at the start of pile-driving and pile-extraction activities, which would only commence during the daytime, allowing marine mammals to leave the vicinity before pile driving reaches full power. Any nighttime pile driving, if required, would occur only as a continuation of work initiated during the daytime after implementation of the daytime soft-start procedures. Mitigation Measure BIO-1(d) would ensure that any impacts to marine mammals would avoid injury and be limited to behavioral impacts, and would thus be less than significant.

Draft EIR Page 3.3-51:

SPECIAL-STATUS WILDLIFE

The proposed project would primarily occur within existing developed areas, and would not involve significant new levels of disturbance to suitable Crotch's bumble bee habitat or to the mouth of Strawberry Creek… Therefore, impacts on northwestern pond turtle due to operation would be less than significant.

Impacts to California least tern from operation would be minimal, with the ferry operating in open water and the existing use of the project site for recreation would continue with similar levels of activity and disturbance. Wake generated by ferry operation would be consistent with existing vessel operations in the Bay, thus impacts to California least tern foraging habitat due to project operation would be less than significant.

Impacts on nesting birds, including double-crested cormorant, from operation would also be minimal. Any additional lighting added as part of the project, as discussed in *Section 3.1, Aesthetics,* under Impact AES-4, would be designed in accordance with City ordinance, and would be similar to existing levels of lighting present on the project site. The ferry would operate in open water, and the existing

use of the project site for recreation would continue with similar levels of activity and disturbance. Wake generated by ferry operation would be consistent with existing vessel operations in the Bay and not result in disturbance to nesting or roosting habitats above the existing shoreline riprap armoring. Therefore, impacts on migratory and nesting birds due to operation would be less than significant.

Draft EIR Page 3.3-52:

While the electric ferry vessels would introduce a new noise source, they would generate significantly less noise, especially at lower frequency sounds, than traditional diesel engines. Underwater noise measurements made of various hybrid electric and conventional ferry vessels indicate that a ship retrofitted with electric motors, generators, and batteries (Tellus) radiated less underwater noise than a ship with a conventional diesel propulsion system (Neptunus). A report from 2024 prepared by Silent@Sea notes the following: "according to our measurements, Tellus radiates less underwater noise than Neptunus, with up to 10 dB [difference]." A 10dB difference is a halving of noise, as if a wall or barrier has been put in place. The report states: "This is an indication that retrofitting ships with modern hybrid propulsion is a potential way to reduce their noise radiation."[94] Additionally, recent research evaluating underwater noise generated by electric vessels indicates that while certain electric vessel configurations may generate high-frequency tonal noise associated with electric propulsion components, underwater noise characteristics vary substantially depending on vessel design, propulsion architecture, and motor installation. In particular, Smith et al. (2026) found that electric vessels remained quieter than a comparable conventionally powered vessel across the full range of operating speeds evaluated and found that such tonal noise can be reduced through engineering measures including optimization of motor controller switching frequencies and electromagnetic interference filtering.[95] Similarly, Gaggero et al. (2024) found that although electric vessels may generate high-frequency tonal noise, propulsion architecture and motor placement are important factors influencing underwater noise generation.[96] Accordingly, following publication of the Draft EIR, WETA has advanced the design-build contract for the proposed electric ferry vessels to incorporate features consistent with those identified in the recent literature, including propulsion motors mounted inboard in enclosed Propulsion Rooms with water-cooled, resilient-mounted configurations, acoustic insulation and sound-damping coatings on propulsion equipment spaces, and third-party acoustic measurement and verification during construction. These design features would minimize the potential for the proposed electric ferry vessels to generate underwater noise that could adversely affect marine mammals. Therefore, in-water noise impacts on marine mammals due to operation of ferry vessels would be less than significant.

Draft EIR Page 3.3-54 and Page 3.3-55:

MITIGATION MEASURE BIO-1(B): CONDUCT NORTHWESTERN POND TURTLE SURVEY AND AVOIDANCE PRIOR TO CONSTRUCTION

No less than seven days prior to the start of any construction activities within 500 feet of Strawberry Creek (including staging and mobilization), a City-approved qualified biologist will conduct a preconstruction survey for northwestern pond turtle within suitable habitat on the project site as feasible. If any northwestern pond turtle are identified within the work area, they will be allowed to leave the work site on their own. CNDDB Field Survey Forms will be submitted to the CDFW for all special-status animal species observed.

If any northwestern pond turtles are observed by construction personnel within or adjacent to (within 50 feet) the project site, all work within the vicinity of the observation will be halted and the ~~qualified biologist will be notified immediately to evaluate the occurrence and relocate the animal as necessary.~~ City will contact CDFW immediately for guidance. Only a ~~qualified~~ CDFW-approved biologist will capture and relocate wildlife. Construction personnel are not permitted to handle said animals. If northwestern pond turtles become federally-listed at the time of construction, no individuals shall be handled without approval from USFWS.

[…]

MITIGATION MEASURE BIO-1(C): CONDUCT BURROWING OWL AND NESTING BIRD SURVEY AND AVOIDANCE PRIOR TO CONSTRUCTION

Burrowing Owl

Prior to project construction, a qualified biologist will conduct a habitat assessment to determine if potential habitat for burrowing owl is present in or near the project site. If potential habitat is present in or within 500 feet of the project site, a qualified biologist will conduct a pre-construction survey of the project site (plus a 500-foot buffer as access allows) for the presence of burrowing owl. The survey will be conducted no more than 14 days prior to ground disturbing activities and will conform to CDFW guidelines for burrowing owl Take Avoidance Surveys as described in Appendix D of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.[100] A report of pre-construction survey efforts and results will be submitted to the City within 30 days of completion of the survey. The report will include the dates, times, weather conditions, and personnel involved in the survey. Depending on survey results, the report will also include observations of burrowing owl or potential burrows, and the location and habitat description of the observations. If burrowing owl, active burrows, or their sign (i.e., tracks or pellets) are not observed in the project site, no additional measures related to impact avoidance and minimization of the absent species are recommended. If burrowing owl, active burrows, or their sign are observed within the project site, CDFW will be notified and the following measures will be implemented:

- A qualified biological monitor will be present during landside construction on the project site to document burrowing owl observations, burrow statuses, and require that construction activities do not negatively affect burrowing owl. The duration and frequency of monitoring will be determined at the discretion of the qualified biologist and a monitoring report detailing monitoring results will be submitted to the City within 30 days of the completion of project activities or breeding season (February 1 to August 31), if applicable.
- The biological monitor will visually inspect any pipes, debris piles, culverts, or similar structures for burrowing owl before the material is moved, buried, or capped. Open holes and trenches within the project site will be inspected at the beginning and end of each landside construction workday and immediately prior to backfilling. At the end of each such workday, trenches and holes will be ramped so that any animals that may have become trapped in the trench or hole can climb out. The ramp may be constructed of dirt fill or wood planking or other suitable material at an angle no greater than 30-45 degrees. If a burrowing owl is trapped in a trench or hole, work will stop and the qualified biologist will be notified immediately. The burrowing owl will be allowed to escape unimpeded.
- If active burrows are observed on the project site, a non-disturbance buffer will be established restricting all ground-disturbing activities from occurring within the buffer and a qualified biological monitor will be present at the initiation of project activities. The buffer will be established by a qualified biologist and range from 330 ft. to 1,500 ft. depending on project activity, line of sight, and local topography during the breeding season. During the non-breeding season (September 1 to January 31), the buffer will range from 165 ft. to 330 ft. The buffer will be demarcated using brightly colored flagging and may only be reduced at the discretion of a qualified biologist based on the factors listed above and potential use of sound and visual barriers (i.e., hay bales). Removal of the

buffer will only occur if a qualified biologist determines burrowing owl are not present in the vicinity and any potential burrows are inactive.

- If active burrow avoidance is infeasible during the non-breeding season or during the breeding season, where resident owls have not yet begun egg laying or incubation, or where the juveniles are foraging independently and capable of independent survival, the City in coordination with a qualified biologist will consult with CDFW to prepare, authorize, and implement a passive relocation program consistent with Appendix E of the 2012 CDFW Staff Report on Burrowing Owl Mitigation.
- A habitat mitigation plan will be developed in coordination with the City and CDFW for loss of active burrowing owl burrow sites if implementation of a passive relocation plan is necessary and/or burrowing owl are documented to nest on site or within 500 feet of the project site. This would be based upon the portion of the project site that overlaps with the primary foraging area around the burrow site (approximately 500-foot buffer) to be replaced at a minimum 1:1 ratio.

Nesting Birds

Project construction activities, including but not limited to vegetation removal and ground disturbance that result in noise or disturbance affecting potential nesting bird habitat, should commence outside of the nesting season (February 1 through September 15), if feasible. If construction begins outside the nesting season, a nesting bird survey is not required.

If ground disturbing project activities begin within the nesting season (February 1 through ~~August 31~~ September 15), then no more than seven days prior to the initiation of project activities, a nesting bird pre-construction survey shall be conducted by a City-approved qualified biologist within the disturbance footprint, plus a 300-foot buffer for passerines and a 1,000-foot buffer for raptors. During construction within the nesting season, an additional focused survey shall be conducted prior to tree removal to identify active nests with the subject tree(s). If no active nests are observed, no further action would be required. Ground-disturbing project activities that are initiated outside of the nesting season may continue into the nesting season without requiring new nesting bird surveys.

Pre-construction nesting bird surveys shall be conducted by a qualified biologist during the time of day when birds are most active and should be of sufficient duration to reliably conclude presence or absence of nesting birds on the project site and within the designated buffer. A report of the nesting bird surveys results shall be submitted to the City for review and approval prior to clearance for mobilizing equipment. If nests are found, their locations shall be flagged (if possible) and recorded with the use of a GPS unit. Avoidance buffers shall be established around active nests. Depending upon the species, suitable minimum buffers may be 50 feet for non-raptor species and 300 feet for raptor species, or as determined by the qualified biologist in consultation with CDFW based on species sensitivity, construction activities, and other factors.

If active nests are present, all project work shall be conducted outside the established avoidance buffer zone from the nest until it is no longer active. No staging of large equipment shall occur within the avoidance buffer until the qualified biologist confirms that breeding/nesting is complete and all the young have fledged. If buffer zones are determined to be infeasible, a City-approved qualified biological monitor shall be on site to monitor project activities within the avoidance buffer zones to ensure active nests and nesting birds are not impacted. Nesting bird surveys are not required for project activities that occur between September 16 and January 31. A report of all survey results and any proposed avoidance buffers shall be submitted to the City for review and approval.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Draft EIR Page 3.3-56:

MITIGATION MEASURE BIO-1(E): PREPARE MARINE MAMMAL MONITORING PLAN PRIOR TO CONSTRUCTION AND IMPLEMENT RECOMMENDATIONS DURING CONSTRUCTION

Prior to construction, the City shall prepare a Marine Mammal Monitoring Plan (MMMP) to avoid and minimize potential adverse impacts on marine mammals during pile driving and tug operations. The MMMP shall implement general guidelines set forth in the MMPA and incorporate the hydroacoustic modeling results developed for the project to define site-specific protection zones and avoid exposure of marine mammals to underwater sound levels exceeding the most up to date Level A (injury) thresholds identified by NOAA Fisheries. The MMMP shall include the following:

- **Protection and Monitoring Zones**: Using the hydroacoustic modeling results, the MMMP shall define shutdown and disturbance zones for each marine mammal hearing group. These zones will be tailored to the pile type, size, and driving method and will correspond to the Level A and Level B effect distances developed for the project. The plan will describe how these protection zones will be verified and monitored in the field, integrating them with the soft-start and observation procedures described in Mitigation Measure BIO-1(d).
- **Vessel Operation Protocols**: The MMMP shall include vessel-operation measures consistent with the MMPA. Construction vessels under power shall remain at least 300 feet from whales and 150 feet from dolphins, porpoises, seals, and sea lions. When marine mammals are encountered, vessel operators shall reduce speed to no-wake, shift to neutral, and allow the animals to pass safely before resuming operations.
- **On-Site Monitoring and Response**: A qualified biologist shall be present on site, either observing from the pier or aboard a vessel, during all pile-driving and tug operations. The biologist shall document all marine-mammal observations, note behavioral responses, and immediately alert project personnel if a whale enters the modeled harassment distance or comes within 300 feet, or if any other marine mammal enters the modeled harassment distance or comes within 150 feet, whichever is greater. Upon such an observation, the contractor shall implement the appropriate delay or shutdown procedures identified in the MMMP.
- **Adaptive Management and Coordination**: The MMMP shall outline communication and reporting protocols, including stop-work notification procedures and coordination with NMFS Protected Species Division. Results from daily monitoring will be used to assess the effectiveness of the protection zones and adjust them, if needed, in consultation with NMFS.
- **Nighttime Pile Driving**: Nighttime pile driving shall be limited to situations where safety concerns or significant schedule delays require that pile driving started during daytime hours extend beyond typical work hours. For instances where nighttime pile driving is required, the MMMP shall include non-visual monitoring protocols, such as passive acoustic monitoring, thermal/infrared cameras, and night-vision optics, as well as larger nighttime exclusion/shutdown zones, extended soft-start procedures, and the most effective feasible hydroacoustic attenuation.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

MITIGATION MEASURE BIO-1(F): IMPLEMENT CDFW-REQUESTED MEASURE FOR CROTCH'S BUMBLE BEE PRIOR TO CONSTRUCTION

A formal habitat assessment of the project site landside project disturbance areas shall be performed by a qualified biologist prior to initiating ground disturbing activities to determine if suitable nesting or foraging habitat is present within the project site. The assessment shall include:

- Review of occurrence record data
- Analysis of foraging, nesting, and overwintering resources

- Documentation of plant species observed (including what is blooming at the time of the survey and percent cover)

The locations of nesting resources, including rodent burrows, cavities, thatched grasses, brush, rock piles, fallen logs, and manmade structures, shall be mapped during the assessment. Areas adjacent (within 50 feet) to the project site shall also be considered, if accessible, to determine if there is suitable nesting or foraging habitat.

If suitable nesting and foraging resources are detected during the habitat assessment, they will be avoided by a minimum 50-foot buffer, where possible. If avoidance is not possible, protocol-surveys following the CDFW *Survey Considerations for California Endangered Species Act (CESA) Candidate Bumble Bee Species* (CDFW 2023) will be conducted to determine if Crotch's bumble bee is present within the project site. A minimum of three visits will be conducted during the colony active season (April – August) and will be spaced 2-4 weeks apart. Surveys will be conducted each year that construction activities occur within suitable nesting habitat, because bumble bees move their nests each year. If no Crotch's bumble bees are detected on the project site, no further mitigation actions will be required. If Crotch's bumble bees are detected, consultation with CDFW will be initiated to determine the most appropriate strategy to avoid impacts to bumble bees on the project site. If full take avoidance is not feasible, the City will apply to CDFW for take authorization under an Incidental Take Permit.

Draft EIR Page 3.3-58:

Vessel operators would be required to comply with all USCG and RWQCB requirements for ferry operations. Therefore, operational impacts related to sensitive marine habitats, including EFH for Pacific Coast Salmon, would be less than significant.

Draft EIR Page 3.3-63:

TERRESTRIAL

Operation of the project would include vehicles, bicycles, and pedestrians using University Avenue, Seawall Drive, and parking lots. These uses of the project site would be consistent with existing recreation and commercial uses. No new barriers or disturbances to terrestrial wildlife movement are proposed. Roosting birds and birds staging during migration may be temporarily displaced by removal of portions of the existing pier deck and pilings; however, the old wooden pilings at the west end where the majority of roosting birds occur would remain in place. Additionally, there are other roosting sites available in the project vicinity and wider bay, including a platform that was specifically constructed for cormorants on the new eastern span of the Bay Bridge. Therefore, there would be no operational impact related to terrestrial wildlife movement.

MARINE

Operation of ferry vessels would occur at the water surface level, with some incremental increase in ferry boat noise and lighting within the project ~~area~~ vicinity. The project proposes to operate two ferry vessels with regular service to San Francisco ~~and weekend service to Larkspur~~, which ~~are both~~ is an active shipping port~~s~~ with existing recreational and ferryboat use. Therefore, the project would represent an incremental increase in existing boat trips on the Bay.

Temporary disturbance from ferry operations would be localized and intermittent, affecting only a small portion of the broad open-water foraging and roosting areas used by migratory and wintering birds in San Francisco Bay. The project's operational corridor represents a minor fraction of the available bay habitat, and similar foraging and roosting sites occur immediately north and south of the corridor. Because displacement events would be shorter and birds can move to adjacent habitat with comparable resources, the loss of usable foraging or roosting area is expected to be temporary and minimal.

Special-status fish and marine mammals, specifically whales, are likely habituated to existing levels of boat trip levels and would avoid new ferry boat service….

Section 3.4, Cultural Resources

Sub-Section 3.4.2, Environmental Setting

Draft EIR Page 3.4-10:

Two of the evaluation efforts focused on the Berkeley Pier and did not consider the property's larger developmental context, current ownership, and functionally related relationship of the Berkeley Pier to the larger Berkeley Marina, to which it is historically linked. As recommended by guidance from OHP, the evaluation was updated in 2025 to support the proposed project's environmental review to amplify information about the resource and document changes that have occurred since the previous evaluation.[43] Additionally, the updated 2025 Berkeley Pier evaluation considered the Berkeley Pier within its broader historical context, including its relationship to the Berkeley Marina, and assessed local eligibility, which was not included in previous evaluations. The results of the 2025 updated evaluation indicate that the Berkeley Pier does not meet the criteria for listing in the NRHP, CRHR, Berkeley Register of Designated Landmarks BERD, or as a City of Berkeley historical resource. Accordingly, the updated evaluation confirms that no historical resources are present within or directly adjacent to the project site.

Section 3.5, Geology and Soils

Sub-Section 3.5.4, Impacts Analysis

Draft EIR Page 3.5-30:

Based on a groundwater ~~table elevation of~~ level encountered approximately 5 feet below existing ground surface during geotechnical investigations, soil testing results indicated there were discontinuous layers of liquefiable soil within the artificial fill.

[…]

The liquefaction analysis of the artificial fill indicated that approximately half of the area may experience liquefaction or cyclic softening in discontinuous layers. Although future sea level rise and corresponding increases in groundwater elevations could increase liquefaction susceptibility over time, the project site is already characterized by shallow groundwater conditions and is mapped within a liquefaction hazard zone under existing conditions. Accordingly, liquefaction hazards associated with shallow groundwater conditions were considered in the geotechnical evaluation and the development of site-specific recommendations for the proposed project. In addition to the incorporation of site-specific recommendations, final engineering design would be required to comply with applicable California Building Code requirements and current geotechnical engineering standards in effect at the time of construction.

[…]

The geotechnical report soil stabilization recommendations would be required for all proposed project landside and waterside components

Although the project site is underlain by artificial fill, Young Bay Mud, and other Bay-margin deposits that may be susceptible to liquefaction, settlement, and lateral spreading during a seismic event, the site is suitable for the proposed project provided that site-specific geotechnical recommendations are incorporated into final design and construction. Consistent with Berkeley General Plan Policy S-14, which requires soil investigation and/or geotechnical reports for the project, implementation of recommendations included within the Geotechnical Report would be required as part of project design and prior to operation. The geotechnical report soil stabilization recommendations would be

required for all proposed project landside and waterside components. Specifically, the use of deep soil mix would improve weak and potentially liquefiable soils, retaining wall design recommendations would stabilize landside fill areas, pile-supported structures would transfer loads to more competent subsurface materials, and continued geotechnical engineer oversight during construction would reduce risks associated with construction in areas of variable subsurface conditions. Additionally, final engineering design would be required to comply with the regulations described in Section 3.5.3, *Regulatory Framework*, including the California Building Code, International Building Code, and applicable seismic design standards for piers and wharves in effect at the time of construction. Regulatory compliance and implementation of the measures described above would reduce the potential for excessive settlement, lateral spreading, structural instability, or loss of bearing capacity during a seismic event. Therefore, construction and operational impacts related to substantial adverse effects involving seismic-related ground failure and unstable geologic unit risk specific to liquefaction and lateral spreading to less than significant.

Draft EIR Page 3.5-31:

In addition, the shoreline around the ~~project site~~ ferry approach area is made of armored rip rap, rather than exposed native soils or unconsolidated shoreline sediments.~~; therefore, there is no soil that could be eroded.~~ As described in Chapter 2, *Project Description*, a localized section of shoreline along the eastern side of the Seawall Peninsula is currently experiencing deterioration of existing shoreline protection and exposure of underlying fill material. The proposed project would repair and stabilize this already-armored shoreline segment through in-kind replacement and reinforcement of existing shoreline protection features. Because the proposed shoreline repair would restore and maintain an existing hardened shoreline condition, rather than introduce new armoring into a previously natural shoreline, the project would not substantially alter shoreline geomorphology, wave reflection patterns, or erosion processes relative to existing conditions. Although shoreline armoring can influence localized erosion patterns in adjacent unarmored areas, the shoreline areas immediately adjacent to the proposed repair are similarly developed and protected with existing shoreline stabilization features. Therefore, the proposed shoreline repair would not substantially increase erosion rates in nearby shoreline areas beyond existing conditions. Finally, the ferry vessels approaching the project site would reduce speed to 8 knots or less when approaching the Berkeley pier boarding float, which would further minimize wake-related shoreline effects.[68] For these reasons, operational impacts on erosion or loss of topsoil would be less than significant.

[68.] 8 knots is equal to approximately 9.2 miles per hour.

Section 3.7, Hazards and Hazardous Materials

Sub-Section 3.7.4, Impacts Analysis

Draft EIR Page 3.7-28:

However, compliance with existing regulations would minimize the potential risk associated with piles that have been treated with creosote, which is also known as Treated Wood Waste or TWW. TWW at the project site would be identified prior to construction, as part of the design process, via visual inspection for indications of treated wood, such as but not limited to end tags, wood manufacturer stamp codes, discoloration, and/or odor.[45]

Section 3.8, Hydrology and Water Quality

Sub-Section 3.8.4, Impacts Analysis

Draft EIR Pages 3.8-7 through 3.8-8:

Tides and Currents

While the discussion presented herein primarily references the City of Berkeley Mean Lower-Low Water (MLLW) vertical datum, other discussions such as those within Section 3.3, *Biological Resources*, may reference both the North American Vertical Datum of 1988 (NAVD88) and the Berkeley MLLW vertical datum when presenting tidal elevations, flood elevations, and sea level rise projections. For reference, NAVD88 is approximately 0.6 feet below Berkeley MLLW at the project site. Unless otherwise noted, future references to elevations relevant to the project may be presented in both datums to facilitate comparison. Table 3.8-1, below, summarizes representative tidal datums and conversion values applicable to the project site.

Table 3.8-1 Representative Vertical Datum Conversion Values

Datum (NOAA)	NAVD88 (feet)	Berkeley MLLW (feet)
Highest Astronomical Tide (HAT)	+7.8	+8.4
Mean Higher-High Water (MHHW)	+6.2	+6.8
Mean High Water (MHW)	+5.6	+6.2
Mean Sea Level (MSL)	+3.4	+4.0
North American Vertical Datum of 1988 (NAVD88)	0.0	+0.6
Berkeley Mean Lower-Low Water (MLLW)	-0.6	0.0
Lowest Astronomical Tide (LAT)	-2.1	-1.6

Source: COWI. 2025. Berkeley Water Transportation Pier Ferry Project: Basis of Design 60% Submittal. December 12.

The Berkeley Waterfront experiences mixed semidiurnal tides, with water levels ranging from approximately +6.8 feet ~~mean lower-low water (~~MLLW~~)~~ during average higher-high tide conditions to about ~~+10.3~~ 8.4 feet MLLW ~~under 100-year extreme tide events~~ during Highest Astronomical Tide (HAT) conditions. Extreme Water Level conditions may reach approximately +10.3 feet MLLW during severe storm and coastal flooding events. The design still water level, which accounts for astronomical tides, storm surge, and projected sea level rise through 2075, is estimated at +11.9 feet MLLW.

Draft EIR Page 3.8-11:

A portion of the project site is located in a special flood hazard area. As shown on Figure 3.8-3, Central San Francisco Bay within the project site is mapped as “Zone VE” of the 100-year floodplain, which are coastal areas with a 1 percent or greater chance of flooding in any single year and an additional hazard associated with storm waves. Zone VE areas have a 26 percent chance of flooding over a 30-year period.[29] As also shown on Figure 3.8-3, portions of the shoreline and surrounding areas adjacent to the project site are mapped as FEMA Zone AE, which identifies areas subject to inundation from the 1-percent-annual-chance flood event where Base Flood Elevations (BFEs) have been established. While the proposed waterside project components are primarily associated with the Zone VE flood hazard area, nearby shoreline areas include both Zone AE and Zone X flood hazard designations. FEMA Flood Insurance Rate Maps identify BFEs for the mapped Zone VE and Zone AE areas adjacent to the project site. The BFE for Zone VE ranges from approximately 12 to 13 feet and the BFE for adjacent Zone AE areas is approximately 10 feet. These BFEs represent the estimated water surface elevation associated with the 1-percent-annual-chance flood event and are used for floodplain management and project design purposes. Further offshore, the San Francisco Bay is designated as open water, which is not considered a special flood hazard area.[30]

[29.] FEMA. 2026. Flood Map Service Center. Available: https://msc.fema.gov/portal/search?AddressQuery=Berkeley%20marina (accessed February 2026).

[30.] FEMA. 2026. Flood Map Service Center. Available: https://msc.fema.gov/portal/search?AddressQuery=Berkeley%20marina (accessed February 2026).

Sub-Section 3.8.3, Regulatory Framework

Draft EIR Page 3.8-18:

Water quality objectives for surface and ground waters relevant to the proposed project and project ~~area~~ site, which include the enclosed San Francisco Bay, include those listed in Table ~~3.8-1~~ 3.8-2 and Table ~~3.8-2~~ 3.8-3.

Draft EIR Page 3.8-19:

Table ~~3.8-1~~ 3.8-2 Water Quality Objectives for Surface Waters

Draft EIR Page 3.8-21:

Table ~~3.8-2~~ 3.8-3 Water Quality Objectives for Groundwater

Draft EIR Page 3.8-23:

San Francisco Bay Plan

The San Francisco Bay Plan is the guiding policy document for the BCDC codified by the McAteer-Petris Act. The plan includes policies to ensure water quality in San Francisco Bay is maintained at levels sufficient for the protection and beneficial use of San Francisco Bay. For additional information about pertinent policies, please refer to Section 3.9, *Land Use and Planning.*

BCDC implements the McAteer-Petris Act, a State law governing development within the San Francisco Bay and its shoreline, and administers the San Francisco Bay Plan, which includes policies that are adopted as State regulations.

Sub-Section 3.8.4, Impacts Analysis

Draft EIR Page 3.8-27:

For purposes of the following impact analysis, the following thresholds are used to evaluate the significance of hydrology and water quality impacts resulting from implementation of the proposed project.

- Violate any surface water or groundwater quality standards or waste discharge requirements, or conflict with the San Francisco Bay Basin Plan, in a way that would:
  - Result in an exceedance of a water quality objective, specified in the Basin Plan and shown in Table ~~3.8-1~~ 3.8-2 or Table ~~3.8-2~~ 3.8-3, in a manner that would impair beneficial uses; or
  - Discharge a pollutant that the water body (i.e., San Francisco Bay) is listed as impaired with on the 303(d) list (see *Surface Water Quality* subsection in Section 3.8.2, *Environmental Setting*).

Draft EIR Page 3.8-29:

Without proper controls, accidental releases of fuels, oils, concrete wash water, or other construction-related pollutants could infiltrate shallow soils and migrate into perched groundwater, potentially affecting groundwater quality in violation of the objectives identified in Table 3.8-3.

[…]

Construction activities within surface waters have the greatest potential to affect water quality in the San Francisco Bay. Impacts to the San Francisco Bay would be primarily due to construction-related

dredging, demolition of the existing pier, and construction of a new pier. In-water construction activities, such as dredging, existing pile removal and new pile installation, and pier deck demolition and construction, as well as any associated sediment disturbance, have the potential to directly affect San Francisco Bay water quality. Some of the existing pier piles, if wooden, could contain hazardous materials, such as creosote, that could be released during demolition and removal activities. Consistent with standard practice, existing wooden piles would be evaluated for the presence of wood preservatives and managed in accordance with applicable requirements, including requirements related to Treated Wood Waste, if applicable, as discussed further in Section 3.7, *Hazards and Hazardous Materials*. Dredging of debris, removal of existing pier infrastructure, and pier installation could resuspend bottom sediments, increasing turbidity in the immediate project vicinity. Elevated turbidity can reduce light penetration, affecting photosynthetic organisms and potentially adversely affecting water quality. Sediment resuspension may also release adsorbed contaminants such as metals, hydrocarbons, or legacy pollutants into the water column, where they can be transported by currents and dispersed to adjacent areas.

Draft EIR Page 3.8-30:

Dredging activities have the potential to temporarily degrade water quality by resuspending bottom sediments into the water column. As described previously, in 2025, sediment sampling and analysis was conducted within five dredge units in the project vicinity and sediment samples were found to contain metals, organochlorine pesticides, polynuclear aromatic hydrocarbons, PCBs, and dioxins/furans. Although contaminants were present, the concentrations of such contaminants indicate that sediments are not likely to pose significant hazards if managed according to reuse site requirements.

Any increase in suspended sediment concentrations resulting from dredging activities would be temporary and limited to the construction period. Suspended sediments generated during dredging would be expected to settle following completion of the work, and standard construction best management practices would be implemented to minimize sediment dispersion beyond the immediate work area. The sediment transport assessment indicates that the highest sedimentation rates would occur within the dredged navigation channel as natural sediment transport processes gradually infill dredged areas over time.[48] Given the localized nature of dredging activities and the expected settling of suspended sediments near the dredged area, the project is not expected to result in a measurable increase in sediment deposition within the South Sailing Basin or a reduction in access beyond existing tidal limitations.

[…]

The work surface on the barge deck will include a containment basin for creosote, piles, concrete, and any mud or sediment removed during pulling. Upon removal from substrate, the piles will be moved expeditiously from the water into the containment basin. Any sediment accumulated from the pile removal operations ~~will be assumed to contain creosote and~~ will be contained, managed, and disposed ~~offsite in an appropriate landfill~~ of in accordance with applicable federal, State, and local requirements, including any requirements associated with treated wood preservatives identified during pre-construction materials characterization (refer to Section 3.7, *Hazards and Hazardous Materials*).

[48]. COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December. https://berkeleypierferryproject.com/wp-content/uploads/2026/02/COWI_2025_Coastal-Study.pdf (accessed July 2026).

Draft EIR Page 3.8-33:

Projects in Berkeley are subject to CalOSHA regulations regarding management of certain hazardous materials. Title 8 of the California Code of Regulations Section 5194, 5531-5608, and 5198 cover the control and management of chemicals, including paints, solvents, fuels, detergents and sludges, and

lead. CalOSHA requires testing, monitoring, containment, and disposal of these materials, such that exposure levels do not exceed CalOSHA standards.[53]

The proposed fish cleaning station would be a small amenity with intermittent use, typical of public fishing piers. While the station would include a drain that discharges to the Bay, the volume and frequency of fish cleaning activities would be limited and would not result in substantial degradation of water quality due to consistent flows, dilution, and regular tidal flushing. The covered trash receptacles and fishing line recycling stations would promote proper disposal of fish waste and associated materials. These amenities would be regularly serviced to promote usage and maintain sanitary conditions, minimizing the potential for water quality-related impacts to surface waters.

[53] California Code of Regulations. 2025. Title 8, Industrial relations. Office of Administrative Law. Available: https://www.dir.ca.gov/Counters/t8index.htm (accessed September 2025).

Draft EIR Page 3.8-40:

The Universal Charging Float battery systems would be housed in smoke-tight, watertight compartments with real-time monitoring, automated shutoff systems, and multiple redundant fire suppression systems, substantially reducing the potential for pollutant release in the event of inundation. Additionally, as depicted in Figure 3.8-3, portions of the project site are located within FEMA-designated 500-year floodplains. However, the proposed ferry terminal includes infrastructure intended to remain structurally resilient during extreme coastal flood events. As described in Section 3.12, *Transportation*, WETA and its contracted operator proactively monitor weather forecasts and U.S. Coast Guard advisories. In the event of an approaching storm, senior staff coordinate with vessel crews to evaluate the safety of continuing ferry service on affected routes. Although ferry operations may be temporarily suspended during severe storm conditions such as a 500-year flood event due to navigational safety concerns, the pier, breakwater, piles, and associated structural elements have been designed to accommodate water levels and wave forces associated with extreme flood events, as the project's coastal engineering analyses considered future sea level rise and coastal flooding conditions over the life of the project. Therefore, any operational interruption associated with extreme storm or flooding events would be temporary and would not be expected to result in a substantial long-term loss of emergency transportation or evacuation capabilities, nor would any operational interruption indicate structural failure of the proposed facilities.

Draft EIR Page 3.8-41:

The Basin Plan establishes water quality objectives and beneficial uses for San Francisco Bay, and emphasizes control of pollutant discharges, protection of aquatic life, and maintenance of water quality standards. See Table ~~3.8-1~~ 3.8-2 and Table ~~3.8-2~~ 3.8-3 for an overview of water quality objectives and beneficial uses in the Basin Plan.

Section 3.9, Land Use and Planning

Sub-Section 3.9.2, Environmental Setting

Draft EIR Page 3.9-2:

The project site has a Berkeley General Plan land use designation of Waterfront/Marina.1 The General Plan describes the Waterfront/Marina as areas intended to maintain and preserve areas of Berkeley adjacent to the Bay for open space, recreational uses, waterfront-related commercial and visitor services, boating, and water transit facilities. The project site has a zoning designation of Unclassified (U). Development within Unclassified areas requires a Use Permit in compliance with Berkeley Municipal Code Section 23.208.020, which governs Use Permits in Unclassified zones. The project site is subject to the Berkeley Marina Use Permit (Permit No. 5567), issued in 1965, which authorizes existing uses and permits implementation of the Marina Master Plan. This permit governs current uses at the Berkeley Waterfront and establishes a framework for future improvements. The

project will be required to obtain a new Use Permit for any new use proposed, which includes the use of the pier for the operation of a public ferry. A summary of the permitting process pursuant to Berkeley Municipal Code Section 23.208.020 is provided in Section 3.9.3, *Regulatory Framework*, below.

Portions of the project site are located within the jurisdiction of the San Francisco Bay Conservation and Development Commission (BCDC), pursuant to the McAteer-Petris Act. The City will coordinate with BCDC staff, as appropriate, during permitting to confirm jurisdictional boundaries and applicable regulatory requirements.

Sub-Section 3.9.3, Regulatory Framework

Draft EIR Page 3.9-4:

In compliance with the McAteer-Petris Act, BCDC prepared the first San Francisco Bay Plan in 1968 which was transmitted to the California Legislature and the Governor in 1969. BCDC amends the Bay Plan over time to address regional needs. The San Francisco Bay Plan includes policies to guide future uses of the Bay and the shoreline. The Plan aims to protect the Bay from unnecessary filling, promote public access, and ensure sustainable development. It designates priority use areas for water-oriented activities, such as ports and recreational facilities, and establishes environmental safeguards to preserve the Bay's natural resources. The Plan also includes specific policies for shoreline protection, habitat restoration, and climate resilience, ensuring that land use and planning decisions support ecological health and community needs. Pertinent policies are identified and addressed in detail under Impact LU-2 within this EIR section.

Although BCDC laws and policies have a regional focus and are therefore included within the Regional and Local Regulations subsection of Section 3.9.3, *Regulatory Framework*, BCDC's governing legislation, the McAteer-Petris Act, has the status of State law and is effectively comprised of State regulations subject to approval by the California Office of Administrative Law.

Sub-Section 3.9.4, Impacts Analysis

Draft EIR Page 3.9-12:

Given the project location within 100 feet of the San Francisco Bay shoreline, the BCDC San Francisco Bay Plan would be applicable in terms of land use planning. BCDC will determine whether the proposed project is consistent with the McAteer-Petris Act and Bay Plan policies. Such determinations are made by BCDC on a case-by-case basis when considering permit applications. As part of this process, BCDC will conduct an independent review of the project's consistency with its governing laws and policies and may impose conditions or require project modifications to ensure compliance. To the extent that consistency with these laws and policies is subject to CEQA review, ~~T~~the City's evaluation of project consistency with applicable BCDC San Francisco Bay Plan policies is discussed in Table 3.9-1.

Draft EIR Pages 3.11-17 through 3.11-18:

Table 3.9-1 BCDC San Francisco Bay Plan Consistency

Policy	Consistency
Recreation	
Policy 3(a)(6). Sites, features or facilities within designated waterfront parks that provide optimal conditions for specific water-oriented recreational uses should be preserved and, where appropriate, enhanced for those uses, consistent with natural and cultural resource preservation.	**Consistent.** The project site is located within a waterfront area that supports a variety of water-oriented recreational uses, including fishing, windsurfing, kayaking, sailing, wildlife viewing, and shoreline recreation. As described in Chapter 2, *Project Description*, and evaluated in Section 3.11, *Recreation*, the proposed project would preserve and enhance opportunities for water-oriented recreation by restoring public access to the Berkeley Pier, constructing a new publicly accessible pier and breakwater, implementing shoreline access improvements, extending the Bay Trail, and providing new public amenities including seating, viewing areas, bicycle facilities, and interpretive features. The project would also maintain access to existing marina facilities, windsurfing areas, boat launching facilities, and other water-oriented recreational resources. As discussed in Section 3.11, *Recreation*, the project would result in a net increase in recreational opportunities and facilities available to the public (Impact REC-1). Furthermore, the project has been designed to avoid substantial impacts on natural and cultural resources, and mitigation measures identified in Sections 3.3, *Biological Resources*, and 3.8, *Hydrology and Water Quality*, would ensure that project-related impacts remain less than significant or less than significant with mitigation.
Policy 3(a)(7). Access to marinas, launch ramps, beaches, fishing piers, and other recreational facilities should be clearly posted with signs and easily available from parking reserved for the public or from public streets or trails.	**Consistent.** As described in Chapter 2, *Project Description*, the proposed project would include wayfinding signage along University Avenue, Marina Boulevard, Seawall Drive, the Seawall Drive Parking Lot, portions of the Berkeley Waterfront, and Shorebird Park to direct visitors to the new pier, ferry facilities, parking areas, and other recreational destinations. The project would also include interpretive and educational signage along the pier, breakwater, and Bay Trail Extension. Final signage design and placement would be refined through final design and applicable permitting processes. The project would also provide continued public access to recreational facilities from public streets and trails, including University Avenue, Seawall Drive, and the Bay Trail, and would maintain and improve public parking access through renovation of the existing Seawall Drive parking lot, which would provide approximately 400 to 450 public parking spaces. In addition, the project would enhance pedestrian, bicycle, and transit access through construction of a new cycle track, Bay Trail improvements, bicycle parking facilities, and transit improvements. Accordingly, the project would be consistent with Recreation Policy 3(a)(7).
Policy 7. Because of the need to increase the recreational opportunities available to Bay Area residents, small amounts of Bay fill may be allowed for waterfront parks and recreational areas that provide substantial public benefits and that cannot be developed without some filling.	**Consistent.** The proposed pier and breakwater would provide recreational opportunities to the Bay. As such, the fill would be allowed if it provides substantial public benefits and cannot be developed without some filling. Since the proposed project will provide an alternative form of transportation that will reduce vehicle miles traveled and greenhouse gas emissions, as well as providing a new recreational opportunity to access the Bay, the proposed project will result in substantial public benefits.

Draft EIR Page 3.9-32:

Table 3.9-4 Berkeley Marina Master Plan Consistency

Policy	Consistency
Principle 4. Provide for appropriate recreational, commercial and nonprofit development that both encourages use and protects or enhances the natural resources of the Marina lands.	
Policy 4A. Promote the use of the Marina for boating and appropriate recreational activities and encourage appropriate commercial and non-profit uses that support marine and recreation functions. Encourage Inexpensive Food Vendors. The availability of inexpensive food at the Marina should be encouraged. Use of pushcarts and other mobile structures should be allowed, but should not be located in areas that will obstruct public access or views. Support Low Cost Water Activities and Education. The City should continue to support affordable programs such as Cal Sailing Club, Cal Adventures and the Nautilus Institute that provide a variety of low-cost water-related activities as well as educational programs for youth and the community.	**Consistent.** Overall, the project would create a more attractive area that would encourage and support marine and recreation functions. The proposed public plaza would facilitate the potential for inexpensive food at the Marina. Additionally, the ferry service would support low-cost water activities, and informative signs on the pier would support education for visitors.
Policy 4C. Preserve the areas devoted to marine operations and recreational activities and expand to new areas where feasible and without negatively impacting natural resources. • Enhance Windsurfer Activities at the point immediately to the west of H's Lordships Restaurant. Consider constructing large terraced stairs to improve windsurfer access. Consider low-maintenance materials for adjacent staging areas and screening these areas with landscaping. A new pedestrian path is needed that links with the existing pathway on the north side of the parking lot. New signage and benches should be installed.	**Consistent.** The project would not be located within the Marina Basin and would, therefore, not conflict with marine operations. Implementation of the enhanced pier and ferry infrastructure would not impact waterfront recreation as recreation is prohibited at this location. The project would expand recreational activities by provided a new pier. The project would also be consistent with the Policy 4C provision to enhance windsurfer activities west of H's Lordships Restaurant (199 Seawall Drive). The project would not eliminate shoreline access used by windsurfers or other non-motorized watercraft users and would not preclude future implementation of windsurfing-related improvements contemplated by the Marina Master Plan. Access to the existing launch area near 199 Seawall Drive would be maintained. In addition, the project would provide improvements that are consistent with the policy's objectives to enhance public access and shoreline amenities, including new pedestrian and bicycle facilities, Bay Trail improvements, wayfinding signage, seating areas, the public plaza and restroom, and shoreline access improvements. Accordingly, the project would improve access and recreational use of the Waterfront while remaining compatible with existing water-oriented recreational activities such as windsurfing.

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Policy	Consistency
Principle 5. Enhance access and use of the Marina, especially for members of special user groups such as elderly, economically disadvantaged or physically challenged persons.	
Provide new and renovate pedestrian pathways and bicycle trails to increase public access at the Marina. As needed, pedestrian paths should be resurfaced and widened to provide access for all members of the community. New paths and upgraded paths will comply with ADA requirements. Bicycle paths and improvements consistent with the Berkeley Bicycle Plan should be installed along Seawall Drive, University Avenue, Marina Boulevard, and Spinnaker Way. Bike racks should be installed at key locations along the bicycle paths. *Improve shoreline access by upgrading existing pedestrian pathways along the shoreline and, where feasible, providing new pathways at the shoreline edge.* Provide a pedestrian path along the entire length of Seawall Drive. The pedestrian pathway should be grade separated from parked cars and the roadway. Plantings and berms should be used to screen cars from the pedestrian path. New signage and benches should be installed along the path. *Improve Marina Boulevard/University Avenue intersection.* As part of the Marina Boulevard realignment, the intersection should be redesigned to improve safety and clarity for pedestrian and bicyclists.	**Consistent.** The proposed project would provide the infrastructure identified in this policy. The proposed project includes the installation of a cycle track on University Avenue and a portion of the Bay Trail Extension off Seawall Drive. Where the Bay Trail Extension or recreation amenities are adjacent to Seawall Drive, the City would implement safety measures to create a barrier between vehicles and pedestrians (such as parking areas, boulders, bollards, fence, or guardrail). In addition, benches, chairs, and signage are planned to be installed on the Bay Trail Extension. The project is being designed to be ADA compliant.
Principle 6. Pursue a fiscally responsible and sustainable implementation program for the Marina.	
Maintain the Plan's prioritized capital improvement program for the construction of boating facilities, roadways, restroom facilities, and other infrastructure facilities necessary to continue Marina operations. Identify funding options to pay for the improvements.	**Consistent.** The proposed project is identified as one of Berkeley's capital projects.
Figure 2.0, Marina Master Plan	
The Marina Master Plan concept diagram identifies numerous recreational enhancements throughout the Marina, including enhancement of pedestrian and bicycle circulation, recreational opportunities, shoreline access amenities, and of windsurfer activity in the vicinity of Seawall Drive and H's Lordships Restaurant.	**Consistent.** Figure 2.0 illustrates a conceptual vision for future improvements at the Berkeley Marina and Waterfront, including enhancement of windsurfer activity near Seawall Drive and H's Lordships Restaurant (199 Seawall Drive). The proposed project would not eliminate access to the existing shoreline areas used by windsurfers, wingers, swimmers, kayakers, paddleboarders, and other water-based recreational users. The project would maintain access to the existing 199 Seawall Drive launch area and would not preclude continued use of shoreline areas adjacent to the project site for water-oriented recreation. The project would also enhance public access through construction of the Bay Trail Extension, bicycle and pedestrian improvements, new public viewing areas, shoreline access improvements, and restoration of public access to the Berkeley Pier. Accordingly, the project would support and not conflict with the recreational access objectives depicted in Figure 2.0.

Section 3.10, Noise

Sub-Section 3.10.4, Impacts Analysis

Draft EIR Page 3.10-23:

Table 3.10-14 Comparison of Landside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated and Mitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA)		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?

dBA = A-weighted decibels; MM = Mitigation Measure

[1] All noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for general construction activities.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime multi-family residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime multi-family residential and commercial limits are 65 dBA and 70 dBA, respectively.

[3] While commercial uses (e.g., restaurants and offices) are not typically considered to be noise-sensitive receptors, these uses were included as sensitive receptors in the analysis as the City defines construction noise limits for commercial uses.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. This analysis conservatively assumes that the nearest live-aboard boat is situated at a location within the Marina that is nearest to proposed construction activity during each phase of construction.

[5] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

Source: See Appendix E for construction noise modeling results

Draft EIR Page 3.10-24:

Implementation of Mitigation Measure NOI-1, including the use of temporary noise barriers, would reduce construction noise levels by up to 20 dBA for ~~demolition,~~ dredging~~,~~ and construction of waterside infrastructure and amenities (excluding pile driving equipment).[18,19] For construction phases which include the use of pile driving equipment (e.g., demolition and pile installation), ~~S~~shrouding of pile driving equipment would attenuate noise levels by 10 dBA or more.

			César E. Chávez Park[5]	47	27	60	No

dBA = A-weighted decibels; MM = Mitigation Measure

[1] All noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for phases consisting of general construction activities (i.e., dredging, deck, float, and gangway construction, and amenities installation) and 10 dBA of noise reduction for phases consisting of pile driving activities (i.e., demolition and pile installation).

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

Demolition	50	At pier entrance	Shorebird Park[3]	150	85	60	**Yes**
			Nearest live-aboard boat[4]	670	72	65	**Yes**
Dredging	83	At pier entrance	Shorebird Park[3]	150	75	60	**Yes**
			Nearest live-aboard boat[4]	670	62	65	No
Pile Installation	49	Along pier	Shorebird Park[3]	150	85	60	**Yes**
			Nearest live-aboard boat[4]	670	72	65	**Yes**
Deck, Float, and Gangway Construction	120	At pier entrance	Shorebird Park[3]	150	80	60	**Yes**
			Nearest live-aboard boat[4]	670	67	65	**Yes**
Amenities Installation	95	At pier entrance	Shorebird Park[3]	150	75	60	**Yes**
			Nearest live-aboard boat[4]	670	62	65	No

dBA = A-weighted decibels; L_{max} = maximum sound level

[1] All equipment in each waterside construction phase was conservatively assumed to operate near the pier entrance, as this represents the closest location where construction activity may occur relative to nearby sensitive receptors.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] Note that the City does not define construction noise thresholds for parks or similar outdoor recreation spaces; however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., single-family residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

See Appendix E for construction noise modeling results.

Table 3.10-23 Comparison of Maximum Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase With and Without Mitigation Measure NOI-1

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA L_{max})		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With MM NOI-1[1]		
Demolition	50	At pier entrance	Shorebird Park[3]	85	75	60	**Yes**
			Nearest live-aboard boat[4]	72	62	65	No
Dredging	83	At pier entrance	Shorebird Park[3]	75	55	60	No
			Nearest live-aboard boat[4]	62	42	65	No
Pile Installation	49	Along pier	Shorebird Park[3]	85	75	60	**Yes**
			Nearest live-aboard boat[4]	72	62	65	No
Deck, Float, and Gangway Construction	120	At pier entrance	Shorebird Park[3]	80	60	60	No
			Nearest live-aboard boat[4]	67	47	65	No
Amenities Installation	95	At pier entrance	Shorebird Park[3]	75	55	60	No
			Nearest live-aboard boat[4]	62	42	65	No

dBA = A-weighted decibels; MM = Mitigation Measure; L_{max} = maximum sound level

[1] Note that all noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for phases consisting of general construction activities (i.e., dredging, deck, float, and gangway construction, and amenities installation) and 10 dBA of noise reduction for phases consisting of pile driving activities (i.e., demolition and pile installation).

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] Note that the City does not define construction noise thresholds for parks or similar outdoor recreation spaces; however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., single-family residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

See Appendix E for construction noise modeling results.

Draft EIR Page 3.10-30:

Noise from Operation of Ferry Vessels

Ferry vessels would operate at the north end of the pier, as close as approximately 400 feet from the nearest sensitive receptor (i.e., the Skates on the Bay Restaurant located to the northeast). At this distance, operation of the ferry vessels would generate noise levels up to 52 dBA at the Skates on the Bay Restaurant, which would not exceed the City's daytime or nighttime exterior noise limits of 65

and 60 dBA, respectively, at commercial land uses. Additionally, ferry vessels would operate approximately 430 feet from the nearest portion of the proposed Bay Trail corridor and approximately 550 feet from Shorebird Park. At these distances, operation of ferry vessels would generate noise levels up to 51 and 49 dBA at the Bay Trail corridor and Shorebird Park, respectively, which would not exceed the City's daytime exterior noise limit of 55 dBA for low-density single-family residential uses, which is the threshold also used for outdoor recreation spaces due to a similar level of noise sensitivity. Note that noise levels would continue to decrease as distance from the ferry terminal increases, therefore noise levels at all other parks located farther away (e.g., César E. Chávez Park, Horseshoe Park, Marina Mall, and Adventure Playground) would also not exceed the City's applicable daytime exterior noise limit. Therefore, operational noise impacts associated with the ferry vessels would be less than significant. For the noise impact associated with operation of ferry vessels as it relates to potential impacts related to biological resources discussion, see Impact BIO-1 in Section 3.3, *Biological Resources*.

Section 3.11, Recreation

Sub-Section 3.11.2, Environmental Setting

Draft EIR Page 3.11-1:

Open space is a broad term for undeveloped land that provides public access, while a park is a specific type of open space that is developed for recreation and leisure activities. Parks can include playgrounds, sports fields, and paved paths, whereas open spaces can be more natural and less developed areas like forests, farms, or grasslands. Both open space and parks can be publicly owned and operated by a city, a regional jurisdiction, the State, or the federal government. A recreational facility is a specific, human-made structure or area designed for a particular recreational activity and can include elements such as parks and picnic sites, pathways and trails, boating docks, community and nature center buildings, sports courts and swimming pools, among other elements. For purposes of the EIR analysis presented in Section 3.11.4, *Impacts Analysis*, recreational resources include both land-based facilities, such as parks, trails, and open space areas, as well as water-based areas used for recreation, such as marina basins, lagoons, and San Francisco Bay Waters. Figures depicting park and recreation resources may include water features to represent the full extent of recreational use areas rather than solely land acreage.

Draft EIR Page 3.11-5:

Berkeley Marina Basin

The Berkeley Waterfront is an approximately 125-acre area west of I-80 in the City of Berkeley. The Berkeley Marina Basin refers to a subset of the Berkeley Waterfront north of the project site that includes the main boat harbor with approximately 1,000 recreational boat slips (Figure 3.11-2). In 1937, Berkeley built the original yacht harbor (i.e., the Marina Basin) in the Waterfront area. In the 1960s, the City participated in regional planning efforts to develop an East Bay Shoreline for recreation and public access. During this period, the City decided to re-develop the existing yacht harbor of 1937 into the modern Berkeley Marina Basin that exists today.[11] The predominant activity at the Berkeley Marina Basin Main Harbor involves the operation of boat slips for up to 1,000 recreational sailboats, as well as other activities such as dinner cruises, commercial charter boats for sightseeing and fishing, sailing lessons and dragon boat canoe racing. The Marina is a designated San Francisco Bay Water Trail site.[12]

Draft EIR Page 3.11-6:

South Sailing Basin

The South Sailing Basin, located immediately south and southeast of project site is identified as a Water/Recreational use in the Marina Master Plan (see Figure 3.11-2).[16] The South Sailing Basin is a designated San Francisco Bay Water Trail site.[17] Three public docks, located south of University Avenue and south of the sailing club facilities, and south of the project site provide public access to the water for small boats (sail, windsurf, wing, kayak, canoe, paddleboard, etc.) and swimming. The Cal Sailing Club and the Cal Adventures Center utilize the public access docks for sailing and other water recreation activities in the South Sailing Basin.

17. San Francisco Bay Conservation and Development Commission (BCDC). 2026. Berkeley Marina Small Boat Launch. https://sfbaywatertrail.org/trailhead/berkeley-marina-small-boat-launch (accessed September 2026).

San Francisco Bay

The San Francisco Bay is a tidal estuary that provides a variety of natural resource and open space opportunities (see Figure 3.11-2). According to the BCDC San Francisco Bay Plan, the San Francisco Bay is the most important open space in the Bay region, and it provides a variety of unique recreational opportunities. Primary recreation activities occurring throughout the San Francisco Bay include sailing, kayaking, paddle-boarding, swimming, windsurfing, kitesurfing, canoeing and dragon boat canoeing. Additional recreation activities on the Bay include wildlife viewing, fishing and boating via public ferry, private and charter boats. These water-based recreational activities often involve specialized equipment and access points to the shoreline and marina facilities, and are an integral component of the recreational setting at the Berkeley Waterfront.

Draft EIR Page 3.11-7:

Open water swimming is a recognized recreational activity within the Berkeley Waterfront, including use of marina coves and shoreline areas. While the Draft EIR does not quantify user volumes, these activities are considered part of the existing recreational baseline in evaluating potential impacts to recreational access and facilities. Windsurfers, wingers, swimmers, paddleboarders, and kayakers launch from the South Sailing docks or Shorebird Beach for access throughout the South Sailing Cove and beyond. An un-improved rocky shoreline at the southernmost point of the 199 Seawall peninsula is used by some swimmers and windsurfers/wingers, primarily when low tides make launching from the South Cove undesirable due to shallow water and exposed mudflats. According to Berkeley Municipal Code Section 6.20.180, Prohibited activities, swimming, bathing, windsurfing, and wading is prohibited within the City jurisdictional waters except for the South Sailing Basin (including the Shorebird Park Beach and the sailing docks), and no personal watercraft of any kind may be operated within 1,500 feet of the Berkeley Pier.

Sub-Section 3.11.3, Regulatory Framework

Draft EIR Page 3.11-8:

McAteer-Petris Act

The McAteer-Petris Act, enacted in 1965, established the San Francisco Bay Conservation and Development Commission (BCDC) to address public concerns about the future of San Francisco Bay. The Act empowers BCDC to regulate development and fill within the Bay, requiring that changes promote public access and recreational opportunities. This provision mandates comprehensive

planning through the San Francisco Bay Plan, which includes requirements for parks and recreational areas to enhance public enjoyment of the Bay. Additionally, the Act empowers BCDC to issue and deny permits for projects within its jurisdiction, balancing development projects with environmental preservation and public access. In addition, Chapter 7 of the McAteer-Petris Act describes the San Francisco Bay Area Water Trail, a non- linear, recreational trail of launching and landing sites for non-motorized small boaters that circumnavigates the San Francisco Bay. The South Sailing Basin and Marina are designated San Francisco Bay Water Trail sites.

[…]

BCDC San Francisco Bay Plan

The San Francisco Bay Plan, developed by BCDC, serves as a comprehensive framework for managing the Bay and its shoreline. The Plan emphasizes the importance of preserving and enhancing public access to the Bay, including the development of parks, marinas, beaches, and fishing piers. It aims to balance environmental preservation with recreational opportunities, ensuring that the Bay remains a valuable natural asset for both current and future generations. The Plan establishes policies and identifies priority use areas to guide development within BCDC's jurisdiction, including the "Waterfront Park, Beach" designation, which applies to portions of the project site. By guiding development and conservation efforts, the Plan supports the creation of recreational spaces that contribute to the overall quality of life in the Bay Area. Although BCDC laws and policies have a regional focus and are therefore included within the Regional and Local Regulations subsection of Section 3.11.3, *Regulatory Framework*, BCDC's governing legislation, the McAteer-Petris Act, has the status of State law and is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. The BCDC San Francisco Bay Plan includes the following policies related to recreation and public access: …

Sub-Section 3.11.4, Impacts Analysis

Draft EIR Page 3.11-15:

One agency (BCDC) requested that the City document recreational use, identify the service area and service population, assess whether recreational facilities for the project are commensurate with need, and assess potential deterioration of facilities. Section ~~3.10.2~~ 3.11.2, *Environmental Setting* provides details about existing recreational use, the service area and service population, and the existing parks to person ratio; and Impact REC-1 addresses impacts associated with the physical deterioration of recreational facilities.

Organizations and individuals provided general comments about addressing recreational impacts, including impacts on swimming and fishing, as well as recreational access. Comments about recreation impacts and recreational access are addressed in Impacts REC-1 and REC-2. Potential indirect effects on fish habitat and behavior are evaluated in Section 3.3, *Biological Resources*, while this Section evaluates physical access to fishing opportunities. The City also received comments about parking. Comments about parking not related to CEQA impacts are not addressed in this Section (please refer to Chapter 3, *Environmental Impact Analysis*, for a discussion about how parking is considered in this EIR).

Draft EIR Pages 3.11-16:

Direct impacts on parks due to construction would be limited to the installation of a wayfinding signage in Shorebird Park. These potential impacts would be minor, as the construction would be completed using hand tools, would last one day, and would not require the closure of Shorebird Park. For these reasons, direct impacts on parks would be limited; however, there is the potential for construction to result in indirect impacts on recreational resources located near the project site, such as air quality and noise impacts due to use of construction equipment.

Construction activities associated with the proposed project would be phased and managed to maintain recreational access to the Berkeley Waterfront to the maximum extent feasible. During construction, temporary access constraints may occur in localized areas used for staging or active work. However, the City would implement access management practices, including maintaining access where feasible, providing temporary detours around active work areas, and installing temporary signage and wayfinding to direct recreational users to available areas of the waterfront, consistent with the City's construction permitting requirements and traffic control standards.

Draft EIR Page 3.11-17:

While construction of the proposed project may temporarily influence recreational users to seek alternative park facilities, the Berkeley Waterfront area spans approximately 100 acres with multiple access points at other locations that would not be affected by construction staging. In addition, although access routes may be temporarily modified, construction staging and sequencing would be organized, to the maximum extent feasible, to minimize disruption to public access, while maintaining safe construction operations. Therefore, project construction would not preclude recreation at the Waterfront to such an extent that recreational facilities would physically deteriorate or new recreational facilities would be needed.

Draft EIR Page 3.11-18:

For construction occurring in the water, swimming, bathing, wading, and wind surfing~~, sailing, and kayaking~~ are prohibited at the existing and new pier areas, pursuant to Berkeley Municipal Code Section 6.20.180(A), Prohibited activities. Although Berkeley Municipal Code Section 6.20.180(B) also prohibits the use of jet skis and other motorized watercrafts in this vicinity, sailboats, kayaks, paddleboards, and other non-motorized recreational watercraft may continue to use waters in the pier area. Boats already navigate around the existing pier and other vessels in the Bay and Marina, and they would similarly be able to navigate around in-water construction activities. Boats entering or exiting the Marina would also be able to maneuver around the work area, as construction would be staged to maintain adequate space for vessel passage. Therefore, water-work would not directly impact water-based recreation. ~~Therefore, p~~Project construction also would not substantially increase the use of existing park and recreational ~~reactional~~ facilities, including access to the San Francisco Bay for recreational use, such that there would be substantial physical deterioration of existing parks and recreational facilities and result in need for new or physically altered park facilities.

Draft EIR Page 3.11-19 and 3.11-20:

Operation of the ferry vessels would not interfere with recreational uses of the Berkeley Waterfront area. While the project would introduce ferry vessel operations within the approach channel and berthing area, these activities would be limited to defined navigation corridors. Recreational sailing areas in the Marina and adjacent waters would remain available. Proposed ferry vessels would travel and dock in Bay waters north of the pier, in an area where swimming, bathing, wading, and windsurfing~~/sailing is~~ are prohibited by the Berkeley Municipal Code Section 6.20.180(A), Prohibited activities. These restrictions represent existing municipal regulations applicable to localized areas of the Marina and are part of the existing baseline conditions; the proposed project would not modify or expand the geographic extent of these regulated areas. However, other types of recreational boats are permitted to use this area. Sailboats, kayaks, paddleboards, and other non-motorized personal watercraft are not prohibited by either Section 6.20.180(A) or Section 6.20.180(B) and may continue to use the area accordingly. At present, permitted recreational boats already navigate around the existing pier and other vessels using the Bay and Marina, and they would similarly be able to navigate around the proposed ferry infrastructure and ferry vessels. Boats entering or exiting the Marina would continue to be able to maneuver around ferry infrastructure similar to how they currently navigate the area, as ferry infrastructure would maintain adequate space for the passage and docking of permitted recreational boats. Ferry operations would comply with speed restrictions and navigation protocols, resulting in wake conditions consistent with existing vessel traffic. Recreational users, including

swimmers and non-motorized watercraft users, are not typically present within the proposed ferry terminal location, north of the Pier, due to the existing traffic of sailboats and charter boats entering and exiting the Marina. Ferry boats would be regulated near the ferry terminal and be restricted to a travel speed maximum of 8 knots.[29] More specifically, at 0.33 nautical miles, or approximately 2,000 feet from the terminal, ferry boats would begin to slow speed to reduce the effects of the vessel's wake. At 0.25 nautical miles, or approximately 1,500 feet from the terminal, the vessels would be brought to neutral for transferring and qualifying controls at the wing station for docking.[30] Consistent with existing WETA practices, ferry operations would be subject to U.S. Coast Guard navigation and safety requirements and would incorporate standard operational protocols, including defined approach routes, speed controls, and coordination with marina traffic, to ensure safe coexistence with recreational water users (refer to Section 3.12, *Transportation*). In addition to compliance with speed restrictions and navigation protocols, recreational users, including swimmers and non-motorized watercraft users, are not typically present within the proposed ferry terminal location north of the Pier due to the existing traffic of sailboats and charter boats entering and exiting the Marina. There are no designated launch points within the immediate vicinity of the ferry terminal. Ferry operations would occur within areas already characterized by vessel activity and would not affect primary recreational launch areas located elsewhere within the Berkeley Waterfront. Therefore, the associated ferry wake would not be noticeable within the context of the Berkeley Waterfront area and existing sailboat, motorized boats, and other recreational craft use. Recreation in the South Sailing Basin would not be impacted by operation of the proposed project, given the ferry boats would not traverse that area.

Operation of the ferry would not hinder existing and new physical access to recreational resources on the project site or adjacent areas. The project would not restrict shoreline areas used for water-based recreation within the South Sailing Basin, and existing access points to these areas would be maintained.

While certain access points, circulation patterns, and parking configurations within the project vicinity would be modified, overall access to recreational resources would be maintained and enhanced. The proposed new pier and breakwater, Bay Trail Extension, and green space next to the Bay Trail Extension would be publicly accessible and access to such project-related recreational uses would not be hindered by ferry operation or riders commuting to and from the Berkeley Waterfront area to utilize ferry services. Furthermore, the proposed project would include amenities such as fish cleaning stations, seating, and public restrooms, which would enhance the experience of people visiting the pier and breakwater for recreation.

29. 8 knots is equal to approximately 9.2 miles per hour.

Section 3.12, Transportation

Sub-Section 3.12.3, Regulatory Framework

Draft EIR Page 3.12-11:

BCDC San Francisco Bay Plan

The San Francisco Bay Plan, developed by BCDC, serves as a comprehensive framework for managing the Bay and its shoreline. The Plan emphasizes the importance of preserving and enhancing public access to the Bay, including the development of parks, marinas, beaches, and fishing piers. It aims to balance environmental preservation with recreational opportunities, ensuring that the Bay remains a valuable natural asset for both current and future generations. The Plan establishes policies and identifies priority use areas to guide development within BCDC's jurisdiction,

including the "Waterfront Park, Beach" designation, which applies to portions of the project site. By guiding development and conservation efforts, the Plan supports the creation of recreational spaces that contribute to the overall quality of life in the Bay Area. Although BCDC laws and policies have a regional focus and are therefore included within the Regional and Local Regulations subsection of Section 3.12.3, Regulatory Framework, BCDC's governing legislation, the McAteer-Petris Act, has the status of State law and is effectively comprised of State regulations subject to approval by the California Office of Administrative Law. Refer to Table 3.9-1 within Section 3.9, *Land Use and Planning*, of this EIR, which identifies the relevant BCDC San Francisco Bay Plan policies applicable to transportation and public access considerations at the project site.

Chapter 5, Alternatives

Sub-Section 5.5.1, Alternative 1: No Project Alternative Description

Draft EIR Page 5-4:

Under the No Project Alternative, none of the improvements associated with the project and the current uses would remain. Below is a summary of the No Project Alternative.

- The pier, breakwater, and associated infrastructure for the ferry vessels would not be installed, and the pier would continue to deteriorate and remain closed to the public.
- No new ferry service from Berkeley would be established and vehicle trips across the Bay would continue at their current rate.
- No new public plaza would be installed.
- None of the improvements along University Avenue or Seawall Drive would be installed, including no new cycle track, no upgraded bus facilities, and no Bay Trail Extension. Vehicles, buses, pedestrians, and bicyclists would continue to use the existing facilities.
- The Seawall Drive East Parking lot would remain in its current condition.
- None of the construction associated with the project would occur.
- Reasonably foreseeable projects, as identified in Table 3-1 would continue to be implemented.

Sub-Section 5.5.2, Alternative 1: No Project Alternative Impact Analysis

Draft EIR Page 5-8:

Transportation

Under Alternative 1, the site would remain in its current condition, with no ferry infrastructure, public plaza, recreation, or transportation improvements implemented. Existing facilities such as the deteriorating pier and Seawall Drive East Parking lot would remain unchanged, and vehicle trips across the Bay would continue at their current rate. At the project site, trips to the site for recreation would continue. In addition, if future development occurs at the Berkeley Waterfront, including but not limited to the development of a new restaurant at 199 Seawall Drive, local VMT would increase. Regionally, VMT would increase over time with projected regional growth, University Avenue would not undergo any safety improvements, and emergency evacuation capabilities would remain constrained. Alternative 1 transportation impacts would be less than significant.

The proposed project's impact related to transportation would be less than significant (see Section 3.12, *Transportation*). Alternative 1 would have a greater impact related to transportation compared to the proposed project due to the lack of improvements on University Avenue that would improve circulation and pedestrian safety, the lack of zero-emission transportation infrastructure that would decrease VMT, and the lack of emergency evacuation capability improvements that the proposed project would provide.

Sub-Section 5.5.9, Alternatives Considered but Rejected

Draft EIR Page 5-27:

Smaller scale ferry service. Under this potential alternative, smaller ferry vessels or a reduced ferry vessel schedule would be used. A smaller ferry or reduced ferry vessel schedule would still result in additional ferry vessels and would not reduce a significant environmental impact. Regarding biological resources, in general, fish and marine mammals potentially near the Berkeley waterfront are adapted to the high activity level of an active marina and would avoid ferry boats as they now avoid commercial and recreational boaters. An alternative that would introduce a smaller scale ferry service would still have the same potential impact. Therefore, this alternative would not reduce any environmental impacts. Similarly, the use of smaller vessels or smaller scale ferry service would also not avoid or substantially lessen significant environmental impacts associated with dredging. Regardless of vessel size or the schedule of ferry vessels, ferry operations would still require in-water improvements and construction activities within the San Francisco Bay to provide safe vessel access and passenger boarding facilities and therefore, although a smaller vessel could potentially reduce dredging requirements, there is no assurance that dredging would be avoided altogether. In addition, to the extent that a smaller scale ferry service or smaller ferry vessel could operate from within the Berkeley Marina using an existing berth or marina facilities, such an alternative would present similar operational and feasibility concerns as the Berkeley Marina Basin alternative (refer to Section 2.2.12, *Topical Response: In-Marina Ferry Terminal Alternative*, of the Final EIR). Similar to the Berkeley Marina Basin alternative, a smaller scale ferry service or smaller ferry vessel would result in operational inefficiencies and decreased reliability, as ferry operations within the marina would be subject to maneuvering constraints, increased docking and departure times, and potential conflicts with slipholders. Furthermore, a substantially smaller ferry service or smaller ferry vessel would not fully meet the project's basic objective of providing efficient and environmentally friendly zero-emission public ferry service between Berkeley and San Francisco, as a smaller vessel or substantially reduced service schedule would lessen the project's capacity to improve regional connectivity and reduce single-occupancy vehicle trips. Because this alternative would not reduce significant environmental impacts and would not meet the project's basic objective of providing efficient ferry service, this alternative has been considered but rejected.

Appendix C, Supporting Biological Resources Information

Draft EIR Page C-8 through C-10:

This page intentionally left blank.

Special Status Animal Species in the Regional Vicinity of the Project site

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
…				
Fish				
…				
Oncorhynchus tshawytscha pop. 11 chinook salmon - Central Valley spring-run ESU	FT/ST G5T2Q/S2	Adult numbers depend on pool depth and volume, amount of cover, and proximity to gravel. Water temps >27 C are lethal to adults. Federal listing refers to populations spawning in Sacramento River and tributaries.	Moderate Potential (non-breeding)	Suitable freshwater breeding habitat for the species does not occur within the Project site. However, the Bay habitat within the Project site provides migrating habitat for this species.
Oncorhynchus tshawytscha pop. 13 chinook salmon - Central Valley fall/late-fall-run ESU	None/None G5T3Q/S3 SSC	Populations spawning in Sacramento River and San Joaquin rivers and their tributaries.	Moderate Potential (non-breeding)	Suitable freshwater breeding habitat for the species does not occur within the Project site. However, the Bay habitat within the Project site provides migrating habitat for this species.
Spirinchus thaleichthys pop. 2 longfin smelt- San Francisco Bay-Delta DPS	FE/ST G5TNRQ/S1	Pelagic and anadromous within the Sacramento-San Joaquin River Delta, San Francisco Bay, and Gulf of the Farallones. Spawns in lower freshwater reaches of Sacramento and San Joaquin Rivers. First year in Suisun Bay; later SF Bay or Gulf of the Farallones. Occurs in salinities ranging from pure freshwater to pure saltwater; typically salinities ranging from 14-28 parts per thousand (ppt). Generally occupies water temperatures from 61-68F, with spawning occurring in water temperatures from 41-58F.	High Potential	The Project site is within a known occurrence with recent observations, and marine areas are suitable habitat for the species.
…				
Birds				
…				
Athene cunicularia burrowing owl	None/SC G4/S2 SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Low Potential	Although one occurrence has been documented within five miles of the project site and burrowing owls are known to overwinter at Cesar Chavez Park, the project site itself does not provide the habitat conditions required for overwintering. The site lacks open, low-stature annual grassland and protected foraging areas with sufficient insect prey, which are essential for sustaining overwintering individuals. Adjacent areas, including fragmented grasslands in Shorebird Park and along University Avenue, contain limited open space but do not provide suitable overwintering habitat. While some ground squirrel burrows are present, these grassland areas are routinely mowed for park use and subject to heavy recreational use and frequent human disturbance, which reduces prey availability and limits habitat suitability. In addition, the grassland areas along University Avenue are narrow and linear, lack refuge from disturbance due to regular trail use, recreation, and the presence of dogs, and are exposed to numerous tall perching structures that support hawks and other avian predators. A migrating or displaced individual could briefly land on the project site or within nearby areas during movement; however, sustained overwintering use is not expected. Accordingly, neither the project site nor immediately adjacent areas, provide suitable overwintering habitat for burrowing owl.
Branta bernicla *brant*	None/SC G5/S2 SSC	Requires well-protected, shallow marine waters with intertidal eel-grass beds, primarily within bays and estuaries. At high tide they need sheltered open water or protected beaches for loafing. Primary food is eelgrass. Brant often feed close to mudflats, sandbars, or spits used as gritting sites.	Low Potential	There are no known occurrences within five miles and this species does not breed in California; however, suitable foraging habitat may be present in the project vicinity.

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale[1]
Branta hutchinsii leucopareia cackling (=Aleutian Canada) goose	FD/None G5T3/S3 WL	Winters on lakes and inland prairies. Forages on natural pasture or that cultivated to grain; loafs on lakes, reservoirs, ponds.	Not Expected	There are no known occurrences within five miles, this species does not typically breed in California, and the Project site is largely developed and disturbed by recreational use.
…				
Falco peregrinus anatum American peregrine falcon	FD/SD G4T4/S3S4	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	Not Expected	There are two known occurrences within five miles; however, suitable cliffs or tall buildings are not present.
Gavia immer common loon	None/None G5/S1 SSC	Breeds in northern freshwater lakes in Canada and the northern United States, migrates to coastal waters or large southern lakes in winter. Frequents bodies of water that are extensive, fairly deep, and produce quantities of large fish.	Low Potential	No recorded occurrences within five miles, however winter habitat is present in open water in the vicinity of the project site.
Geothlypis trichas sinuosa saltmarsh common yellowthroat	None/None G5T3/S3 SSC	Resident of the San Francisco Bay region, in freshwater and saltwater marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	Not Expected	There is one known occurrence within five miles; however, suitable marsh habitat is not present, and the Project site is largely developed and disturbed by recreational use.
…				
Nannopterum auritum double-crested cormorant	None/None G5/S4 WL	Colonial nester on coastal cliffs, offshore islands, and along lake margins in the interior of the state. Nests along coast on sequestered islets, usually on ground with sloping surface, or in tall trees along lake margins.	Moderate Potential	There are no known occurrences within five miles, and the Project site is largely developed and disturbed by recreational use; however, this species is known locally to nest on man-made structures.
Pandion haliaetus *osprey*	None/None G5/S4 WL	Ocean shore, bays, freshwater lakes, and larger streams. Builds large nests in tree-tops or tall structures within 15 miles of a good fish-producing body of water.	Low Potential	There are no recorded occurrences within five miles. Suitable foraging habitat is present over open water within the project site. There are suitable trees and tall structures for nesting within the project site, but due to high anthropogenic disturbance and no documentation of nests, it is unlikely that ospreys would nest in the project site.
Rallus obsoletus obsoletus California Ridgway's rail	FE/SE G3T1/S2 FP	Salt water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay. Associated with abundant growths of pickleweed, but feeds away from cover on invertebrates from mud-bottomed sloughs.	Not Expected	There are two known occurrences within five miles; however, suitable marsh habitats are not present and the Project site is largely developed and disturbed by recreational use
…				
Rynchops niger black skimmer	None/None G5/S2 SSC	Nests on gravel bars, low islets, and sandy beaches, in unvegetated sites. Nesting colonies usually less than 200 pairs.	Not Expected	There are no known occurrences within five miles, suitable gravel bars and beaches are not present, and the Project site is largely developed and disturbed by recreational use.
Sternula antillarum browni California least tern	FE/SE G4T2T3Q/S2 FP	Nests along the coast from San Francisco Bay south to northern Baja California. Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches, alkali flats, land fills, or paved areas.	~~Not Expected~~ Low Potential	There are no known occurrences within five miles, suitable colonial breeding sites are not present, and the Project site is largely developed and disturbed by recreational use. This species may forage over open water in the vicinity of the project site.
Thalasseus elegans *elegant tern*	None/None G5/S3 WL	Nests on open, sandy undisturbed beaches and on salt-evaporating pond dikes (San Diego) in association with the Caspian tern. There are three known breeding colonies in San Diego Bay, Los Angeles Harbor, and Bolsa Chica Ecological Reserve. Outside of breeding season they can be found along the Pacific coast, from California, all the way into South America. They eat mostly small schooling fish and the northern anchovy is their primary prey.	Low Potential	There are no known occurrences within five miles, suitable breeding sites are not present. This species may forage over open water in the vicinity of the project site.
Xanthocephalus xanthocephalus yellow-headed blackbird	None/None G5/S3 SSC	Nests in freshwater emergent wetlands with dense vegetation and deep water. Often along borders of lakes or ponds. Nests only where large insects such as Odonata are abundant, nesting timed with maximum emergence of aquatic insects.	Not Expected	There are no known occurrences within five miles, suitable freshwater emergent wetlands are not present, and the Project site is largely developed and disturbed by recreational use.

3.2 Staff-initiated Changes

Executive Summary

Summary of Impacts and Mitigation Measures

Draft EIR Page ES-7:

Table ES-1 Summary of Environmental Impacts, Mitigation Measures, and Residual Impacts

Impact Statement	Mitigation Measure(s)	Residual Impact
Aesthetics		
…		
Impact AES-4. Construction ~~of~~ lighting from the proposed project would ~~not create a new source of substantial light or glare~~ affect nearby houseboat residents or occupants. This impact would be less than significant with mitigation. Operation of the Proposed project would result in sources of light and glare from overhead light fixtures and safety and wayfinding lighting. However, operational levels of light and glare would be minor, similar to existing conditions, and all lighting associated with the project would designed with DarkSky approved fixtures, resulting in a less than significant impact during operations. ~~This impact would be less than significant with mitigation.~~	…	…
Biological Resources		
Impact BIO-1. Construction of ~~T~~the project ~~e~~would result in direct or indirect impacts to special-status species or their associated habitats including impacts to migratory bird nest sites. Impacts would be less than significant with mitigation.	…	…
Impact BIO-2. Construction of ~~T~~the project ~~e~~would have a substantial adverse effect on sensitive natural communities identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service. Impacts would be less than significant with mitigation incorporated..	…	…
Impact BIO-3. Construction and operation of ~~T~~the project ~~e~~would have a substantial adverse effect on state- or federally-protected wetlands or Waters. Impacts would be less than significant with mitigation incorporated.	**BIO-3: ~~Provide~~ Avoid ~~Compensatory Mitigation for~~ Net Loss of Jurisdictional Waters Prior to Operation** The City shall avoid a net loss of jurisdictional waters due to project implementation by demolishing additional portions of the existing pier to offset ~~new~~ net increase in fill and overwater cover. ~~Compensatory mitigation~~ Removal of existing pier decking and associated piles shall be required at a minimum 1:1 ratio for net increase in fill and overwater cover impacts on tidal waters of the San Francisco Bay, to achieve no net increase in Bay fill. ~~Compensatory mitigation shall be provided at a minimum 1:1 ratio (by square foot of impact) through removal of existing pier piles and decking, as approved by the regulatory agencies. Mitigation may be achieved through removal of additional areas of the existing pier, including the concrete pier deck and pilings. Compensatory mitigation~~ Removal of existing structures shall be implemented prior to or concurrently with construction of the new pier. The City shall develop a ~~mitigation~~ plan documenting the existing pier footprint, the proposed pier footprint, and the required additional demolition needed to ~~meet the mitigation goal~~ demonstrate that no net increase in Bay fill or overwater cover would occur. This plan shall be developed by a qualified regulatory specialist prior to project construction and submitted to the appropriate agencies for review and approval during permitting. This measure may be modified or supplemented by permit conditions from applicable regulatory agencies. HYD-1: Include and Implement Additional Best Management Practices in the SWPPP Prior to and During Pier Demolition. See Section 3.8, *Hydrology and Water Quality,* for mitigation measure details.	Less Than Significant with Mitigation
…		

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact BIO-5. Construction and operation of ~~T~~the project would be subject to the City's policies and ordinances protecting biological resources, including protected trees, and therefore would not conflict with them. ~~For other policies~~ Regarding consistency with policies in the BCDC Bay Plan related to protecting biological resources, impacts would be less than significant with mitigation.	...	...
...		
Cultural Resources		
...		
Impact CR-2. The proposed land and water disturbances during construction ~~could~~ would adversely affect unidentified archaeological resources. This impact would be less than significant with mitigation for potential unknown archaeological resources.	...	...
...		
Land Use and Planning		
...		
Impact LU-2. Operation and construction of the proposed project would be consistent with the goals and policies of the Berkeley General Plan, Bay Area Clean Air Plan, ABAG/MTC Plan Bay Area 2050, Berkeley Marina Master Plan, Berkeley Local Hazard Mitigation Plan, Berkeley Climate Action Plan, and Berkeley Measure L, and impacts would be less than significant. Operation and construction of the proposed project would be consistent with the goals and policies of the BCDC San Francisco Bay Plan with ~~incorporation~~ implementation of mitigation. Construction of the proposed project would not be consistent with polices related to noise in the Berkeley Municipal Code, and impacts would be significant and unavoidable.	...	...
Noise		
Impact NOI-1. Operational Impacts: Mobile and stationary operational noise impacts would be less than significant. Construction Impacts: Most project construction noise impacts would be less than significant with mitigation; however, construction noise levels at ~~some nearby sensitive receptors~~ Shorebird Park and some live-aboard boats, including for demolition and daytime nighttime ~~construction work~~ pile installation, would still exceed City thresholds and, thus, overall construction noise impacts would be significant and unavoidable.	...	...
...		
Tribal Cultural Resources		
Impact TCR-1. The proposed disturbances due to construction on the non-fill ground and seabed ~~could~~ would adversely affect Tribal Cultural Resources. With adherence to mitigation measures agreed upon through AB 52 consultation, impacts to tribal cultural resources would be less than significant with mitigation.	...	...

Impact Statement	Mitigation Measure(s)	Residual Impact
Utilities and Service Systems		
Impact UTL-1. Construction of ~~T~~the proposed project would require utility service and connections for water supply, wastewater conveyance, and stormwater conveyance, as well as telecommunications and electricity. Existing utility systems for water, wastewater, stormwater, electric power, and telecommunications facilities in Berkeley have sufficient capacity to serve the Project. Adequate wastewater capacity exists to serve the Project's projected demand in addition to the provider's existing commitments. Utility connections from the proposed project would result in less than significant impacts on air quality, biological resources, cultural resources, noise, and tribal cultural resources, after mitigation. Impacts would be less than significant with mitigation. ...	...	...

[1] The City acknowledges that this park is currently undergoing a formal renaming process. This document was prepared prior to the name change and, for consistency, has not been revised throughout to reflect the new park name. References to the existing park name are intended solely for identification purposes. The pending name change does not affect the analyses, findings, recommendations, or conclusions presented in this document.

Chapter 2, Project Description

Sub-Section 2.1.2, Project Site Setting

Draft EIR Page 2-1:

> Vehicle access to the project site is available via University Avenue and Seawall Drive. Bicycle and pedestrian access is also available at multiple locations at the project site, including existing sidewalks and pathways for pedestrians and bicyclists on both sides of University Avenue, the Bay side of Seawall Drive, and completed portions of the Bay Trail Extension. AC Transit bus route 51B provides public bus access to the project site.
>
> Following publication of the Draft EIR, the project footprint has been refined to reflect updated project design information. Figure 2-2, below, has been revised to reflect the updated project footprint, including areas where the footprint has been reduced and the limited areas where the footprint has been expanded. Overall, these refinements result in a net reduction in the project footprint compared to the Draft EIR. The shoreline revetment area associated with the proposed shoreline repair improvements is included within the revised project footprint, and has been analyzed throughout the Draft EIR as part of the proposed project.

Draft EIR Page 2-3:

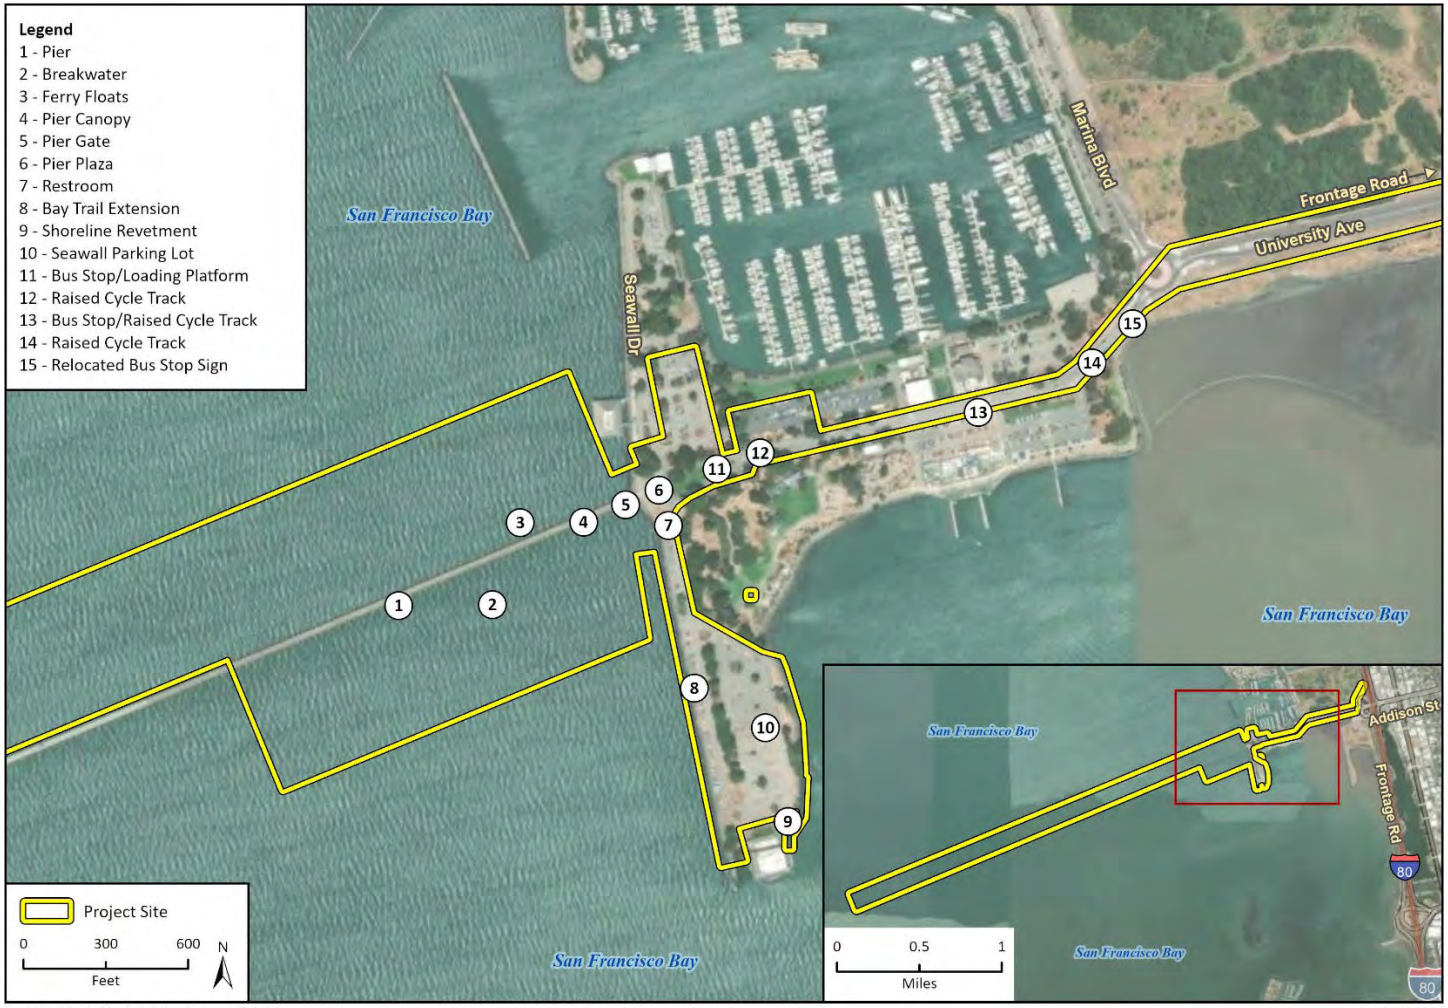

Figure 2-2 Project Site Location (Revised)[1]

[1] Figure 2-2 has been revised to reflect refinements to the project footprint based on updated project design information. The revised figure identifies areas where the footprint has been reduced or expanded and incorporates the shoreline repair area within the project footprint. These revisions result in a net reduction in the project footprint compared to the footprint analyzed in the Draft EIR.

Draft EIR Page 2-7:

Figure 2-3 Overview of Proposed Project Components (Revised)[5]

[5] Figure 2-3 has been revised to reflect updated project design information and refinements to the project footprint shown on revised Figure 2-2, including incorporation of the shoreline repair area and adjustments to the project footprint boundaries.

Sub-Section 2.5.1, Waterside (Sub-Section Proposed Ferry Vessel Infrastructure)

Draft EIR Page 2-10:

The proposed ferry vessel infrastructure would include up to two 120-foot-long and 10-foot-wide gangways[9] that would bring passengers from the pier to the two proposed boarding floats[10], which would measure approximately 135 feet in length and 42 feet in width. Each float would include 4 to 6 steel guide piles to moor the floats in place. In addition, there would be a total of 6 donut fenders (2 at the end of each float and 2 near the breakwater), each of which would be 6-feet in diameter and would require a 3-foot pile. Since publication of the Draft EIR, the project design has been refined to include additional fender piles[11] and donut fenders[12] (steel protection piles, 36-inches in diameter) located adjacent to the ferry berthing area and around portions of the breakwater and turning basin. These protection piles would function as passive marine safety features and would supplement the guide piles and donut fender system associated with the proposed ferry facilities. The protection piles are intended to provide additional protection for waterside infrastructure during vessel approach and docking operations, including in the unlikely event of a vessel loss-of-control incident (see Section 3.12, Transportation).

[9.] Gangway is defined as a raised platform or walkway that provides a passage. For the proposed project, the gangway would provide passage from the pier to the float.

[10.] Floats are defined as structures buoyant in water.

[11.] Fender piles are marine protective structures designed to absorb or deflect vessel impact and help prevent contact with adjacent facilities.

[12.] Donut fenders are circular energy-absorbing devices installed around piles or other marine structures to cushion vessel contact and reduce the transfer of impact forces during docking maneuvers or other low-speed vessel movements.

Sub-Section 2.6.1, Construction Activities and Equipment (Sub-Section Piles)

Draft EIR Page 2-27:

The landside retaining wall would be a mechanically stabilized earth (MSE) with a pre-case concrete panel face. Following the completion of the shoreline retaining wall and landside concrete abutment, the new pier would be constructed from the shoreline heading westward likely using a combination of a floating crane barge and shore-based cranes operating from the progressive extension of the newly constructed concrete abutment and pier. The 1,080-foot pier would be constructed using 24-inch octagonal precast concrete piles (24-inch concrete piles). Two 24-inch concrete piles would be installed approximately every 25 feet using a combination of jetting and impact pile driving. At the landside interface approximately 2 steel piles will be driven through the existing rock dike using a crane and a combination of vibratory and impact hammers. The construction of the pier would progress westward to include construction of the landing floats using 24-inch concrete vertical piles and eventually construction of loading ramps, and adjacent donut fender piles and fender piles using 36-inch steel pipe piles as support guide piles. The 36-inch steel pipe piles anchoring the UCFs and donut fenders would be installed using a combination of vibratory and impact pile driving hammers. To complete the project and to help protect the ferry boarding areas and reduce wave energy, a concrete sheet pile breakwater perpendicular to the new pier would be constructed using 24-inch concrete batter piles and interlocking 48-inch x 14-inch prestressed concrete sheet piles (sheet piles) using a combination of jetting and impact pile driving hammers for the 24-inch concrete batter piles and sheet piles. Four 12-inch Precast Prestressed Concrete Marker Piles would be installed along the dredged channel to identify the limits of the dredged channel. Table 2-1 provides a summary of the kinds of piles and the number of piles that are proposed.

Table 2-1 Summary of Proposed Piles ~~201~~

Location	Pile Type	Number of Piles
Landside/Shoreline Retaining Wall	24-inch Steel Pipe Pile [2]	46
UCF Guide and Donut Piles and Fender Piles	36-inch Steel Pipe Pile	~~18~~ 28
Pier, Landing Platform, and Breakwater	24-inch Octagonal Prestressed Concrete Pile	~~227~~ 128
Breakwater	48-inch x 14-inch Concrete Sheet Pile	~~125~~ 75
Dredged Channel	12-inch Precast Prestressed Concrete Marker Piles	4

[1.] The overall number of piles presented in Table 2-1 ~~is based on the current design of the Project and may be reduced in the future~~ has been reduced from the Draft EIR to the Final EIR, based on the updated project design. ~~The number of piles in Table 2-1 is a conservative estimate. For example, the retaining wall may be MSE and would not require the number of piles identified.~~

[2.] Two of these piles have a 54-inch diameter sleeve. The purpose of the steel pile sleeve is to isolate the inner steel piles from riprap slope movement during earthquakes.

Draft EIR page 2-28:

Dredging is the process of removing sediment from the bottom of waterbodies to make waterways deeper for boats. The following specifications represent the maximum extent of potential dredging; however, further design may decrease the proposed dredging footprint and/or volume. Nonetheless, for the purposes of environmental analysis, this Environmental Impact Report uses these conservative assumptions.

As part of the proposed project, dredging would be conducted north of the closed pier. Dredging would be needed along the existing 100-foot wide United States Army Corps of Engineers (USACE)-designated federal navigation channel that parallels the closed pier and which future ferry vessels would use to travel to and from the pier. Refer to Figure 2-2 for the location of dredging. The dredging footprint represents a maximum envelope wherein dredging would occur and not all the areas shown in Figure 2-2 would be dredged. Rather, the exact location of the dredging channel will be refined as the project advances in its design. As needed, the final design plans will identify areas where buoys will be employed to identify the limits of dredging or anchoring, or to avoid sensitive areas outside of the dredging footprint. In addition, dredging would be needed for the turning basin, which would allow for ferry vessels to turn and dock at the two ferry boarding floats. Dredging would be done to a maximum depth of minus 12.51 feet City of Berkeley mean lower low water (MLLW)[22], which is equal to -12 feet National Oceanic and Atmospheric Administration (NOAA) MLLW. A maximum total of 400,000 cubic yards of dredged materials would be generated and would require disposal.

[22.] The 12.51 feet measurement uses City of Berkeley Datum.

Section 3.1, Aesthetics

Sub-Section 3.1.4, Impacts Analysis

Draft EIR Page 3.1-33:

IMPACT AES-4 CONSTRUCTION ~~OF~~ LIGHTING FROM THE PROPOSED PROJECT WOULD ~~NOT CREATE A NEW SOURCE OF SUBSTANTIAL LIGHT OR GLARE~~ AFFECT NEARBY HOUSEBOAT RESIDENTS OR OCCUPANTS. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION. OPERATION OF THE PROPOSED PROJECT WOULD RESULT IN SOURCES OF LIGHT AND GLARE FROM OVERHEAD LIGHT FIXTURES AND SAFETY AND WAYFINDING LIGHTING. HOWEVER, OPERATIONAL LEVELS OF LIGHT AND GLARE WOULD BE MINOR, SIMILAR TO EXISTING CONDITIONS, AND ALL LIGHTING ASSOCIATED WITH THE PROJECT WOULD DESIGNED WITH DARKSKY APPROVED FIXTURES, RESULTING IN A LESS THAN SIGNIFICANT IMPACT DURING OPERATION. ~~THIS IMPACT WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.~~

Section 3.3, Biological Resources

Sub-Section 3.3.4, Impact Analysis

Draft EIR Page 3.3-42:

IMPACT BIO-1 CONSTRUCTION OF ~~T~~THE PROJECT ~~C~~WOULD RESULT IN DIRECT OR INDIRECT IMPACTS TO SPECIAL-STATUS SPECIES OR THEIR ASSOCIATED HABITATS INCLUDING IMPACTS TO MIGRATORY BIRD NEST SITES. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION

Draft EIR Page 3.3-57:

IMPACT BIO-2 CONSTRUCTION OF ~~T~~THE PROJECT ~~C~~WOULD HAVE A SUBSTANTIAL ADVERSE EFFECT ON SENSITIVE NATURAL COMMUNITIES IDENTIFIED IN LOCAL OR REGIONAL PLANS, POLICIES, OR REGULATIONS, OR BY THE CALIFORNIA DEPARTMENT OF FISH AND WILDLIFE OR US FISH AND WILDLIFE SERVICE. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED.

Draft EIR Page 3.3-59:

IMPACT BIO-3 CONSTRUCTION AND OPERATION OF ~~T~~THE PROJECT ~~C~~WOULD HAVE A SUBSTANTIAL ADVERSE EFFECT ON STATE- OR FEDERALLY-PROTECTED WETLANDS OR WATERS. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED.

[…]

The project would remove approximately 1,280 linear feet of the existing pier, which is equivalent to approximately 28,160 square feet. It should be noted that this removal is part of the proposed project, is required for the installation of the new pier, and is not considered mitigation. The project would install a new pier, breakwater, universal charging floats, and landing ramps and platforms, with an area of approximately 45,210 square feet. Table 3.3-4 provides a summary of the proposed removal and addition of this cover area within tidal waters of the San Francisco Bay. The project would result in a net increase of approximately 17,050 square feet of fill and/or cover area within the San Francisco Bay. The increase in fill and cover within the Bay would result in temporary or permanent loss of tidal waters by area and associated ecological functions and services, which would be a potentially significant impact.

Mitigation Measure BIO-3 would require the removal of additional portions of the existing pier to address project impacts associated with net increase in fill and cover in the San Francisco Bay. The City would also obtain the appropriate permits from the USACE, RWQCB, and BCDC; these permits will

include avoidance, minimization, and compensatory mitigation requirements to achieve no net loss of jurisdictional waters. Because implementation of Mitigation Measures BIO-3 would result in no net loss of jurisdictional waters, impacts would be less than significant with mitigation.

Draft EIR Page 3.3-60:

Table 3.3-4 Proposed Project Estimated Cover Area

Structure	Pile Type	Cover Area (square feet)
Existing Pier	20" Concrete Piles	28,160
New Build		
New Pier, Gangway and Platform, and Breakwater	24" Octagonal Piles	33,525
	48"x14" Prestressed Concrete Sheet Pile (for breakwater)	
Universal Charging Float Guide and Donut Piles	36" Steel Guide Pipe Piles	11,685
	36" Steel Donut Fender Pipe Piles	
Total New Build		**45,210**
Net Change		**17,050**

Note: As noted in Table 2-1 of Chapter 2, *Project Description*, design updates (since the Draft EIR was published) have resulted in an overall reduction in the number of piles proposed for installation. Given that final calculations will be conducted as the City obtains regulatory permits, the values in this table have not been changed. They continue to represent conservative values for the purposes of CEQA analysis.

[…]

However, Mitigation Measure BIO-3 would be required to remove additional areas of the existing pier at a ratio of at least 1:1 for net increase in fill and cover, so that there is no increase in shading or loss of soft bottom habitat. The project would add hard substrate for algal growth, sessile invertebrates, and seaweeds with the creation of the breakwater, which could benefit ecological function. Therefore, operation-related fill shading and soft bottom habitat impacts would be less than significant with mitigation.

Draft EIR Page 3.3-61:

MITIGATION MEASURE BIO-3: ~~PROVIDE~~ AVOID ~~COMPENSATORY MITIGATION FOR~~ NET LOSS OF JURISDICTIONAL WATERS PRIOR TO OPERATION

The City shall avoid a net loss of jurisdictional waters due to project implementation by demolishing additional portions of the existing pier to offset ~~new~~ net increase in fill and overwater cover. ~~Compensatory mitigation~~ Removal of existing pier decking and associated piles shall be required at a minimum 1:1 ratio for net increase in fill and overwater cover impacts on tidal waters of the San Francisco Bay, to achieve no net increase in Bay fill. ~~Compensatory mitigation shall be provided at a minimum 1:1 ratio (by square foot of impact) through removal of existing pier piles and decking, as approved by the regulatory agencies. Mitigation may be achieved through removal of additional areas of the existing pier, including the concrete pier deck and pilings. Compensatory mitigation~~ Removal of existing structures shall be implemented prior to or concurrently with construction of the new pier.

The City shall develop a ~~mitigation~~ plan documenting the existing pier footprint, the proposed pier footprint, and the required additional demolition needed to ~~meet the mitigation goal~~ demonstrate that no net increase in Bay fill or overwater cover would occur. This plan shall be developed by a qualified regulatory specialist prior to project construction and submitted to the appropriate agencies for review and approval during permitting.

This measure may be modified or supplemented by permit conditions from applicable regulatory agencies.

Draft EIR Page 3.3-64:

IMPACT BIO-5 CONSTRUCTION AND OPERATION OF ~~T~~THE PROJECT WOULD BE SUBJECT TO THE CITY'S POLICIES AND ORDINANCES PROTECTING BIOLOGICAL RESOURCES, INCLUDING PROTECTED TREES, AND THEREFORE WOULD NOT CONFLICT WITH THEM. ~~FOR OTHER POLICIES~~ REGARDING CONSISTENCY WITH POLICIES IN THE BCDC BAY PLAN RELATED TO PROTECTING BIOLOGICAL RESOURCES, IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

Section 3.4, Cultural Resources

Sub-Section 3.4.4, Impacts Analysis

Draft EIR Page 3.4-24:

IMPACT CR-2 THE PROPOSED LAND AND WATER DISTURBANCES DURING CONSTRUCTION ~~COULD~~ WOULD ADVERSELY AFFECT UNIDENTIFIED ARCHAEOLOGICAL RESOURCES. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION FOR POTENTIAL UNKNOWN ARCHAEOLOGICAL RESOURCES.

Section 3.9, Land Use and Planning

Sub-Section 3.9.4, Impacts Analysis

Draft EIR Page 3.9-12:

IMPACT LU-2 OPERATION AND CONSTRUCTION OF THE PROPOSED PROJECT WOULD BE CONSISTENT WITH THE GOALS AND POLICIES OF THE BERKELEY GENERAL PLAN, BAY AREA CLEAN AIR PLAN, ABAG/MTC PLAN BAY AREA 2050, BERKELEY MARINA MASTER PLAN, BERKELEY LOCAL HAZARD MITIGATION PLAN, BERKELEY CLIMATE ACTION PLAN, AND BERKELEY MEASURE L, AND IMPACTS WOULD BE LESS THAN SIGNIFICANT. OPERATION AND CONSTRUCTION OF THE PROPOSED PROJECT WOULD BE CONSISTENT WITH THE GOALS AND POLICIES OF THE BCDC SAN FRANCISCO BAY PLAN WITH ~~INCORPORATION~~ IMPLEMENTATION OF MITIGATION. CONSTRUCTION OF THE PROPOSED PROJECT WOULD NOT BE CONSISTENT WITH POLICIES RELATED TO NOISE IN THE BERKELEY MUNICIPAL CODE, AND IMPACTS WOULD BE SIGNIFICANT AND UNAVOIDABLE.

Draft EIR Page 3.9-18 (Table 3.9-1):

Policy	Consistency
Fish, Other Aquatic Organisms and Wildlife	
Policy 1. To assure the benefits of fish, other aquatic organisms and wildlife for future generations, to the greatest extent feasible, the Bay's tidal marshes, tidal flats, and subtidal habitat should be conserved, restored, and increased.	**Consistent**. The City would mitigate all impacts on aquatic resources to address adverse effects, in accordance with Mitigation Measure Bio-3. Implementation of this ~~compensatory~~ mitigation would result in <u>no net loss of jurisdictional waters and</u> the preservation of aquatic resources.
…	…
Water Quality	
Policy 1. Bay water pollution should be prevented to the greatest extent feasible. The Bay's tidal marshes, tidal flats, and water surface area and volume should be conserved and, whenever possible, restored and increased to protect and improve water quality. Fresh water inflow into the Bay should be maintained at a level adequate to protect Bay resources and beneficial uses.	**Consistent.** Please refer to Section 3.8, *Hydrology and Water Quality.* The project would be subject to regulatory requirements that would prevent Bay water pollution during construction, including preparation of a SWPPP and implementation of BMPs in accordance with the State Water Resources Control Board's Construction Stormwater General Permit. In addition, implementation of Mitigation Measure~~s~~ HYD-1~~, HYD-2, and HYD-3~~ would include additional requirements during construction that would further prevent Bay water pollution. As described in Section 3.8, *Hydrology and Water Quality*, adherence to existing regulations, operation of proposed project would not violate water quality standards. The City would mitigate all impacts on aquatic resources to address adverse effects, in accordance with Mitigation Measure Bio-3. Implementation of this ~~compensatory~~ mitigation would result in <u>no net loss of jurisdictional waters and</u> the preservation of aquatic resources. Regarding water surface area and volume, please see Consistency with Water Surface Area and Volume Policy 1. The project does not have any features that would impede freshwater inflow.
…	
Water Surface Area and Volume	
Policy 1. The surface area of the Bay and the total volume of water should be kept as large as possible in order to maximize active oxygen interchange, vigorous circulation, and effective tidal action. Filling and diking that reduce surface area and water volume should therefore be allowed only for purposes providing substantial public benefits and only if there is no reasonable alternative.	**Consistent.** Given that the proposed project is not introducing any dikes, and that the proposed project would introduce a new pier in the location of an existing pier, substantial changes to the existing environment as it relates to water surface area, water volume, and water circulation is not expected. The proposed project includes mitigation to remove fill (in the form of removing piles from the existing pier) to mitigate the <u>net increase in</u> fill <u>and cover</u> impacts associated with the project (see Mitigation Measure Bio-3 in Section 3.3, *Biological Resources*).
…	
Tidal Marshes and Tidal Flats	
Policy 1. Tidal marshes and tidal flats should be conserved to the fullest possible extent. Filling, diking, and dredging projects that would substantially harm tidal marshes or tidal flats should be allowed only for purposes that provide substantial public benefits and only if there is no feasible alternative.	**Consistent.** The project would not affect tidal marshes. The City would mitigate all impacts on aquatic resources to address adverse effects, in accordance with Mitigation Measure Bio-3. Implementation of this ~~compensatory~~ mitigation would result in <u>no net loss of jurisdictional waters and</u> the preservation of aquatic resources. See Consistency with Subtidal Areas Policy 1 regarding public benefits.
…	
Transportation	
…	
Policy 5. Ferry terminals should be sited at locations that are near navigable channels, would not rapidly fill with sediment and would not significantly impact tidal marshes, tidal flats or other valuable wildlife habitat. Wherever possible, terminals should be located near higher density, mixed-use development served by public transit. Terminal parking facilities should be set back from the shoreline to allow for public access and enjoyment of the Bay.	**Consistent.** The siting for the ferry terminal is along the existing 100-foot wide USACE-designated federal navigation channel that parallels the closed pier. Sedimentation rates were identified as part of the Coastal Study, which was prepared by registered professional civil engineers at COWI.[18] This coastal study indicated that "sedimentation was < 0.05 ft in the 2020-2023 period, indicating practically no sedimentation." There are no tidal marshes near the project site. Please refer to Section 3.3, *Biological Resources,* which indicates that there would be less than significant impacts on wildlife habitat after the implementation of mitigation, including Mitigation Measure BIO-3, which would require the removal of fill associated with portions of the <u>existing</u> ~~exiting~~ pier<u>, to mitigate for net increase in fill and cover impacts</u>. While there is no higher density, mixed-use development next to the project site, the project is served by public transit (AC Transit) and includes infrastructure that would allow for expanded AC transit service. Parking for ferry patrons would be at the Seawall Drive Parking Lot, Skates/N, and the Marina Blvd Lot, all of which are set back away from the shoreline. The proposed project would provide amenities that would allow for public access and enjoyment of the Bay. The proposed project includes parking to allow for Bay viewing, as well as green space and a portion of the Bay Trail Extension with benches for the enjoyment of the Bay. [18.] COWI. 2025. Berkeley Water Transportation Pier Ferry Project Coastal Study prepared for City of Berkeley. December.

City of Berkeley
Berkeley Water Transportation Pier Ferry Project

Policy	Consistency
Recreation	
...	
Policy 9. Ferry terminals may be allowed in waterfront park priority use areas and marinas and near fishing piers and launching lanes, provided the development and operations of the ferry facilities do not interfere with current or future park and recreational uses, and navigational safety can be assured. Terminal configuration and operation should not disrupt continuous shoreline access. Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons. Shared parking arrangements should be provided to minimize the amount of shoreline area needed for parking.	**Consistent.** The proposed ferry facility is located within a waterfront park priority use area and would be located at the proposed pier that will also be used for fishing, sight-seeing, and walking. The proposed ferry facility would not interfere with current or future park and recreational users. This project would actually enhance recreational use by providing a pier that can be used for recreation. Navigational safety would be assured through adherence to WETA safety protocols. The project would not disrupt shoreline access; in fact, the project would restore shoreline access that is not publicly available under existing conditions. Regarding parking facilities, the City would implement a parking strategy to balance shared-use parking for both future ferry patrons and recreational users. The exact strategies that would be implemented would follow the guidelines established in the project Parking and TDM Plan [19] [20] and may be subject to approval from BCDC via the Project permitting process. The Parking and TDM Plan estimates a weekday ferry parking demand of between 356 and 393 spaces following implementation of TDM measures. This range does not include the implementation of paid parking, which would further reduce ferry rider demand by 42 to 53 spaces. The Parking and TDM Plan analyzes existing parking demand using multiple methodologies, in response to public feedback received during development of the Draft Parking and TDM Plan. The most conservative methodology relies on analyzing only midday, summer-season parking counts collected between April and August 2024 (Parking and TDM Plan Addendum, Figure 3), a period representing the highest weekday recreational parking demand observed at the Waterfront. Even using this conservative dataset, the combined Skates/N Lot, Seawall Drive, Seawall Lot and Marina Boulevard have a conservative minimum 357 unoccupied spaces on weekdays. As described in Chapter 2, *Project Description*, the Project would replace the existing 404 parking spaces across the Seawall Drive Lot and Seawall Drive with approximately 400 to 450 new parking spaces, resulting in a total parking supply at the Seawall Peninsula that is at least the same as existing conditions. The Parking and TDM Plan demonstrates sufficient spaces to accommodate shared use by ferry riders without displacing recreational parking. The City will implement parking management tools to facilitate the shared use of these parking areas. It should be noted that consistency with this policy related to parking would not be considered an environmental impact under CEQA. Please refer to Chapter 3, *Environmental Impact Analysis*, for a discussion about how parking is addressed in this EIR. This EIR has found no secondary environmental impacts related to parking. ...	
Fill for Bay-Oriented Commercial Recreation and Bay-Oriented Public Assembly on Privately-Owned or Publicly-Owned Land	
Policy 1. Filling for Bay-oriented commercial recreation and Bay-oriented public assembly on privately-owned or publicly-owned property should be approved only if the filling would provide, for new public access to the Bay and for improvement of shoreline appearance-in addition to what would be provided by the other Bay Plan policies-and the filling would be limited to replacement piers for Bay-oriented commercial recreation and Bay-oriented public assembly purposes, covering less of the Bay than was being uncovered and the proposed fill would fully comply with all of the additional criteria: a. The proposed replacement fill in its entirety, including all parts devoted to public recreation, open space, and public access to the Bay, would cover an area of the Bay smaller in size than the area being uncovered by removal of piers (pile-supported platforms), and those parts of the replacement fill devoted to uses other than public recreation, open space, and public access would cover an area of the Bay no larger than 50 percent of the area being uncovered (or such greater percentage as was previously devoted to such other uses that were destroyed involuntarily, in whole or in part, by fire, earthquake, or other such disaster, and will be devoted to substantially the same uses). b. The volume (mass) of structures to be built on the replacement pier (pile-supported platform) would be limited to the minimum necessary to achieve the purposes of the project. c. The replacement fill would be limited to piers (pile-supported platforms), rather than earth or other solid material, and, wherever possible, a substantial portion of the replacement project would be built on existing land. d. The pier (pile-supported platform-not a bridge) to be removed from the Bay must have: 1. been destroyed involuntarily, in whole or in part, by fire, earthquake, or other such disaster, or 2. become obsolete through physical deterioration, or 3. become obsolete because changes in shipping technology make it no longer needed or suitable for maritime use.	**Consistent.** The filling associated with the proposed project would provide new public access to the Bay, given that the pier is currently closed to the public and this project would restore public access. The proposed pier is located in the same area as the current pier; however, the proposed breakwater would be perpendicular to the pier and would introduce fill in areas that have not been previously filled. However, the project would implement Mitigation Measure BIO-3 to compensate for this impact of net increase in fill and cover through the removal of additional fill from the existing pier. With implementation of this mitigation, the proposed fill associated with the project (which would all be devoted to public recreation and public access) would cover an area of the Bay equal in size to the area being uncovered by removal of piers (pile-supported platforms). The fill associated with the project is piers (pile-supported platforms) and its volume would be limited to the minimum necessary to achieve the purposes of the project (i.e., providing recreational access and a safe area to berth for ferry vessels). The piers to be removed have become obsolete through physical deterioration. The removal of fill, as required by mitigation, would be located in the same geographic vicinity of where the new fill being placed for the pier would be located. The proposed project would limit the use of the pier for public recreation and accessing ferry vessels for public transportation. The proposed pier would remain free to the public.

Policy	Consistency
4. If the platform itself, or the structures on it, have become obsolete, but the pilings that support the platform are structurally sound, consideration must be given to using the existing pilings in any replacement project. e. The proposed project must be consistent with a comprehensive special area plan for the geographic vicinity of the project, a special area plan that the Commission has determined to be consistent with the policies of the San Francisco Bay Plan, except that this provision would not apply to any project involving replacement of only a pier that had been destroyed involuntarily. f. The proposed project would involve replacement fill and removal of material in the same geographic vicinity (as set forth in the applicable special area plan). g. The proposed replacement pier would not extend into the Bay any farther than (i) the piers (pile-supported platforms) to be removed from the Bay as part of the project or (ii) adjacent existing piers. h. The proposed project would limit the use of the replacement pier to: 1. public recreation (beaches, parks, etc.); and 2. Bay-oriented commercial recreation and Bay-oriented public assembly, defined as facilities specifically designed to attract large numbers of people to enjoy the Bay and its shoreline, such as restaurants, specialty shops, and hotels i. The proposed project would be designed so as to take advantage of its nearness to the Bay, and would provide opportunities for enjoyment of the Bay in such ways as viewing, boating, fishing, etc., by keeping a substantial portion of the development, and a substantial portion of the new shoreline created on the replacement pier, open to the public free of charge (though an admission charge could apply to other portions of the project). j. The proposed project would not conflict with the adopted plans of any agency of local, regional, state, or federal government having jurisdiction over the area proposed for the replacement piers, and would be in an area where governmental agencies have not planned or budgeted for projects that would provide adequate access to the Bay. k. The proposed project would either provide recreational development in accordance with the Bay Plan maps or would provide additional recreation development that would not unnecessarily duplicate nearby facilities. l. The project would be planned to minimize the need for filling. (For example, all automobile parking should, wherever possible, be provided on nearby land or in multilevel structures rather than in extensive parking lots.) m. The proposed project would result in permanent public rights to use specific areas set aside for public access and recreation; these areas would be improved at least to finished grade and by installation of necessary basic utilities, at little or no cost to the public. n. The proposed project would, to the maximum extent feasible, establish a permanent shoreline in a particular area of the Bay, through dedication of lands and other permanent restrictions on all privately-owned and publicly-owned property bayward of the area approved for piers. o. The proposed project would provide, to the maximum extent feasible, for enhancement of fish and wildlife and other natural resources in the area of the development, and in no event would result in net damage to these values.	
Mitigation	
Policy 2. Individual compensatory mitigation projects should be sited and designed within a Baywide ecological context, as close to the impact site as practicable, to: (1) compensate for the adverse impacts; (2) ensure a high likelihood of long-term ecological success; and (3) support the improved health of the Bay ecological system. Determination of the suitability of proposed mitigation locations should be guided in part by the information provided in the Baylands Ecosystem Habitat Goals report.	**Consistent**. Please refer to Mitigation Measure BIO-3 in Section 3.3, *Biological Resources*. ~~Compensatory m~~Mitigation is being proposed as close to the impact site as practicable, through the removal of fill from the existing pier.
…	
Policy 4. When determining the appropriate location and design of compensatory mitigation, the Commission should also consider potential effects on benefits provided to humans from Bay natural resources, including economic (e.g., flood protection, erosion control) and social (e.g., aesthetic benefits, recreational opportunities) benefits and whether the distribution of such benefits is equitable.	**Consistent**. The EIR includes ~~compensatory~~ mitigation for impacts from construction in the water. Mitigation Measure BIO-3 would require the removal of additional portions of the existing pier to address project impacts associated with net increase in fill and cover in the San Francisco Bay. The City would also obtain the appropriate permits from the USACE, RWQCB, and BCDC; these permits will include avoidance, minimization, and compensatory mitigation requirements to achieve no net loss of jurisdictional waters. Because implementation of Mitigation Measures BIO-3 would result in no net loss of jurisdictional waters, impacts would be less than significant with mitigation. The determination as to whether the distributions of the benefits from removing additional piles from the pier is equitable will need to be determined with BCDC. Please note that consistency or inconsistency with this policy would not constitute a significant environmental impact under CEQA.
Policy 5. The amount and type of compensatory mitigation should be determined for each mitigation project based on a clearly identified rationale that includes an analysis of: the probability of success of the mitigation project; the expected time delay between the impact and the functioning of the mitigation site; and the type and quality of the ecological functions of the proposed mitigation site as compared to the impacted site.	**Consistent**. The ~~compensatory~~ mitigation identified for this project, and as required by Mitigation Measure Bio-3, was based on the impacts analyzed in Impact Bio-3 (see Section 3.3, *Biological Resources*).

Policy	Consistency
Policy 6. To increase the potential for the ecological success and long-term sustainability of compensatory mitigation projects, resource restoration should be selected over creation where practicable, and transition zones and buffers should be included in mitigation projects where feasible and appropriate. In addition, mitigation site selection should consider site specific factors that will increase the likelihood of long-term ecological success, such as existing hydrological conditions, soil type, adjacent land uses, and connections to other habitats.	**Consistent**. Please refer to Mitigation Measure BIO-3 in Section 3.3, *Biological Resources*. ~~Compensatory m~~Mitigation would be conducted in the form of removal of fill from the existing pier.
Policy 7. Mitigation should, to the extent practicable, be provided prior to, or concurrently with those parts of the project causing adverse impacts	**Consistent**. Please refer to Mitigation Measure BIO-3 in Section 3.3, *Biological Resources*. ~~Compensatory m~~Mitigation would be conducted prior to, or concurrently with construction of the new pier.
Policy 8. When compensatory mitigation is necessary, a mitigation program should be reviewed and approved by or on behalf of the Commission as part of the project. Where appropriate, the mitigation program should describe the proposed design, construction and management of mitigation areas and include: a. Clear mitigation project goals; b. Clear and measurable performance standards for evaluating the success of the mitigation project, based on measures of both composition and function, and including the use of reference sites; c. A monitoring plan designed to identify potential problems early and determine appropriate remedial actions. Monitoring and reporting should be of adequate frequency and duration to measure specific performance standards and to assure long-term success of the stated goals of the mitigation project; d. A contingency plan to ensure the success of the mitigation project, or provide means to ensure alternative appropriate measures are implemented if the identified mitigation cannot be modified to achieve success. The Commission may require financial assurances, such as performance bonds or letters of credit, to cover the cost of mitigation actions based on the nature, extent and duration of the impact and/or the risk of the mitigation plan not achieving the mitigation goals; and e. Provisions for the long-term maintenance, management and protection of the mitigation site, such as a conservation easement, cash endowment, and transfer of title.	**Consistent**. Please refer to Mitigation Measure ~~Bio~~BIO-3 in Section 3.3, *Biological Resources.* While the Mitigation Measure establishes the requirements associated with providing ~~compensatory~~ mitigation to avoid a net loss of jurisdictional waters, it also required that a Mitigation Plan be developed and shared with regulatory specialists, which would include BCDC.

Draft EIR Page 3.9-23:

As shown in Table 3.9-1, construction and operation of the project would overall be consistent with the applicable policies of the BCDC San Francisco Bay Plan with incorporation of identified mitigation measures for biological resources and hydrology/water quality, specifically Mitigation Measures BIO-1(a) through BIO-1(~~f~~ e), BIO-2, BIO-3, and HYD-1 ~~through HYD-3~~. These mitigation measures would require implementation of surveys and plans that would protect special-status species; compensatory mitigation for loss of jurisdictional waters; and plans and practices that would protect water quality (for more detailed information, please refer to Section 3.3, *Biological Resources* and Section 3.8, *Hydrology and Water Quality).* Therefore, the project would not conflict with the BCDC San Francisco Bay Plan, and related construction and operational impacts would be less than significant with mitigation.

Section 3.10, Noise

Sub-Section 3.10.4, Impacts Analysis

Draft EIR Page 3.10-19:

IMPACT NOI-1
OPERATIONAL IMPACTS: MOBILE AND STATIONARY OPERATIONAL NOISE IMPACTS WOULD BE LESS THAN SIGNIFICANT.
CONSTRUCTION IMPACTS: MOST PROJECT CONSTRUCTION NOISE IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION; HOWEVER, CONSTRUCTION NOISE LEVELS AT ~~SOME NEARBY SENSITIVE RECEPTORS~~ SHOREBIRD PARK AND SOME LIVE-ABOARD BOATS, INCLUDING FOR DEMOLITION AND DAYTIME AND NIGHTTIME ~~CONSTRUCTION WORK~~ PILE INSTALLATION, WOULD STILL EXCEED CITY THRESHOLDS AND, THUS, OVERALL CONSTRUCTION NOISE IMPACTS WOULD BE SIGNIFICANT AND UNAVOIDABLE.

Draft EIR Page 3.10-25:

Table 3.10-15 Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA)	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
…							
Pile Installation	49	Along pier	Shorebird Park[3]	150	79	60	**Yes**
			Skates on the Bay Restaurant[4]	~~230~~ 170	~~75~~ 78	70	**Yes**
			Nearest live-aboard boat[4][5]	670	66	65	**Yes**
…							

dBA = A-weighted decibels

[1] All equipment in each waterside construction phase was conservatively assumed to operate near the pier entrance, as this represents the closest location where construction activity may occur relative to nearby sensitive receptors for extended periods of time.

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Distance to Sensitive Receptor (feet)[1]	Noise Level at Sensitive Receptor (dBA)	Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?

daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

[4] Note that restaurants are not typically considered to be noise-sensitive receptors; however, due to the close proximity of this land use to project construction and locations where pile driving would occur, this restaurant is conservatively included as a sensitive receptor.

[4-5] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

Source: See Appendix E for construction noise modeling results.

Draft EIR Page 3.10-26:

Table 3.10-16 Comparison of Waterside Construction Noise Levels at Nearby Sensitive Receptors by Phase (Unmitigated and Mitigated)

Construction Phase	Duration (days)	Primary Work Area	Nearby Sensitive Receptor	Noise Level at Sensitive Receptor (dBA)		Applicable Noise Threshold (dBA)[2]	Exceeds Threshold?
				Unmitigated	With Mitigation[1]		
…							
Pile Installation	49	Along pier	Shorebird Park[3]	79	69	60	**Yes**
			Skates on the Bay Restaurant	~~75~~ 78	~~65~~ 68	70	No
			Nearest live-aboard boat[4]	66	56	65	No
…							

dBA = A-weighted decibels; MM = Mitigation Measure

[1] All noise levels presented at sensitive receptors in this column account for the noise reduction provided by Mitigation Measure NOI-1, which is estimated to provide 20 dBA of noise reduction for phases consisting of general construction activities (i.e., dredging, deck, float, and gangway construction, and amenities installation) and 10 dBA of noise reduction for phases consisting of pile driving activities (i.e., demolition and pile installation).

[2] The applicable noise threshold is based on the City's construction noise limits specified in Section 13.40.070(B)(7) of the BMC, which vary depending on the duration of construction. For construction lasting less than 10 days, the applicable daytime residential and commercial limits are 75 and 85 dBA, respectively. For construction lasting 10 days or more, the applicable daytime residential and commercial limits are 60 dBA and 70 dBA, respectively.

[3] The City does not define construction noise thresholds for parks or similar outdoor recreation spaces (e.g., Shorebird Park); however, these uses are typically considered to be noise-sensitive receptors; therefore, the City's daytime construction noise threshold for similar noise-sensitive uses (i.e., low-density residential land uses) of 60 dBA was used.

[4] Exact locations of live-aboard boats within the Marina are not known; however, based on information provided by the City, up to 100 live-aboard boats are allowed/may be present in the Marina at a given time. For evaluation of waterside construction noise impacts, this analysis conservatively assumes that the nearest live-aboard boat is situated at the southwestern corner of the Marina, as this represents the nearest location to proposed waterside construction activities.

Source: See Appendix E for construction noise modeling results.

Section 3.12, Transportation

Sub-Section 3.12.4, Impacts Analysis

Draft EIR Page 3.12-15:

> *Expansion of Ferry Transit Service in the San Francisco Bay Area Program EIR*
>
> The Water Emergency Transportation Authority (WETA) – also known as San Francisco Bay Ferry – prepared the Expansion of Ferry Transit Service in the San Francisco Bay Area Program EIR in 2003 (2003 WETA EIR). The Navigation Section of the 2003 WETA EIR, which the City incorporates by reference herein, included a program-level analysis of ferry vessel navigation and operational safety within the San Francisco Bay. The 2003 WETA EIR describes the regulatory context governing ferry navigation, including federal, state, and regional regulations, as well as coordination with and oversight by applicable maritime authorities. The 2003 WETA EIR accordingly evaluates potential navigation-related impacts associated with expanded ferry service and identifies standard operating procedures and mitigation measures to maintain safe vessel operation and minimize navigation conflicts, including the potential for vessel loss of control incidents (refer to 2003 WETA EIR Section 3.2.1.5, *Regulatory Setting*, and Section 3.2.2, *Impacts and Mitigation*). This information on the regulatory context as well as these mitigation measures are incorporated by reference and provide a broader regulatory and operational framework for ferry navigation evaluated at the project level in this Draft EIR.

Draft EIR Page 3.12-24:

> It should be noted that other marine vessels regularly operate near the project site, given that the project site is next to an active Marina. Similar to other vessels, ferry vessels would operate safely. For example, when approaching the ferry floats, ferry vessels would slow down significantly and adhere to speed limits and docking safety procedures. Additionally, the project design has been refined to include additional fender piles and donut fenders located adjacent to the proposed ferry berthing area and around portions of the breakwater and turning basin. These fender piles and donut fenders would function as passive marine safety features and are intended to supplement the guide piles and donut fender system associated with the ferry terminal described in Chapter 2, *Project Description*. The fender piles and donut fenders would provide an additional layer of protection for ferry terminal infrastructure during vessel approach and docking operations, including in the unlikely event of a vessel loss-of-control incident. The addition of these fender piles and donut fenders is consistent with standard marine engineering and navigational safety practices and would further reduce the potential for collisions involving ferry terminal facilities. The fender piles and donut fenders do not alter ferry operations, navigation routes, vessel maneuvering requirements, or the conclusions of this analysis regarding transportation safety. As described above, these refinements are within the scope of the project analyzed in the Draft EIR and do not result in new or more severe environmental impacts than those originally disclosed. As such, the conclusions of the Draft EIR remain unchanged.

Draft EIR Page 3.12-26:

> ### Overall Level of Cumulative Significance
>
> Less Than Significant ~~with Mitigation~~

Section 3.13, Tribal Cultural Resources

Sub-Section 3.13.4, Impacts Analysis

Draft EIR Page 3.13-8:

IMPACT TCR-1 THE PROPOSED DISTURBANCES DUE TO CONSTRUCTION ON THE NON-FILL GROUND AND SEABED ~~COULD~~ WOULD ADVERSELY AFFECT TRIBAL CULTURAL RESOURCES. WITH ADHERENCE TO MITIGATION MEASURES AGREED UPON THROUGH AB 52 CONSULTATION, IMPACTS TO TRIBAL CULTURAL RESOURCES WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

3.14, Utilities and Service Systems

Sub-Section 3.14.4, Impacts Analysis

Draft EIR Page 3.14-26:

IMPACT UTIL-1 CONSTRUCTION OF ~~T~~THE PROPOSED PROJECT WOULD REQUIRE UTILITY SERVICE AND CONNECTIONS FOR WATER SUPPLY, WASTEWATER CONVEYANCE, AND STORMWATER CONVEYANCE, AS WELL AS TELECOMMUNICATIONS AND ELECTRICITY. EXISTING UTILITY SYSTEMS FOR WATER, WASTEWATER, STORMWATER, ELECTRIC POWER, AND TELECOMMUNICATIONS FACILITIES IN BERKELEY HAVE SUFFICIENT CAPACITY TO SERVE THE PROJECT. ADEQUATE WASTEWATER CAPACITY EXISTS TO SERVE THE PROJECT'S PROJECTED DEMAND IN ADDITION TO THE PROVIDER'S EXISTING COMMITMENTS. UTILITY CONNECTIONS FROM THE PROPOSED PROJECT WOULD RESULT IN LESS THAN SIGNIFICANT IMPACTS ON AIR QUALITY, BIOLOGICAL RESOURCES, CULTURAL RESOURCES, NOISE, AND TRIBAL CULTURAL RESOURCES, AFTER MITIGATION. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

Appendix F, Transportation Impact Analysis Memorandum

Sub-Section Queuing (Sub-Sections, Intersection LOS, Existing Conditions)

Draft EIR Appendix F, Page 6:

Intersection LOS

With LOS no longer used to assess transportation impacts under CEQA, intersection LOS analysis was only conducted to determine if project-related traffic causes queuing exceedances.

Existing Conditions

Table 6 presents the existing conditions intersection delay and LOS summary for weekday AM, PM, and weekend peak hour volumes. The peak hour intersection delay and corresponding LOS were calculated using Highway Capacity Manual (HCM) 7th Edition methodology; the Synchro reports are included in **Appendix B**.

The intersection of University Avenue and Frontage Road operates at an unacceptable LOS F or worse during the AM peak hour, PM peak hour, and Weekend peak hour based on the standard established by the City of Berkeley.[4] ~~A Signal Warrant analysis will be required at this intersection to confirm if a signal is warranted at this intersection. Installation of a traffic signal or other intersection control will help manage queueing at this intersection.~~

Planning Commission

FINAL MINUTES OF THE REGULAR PLANNING COMMISSION MEETING
January 21, 2026

The meeting was called to order at 6:35 p.m.

Location: North Berkeley Senior Center, 1901 Hearst Avenue, Berkeley, CA 94709

1. **ROLL CALL:**
   Commissioners Present: Emily Marthinsen, Jeff Vincent, Christina Oatfield, Savlan Hauser, Angela Wang, Alfred Twu (Arrived 6:40 pm)
   Commissioners Absent:, Darrell Owens, Blaine Merker, Charles Kahn
   Staff Present: Secretary Justin Horner, Clerk Faye Messner, Liza McNulty

2. **LAND ACKNOWLEDGEMENT**
   The City of Berkeley recognizes that the community we live in was built on the territory of xučyun (Huchiun (Hooch-yoon)), the ancestral and unceded land of the Chochenyo (Cho-chen-yo)-speaking Ohlone (Oh-low-nee) people, the ancestors and descendants of the sovereign Verona Band of Alameda County. This land was and continues to be of great importance to all of the Ohlone Tribes and descendants of the Verona Band. As we begin our meeting tonight, we acknowledge and honor the original inhabitants of Berkeley, the documented 5,000-year history of a vibrant community at the West Berkeley Shellmound, and the Ohlone people who continue to reside in the East Bay. We recognize that Berkeley's residents have and continue to benefit from the use and occupation of this unceded stolen land since the City of Berkeley's incorporation in 1878. As stewards of the laws regulating the City of Berkeley, it is not only vital that we recognize the history of this land, but also recognize that the Ohlone people are present members of Berkeley and other East Bay communities today. The City of Berkeley will continue to build relationships with the Lisjan Tribe and to create meaningful actions that uphold the intention of this land acknowledgement.

3. **PUBLIC COMMENT ON ITEMS NOT ON THE AGENDA: 1**

4. **ORDER OF AGENDA:** No change

5. **CHAIRPERSON REPORT:**

- Chair Marthinsen reported on:
- Her correspondence with the Chair of the Parks, Recreation and Waterfront Commission. The Chairs are looking for ways to connect on parks, open space and urban planning.
- Participation in the Vision Zero Advisory Committee. This committee engaged Berkeley Commissions on the status of the 2020 Vision Zero plan.

- Proposed future discussion on the role of the Planning Commission and objective design guidelines.
- Continued informal discussion of Planning Commission goals with fellow Commissioners.

6. AD HOC SUBCOMMITTES AND LIASON COMMENTS

- None

7. COMMISSIONER ANNOUNCEMENTS

- None

8. STAFF ANNOUNCEMENTS

- **Upcoming PC Meeting Items:**
  - February:
    - Corridors Small Business policies and ground floor ODS,
    - Density Bonus and the C-AC,
    - Chair and Vice Chair Elections
  - **March:**
    - Safety-EJ Discussion
    - San Pablo Specific Plan
    - SLTE 2026
    - 5th Street GP and Zoning Amendments
  - **April:**
    - SB 79 and AB 893 implementation
- **Upcoming City Council Items:**
  - **January 20:**
    - ADU Condos
    - Program 32 and Design Review
  - **February 24:**
    - Undergrounding of Transformers
  - **March 10:**
    - SB 684 Implementation

9. APPROVAL OF MINUTES:

Motion/Second (Vincent/Hauser) to approve the Planning Commission Meeting Minutes from December 3, 2025. Ayes: Marthinsen, Vincent, Oatfield, Twu, Hauser and Wang. Noes: None. Abstain: None. Absent: Owens, Kahn, Merker (6-0-0-3). Motion passed.

10. ACTION AND DISCUSSION ITEMS

A. Action: Pier-Ferry Project Use Permit Application

Liza McNulty, Capital Improvement Program Manager (Parks, Recreation and Waterfront Department) presented the Use Permit Application for the Berkeley Pier-Ferry project. Commissioners took public comment, asked questions and made comments including but not limited to: the Planning Commission's role in the Use Permit approval, future transportation needs of the area, other uses on the Pier and in the Marina, the importance of the Ferry as an emergency transportation option, connecting to San Francisco to support tourism and Berkeley businesses, impacts to and connections with BART and AC Transit, and the importance of reinvigoration of the Waterfront and Marina.

Public Comments: 5

Motion/Second (Vincent/Twu) to approve staff recommendation in Attachment 1 to approve the User Permit for the Berkeley Pier Ferry project. Ayes: Marthinsen, Vincent, Oatfield, Twu, Hauser and Wang. Noes: None. Abstain: None. Absent: Owens, Kahn, Merker (6-0-0-3). Motion passed.

B. Public Hearing: Amendments to BMC Title 23 (Zoning) to update the regulation of Nonconforming Lot Coverage, Floor Area Ratio (FAR) and Density for Residential Uses in the Residential Multi-Unit 1 (R-1), Residential Multi-Unit 2 (R-2), Residential Multi-Unit 2A (R-2A), and Mixed Use-Residential (MU-R) Zoning Districts.

Assistant Planner Faye Mingham presented proposed amendments to BMC Title 23 (Zoning) Section 23.324.050 to update the regulation of nonconforming lot coverage, FAR and density for residential uses in the R1, R-2, R-2A, & MU-R zoning districts. Commissioners took public comment, asked questions and made comments including but not limited to: clarifying the intent of Middle Housing development standards and defining nonconforming structures versus alterations.

Public Comments: 1

Motion/Second (Vincent/Wang) to close the public comment. Ayes: Marthinsen, Vincent, Oatfield, Twu, Hauser and Wang. Noes: None. Abstain: None. Absent: Owens, Kahn, Merker (6-0-0-3). Motion passed.

Motion/Second (Vincent/Oatfield) to approve staff's recommendation with the addition of language from 23.324.050(D)(3)(b) to ensure nonconformities are not increased or exacerbated. Ayes: Marthinsen, Vincent, Oatfield, Twu, Hauser and Wang. Noes: None. Abstain: None. Absent: Owens, Kahn, Merker (6-0-0-3). Motion passed.

C. Nominations for February Elections

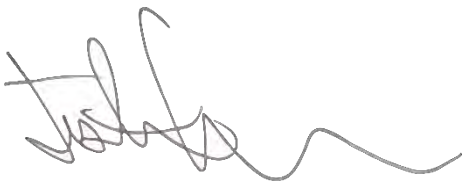
Commissioners put forward nominations for the Chair and Vice Chair election.

Motions/Seconds for Chair and Vice Chair: 1. (Hauser/Vincent) to nominate Commissioner Marthinsen for Chair and Commissioner Hauser for Vice Chair.

Public Comments: 0

11. INFORMATION ITEMS

None



12. CORRESPONDENCE

13. NEXT COMMISSION MEETING: Wednesday, February 4, 2026 at 6:30 PM.

14. ADJOURN

Motions/Second/Carried (Twu/Oatfield) to adjourn the meeting at 8:10pm. Ayes: Marthinsen, Vincent, Oatfield, Twu, Hauser and Wang. Noes: None. Abstain: None. Absent: Owens, Kahn, Merker (6-0-0-3). Motion passed.

Members of the public in attendance: 16
Public Speakers: 6
Length of the meeting: 1 hour and 40 minutes

Justin Horner, Planning Commission Secretary

Planning and Development Department
Land Use Planning Division

STAFF REPORT
January 21, 2026

TO: Members of the Planning Commission

FROM: Liza McNulty, Capital Improvement Program Manager
Parks, Recreation & Waterfront Department

SUBJECT: Pier-Ferry Project Use Permit Application

RECOMMENDATION

Planning Commission review the staff report, receive a staff presentation, consider public comments, and recommend approval of the Use Permit application for the Pier-Ferry Project (Project).

BACKGROUND

History of Berkeley Pier

The Berkeley Pier was constructed in 1926 by the Golden Gate Ferry Company to provide 24-hour ferry service between Berkeley and San Francisco. The pier was constructed as a two-way causeway, allowing vehicles to drive onto the pier and a ferry boat for transit between Berkeley and San Francisco. In 1937, eleven months after the Bay Bridge opened to auto traffic, the ferry line shut down, and the Pier was transferred to City ownership. Berkeley re-opened the pier for pedestrian and vehicle recreational use in 1938. By the 1950s, much of the pier had been abandoned, leaving 3,000 feet maintained for pedestrian access only. In 2015, the Pier was closed to the public due to observed structural deterioration.

Berkeley Pier-Ferry Project

In 2018, the City was approached by the Water Emergency Transportation Authority (WETA) regarding the possibility of a new public ferry service at the Berkeley Waterfront. In 2019, WETA and the Berkeley City Council authorized a Memorandum of Understanding (MOU) Agreement to jointly fund a planning study on the feasibility of rebuilding the Berkeley Pier to provide both ferry service and recreational access. The Feasibility Study concluded in 2023 with the recommendation of preferred layouts for pier, breakwater, ferry terminal and landside improvements. In 2024, the City obtained grant funding for the detailed design and environmental analyses of the Pier-Ferry Project.

The Project scope includes establishing a new use (public transportation) and enhancement of existing uses via the repair or replacement of existing landside and waterside infrastructure including trails, bike paths, streets, sidewalks, parking areas,

public spaces and the pier. The Use Permit application is limited to the establishment of a new use – public transportation – at the Berkeley Pier. The repair and replacement of existing infrastructure to serve existing uses does not require a new Use Permit.

Use Permit Application Process and Role of Planning Commission

The Berkeley Waterfront is a single parcel (APN 06-2545-1) all of which is zoned as an Unclassified (U) zoning district. Berkeley Municipal Code (BMC) Section 23.208.202, Special Purpose Districts, states that a Use Permit is required to establish any use in a U zoning district and establishes the procedures for a Use Permit application.

The BMC requires that a Use Permit application in a U zoning district first be submitted to the Planning Commission with the Planning Commission making a report to the Zoning Adjustment Board (ZAB). If the Planning Commission fails to take an action on the report within 30 days after a Use Permit application is deemed complete, the ZAB will consider the application without a Planning Commission report. To approve a Use Permit in the U zoning district, the ZAB, City Council and Planning Commission must make all the findings in Section 23.406.0303(F), which include:

- That the proposed use will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working in the area or neighborhood of the proposed use; and
- That the proposed use will not be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood or to the general welfare of the City.

The proposed new use is public transportation – specifically, the operation of a public, zero emission ferry at the Berkeley Pier. New structures necessary to accommodate the use include:

- Universal charging and boarding floats, which provide the infrastructure for the ferry vessel to dock and charge while passengers on and off board;
- Ferry gate and landing, including signage and ticket kiosks, connecting the recreational pier to the gangway;
- Gangway connecting the Ferry landing to the float; and
- Breakwater, providing protection for the ferry terminal elements described above. The breakwater also enhances public access for pedestrian recreation and fishing.

Establishing transportation as an allowable use is fundamental to the overall Project schedule and progress. In addition to a Use Permit, the Project must obtain building and other permits from multiple agencies with jurisdiction over the Project, including but not limited to the San Francisco Bay Development and Conservation Commission (BCDC), Army Corps of Engineers, and California Regional Water Quality Control Board. These permits have lengthy application review periods, and the City anticipates submitting applications soon after completing public review of the Draft EIR. For the Project to proceed with these applications and remain on schedule to be shovel-ready by 2027, the

City is prioritizing Planning Commission and ZAB review and action on the Use Permit application prior to publication of the Draft EIR.

Attachments 2-8 include the Use Permit application and application-related materials.

DISCUSSION

The Project is not within or adjacent to a residential zoning district. The nearest residential zone is over one mile east of the proposed use. The nearest neighbors of the proposed use (within 0.1 mile) are a restaurant, park and public parking lot. Within 0.2 miles of the proposed use are additional public amenities (parklands, paths, playground), portions of the Berkeley Marina and additional public and mixed-use parking lots. Beyond 0.2 miles from the proposed use, the Berkeley Waterfront includes additional parks, parking lots, restaurants and office buildings, a hotel, and various boating and recreational facilities. The Berkeley Marina has a total 1,000 boat slips, of which up to 100 are permitted for live-aboard occupancy. Thirteen floating homes are berthed approximately 0.4 miles from the proposed use. ***Attachments 5 and 6*** include additional photographs and images of the Project site and proposed Project.

Ferry Service

Ferry service would be operated by WETA. Prior to initiation of ferry service, the City Council would execute an MOU or similar formal agreement with WETA to authorize the use of the Berkeley Pier for the ferry service.

A summary of the proposed Berkeley Ferry Service included in the WETA Berkeley Ferry Service Business Plan (V1.0)[1] includes:

- WETA envisions operating two vessels on the weekday route and a single vessel during weekend service. Weekday ridership is projected to be 955 riders in the first year of service, increasing to 1,018 riders in the 10th year of service. Weekend ridership is projected to be 684 riders in the first year of service and 729 riders in the 10th year of service.
- Weekday service every 35-minutes between Berkeley and San Francisco. The one-way travel time is about 25-minutes. Service would run from 6:30 am to 11:15 am in the morning and 4 pm to 7:40 pm in the evenings.
- Weekend service every 70-90 minutes. Weekend service could include a Berkeley - Larkspur route; with one-way travel time of 35-minutes. Service would run from 8:30 am to 5 pm weekends.
- The fare for Berkeley – San Francsico service is estimated to be $5.17 - $5.41 per trip, and fare for Berkeley – Larkspur service estimated to be $10.78 - $12.72 per trip (in 2026; fares are projected to increase 3% annually).
- Special event service may operate between Berkeley and San Francsico or Mission Bay for example, for events at the Chase Center, Oracle Park or Berkeley Marina. Special event service fare pricing would be set to cover WETA costs.

The WETA Berkeley Ferry Service Business Plan is a living document and future updates prior to service initiation are expected.

Land Use Planning

The Berkeley Waterfront lands are “public tidelands” that are subject to the Public Trust Doctrine. Under the Public Trust Doctrine, the City holds these lands in trust for the benefit of all the people of California. Public tidelands must be used for water-dependent or water-related uses, including commerce, navigation, fishing, water-oriented recreation, visitor-serving uses, environmental protection, open space, recreation, etc. Portions of the Berkeley Waterfront are also regulated by the San Francisco Bay Development and Conservation Commission (BCDC).

This area has a land use designation of “Waterfront / Marina” in the Berkeley General Plan. The General Plan describes the Waterfront / Marina as areas intended to maintain and preserve areas of Berkeley adjacent to the Bay for open space, recreational uses, waterfront-related commercial and visitor services, boating and water transit facilities. The Berkeley Marina Master Plan (adopted in 2003) identifies various capital improvements throughout the Berkeley Marina, although improvements related to the Pier are limited to new benches and signage. This Plan was adopted 12 years prior to the Pier closure to the public.

[1] https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf

The City's Local Hazard Mitigation Plan (2019) identifies developing a ferry service as a High Priority Action that would play an important role in the City's emergency response and recovery after a major disaster.

The City's Climate Action Plan identifies public transit as a more sustainable form of transportation (Chapter 3) and sets a goal to established ferry service at the Berkeley Marina that would connect to San Francisco and other locations.

Ferry service connecting Berkeley to San Francsico is included in multiple regional transportation planning documents, including the Metropolitan Transportation Commission adopted Plan Bay Area 2050, Draft Plan Bay Area 2050+ and the WETA 2050 Service Vision.

Public Engagement
The City has conducted extensive public outreach related to the Pier-Ferry Project since 2019 (***Attachment 4***)

Some existing Waterfront users have consistently expressed concern that parking by ferry riders could negatively impact the ability for recreation visitors to find parking. The City and its consultants collected parking utilization data on 588 days between May 2021 and August 2024. Data was collected at various times throughout the days including five separate days of full-day continuous data collection over five months. This data was analyzed by the transportation engineering and planning consultant to determine existing parking patterns, including peak use and occupancy, turn-over and other factors. The analysis (***Attachment 7***) concluded that even during peak visitation periods, multiple parking lots at the Berkeley Waterfront are currently under-utilized and there are sufficient parking stalls to accommodate ferry riders within these under-used parking lots without impacting recreation parking access.

The Project incorporates multiple transportation demand management measures to encourage multi-modal transportation, including a new bike lane on University Avenue, secure bike parking, dedicated ride-share loading zone and improved AC Transit facilities. The City has developed a Preliminary Parking Management Plan (***Attachment 8)*** that would limit full day parking by ferry riders to only those lots identified as having capacity available and would prohibit full-day parking by ferry riders at those lots that do not have excess capacity.

ENVIRONMENTAL REVIEW
The City published a Notice of Preparation (NOP) for an Environmental Impact Report (EIR) for the Pier-Ferry Project in May 2025. A Draft EIR for the Project is expected to be published for public review in late February 2025. The Berkeley City Council would need to certify a Final EIR for the Project prior to the Project receiving permits from the City, including this Use Permit, and from other regional or state agencies with jurisdiction over the Project. Federal environmental review pursuant to the National Environmental Policy Act will be conducted by the lead federal agency prior to issuance of any federal permit.

NEXT STEPS

After Planning Commission review and recommendation, the ZAB shall take action to approve, conditionally approve, or deny the application. As pertains to Use Permits in the Unclassified district, ZAB decisions may not be appealed (BMC 23.208.202.C.2) and are not effective until after action by the City Council. City Council may affirm, reverse, or modify the ZAB decision.

PLANNING COMMISSION
RESOLUTION NO. 2026-01

A RESOLUTION OF THE CITY OF BERKELEY PLANNING COMMISSION RECOMMENDING THE ZONING ADJUSTMENTS BOARD AND CITY COUNCIL APPROVE THE USE PERMIT FOR THE BERKELEY PIER-FERRY PROJECT

WHEREAS, the Berkeley Waterfront is a single parcel with an Unclassified zoning district; and

WHEREAS, the City of Berkeley proposes establishing a new transportation use at the Berkeley Pier for public ferry service; and

WHEREAS, establishing Berkeley ferry service is identified as a high priority action in the City of Berkeley Local Hazard Mitigation Plan; and

WHEREAS, establishing Berkeley ferry service is identified as a goal in the City of Berkeley Climate Action Plan; and

WHEREAS, a public ferry is consistent with the allowable water-dependent uses of public tidelands that are subject to the Public Trust Doctrine; and

WHEREAS, establishing transportation as an allowable use at the Berkeley Pier is critical to overall schedule and progress of the Berkeley Pier-Ferry Project; and

WHEREAS, on January 21, 2026, the Planning Commission held a duly-noticed meeting and considered all public comments received, the presentation by City staff, the staff report, and all other pertinent documents regarding the proposed request; and

WHEREAS all documents constituting the record of this proceeding are and shall be retained by the City of Berkeley Planning and Development Department, Land Use Planning Division, at 1947 Center Street, Berkeley, California.

WHEREAS, the Use Permit is not effective until after action by Berkeley City Council, who may affirm, reverse or modify the Zoning Adjustment Board decision; and

WHEREAS, the Berkeley City Council would need to certify a Final Environmental Impact Report for the Project prior to the Project receiving permits from the City, including the Use Permit;

NOW, THEREFORE, IT BE RESOLVED that the Planning Commission does hereby recommend the Zoning Adjustments Board and the City Council of the City of Berkeley approve the Use Permit for the Berkeley Pier-Ferry Project

Pursuant to Berkeley Municipal Code Section 23.208.020(E), the Planning Commission makes the following findings to support its recommendation for the Use Permit:

(a) Will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working in the area or neighborhood, of the proposed use; and

Rationale: There are no permanent residences within 0.5 miles of the project. Persons working in the area or residing on live-aboard boats or floating homes in the Marina would gain an additional transportation option for commuting or personal travel to San Francisco. The City has conducted an analysis of parking and transportation demand management measures that have been incorporated into the project to ensure that the project will not be detrimental to the general welfare of persons who use the Berkeley Waterfront.

(b) Will not be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood or to the general welfare of the City.

Rationale: Establishing a ferry service in Berkeley has been identified as a goal in multiple City and regional planning documents to improve the general welfare of the City by reducing greenhouse gases, improving transportation access and providing emergency response and disaster recovery. The use of a public ferry is a water-related use consistent with the Public Trust Doctrine governing Berkeley waterfront land use. The project is subject to the City's standard conditions of approval regarding noise and air quality, waste diversion, toxics and stormwater requirements, thereby ensuring the project will not be detrimental.

I HEREBY CERTIFY the foregoing resolution was passed and adopted by the Planning Commission of the City of Berkeley, at a regular meeting thereof, held on the 21st day of January 2026, by the following vote:

Project Description:
(include applicable demolition/removal, proposed use(s) total square feet of new/addition, height, number of units and very-low income units, and parking)

Berkeley Waterfront is entirely zoned as Unclassified (U) District, which requires a use permit for new uses. The proposed new use is the operation of an electric, zero-emission ferry service connecting Berkeley to San Francisco & Larkspur. The Project includes construction of a new Pier to replace the derelict existing Pier, new breakwater, and Ferry terminal infrastructure.

☐ **DEDICATED CONSULTANT REVIEW REQUESTED FOR USE PERMIT? (Check box if requested)**

Dedicated Consultant Review involves a competitive bid process to select an outside consultant, and is only available for Use Permits, substantial modifications to a Use Permit, Variances. Consultant costs are in addition to Use Permit fees already paid.

DRAWINGS PROTECTED BY COPYRIGHT STATEMENT

Effective January 1, 2023, (State Government Code, Section 65103.5 (e), SB 1214), if an official copy of architectural drawings are submitted to the Land Use Division of the Planning and Development Department as part of a zoning permit application, the design professional (or the owner of the copyright if different from the design professional) may submit a separate "site plan" or "massing diagram" for posting online or for distribution to the public.

If a separate "site plan" or "massing diagram" is not submitted in addition to the official architectural plans, permission is deemed granted to the Land Use Division to post online or to provide to the public copies of the architectural drawings without the restrictions that would otherwise apply.

A massing diagram and a site plan are defined as follows per Government Code Section 65103.5 (f): "Massing diagram" means a document that displays the three-dimensional form of a building and describes the general profile, bulk, setbacks, and size of the building, but does not contain specific architectural detail.

"Site plan" means a document for a project that is drawn to scale and displays all of the following: property lines, setback lines, topographic lines, easements, drainage, utilities, lighting, driveways, surrounding streets and traffic flow, parking lots and parking spaces, landscaped areas, setback distance between buildings and property lines, outline of existing and proposed buildings and structures, distance between buildings, and ground sign location.

PLEASE CHECK ONE OF THE FOLLOWING (required):

❑ **My application includes a separate "site plan" or "massing diagram," defined in Government Code Section 65103.5(f), for posting online or for distribution to the public.**

☑ **Permission is granted to make publicly available the submitted architectural drawings without restriction to posting online or distribution to the public.**

Under penalty of perjury, I certify that:

(1) the application materials are true and complete to the best of my knowledge; and
(2) if provided, the attached paper and electronic copies of this application are the same; and
(3) I agree to pay all expenses associated with this application

The Zoning Project Submittal Requirements packet describes all of the materials required to submit a complete Zoning Project Application to the Land Use Division of the Planning and Development Department.

The checklist on pages 1-2 of this packet must be completed, signed, and submitted with the Application. You must initial each Section and check each box that corresponds to an item submitted for review.

Staff will verify that the minimum submittal requirements have been included within 30 days of receiving an application submittal, per Government Code Section 65943 (30-Day Review Period). Applications that are missing the materials will be deemed incomplete and not accepted for permit processing review. During the permit processing review, you may be required to clarify, amplify, correct, or supplement the information listed in the submittal requirements per Government Code Section 65944 (Agency Acceptance of Applications).

Section 1 is a checklist of materials required for all projects. Sections 2-7 are checklists of materials that may be required based on the project type or location.

Each submittal requirement on the checklist is described further in this packet, starting on page 3. Each description identifies whether an item is required, and indicates how to prepare each document, drawing, material, and/or report. Hyperlinked forms and instructions are also online under Land Use at **https://berkeleyca.gov/construction-development/permits-design-parameters/permit-types/permit-forms**.

All documents, reports and plans must be provided in digital format, unless requested in hard copy. Printed plans are required prior to public meetings and/or hearings. See the **Guide to Submitting a Zoning Project Application** for details on how to submit, review timing, and digital plans and document.

☑	C. **PAYMENT OF LAND USE PLANNING APPLICATION FEES** **Submit** required fees to the cashier in the Permit Service Center or pay through the Online Permit Portal. Review of your application will not begin until the fees are paid in full. **If supplemental technical studies are required, a Peer Review deposit will be required (e.**g., Traffic Impact Analysis, Geotechnical Report, Arborist Report).
	D. **HAZARDOUS WASTE AND SUBSTANCES STATEMENT** — **Required for all projects,** pursuant to Government Code Section 65928.
	E. **TABULATION FORM** NA - No Bldg **Required for all projects.** **Submit** the form as a separate document, completely filling out each column, using the applicable development standards of the Zoning Ordinance as a guide.
☑	F. **PRE-APPLICATION YELLOW POSTER** **Required for all Projects** **Install** the poster prior to submittal, and submit color photos that clearly show the poster installed at the front of the site and that clearly show the sign content. Yellow Poster Instructions Small Project Sample Poster and fillable PDF template Large Project Sample Poster and fillable PDF template (Large poster required for projects that include four or more stories, State Density Bonus, Floor Area Ratio greater than 2.0, or more than 10,000 square feet gross floor area.)

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 1 - REQUIRED FOR ALL PROJECTS

G. PRE-APPLICATION NEIGHBORHOOD CONTACT AND OUTREACH INSTRUCTIONS

NA - No

Required for the following projects:

- **All projects located in a Residential District, and all non-residential projects that abut a Residential District are required to contact all abutting and confronting residential occupants and residential property owners to advise them of the proposed development prior to submitting a zoning project application.**
- **All projects of community or neighborhood interest, which consist of the following:**
  i. Any project in a Residential District that would create 6 or more bedrooms on a parcel within ½ mile of the UC Campus (or the area confined by Grant Avenue on the west, Derby Street on the south, and Rose Street on the north), or
  ii. Any project in a Non-Residential District that includes three or more stories, State Density Bonus, Floor Area Ratio greater than 2.0, or more than 10,000 square feet gross floor area.
  iii. Are required to contact all property owners, residents, and neighborhood organizations within 300 feet of the project site to advise them of the proposed development.
- **All residential projects that propose to alter an existing dwelling unit or eliminate a dwelling unit that is subject to the Rent Ordinance (BMC Chapter 13.76) through demolition, including elimination of a dwelling unit through** conversion, are required to provide all sitting tenants notice of the application no later than the date the application is submitted to the City.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 2 - PLANS REQUIRED FOR ALL DEVELOPMENT PROJECTS INVOLVING NEW STRUCTURES, ADDITIONS, DEMOLITIONS, OR EXTERIOR ALTERATIONS

PLAN SET (I.E. ARCHITECTURAL DRAWINGS) **– GENERAL REQUIREMENTS**

1. **All plans (items A – I) must be included in a single plan set, fully dimensioned, and include:**

— Name of person preparing plans (licensed architect required for certain projects, see Item 3 below)

— Dates of preparation and revision

— Project address

— Graphic scale (see Item 2 below for minimum scales)

— North arrow

— Legend describing all symbols and notations

— Building Code construction and occupancy types

Notes: For applications to modify a prior permit, the plans must clearly show the approved and modified project, and you must "cloud" all changes from the approved project.

For plan resubmittals during review, provide the date of revision on all sheets and "cloud" all changes to previous information. Plan resubmittals must include the full plan set, not individual plan sheets. Staff cannot collate or update your plans for you.

2. **Electronic Plans Requirements:**

See the **Zoning Project Application Guide to Submitting** for digital plans and document standards.

Note that these plans are often released to the public on paper no larger than 8½" x 11", and that you must format your plans so that all images and text are legible at this size.

Hard copy plan sets may be required by the project planner, if necessary to facilitate project review.

Design Review Committee, Landmarks Preservation Commission, and Use Permit applications only, 12 copies of 11" x 17" or 12" x 18" plan sets must be submitted at least two weeks prior to the public meeting or hearing.

3. **Architect or Engineer Required for Certain Projects**

Plans that require preparation by a licensed California architect or engineer under the California Architects Practice Act (Business and Professions Code Sections 5537 and 6737) shall bear the architect or engineer's stamp and signature on each sheet. **This requirement may be waived for projects involving only minor alterations or repairs; consult with a planner. For further information, visit www.cab.ca.gov**

4. **Change of Use**

Applications that ***only*** propose to **change the type of activity or use** occurring within the building must submit the following site-related information:

— **Site Plan** showing the following:

a. Property lines and lot dimensions

b. Existing and proposed building footprint(s), dimensions, setbacks (required, existing and proposed), and projections such as eaves, balconies and bays. Show all buildings , including garages, sheds, etc.

c. Driveways and parking spaces with dimensions, location of handicapped parking spaces, bicycle racks, and security gates.

— **Floor Plans** showing the following:

d. All floors, including mezzanines, basements, and attics

e. Use of all rooms (existing and proposed), per the California Building Code

f. For buildings with multiple commercial tenant spaces, label the use of each tenant space within the subject building

Note: *For changes to existing buildings, provide separate plans for existing and proposed conditions, or if changes are limited, used dashed lines for demolished features and solid lines for new features.*

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 2 - PLANS REQUIRED FOR ALL DEVELOPMENT PROJECTS INVOLVING NEW STRUCTURES, ADDITIONS, DEMOLITIONS, OR EXTERIOR ALTERATIONS

☑ **A. SITE PLAN**

Required for all projects.
The Site Plan must show the following:

- Property lines and lot dimensions
- Existing and proposed building footprint(s) (dimensioned), setbacks (required, existing and proposed), and projections such as eaves, balconies, and bays. Show all accessory structures, such as garages, sheds, etc.
- Delineation of proposed additions, if any, with shading, hatching or another appropriate method
- Any portions of neighboring buildings within 20 feet of property lines, including the building-to-building separation (measured in feet)
- Pathway(s) from the residential structure to the public right of way
- Driveways and parking spaces with dimensions, location of ADA spaces, and security gates
- Trash/solid waste storage area
- Bicycle racks (short-term bicycle parking) subject to the Berkeley Bicycle Plan – Appendix F – Facility Design Toolbox
- Utility meters / boxes / equipment for all wet and dry utilities – including above-ground and under-ground, in conformance with utility company standards, including on the site and in the public right of way (subject to approval by the Public Works Department).
- Decks, patios, hot tubs, and all unenclosed accessory structures

Note: The City of Berkeley Community GIS Portal is an online resource indicating site features and characteristics listed above, which are required to be shown on the Site Plan

☐ **B. LANDSCAPE AND USABLE OPEN SPACE PLAN**

No buildings, landscaping, lot / parcel lines, grading related to new use

Required for all projects
The Landscape Plan must show the following:

- Fully dimension all areas that qualify as existing and proposed Usable Open Space, in compliance with the applicable zoning district development standard and BMC Section 23.304.090; and
- Any existing landscaping to remain and to be removed
- All proposed landscaping, including all existing and proposed trees, including street trees (indicate species, trunk diameter, drip line), hedge rows, and ground cover
- All paved areas and surface treatments
- Fences and retaining walls (materials and height)
- Significant natural features such as creeks (indicate banks or culvert outline), and prominent landforms.

☐ **C. LOT COVERAGE DIAGRAM AND CALCULATIONS**

No buildings, landscaping, lot / parcel lines, grading related to

Required for all residential Projects (or the residential portion of a mixed-use projec

- **Submit** the Lot Coverage Diagram and calculations, using the Site Plan as a base map, which must show the fully dimensioned diagrams to depict existing and proposed lot coverage in compliance with the applicable zoning district development standard and BMC Section 23.106.020.

☐ **D. FLOOR PLANS**

No buildings, landscaping, lot / parcel lines, grading related to new use

Required for all projects
The Floor Plan (s) must show the following

- All floors, including mezzanines, basements, and attics
- Trash room pursuant to Public Works Department requirements
- Long-Term Bicycle parking, showing location of lockers or racks suitable for secure locks and subject to the Berkeley Bicycle Plan – Appendix F – Facility Design Toolbox
- Use of all rooms (existing and proposed), per the California Building Code
- For changes to existing buildings, provide separate plans for existing and proposed conditions, or if changes are limited, use dashed lines for demolished features and solid lines for new features.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 2 - REQUIRED FOR ALL DEVELOPMENT PROJECTS INVOLVING NEW STRUCTURES, ADDITIONS, DEMOLITIONS, OR EXTERIOR ALTERATIONS

☑ **E. BUILDING ELEVATIONS**

Required for all projects.

The Elevations must show the following:

— All exterior features and openings, including finishes and materials

— Existing and proposed building height (as defined in BMC Sections 23.106.090), see Instructions linked below), finished floor elevations, and existing and finished grades (within five feet of the building).

— Adjacent features such as fences, landscaping, and other buildings and property lines.

— For changes to existing buildings, provide separate elevations for existing and proposed conditions, or if changes are limited, used dashed lines for demolished features and solid lines for new features.

Height Instructions –Average Building Height*

(Residential districts, except R-S, R-SMU, and R-BMU)

Height Instructions –Maximum Building Height*

(Hillside Overlay, R-S, R-SMU, and R-BMU, Commercial, and Manufacturing districts)

*In the Hillside Overlay ("H"), both average and maximum building height apply.

☐ **F. STREET STRIP ELEVATION**

No buildings, landscaping, lot/parcel lines, grading related to new use

Required for any new main buildings.

Submit a street elevation exhibit showing existing conditions on the parcel and the proposed project in elevation view; include at least two (2) parcels on either side of the subject parcel on a single sheet. Minimum scale is 1/8" = 1'.

G. SECTION DRAWINGS

Required for the following projects:

— **New main buildings in the "H" District.**

— **Additions exceeding 14 feet in average height in the "H" District.**

Submit drawings that show adjacent uphill or downhill buildings where views may be affected. Minimum scale is 1/8" = 1'. Show existing and proposed finished grades.

H. BOUNDARY AND/OR TOPOGRAPHIC SURVEY

No buildings, landscaping, lot/parcel lines, grading related to new use

Required for the following projects:

— **Any new main building.**

— **Expansions of a building footprint or the creation of accessory building/structures less than two feet from, or within, a required setback.**

Submit a survey meeting the following requirements:

1. Wet-stamped, signed by a licensed CA surveyor or appropriately licensed civil engineer
2. Minimum scale of 1/10" = 1'
3. All property lines, curb and sidewalk, spot elevations, existing structures, building dimensions, and setbacks to all property lines
4. For projects in the "H" District, survey must be no more than five years old and must show contour lines with minimum 5-foot intervals.

I. CONCEPTUAL GRADING PLAN

Required for projects with more than 50 cubic yards of cut and/or fill.

Submit a survey meeting the following requirements:

1. Prepared by a licensed surveyor, architect or engineer
2. Estimated quantities and locations of cut and fill
3. Existing and final elevations

No buildings, landscaping, lot/parcel lines, grading related to new use

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 3 - SUPPORTING DOCUMENTS, STUDIES, GRAPHICS, AND DEPICTIONS

☑ **A. SITE PHOTOGRAPHS**

Required for all projects.

Submit one set of exterior photos, that meet the following requirements:

1. Use captions or a key indicating the location (perspective) of each photo.
2. Provide an adequate number of photos to show entire project site and all adjacent buildings for context. Where possible, take wide-angle shots showing project site and adjacent buildings together.

☐ **B. SHADOW STUDY**

Required for the following projects:

- **Buildings exceeding 14 feet in average height, located in or adjacent to a residential (R) district (excluding ADUs)**
- **Additions exceeding 14 feet in average height on sites adjacent to a residential use**
- **Projects in either the C-T or C-DMU District, requiring a Use Permit to increase the maximum building height/number of stories**

Shadow Study Instructions

No buildings/units, floor area, grading, building demolition or tree removals related

☐ **C. STORY POLE PLAN**

Required for the following projects:

- **New main buildings exceeding 14 feet in average height in the "H" District (excluding ADUs)**
- **Additions exceeding 14 feet in average height in the "H" D**

Story Pole Instructions

No buildings/units, floor area, grading, building demolition or tree removals related

D. ARBORIST REPORT

Required for projects involving any construction activity (including excavation, trenching, demolition, paving, storage of materials, and parking of vehicles) within the drip line of a Coast Live Oak (quercus agrifolia) tree with a circumference of at least 18 inches at 4 feet above the ground (or at least 26 inches aggregate circumference for a multi-stemmed tree). Submit

1. A report by a certified arborist assessing the project's impacts on the affected tree(s) (tree may be located either on- or off-site) and recommending preservation measures both during and after construction, as applicable.
2. Deposit of $500 for the first two hours of peer review of report (additional funds may be required for more complicated projects or site visits)

Tree Protection Instructions

Coast Live Oak Tree Ordinance

No buildings/units, floor area, grading, building demolition or tree removals related

E. STRUCTURAL EVALUATION

Required for any project that is not a demolition, but is removing between 25 and 49 percent of a main building's exterior wall and between 25 and 49 percent of a main building's roof framing (including in-kind replacement of existing framing), in order to confirm the feasibility of retaining the remaining portions of any wall and roof.

A Structural Evaluation is not required for projects requesting a Use Permit for demolition.

Submit a demolition diagram that indicates the percentage of each wall and roof that is proposed to be replaced or removed, as well as a report by an independent, fully credentialed structu
retention of structural elements not proposed for removal is ac

No buildings/units, floor area, grading, building demolition or tree removals related

☐ **F. PARKING SURVEY**

Required for projects requesting a waiver of any required off-street vehicular parking spaces pursuant to the Zoning Ordinance, located in a Commercial or Manufacturing District (C, M, MM, or MU) .

Parking Survey Instructions

Not in Comerical or Manufacturing District

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 3 - SUPPORTING DOCUMENTS, STUDIES, GRAPHICS, AND DEPICTIONS

☑ **G. TRANSPORTATION DEMAND MANAGEMENT (TDM) AND BICYCLE PARKING SUPPLEMENTAL APPLICATION**

Required projects creating five or more new dwelling units or Group Living Accommodation rooms

TDM required for projects creating 10 or more dwelling units outside of the C-DMU. (Not required for projects where 50 percent of total units are affordable, ADUs, projects located in ES-R, or projects on properties in the Hillside overlay on narrow streets 26-feet wide or less.)

Bicycle parking required for projects creating five or more new dwelling units and/or Group Living Accommodation rooms.

TDM Program and Bicycle Parking Supplemental Application

☐ **H. PHOTO SIMULATIONS**

Required for a project creating any of the following:

— **Wireless telecommunications projects**

— **A "Large Scale Development Project," which consists of project located in a non-residential district that proposes any of the following:**

– Density Bonus under Section 65919 of California State Law,

– Three or more stories in height,

– Floor Area Ratio more than 2.00, or

– 10,000 square feet or more of gross floor area.

Not a large scale development project

Photo Simulation Instructions

I. PUBLIC ART DECLARATION

Required for any of the following projects:

— **A new commercial or industrial building**

— **A project that creates five or more dwelling units**

— **An addition of more than 10,000 square feet to any commercial or industrial building**

No buildings/units, floor area, grading, building demolition or tree removals related

Public Art Allocation Declaration form

J. BIRD SAFE REQUIREMENTS

Required for any of the following projects:[1]

Nonresidential projects: New construction/addition

Nonresidential Projects: New or replacement windows on existing buildings, unless all facades are Lower Hazard Facades

Residential and Mixed-Use Projects: New construction/addition of 10,000 sq. ft. or more AND more than 35 feet average height

Residential Mixed-Use Projects: New or replacement windows on existing buildings of 10,000 sq. ft. or more AND more than 35 ft. average height unless all facades are Lower Hazard Facades

No buildings/units, floor area, grading, building demolition or tree removals related

— **Complete Bird Safe Building Requirements Attestation**

— **For projects that include Lower Hazard Facades, diagrams and calculations that show the percentage of façade area consisting of transparent or reflective material, such as windows or High-Risk Features (as defined in BMC Section 23.304.150)**

[1] Certain projects are exempt. See BMC 23.304.150

See Bird Safe Building Requirements Information and Submittal Checklist.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 4 - ENVIRONMENTAL REVIEW

☐ **A. CREEK PROTECTION DOCUMENTATION**

Required for any project within 40 feet of the centerline of an open creek, and/or within 25 feet of a culverted creek, that is protected by the Creeks Ordinance

Creek Protection Instructions

New use is within San Francisco Bay, not within 40 feet of

Note: Applies even if a protected creek or culvert has not yet been identified by the City.

B. HISTORIC RESOURCE EVALUATION

Required for:

— **Demolition of a non-residential building 40 or more years old, subject to referral to the Landmarks Preservation Commission in accordance with BMC Section 23.326**

— **Demolition/Substantial Change of any building 40 or more years old subject to environmental review pursuant to CEQA**

Submit: State of California Department of Parks and Recreation (DPR) 523 forms. Evaluation(s) to include references to development history documentation (including but not limited to photographs, building permits, Sanborn maps, and directory listings); completed by a qualified historian, architectural historian or historic architect. Provide supplemental information in accordance with the Landmarks Preservation Ordinance criteria (BMC Section 3.24.110).

Waiver for residential additions/alterations: The Environmental Review Officer may waive this requirement for residential addition and alteration proposals after determining that the project complies with preservation standards and environmental practices OR that qualified sources other than an HRE can provide the relevant information.

California guidelines (Instructions for Recording Historical Features)

C. GEOTECHNICAL AND SEISMIC HAZARD INVESTIGATIONN

Required for all development projects intended for human occupancy located in a State-designated Seismic Hazard Zone, as defined by the California Seismic Hazards Mapping Act and Alquist-Priolo Earthquake Fault Zoning Act, as shown on the State's Environmental Constraints Map.

No building / human occupancy associated with

Exemptions:

For projects located in any State-designated Seismic Hazard Zone (PRC 2693, i.e. liquefaction, landslide, and earthquake shaking):

— Single-family wood-frame or steel-frame dwellings to be built on parcels of land for which geologic reports have been approved pursuant to an approved subdivision map;

— A single-family wood-frame or steel-frame dwelling not exceeding two stories when that dwelling is not part of a development of four or more dwellings; or

— Alterations or additions to any structure within a seismic hazard zone which do not exceed either 50 percent of the value of the structure or 50 percent of the existing floor area of the structure.

If located in the Alquist-Priolo Fault Zone (PRC 2621.6 and 2621.7):

— Single-family wood-frame or steel-frame dwellings to be built on parcels of land for which geologic reports have been approved pursuant to an approved subdivision map;

— A single-family wood-frame or steel-frame dwelling not exceeding two stories when that dwelling is not part of a development of four or more dwellings; and

— Alterations or additions to any structure if the value of the alteration or addition does not exceed 50 percent of the value of the structure; or

— Conversion of an existing apartment complex into a condominium

Submit the following:

1. Geotechnical report satisfying the California Building Code and requirements of Special Publication 117A (for landslide and liquefaction zones) and/or California Geological Survey Note 49 (for fault zones); and

2. Deposit of $1,500 for peer review of report (additional funds may be required for more complicated projects.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 4 - ENVIRONMENTAL REVIEW

☐ **D. PHASE I OR II SITE ASSESSMENT**

Required for any project that includes the following:

No excavation associated with new use.

— **Excavation of 5 or more feet below grade**
— **A site with a history of soil and/or groundwater contamination (see the Hazardous Waste and Substances Statement)**
— **A site within an Environmental Management Area (see Community GIS Portal)**

Submit: A recent Page I and/or Phase II Site Assessment (less than 2 years old)

Note: Depending on the findings in the Phase I, a Phase II or additional investigation may be necessary in order to determine the appropriate environmental review pathway under CEQA. If the Phase II indicates the exceedance of Environmental Screening Levels, clearance from one of the following agencies must be submitted prior to final action on a zoning permit application:

- San Francisco Bay Regional Water Quality Control Board (RWQCB)
- Department of Toxic Substances Control (DTSC)
- Alameda County Department of Environmental Health's Local Oversight Program (LOP)

Contact the Toxics Management Division (510) 981-7460 for more information.

☑ **E. TRANSPORTATION IMPACT STUDY**

Required for projects that do not meet at least one of the City's screening criteria for determining if detailed VMT or vehicular parking analysis is necessary.

Consult with the Transportation Division for a copy of the screening criteria and thresholds at (510) 981-7010

☐ **F. STATE GENERAL CONSTRUCTION PERMIT**

Required for projects disturbing one acre or more of soil (or less than one acre if part of a larger development plan that disturbs one acre or more).

Submit a copy of the Notice of Intent (NOI) submitted for the State General Construction Permit, and Storm Water Pollution Prevention Plan (SWPPP) prior to building permit issuance.

Construction Stormwater General Permits

New use is within San Francisco Bay. No excavation. Project is subject environmental permitting by state & federal agencies. EIR in

☐ **G. STORMWATER REQUIREMENTS CHECKLIST**

Required for projects creating or replacing 2,500 square feet or more of impervious surface, including single-family dwellings. Includes new buildings, additions, and alterations to existing roofs that affect drainage; does not include maintenance/re-surfacing of existing impervious surfaces.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 5 - REQUIRED FOR PROJECTS SUBJECT TO AFFORDABLE HOUSING R

Project does not include housing

☐ **A. AFFORDABLE HOUSING COMPLIANCE PLAN (PRELIMINARY)**

Required for Housing Development Projects with more than 5,000 square feet of residential unit floor area

Submit following:

1. Completed Affordable Housing Compliance Plan

2. Affordable Housing Compliance Plan Sheet(s) (in the plan set)

- Residential Unit Floor Area Diagrams (BMC Section 23.328.020 Definitions)
- On-site Below Market Rate unit calculations
- In-Lieu Fee calculations

See BMC 23.328 Inclusionary Housing and the Affordable Housing Compliance Plan Application for additional information.

B. ANTI-DISCRIMINATION HOUSING POLICIES

Required for a project creating any of the following:

— **Five or more new dwelling units and/or five or more live/work units**

— **New dwelling units and/or live/work units on lots whose size and zoning designation is such to allow construction of five or more dwelling units**

— **One to four (new dwelling units and/or five or more live/work units, which are added to an existing one to four-unit property developed after August 14, 1986, and the resulting number of units totals five or more**

— **Additional condominium units, resulting in five or more condominium units converted and/or created after August 14, 1986 on the site**

Submit a written statement answering the following questions and provide the requested documentation, if applicable:

– Does the applicant or sponsor, including the applicant or sponsor's parent company, subsidiary, or any other business or entity with an ownership share of at least 30 percent of the applicant's company, engage in the business of developing real estate, owning properties, or leasing or selling individual dwelling units in states or jurisdictions outside of California?

– If the answer to (1) is yes, which?

– If the answer to (1) is yes, does the applicant or sponsor, as defined in (1), have policies in individual states that prohibit discrimination based on sexual orientation, gender identity, and/or gender expression in the sale, lease, or financing of any dwelling units enforced on every property in the state or states where the applicant or sponsor has an ownership or financial interest?

– If the answer to (1) is yes, does the applicant or sponsor, as defined in (1), have a national policy that prohibits discrimination based on sexual orientation and gender identity in the sale, lease, or financing of any dwelling units enforced on every property in the United States where the applicant or sponsor has an ownership or financial interest in property?

– If the answer to (3) or (4) is yes, please provide a copy of that policy or policies as part of this application.

The Land Use Division will not accept an application as complete unless the applicant provides a response to this section. The processing of and recommendations or determinations made by the Land Use Division regarding an application will be unaffected by the applicant's response to this section.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 5 - REQUIRED FOR PROJECTS SUBJECT TO AFFORDABLE HOUSING F

Project does not include housing

☐ **C. DENSITY BONUS ELIGIBILITY STATEMENT**

Required for projects requesting a density bonus pursuant to Government Code Section 65915

Submit the following information:

1. A written statement that includes the following information:

a. Number of "base project" units

b. Number and percent of affordable units and level of affordability

c. Percent density bonus requested and allowed pursuant to Government Code Section 65915

d. Waivers or modifications of development standards necessary to physically accommodate "density bonus" units (e.g., increased height or FAR, reduced setbacks or parking, etc.)

e. Explanation of why each waiver or modification is needed to accommodate "density bonus" units

f. If the project is requesting an incentive or concession, describe each incentive or concession being requested in addition to (or instead of) waivers or modifications necessary to accommodate density bonus

2. Plans showing a "base project" that complies with all applicable Zoning Ordinance requirements. For staff to effectively review your density bonus project, a combination of diagrams, compliance tables and calculation tables must be included in the project plan set:

a. Base Project and Proposed Project diagrams, per floor

b. Base Project and Proposed Project development standards compliance tables

c. Residential floor area calculations and diagrams (per floor; can be combined with Base Project and Proposed Project diagrams)

d. Maximum allowable residential density calculation table

e. Usable open space and lot coverage diagrams and calculations

f. Base Project, Density Bonus, and Proposed Project residential floor area table

Your project planner can provide examples of preferred diagram and table formats.

State Density Bonus - Procedures

D. AREA OF POTENTIAL EFFECTS (APE) STATEMENT

Required for projects seeking federal funds (either directly or through the City of Berkeley Housing Trust Fund).

Submit a statement identifying the project's "Area of Potential Effects" as defined in federal regulations (36 CFR Part 800). Contact the Housing Department at (510) 981-5400 for more information and requirements.

INFORMATION CITY OF BERKELEY **LAND USE PLANNING**

ZONING PROJECT APPLICATION SUBMITTAL REQUIREMENTS

SECTION 6 - LANDSCAPE AND GREEN BUILDING REQUIREMENTS

☐ **A. WELO LANDSCAPE REQUIREMENTS**

Required for projects with either:

- **500 square feet or more of new, or**
- **2,500 square feet or more of renovated irrigated area.**

New Use does not include landscaping

These projects must comply with water efficient landscaping as specified in the Model Water Efficient Landscape Ordinance (MWELO) and East Bay Municipal Utility District (EBMUD) Water Efficiency Review: Section 31 Regulations and MWELO Compliance, and all applicable measures in the Bay Friendly Basics checklist.

Submit WELO-compliant landscape documentation including a planting, grading, and irrigation plan. Water budget calculations are also required for landscapes of 2,500 square feet or more. The reference evapotranspiration rate (ETo) for Berkeley is 41.8.

See Green Building requirements.

B. BERKELEY ENERGY CODE AND BERKELEY GREEN CODE

New Use does not include construction of any buildings

Required for newly constructed buildings (buildings that have never before been used or occup

Submit the following:

1. A statement, and corresponding features on plans, that the proposed project is designed to comply with the Berkeley Energy Code (BMC Chapter 19.36) and Berkeley Green Code (BMC Chapter 19.37) including solar PV system, battery energy storage, electric vehicle charging, and low-carbon concrete requirements. Note that for building permit submittal, quantitative values for appliance fuel efficiency must be included in relevant building permit architectural sheets, and window and door schedules, and on architectural, plumbing, and mechanical sheets, matching those values stipulated in prescriptive or performance energy compliance documents.

Note: Carefully consider the Building Code prior to submitting a Use Permit application. Per the standard Conditions of Approval for all development projects, only the Zoning Adjustments Board may approve a modification to the use or structure for which the Permit is issued, except that the Zoning Officer may approve changes that do not expand, intensify, or substantially change the use or building.

The California Energy Design Assistance (CEDA) Program provides free energy design assistance, financial incentives, and operational energy savings to new commercial, public, multifamily (4 stories or more), industrial, and agricultural buildings. CEDA application must occur while a project is in early design phases.

See Green Building requirements.

C. GREEN BUILDING REQUIREMENTS

New Use does not include construction of any buildings

Required for newly constructed buildings and additions of more than 20,000 square feet for p
cial-Downtown Mixed-Use District (C-DMU).

Submit a completed LEED Checklist / Scorecard (typically for commercial projects), showing that the proposed project is on track for LEED Gold certification or above, or a completed GreenPoint Rated (GPR) Checklist (for residential and most mixed-use projects), showing that the proposed project is on track for GPR Silver certification or above.

See Green Building requirements.

☐	**B. STRUCTURAL ALTERATIONS SUBMITTAL** **Required** for exterior alterations to designated City Landmarks, Structures of Merit, and structures within a Historic District (and interior alterations to such structures if publicly owned). **Submit** separate Structural Alteration Permit application, per the Structural Alteration Permit & Design Review Submittal Requirements.
	C. ZONING USE QUESTIONNAIRE **Required** for projects that establish a new business or create a new commercial space with the tenant/operator already selected.
	D. HOME OCCUPATION QUESTIONNAIRE – CLASS II AND III **Required** for Class II or Class III Home Occupations that establish a new home-based business. **Submit** a Zoning Permit Application (Section 1.A, above), and fill out the Class II and III Home Occupation Questionnaire.

New Use does not include exterior alterations to City Landmarks, Structures of Merit, not within Historic District, does not establish business or commerical space, no home-

Berkeley Ferry Use Permit

Applicant Statement

1 Project History and Context

History of Berkeley Pier

The Berkeley Pier was constructed in 1926 by the Golden Gate Ferry Company to provide 24-hour ferry service between Berkeley and San Francisco. The pier was constructed as a two-way causeway, allowing vehicles to drive onto the pier and a ferry boat for transit between Berkeley and San Francisco. In 1937, eleven months after the Bay Bridge opened to auto traffic, the ferry line shut down, and the Pier was transferred to City ownership. Berkeley re-opened the pier for pedestrian and vehicle recreational use in 1938. By the 1950s, much of the pier had been abandoned, leaving 3,000 feet maintained for pedestrian access only. In 2015, the Pier was closed to the public due to observed structural deterioration.

Zoning / Use Permit History

The Berkeley Waterfront is a single parcel (APN 06-2545-1) all of which is zoned as an Unclassified (U) District. Berkeley Municipal Code Chapter 23.208.202, Special Purpose Districts, establishes that "all uses not prohibited by law are permitted in the U district" and that "a Use Permit is required to establish any use". Use Permit procedures include planning commission review of the use permit application followed by Zoning Adjustment Board (ZAB) action to approve, conditionally approve or deny the application. The ZAB's decision is not effective until after action by the City Council. The Council may affirm, reverse or modify the ZAB decision.

Use Permit #5567 issued by the City of Berkeley in January 1965, authorized the construction of the Berkeley Marina in accordance with the Master Plan dated April 15, 1964 and revised December 16, 1964. Existing uses at the Berkeley Waterfront are authorized via this 1964 Permit. No additional Use Permits within the Berkeley Waterfront have been issued since Use Permit #5567.

Land Use Planning Context

The Berkeley Waterfront lands are "public tidelands" that fall under the Public Trust Doctrine. Under the Public Trust Doctrine, the City holds these lands in trust for the benefit of all the people of California and to ensure the lands are devoted to uses to which they are uniquely situated. Public tidelands must be used for water-dependent or water-related uses, including commerce, navigation, fishing, water-oriented recreation, visitor-serving uses, environmental protection, open space, recreation, etc. Portions of the Berkeley Waterfront are also regulated by the San Francisco Bay Development and Conservation Commission (BCDC).

This area has a land use designation of "Waterfront / Marina" in the Berkeley General Plan. The General Plan describes the Waterfront / Marina as areas intended to maintain and preserve areas of Berkeley adjacent to the Bay for open space, recreational uses, waterfront-related commercial and visitor services, boating and water transit facilities. The Berkeley Marina Master Plan[1] (adopted in 2003) identifies various capital improvements throughout the Berkeley Marina, although improvements related to the Pier are limited to new benches and signage. This Plan was adopted 12 years prior to the Pier closure to the public. The City published a Draft Waterfront Specific Plan in November, 2024, which includes a description of ferry service at a reconstructed Berkeley Pier. In November 2024, City Council directed staff to make various updates to the Draft Waterfront Specific Plan, including developing a conceptual plan for Cesar Chavez Park. Currently there is no funding identified to complete the Waterfront Specific Plan.

The City's Local Hazard Mitigation Plan (2019) identifies developing a partnership with ferry service as a High Priority Action that would play an important role in the City's emergency response and recovery after a major disaster. The City's Climate Action Plan identifies public transit as a more sustainable form of transportation (Chapter 3) and sets a goal to expand under-used modes of transportation, such as ferry Berkeley at the Berkeley Marina that would connect to San Francisco and other locations. Ferry service connecting Berkeley to San Francsico is included in multiple regional transportation planning documents, including the Metropolitan Transportation Commission adopted Plan Bay Area 2050 and Draft Plan Bay Area 2050+ and the WETA 2050 Service Vision.

Berkeley Pier-Ferry Project Context

In 2018, the City was approached by the Water Emergency Transportation Authority (WETA) regarding the possibility of a new ferry service at the Berkeley Waterfront. In 2019, WETA and the Berkeley City Council authorized a Memorandum of Understanding (MOU) Agreement to jointly fund a planning study on the feasibility of rebuilding the Berkeley Pier to provide both ferry service and recreational access. The Feasibility Study concluded in 2023 with the recommendation of preferred layouts for pier, breakwater, ferry terminal and landside improvements. In 2024, the City initiated detailed design and environmental analyses for the Project.

The Pier-Ferry Project scope includes both establishing a new use (public transportation via ferry service) and enhancement of existing uses via the repair or replacement of existing landside and waterside infrastructure including trails, bike paths, streets, sidewalks, parking areas, public spaces and the pier. The current use permit application is to establish a new use – public

[1] https://berkeleyca.gov/your-government/our-work/adopted-plans/berkeley-marina-master-plan

transportation – at the Berkeley Pier. The repair and replacement of existing infrastructure to serve existing uses does not require a Use Permit.

2 Scope of Use Permit

Construction associated with the new transportation use includes:

- Universal charging and boarding floats, which provides the infrastructure for the ferry vessel to dock and charge while passengers board;
- Ferry gate and landing, including signage and ticket kiosks, connecting the recreational pier to the gangway;
- Gangway connecting the Ferry landing to the float; and
- Breakwater, providing protection for the ferry terminal elements described above. The breakwater also enhances existing public access for pedestrian recreation and fishing.

Ferry service would be operated by WETA. Prior to initiation of ferry service, the City Council would execute an MOU or similar formal agreement with WETA to authorize the use of the Berkeley Pier for the ferry service.

The WETA Berkeley Ferry Service Business Plan is a living document that is expected to be routinely updated by WETA. Future updates may change the specific details of the ferry service, schedule and fares. The most recent published version is V1.0, dated March 17, 2022[2]. Highlights of the proposed Berkeley Ferry Service include in V1.0 include:

- The electric zero-emission vessels proposed for this service would have a passenger capacity of 250. WETA envisions operating two vessels on the weekday route and a single vessel during weekend service.
- Weekday service would be every 35-minutes between Berkeley and San Francisco. The one-way travel time is about 25-minutes. Service would run from 6:30 am to 11:15 am in the morning and 4 pm to 7:40 pm in the evenings.
- Weekend service every 70-90 minutes. Weekend service could include a Larkspur Ferry; with one-way travel time of 35-minutes. Service would run from 8:30 am to 5 pm weekends.
- Special event service may operate between Berkeley and San Francsico or Mission Bay for example, for events at the Chase Center, Oracle Park or Berkeley Marina. Special event service fare pricing would be set to cover WETA costs.

[2] https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf

- The fare for Berkeley – San Francsico service is estimated to be $5.17 - $5.41 per trip, and fare for Berkeley – Larkspur service estimated to be $10.78 - $12.72 per trip (based on 2026; fares are projected to increase 3% annually).

3 Public Engagement

The Project is not within or adjacent to a residential zoning district. The nearest residential zoning district is over one mile east of the Project location.

The City has conducted extensive public outreach related to the Project and has incorporated public feedback into the Project design in multiple ways. A summary of public meetings regarding the Project is provided below and a detailed list of public outreach engagement is appended to the end of this document.

Feasibility Phase

- Three Focus Groups (January 2021)
- 3 Community Workshops (January, August, October 2021)
- 2 City Council Work Sessions (February, December 2021)
- Public Survey / Questionnaire (March 2021)

Public Meetings

- Berkeley Parks, Recreation, and Waterfront Commission (March 2024, March 2025, May 2025, December 2025)
- Youth Commission
- BCDC Design Review Board Briefing (May) and Review (November)
- Notice of Preparation of EIR (May)

2025 Community Group Meetings

- Telegraph for People
- UC Berkeley Urban Studies Student Association
- Washington Elementary School (Black History Month Celebration)
- Walk/Bike Berkeley
- Bike East Bay
- Healthy Black Families
- Live Oak Community Center (Community Partner Resource Night)
- Save the Bay
- Berkeley Black Ecumenical Ministers Alliance
- Berkeley Breakfast Club
- Berkeley Business District Network

- Berkeley Chamber of Commerce
- Berkeley Design Advocates
- Berkeley Democratic Club
- Berkeley Neighborhood Council
- East Bay Conservation Committee
- Gilman Coordinating Committee

2025 Focus Group / Targeted Surveys

- Water Access Improvement Focus Group (April and December 2025)
- Swimmer Focus Group (June 2025)
- Seven Parking Intercept Surveys (April, July, August 2024)

4 Parking & Transportation Demand Management

Existing Waterfront users have consistently expressed concern that parking by ferry riders could impact the ability for recreation visitors to find parking. The City has conducted daily counts of parking utilization throughout the Berkeley Waterfront for multiple years. Specifically, the City collected parking utilization data on 588 days between May 2021 and August 2024. This includes morning and evening data (523 days), mid-day data (60 days) and full day continuous data collect (5 days). This data was analyzed by the City's consultant to determine existing parking patterns, including peak use and occupancy, turn-over and other factors. The analysis concluded that even during peak visitation periods, multiple parking lots at the Berkeley Waterfront are currently under-utilized and there are sufficient parking stalls to accommodate ferry riders within these under-used parking lots (see attached *Water Transportation Pier-Ferry Project Parking and TDM Plan & Addendum*).

The City has developed a Preliminary Parking Management Plan that would limit full day parking by ferry riders to only those lots identified as having capacity available and would prohibit full-day parking by ferry riders at those lots that do not have excess capacity.

5 Environmental Review

The City published a Notice of Preparation (NOP) for an Environmental Impact Report (EIR) for the Pier-Ferry Project in May 2025. A Draft EIR for the Project is expected to be published for public review in late February 2025. The Berkeley City Council would need to certify a Final EIR for the Project prior to the Project receiving permits from the City, including this Use Permit, and from other regional or state agencies with jurisdiction over the Project. Federal environmental review pursuant to the National Environmental Policy Act will be conducted by the lead federal agency prior to issuance of any federal permit.

6 Other Agencies & Jurisdictions with Authority

The Project includes construction within San Francisco Bay. While individual agencies will be responsible for determining the final permit type required, it is expected that the Project would require the following permits in addition to this Use Permit:

- City of Berkeley Permits: Building, Fire/Safety, Engineering, etc.;
- Approval by California State Lands Commission to ensure compliance with the grant of tidelands restrictions;
- San Francisco Bay Conservation and Development Commission (BCDC) Major Permit or Major Permit Amendment;
- United States Army Corps of Engineers (USACE) Clear water Act Section 404 Individual Permit and Rivers and Harbors Act Section 10 Permit;
- Regional Water Quality Control Board (RWQCB) Water Quality Certification;
- California Department of Fish & Wildlife (CDFW) incidental take permit;
- National Marine Fisheries Service (NMFS) incidental harassment authorization; and
- Section 106 / State Historic Preservation Officer (SHPO) finding.

Public Outreach: Feasibility Phase

Feasibility Phase

- Focus Group Meeting #1, January 5, 2021
- Focus Group Meeting #2, January 6, 2021
- Focus Group Meeting #3, January 7, 2021
- Community Workshop #1, January 21, 2021
- City Council Work Session #1, February 16, 2021
- Public Survey / Questionnaire (online), March 2021
- Community Workshop #2, August 10, 2021
- Community Workshop #3, October 27, 2021
- City Council Work Session #2, December 7, 2021

Public Outreach: Design Phase

2024

- Parks, Recreation & Waterfront Commission, March 13, 2024
- Waterfront Intercept Survey (Parking), April 6, 2024
- Waterfront Intercept Survey (Parking), July 18, 2024
- Waterfront Intercept Survey (Parking), August 1, 2024
- Waterfront Intercept Survey (Parking), August 17, 2024
- Waterfront Intercept Survey (Parking), August 22, 2024
- Waterfront Intercept Survey (Parking), August 24, 2024
- Waterfront Intercept Survey (Parking), August 27, 2024

Public Outreach: Design Phase

2025

- Focus Group, Berkeley Chamber of Commerce, January 15, 2025
- Focus Group, Healthy Black Families, January 16, 2025
- Focus Group, Bike East Bay & Walk/Bike Berkeley, January 29, 2025
- Focus Group, Berkeley Business District Network, February 6, 2025
- Focus Group, Gilman Coordination Committee, February 7, 2025
- Focus Group, Berkeley Neighborhood Council, February 8, 2025
- Focus Group, Berkeley Design Advocates, February 12, 2025
- Agency Presentation, Water Emergency Transportation Agency (WETA), February 13, 2025
- Community Event, Community Partner Resource Night Meet & Greet, February 20, 2025
- Community Event, Black History Month Celebration at Washington Elementary, February 27, 2025
- Focus Group, Berkeley Democratic Club, March 3, 2025

Section 1
Executive Summary

1. EXECUTIVE SUMMARY

The City of Berkeley completed a feasibility study for a ferry facility at the Berkeley Municipal Pier in December 2021 and is now progressing with detailed engineering and environmental studies for the Water Transportation Pier-Ferry (WTPF) Project. To support the proposed ferry service and potential future waterfront development, this Parking and Transportation Demand Management (TDM) Plan evaluates existing parking conditions and proposes strategies to address current and potential parking needs and current stakeholder concerns.

The Waterfront staff currently uses several parking and circulation management strategies, including a slipholder permit program, time-limited parking, gate controls, and paid parking. An analysis of parking counts conducted between May 2021 and February 2024 shows that peak weekday parking utilization Waterfront-wide was 50%, while peak Saturday utilization reached 72%. Certain lots, such as South Cove East/West, J&K lot, and Spinnaker Way lot, experienced near 100% utilization during specific times. However, even though this high utilization was occurring more than 300 parking spaces remained available across various other lots. The primary concern among some stakeholders during these peak periods is not finding a parking space at all, but finding one near the desired destination.

The Feasibility Study estimated 250 parking spaces at the 199 Seawall Drive lot (Hs Lordship) would be utilized by weekday ferry riders. The Water Emergency Transportation Authority (WETA) projects that 915 average weekday passengers per day will use the Berkeley ferry terminal initially, increasing to 1,055 by 2040. Based on WETA's onboard survey data and business plan methodology, Kittelson estimates that in the absence of TDM measures, 40% of ferry riders will drive alone, and 12% will carpool to the terminal. This results in a peak weekday parking demand of 421 spaces, 171 more than the baseline 250 spaces, without TDM measures.

TDM strategies, such as well-designed and convenient loading zones for family drop-off and rideshare vehicles, enhanced bicycle and pedestrian access, improved secure bike parking, expanded shared micromobility options (e.g., scooters, e-bikes, etc.), paid and time-limited parking could reduce parking demand by 65 spaces. Additionally, parking management strategies, including increased capacity at the 199 Seawall Drive lot, overflow parking, and wayfinding signage could provide the City with additional tools to manage potential increased demand for parking at the Waterfront.

The Plan also considers future waterfront development outlined in the Waterfront Specific Plan (WSP) that projects future parking demands. Recommendations include valet parking services, satellite parking lots, demand-based paid parking, and shuttle services. With full implementation of the development considered in the WSP the existing surface parking lots would be redeveloped for proposed developments which could reduce public parking capacity by 81 spaces. However, efficient lot redesign, and developer agreements could recover and potentially enhance the parking at the Waterfront.

The Plan concludes that the Waterfront will have sufficient parking spaces to accommodate the parking demand from future uses in the WSP. However, while the overall parking demand for the area can be met, there will be instances where individuals might not park near their desired destinations during peak times on peak days. This could be frustrating for Waterfront visitors, and this occurs on occasion in the current

environment at the Waterfront. Implementing dynamic wayfinding and clear messaging strategies could help enhance the overall parking experience of visitors.

Section 2
Introduction

2. INTRODUCTION

The City of Berkeley (City) completed the feasibility study for the ferry facility at Berkeley Municipal Pier (Feasibility Study) in December 2021 and is now beginning detailed engineering and environmental studies for the Water Transportation Pier-Ferry (WTPF) Project. This Parking and Transportation Demand Management Plan (Parking and TDM Plan) evaluates the existing parking conditions and parking demand for the proposed ferry service and future development at the Berkeley Waterfront.

2.1. Purpose of the Report

The Parking and TDM Plan aims to address stakeholder concerns related to parking. It provides the City with a comprehensive review of current parking conditions, as well as for Ferry and Cumulative Conditions. This document will serve as an actionable guide for the City, and provides strategies to address future parking needs with the implementation and phasing of a range of TDM measures at different phases of future development.

2.2. Study Area

The study area (Berkeley Waterfront or Waterfront) is the area west of the McLaughlin Eastshore State Park, bordered by Spinnaker Way to the north and South Sailing Basin to the south, see Figure 1. University Avenue provides vehicle connection between the Waterfront, Downtown Berkeley and Highway 80.

AC Transit Bus Route 51B connects the Waterfront and Rockridge BART via College Avenue, Downtown Berkeley BART, and University Avenue. Only one out of every three scheduled bus trips between 7 am and 9 pm serves the Waterfront; all other trips terminate at the Berkeley Amtrak station, resulting in a frequency of two (2) buses every hour to the Waterfront.

The San Francisco Bay Trail Extension provides bicycle and pedestrian access to the Waterfront from the intersection of University Avenue and Frontage Road. The bicycle and pedestrian bridge across I-80 connects the Waterfront with the City of Berkeley. Additionally, the Virginia Street Right-of-Way (a dirt pathway) offers another bike and pedestrian connection.

The Study Area is located entirely on public tidelands held in trust by the City. There are over 100 acres of uplands and 5 miles of pedestrian trails within the Waterfront. Centered within this landscape is the Berkeley Marina, the largest public marina in the San Francisco Bay with 1,000 boat slips. The Berkeley Waterfront also includes three public access docks, a boat launch ramp, nine public parking lots, five on-street parking facilities, slipholder permit lots and privately leased parking lots.

In addition to various recreation opportunities, current businesses and attractions include 1 hotel, 4 restaurants, 1 boatyard, a yacht club, two non-profit sailing clubs, a nature center, a two-story office building (commercially leased), and 9 restroom buildings (including both public and slip-holder only facilities), as shown in Figure 2.

LEGEND

Source: City of Berkeley, MTC

KITTELSON & ASSOCIATES

Figure 2: Existing Businesses and Destinations

Source: Draft Waterfront Specific Plan, 2023

The proposed ferry terminal at the Waterfront will be located at Berkeley Pier, ~1.100-feet of which will be reconstructed to provide a dual-purpose pier for both ferry and recreation access. The study focuses on the following nine (9) public parking lots and five (5) on-street parking facilities. Private, paid and slipholder only parking lots (Boat Launch Stalls – Paid, Doubletree Stalls – Private/Paid, and Berkeley Marine Center) were not included in the analysis, as it is assumed that neither ferry riders nor the general public will have utilize these locations for parking.

Public parking lots

1. Spinnaker Way Lot
2. J & K Lot
3. L Lot
4. M Lot
5. South Cove East Lot
6. South Cove West Lot
7. Seawall Drive Lot
8. Skates/N Lot
9. O Lot

On-street parking facilities

1. Spinnaker Way
2. Marina Blvd
3. University Ave Shoulder (at West Frontage Rd)
4. Seawall Drive North
5. Seawall Drive South

Slipholder Permit Lots

1. D&E Lot
2. F&G Lot
3. H&I Lot
4. Dry Boat Storage Lot

Limited Parking Area (Not included in the analysis)

1. Launch Ramp Paid (Public Lot)
2. Berkeley City Vehicle Parking
3. Berkeley PD Leased Lot
4. Doubletree Leased Lot
5. Marine Center Leased Lot

Potential future redevelopment is limited to the existing developed land at the Waterfront comprised of leased land and surface parking lots. Future redevelopment at the Waterfront over the next several decades may bring in more visitors and hence, an increase in the need for parking and TDM.

2.3. MTC TOC Parking Management Policy

The MTC Transit-Oriented Communities (TOC) parking management policy is designed to reduce automobile trips and prioritize the limited land near transit for shared and active transportation modes. Parking management complements increased residential and commercial density, supporting higher transit ridership on the region's existing and planned fixed-guideway transit systems.[1]

To comply with the TOC Policy, MTC mandates adherence to parking standards based on the level of transit service. Ferry terminals, such as the Berkeley Ferry Terminal, qualify as Tier 4, requiring parking maximums of 4 spaces per 1,000 square feet or fewer for commercial developments and 1.5 spaces per unit or fewer for residential developments. Additionally, AB 2097 prohibits public agencies from imposing or enforcing parking minimums on residential, commercial, or other developments within ½ mile of a major transit stop.[2]

The design standards outlined in the Waterfront Specific Plan, combined with recommendations from this Parking and TDM Plan, ensure compliance with the MTC TOC parking management policy by meeting both residential and commercial parking maximum requirements.

Section 3
Existing Conditions

3. EXISTING CONDITIONS

3.1. Existing Parking Management

Existing parking facilities at the Berkeley Waterfront are managed using a variety of parking regulations. Currently, 8 out of 14 parking lots have no parking restrictions beyond overnight parking restrictions and 72-hour limits set in the Berkeley Municipal Code. The remaining lots are restricted either using manual gate openings at peak periods or via permits for berth holders. Table 1 catalogues existing parking regulations at Waterfront parking facilities and proposes new time-limited regulations to reduce the impact of ferry users on other parking lots. While parking facilities on the North side of the Waterfront are unlikely to experience direct impacts from ferry vehicle trips, facilities in the Waterfront's South and Central facilities are within easy walking distance of the ferry terminal site and have regular visitation throughout the week that could be impacted by overflow ferry parking.

Table 1 should be considered preliminary, and public feedback from waterfront visitors will help the City develop parking restrictions that would best balance the needs of different users while ensuring that commuters cannot leave vehicles in those locations for the 8+ hour duration between morning and evening ferry commute trips.

Separate from ferry parking demand management, the City can evaluate the process for issuing parking permits to non-recreational or commercial visitors to the Waterfront, including boaters with a permit to live aboard their recreational vessel and employees at Waterfront businesses. One common piece of feedback from the parking intercept survey was that the permit parking procedures in the M Lot were opaque to frequent paddlers who were not slip holders. Clarifying and enforcing existing and/or changed permit parking restrictions and procedures would improve the overall parking experience for both frequent and occasional visitors (see Appendix A).

The City has the opportunity at the Berkeley Waterfront to regularly review and revise its parking restrictions and policies. In addition to revisions specifically related to the WTPF, parking regulations should be regularly updated to reflect parking practices among current Waterfront users, as determined from parking data collection, intercept surveys and public outreach and feedback. Generally, parking time restrictions are a powerful tool that should be implemented more broadly throughout the Waterfront, coordinated with the destinations and activities that are served by specific parking lots. Parking facilities optimal uses should be encouraged with parking regulations, such as time-limited parking.

Table 1: Existing and Potential Parking Regulations

#	Parking Lot / Street Parking	Waterfront Area	Existing Regulations[1]	Potential Regulations[2]	Key Stakeholder Group
1	D&E Lot	North	Berther Permit Parking Only	No Change	Slip holders
2	Spinnaker Way Lot	North	No Additional Restrictions	No Change	General Recreation
3	Marina Blvd	North	No Additional Restrictions	No Change	General recreation
4	Spinnaker Way	North	No Additional Restrictions	No Change	General recreation
5	F & G Lot	North	Berther Permit Parking Only	No Change	Slip holders
6	H, & I Lot	North	Berther Permit Parking Only	No Change	Slip holders
7	J & K Lot	Central	No Additional Restrictions	No Change	Boaters / Diners
8	South Cove West Lot	Central	No Additional Restrictions	5-Hour Parking	Charters / Boaters / Adventure Playground / Shorebird Park
9	South Cove East Lot	Central	Limited access hours via manual gate operations	5-Hour Parking	Boaters / Adventure Playground / Shorebird Park
10	L[3] Lot	Central	Berther Permit Parking on weekends and between 8 pm and 10 am on weekdays	5-Hour Parking	Boaters / Nature Center
11	M Lot	Central	Berther Permit Parking on weekends and between 8 pm and 10 am on weekdays	5-Hour Parking	Boaters / Nature Center
12	O Lot	South	No Additional Restrictions	Slip Holder / Permit Parking	Slip holders, Yacht Club Visitors
13	Seawall Drive	South	No Additional Restrictions	3-Hour Parking	General Recreation / In-Car Bay Viewing
14	Skates/N Lot	South	No Additional Restrictions	3-Hour Parking	Diners / General Recreation
15	Seawall Lot	South	Open only during high use periods via manual gate operation	No Regulation	Diners / Pier & Ferry Access / Shorebird Park / General Recreation

Source: Kittelson & Associates, Inc. 2024
[1]Excluding overnight parking restrictions, which vary by lot / location. All public parking has a maximum of 72-hour parking without a permit per Berkeley Municipal Code.
[2] Possible parking regulations. Final recommendations should account for measured parking turnover rates and stakeholder outreach. Paid parking is not included in this table, but should be considered by the City, in particular for full-day parking.
[3] Does not include the Berkeley Police Department lot (gated)

3.2. Existing Parking Utilization

The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time to better support parking management objectives. Kittelson reviewed data from May 2021 to February 2024. During data processing, some lots had to be merged for various reasons, such as a lack of physical boundaries between them or combined data reporting for adjacent lots.

Limitations: The data may not reflect peak utilization which could occur at times other than 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points,

Table 2 measures parking utilization by lot for average and peak weekdays and Saturdays. Across all lots, parking utilization averaged around 31% on weekdays and 49% on Saturdays. Peak weekday parking was 50% utilized, while peak Saturday parking was 79%. This Waterfront-wide peak period occupancy estimate is a conservative aggregation of each lot's individual peak utilization. It is therefore likely that, even during peak periods, the Waterfront has more than 300 available spaces, spread across various lots.

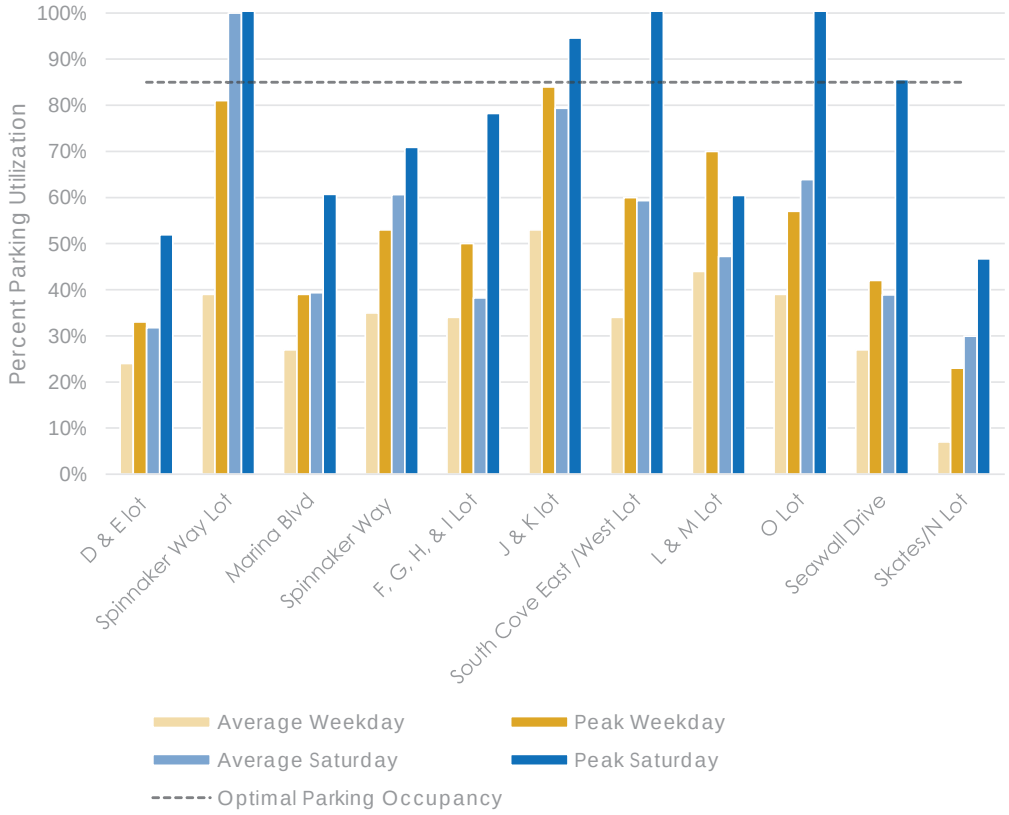

Table 2: June Parking Utilization at the Berkeley Marina, 2021-2023

Parking Lot	Existing Capacity	Utilization (taken spaces, % of spaces occupied)							
		Average Weekday		Peak Weekday		Average Saturday		Peak Saturday	
D&E lot	129	31	24%	42	33%	41	32%	67	52%
Spinnaker Way Lot	36	14	39%	29	81%	36	100%	71	197%
Marina Blvd	150	41	27%	59	39%	59	39%	91	61%
Spinnaker Way	127	45	35%	67	53%	77	61%	90	71%
F, G, H, & I Lot	115	39	34%	57	50%	44	38%	90	78%
J&K lot	92	49	53%	77	84%	73	79%	87	95%
South Cove East /West Lot	182	62	34%	110	60%	108	59%	191	105%
L&M[3] Lot	91	40	44%	64	70%	43	47%	55	60%
O Lot	72	28	39%	41	57%	46	64%	87	121%
Seawall Drive	90	24	27%	38	42%	35	39%	77	86%
Skates/N Lot	137	10	7%	31	23%	41	30%	64	47%
Totals	1,221	383	31%	615	50%	603	49%	970	79%

Source: Kittelson & Associates, Inc. 2024
Note: The peak Saturday utilization for Spinnaker Way Lot exceeded the capacity due to data collection error in which some of the Launch Ramp Paid parking was counted as the adjacent Spinnaker Way Lot.

Figure 3 visualizes the same data, along with a dotted line marker at 85% parking utilization. As a rule of thumb, when parking occupancy is over 85%, drivers have to spend more time looking for parking, increasing congestion, and negatively impacting the experience of visiting a destination. Only the Spinnaker Way lot saw average June occupancies meet or exceed this optimal parking level. In addition, several other locations, including the J&K lot, South Cove East / West, O lot, and Seawall Drive saw individual, peak observation periods exceed this same threshold. This indicates that, while parking at the Waterfront is generally well below optimal utilization, there are periods when parking spaces are difficult to find in individual lots.

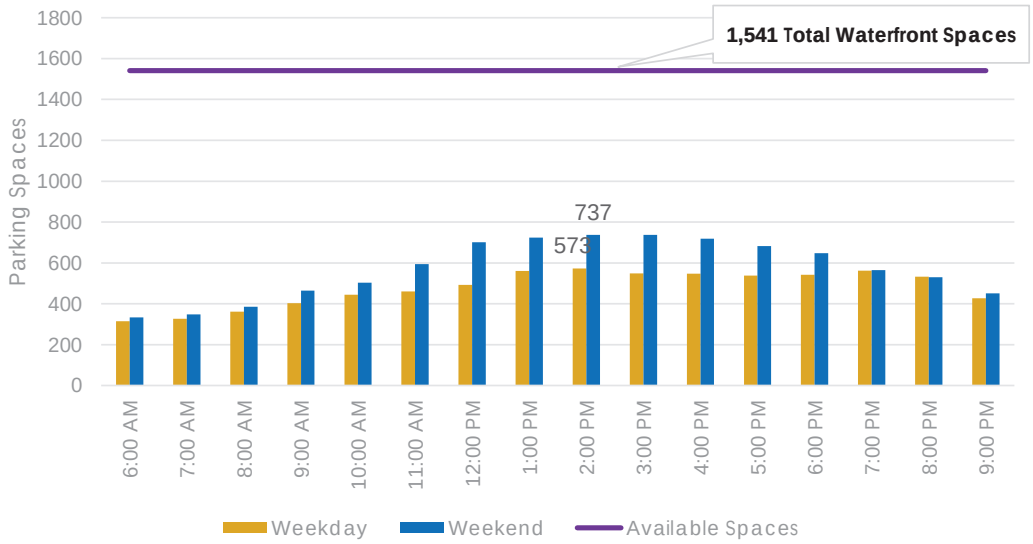
Figure 3: Average and Peak Utilization by Lot

Source: Kittelson & Associates, Inc. 2024

Note: The peak Saturday utilization for Spinnaker Way lot exceeded the capacity due to data collection error in which some of the Launch Ramp Paid parking was counted as the adjacent Spinnaker Way Lot.

When all of the Waterfront's parking resources are considered together, peak parking utilization would reach just 72% of available spaces, with around 340 spaces unoccupied. Effective parking management strategies, including wayfinding, time restrictions, and permit holder restrictions could help to better distribute the demand for parking around the Waterfront. This would allow more visitors to park closer to their destination on a more predictable basis.

3.3. Time of Day Utilization



Kittelson retained Quality Counts (QC) to collect hourly parking counts between 5:30 am and 9:30 pm on Saturday, and 8 am to 10 pm on Thursdays on the following dates in 2024:

- Saturday, April 6
- Thursday, April 11
- Thursday, August 1
- Thursday, August 22
- Saturday, August 24

The counts were collected using go-pro dash cams while slowly driving through all parking lots once per hour during the count period. Post-processing involved the analysis of GoPro footage, the partial license plate, make, model, and color to demarcate specific individual vehicles and the time a vehicle remained in parking stall.

Figure 4 displays the number of parking spaces occupied at the Waterfront each day. As expected, the parking utilization was higher on weekends compared to weekdays, especially during midday hours (10 am – 2 pm). The peak usage occurred at 2 pm on weekends (48% occupied, 737 spaces) and weekdays (37% occupied, 573 spaces).

Figure 4: Parking Utilization by Time of Day

Source: Kittelson & Associates, Inc. 2024

Note: The total available spaces include 320 parking spaces on Seawall Lot, bringing the total to 1,541.

Section 4

Year 1 Parking Management and TDM Strategies

4. YEAR 1 FERRY CONDITIONS

3.4. Year-One Ferry Conditions

In this scenario, it is assumed that the Waterfront will continue to operate under typical baseline conditions, with the addition of the Project. The recommended parking and TDM strategies are specifically tailored to address the needs of the Project but are designed to provide benefits to the other uses at the Waterfront.

3.4.1. RIDERSHIP PROJECTIONS

The proposed ferry terminal at the Waterfront would be located at the Berkeley Pier, a portion of which would be reconstructed to provide both ferry and recreation access. WETA estimates a total of 1,830 average weekday boardings. Conservatively, this would result in 915 riders boarding at the Berkeley Terminal, assuming all riders are round-trip traveling between Berkeley and San Francisco and originating in Berkeley. WETA projects that the average weekday boardings could reach 2,110 by 2040, as shown in Table 3.

The Feasibility Study and WETA Business Service Plan separately estimated the travel mode share of future ferry riders, as shown in Table 4. The Feasibility Study estimated that 54% of the ferry riders would drive alone and 9% would carpool to the ferry terminal. The remaining ferry riders would arrive by bicycle, ride-share, public transit or other modes of transportation that would not require a vehicle parking space. The WETA Business Service Plan estimated that only 31% would be driving alone and 15% would be carpooling to the ferry terminal.

Kittelson reviewed updated on-board survey data from WETA, which included surveys conducted in 2022. Using the WETA Business Plan methodology and updated data, Kittelson estimated that approximately 44% of trips would be drive-alone, which is 13 percentage points higher than the WETA Business Service Plan estimate. Using the 2022 data, the results for the lower mode shares for walking (4%) and biking (11%), as well as public transit 2%), are very low, likely due to pandemic conditions, as people were avoiding public transportation.

The Kittelson recommended baseline mode share, shown in bold in Table 4, references the three sources and reflects the local context and our understanding of the existing travel patterns at the Waterfront. These baseline values represent the estimated mode share prior to the implementation of TDM strategies.

Table 3: Ferry Ridership Estimates (Total Boardings)

Year	San Francisco Only		San Francisco + Mission Bay	
	Weekday	Weekend	Weekday	Weekend
2020[1]	1,830	1,310	2,020	1,440
2026	1,910	1,367	2,106	1,503
2035	2,036	1,457	2,241	1,602
2040[2]	2,110	1,510	2,320	1,660

Source: WETA Business Service Plan, 2022

[1]2020 ridership estimates for San Francisco connection is used for year 1 travel assumptions.

[2]2040 ridership projections for San Francisco + Mission Bay is used for future conditions.

Table 4: Mode Share Summary for Ferry Riders (no TDM)

Source	Drive Alone	Carpool	Kiss-and-Ride[1]	Public Transit	Bike	Walk Only	TNC[2]/ Taxi	Other[3]
WETA Business Plan, 2017-19	31%	15%	15%	5%	16%	8%	8%	2%
Feasibility Study (Baseline)	54%	9%	8%	4%	18%	3%	3%	1%
WETA Updated Survey - 2022	44%	8%	8%	2%	11%	4%	2%	21%

1Kiss-and-ride is drop off in personal vehicle; 2TNC is transportation network or "rideshare" company, e.g., Uber/Lyft; 3Other includes multiple modes and private shuttle. Note: Autonomous Vehicles (AV) have not been included.

3.4.2.MODE SHARE ESTIMATES

Using WETA's projected ridership figures and the latest baseline mode share, it is estimated that without implementation of any TDM strategies there will be a weekday peak demand for 421 parking spaces after the implementation of ferry service (Table 5).The City and WETA have conceptually planned for 250 vehicle parking spaces in the Seawall Drive Lot (formerly known as HS Lordship lot) to be utilized by weekday ferry riders (i.e. commuters). The estimated demand for vehicle parking spaces, without implementation of any TDM measures, exceeds this number by 171 parking spaces. The following sections of this memorandum identify strategies to (1) reduce the number of vehicle trips and parking demand and (2) effectively manage and distribute the resulting parking demand.

Table 5: Estimated Year 1 Weekday Ferry Ridership by Mode and Parking Demand (no TDM)

Mode	Mode Share	PersonTrips[1]	Base Parking Demand for Ferry Riders[1]
Drive Alone	40%	366	366
Carpool	12%	110	55
Kiss-and-Ride	8%	73	0
Transit	5%	46	0
Bike	16%	146	0
Walk	4%	37	0
Taxi / TNC	5%	46	0
Other	10%	92	0
Total	100%	915	421

Source: Kittelson & Associates, Inc. 2024
Note: [1]A person trip is a trip taken by a ferry rider using any mode of transportation. Rounded to the nearest integer.

3.4.3.TRANSPORTATION DEMAND MANAGEMENT ESTIMATES

Based on the estimated ferry ridership and mode share, there will be a peak weekday demand for 421 vehicle parking spaces. With the implementation of TDM measures identified in the Berkeley Waterfront Parking and TDM Toolkit (see Appendix B), demand for parking in the ferry terminal lot could be reduced by between 8% and 15%, resulting in a demand for between 356 and 389 parking spaces each day.

The effectiveness of potential TDM strategies was estimated using formulas from the California Air Pollution Control Officer's Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA Handbook), informed by case studies from peer projects and our understanding of the Waterfront. However, estimating the reduction in parking demand through TDM measures is challenging due to limited comparable studies, and none of the available studies are specific to the Waterfront context. Table 6 provides the methodology used for each strategy, and key assumptions are included in the Appendix C of this report. A conceptual design showing bicycle, pedestrian and bus stop improvements at University Avenue and Seawall Drive is included in Appendix D.

The calculated reductions in vehicle trips and parking demand associated with implementation of these TDM strategies is presented in Table 6. Based on these calculations, parking demand from ferry users could be reduced by 32 to 65 spaces. This analysis utilizes the higher range of this expected reduction to reflect the large-scale changes to travel patterns that the City expects as a result of improving bicycle network connections to the WTPF. This reduction would result in a weekday demand for 356 parking spaces at the ferry terminal parking lot, 106 more than the 250 spaces planned for in the Feasibility Study.

Table 6: Estimated Effectiveness of Parking and TDM Strategies

Strategy	Weekday Ferry Parking Lot Demand Reduction (spaces)	Calculation Source

Appendix D includes bicycle and pedestrian improvements at University Avenue and Seawall Drive.

In addition to the strategies mentioned above, demand-based paid parking has proven to be highly effective in reducing vehicle trips and parking demand. The implementation of a paid parking program was the primary recommendation of the Berkeley Marina Area Specific Plan Parking and Mobility Framework. However, public feedback from parking intercept surveys conducted in Summer 2024 as part of this Plan indicates that many current Waterfront visitors are reluctant to pay for parking when visiting for recreational purposes. While this strategy is not included in the Plan, it has the potential to reduce parking demand by an additional 42 vehicles. Further details on paid parking and other TDM strategies can be found in Appendix C.

3.4.4.YEAR-ONE PARKING MANAGEMENT STRATEGIES

After the implementation of TDM strategies, the Waterfront will need to accommodate ferry rider demand for approximately 106 more parking spaces than are planned to be made available in the 199 Seawall Drive lot. The city can meet this excess demand by implementing three strategies for year-one of ferry operations, including 1) maximizing the number of spaces made available in the renovation of the 199 Seawall Drive lot, 2) by directing drivers to designated low-occupancy lots in other locations around the Waterfront to be used as overflow parking when 199 Seawall Drive reaches capacity, and 3) by establishing a wayfinding program that can help drivers locate parking that is best suited for their trip purpose, such as clarifying where all-day parking is and is not allowed.

It should be noted that it is very unlikely that the WETA projected Ferry ridership will actually be achieved within the first year of service. As ridership increases and all-day parking becomes less desirable for ferry riders, they are more likely to switch to alternative modes of transportation including bike, AC transit and ride shares. The approach to TDM planning should allow for a dynamic approach to implementation of TDM strategies based on actual mode shares and parking demand patterns over time. While not evaluated in this study, it should also be noted that the growth of Autonomous Vehicles in urbanized areas is anticipated to growth significantly in the next five to ten years, which is likely to reduce the need for all-day ferry parking at the Berkeley Waterfront.

1. Maximize Parking Capacity at 199 Seawall Drive Lot

The City of Berkeley will consider design strategies to maximize the number of parking spaces available in the 199 Seawall Drive lot, marked by #1 in Figure 5. By accommodating full-day parking in this area, the City can reduce the number of drivers who need to seek parking elsewhere in the Waterfront or who will have to adjust their travel habits to travel to the ferry earlier, when parking is available, or who will have to access the ferry terminal by other modes.

2. Provide Overflow Parking

The City of Berkeley can designate formal overflow lots to provide full-day parking spaces when the 199 Seawall Drive Lot becomes full. Overflow parking can be established in locations that have low existing parking utilization on weekdays and that are within walking distance of the Berkeley Pier, including possible sites at the Marina Boulevard lot or at the Skates/N Lot.

The public street parking on Marina Boulevard could serve as an ideal location for overflow parking (see #2 in Figure 5). On weekdays, the average parking utilization is below 40%, and even at peak occupancy of 53% (as shown in Table 2), it could provide up to 90 additional all day parking spaces. Current observations

indicate that much of the existing utilization is from employees and visitors of the Doubletree Hotel, which has existing parking within their leased premises. With additional management of those vehicles, Marina Boulevard will conservatively accommodate over 100 full-day parkers. However, the walking distance from this lot ranges from approximately 0.4 miles to 0.75 miles away from the Berkeley Pier, for walks of between 10 and 17 minutes respectively, according to Google Maps.

The Skates / N Lot has a similarly low weekday utilization of just 7% and a peak utilization of 22% and is located adjacent to the Berkeley Pier. At its peak 10:00 AM weekday occupancy, the Skates / N Lot can accommodate 108 additional vehicles. However, the Skates / N Lot serves the Skates on the Bay restaurant and is close enough to serve as an informal overflow lot for higher occupancy lots including the O Lot, L&M Lots, and South Cove Lots. Though it has a slightly higher weekday utilization rate, the Marina Boulevard lot may be better suited for use as a formally designated overflow area.

Using these two TDM strategies, the combined overflow capacity at both the Marina Boulevard Lot and Skates / N Lot can easily accommodate the unmet demand for 106 parking spaces from the 199 Seawall Drive Lot.

3. Implement Wayfinding Program

To successfully shift vehicles to overflow lots, the City can implement a Waterfront-wide wayfinding program to clarify parking options for full-day parkers who arrive later in the day, or for whom walking from an overflow lot is not a physical constraint. Key locations for year-one wayfinding are indicated by the circles marked with #3 in Figure 5. Instead of circling the 199 Seawall Drive lot looking for spaces on busy days, these riders would know that they could immediately park at a formally-designated overflow location. Wayfinding can also be used to improve current parking conditions by leading visitors to the lots closest to their destinations or to areas with existing capacity that are a short walk from more popular lots.

Wayfinding measures are split up into two categories, static and dynamic wayfinding. Static wayfinding consists of signage to direct drivers to lots that best suit their needs and most effectively distribute demand across the Waterfront. Static wayfinding is critical as well as cost-effective for managing parking at the Waterfront and should be implemented before or concurrent with the launch of the ferry service. Dynamic wayfinding would use parking occupancy sensors and message boards at key access points around the Waterfront to provide drivers of information regarding the relative occupancy levels of parking lots and direct them to lots with more availability. Dynamic wayfinding would be an addendum to static wayfinding and is not critical for year-one ferry operations. It would also involve installation, operations and maintenance costs that would need to be planned by the City.

Wayfinding improvements would allow the City to effectively distribute parking demand around the ample occupancy in Waterfront lots. A wayfinding plan for the Waterfront would allow the City to strategically direct drivers to available parking that they were not aware of. This strategy can reduce the locations where shorter duration recreational and commercial visitors compete with full-day parkers, and will also more effectively manage weekend and special event parking loads outside of peak commuting hours.

Year One Parking Management Strategies

1 Maximize parking at 199 Seawall Drive
2 Provide overflow parking
3 Implement wayfinding program

KITTELSON & ASSOCIATES

Static Wayfinding

Improving wayfinding is a critical strategy for leveraging the existing resources of the Waterfront. The future ferry terminal site is immediately surrounded by low utilization parking lots. However, drivers pass some of the higher occupancy lots in the Marina on the way to the ferry terminal, including the J&K Lot and South Cove Lots. Improved wayfinding would help drivers find the parking facility that best suits their needs without infringing on the access of other visitors. To successfully implement a static wayfinding plan, the city must:

1. Update parking regulations based on best uses for each parking lot at the Waterfront (Table 1)
2. Identify key wayfinding locations
3. Install critical wayfinding signage as part of the WTPF project scope.

1. **Coordinate parking regulations**. Static wayfinding can direct drivers to specific lots, but the city must first determine the desired use for each lot at the Waterfront. For example, if the main desired usage of the South Cove lots is for access to watersports and Adventure Playground, then picknickers traveling toward Shorebird Park could be directed towards the M Lot or to spaces along Seawall Drive. Appropriate parking regulations should be aligned with the preferred uses at each parking lot. This step can be completed as part of the parking regulation review recommended in this report. See also Section 4.1.5 regarding types of implementation and enforcement for time-limited parking regulations.

2. **Identify key wayfinding locations**. Following the classification of parking lot purpose and regulation, the city should identify key wayfinding decision points around the Waterfront where drivers make parking lot usage choices. Key location might include: the University Ave roundabout, lot entrances to Central Facilities along University Ave, and at the intersection of University Ave and Seawall Dr, show in Figure 5. These locations should be selected to ensure that all drivers who arrive at the Waterfront are presented with a series of options that can help them park in a location that is most convenient for them without inconveniencing other Waterfront visitors.
3. **Implement a wayfinding program**. The City should implement a new wayfinding program before or concurrent with the launch of ferry service. This means that the capital investment in the program should be scaled to match the ferry service project timeline. More ambitious wayfinding could include new branding and features that would emphasize the difference between parking at the Waterfront and parking in the rest of the City. See a mockup of a wayfinding program in Estes Park, Colorado in Figure 6. In this wayfinding program, signs offer drivers a variety of parking options to suit their needs, including directions to specific destinations, directions to free parking with shuttle service, and paid parking closest to key destinations.

Figure 6: Parking Wayfinding Example

Source: e.holdings inc.

Note: This example is from the City of Estes Park, Colorado for implementation of a paid parking program. Notice signs to emphasize free parking, paid parking, and shuttle services.

Dynamic Wayfinding

Dynamic wayfinding techniques could serve as an additional tool to distribute parking effectively around the Marina and avoid excessive circling for spaces and illegal parking practices, especially during peak demand hours. Dynamic wayfinding could be implemented in select parking facilities as demand warrants and is not essential for year-one ferry operations.

Dynamic wayfinding systems use sensors to track parking occupancy across a parking facility. The number of available spaces can then be displayed at a remote wayfinding board before drivers make the decision to enter a facility.

Dynamic wayfinding at the Waterfront could be utilized to monitor the occupancy of spaces available for all day use by ferry riders. A dynamic wayfinding board could be installed in coordination with the provision of alternative parking locations of ferry riders, either to direct them to less occupied lots near the ferry, or to a satellite parking facility with shuttle service to the ferry terminal.

See Figure 7 for an example of dynamic wayfinding in Redwood City, California. In 2022, Redwood City completed a dynamic wayfinding project that monitors over 4,000 parking spaces throughout their downtown area. The occupancy of those spaces is then communicated to drivers at key locations as they approach the downtown area, including in the underpass under Caltrain tracks, as shown in Figure 7.[3] These boards provide information that can improve the visitor experience of parking in Redwood City and more effectively utilize existing parking facilities and helps the City to avoid the need for costly expansion or restructuring of parking.

Figure 7: Dynamic Wayfinding Signage Example

Source: Google Streetview

Note: This example is from Redwood City, CA.

3.4.5.IMPLEMENTATION & ENFORCEMENT OF TIME LIMITED PARKING

Section 4.1.4 provides parking management strategies to manage the projected demand for parking through the use of over-flow full-day parking options. As described in Table 1, while some parking lots have hours of no parking (via either use of permits or gates), no parking lots have enforced time limited parking. In order to ensure that full-day parking for ferry riders only occurs at locations where such use has been planned for, the City will need to create and enforce a means of limiting parking access or duration in those areas where full-day parking by ferry riders is not intended.

[3]Redwood City Pulse. (2022). *Redwood City installs digital parking signs downtown*. Retrieved from https://www.rwcpulse.com/express-newsletter-content/2022/05/17/redwood-city-installs-digital-parking-signs-downtown/

Table 1 provides an example of what those time limits could be at various parking lots; actual durations for time-limited parking should be determined, and adjusted if needed, based on feedback from the public and Waterfront Visitors.

There are a variety of ways to implement time-limited or access-limited parking.

- Free Time Limited Parking. Many areas in Berkeley have 2-hour time limits for on-street parking unless a residential parking permit for that zone is displayed. A similar type of restriction and enforcement could be used in specific Waterfront parking lots. This approach has the advantage of not requiring infrastructure beyond signage, but enforcement is costlier since it requires multiple passes by parking enforcement staff. Berther parking that exceeds the time limit could be accommodated via permits.
- Paid Parking. Similar to many locations in the City, the use of paid parking with maximum time limits allows for enforcement via the issuance of parking passes. This approach would require installation and maintenance of kiosks/meters at parking lots where implemented and enforcement.
- Gated Lots. Use of manual gates to limit the period of access instead of time-limited parking spaces is currently used at the South Cove East Lot. The gate is not opened until after the early-morning boaters depart, ensuring that those primarily full-day parkers use Marina Blvd and South Cove West lot. This system could be refined and expanded in various ways. The use of gates requires staff time, which is costly due to frequent maintenance needs, and can be occasionally variable due to limited staff resources.

Section 5

Future Conditions

5. FUTURE CONDITIONS

5.1. Future Ferry Conditions

In this scenario, it is assumed that the Waterfront will continue to operate under typical baseline conditions with no new development but with an increase in ferry ridership. As outlined in Section 2.3.1, WETA anticipates that average weekday ridership will increase to 1,160 by 2040 under full service which includes connecting service between the San Francisco Ferry Terminal and Mission Bay, reflecting a growth of approximately 15%. These ridership projections are based on pre-COVID assumptions but have been adjusted to account for a "pandemic recovery" fare structure, as well as shifting commuter travel patterns and demand for services. Changes in costs, services, or overall economic conditions may impact these assumptions, so WETA will update the projections as new information becomes available. The City of Berkeley staff should also implement parking and TDM strategies based on the needs of ferry riders and Waterfront visitors. This section is intended for planning purposes, and the recommended strategies will be revisited in the future to assess how ferry ridership aligns with the projections.

5.1.1. RIDERSHIP AND MODE SHARE

This analysis conservatively assumes that the mode share will remain unchanged under future conditions. This would result in a parking demand of 534 spaces without implementing any TDM measures.

Table 7: Future 2040 Ferry Mode Share and Parking Demand (no TDM)

Mode	Mode Share	Person Trips[1]	Base Parking Demand for Ferry Riders[1]
Drive Alone	40%	464	464
Carpool	12%	139	70
Kiss-and-Ride	8%	93	0
Transit	5%	58	0
Bike	16%	186	0
Walk	4%	46	0
Taxi / TNC	5%	58	0
Other	10%	116	0
Total	100%	1,160	534

Source: Kittelson & Associates, Inc. 2024

Note: [1]A person trip is a trip taken by a ferry rider using any mode of transportation. Rounded to the nearest integer.

5.1.2. TRANSPORTATION DEMAND MANAGEMENT STRATEGIES

Applying the same TDM strategies from the Year 1 scenario, parking demand from ferry users could be reduced by 67 to 108 spaces, as shown in Table 8. The higher reduction is attributed to increased ridership, as more individuals would opt for more sustainable modes of accessing the ferry terminal instead of driving, thereby enhancing the effectiveness of the TDM strategies. This reduction would result in a weekday

demand for 467 parking spaces at the ferry terminal parking lot, 217 more than planned (250) for within the 199 Seawall Drive parking lot in the Feasibility Study.

Table 8: Estimated Effectiveness of Parking and TDM Strategies

CAPCOA Handbook- California Air Pollution Control Officer's Association Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity; TNC - Transportation Network Companies

5.1.3.PARKING MANAGEMENT STRATEGIES

Similar to the TDM strategies, the parking management strategies outlined in Section 4.1.4 for Year 1 Ferry Conditions will help address the additional peak parking demand of 217 spaces from ferry riders. To be conservative, it is assumed that these strategies will be as effective as they were under the Year 1 Ferry Conditions, which would reduce the need by 106 spaces. This means that under Future Ferry Conditions, additional parking management strategies will be necessary to accommodate the remaining demand of approximately 111 spaces.

Based on the Parking and TDM Toolkit presented in Appendix B, the following strategies in combination would be effective in addressing the remaining demand of 111 spaces.

5.1.4. Valet Service

Valet Service would maximize finite space in existing lots by allowing valet attendants to tandem park vehicles. Likewise, valet parking can turn underutilized parking lots into an efficient tool for parking management. Valet parking is well-suited for the Waterfront's parking and usage patterns, which are characterized by an overabundance of parking capacity on most days and congestion and high occupancy levels in certain lots during events and peak periods of good weather and boating conditions. Additional details on the implementation of this strategy are provided in Appendix B.

5.1.5. Satellite Parking Facilities

The City could establish a satellite parking facility at Golden Gate Fields or other public parking lots that could be used by ferry riders or other visitors during special events. The satellite lot would be a tool for transferring parking demand away from Waterfront lots for those who have the flexibility to then proceed

to the Waterfront by shuttle, AC Transit service, or by biking and walking. A satellite parking facility could maximize the space devoted to vehicle parking for recreational uses at the Waterfront without limiting access to the ferry service. Additional details on the implementation of this strategy are provided in Appendix B.

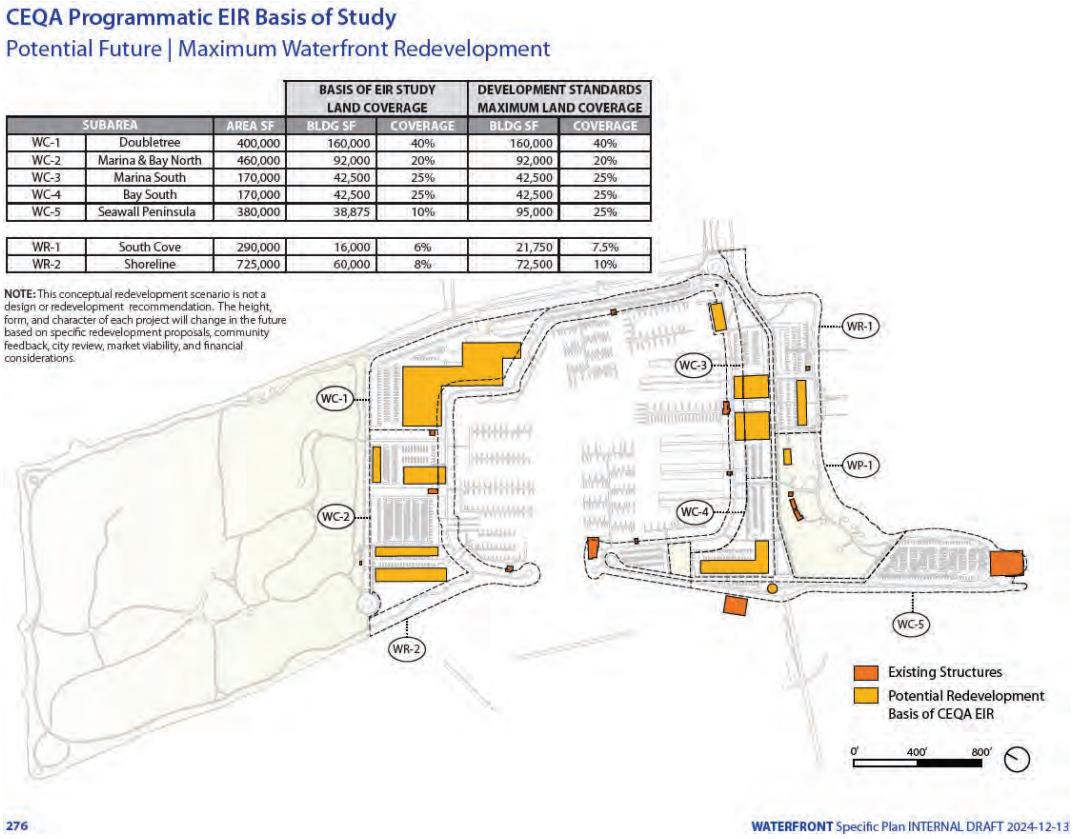
5.1.6. Demand Based Paid Parking

Paid parking can be an effective tool for managing parking demand from ferry users. Its implementation should be carefully designed to accommodate the needs of ferry riders while ensuring sufficient availability for a wide range of Waterfront visitors. A well-executed paid parking program is anticipated to reduce the demand by approximately 53 parking spaces. Additional details on the implementation of this strategy are provided in Appendix B.

5.1.7. Shuttle Service to the Waterfront

A shuttle service to the Berkeley Waterfront that is aligned with the ferry schedule could serve as an alternative to car trips for ferry riders. This shuttle would need to connect commuters and visitors from various origins throughout Berkeley to the Waterfront. Currently, UC Berkeley operates a shuttle bus under the Bear Transit program that loops between the campus and the Downtown Berkeley BART Station.[4] Another West Berkeley Shuttle, funded by Bayer HealthCare and Wareham provides a last-mile connection between Ashby BART Station and businesses in the West Berkeley Area.[5]

The City could consider extending this service to the Ferry Terminal, facilitating a seamless transfer for users. A shuttle service is anticipated to reduce the demand by approximately 53 parking spaces. Additional details on the implementation of this strategy are provided in Appendix B.



These two strategies would be sufficient to meet the future ferry ridership parking demand and transportation needs. However, the City could explore more strategies in the future based on the updated projections and changes to mode share splits that are not currently foreseeable.

5.2. Cumulative Conditions

This scenario considers the potential maximum development informed by the Draft Waterfront Specific Plan (WSP) combined with projected future ferry ridership. The Draft WSP is currently being developed by City staff in collaboration with Hargreaves Jones. As a part of this effort, the City desires to understand the potential impact of the development considered in the WSP on future Waterfront parking and transportation demands. Kittelson received land use data from City staff to evaluate the High Redevelopment Scenario, which anticipates 1.2 million square feet of development, including the existing 404,150 square feet of structures. The potential redevelopment locations and subareas are illustrated in Figure 8.

F&B = food and beverage

The potential development would necessitate the redevelopment of the existing surface parking lots, leading to the reconfiguration of current parking spaces. Table 10 outlines the number of parking spaces affected by the future redevelopment as envisioned in the WSP. It is estimated that the Waterfront would experience a loss of four (4) public spaces, with an overall gain of 40 parking spaces due to the parking lots reconfiguration. Additionally, private parking is projected to increase by 150 spaces, whereas permit parking will decrease by 106 spaces.

However, efficient lot redesign, and developer agreements could recover and potentially enhance the parking at the Waterfront.

Table 10: Reconfiguration of Existing Parking Lots

	Existing			Future			Change
Lot Location	**Public**	**Permit**	**Private**	**Public**	**Permit**	**Private**

Source: Hargreaves Jones, for the Waterfront Specific Plan, 2024

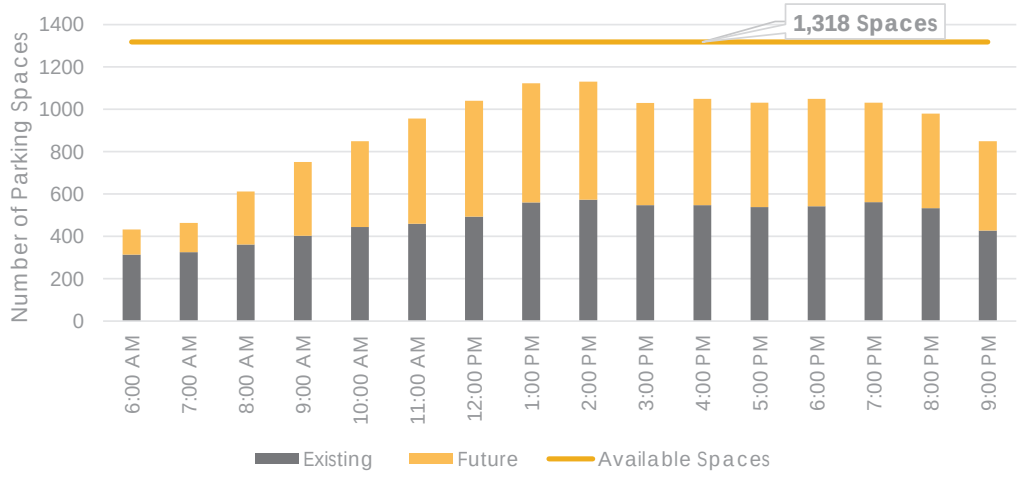
Note: Estimate of change in parking spaces based on the conceptual Maximum Waterfront Redevelopment scenario shown in Figure 8; Includes Marina Boulevard Trail, Access and Shoreline Improvements, dated 7-9-2020.

The City of Berkeley has developed conceptual plans to realign and develop Marina Boulevard, increasing the total parking capacity from 150 to 204 spaces. Details of the conceptual plan can be found in Appendix E.

A parking demand analysis has been prepared to estimate the future parking needs associated with the proposed developments in the WSP, helping to evaluate the requirements for future parking facilities and management strategies. Only certain developments are expected to influence parking demand, while others, such as restrooms and cafés, are considered auxiliary uses that will not generate additional trips to the Waterfront. The developments anticipated to have an effect on parking demand include:

- X1 Bay North Hotel
- X2 Recreation/F&B Complex
- X4 Bay South Hotel
- S1 Hana Japan & Sportsman's Center expansion
- S4 199 Seawall (i.e. Hs Lordship)
- S5 Aquatic Center / F&B/ Cal Adventure & Cal Sailing
- X6 Old Ferry Dock F&B
- Among these developments, the two hotels (Bay North and Bay South) would be required to provide off-street parking at a rate of 0.5 spaces per room, as specified in the development standards section of the WSP. The other five recreational and food establishment uses would not be required to provide off-street parking and would rely on the public parking spaces currently available at the Waterfront. Kittelson conservatively estimated the peak parking demand for these uses using the ITE Parking Generation, 6th Edition. It is estimated during the weekday peak hour the demand would be 461 spaces and during the weekend peak hour demand would be 450 spaces. Different land-uses have varying parking demand across the day. Kittelson utilized the Urban Land Institute (ULI) Shared Parking model, 3rd edition, to estimate the time-of-day rates for each future use. Table 11 presents weekday and weekend parking demand calculations for uses that will rely on public parking spaces.

Table 11: Weekday and Weekend Parking Demand



Location	Description	ITE Land Use Code	Weekday Average Rate	Weekend Average Rate	Weekday Peak Parking Demand	Weekend Peak Parking Demand
X2	Recreation/F&B Complex[1]	Food Hall (928) & Recreational Community Center (495)	3.96	2.72	87	60
S1	Hana Japan & Sportsman's Center	Food Hall (928)	3.96	2.72	44	30
S4	Hs Lordship	Fine Dining Restaurant (931)	16.18	18.23	239	270
S5	Aquatic Center / F&B Cal Adventure & Cal Sailing[1]	Food Hall (928) & Recreational Community Center (495)	3.96	2.72	25	17
X6	Old Ferry Dock F&B	Fine Dining Restaurant (931)	16.18	18.23	65	73
Total					461	450

Source: ITE Parking Generation Manual, 6th Edition
Note: [1]It assumes that only 40% of the GFA will be allocated for Food Hall (928) and the remaining 60% will be used for recreational purposes. F&B = food and beverage

The ULI Shared Parking model considers that while each land use generates demand for a certain number of parking spaces, these parking demands fluctuate hour-by-hour and day-by-day and shared parking between land uses can minimize the amount of space and resources devoted to parking.

Figure 9 shows the average weekday parking demand for existing in addition to the future uses by time of day. The "future uses" included in this figure include both ferry riders and the WSP High Redevelopment scenario. The peak demand is expected to be around 2 PM, with 1,131 parking spaces occupied (86% utilization), which remains below the 1,318 publicly available future parking spaces, excluding 76 Launch Ramp Paid parking spaces.

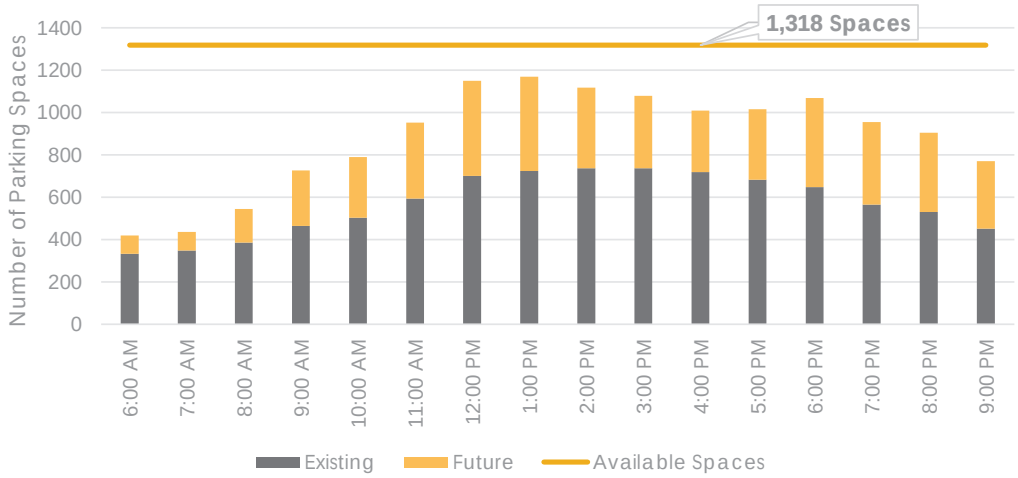


Figure 9: Weekday Parking Demand for Existing and Future Uses

Source: Kittelson & Associates, Inc. 2024

Figure 10 illustrates the average weekend parking demand for existing and future uses at the Waterfront, compared to the available parking spaces by time-of-day. The peak demand occurs around 1 PM, with 1,169 spaces utilized (89% utilization), which remains slightly below the total available spaces.

Figure 10: Weekend Parking Demand for Existing and Future Uses

Source: Kittelson & Associates, Inc. 2024

Based on the parking demand analysis, it can be concluded that the Waterfront will generally have sufficient parking spaces to accommodate the parking demand from future uses in the WSP. However, while the overall parking demand for the area can be met, there will be instances where individuals cannot park near their desired destinations, mainly during peak days and times. This could negatively impact the parking experience and cause frustration for some visitors. Implementing dynamic wayfinding and clear messaging strategies could help enhance the overall parking experience for visitors to the Berkeley Waterfront.

As noted earlier, AB 2097 prohibits public agencies from enforcing parking minimums for developments within ½ mile of a ferry terminal. However, the City can still require developers to implement Transportation Demand Management (TDM) strategies, such as providing bicycle parking, transit subsidies, or contributing to shuttle service programs. Developers must also submit a project-specific TDM plan that aligns with the City's monitoring and reporting requirements.[6]

TECHNICAL MEMORANDUM

February 28, 2025 Project# 19867.006

To: Liza McNulty, PE, Capital Improvement Program Manager
City of Berkeley Parks, Recreation & Waterfront (PRW) Department
2180 Milvia Street, 3rd Floor.
Berkeley, CA 94704

From: Kittelson & Associates, Inc.

CC: Ali Endress and Roger Miller

RE: Berkeley WTPF Baseline Parking Conditions

1.0 Background

The City of Berkeley (City) completed the feasibility study for the ferry facility at Berkeley Municipal Pier (Feasibility Study) in December 2021 and is now beginning detailed engineering and environmental studies for the Water Transportation Pier-Ferry (WTPF) Project. Kittelson & Associates, Inc. (Kittelson) is working with the City to develop a Parking and Transportation Demand Management (TDM) Plan that will support the proposed ferry service and future development at the Waterfront ("Parking and TDM Plan").

The purpose of this technical memorandum is to establish a baseline condition for the Parking and TDM Plan. The memorandum is organized into the following sections:

- Study Area
- Review of Existing Documents
  - Parking Issues and Needs
  - Past and Current Parking Management Solutions
  - Historic Parking Utilization
  - Ridership and Mode Share Estimates
- Case Study Interviews
- Staff Working Group Sessions
- Review of Parking Counts
  - Parking Inventory
  - Historical Count Data
  - All Day Count Data
- Intercept Survey
  - Survey Response Summary

2.0 Study Area

The study area (Berkeley Waterfront or Waterfront) is the area west of the McLaughlin Eastshore State Park, bordered by Spinnaker Way to the north and South Sailing Basin to the south, see **Figure 1**. University Avenue provides vehicle connection between the Waterfront, Downtown Berkeley and Highway 80.

AC Transit Bus Route 51B connects the Waterfront and Rockridge BART via College Avenue, Downtown Berkeley BART, and University Avenue. Only one out of every three scheduled bus trips between 7 am and 9 pm serves the Marina; all other trips terminate at the Berkeley Amtrak station, resulting in a frequency of two (2) buses every hour.

The San Francisco Bay Trail Extension provides bicycle and pedestrian access to the Waterfront from the intersection of University Avenue and Frontage Road. The bicycle and pedestrian bridge across I-80 connects the Waterfront with the City of Berkeley. Additionally, the Virginia Street Right-of-Way (a dirt pathway) offers another bike and pedestrian connection.

The Study Area is entirely public tidelands held in trust by the City. There are over 100 acres of uplands and 5 miles of pedestrian trails within the Waterfront. Centered within this landscape is the Berkeley Marina, the largest public marina in the San Francisco Bay with 1,000 boat slips. The Berkeley Waterfront also includes three public access docks, a boat launch ramp, and 11 parking lots.

Current businesses and attractions include 1 hotel, 4 restaurants, 1 boatyard, a yacht club, two non-profit sailing clubs, a nature center, a two-story office building (commercially leased), and 9 restroom buildings, as shown in **Figure 2**.

LEGEND

Source: City of Berkeley, MTC

KITTELSON & ASSOCIATES

Figure 2: Existing Businesses and Landmarks

Source: Draft Waterfront Specific Plan, 2023

The proposed ferry terminal at the Waterfront will be located at the Berkeley Pier, which will be reconstructed to provide dual ferry and recreation access. The study focuses on the following nine (9) public parking lots and three (3) on-street parking facilities. Private, paid and slipholder only parking lots (Boat Launch Stalls – Paid, Doubletree Stalls – Private/Paid, and Berkeley Marine Center) were not included in the analysis, as it is assumed that ferry riders will not use these locations for parking.

- **Public parking lots**
  - Spinnaker Way Lot
  - J&K Lot
  - L&M Lot
  - South Cove East/West Lot
  - Seawall Drive Lot
  - Skates/N Lot
  - O Lot

- **On-street parking facilities**
  - Spinnaker Way
  - Marina Blvd
  - University Ave Shoulder (at West Frontage Rd)
  - Seawall Drive North/South

- **Slipholder Permit Lots**
  - D&E Lot
  - F&G Lot
  - H&I Lot

Potential future redevelopment is limited to the existing developed land at the Waterfront comprised of leased land and surface parking lots Future redevelopment at the Waterfront over the next several decades may bring in more visitors and hence, an increase in the need for parking and TDM.

3.0 Review of Existing Documents

The following relevant documents and programs were reviewed for this task:

- Berkeley Marina Ferry Parking & Transportation Demand Management Strategy (Appendix D), Nelson Nygaard, October 2021
    - Appendix A: Revised Short-Term Recommendations for Parking Management, December 2018
- WETA Berkeley Ferry Service, Business Plan Version 1.0, March 2022
    - The Business Plan is intended to be a "living" document that will be updated as needed to respond to new information, new data, and emerging ideas.
- Parking and Mobility Framework, Draft, Berkeley Marina Area Specific Plan, January 2022
- Draft Waterfront Specific Plan, November 2, 2023
- Traffic Assessment of University Avenue Concept Study, December 2017

The following relevant topics were summarized for each document.

- Parking issues and needs
- Past and current parking management solutions
- Historic parking utilization
- Ridership and mode share estimates

3.1 PARKING ISSUES AND NEEDS

The 2021 Berkeley Marina Ferry Parking & TDM Strategy was developed as part of the Feasibility Study to support the needs of future ferry riders travelling to and from the Waterfront. The study analyzed existing conditions and transportation facilities near the proposed ferry terminal location, and was based largely on the 2018 Short-Term Recommendations for Waterfront Parking Management (Appendix of the Feasibility Study). The following parking issues were highlighted in the 2018 Report:

- **Small Scale Ferry Service:** Small scale ferry service was initiated in 2017 by two independent providers (Tideline and Prop SF). Small scale ferry service increased the demand for all-day parking at the Waterfront, particularly surrounding K-Dock, where ferries depart. It should be noted that both of these services were suspended in 2020 during the COVID pandemic.

- **Overcrowding at South Cove lots due to mixed uses/user groups.** The South Cove lots have multiple users that come to the Waterfront at similar or overlapping times, resulting in peak periods in which the lots are full. Users of South Cove include public access for water activities, Cal Sailing and Cal Adventures, Adventure Playground patrons, small scale ferry passengers, charter boat customers, Hana Japan and Bait Shop customers, and employees who work on the Waterfront.

- **All-day visitors (charter and ferry customers) occupy parking spaces for relatively long periods of time.** Ferry and charter boat customers tend to arrive early and utilize the highest demand spots closest to K-Dock. Their vehicles remain in the prime spots in excess of eight hours per day and leave no room for turnover. This creates an issue for those making shorter trips to the South Cove for sailing and boating (Cal Sailing/Cal Adventures), Adventure Playground, Nature Center, Summer Camp drop off, and customers of the marina office, Berkeley Sportsman's Center, and the 125-127 University Avenue office buildings. Many small-scale ferry and charter boat customers show a preference for the newly paved South Cove East Lot over the unpaved South Cove West Lot, in addition to J&K and M Lots. Ferry customers have not heeded recent [2018] City signage (placed on South Cove, J&K, and M Lots) to park on Marina Boulevard instead.

- **Locations needed for watersports community to park.** Many recreational watersports activities (such as windsurfing and winger watersports) require the use of the new green turf area on the northern edge of the South Cove East lot to prepare and rig their large equipment, the adjacent parking stalls (for convenient loading and unloading), and the adjacent wide path of travel (to access the launching docks in the South Sailing Basin). The parking spaces adjacent to the turf are also desirable for small scale ferry and charter customers because of their proximity to K-Dock and attractive appearance. Over the summer, some windsurfers reported that they were unable to find parking next to the turf on weekday afternoons. Several complaints by windsurfers seeking safe and convenient access to the rigging area from their vehicles were filed with PRW Staff in the months of June, July, and August of 2018. A-Frame signs placed in August 2018, were moderately effective at reserving the parking stalls adjacent to the turf for watersports users.

- **Importance of maintaining adequate slipholder parking close to docks.** Every dock at the Marina has a nearby shared parking lot. Some shared lots fill with the vehicles of other park users, limiting access for slipholders at peak times.

- **Importance of maintaining parking for Hana Japan customers in lot.** Hana Japan is only open for dinner when other Waterfront users tend to be leaving. However, in the summer, parking for Hana Japan customers often overflows to the unlit South Cove lots across University Avenue.

This 2024 Parking and TDM Plan will be reviewing and updating this information based on the changes that occurred during the past few years, in particular changes to parking management activities by the City and post COVID cuts to small scale ferry service.

3.2 PAST AND CURRENT PARKING MANAGEMENT SOLUTIONS

Since at least 2016, parking management at the Waterfront has been an evolving and dynamic effort, with the City implementing various lot-specific parking management strategies. This includes various pilot programs, some of which have been abandoned and others expanded based on their efficacy and public feedback. This section describes the parking management strategies that have previously been implemented or are currently in effect.

Slipholder Permit Program: This program became effective on June 4, 2018, for the three northern slipholder lots (D&E, F&G, H&I Lots).[1] The Program prohibits unpermitted overnight parking (12 am – 10 am). For slipholders at those locations, hangtag overnight permits are distributed by Marina staff, and guest permits are granted upon request. Waterfront staff have issued citations to vehicles parked overnight without a permit, or without payment in the Boat Launch Ramp lot. This Program was subsequently expanded to J&K lot and Skates/N Lot. A similar version of this program was implemented in L&M and O Lots, as a mix of public parking/slipholder only parking depending on time of day and day of week. Since the implementation of this permit program, vehicle counts in north facilities have indicated[2]:

- a 60% reduction of unpermitted parked vehicles.
- a reduction of total cars parked by up to 20%.

Time Limited Parking: In 2018, the City introduced time limited (i.e. maximum allowable parking duration) parking in J&K lot for 5 hours between 8 am and 8 pm. This was to ensure that the visitors to Hana Japan have spaces available and are not affected by all day parkers. This system was subsequently replaced with the Slipholder Permit Program described above. Throughout the Waterfront, virtually all public parking areas (streets and lots) have a maximum 72-hour parking limit (per Berkeley Municipal Code).

Gate Control: The Waterfront staff manage the opening and closing of gates at South Cove East and Seawall Drive as necessary, especially during peak summer months to prevent overnight parking.

Paid parking: There is a gate controlled paid parking at the Boat Launch ramp lot on the northern side of the Waterfront, charging $15 per entry for 76 paid stalls. On the northern side of this lot, referred to as the Spinnaker Way lot, there are 36 free public stalls used primarily by visitors to Cesar Chavez Park. DoubleTree Hotel provides parking for $8/hour or $40/day for its 408 spots.

A summary of the existing parking rules currently enforced at the Waterfront is provided in **Appendix A**.

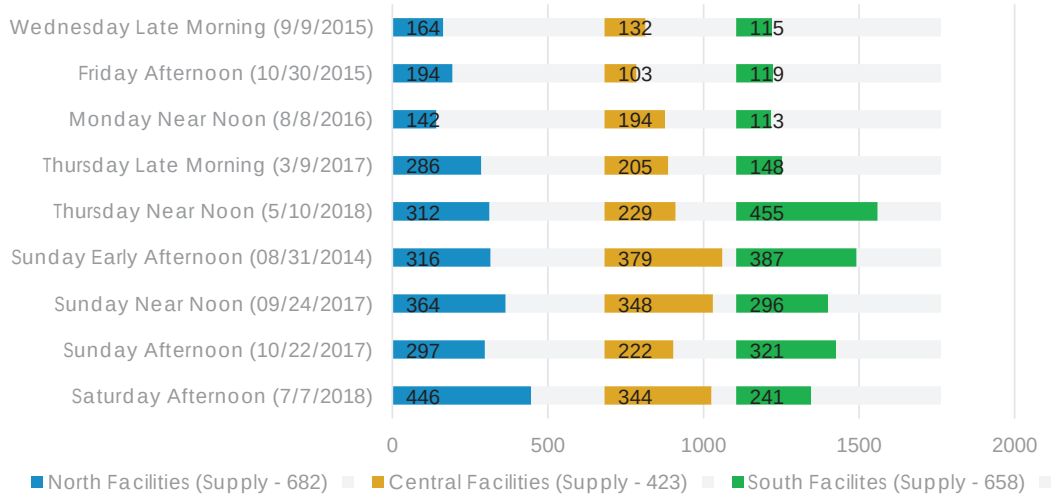
3.3 HISTORIC PARKING UTILIZATION

The parking utilization summary below and in Figure 3 is based on analysis conducted during the Feasibility Study, which used aerial parking utilization counts taken on several days between 2014 and 2018. **Figure 3** shows the specific days on which car counts were conducted for this analysis. The lots were divided into three subareas based on the geographic location of each facility.

- **Central Facilities** consist of L&M lot, J&K lot, South Cove West, South Cove East, and the "Small Boat Launch". The 10 parking spaces in the small boat launch ramp area were permanently removed in 2020 to make way for improvements to the Bay Trail Extension and access road. During the peak parking demand periods, the J&K Lot and L&M Lot, experienced as much as 89% and 93%

[1] *The Parking Permit Program does not apply to the paid launch ramp lot.*

[2] *Nelson\Nygaard. Revised Short-Term Recommendations for Waterfront Parking Management, 2018*



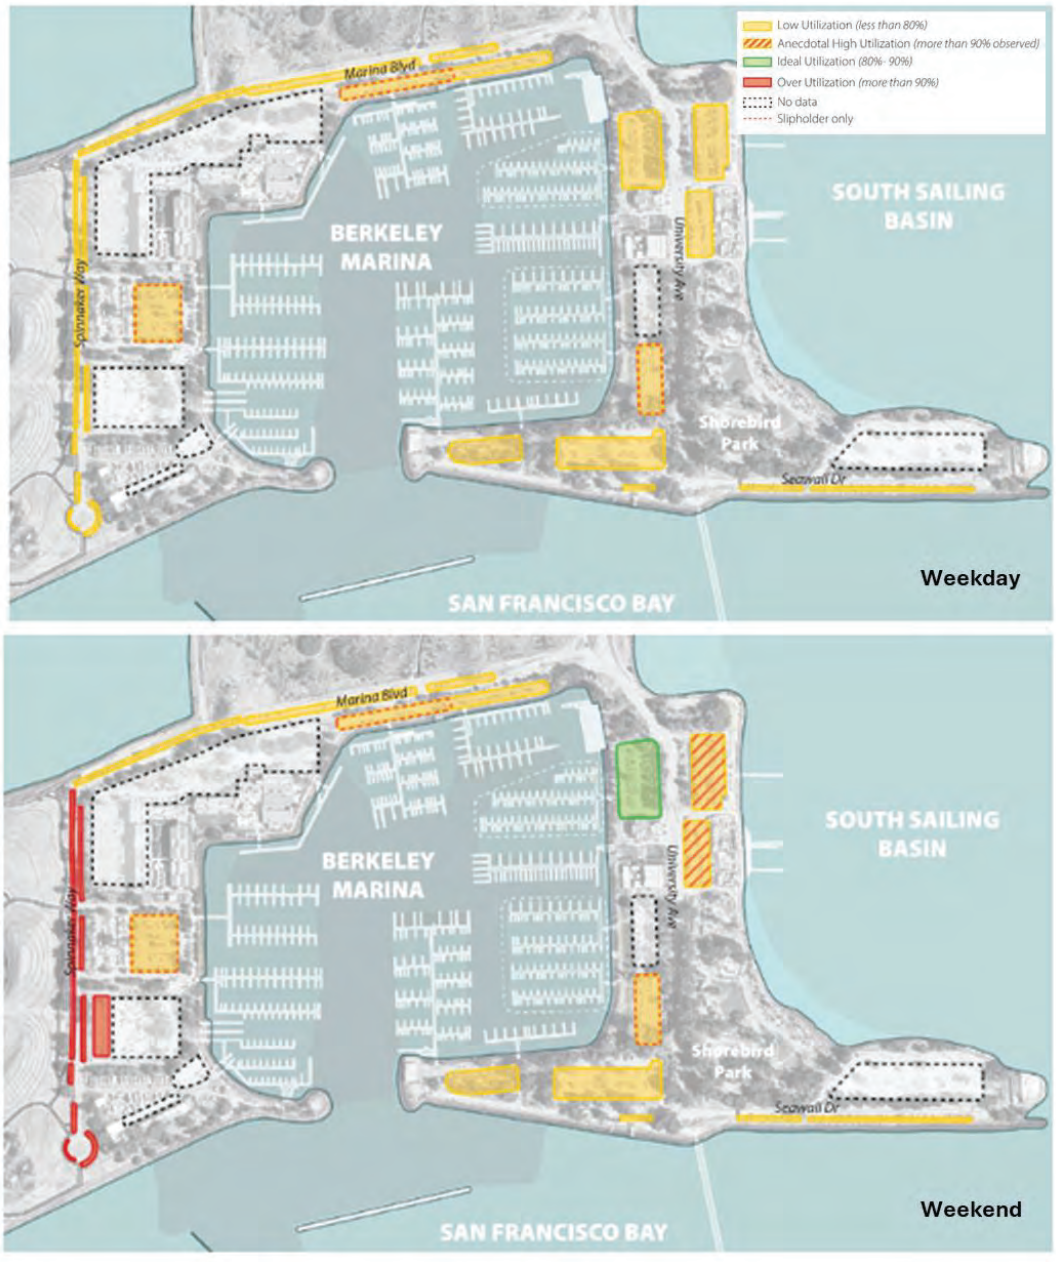
occupancy, respectively. Overall, the Central Facilities experienced 81% occupancy on Saturday afternoon and 90% occupancy on Sunday afternoon during the peak July-August parking periods.

- **South Facilities** consists of Skates/N Lot, O Lot, 199 Seawall Drive Lot, and Seawall Drive. The peak parking period for south facilities was Thursday afternoon with 69% occupancy.

- **North Facilities** consists of D&E Lot, F&G Lot, H&I Lot, Marina Blvd, the Boat Launch Ramp, Spinnaker Circle, and Spinnaker Way. Spinnaker Way had 97% occupancy during the Saturday afternoon surveyed. In aggregate, the parking lot facilities in the north observed the highest demand during Saturday afternoon with 65% occupancy.

Figure 3 shows parking utilization by facilities and time of day.

Figure 3: Parking Utilization by Facilities by Time of Day (2015 – 2018)



Source: Nelson\Nygaard. 2018. Berkeley Waterfront Parking Study. Appendix A

The data includes private lots such as the Marine Center Leased Lot, DoubleTree Leased Lot, Berkeley Police Department Leased Lot, and Berkeley City Vehicle Parking Lot, which results in the parking supply being 1,763 spaces higher than the public lots (1,566) analyzed in this report.

Figure 4 shows average weekday and weekend parking utilization based on the data collected for the Draft Waterfront Specific Plan in 2022-2023. During the weekend, the parking utilization was higher in the northern facilities – Spinnaker Way on-street parking and Spinnaker Way Lot. The figure also shows high utilization at South Cove lots during the weekend based on anecdotal information, including feedback provided from City staff and community members.

Figure 4: Average Weekday and Weekend Parking Demand (Draft Waterfront Specific Plan)

Source: Draft Waterfront Specific Plan, October 2023

3.4 RIDERSHIP AND MODE SHARE ESTIMATES

The proposed ferry terminal at the Waterfront will be located at the Berkeley Pier, which will be reconstructed to provide dual ferry and recreation access WETA estimates a total of 1,830 average weekday boardings. Conservatively, this would result in 915 riders boarding at the Berkeley Terminal, assuming all riders are round-trip traveling between Berkeley and San Francisco and originating in Berkeley. It is projected that the average weekday boardings would reach 2,110 by 2040.

The Feasibility Study and WETA Business Service Plan separately estimated the travel mode share of future ferry riders, as shown in **Table 1**. The Feasibility Study estimated that 54% of the ferry riders will drive alone and 9% will carpool to the Ferry Terminal. The remaining ferry riders will arrive by bicycle, ride-share, public transit or other modes of transportation that would not require a vehicle parking space. WETA Berkeley Ferry Service Business Plan estimates that only 31% will be driving alone and 15% will be carpooling to the Ferry Terminal.

Kittelson reviewed updated on-board survey data from WETA, which included surveys conducted in 2022. Using the WETA Business Plan methodology, Kittelson estimated the mode share based on the new data. The results estimate that 44% of trips were drive-alone, which is higher than the WETA business plan estimate. The 2022 estimates also estimate lower shares for walking (4%) and biking (11%). Public transit mode share was estimated at 2%, which could be largely attributed to pandemic conditions, as people were avoiding public transportation.

Comparing the three sources of data, Kittelson has recommended a baseline (i.e. pre-TDM implementation) mode-share that reflects the local context and our understanding of the existing travel patterns at Berkeley Waterfront. The baseline mode share, shown in bold in Table 1 below, represents the assumed mode share before implementation of new TDM strategies at the Waterfront. TDM strategies that further reduce the parking demand for Ferry Riders are in development.

Table 1: Mode Share Summary for Ferry Riders

Source	Drive Alone	Carpool	Kiss-and-Ride	Public Transit	Bike	Walk Only	TNC/ Taxi	Other[1]
WETA Business Plan, 2017-2019	31%	15%	15%	5%	16%	8%	8%	2%
Feasibility Study (Baseline)	54%	9%	8%	4%	18%	3%	3%	1%

4.0 Case Study Interviews

Kittelson conducted three case study interviews with agency staff who were either involved in implementing parking and transportation demand management strategies or are familiar with the parking management at the selected locations. The details of the interviews and key takeaways are presented in this section.

4.1 ALAMEDA HARBOR BAY FERRY PAID PARKING APPROACHES

- **Interview date**: August 8th, 2024
- **Participants**: Lisa Foster, Acting Transportation Planning Manager, City of Alameda

In an attempt to prevent spillover parking from the adjacent Harbor Bay Ferry Terminal, three home owners associations (HOAs) in the City of Alameda were given the authority to issue free residential parking permits to residents. The permits went into effect in 2017 with limited public oversight and subsequent turnover of City staff, and there is limited knowledge on the success of the program. As of now, the City of Alameda suspects that the HOAs are no longer issuing new permits for the permitted parking zones. Signs indicating the permit only parking restrictions are still present in the neighborhood, but it is unclear if enforcement is active.

In the meantime, the City moved forward with its own paid parking program to manage demand for parking at the Harbor Bay and Seaplane Lagoon ferry terminals. This plan was approved by the Alameda City Council prior to the pandemic, and was reauthorized in both 2022 and 2023.

The City of Alameda's ferry terminal management strategies offer important lessons for the parking management at the Berkeley Waterfront, including that:

- Paid parking may be most easily implemented at ferry terminals if introduced at the inception of a new service, or if there is regularly high occupancy at terminal parking lots.
    - The City of Alameda intended to introduce paid parking at the opening of the Seaplane Lagoon Ferry Terminal, but delayed due to the pandemic. The City is now in their third year of trying to implement paid parking at that location.
- The City of Alameda is partially reinvesting paid parking revenue to enhance security at parking lots. This serves to ease riders' concerns over theft and vandalism, as well as to ease public acceptance of new parking fees.
- Coordinating public bus or shuttle service can be difficult due to the relative infrequency of both ferry services and of bus routes that serve waterfront areas. AC Transit discontinued a shuttle service to the Seaplane Lagoon Ferry Terminal after low ridership and AC Transit Route 21 receives low ridership to the Harbor Bay Ferry Terminal.

4.2 BERRYESSA BART URBAN VILLAGE PLAN

- **Interview date**: August 16th, 2024
- **Participants**:
  - Jessie O'Malley Solis, Director of Real Estate and Transit Oriented Development, VTA
  - Charla Gomez, Planning Project Manager, City of San Jose
  - Wilson Tam, Transportation Planning Manager, City of San Jose

In 2021, the City of San Jose approved the Berryessa BART Urban Village Plan (UVP), which established guidance for mixed-use development around the newly opened Berryessa BART Station. One of the plan's main objectives is to enable high-density residential and commercial development around the station without overwhelming the project site with parking facilities which would diminish the urban character of the new development. The UVP's main goal is to plan for density around the BART station, and all of its parking recommendations are designed to support that goal.

The UVP's binding recommendations include the formation of a transportation management authority (TMA) to oversee parking and TDM policy in the new developments. The UVP also dovetails with a city-wide parking reform process that eliminated mandatory parking minimums[3] and established TDM incentives for new development.

Key takeaways for the Berkeley Waterfront include:

- The Berryessa BART UVP's progressive parking policy recommendations were supported by ongoing citywide planning initiatives.
  - If the UVP's parking recommendations had been a standalone deviation from San Jose's parking guidelines, they would have been more difficult to adopt.
  - The City of Berkeley should consider how the introduction of mass transit service to the Waterfront interacts with the city's recent and ongoing land use and TDM planning processes, including the city's VMT criteria and thresholds.[4]
- Publicly owned land can provide important opportunities for setting the tone for new development.
  - The UVP was developed for land owned by VTA, which enabled more restrictive criteria for developments than if the land had been privately owned.
  - The City of Berkeley can capitalize on its public property at the Waterfront to ensure that any new development or transportation investments meet rigorous standards for sustainability and equity goals.

[3] Since 1965, the City of San Jose's municipal zone code required new develops to build a minimum number of parking spaces based on size and land use type. With its 2022 parking reform, San Jose became the largest US city to eliminate parking minimums.
[4] City of Berkeley, *VMT Criteria and Thresholds*. 2020.

4.3 EMERY GO-ROUND

- **Interview date**: August 21st, 2024
- **Participants**:
    - Daniel Olver, Executive Director, AlTrans
    - Wendy Silvani, Principal, Silvani Transportation Consulting

The City of Emeryville has been running free public shuttle service since the 1990s to connect the city to MacArthur BART Station in Oakland. At first the service was funded by a few major employers, but eventually transitioned to a property-based improvement district (PBID) funding model, where all Emeryville residents contribute based on their property tax assessments. Today, 80% of Emery Go-Round's funding comes from the PBID, 11% from the City's budget, and the rest from state and federal grants.

Emery Go-Round consists of two routes that provide local service across Emeryville and provide more bus to rail transfers at MacArthur BART than AC Transit does. However, Emery Go-Round ridership is still recovering from the pandemic, when it lost 90% of its ridership in one year. As of May 2024, Emery Go-Round had recovered to just 40% of its 2019 weekday ridership, but was up to 80% of its weekend ridership.

Key takeaways for the Berkeley Waterfront include:

- Successful shuttle services tend to rely on robust private sector financing from major employers or commercial destinations. However, once established, funding for shuttles can be transitioned into public control using mechanisms like PBIDs.
    - Shuttle service to the Berkeley Waterfront would likely need to be subsidized by major private sector institutions in either Berkeley and/or in San Francisco. The current commercial activity at the Waterfront is not likely able to support a shuttle service on its own.
- Shuttle services tend to rely primarily on commute trips, which can be carefully coordinated around timetables at rail stations or ferry terminals, but are easily disrupted by changes to employment markets and commute travel patterns.

5.0 Staff Working Group Sessions

Kittelson met with the City and Waterfront staff on May 23, 2024, to discuss the vehicle parking issues and challenges at the Waterfront. Some of the key themes from this discussion are listed below:

Parking Management

- High tides and holidays affect parking lot usage as high tides attract regular sailors and holidays attract a surge of recreational users. Nature Center and Adventure Playground are closed on City holidays.
- Waterfront Monitors play a key role in managing parking and vehicle circulation during peak times.
- Slipholder lots (e.g., M) require overnight permits, but illegal parking is common during peak times.
- There is a need for wayfinding signage to help users access the lots that are underused. The University Roundabout was identified as a potential site for decision-making and parking.
- There is a need for designated passenger drop-off and pick-up and loading and unloading zones.
- Challenges with managing large groups and bus parking on weekends. Tour buses sometimes park without a permit at the Marina Boulevard lot.

Major Destinations

- Seawall Drive View, Restaurants (Hana Japan and Skates on the Bay), Cal Sailing Club and Cesar Chavez Park are major destinations.
- Adventure Playground is popular for birthday parties and there is a need for nearby parking and loading zones to accommodate pick-ups and drop-offs.
- Cal Sailing Open House introduces many new visitors, in particular UC Berkeley students, to the Berkeley Waterfront and generates a lot of visitors (many hundreds) on event days, which occur about 10 times per year.
- Roaming Bean Coffee primarily serves existing users.
- Fishing pier used to attract large number of visitors before it closed down.

Other Modes of Transportation

- There is a need for more bike parking spaces and enhanced wayfinding signage throughout the Waterfront and especially near recreational activities.
- Inner Harbor Walkway and other areas are used for biking.
- AC Transit Bus Route 51B is popular among the UC Berkeley Students and provides students and other visitors without cars a transportation option to the Waterfront.

Upcoming projects

- Projects include South Cove West Parking Lot, Cesar Chavez Perimeter Path and restroom, restrooms upgrades, replacing D&E dock and Harbor Entrance dredging.
- Identifying a new leaseholder for the former HS Lordship building at 199 Seawall Drive is a high priority.

Potential Solutions Brainstorm

- Charging for parking should be considered though it may not be a popular option for Waterfront visitors or businesses.

- Valet parking should only be considered if it is self-sustaining and does not require ongoing funding.
- Gated parking should be self-regulated, and the exit must be secured.
- Consider shuttle to offsite parking, e.g., at Golden Gate fields and other major destinations (Amtrak and Fourth Street).

Other Considerations

- Car break-ins have been an ongoing issue - the police department's presence has reduced criminal activity at the Waterfront.
- Camera surveillance and lift gates would enhance security.
- Integrate public art and placemaking along Seawall Drive promenade.
- Non-residents contribute significantly to the Waterfront revenue.
- Dry storage at D&E Lot generates revenue, however, there may be other uses that provide greater benefit.
- Install additional electric vehicle charging stalls.

6.0 Review of Parking Counts

The parking demand at the Waterfront is inherently variable and influenced by a range of environmental, seasonal, and human factors. For instance, on sunny days, the area is likely to experience a surge in visitors, including beachgoers, sailors, and recreational users, all of whom contribute to increased parking demand. Conversely, cloudy or rainy days can lead to a significant drop in visitors, reducing the need for parking.

Additionally, peak recreational use is closely linked to natural conditions such as tides, winds, and surfing seasons. For surfers, optimal conditions may not always align with predictable weather patterns or typical peak hours, leading to fluctuating demand that can be difficult to anticipate. Similarly, other water-based activities, like boating or fishing, can see spikes in participation based on favorable weather and tide conditions.

Given these dynamics, conducting a comprehensive parking study that accurately accounts for all these variables is challenging. Normal parking evaluation methodology relies on typical conditions and average usage rates, and will likely not completely capture the complexities introduced by fluctuating weather and seasonal recreational patterns. While this document can provide a baseline understanding, it has its limitation to predict demand with precision due to the highly variable nature of Waterfront use driven by weather and natural conditions.

Kittelson reviewed parking counts from two data sources — Historical Count Data from May 2021 to February 2024 and All-Day Counts collected for five days in 2024.

Historical Count Data: The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time to better support parking management objectives. Kittelson reviewed data from 2021 to

2024. During data processing, some lots had to be merged for various reasons, such as a lack of physical boundaries between them or combined data reporting for adjacent lots. The lots that were merged are:

- F&G and H&I Lots
- South Cove East and South Cove West Lots

Limitations: The data may not reflect peak utilization which could occur outside of the hours of 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points,

All-Day Count Data: Kittelson in partnership with Quality Counts (QC) collected hourly parking counts between 5:30 am and 9:30 pm on Saturday, and 8 am to 10 pm on Thursdays on the following dates:

- Saturday, April 6
- Thursday, April 11
- Thursday, August 1
- Thursday, August 22
- Saturday, August 24

The counts were collected using go-pro dash cams while slowly driving through all parking lots once per hour during the count period. Post-processing involves reviewing the GoPro footage and recording each vehicle parked. QC recorded the partial license plate, make, model, and color to demarcate specific individual vehicles and the time a vehicle remained in parking stall.

Limitations: The data was collected on typical Thursdays and Saturdays with pleasant weather, chosen to reflect peak Waterfront activity while avoiding any events that might skew the results.

Additionally, Kittelson with the help of Waterfront monitors conducted parking intercept surveys to understand the trip purpose and travel behavior of the visitors. More information on Parking Intercept surveys is presented in the next section.

The following section summarizes key findings from the data analysis.

6.1 PARKING INVENTORY

Based on a field survey conducted in 2024 and validated by City staff, there are 1,566 public free vehicle parking spaces throughout the Waterfront. The survey was necessary due to the presence of unstriped parking lots, making it challenging to accurately determine the number of spaces. **Table 2** presents the parking inventory (number of vehicle spaces) by lot. The inventory does not include the paid parking spaces available at the Boat Launch or Double Tree Hotel. A summary of the parking counts by location is provided in **Appendix A**.

Table 2: Parking Inventory

Lot Location	Number of Spaces	Type	Surface Type
North Facilities			
Marina Blvd	150	Unstriped	Unpaved

Total Public Parking Spaces	**1,566**		

Source: Kittelson & Associates, Inc.

6.1.1 Bicycle Parking Inventory

There are 149 short-term bicycle parking spaces located in racks across the site and 10 BikeLink lockers for secure bike storage located near the Bait Shop and Hana Japan. As shown in **Figure 5,** most of the bike parking is located near the major destinations near central and south vehicle parking facilities.

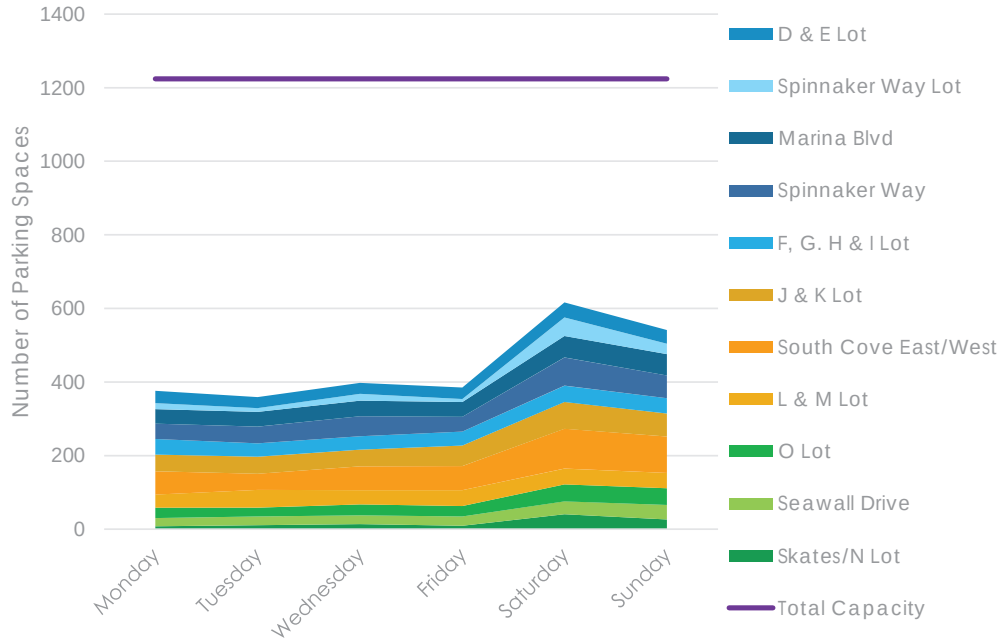
6.2 HISTORICAL COUNT DATA

6.2.1 Parking Utilization by Month

Figure 6 shows the average monthly parking utilization at the Waterfront. The highest utilization occurs during the late spring and summer seasons, with the peak occurring in June, where 36% (440) of the total public parking spaces were occupied. Overall, the total occupancy rate fluctuates between 26% (318) and 36% (440) over the two time periods of data collection.

Figure 6: Parking Utilization by Month (2021-2024)



Source: Daily Parking Counts by Waterfront Staff 2021-2024, Data Compiled by Kittelson & Associates, Inc. 2024

Note: Data does not include Seawall Drive Lot and University Avenue (320 + 25 parking spaces) in counts or capacity.

6.2.2 Parking Utilization by Day

Figure 7 depicts daily parking utilization by day at the Waterfront for the peak month of June. Utilization peaks on weekends, with Saturday experiencing up to 50% occupancy across the entire waterfront. Significant increases in weekend usage are observed in the Launch Ramp-Public, J&K Lot, South Cove East and West, O Lot, and Skates/N Lot, likely due to the increase in the number of water-based recreational and restaurant visitors.

6.3.4 Parking Availability on Weekends

As seen in **Figure 7**, the parking utilization during weekend is higher than weekdays. **Figure 9** shows the average parking occupancy on weekends during the month of June.

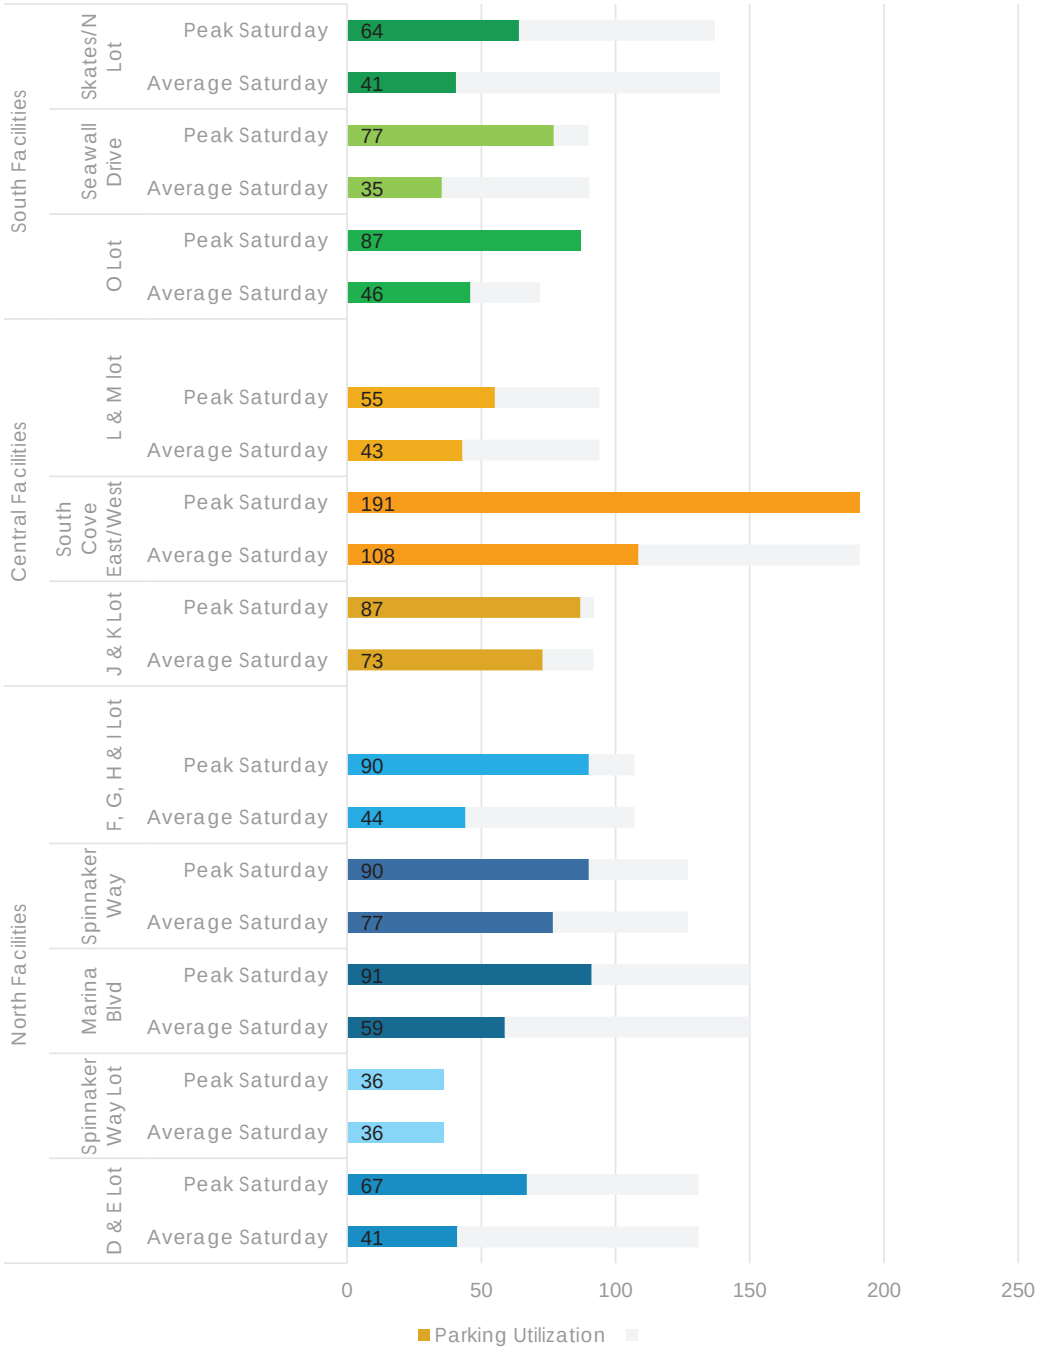

Figure 10 compares parking utilization on an average Saturday with that of the peak Saturday on April 1, 2023. The comparison reveals that certain lots had more than double the occupancy on the peak Saturday compared to an average Saturday. Nevertheless, even on the peak Saturday, overall Waterfront public parking was 75% occupied with 306 spaces remaining. During the peak Saturday, centrally located lots observed 82% occupancy, while South Cove East/West reached full occupancy at 100%.

Figure 10: Parking Utilization on Weekends (Average Saturday vs Peak Saturday)

Source: Parking Counts by Waterfront Staff, Data Compiled by Kittelson & Associates, Inc. 2024
Note: Data does not include Seawall Drive/ Shorebird Lot.

6.3.5 Parking Utilization at Seawall Drive Lot

The Seawall Drive Lot (also commonly known as the HS Lordship Lot) was analyzed separately as the data collection was conducted on fewer days than other lots due to lot closures for public safety. The Waterfront staff will open the gates to the parking lot only as needed, for example, during peak summer months and during camp drop off times. Based on the available parking counts, the lot was 21% (67 spaces of 318 available) occupied on an average Saturday.

Figure 11: Gates at Seawall Drive Lot

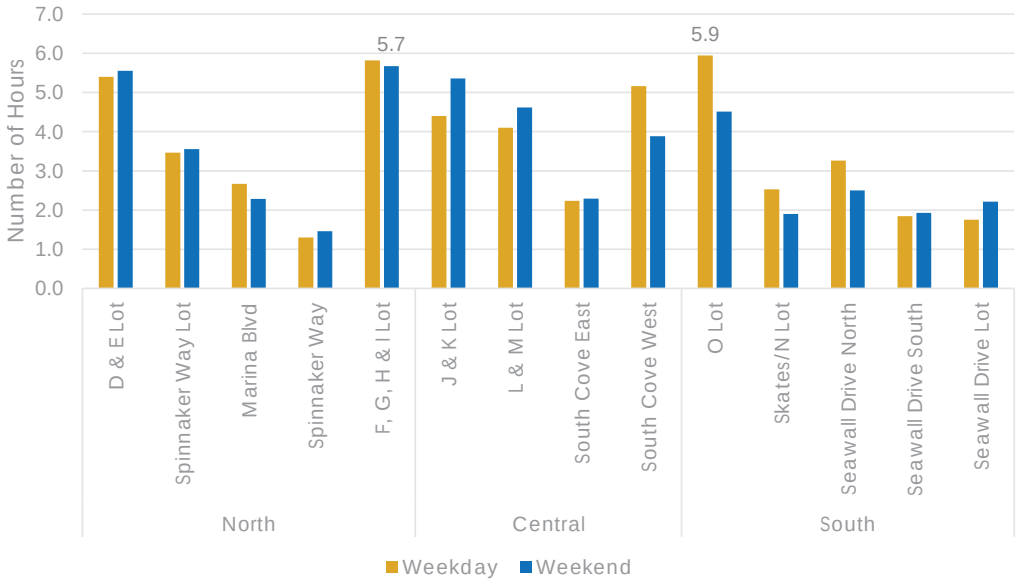
6.4 ALL DAY COUNT DATA

Quality Counts collected hourly parking counts on three weekdays and two weekends as mentioned in the introduction of this section. The hourly counts were collected to understand the parking turnover and duration at each public parking location.

6.4.1 Hourly Parking Demand

Figure 12 displays the number of parking spaces occupied at the Waterfront each day, The parking utilization is higher on weekends compared to weekdays, especially during midday hours (10 am – 2 pm). The peak usage occurred at 2 pm on weekends (48% occupied, 737 spaces) and weekdays (37% occupied, 573 spaces).

Figure 12: Parking Occupancy by Time of Day



Source: Kittelson & Associates, Inc. 2024

6.4.2 Parking Duration

Parking duration indicates the average time a car remains parked in a space. **Figure 13**, **Figure 14** and **Figure 15** shows the parking duration by lot for both days. On Thursday, the O Lot had the highest average parking duration at approximately 6 hours. Additionally, the D&E Lot, F, G, H & I Lot, J & K Lot and L&M Lot all recorded vehicles being parked for over 4 hours on both days.

6.4.3 Parking Turnover

Parking turnover refers to the number of parking spaces that either become occupied or vacated within a given period, reflecting the rate of use of a facility. For example, if two cars leave a parking lot and two new cars park in the same lot, the turnover value for that lot would be 4. **Figure 16** shows the total waterfront public parking turnover by time of day. The turnover is higher on Saturday as compared to Thursday and between 4 pm and 7 pm. On weekends, the highest turnover occurred at 6 pm with 28% (429 turnovers) of the total available spaces.

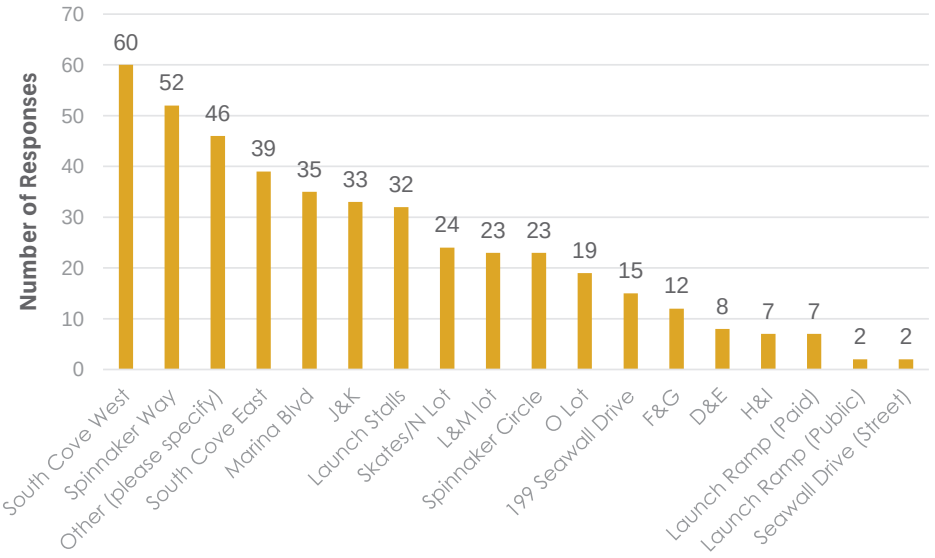
Figure 16: Parking Turnover by Time of Day

Source: Kittelson & Associates, Inc. 2024

7.0 Intercept Survey

To understand the trip purpose and parking habits of Waterfront visitors, Kittelson, with the help of Waterfront monitors, conducted parking intercept surveys on seven days between April and August 2024. The dates and times of the completed surveys are listed in **Table 3**. The surveys were administered in-person to gather firsthand insights into participants' parking concerns. Respondents were given the option to skip questions if they felt uncomfortable answering them. This section presents summary of the findings from the analysis of 455 responses. The survey questionnaire is included in **Appendix B**.

Table 3: Parking intercept survey dates



Survey No.	Survey Date	Survey Time
1	Saturday, April 6th	12:00 pm – 4:00 pm
2	Thursday, July 18th	3:30 pm – 7:30 pm
3	Thursday, August 1st	3:30 pm – 7:30 pm
4	Saturday, August 17th	12:00 pm – 4:00 pm
5	Thursday August 22nd	3:30pm – 7:30 pm
6	Saturday, August 22nd	12:00 pm – 4:00 pm
7	Tuesday, August 27th	3:30 pm – 7:30 pm

Source: Kittelson & Associates, Inc. 2024

7.1 SURVEY RESPONSE SUMMARY

Figure 17 shows the number of responses by lot names. The highest number of responses were received from the Northern facilities (41%), followed by Central facilities (35%).

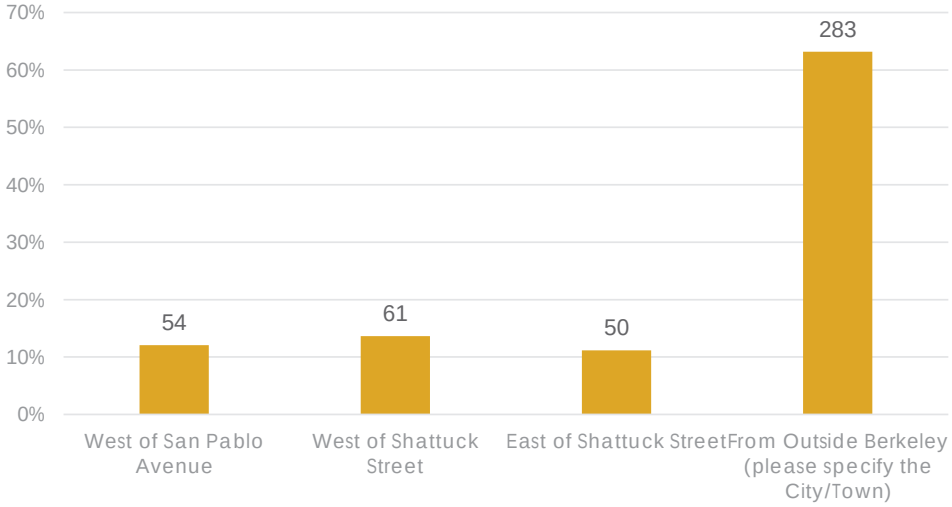


Figure 17: Parking lot location

Number of responses: 437
Source: Kittelson and Associates, Inc. 2024

Figure 18 shows the location of the respondent. Approximately 63% (283) of the respondents came from Outside of Berkeley which included visitors from Oakland, San Francisco, Emeryville and Walnut Creek.

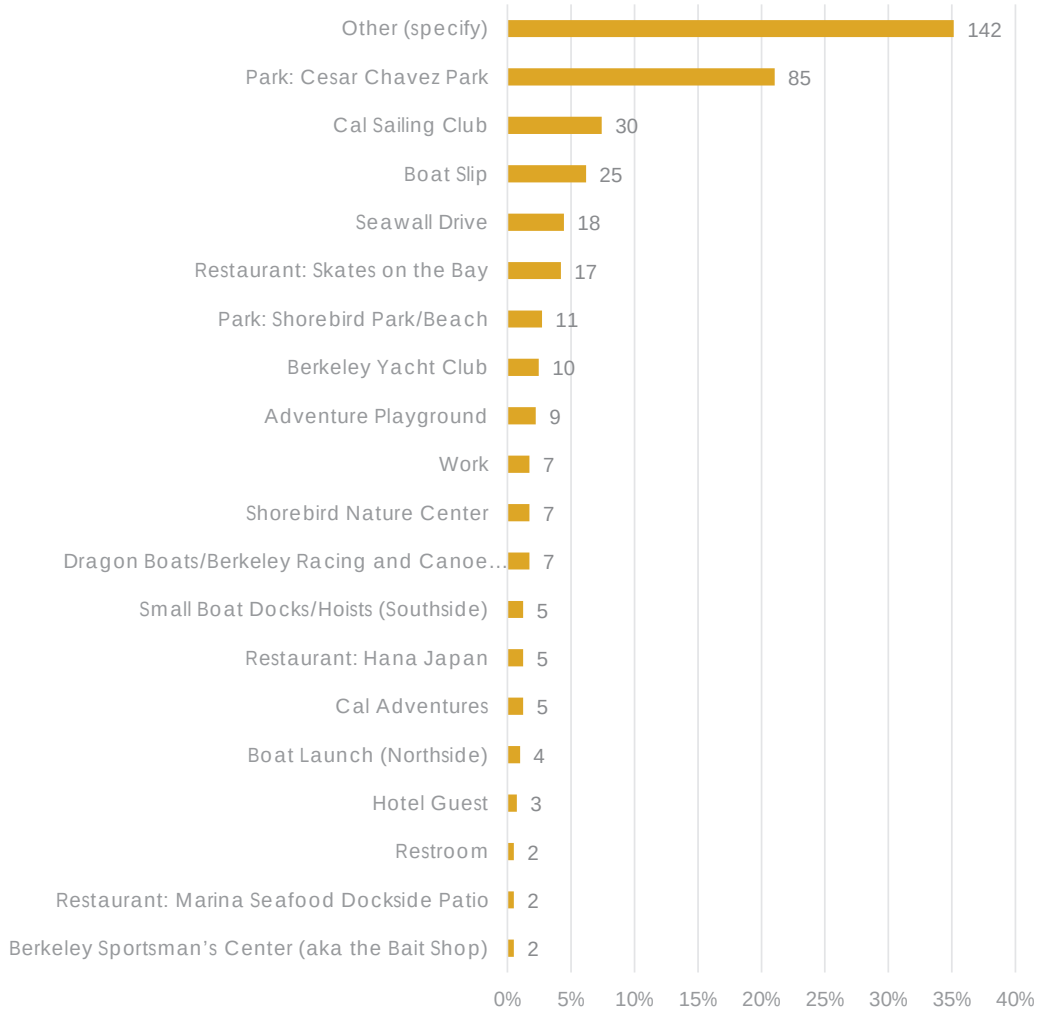

Figure 18: Where do you live?

Number of responses: 448
Source: Kittelson and Associates, Inc. 2024

The parking intercept survey reached a wide range of Berkeley Waterfront visitors, with the most popular visitor destinations including Cesar Chavez Park (21% of respondents), Cal Sailing Club (7%), and boat slips (6%), as shown in **Figure 19**. The rest of responses were scattered across a wide array of destinations, including specific institutions at the Waterfront.

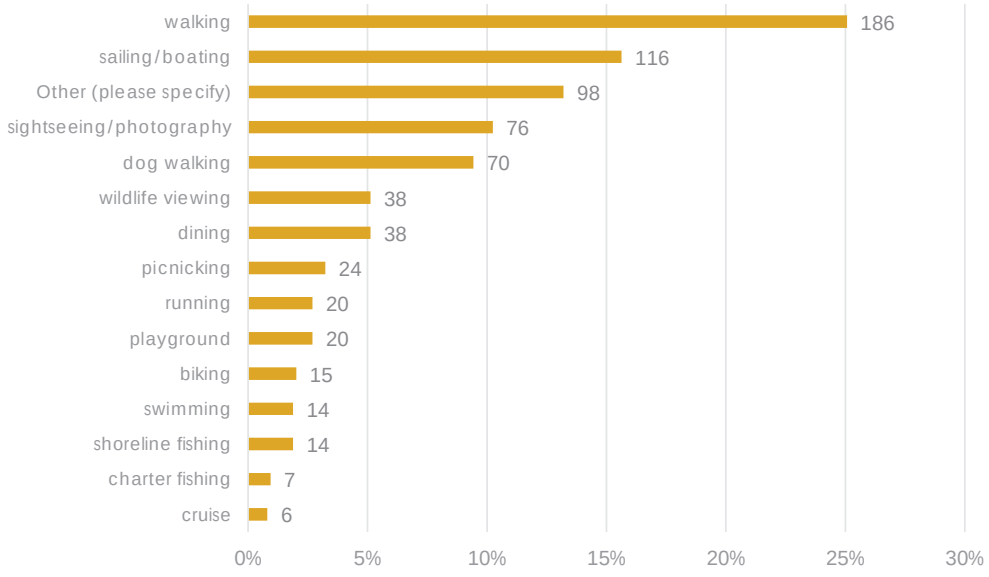

Figure 19: What is the name of the destination that you are visiting today?

Note: *38% of respondents listed a destination not included in the set list of options. Chart only includes destinations listed more than once. "Work" category includes: "deck hand, commercial fishing captain, hotel employee, etc."*
Number of responses: 404
Source: Kittelson and Associates, Inc. 2024

The most common activities were consolidated among outdoor recreation, including walking, sailing/boating, and sightseeing / photography, which together made up around 50% of responses, see **Figure 20**. However, respondents visited the Waterfront for a wide variety of reasons, with almost 100 noting that they made their trip for a reason other than options offered in the survey.

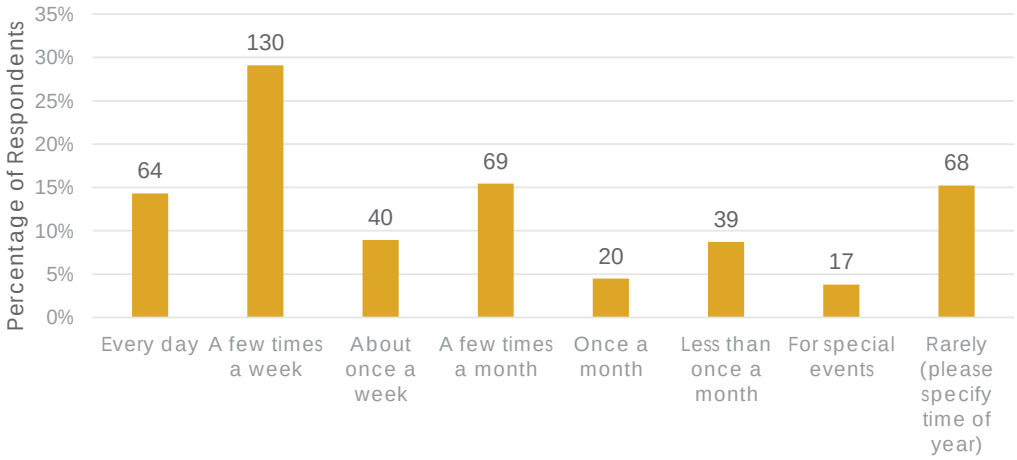

Figure 20: What brings you to the Waterfront?

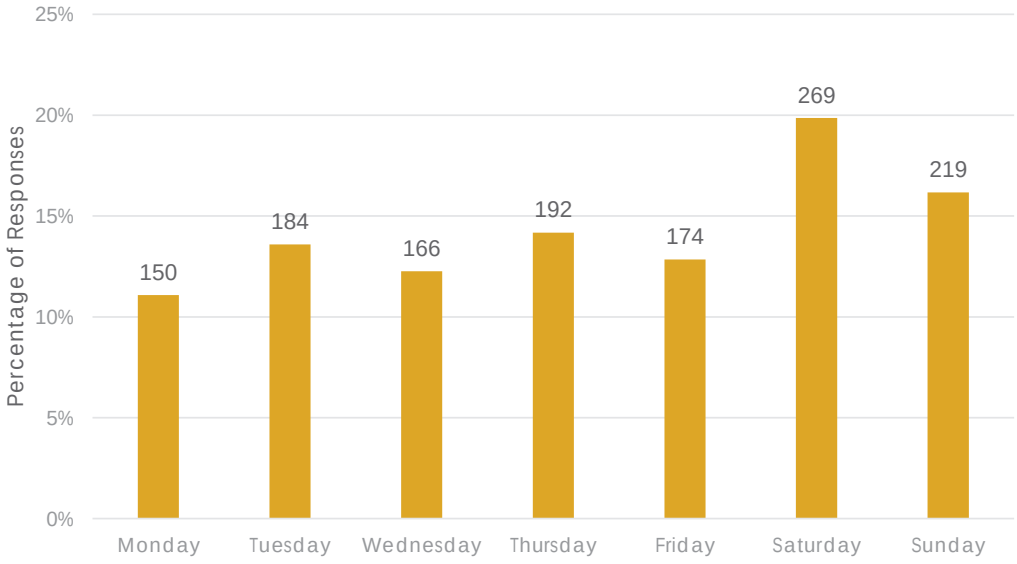
Number of responses: 742 (Respondents were allowed to select multiple options)
Source: Kittelson and Associates, Inc. 2024



Respondents tended to visit the Waterfront often, with over 50% noting that they visited at least once a week or more (**Figure 21)**, and with Saturday (approximately 20%) being the most visited day by the respondents (**Figure 22**).

Figure 21: How frequently do you visit the Waterfront?

Number of responses: 447
Source: Kittelson and Associates, Inc. 2024

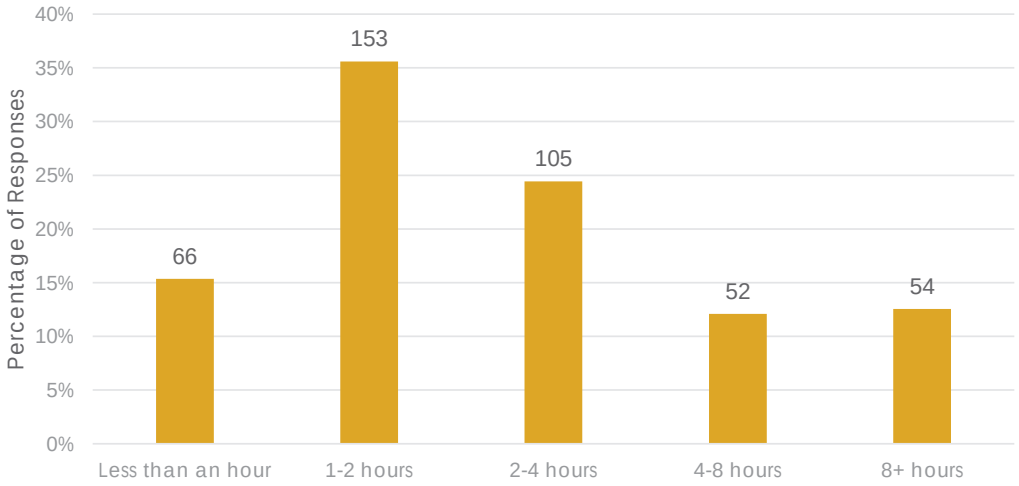


Figure 22: Typical days that you visit the Waterfront? (select all that apply)

Number of responses: 1,354 (Respondents were allowed to select multiple options).
Source: Kittelson and Associates, Inc. 2024

Figure 23 illustrates the duration of time respondents parked for their activities. The largest group (35%) parked for 1-2 hours, with 153 respondents. This is followed by 2-4 hours (24%), reported by 105 respondents.

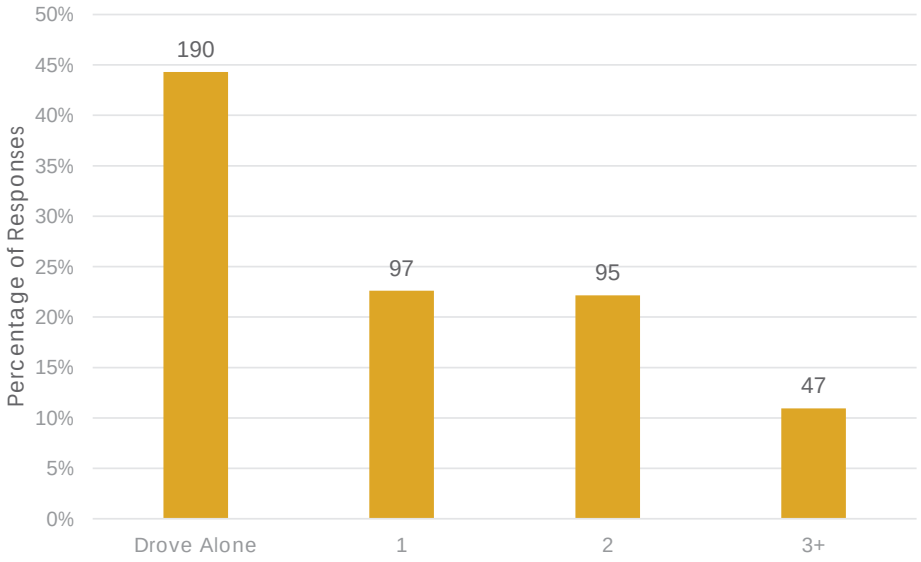

Figure 23: How long did you park for your activity today?

Number of responses: 430
Source: Kittelson and Associates, Inc. 2024

Respondents primarily drove alone to the Waterfront, with 44% stating that they had no other passengers in the vehicle, while 22% stated that they drove with one passenger (**Figure 24**).

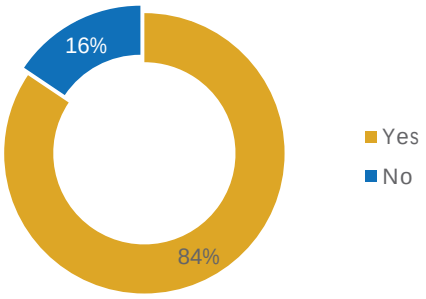

Figure 24: How many passengers other than you were there in your vehicle?

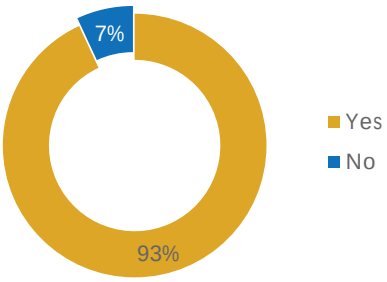
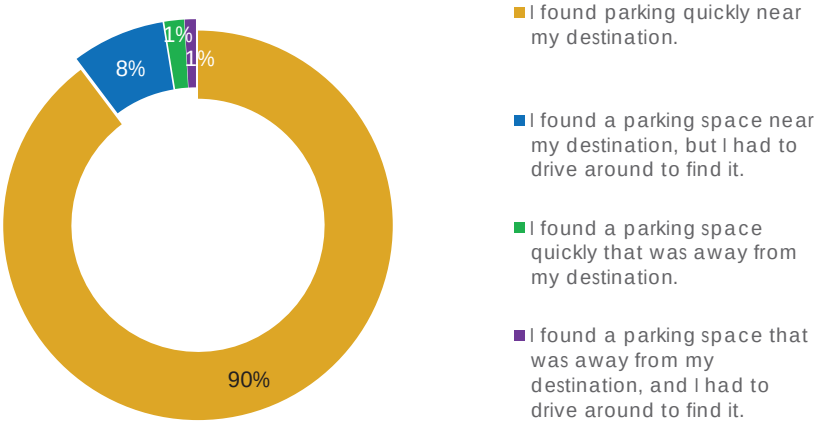
Number of responses: 429
Source: Kittelson and Associates, Inc. 2024



Waterfront visitors indicated that they have predictable and easy parking on their visits. 84% typically park in the same location, 93% said the parking is close to their destination, and 90% mentioned they were able to park quickly near their destination (**Figure 27)**.

Figure 26: Do you normally park at this location?

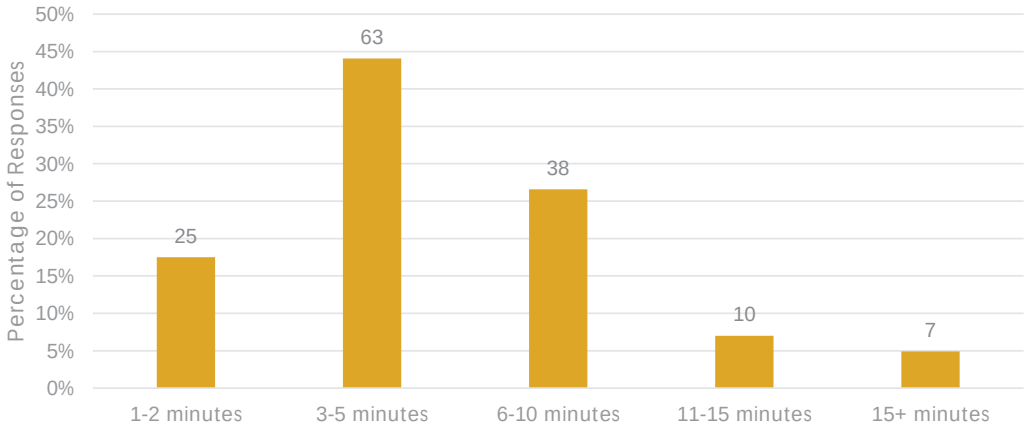


Number of responses: 417
Source: Kittelson and Associates, Inc. 2024

Figure 25: Did you park near your destination?

Number of responses: 419
Source: Kittelson and Associates, Inc. 2024

Figure 27: How was your experience of finding parking today?



Number of responses: 428

Source: Kittelson and Associates, Inc. 2024

Figure 28 illustrates how far respondents are willing to walk from their parking spot to their destination, based on 143 responses. The majority (44%) are willing to walk 3-5 minutes, followed by 27% who are comfortable with a 6–10-minute walk. The average reported walking time is 7.3 minutes, and the median is 5 minutes.

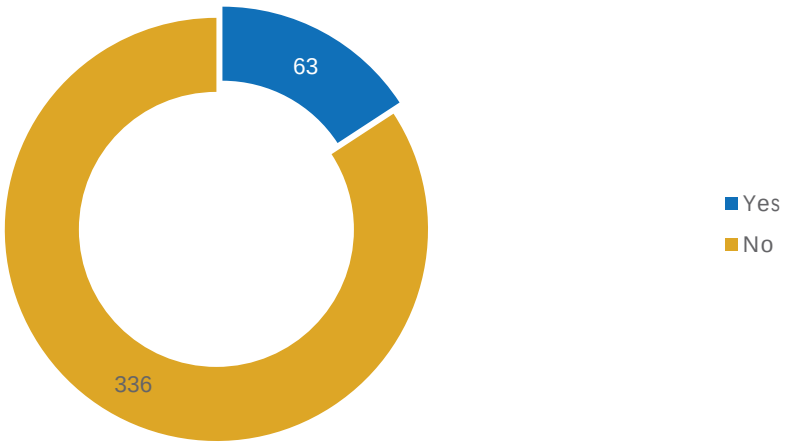


Figure 28: How far are you willing to walk from the parking spot to your destination?

Note: *Mean response = 7.3 minutes, median response = 5 minutes, responses answered in distance were converted to minutes based on an average walking pace of 3mph.*
Number of responses: 143
Source: Kittelson and Associates, Inc. 2024

84% of respondents said that they had never cancelled a trip to the Berkeley Marina out of concern that they would be unable to park (Figure 29).

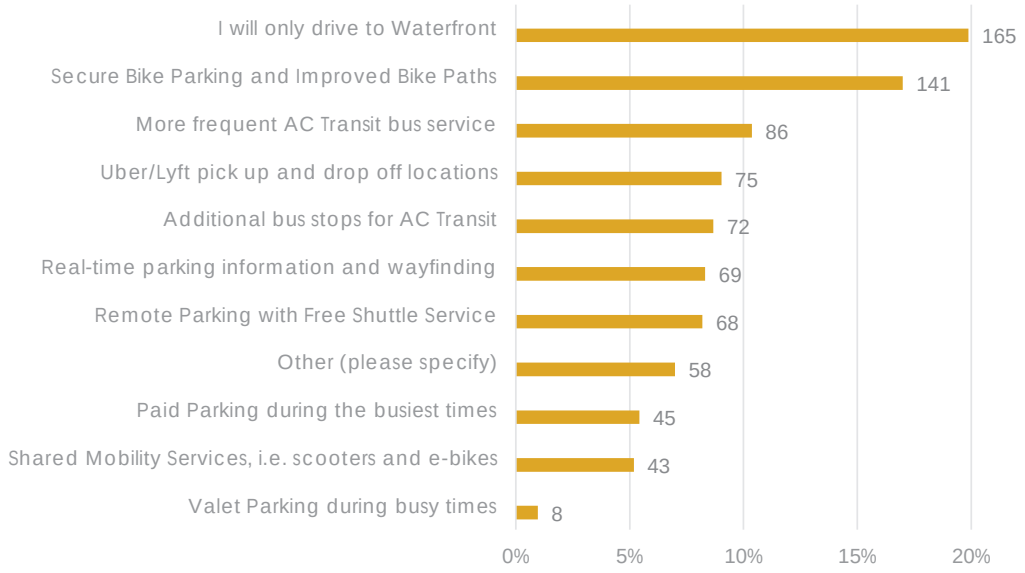

Figure 29: Have you ever cancelled your visit to the Waterfront because you could not park here?

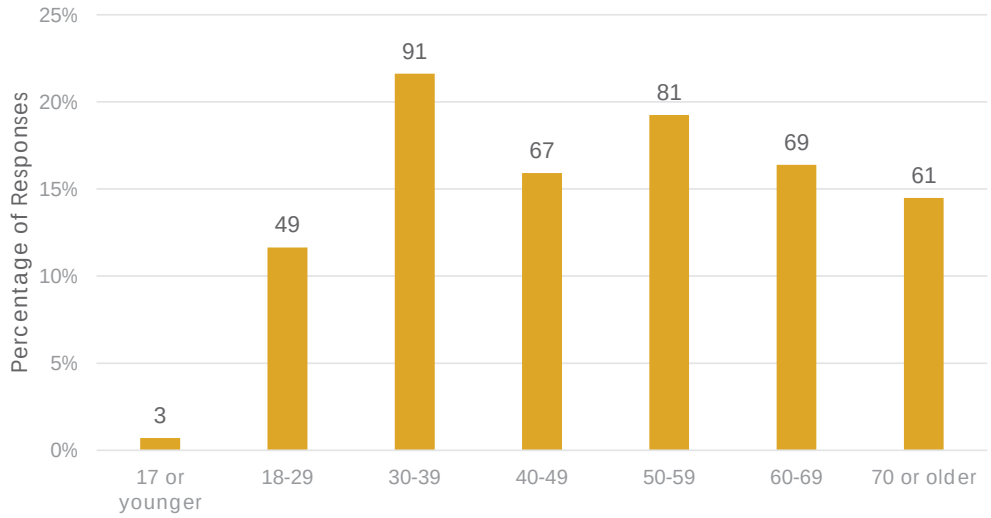
Number of responses: 399
Source: Kittelson and Associates, Inc. 2024

When asked about future methods for accessing the Waterfront, respondents were open to a variety of methods, including secure bike parking and improve bike paths (17%), more frequent AC Transit bus service (10%), and Uber/Lyft pick up and drop off locations (9%). However, a sizeable portion of respondents (20%) indicated that they would only ever drive to the Waterfront (**Figure 30**).

Figure 30: What method would you likely use in the future to reduce cars at the Waterfront? (Select all that apply)

Number of responses: 830, (Respondents were allowed to select multiple options)
Source: Kittelson and Associates, Inc. 2024



Along with the quantifiable responses to the parking intercept survey questions, respondents provided a plethora of written feedback and engaged in extensive conversation with surveyors about the Waterfront, the Pier Ferry Project, and their own travel patterns. Common responses include, "older people want to be able to drive, parking is usually plentiful," indicating a trepidation over future limitations on accessibility. Many responses also called out the needs of specific waterfront hobbyists who feel they will be impacted by a ferry: "Please keep waterfront available and FREE to the Berkeley Community and open for boating and sailing people." However, survey takers generally held the Berkeley Waterfront in high regard as a place where they could recreate peacefully and escape the bustle of their everyday lives, even if this often manifested in hostile attitudes towards the prospect of the Waterfront changing in any way. Many handwritten comments include frustration with the Pier Ferry Project and antagonism towards paid parking at the Waterfront, but very few cite parking occupancy as a problem. This dynamic is put simply but when respondent: "Parking isn't hard. Paid parking would be a deterrent."

Based on the other results of the parking intercept survey, it appears that high parking occupancy is rarely, if ever a barrier for visitor access to the Waterfront. It seems that the existing parking facilities at the Waterfront are able to accommodate the Marina's current recreational uses, and with tailored TDM strategies, could be minimally impacted by the introduction of ferry service to the Waterfront.

7.1.1 Demographics

Kittelson staff and Waterfront monitors were able to successfully reach a diverse set of respondents with the parking intercept survey. Each age bracket of driving age was represented by between 12% and 22% of respondents (**Figure 31**).

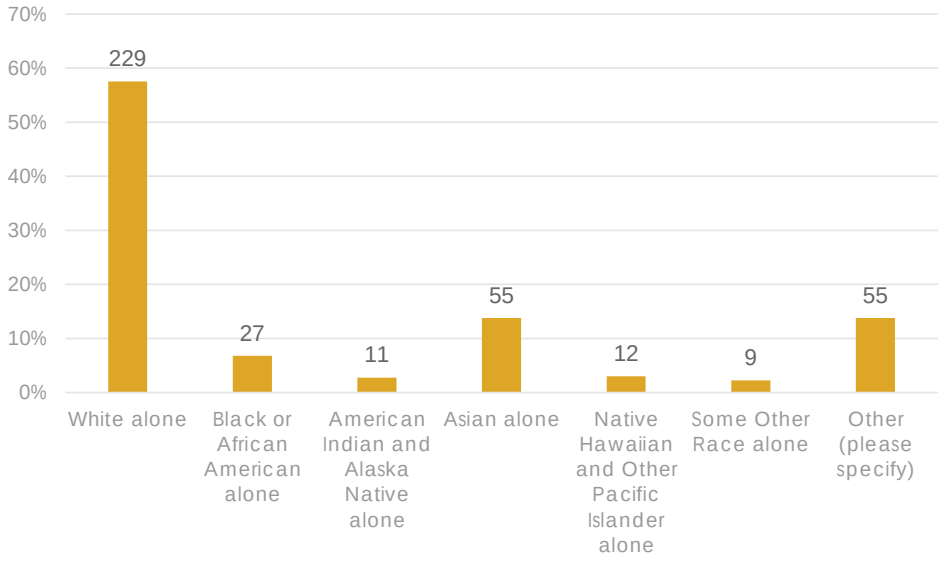


Figure 31: Which category below includes your age?

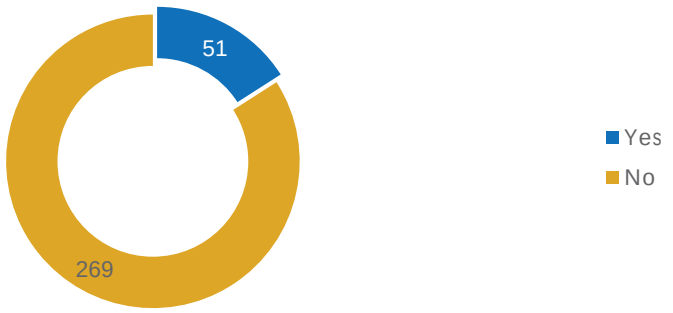
Number of responses: 421
Source: Kittelson and Associates, Inc. 2024

Figure 32 and **Table 4** show how, though respondents predominantly identified as White alone (58%), the general makeup of respondents roughly reflects that of the City of Berkeley. This is an important reference point, however visitation to the Waterfront does not necessarily reflect the demographics of the rest of the City. As shown in **Figure 18**, 63% of survey respondents noted that they lived outside of the City of Berkeley. Approximately 84% of respondents identified as non-Hispanic or non-Latino (**Figure 33**).

Figure 32: How do you identify your race/ethnicity?



Number of responses: 398
Source: Kittelson and Associates, Inc. 2024

Table 4 Race and ethnicity of survey respondents, compared with City of Berkeley

Race / Ethnicity	Survey Responses	City of Berkeley
White alone	57.5%	55.5%
Black or African American alone	6.8%	7.8%
American Indian and Alaska Native alone	2.8%	0.7%
Asian alone	13.8%	20.8%
Native Hawaiian and Other Pacific Islander alone	3.0%	0.2%
Other (please specify)	16.08%	9.8%
Hispanic or Latino	15.9%	12.1%

Source: Kittelson and Associates, Inc. 2024, 2023 ACS 5-Year Estimates

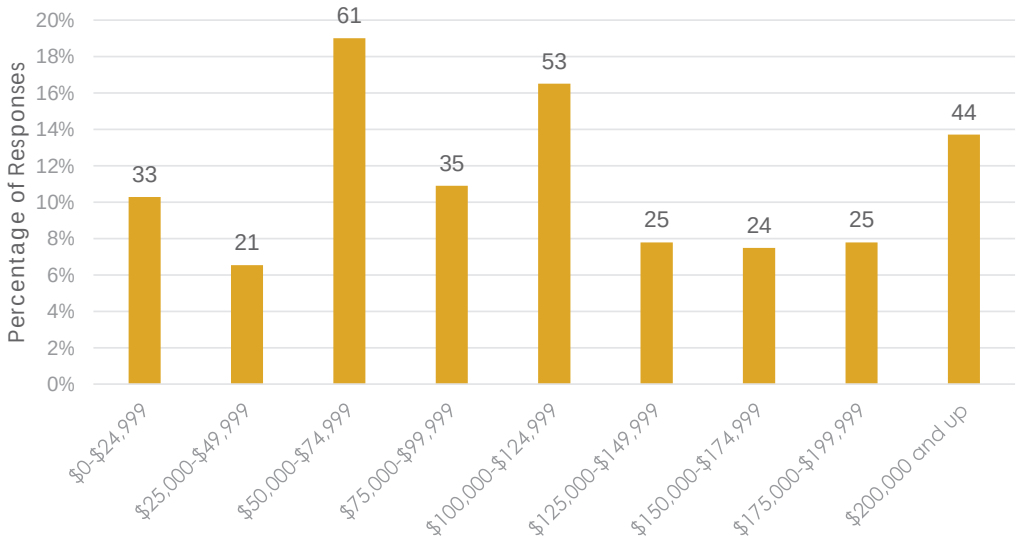


Figure 33: Are you of Hispanic or Latino origin or descent?

Number of responses: 320
Source: Kittelson and Associates, Inc. 2024

Figure 34 illustrates the average household income of the respondent. The largest group indicated that their household earned between $50,000 and $75,000, while the next two highest brackets were $100,000 - $125,000 and $200,000+. These figures compare to a Berkeley median household income of around $95,000 in 2023.[5]

Appendix A : Waterfront Parking Counts and Rules

Berkeley Waterfront
Existing Parking Count & Rules | August 2024

Waterfront Parking Stalls	# Stalls	Percent of Total
Total Waterfront Parking Stalls	2219	100%

Public Street Name	# Stalls	Rules
Marina Blvd	150	No Parking 2am - 6am | Max 72 hour*
Seawall Drive North	6	No Parking 2am - 6am | Max 72 hour*
Seawall Drive South	84	No Parking 2am - 6am | Max 72 hour*
Spinnaker Way	127	No Parking 2am - 6am | Max 72 hour*
University Avenue	25	No Parking 2am - 6am | Max 72 hour*
Public Street Spaces	***392***	18%

Public Lot Name	# Stalls	Rules
J & K Lot	92	Max 72 hour* | Boater Permit required 12am to 10am
L Lot	14	Max 72 hour* | Boater Permit required 12am to 10am
Launch Ramp Paid	76	Paid Boat Launch Access/Trailer Lot: $17/day
M Lot	77	Max 72 hour* | Boater Permit required 12am to 10am
O Lot	72	Max 72 hour* | Boater Permit required 12am to 10am
Seawall Drive Lot	320	Open for periods of high demand
Skates/N Lot	137	Max 72 hour* | Boater Permit required 12am to 10am
South Cove East Lot	96	Open 9am - 11pm weekdays and 5am-11pm weekends
South Cove West Lot	86	Max 72 hour*
Spinnaker Way Lot	36	Max 72 hour*
Public Lot Spaces	***1006***	45%

Boater Lot	# Stalls	Rules
D & E Lot	129	Boater Permit required | Max 72 hour*
F & G Lot	63	Boater Permit required | Max 72 hour*
H & I Lot	52	Boater Permit required | Max 72 hour*
Dry Boat Storage Lot	73	No car parking/Boater Permit required
Boater Spaces	***317***	14%

Limited Parking Area	# Stalls	Rules
Berkeley City Vehicle Parking	10	No public parking
Berkeley PD Leased Lot	47	No public parking
Doubletree Leased Lot	408	Available to public | $8-$38/day | $40/overnight
Marine Center Leased Lot	39	No public parking
Limited Parking Spaces	***504***	23%

*Per Berkeley Municipal Code. All other parking rules are City policy.

Created August 12, 2024

Appendix B : Survey Questionnaire

General Questions

1. Date and Time of Parking

☐ Date: _____

☐ Time: _____ ☐ am ☐ pm

2. Parking Lot Location

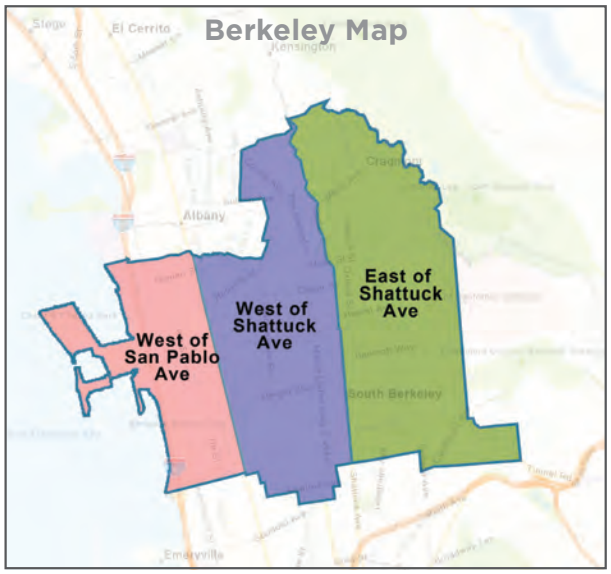
_____

_____

3. Where do you live? (see map)

☐ West of San Pablo Avenue

☐ West of Shattuck Street



☐ East of Shattuck Street

☐ From Outside Berkeley
(please specify the City/Town)

_____

_____

_____

Destination and Duration

4. What is the name of the destination that you are visiting today?

_____

_____

_____

_____

_____

5. What brings you to the Waterfront? (Select all that apply)

☐ sailing/boating
☐ sightseeing/photography
☐ dog walking
☐ shoreline fishing
☐ picnicking
☐ biking
☐ wildlife viewing
☐ cruise
☐ swimming
☐ dining
☐ charter fishing
☐ running
☐ playground
☐ walking

Other (please specify)

_____

_____

_____

6. How frequently do you visit the Waterfront?

☐ Every day
☐ A few times a week
☐ A few times a month
☐ Less than once a month
☐ About once a week
☐ Once a month
☐ For special events
☐ Rarely (please specify time of year)

_____

_____

_____

7. Typical days that you visit the Waterfront? (Select all that apply).

☐ Monday ☐ Tuesday ☐ Wednesday
☐ Thursday ☐ Friday ☐ Saturday ☐ Sunday

8. How long did you park for your activity today?

☐ Less than an hour
☐ 1-2 hours
☐ 2-4 hours
☐ 4-8 hours
☐ 8+ hours

9. How many passengers other than you were there in your vehicle?

☐ Drove Alone ☐ 1 ☐ 2 ☐ 3+

10. Do you normally park at this location?

☐ Yes ☐ No

11. Did you park near your destination?

☐ Yes ☐ No

Parking Experience and Recommended Strategies

12. How was your experience of finding parking today?

- ☐ I found parking quickly near my destination.
- ☐ I found a parking space near my destination, but I had to drive around to find it.
- ☐ I found a parking space quickly that was away from my destination.
- ☐ found a parking space that was away from my destination, and I had to drive around to find it.

13. How far are you willing to walk from the parking spot to your destination?

14. Have you ever cancelled your visit to the Waterfront because you could not park here?

☐ Yes ☐ No

15. What method would you likely use in the future to reduce cars at the Waterfront? (Select all that apply)

- ☐ Secure Bike Parking and Improved Bike Paths
- ☐ Uber/Lyft pick up and drop off locations
- ☐ Additional bus stops for AC Transit
- ☐ More frequent AC Transit bus service
- ☐ Real-time parking information and wayfinding
- ☐ Remote Parking with Free Shuttle Service
- ☐ Shared Mobility Services, i.e. scooters and e-bikes
- ☐ Paid Parking during the busiest times
- ☐ Valet Parking during busy times
- ☐ I will only drive to Waterfront
- ☐ Other (please specify)

16. Share additional thoughts related to access, parking, and circulation in the Waterfront.

Demographic Information

17. Which category below includes your age?

- ☐ 17 or younger
- ☐ 18-29
- ☐ 30-39
- ☐ 40-49
- ☐ 50-59
- ☐ 60-69
- ☐ 70 or older

18. How do you identify your race/ethnicity?

- ☐ White alone
- ☐ Black or African American alone
- ☐ American Indian and Alaska Native alone
- ☐ Asian alone
- ☐ Native Hawaiian and Other Pacific Islander alone Some Other Race alone
- ☐ Other (please specify)

19. Are you of Hispanic or Latino origin or descent?

☐ Yes ☐ No

20. What is your approximate average household income?

- ☐ $0-$24,999
- ☐ $25,000-$49,999
- ☐ $50,000-$74,999
- ☐ $75,000-$99,999
- ☐ $100,000-$124,999
- ☐ $125,000-$149,999
- ☐ $150,000-$174,999
- ☐ $175,000-$199,999
- ☐ $200,000 and up

From: Kittelson & Associates, Inc.

CC: Ali Endress and Roger Miller; City of Berkeley

RE: Berkeley Waterfront – TDM Vehicle Trip and Parking Reduction Methodology - DRAFT

The following are the assumptions and calculations that inform the theoretical parking demand reduction. Three of the strategies were estimated using information gathered from peer case studies and from research papers on transportation demand management. The other strategies were estimated using formulas from the CAPCOA Handbook Chapter 3, Measures to Reduce GHG Emissions: Transportation.[1] This memo includes the CAPCOA formulas used, as well as the specific value inputs gathered from the CAPCOA handbook, from ACS 5-Year Estimates for the City of Berkeley, and from project mode share assumptions.

Shuttle service to the Waterfront and satellite parking facilities

- **Ferry parking demand reduction estimate:** 25-100 spaces

These estimates are based on case study interviews with the City of Alameda and Emery Go-Round (included in Attachment A).

- Limited circulator shuttle service around the Berkeley Waterfront would allow ferry riders to leave their vehicles at low-occupancy lots around the Waterfront (including golden gate fields parking lot) or nearby in the City of Berkeley and take a van or bus shuttle trip to the ferry.
- Low estimates account for a shuttle service run by a 12-seater van, which could run a minimum of two timed services to connect ferry riders to daily ferry departures and arrivals during year one operations.
- High estimates for vehicle trip reduction account for shuttle service to trip origins outside of the Waterfront, including to Downtown Berkeley and / or to satellite parking facilities.
- High estimates for vehicle trip reduction account for the use of 25 foot or equivalent buses to offer increased shuttle capacity.

[1] https://www.caleemod.com/handbook/chapter_3_1transportation.html

- Parking demand reduction could be on the higher end of the provided range if implemented alongside paid parking at the ferry parking lot. Shuttle service would give commuters the option to park for free if paid parking were implemented.

Paid parking program

- **Ferry parking demand reduction estimate:** 42 spaces

This estimate uses CAPCOA strategy T-12: Price workplace parking.

- Results in a 10% reduction in vehicle trips, or demand for 42 fewer parking spaces.
- CAPCOA formula: $\% \ GHG \ Reduction = \frac{B-C}{C} \ x \ E \ x \ D \ x \ F$ where:
  - $\frac{B-C}{C}$ = Rate of change in parking price = .25 (CAPCOA default for introduction of paid parking)
  - E = Elasticity of parking demand with respect to parking price = -.4 (CAPCOA)
  - D = Share of employees paying for parking = 100% (assumption that all ferry riders would be subject to the paid parking program)
  - F = Ratio of vehicle trip reduction to VMT = 1 (CAPCOA)
  - Results in projected 10% reduction in vehicle trips, or demand for 42 fewer parking spaces.

Valet parking

- **Ferry parking demand reduction estimate:** 50-100 spaces

This estimate is based on research on the efficiency of valet parking systems and the relative weekday occupancy of parking lots near the proposed ferry parking facility.

- Research shows that valet parking is able to achieve parking occupancy rates 25% higher than self-parked lots (Banzhaf, et al. 2017).[2]
- Valet parking options for ferry riders could be established within existing parking facilities in the Marina Boulevard Lot or in the Skates / N Lot. Both lots are within walking distance of ferry service and cater to dining or recreational trips that have minimal overlap with ferry parking.
- There were 98 available spaces in the Skates / N Lot and 109 available spaces in the Marina Blvd lot midday on a weekday during data collected in June 2024. If 40-80 of the available spaces in these lots were assigned for valet parking on peak days for ferry ridership, then they could accommodate 50-100 cars that otherwise would be turned away from the ferry parking lot.

Bicycle and pedestrian access

- **Ferry parking demand reduction estimate:** 2 spaces

This estimate uses CAPCOA strategy T-20: Expand bike network.

[2] Banzhaf, Holger & Nienhüser, Dennis & Knoop, Steffen & Zöllner, J.. (2017). The future of parking: A survey on automated valet parking with an outlook on high density parking. 1827-1834. 10.1109/IVS.2017.7995971.

- Results in a 0.4% reduction in vehicle trips, or demand for two fewer parking spaces. This figure would be as high as 40 fewer parking spaces if the calculation accounted for the ongoing implementation of the entire Berkeley Bike Plan.
- Length of bike network expansion set to .38 miles to represent the proposed addition of the "streetscape connector" cycling facility in Figure 2-27 of the September 2023 draft of the Berkeley Waterfront Specific Plan. The streetscape connector would run from along University Ave from the Berkeley Pier to the point where the Bay Trail runs adjacent to the roadway, just west of the traffic circle.
- CAPCOA formula: $\% \, GHG \, Reduction = -1 \, x \, \frac{\left(\frac{C-B}{B} \, x \, D \, x \, F \, X \, H\right)}{E \, x \, G}$ where:
  - $\frac{C-B}{B}$ = Change in bike network miles = .38 (estimated additional bikeway lane miles after implementation of Waterfront Specific Plan Draft "streetway connector" section on University Ave)
  - D = Bicycle mode share in plan/community = 6.2% (2023 ACS 5-Year Estimate)
  - E = Vehicle mode share in plan/community = 40% (project mode share estimate)
  - F = Average one-way bicycle trip length in plan/community = 2.1 miles (CAPCOA)
  - G = Average one-way bicycle trip length in plan/community = 12.4 miles (CAPCOA)
  - H = Elasticity of bike commuters with respect to bikeway miles per 10,000 population = 0.25 (CAPCOA)

Improved bicycle facilities and secure bike parking

- **Ferry parking demand reduction estimate:** 9 - 42 spaces

This estimate uses CAPCOA strategy T-10: Provide end-of-trip bicycle facilities.

- Results in a 2% reduction in vehicle trips with low bike mode adjustment factor and a 10% reduction with high bike mode adjustment factor, for demand for 9 to 42 fewer parking spaces.
- CAPCOA formula: $\% \, GHG \, Reduction = \frac{C \, x \, (E-(B \, x \, E))}{D \, x \, F}$ where:
  - B = Bike adjustment mode factor (1.78 or 4.86, depending on facilities, CAPCOA)
    - Low bike mode share adjustment factor estimates for if only bike parking were provided.
    - High bike moder share adjustment factor estimates for if amenities including showers, lockers, secure bike parking, and bike repair tools were provided.
    - Year-one implementation could exceed the impacts of the low adjustment factor but is unlikely to reach the high adjustment factor. Trip reduction estimates should be somewhere in between.
  - C = Existing bicycle trip length for all trips in region (2.1 miles, CAPCOA)
  - D = Existing vehicle trip length for all vehicles in the region (12.4 miles, CAPCOA)
  - E = Existing bicycle mode share for work trips in region (6.2%, ACS 5-year estimate for Berkeley)
  - F = Existing vehicle mode share for work trips in region (40%, project mode share estimate)

Shared micromobility expansion

- **Ferry parking demand reduction estimate:** 12 spaces

This estimate uses CAPCOA strategy T-22-B: Implement electric bike share program.

- Results in a 3% reduction in vehicle trips, or demand for 12 fewer parking spaces.
- CAPCOA formula: $\% \ GHG \ Reduction = -1 \ x \ \frac{(C-B) \ x \ D \ x \ E \ x \ F}{G \ x \ H}$ where:
  - B = Percent of residents in community with access to system without measure = 0% (introduction of new service area)
  - C = Percent of residents in community with access to system with measure = 60% (Access to Baywheels across Berkeley)
  - D = Daily electric bike share trips per person = .021 (CAPCOA)
  - E = Vehicle to electric bikeshare substitution rate = 35% (CAPCOA)
  - F = Electric bikeshare one-way trip length = 2.1 miles (CAPCOA)
  - G = Daily vehicle trips per person = 2.7 (CAPCOA)
  - H = Regional average one way vehicle trip length = 12.4 miles (CAPCOA)
- Assumes implementation of electric, rather than conventional bike share and does not estimate effects of structuring scooter shared services at the Waterfront.

Pick-up / drop-off zones

- **Ferry parking demand reduction estimate:** 5 spaces

This estimate is based on research that identifies increases in transportation network company (TNC) trip satisfaction among riders when trips utilize designated pick-up and drop-off zones and increases in average traffic speed when TNC companies are provided with discrete pick-up / drop-off zones.

- Results in a 7% increase in TNC or kiss-and-ride trips due to shift from drive alone or carpool trips, or a demand for 5 fewer parking spaces.
- Research shows that dedicated pick-up /drop-off zones increased user satisfaction by as much as 7% to 11% (Shaheen, et al. 2021).[3]
- A traffic simulation experiment showed that, when TNC vehicles were provided with pick-up/drop-off locations on side streets, average traffic speeds increased by as much as 37% during peak periods (Stueger, et al. 2022). [4]
- Establishing dedicated pick-up / drop-off zones will improve the comfort of TNC users and the experience of park-and-ride drivers, encouraging them to avoid drive-along trips in personal vehicles to access the ferry.
- Pick-up / drop-off zones would also improve the experiences of non-TNC users, who may be more comfortable relying on being driven to the Waterfront.

[3] Shaheen, S., Darling, W., Broader, J., & Cohen, A. (2021). Understanding Curb Management and Targeted Incentive Policies to Increase Transportation Network Company Pooling and Public Transit Linkages. *UC Berkeley: Transportation Sustainability Research Center*. Retrieved from https://escholarship.org/uc/item/6gz9w0v9

[4] Stueger, P. N., Fehn, F., & Bogenberger, K. (2023). Minimizing the Effects of Urban Mobility-on-Demand Pick-Up and Drop-Off Stops: A Microscopic Simulation Approach. Transportation Research Record, 2677(1), 814-828. https://doi.org/10.1177/03611981221101894

- If the 7% satisfaction increase indicated by one study resulted in equal mode shift to TNC or kiss-and-ride from drive alone or carpool trips, then there would be a reduction in demand for parking at the ferry lot by 5 spaces.

Transit subsidy for ferry riders

- **Ferry parking demand reduction estimate:** 4 spaces

This estimate uses CAPCOA strategy T-9: Implement subsidized or discounted transit program.

- Results in a 1% reduction in vehicle trips, or demand for 4 fewer parking spaces.
- CAPCOA formula: % $GHG\ Reduction = \frac{C}{B}\ x\ G\ x\ D\ x\ E\ x\ F\ x\ H\ x\ I$, where:
  - C = Subsidy amount = $2.25 (Cost of AC Transit fare)
  - B = Average transit fare without subsidy = $6.95 ($2.25 for AC Transit + $4.70 for ferry)
  - G = Elasticity of transit boardings with respect to transit fare price = -.43 (CAPCOA)
  - D = Percent of riders eligible for discount = 100% (project assumption)
  - E = Percent of project-generated VMT from riders = 100% (project assumption)
  - F = Transit mode share = Transit mode share of work trips = 14.4% (ACS 5-Year Estimate)
  - H = Percent of transit trips that would otherwise be made in a vehicle = 50% (CAPCOA)
  - I = Conversion factor of vehicle trips to VMT = 1 (CAPCOA)

Expanded AC Transit service

- **Ferry parking demand reduction estimate:** 7 spaces

This estimate uses CAPCOA strategy T-26: Increase transit service frequency.

- Results in 2% reduction in vehicle trips, or demand for 7 fewer parking spaces.
- CAPCOA formula: % $GHG\ Reduction = -C\ x\ \frac{B\ x\ E\ x\ D\ x\ G}{F}$, where:
  - B = Percent increase in transit frequency = 100% (doubling of 51B service frequency to the Waterfront from 24 minutes to 12 minutes (matching frequency east of Berkeley Amtrak Station))
  - C = Level of implementation = 8% (represents treatment on one of twelve AC Transit routes with regular service schedules to Downtown Berkeley)
  - D = Elasticity of transit ridership with respect to frequency of service = .5 (CAPCOA)
  - E = Transit mode share in plan or community = 14.4% (ACS 5-Year Estimate)
  - F = Vehicle mode share in plan or community = 40% (project mode share estimate)
  - G = Statewide mode shift factor = 57.8 (CAPCOA)

Appendix C :

Berkeley Waterfront Parking and TDM Toolkit

BERKELEY WATERFRONT PARKING AND TRANSPORTATION DEMAND MANAGEMENT TOOLKIT

This parking and transportation demand management (TDM) toolkit (referred to as the TDM toolkit) is part of an ongoing effort to manage access and circulation to and around the Berkeley Waterfront. TDM is the use of strategies to inform and encourage travelers to maximize the efficiency of our transportation systems leading to improved mobility, reduced congestion, and lower vehicle emissions.[1] TDM aims to provide all people with real transportation options that enable them to travel from their location to a destination in an affordable, efficient, and sustainable way.

This document presents parking and transportation demand management strategies for use at the Berkeley Waterfront, with a focus on managing the influx of commuters driving to the ferry terminal after implementation of new ferry service. The initial list of parking and TDM strategies under consideration for the Waterfront is presented in Table 1 (in no particular order / priority) and strategies are further described in the sections following the table.

Table 1: Parking and TDM Strategies

	Strategy	Effectiveness[1]	Ease of Implementation[2]	Cost[3]
Vehicle Management Strategies				
	Wayfinding	+	✓	$$
	Satellite parking facilities	++	✗	$
	Shuttle service to the Waterfront	++	✗	$$$
	Circulator shuttle service around the Waterfront	+	✓	$$
	Vehicle parking regulations	++	✓	$
	Paid parking	+++	✓	$
	Valet service (free or low cost)	+	✓	$$
	Parking Benefit District	+++	✗	$
	Parking enforcement	+	✓	$
Vehicle Reduction Strategies				
	Bicycle and pedestrian access	++	✓	$$
	Bicycle facilities	++	✓	$$
	Secure bicycle parking	++	✓	$
	Shared micromobility	++	✓	$
	Pick-up/drop-off zones	+	✓	$
	Transit subsidy for ferry riders	++	✓	$$
	Expanded AC Transit service	+++	✗	$$
	Transportation Management Agency	+++	✗	$$$

Notes:
1 Effectiveness: + small effect on mode shift; ++ moderate effect on mode shift; +++ highly effective at mode shift
2 Ease of implementation: ✓easy, short timeline, minimal administrative costs; ✓(medium, longer timeline, requires added administrative duties; ✗difficult, politically or administratively difficult on any timeline
3 Cost: $ low cost, short timeline; $$ medium cost; $$$ high cost

[1] Association for Commuter Transportation. www.actweb.org

In selecting TDM strategies to address circulation and access to and around the Waterfront, it is useful to know how effective measures might be at changing travel behavior, how much they might cost, and how challenging they might be to implement. The empirical evidence on TDM effectiveness, cost, and ease of implementation is sporadic and incomplete. It is also difficult to compare across all measures, as the performance measures and method of evaluation vary from one measure to the next. Studies often lack controls, and external variables, such as the price of gasoline and unemployment rates, affect travel behavior changes. For comparison purposes, Table 1 and the following descriptions present a high-level qualitative rating of these factors (effectiveness, ease of implementation, and cost) based on a review of literature and research and conversations with implementing agencies. These strategies are not presented in any particular order, and have not been prioritized or ranked. The City intends to present these strategies and gather public feedback prior to ranking/prioritizing the various strategies.

VEHICLE MANAGEMENT STRATEGIES

WAYFINDING

Effectiveness: + **Ease of Implementation: ✓** **Cost: $$**

Overview: While the Waterfront has a variety of parking lot locations and types, the total volume of spaces are not well utilized, causing high occupancy at desirable lots when adjacent lots sit mostly empty. Improved wayfinding around the Waterfront can help drivers know where available lots are located and how they can access their destinations from those lots. Improved wayfinding will be an essential tool for managing the influx of new trips to the Waterfront for a new ferry service, and for managing flows of visitors at peak times. Digital parking monitoring tools can also be utilized to help drivers locate open spaces without having to circle multiple locations looking for them. Enhanced wayfinding and monitoring will improve visitors' experiences at the Waterfront and ease the strain on the most desirable parking locations.

For the greatest impact, wayfinding improvements should be paired with pedestrian improvements to ensure comfortable access between parking lots and destinations. Should wayfinding signs direct drivers to lower occupancy lots away further from their destinations, pedestrian improvements should ensure that trips to and from those lots are safe, comfortable, and intuitive.

Implementation: Improving wayfinding is a logistically easy and financially attainable parking management strategy. While technologically advanced parking occupancy counters and directions would increase the difficulty of implementation, basic wayfinding improvements could be made with improved physical signage and online information well in advance of new ferry service.

Internal pedestrian improvements are comparably more expensive and would have to be rolled out on a longer timeline. However, quick-build projects, including enhanced crosswalk paint and temporary pedestrian bulbouts can be used to enhance the effectiveness of wayfinding improvements in the meantime.

Figure 1 Example wayfinding signs

Source: BART, *Station Access Signage & Wayfinding Guidelines*, 2022.

SATELLITE PARKING FACILITIES FOR WATERFRONT VISITORS

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $**

Overview: The City could establish a satellite parking facility for the Waterfront, which could be used by ferry riders or by general Waterfront visitors. The satellite lot would be a tool for transferring parking demand away from Waterfront lots for those who have the flexibility to then proceed to the Waterfront by shuttle, AC Transit service, or by biking and walking. A satellite parking facility could maximize the space devoted to vehicle parking for recreational uses at the Waterfront without limiting access to the ferry service.

Implementation: Feasibility of establishing satellite lots depends on the location and ownership of lots, as well as the necessary complimentary measures needed to help users access the Waterfront – including, but not limited to, shuttle service and bike and pedestrian improvements. Implementation would be made easier if satellite lots were sited in less-used areas, where parkers could easily access the Waterfront's recreational facilities, but wouldn't take up spaces at in-demand parking locations. This proposition would be more convenient, reliable, and economical to satellite lots that are privately owned, or that are located a significant distance from the Waterfront.

Peer Case Studies: Muir Woods Shuttle

SHUTTLE SERVICE TO THE WATERFRONT

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $$$**

Figure 2 Temporary free shuttle offered from North Berkeley BART to the Solano Stroll event *(Source: Jonathan Zisk)*

Overview: A shuttle service to the Berkeley Waterfront could replace car trips taken by ferry riders and could be coordinated with the ferry schedule to reduce the time penalties associated with transfers to / from local bus service. Shuttle service would need to link commuter and other visitors' origins across Berkeley to their destinations at the Waterfront. This would require service to locations throughout the City of Berkeley, or to established satellite parking lots located outside the Waterfront.

Ease of access to the Waterfront for recreational and commercial users must be prioritized. Inefficient shuttle services would deter recreational users or restaurant patrons from using the service, while commuters and longer-term parkers are more easily able to schedule trips around shuttle service.

Implementation: Running a shuttle service is a logistically and financially difficult project. Shuttle services need regular operational funding, on top of startup costs. The necessary condition of an effective shuttle service is that its benefits – increased visitation, environment stewardship, equitable site access – must far outweigh its costs. When successful, shuttle services can enable significant cuts to on-site parking and reduction in single occupancy vehicle trips.

Based on our literature review and discussions with Emery Go-Round staff, peer regional shuttles are supported by robust private employers, commercial districts, and property-based improvement districts (PBIDs). While a shuttle service to the Berkeley Waterfront could be effective at shifting trips away from cars, it may not have the necessary private sector backing to support its operations.

Peer case studies: Emery Go-Round, Harbor Bay Business Park Shuttle, West Berkeley Shuttle, Muir Woods Shuttle

CIRCULATOR SHUTTLE SERVICE AROUND THE WATERFRONT

Effectiveness: + **Ease of Implementation:** ✓ **Cost: $$**

Overview: Shuttles could also be used to improve parking utilization around the Waterfront. An internal circulator shuttle service would not replace car trips to the Waterfront but would enable visitors to park in underutilized lots within the Waterfront and then proceed to their destinations via complimentary shuttle service. The shuttle could operate on a fixed-route or provide on-call and demand-responsive service using vans, buses, or golf carts. Vehicles would be sized appropriately, and hours of operation and routes could be adjusted as needed. This kind of shuttle service could be an invaluable tool for distributing peak demand for parking during the summer and popular events. If well utilized, it could also delay the need for paid parking or other parking restrictions.

Implementation: Running a shuttle within the Waterfront would be comparatively easier than initiating and operating shuttle service between the Waterfront and other destinations, but it would still require investment in vehicles, equipment, and ongoing operations.

Peer case studies: Emery Go-Round, Harbor Bay Business Park Shuttle, West Berkeley Shuttle, Muir Woods Shuttle

VEHICLE PARKING REGULATIONS

Effectiveness: ++ **Ease of Implementation:** ✓ **Cost: $**

Overview: This strategy would evaluate existing vehicle parking regulations and restrictions and identify opportunities to optimize use of existing parking lots. In 2019, the City implemented changes to parking permits and established time limits and regulations tailored to each Waterfront parking lot. The goal was to (1) maximize parking availability for recreational users and shorter term visitors, (2) maximize proximity to end-destinations, and (3) push the Waterfront's long-term parkers to less convenient parking lots, including staff serving various Waterfront businesses, charter fishing customers and small-scale ferry commuters who park at the Waterfront for the majority of a day. City staff shared that this was effective when paired with ample outreach prior to implementation, and with enforcement after the outreach effort. Without enforcement during Covid, the regulations became substantially less effective.

This strategy would anticipate the nature and volume of demand of ferry parking and set regulations accordingly. Factors that affect the demand for ferry-related parking spots include regularity and frequency of ferry service, infrastructure for accessing the ferry via alternative modes of transportation, and incentives for carpooling or shifting visitors away from single occupancy vehicle trips to the Waterfront. A key component in setting parking regulations is understanding how the amount and availability of parking shapes parking demand. By appropriately regulating the parking lots at the Waterfront, the City of Berkeley

can ensure that they both enable access to destinations and avoid causing negative effects to the surrounding natural features of the Waterfront and its recreational uses.

Implementation: Implementing modifications to existing vehicle parking regulations would require new signage and may be paired with driver education campaigns and increased enforcement.

Peer Case Studies: Berryessa BART Urban Village Plan

Figure 3 Parking facilities currently occupy 20% of the Waterfront's in-demand space for natural recreation. Right-sizing and regulating parking facilities is a critical step in preserving both natural resources and visitors' access to them. *(Source:* City of Berkeley, *Waterfront Specific Plan (Draft)*, 2023.*)*

DEMAND-BASED / PAID PARKING

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $**

Overview: Paid parking is an essential tool for managing occupancy in high-demand parking lots. Over the last decades, parking professionals have established that paid parking can increase the availability of parking spaces for those that need them the most, while helping shift other trips away from single occupancy vehicles.[2]

Implementation of a paid parking program was the first recommendation of the Berkeley Marina Area Specific Plan Parking and Mobility Framework. However, public feedback gathered as part of parking intercept surveys collected in Summer 2024 for this Waterfront Parking and Transportation Demand Management Plan effort indicates that many current Waterfront visitors are not willing to pay to park when accessing the Waterfront for recreational uses. Additionally, paid parking was proposed in 2019 at the South Cove parking lots in association with small scale ferry service and commuter charter service that was in operation at the time (the small-scale public ferry service closed during Covid).[3] The public was not in

[2] https://www.sfmta.com/getting-around/drive-park/demand-responsive-pricing/sfpark-evaluation
[3] https://berkeleyca.gov/sites/default/files/documents/2019-04-30%20Item%2026%20New%20Marina%20Fee%20%E2%80%93%20South%20Cove.pdf

support of any paid parking at that time, an alternative was identified, and the City did not proceed with paid parking implementation.

Despite the logistical hurdles involved in the separation of ferry riders from other Waterfront visitors, a paid parking program may be most effective if clearly tailored to meet the unique demands of ferry riders, while leaving other Waterfront users to continue to park for free, especially at off-peak times.

The objective of paid parking is to shift trips to more sustainable modes of transportation without negatively impacting overall access to the Waterfront. Any proposal for paid parking would be clearly tied to measurable benefits for visitors, including ease of access to recreation, restaurants, marina slips, and for the preservation of the Waterfront's natural resources. Paid parking fees at the Waterfront would be directly invested in the beautification, safety, and security projects within the vicinity of parking facilities.

Implementation: Paid parking may be the single most powerful tool for managing parking in a high demand site and would provide revenue that could be reinvested in the Waterfront. However, implementing paid parking presents a logistical and a political challenge.

The logistics of paid parking at the Berkeley Waterfront are eased by the pre-existing paid parking program at the boat launch ramps off Spinnaker Way, as well as by the potential ease of controlling vehicular access to the Waterfront along University Avenue. The political challenges of implementing paid parking are much more complex. To facilitate implementation of a paid parking program, the City could coordinate paid parking with the launch of new ferry service. This would allow paid parking to piggy-back on other changes to the Waterfront and would clarify the relationship between paid parking and expected increases in Waterfront visitation.

Peer case studies: City of Alameda Ferry Terminal Paid Parking Program

The City of Alameda planned to implement paid parking at the 2021 launch of the Seaplane Lagoon Ferry Terminal but opted not to due to decreased ridership resulting from the Covid-19 Pandemic. Alameda plans to launch its paid parking program at both the Seaplane Lagoon and Harbor Bay terminals in the near future.

VALET SERVICE FOR FERRY RIDERS

Effectiveness: + **Ease of Implementation: ✓** **Cost: $$**

Overview: Valet service at the Berkeley Waterfront would maximize finite space in existing lots by allowing valet attendants to tandem park vehicles. Likewise, valet parking can turn underutilized parking lots into an efficient tool for parking management. Valet parking is well-suited for the Waterfront's parking and usage patterns, which are characterized by an overabundance of parking capacity on most days and congestion and high occupancy levels in certain lots during events and peak weather conditions.

Implementation: Valet parking is a relatively infrastructure-light and flexible way of managing parking supply. A valet program could be run only on the highest demand days, while self-parking would be allowed at all other times. In valet parking, traffic management costs are paid through staff expenses, rather than through long-range infrastructure improvements. For this reason, valet parking could be a niche solution for a period with increased visitation at the Waterfront. Likewise, the associated costs of valet service could be borne by the user, the City, the ferry, or the end-user destinations, such as restaurants.

ESTABLISH A PARKING BENEFIT DISTRICT

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $**

Overview: A parking benefit district (PBD) is an entity that would manage parking revenue and allow for direct policy and financial input from a broader group of stakeholders and oversight from community members. PBDs typically have a broad mandate that includes supporting parking maintenance and operations and investing in other transportation systems and services. Establishing a PBD is an effective strategy for generating stakeholder buy-in and support for paid parking initiatives. Stakeholders' involvement with a PBD would allow them to reinvest parking proceeds directly to improvement projects around the Waterfront, including for facility modernization, parking lot maintenance, and beautification projects.

Implementation: To establish a PBD, the City would need to organize a group of enthusiastic and dedicated stakeholders in the Waterfront, including commercial businesses, clubs, and regular users of the Waterfront. Once the PBD was established, it would theoretically manage most of its own affairs, with some assistance from and collaboration with the City. Balancing the interest of various stakeholders in the Waterfront would be a difficult long-term task, especially when current stakeholders at the Waterfront may have opposing stances on the need for increased visitation and parking management. The waterfront has relatively few of these entities relative to other locations, i.e. downtowns or shopping districts, where this has been successful.

Figure 4 A parking meter in the Old Pasadena parking benefits district reminds parkers that their fees are reinvested directly to the place where they just parked Source: Mike Linksvayer, via Flickr

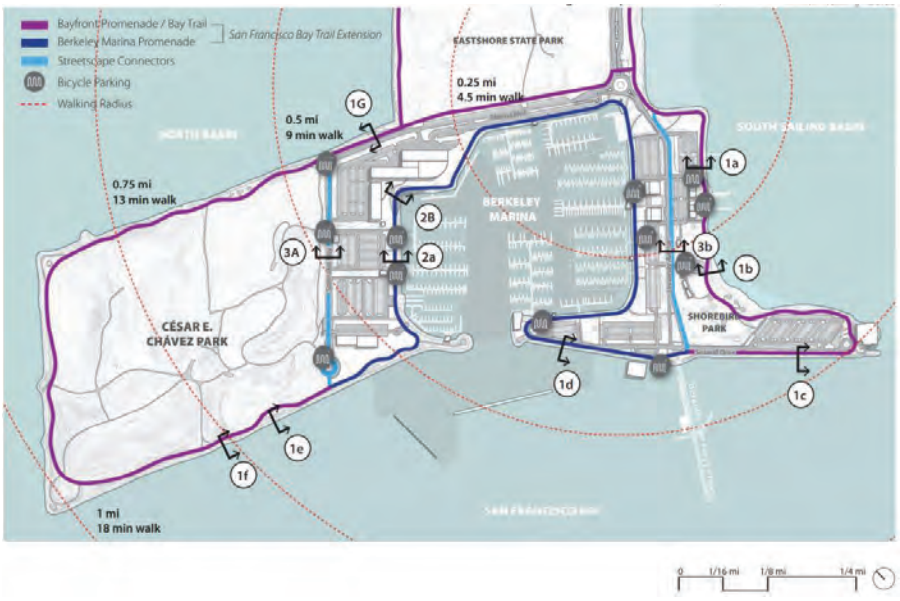
PARKING ENFORCEMENT

Effectiveness: + **Ease of Implementation: ✓** **Cost: $**

Overview: Enforcement of vehicle parking permits, time limits, and other restrictions would encourage adherence with parking regulations. Increased enforcement of existing restrictions could be a key strategy for delaying or avoiding the need for further restrictions or for paid parking.

Implementation: The Waterfront could shape its parking climate and occupancy without implementing paid parking initiatives by increasing parking enforcement. Key points of enforcement would include enforcing permit / slip holder parking areas, overnight parking, and time-limited parking. The Waterfront's hosting of the city's parking enforcement fleet could serve to ease the demands of increased enforcement.

VEHICLE REDUCTION STRATEGIES



BICYCLE AND PEDESTRIAN ACCESS

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $$**

Overview: The Berkeley Waterfront's geographic isolation from the rest of the City poses several challenges for bicycle and pedestrian access. While this planning process can recommend improvements for bicycle and pedestrian facilities in the Waterfront, it cannot do the same for facilities in the rest of Berkeley. Nevertheless, connectivity is of critical importance – safe, comfortable facilities at the Waterfront will not shift trips away from cars without compatible infrastructure off-site. This TDM measure considers both what bicycle and pedestrian improvements can be made at the Waterfront, and how those internal improvements can connect to and enhance improvements outside the Waterfront.

Bicycle and pedestrian infrastructure at the Waterfront: The Waterfront already hosts an extensive series of low-stress, class I, cycling trails. Closing the gaps in this network, as proposed by the draft Waterfront Specific Plan, would continue to establish the Waterfront as a safe and inclusive space for recreational walkers and cyclists.[4]

Figure 5 Pedestrian and Bicycle Circulation within Walking Radius (Source: Figure 2-51 from the Waterfront Specific Plan Public Draft)

Bicycle and pedestrian infrastructure to the Waterfront: Under current conditions, bicyclists and pedestrians access the Berkeley Waterfront via the Bay Trail and Pedestrian/Bicycle Bridge over I-580 just south of University Avenue, and a new pedestrian bridge over I-580 at Gilman Street. While these access points provide low stress connections, they are indirect and require bicyclists and pedestrians to travel out of their way to access the Waterfront. University Avenue would be a more direct method of accessing the waterfront

[4] https://berkeleyca.gov/your-government/our-work/capital-projects/waterfront-specific-plan

for cyclists and pedestrians. However, the University Avenue bridge does not currently have any bicycle or pedestrian facilities on it. Likewise, University Avenue is on the Berkeley's High Injury Network for most of its length, from Oxford Street to Frontage Road, all of which lies outside of the direct purview of the Berkeley Waterfront.[5] If implemented, recommendations in the 2020 Berkeley Pedestrian Plan would improve safety and comfort for vulnerable road users along University Avenue, who might be traveling to or from the Waterfront. Coordinating bicycle and pedestrian improvements in the Waterfront with those in the rest of the City will be a key factor in shifting more trips away from cars.

There are ongoing and planned improvements to Berkeley's cycling network that will make it easier for cyclists to access the Waterfront. On Gilman Street, the City is constructing a cycletrack, (class IV bike facility) which allows for two-way bicycle traffic, protected from vehicular traffic by concrete curbs. The complete portions of the cycletrack are already providing a better, safer path for cyclists traveling to and from the Waterfront on the Gilman Side of the overpass. Planned improvements to the City's cycling network in the 2017 City of Berkeley Bicycle Plan include two projects that would significantly enhance access to the Waterfront. One proposal is for the study of a cycletrack on University Avenue to the east of I-580, and another for the extension of a neighborhood bikeway on Addison Street, between the Bay Trail Bridge and Downtown Berkeley.[6]

Implementation: Creating direct, low stress bike and pedestrian connections to the Waterfront would be a long-term goal involving projects both in and outside of the Waterfront. Fortunately, there are ongoing planning processes to pursue both of those types of improvements. Existing recreational trails at the Waterfront can be supplemented with quick-build enhancements to bike and pedestrian access to the Berkeley Pier. Likewise, this planning process can lend its recommendations to the buildout of the 2017 Berkeley Bicycle Plan and 2020 Berkeley Pedestrian plan which, would neatly align with internal bicycle and pedestrian facilities if completed. A more difficult and longer-term project would be to pursue improvements to bike and pedestrian facilities on the elevated portion of University Avenue, between Sixth Street and Frontage Road, and would have to plan interventions around I-580 freeway ramps. Projects in this stretch of road are outside of the Waterfront, but shape the experience of accessing its many destinations.

Figure 6 Two-way protected cycletrack on Fulton St in Downtown Berkeley. Cycletracks (class IV bike facilities), like those recently constructed in Downtown Berkeley, would be key for the Waterfront's long-range reduction in single occupancy vehicle trips. *(Source: Jonathan Zisk)*

[6] https://berkeleyca.gov/your-government/our-work/adopted-plans/berkeley-bicycle-plan

BICYCLE FACILITIES AT FERRY TERMINAL

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $$**

Overview: Travel by bicycle, much like commutes by car, can be limited by parking presence and availability at the destination. Providing secure bike parking and amenities, including: bike repair stations, lockers (such as those currently at the Berkeley Waterfront Park Office area), and other supporting facilities can make biking a more feasible option for many. Increasing the share of people who access the ferry by bike can help mitigate the overall demand for vehicle parking and reduce the greenhouse gas emissions.[7]

Implementation: The difficulty of implementation varies widely depending on the type and scale of amenities. Well-positioned bike racks and bike maintenance stations could be readily implemented before or concurrent with the implementation of ferry service. However, more secure bicycle parking and facilities, including changing rooms would be more effective at shifting trips to bike. These amenities would also require more space and would be more expensive to construct and operate.

INCREASED SECURE BICYCLE PARKING THROUGHOUT THE WATERFRONT

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $**

Overview: There are currently 20 secure BikeLink lockers in the Waterfront, located on University Ave in front of the Berkeley Waterfront Park Office.[8] For a small fee, those lockers allow cyclists to access the Waterfront without worrying about bike theft or damage. As visitation to the Waterfront grows, increasing the availability of similar bike locker services around the Waterfront would encourage regular and occasional visitors to the Waterfront to choose to ride their bikes rather than traveling by other modes. Ensuring that expanded secure bicycle lockers can accommodate e-bikes and cargo bikes will also encourage families and riders of all abilities to ride to the Waterfront.

Figure 7 BikeLink lockers installed at the Santa Clara Caltrain station. Secure bike parking is an essential and attainable strategy for increasing cycling trips. Source: Caltrain

Implementation: Secure bike lockers can be developed via multiple means, either by a third party like BikeLink, which is the main supplier of secure bike parking around the Bay Area, or directly by a public agency. Though the City of Berkeley does not currently provide secure bike parking directly, there is an active movement for the City to develop its own secure bike parking facilities.[9] Provision of secure bike parking is a feasible and cost-effective strategy for encouraging and improving the overall experience of cycling to the Waterfront.

EXPAND SHARED MICROMOBILITY SERVICES

Effectiveness: + + **Ease of Implementation:** ✓ **Cost:** $

Figure 8 Veo scooters parked at the Waterfront. Source: Amanda Leahy

Overview: There are several different ways that visitors can access the Berkeley Waterfront via shared micromobility, including using Bay Wheels bikes, Veo, and Lyft electric scooters. While these devices can be found parked at bike racks around the Waterfront, there is currently no micromobility-specific infrastructure present at the Waterfront. Designating scooter drop-off sites, areas for bike share, and clearly posted shared-micromobility regulations can increase the overall ease and comfort of shifting trips away from cars.

Implementation: The City of Berkeley would work with operators to implement and administer shared micromobility programs at the Waterfront. Bay Wheels has already expanded their docks as far as Addison Street and Fourth Street and is adding 24 new docks in the East Bay this year.[10] Bay Wheels has also shown a recent commitment to expanding bike share service into recreational areas, with the 2023 expansion of bike docking stations into Golden Gate Park.[11]

ESTABLISH PICK-UP/DROP-OFF ZONES

Effectiveness: + **Ease of Implementation:** ✓ **Cost:** $

Overview: Establish pick-up/drop-off zones near activity centers, such as the new ferry terminal, Cesar Chavez Park, and Adventure Playground. Establishing clearly marked pick-up/drop-off and loading zones can help visitors with diverse needs accessing the Waterfront, including those with mobility impairments, and those utilizing ride share services. Clearly marked loading zones can allow those with picnic supplies or boating equipment to unload near their destinations before parking slightly further away, thereby reducing the demand for parking in the immediate vicinity of key Waterfront destinations.

Implementation: The City can quickly and cheaply identify suitable pick-up/drop-off zones near destinations around the Waterfront. Zones can be marked with new wayfinding and road paint, before eventually being permanently built into roadways. This has already been conducted successfully during special events at the Waterfront.

FREE/REDUCED TRANSIT PASSES OR MICROMOBILITY SERVICE MEMBERSHIPS FOR FERRY RIDERS

Effectiveness: + + **Ease of Implementation:** ✓ **Cost:** $$

Overview: This TDM measures would entail the subsidization of public transit fares and micromobility service memberships to encourage the use of bus or micromobility (e.g., bike share, scooter share).

[10] https://mtc.ca.gov/news/mtc-lyft-kick-bay-wheels-east-bay-expansion
[11] https://www.sf.gov/news/san-francisco-announces-expansion-lyfts-bike-share-program-golden-gate-park

Removing some of the out-of-pocket cost of transit travel would be an effective way of shifting trips to non-auto modes, reducing VMT, and reducing the vehicle parking demand at the Berkeley Waterfront. There has been a recent movement towards integrating fare structures between regional transit operators, including through the pilot Clipper Bay Pass program.[12] The success of that program could be used as inspiration for coordinating fare payments for riders who use AC Transit to access a ferry at the Waterfront.

Implementation: The difficulty of this strategy varies widely, depending on who subsidizes transit fares. If discounts can be applied directly to riders' Clipper cards, then logistical hurdles may be minimal. Micromobility solutions in the City (i.e. VEO scooters) also provide reduced fee programs for those in need. Negotiations with AC Transit, WETA, and any other parties would likely be the major challenge of implementing this strategy. The Parks, Recreation & Waterfront Department would need to work closely with the City's Transportation Department to determine if this is a feasible measure.

EXPANDED AC TRANSIT SERVICE TO THE WATERFRONT

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $$**

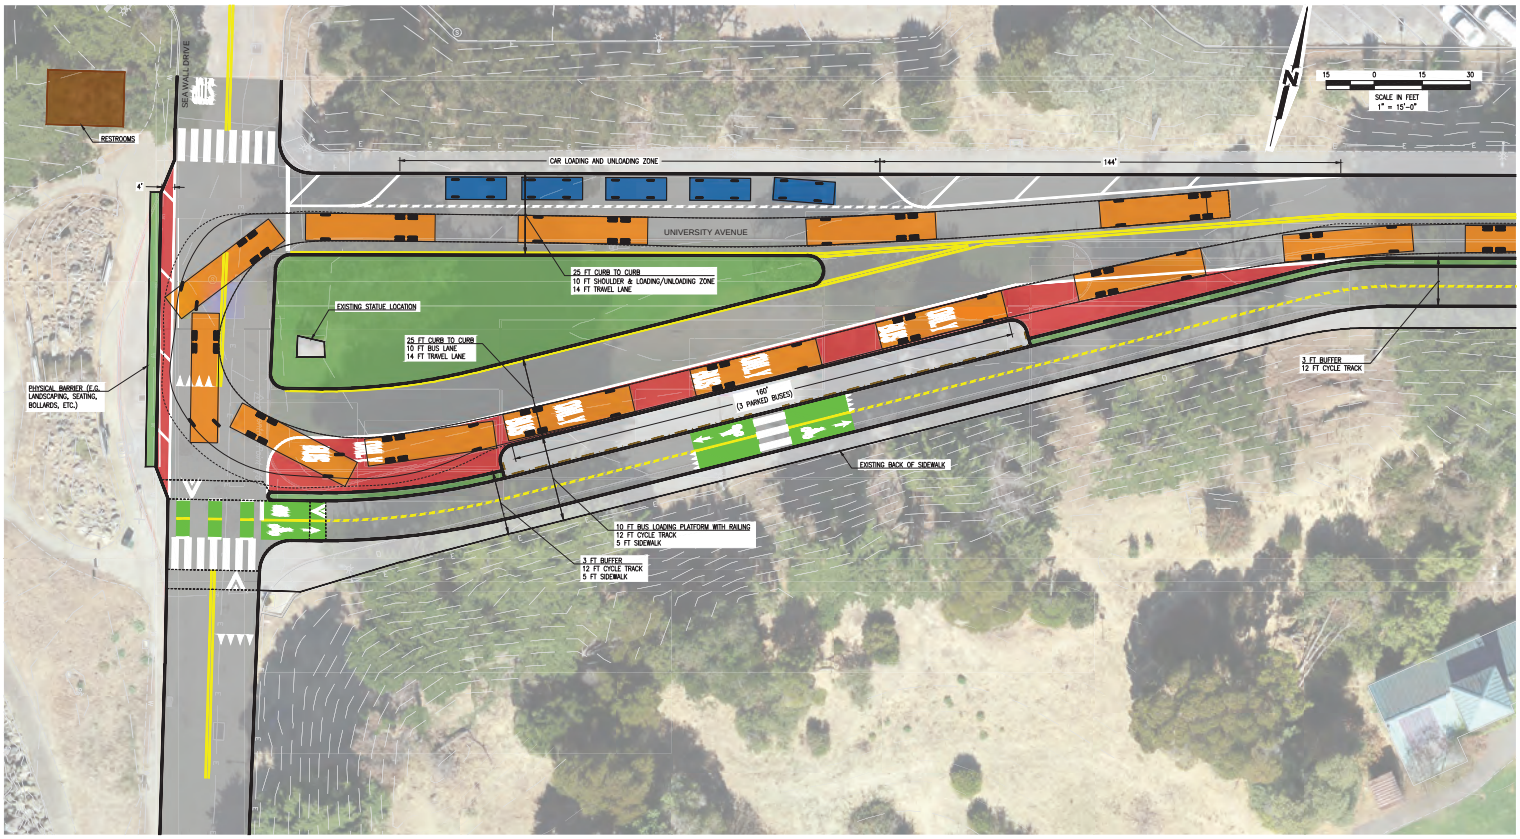
Overview: Currently, as of September 2024, AC Transit's Route 51B runs just one third of its routes to the Berkeley Waterfront, with the rest terminating around one mile to the east on University Avenue, at Berkeley Amtrak station. This alternating schedule results in service to the Waterfront only once every 30 minutes. Increasing the frequency of AC Transit service to the Waterfront could be an important step in shifting trips away from single occupancy vehicles. Frequent transit service is especially important when riders have to transfer between vehicles that each run infrequently, increasing the likelihood of long layovers and discouraging transit ridership.

Implementation: Ferry service at the Berkeley Waterfront may be cause enough for AC Transit to increase its usage of the Berkeley Waterfront as a terminus for Route 51B, especially if facilities at the pier can serve as layover facilities for bus operators. Otherwise, increasing transit frequency to the Waterfront would require significant coordination with AC Transit, and potentially subsidies from the City. Fortunately, there is existing 51B bus route infrastructure at the Waterfront, so the major hurdle would be securing increased operating resources for the expanded service.

ESTABLISH A TRANSPORTATION MANAGEMENT AGENCY

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $$$**

Overview: A transportation management agency (TMA) would be responsible for reducing single-occupant vehicle trips, reducing congestion and demand for vehicle parking, and improving access and circulation to and around the waterfront by increasing transportation options. A TMA would operate independently from the City and receive funding through various sources, including the City of Berkeley, board member dues, and the private sector.



Implementation: The success of establishing a TMA would depend on securing ongoing funding and committed participation of employers, businesses, and other interested parties who face parking and traffic challenges at the waterfront. Finding a balance between TMA activity and City staff would be a significant challenge, given the extensive role that the City of Berkeley already plays in managing the Waterfront.

WATER TRANSPORTATION PIER-FERRY PROJECT PARKING AND TDM PLAN

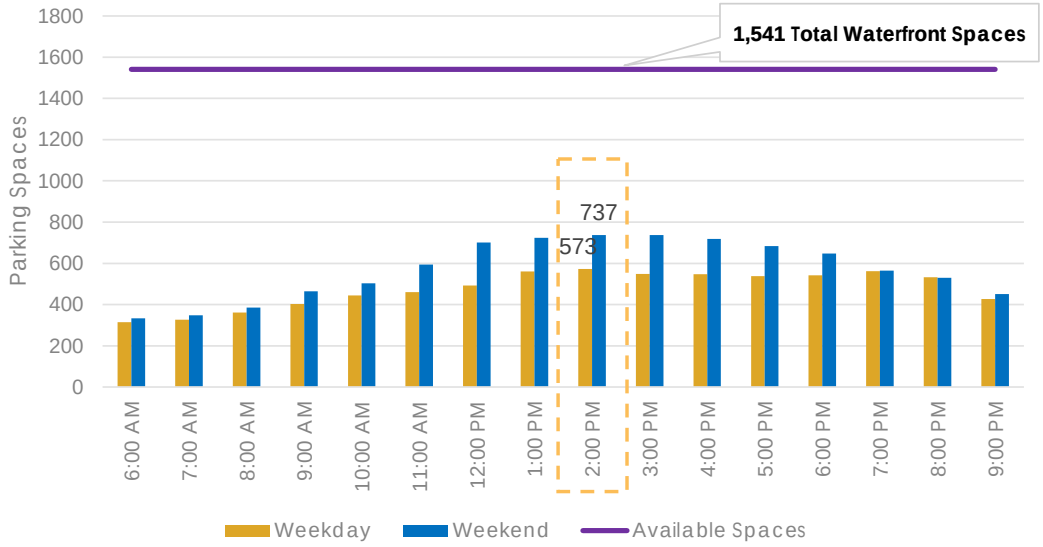
REVISED DRAFT Addendum

Introduction

This addendum supplements the parking analysis presented in the Berkeley Waterfront Transportation Pier-Ferry Project Parking and Transportation Demand Management (TDM) Plan (published March 7, 2025) by incorporating data recently collected by Waterfront Monitors and presenting additional analysis in response to public comments on the Plan.

The Final Draft Parking and TDM Plan (March 7, 2025) presented the analysis of hourly parking counts collected by Quality Counts between 5:30 am and 9:30 pm on the following dates:

- Saturday, April 6, 2024
- Thursday, April 11, 2024
- Thursday, August 1, 2024
- Thursday, August 22, 2024
- Saturday, August 24, 2024



Additionally, Waterfront Monitors collected parking counts on 554 days over the course of three years (May 28, 2021- February 12, 2024). The data was collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with limited counts also collected at 2 pm and 4 pm. The results were recorded on a paper survey form that was later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time and continued through Spring 2024, including parking counts at 2 pm and 4 pm.

At the Parks, Recreation and Waterfront Commission meeting on March 12, 2025, some members of the public and some commissioners inquired about the number of midday (i.e. 2 pm or 4 pm) counts included in the data that is presented in the analysis. The purpose of this addendum is to provide additional information about the hourly and historical parking counts included in the Final Draft Report and supplement the analysis with the data collected from April 2024 to August 2024 that included additional counts collected at 2 pm. This addendum also re-evaluates the availability of parking in the proposed ferry rider overflow lots at Marina Blvd and Skates/N Lot given the additional mid-day data. As discussed in the Parking and TDM Plan, City staff will use TDM and parking management strategies such as time restrictions and paid parking to ensure that ferry riders do not significantly impact current and future recreational activities.

WHEN IS THE PEAK DEMAND?

As shown in Figure 1, using hourly counts collected by Quality Counts, the Parking and TDM Plan concluded that 2 pm is the time of day when peak parking occupancy occurs throughout the Waterfront.

Figure 1: Parking Utilization by Time of Day

Source: Parking and TDM Plan, Figure 4, Kittelson & Associates, Inc. 2024
Note: Total available spaces include 320 parking spaces in Seawall Lot, bringing the total to 1,541.

Table 1 and Table 2 present weekday and weekend parking occupancy by time of day for each public lot. Darker red shades indicate higher parking utilization relative to capacity. As expected, peak parking demand varies by lot depending on the location and types of activities it serves. For instance, the Skates/N Lot located near the Skates by the Bay restaurant experiences higher demand around 7 pm (dinner time). The South Cove West Lot reaches peak occupancy between 1 and 3 pm on both weekdays and weekends, reflecting the concentration of recreation activities that are typically busier during that time frame.

The City and WETA have conceptually planned for 250 vehicle parking spaces in the Seawall Drive Lot (formerly known as HS Lordship lot) to be utilized by weekday ferry riders (i.e. commuters). The Parking and TDM Plan recommends using Marina Blvd and/or Skates/N Lot as designated overflow parking areas for the ferry riders because these lots were shown to be underutilized during the weekdays when commuter ferry riders would want to park. As shown in Table 1, on weekdays, in addition to the 250 dedicated spaces on the Seawall Drive Lot, ferry riders can access 83 (capacity (150) minus peak occupancy (67)) unutilized spaces on Marina Blvd and at least 66 (137 minus 71) spaces in the Skates/N Lot. This value is quite conservative, since the peak occupancy in the Skates/N Lot occurs at 8 pm, long after most ferry riders would have departed. If only considering peak occupancy between 8 am – 6 pm, up to 84 spaces would be available for ferry rider parking in the Skates/N Lot. On weekends, as shown in Table 2, based on the QualityCounts data ferry riders have access to 80 (150 minus 70) unoccupied spaces

on Marina Blvd and 35 (137 - 103) spaces in the Skates/N Lot (increasing to 75 spaces if only 8 am – 6 pm is considered).

Note: Darker Red lighted cells represent the higher parking occupancy number relative to capacity.

WEEKDAY MIDDAY PARKING OCCUPANCY, SPRING-SUMMER 2024

The following analysis is based on the parking counts collected by Waterfront Monitors over 29 days from April 2024 to August 2024 for the midday period (2 pm or 4 pm). As noted previously, this data was not included in the Final Draft Study because it was collected after that work had been initiated. Figure 2 illustrates the average mid-day occupancy during each weekday by lot. The overall highest parking demand is observed on Wednesdays with 31% (470) spaces occupied.

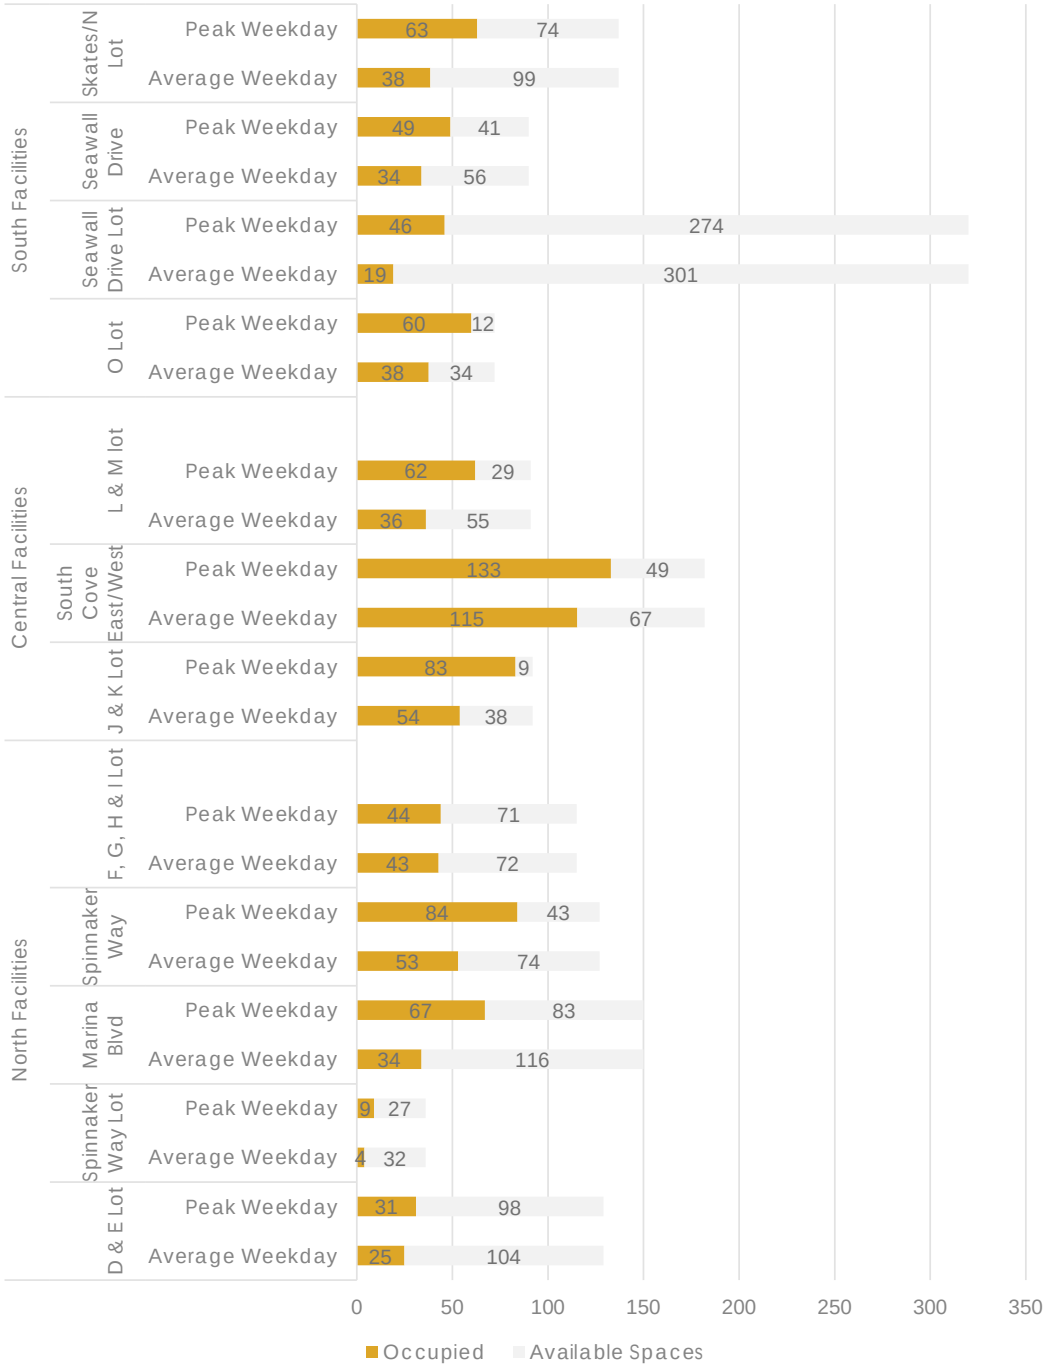

Figure 2: Weekday Midday Parking Occupancy

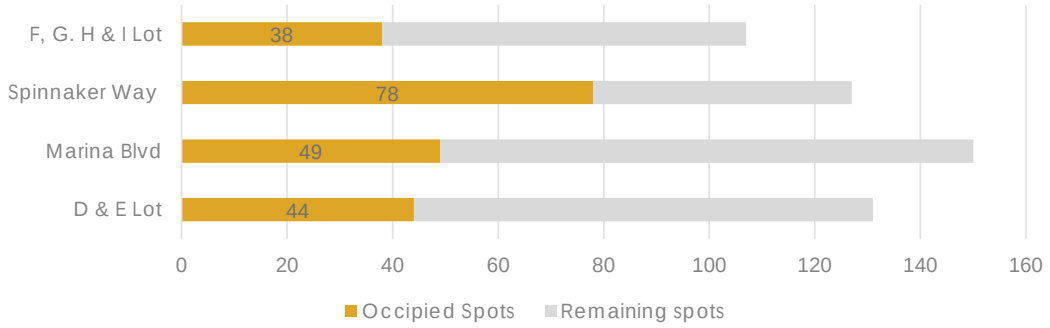
Source: Data Collected by Waterfront Monitors between April 2024 and August 2024, compiled by Kittelson & Associates, Inc. 2025

Figure 3 compares weekday peak parking counts with average parking counts for this midday April-August data set. The data shows that during the peak mid-day weekday demand, approximately 83 parking spaces are available at Marina Blvd. and 74 parking spaces are available at Skates/N Lot. This is very similar to the findings from the hourly Quality Counts data regarding the available capacity at these specific parking lots.

Figure 3: Peak Weekday vs Average Weekday Midday Parking Counts

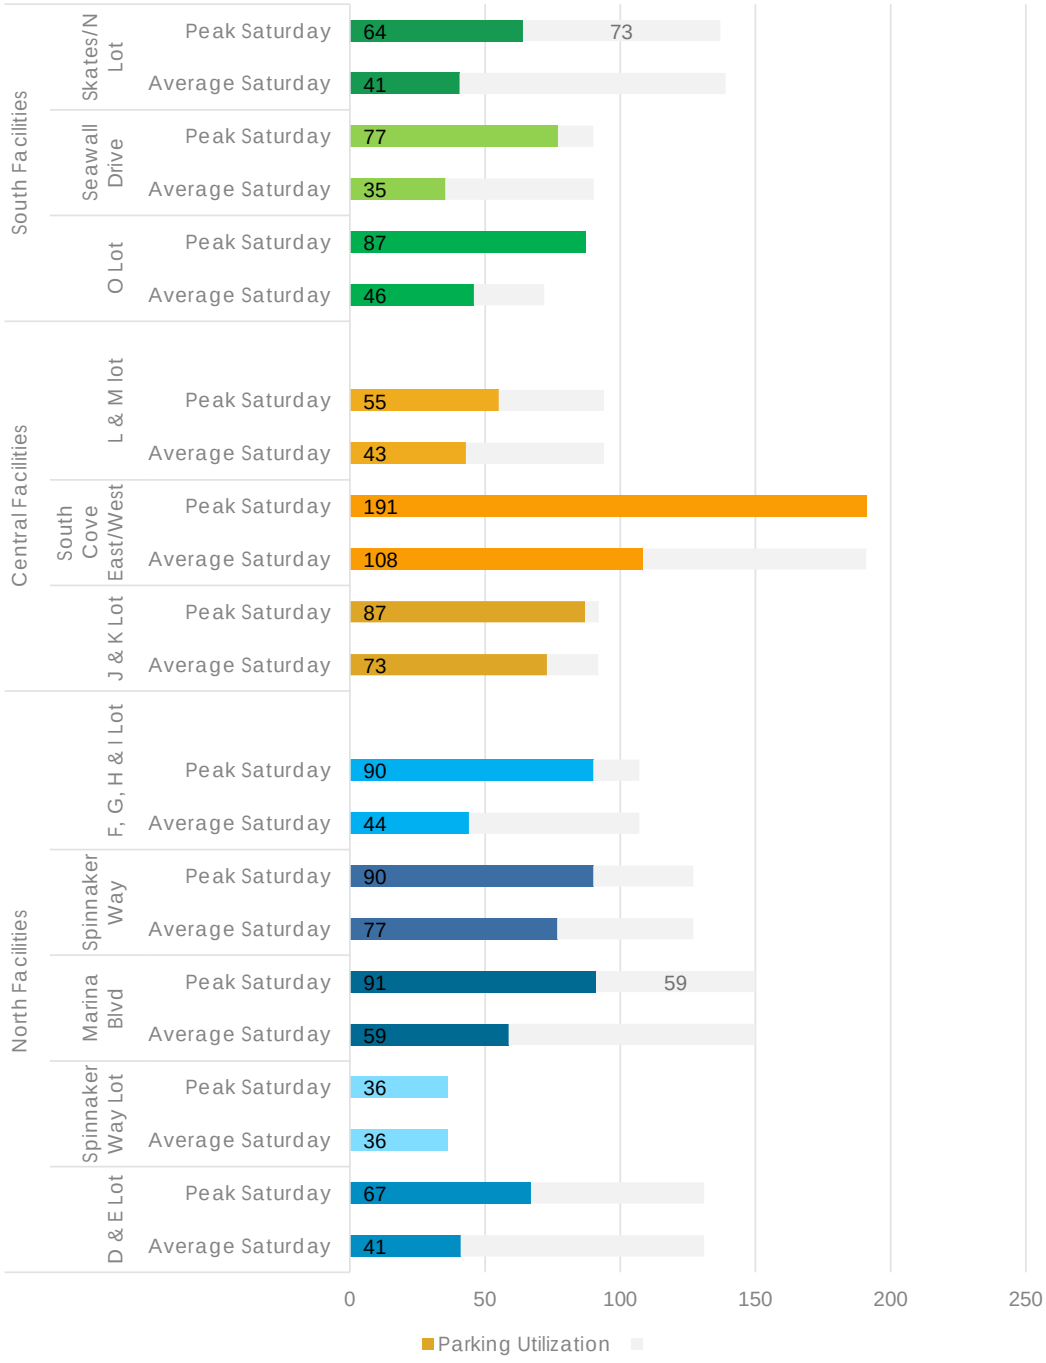


Source: City of Berkeley, Data Collected by Waterfront Monitors between April 2024 and August 2024
Compiled by Kittelson & Associates, Inc., 2025

WEEKEND MIDDAY PARKING OCCUPANCY

The dataset analyzed in the Final Draft Study included mid-day car counts on 26 weekend days. In April – August, 2024, the focus was on weekday data collection, and only one additional weekend midday parking count was collected (on May 25, 2024). Figure 4 presents the May 25, 2024, weekend midday parking count.

Figure 4: Weekend Midday Parking Data



Source: City of Berkeley, Data Collected by Waterfront Monitors on May 25, 2024.
Compiled by Kittelson & Associates, Inc., 2025

The Final Draft Study identified April 1, 2023 as the peak Saturday of the data analyzed. Figure 5 (which was included in the Final Draft Study) shows the average parking utilization on weekends (Saturday) in comparison with the peak Saturday on April 1, 2023. As shown in Figure 5, certain lots had more than double the occupancy on the peak Saturday compared to an average Saturday. Nevertheless, even on the peak Saturday, overall Waterfront public parking was 75% occupied with 306 spaces remaining. During the peak Saturday, centrally located lots observed 82% occupancy, and South Cove East/West reached full occupancy at 100%.

Comparing Figure 4, which reflects data collected on May 25, 2024 and Figure 5, which reflects data collected from 2021 to 2024 that was presented in the Parking and TDM Plan, Marina Blvd. has a similar occupancy level of about 33% with between 91 and 101 spaces available on average weekends.

Figure 5: Parking Utilization on Weekends (Average Saturday vs Peak Saturday)

Source: Parking Counts collected by Waterfront Staff from 2021 to 2024, data compiled by Kittelson & Associates, Inc. 2024

Note: Data does not include Seawall Drive/ Shorebird Lot.

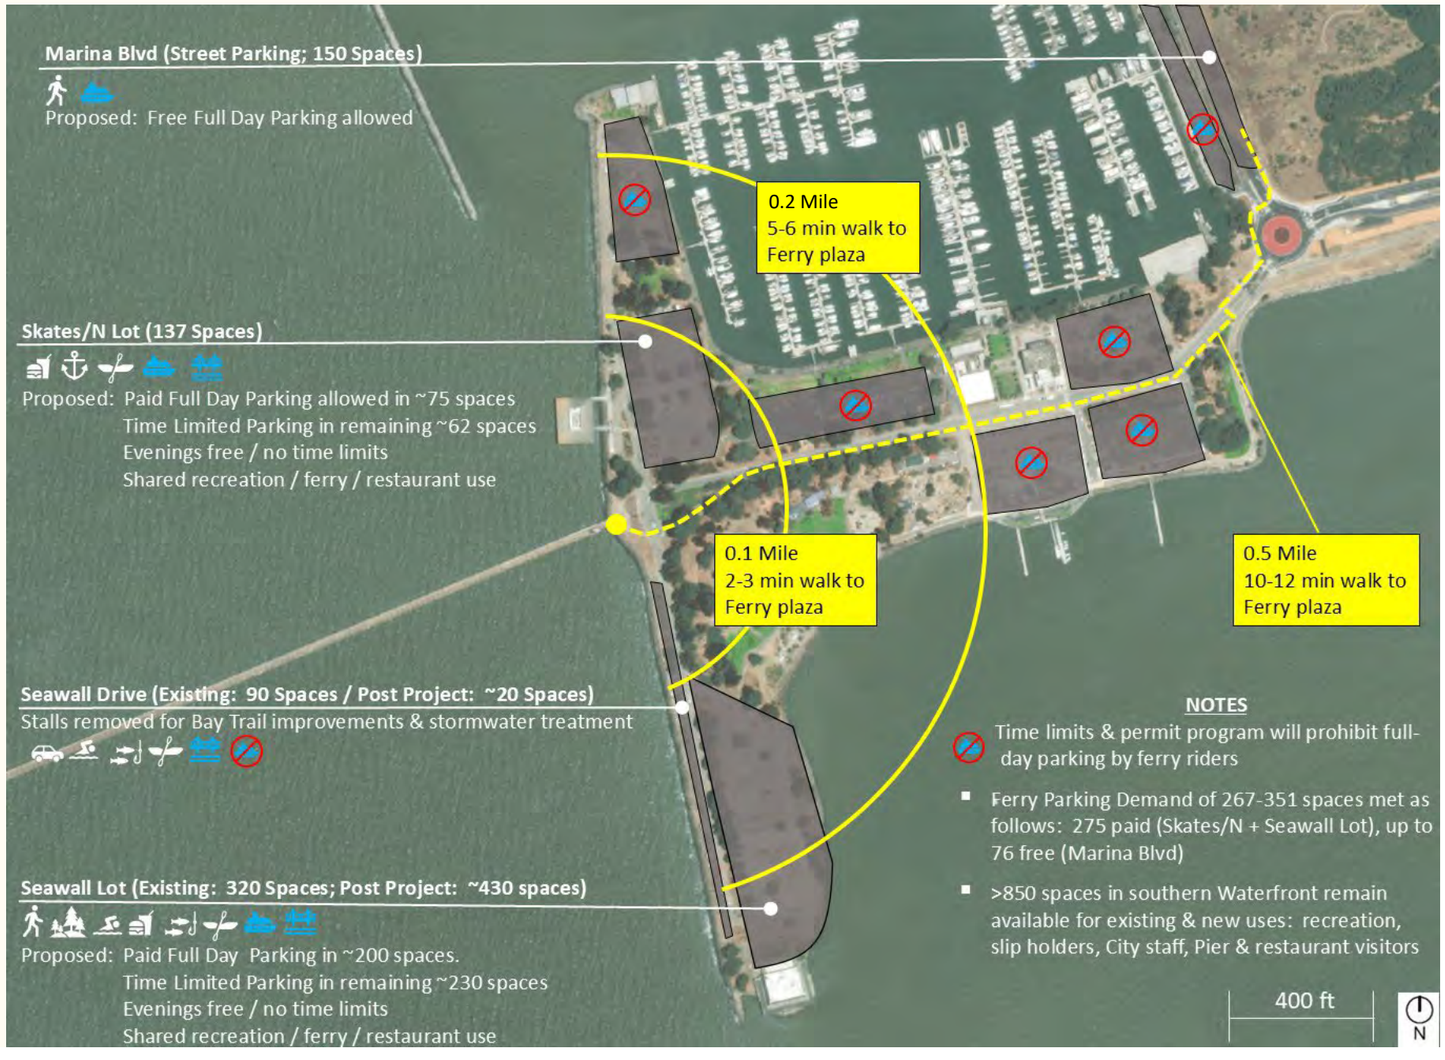
Conclusion

The parking occupancy data by time-of-day (i.e. Quality Counts data) indicates that while peak demand varies based on the parking lot, the overall peak demand for parking at the Waterfront occurs around 2 pm on both weekdays and weekends. Based on the Quality Counts data set, during the weekday peak period, approximately 83 parking spaces are available at Marina Blvd. and 74 parking spaces are available at Skates/N Lot. On weekends, 59 spaces remain available at Marina Blvd. and 73 spaces are available at Skates/N Lot. This midday analysis confirms that although the mid-day data gathered in April-August 2024 varies somewhat from the Quality Counts Data previously presented, the recommended overflow lots—Marina Blvd. and Skates/N Lot— offer sufficient capacity to accommodate overflow demand for parking from ferry riders on both weekdays and weekends.

The parking occupancy data collected from April to August 2024 aligns well with the earlier data collected between May 2021 and February 2024 that informed the Parking and TDM Plan. That plan estimated a weekday parking demand of 421 spaces for ferry users (171 more than the 250 spaces currently available at Seawall Drive) without TDM measures. With TDM strategies in place, demand is projected to drop by 65 spaces to 356. Additional parking management tools, such as expanding capacity at the Seawall Drive and/or Skates/N lots and adding wayfinding signage, could further help to manage parking. Combined, the Seawall parking lot, together with overflow parking at the Marina Blvd. and Skates/N Lot, offer sufficient parking stalls to accommodate ferry riders in currently unoccupied parking stalls without any impact to parking availability in other parking lots.

Pier-Ferry Preliminary Parking Management Plan

Ferry Parking Demand

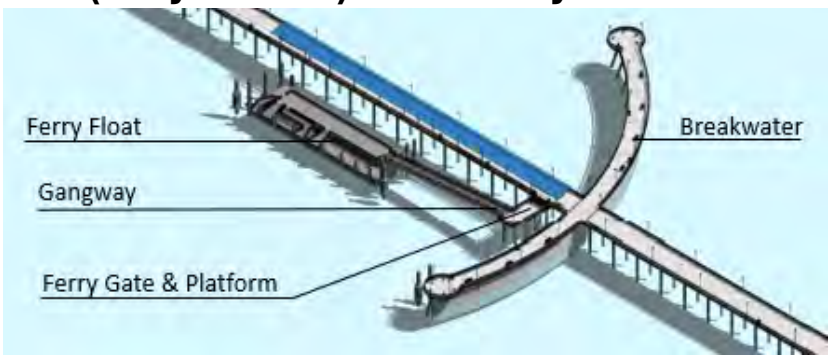


Weekday: 318 – 351 spaces
Weekend: 267 – 300 spaces

Project Transportation Demand Management (TDM) Measures

- University Ave. CycleTrack
- Secure Bike Parking
- Paid Parking
- Rideshare loading zones
- Shared Micromobility Stations

Future TDM Measures



- Increased AC Transit
- Shuttle Services
- Valet Parking
- Marina Blvd. Improvements
- Additional Bike Parking
- Expanded Micromobility Stations

Zoning Adjustments Board Staff Report

APP # ZP2026-0014 Use Permit to Establish Transportation Use (ferry service) at Berkeley Pier

February 26, 2026

Project Facts	Project Description:
Applicant: City of Berkeley Department of Parks, Recreation, and Waterfront **Property Owner:** City of Berkeley **Project Address:** 201 University Avenue **GP Land Use:** Waterfront / Marina (W) **Zoning:** Unclassified District (U) **Council Authority:** ZAB decision is not effective until after action by the City Council (BMC Section 23.208.020(C)) **CEQA:** NOP Published May 2025, Draft EIR to be published on February 27, 2026. **Project Planner:** Singeh Saliki **Prepared by:** Liza McNulty, Parks, Recreation, and Waterfront Department	The applicant is seeking approval to establish transportation via public ferry service as an allowable use at the Berkeley Pier. Constructed elements associated with the new use include a universal charging float (5,700 square feet), ferry gate and landing (750 square feet), gangway (1,200 square feet) and breakwater (4,300 square feet). **Zoning Permits Requested:** A Use Permit Public Hearing is required for the following permits: 1. **New Use. "Unclassified District Allowed Uses"** BMC Section 23.208.020(B), to establish transportation use at the Berkeley Pier. **Staff Recommendation:** Staff recommends that ZAB approve ZP2026-0014 pursuant to BMC Section 23.406.040 (E) "**Findings for Approval**" and subject to the attached Findings and Conditions of Approval. Because an approval by ZAB is not effective until Council action pursuant to BMC Section 23.208.020(C) "Unclassified District Use Permit Procedures", ZAB is not required to make a CEQA determination at this time. Rather, Council will make a CEQA determination before or concurrent with final action on this permit pursuant to BMC Section 23.208.020(C).

ZONING MAP

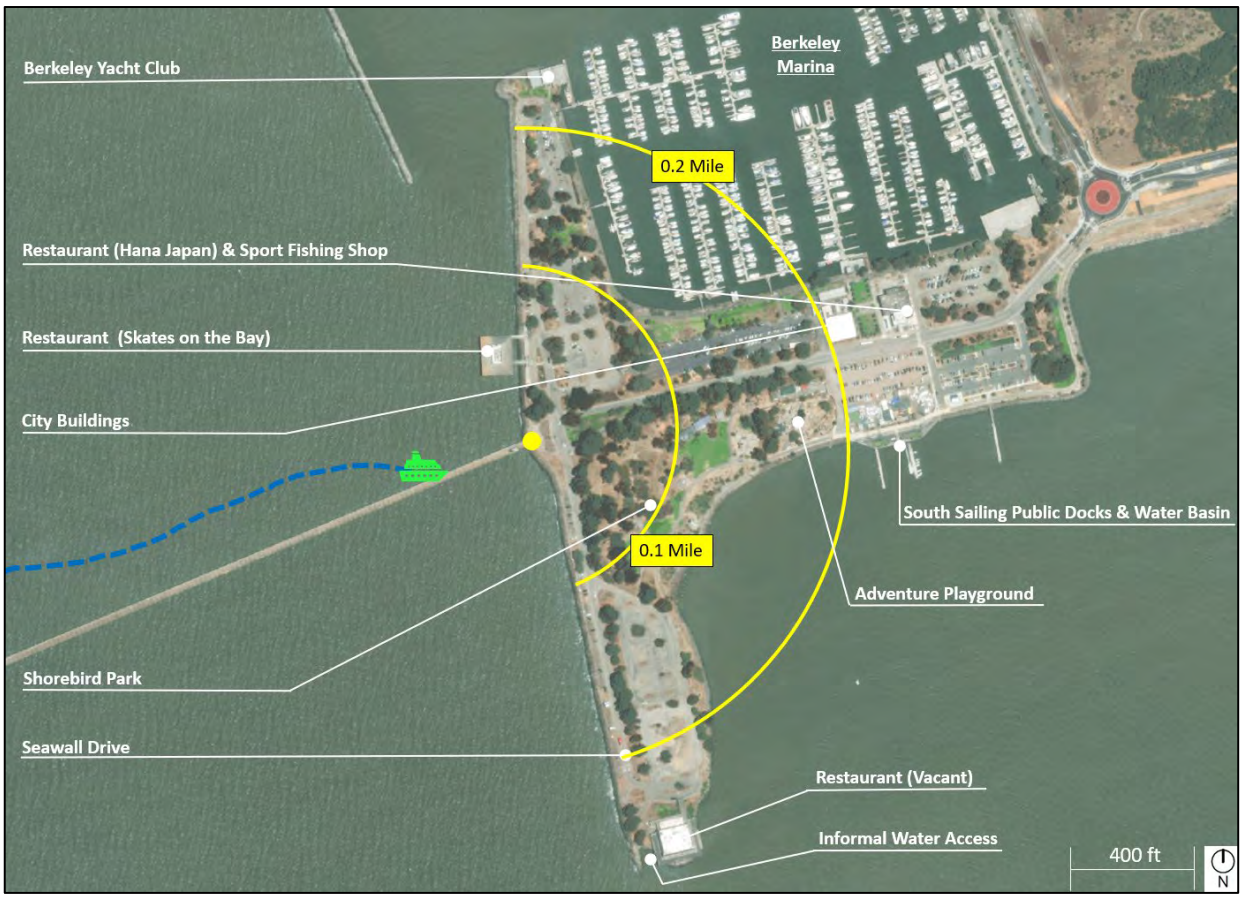
STREET VIEW



BACKGROUND

Subject Site

The subject site is located on the Berkeley Pier, approximately 650-feet west of the Berkeley shoreline in the San Francisco Bay. The Berkeley Waterfront is a single parcel (APN 06-2545-1) all of which is zoned as an Unclassified (U) zoning district. Berkeley Municipal Code (BMC) Section 23.208.020, Unclassified District, states that a Use Permit is required to establish any use in a U zoning district and establishes the procedures for a Use Permit application.

The Project is not within or adjacent to a residential zoning district. The nearest residential zone is over one mile east of the subject site. The nearest neighbors of the site (within 0.1 mile) are a restaurant, park and public parking lot. Within 0.2 miles of the site are additional public amenities (parklands, paths, playground), portions of the Berkeley Marina and additional public and mixed-use parking lots. Beyond 0.2 miles from the site, the Berkeley Waterfront includes additional parks, parking lots, restaurants and office buildings, a hotel, and various boating and recreational facilities. The Berkeley Marina has a total of 1,000 boat slips, of which up to 100 are permitted for live-aboard occupancy. Thirteen floating homes are berthed approximately 0.4 miles from the proposed use.

The Project site is served by an AC Transit bus line (Route 51B) which stops at the University Ave / Seawall intersection approximately every 25-minutes (weekdays).

Site History

The Berkeley Pier was constructed in 1926 by the Golden Gate Ferry Company to provide 24-hour ferry service between Berkeley and San Francisco. The pier was constructed as a two-way causeway, allowing vehicles to drive onto the pier and a ferry boat for transit between Berkeley and San Francisco. In 1937, eleven months after the Bay Bridge opened to auto traffic, the ferry line shut down, and the Pier was transferred to City ownership. Berkeley re-opened the pier for pedestrian and vehicle recreational use in 1938. By the 1950s, much of the pier had been abandoned, leaving 3,000 feet maintained for pedestrian access only. In 2015, the Pier was closed to the public due to observed structural deterioration.

In 2018, the City was approached by the Water Emergency Transportation Authority (WETA) regarding the possibility of a new public ferry service at the Berkeley Waterfront. In 2019, WETA and the Berkeley City Council authorized a Memorandum of Understanding (MOU) Agreement to jointly fund a planning study on the feasibility of rebuilding the Berkeley Pier to provide both ferry service and recreational access. The Feasibility Study concluded in 2023 with the recommendation of preferred layouts for pier, breakwater, ferry terminal, and landside improvements. In 2024, the City obtained grant funding for the detailed design, environmental analysis, and permitting of the Pier-Ferry Project.

Community Meeting

Prior to submitting this application, the City installed a pre-application poster on site in January 2026. The City has conducted extensive public outreach related to the Pier-Ferry Project.

Transportation & Infrastructure Commission, January 15, 2025

The location of the ferry landing on the north side of the pier was selected based on public feedback during the feasibility phase that this configuration reduced the potential for conflict between in-water recreation and ferry vessels.

Some existing waterfront users consistently express concern that the operation of a public ferry would negatively impact the ability of recreation visitors to find parking at the Berkeley Waterfront. The City and its consultants collected parking utilization data on 588 days between May 2021 and August 2024. Data was collected at various times throughout the days including five separate days of full-day continuous data collection over five months. This data was analyzed by transportation engineering and planning consultants to determine existing parking patterns, including peak use and occupancy, turn-over and other factors. Additional analyses were conducted based on public feedback on the Draft document and included in an addendum. The analysis (**Attachment 6**) concludes that even during peak visitation periods and hours, multiple parking lots at the Berkeley Waterfront are currently under-utilized and there are sufficient parking stalls to accommodate ferry riders within these under-used parking lots without impacting recreation parking access.

The City has developed a Preliminary Parking Management Plan (**Attachment 7**) that would limit full-day parking by ferry riders to only those lots identified as having capacity available and would prohibit full-day parking by ferry riders at those lots that do not have excess capacity. The project is subject to permitting from the San Francisco Bay Conservation District (BCDC), among other state, local and federal agencies. To issue a permit, BCDC must determine that the proposed project is consistent with the McAteer-Petris Act and Bay Plan Policies, which include a requirement that "Facilities provided for park and marina patrons, such as parking, should not be usurped by ferry patrons." As such, the final parking management plan would be submitted to BCDC for review and approval as part of the project BCDC permit application.

CITY COUNCIL REVIEW

The ZAB decision on this Use Permit is not effective until after action by the City Council (BMC 23.208.020) pursuant to BMC Section 23.208.020 (C):

C. *Use Permit Procedures*. The City shall review and act on Use Permit applications in the U district as follows:

1. Each application shall be first submitted to the Planning Commission with the Planning Commission making a report to the ZAB. If the Planning Commission fails to take an action on the report within 30 days after a Use Permit application is deemed complete, the ZAB will consider the application without a Planning Commission report.

2. After Planning Commission review, the ZAB shall take an action to approve, conditionally approve, or deny the application. The ZAB's decision is not effective until after action by the City Council. ZAB decisions may not be appealed.

3. The ZAB will send a report of its decision, including findings and any conditions, together with the Planning Commission report, to the City Clerk within 14 days of final action.

4. The City Council will review and act on the application within 30 days of the ZAB decision.

5. The Council may affirm, reverse, or modify the ZAB decision.

Parks, Recreation, and Waterfront Department and Planning Department staff have mutually agreed to extend the timeline outlined in BMC Section 23.208.020(C)(4) for Council action after the ZAB decision.

ANALYSIS

Project Scope

The permit would establish transportation, specifically public zero-emission electric ferry service, as an allowable use at the Berkeley Pier. New structures necessary to accommodate the use include:

- Universal charging and boarding floats (~5,700 square feet), which provide the infrastructure for the ferry vessel to dock and charge while passengers on and off board;
- Ferry gate and landing (~750 square feet), including signage and ticket kiosks, connecting the recreational pier to the gangway;
- Gangway connecting the Ferry landing to the float (~1,200 square feet); and
- Breakwater, providing protection for the ferry terminal elements described above (~4,300 square feet). The breakwater also enhances public access for pedestrian recreation and fishing.

These structures would be designed to essential facility standards to allow the ferry to serve as a disaster response and recovery resource following a significant seismic event.

The Use Permit application is limited to the establishment of a new use (public transportation) and the construction required specifically to implement this new use. The repair and replacement of existing infrastructure to serve existing uses, including the replacement of the existing Berkeley Pier, does not require a Use Permit.

Ferry service would be operated by WETA. Prior to initiation of ferry service, the City Council would execute an MOU or similar formal agreement with WETA to authorize the use of the Berkeley Pier for the ferry service. A summary of the proposed Berkeley Ferry Service included in the WETA Berkeley Ferry Service Business Plan (V1.0)[1] includes:

- WETA envisions operating two vessels on the weekday route and a single vessel during weekend service. Weekday ridership is projected to be 955 riders in the first year of service, increasing to 1,018 riders in the 10th year of service. Weekend ridership is projected to be 684 riders in the first year of service and 729 riders in the 10th year of service.
- Weekday service every 35-minutes between Berkeley and San Francisco. The one-way travel time is about 25-minutes. Service would run from 6:30 am to 11:15 am in the morning and 4 pm to 7:40 pm in the evenings.
- Weekend service every 70-90 minutes. Weekend service could include a Berkeley - Larkspur route; with one-way travel time of 35-minutes. Service would run from 8:30 am to 5 pm weekends.
- The fare for Berkeley – San Francsico service is estimated to be $5.17 - $5.41 per trip, and fare for Berkeley – Larkspur service estimated to be $10.78 - $12.72 per trip (in 2026; fares are projected to increase 3% annually).
- Special event service may operate between Berkeley and San Francsico or Mission Bay for example, for events at the Chase Center, Oracle Park or Berkeley Marina. Special event service fare pricing would be set to cover WETA costs.

[1] https://d262kwcyxl71on.cloudfront.net/wp-content/uploads/20240926061356/Item-8A-Berkeley-Ferry-Service-Business-Plan.pdf

The WETA Berkeley Ferry Service Business Plan is a living document and future updates prior to service initiation are expected.

Findings

Draft findings for approval can be found in Attachment 2 to the staff report.

Environmental Review

The City published a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the Pier-Ferry Project in May 2025. A Draft EIR for the Project is expected to be published for public review in late February 2026. ZAB is not required to make a CEQA determination concurrent with this permit approval because the permit is not effective until Council action pursuant to BMC Section 23.208.020 (C) "Unclassified District Use Permit Procedures". Council, as the decision maker, will make a CEQA determination before or concurrent with final action on this permit pursuant to BMC Section 23.208.020.

The Berkeley City Council must certify a Final EIR for the Project before it can obtain permits from the City, including this Use Permit, or from other regional or state agencies with jurisdiction over the Project. Federal environmental review pursuant to the National Environmental Policy Act will be conducted by the lead federal agency prior to issuance of any federal permit.

Establishing transportation as an allowable use is fundamental to the overall Project schedule and progress. In addition to a Use Permit, the Project must obtain permits from multiple agencies with jurisdiction over the Project, including but not limited to BCDC, Army Corps of Engineers, and California Regional Water Quality Control Board. These permits have lengthy application review and processing periods, and the City will begin preparing these applications immediately after completing public review of the Draft EIR. For the Project to proceed with these applications and remain on schedule to be shovel-ready by 2027, the City is prioritizing ZAB review and action on the Use Permit application prior to publication of the Draft EIR.

ADVISORY BODY REVIEW

Design Review

The constructed elements related to establishing the new use are limited to in-water infrastructure to allow ferry docking and boarding to occur (vessel charging float, gangway, boarding platform and breakwater). Due to the limited and technical nature of the constructed elements associated with the new use, staff has determined that pursuant to BMC Section 23.406.070(D), design review will occur by Planning staff. A preliminary staff-level design review has been completed, and staff did not have any comments on the structures necessary to accommodate the new use (boarding/charging float, gangway, ferry gate/landing platform and breakwater). Ongoing staff-level design review will occur concurrent with project permitting.

Planning Commission Review

Pursuant to BMC Section 23.208.020 (C), "Unclassified District Use Permit Procedures," the Planning Commission considered the proposed Use Permit at its January 21, 2026 meeting. The Planning Commission passed a resolution recommending that the Zoning Adjustments Board and City Council approve the use permit for the Berkeley Ferry project (**Attachment 8**).

POLICY CONSISTENCY

General Plan Consistency

The 2002 General Plan contains several policies applicable to the project, including the following:

1. **Policy T-2: Public Transportation Improvements**. Encourage regional and local efforts to maintain and enhance public transportation services and seek additional regional funding for public and alternative transportation improvements.

   Staff Analysis: The project establishes a new, zero-emission public transportation service connecting the City of Berkeley to San Francisco.

2. **Policy T-9 Ferry Service**. Continue to evaluate the possibility of working with the City of Albany, the racetrack owners, regional transportation agencies, and AC Transit to establish a ferry terminal and regular San Francisco ferry service from Berkeley at the foot of Gilman Street or at the foot of University Avenue as an alternative to the Bay Bridge and as an essential recovery element following a significant seismic event.

   Action A. Ensure transit, shuttle, and bicycle connections are in place before beginning ferry service to minimize parking demand and traffic caused by people driving to the ferry service.

   Action B. Prioritize transit, pedestrian, and bicycle public expenditures over expenditures of public funds for ferry service, and ensure that new ferry service will not result in a reduction in public subsidies for existing transit services.

   Action C. Ensure that ferry services are less environmentally detrimental than the automobile. Advocate for low-emission, environmentally sensitive ferries.

   Staff Analysis: The project proposes to establish a ferry terminal and regular San Francisco ferry service from Berkeley at the foot of University (i.e. the Berkeley Pier) as an alternative to the Bay Bridge. The facilities would be designed to essential facility standards and the ferry would serve as a disaster response and recovery resource following a significant seismic event. The larger Pier-Ferry Project includes improvements to existing transit and bicycle connections, and the proposed use is for a zero-emission electric ferry. Ferry service would be operated by WETA. Funding for

project construction has not been secured.

3. **Policy S-12 Utility and Transportation Systems**. Improve the disaster-resistance of utility and transportation systems to increase public safety and to minimize damage and service disruption following a disaster.

   Staff Analysis: The ferry terminal facilities would be designed to essential facility standards and the ferry would serve as a disaster response and recovery resource following a significant seismic event.

Berkeley Marina Master Plan Consistency

The Berkeley Marina Master Plan provides a long-term vision for enhancing one of the City's most valued Waterfront assets. A key objective of the plan is to maintain and improve recreational, environmental, and boating facilities while preserving the Marina's open space and natural habitat. The Berkeley Marina Master Plan was adopted in 2003 and did not contemplate the closure of the Berkeley Pier nor the operation of public ferry service. The project is consistent with the guiding principles and policies in the Master Plan, including to maintain and upgrade infrastructure, providing for appropriate recreational and commercial/non-profit development that both encourages use and protects and enhances the natural resources of the Marina lands and enhance access and use of the Marina.

Berkeley Local Hazard Mitigation Plan Consistency

The City's Local Hazard Mitigation Plan (2019) identifies developing a ferry service as a High Priority Action that would play an important role in the City's emergency response and recovery after a major disaster.

Berkeley Climate Action Plan Consistency

The City's Climate Action Plan identifies public transit as a more sustainable form of transportation (Chapter 3) and sets a goal to establish ferry service at the Berkeley Marina that would connect to San Francisco and other locations.

Regional Transportation Plan Consistency

Ferry service connecting Berkeley to San Francsico is included in multiple regional transportation planning documents, including the Metropolitan Transportation Commission adopted Plan Bay Area 2050, Draft Plan Bay Area 2050+ and the WETA 2050 Service Vision.

RECOMMENDATION

Because of the project's consistency with the Zoning Ordinance and General Plan, and minimal impact on surrounding properties, staff recommends that the Zoning Adjustments Board **APPROVE** ZP2026-0014 pursuant to BMC Section 23.406.040 (E) "**Findings for Approval**" and subject to the attached Findings and Conditions (see Attachments 2 and 3).

Attachments

1. Table 1: Special Characteristics
2. Draft Findings
3. Draft Conditions of Approval
4. Project Plans, received January 13, 2026
5. Notice of Public Hearing
6. Transportation Demand Management Study & Addendum Final Draft
7. Preliminary Parking Management Plan Exhibit
8. Planning Commission Resolution No. 2026-01

Attachment 1

Table 1: Special Characteristics

Characteristic	Applicability	Explanation
Affordable Child Care Fee for qualifying non-residential projects (Per Resolution 66,618-N.S.)	No	These fees apply to net newly constructed nonresidential gross floor area over 7,500 square feet. The project includes less than 7,500 square feet of net new commercial space. Therefore, the project is not subject to this fee.
Affordable Housing Fee for qualifying non-residential projects (Per Resolution 66,617-N.S.)		
Affordable / Inclusionary Housing Requirements (BMC Chapter 23.328)	No	The project is not a housing development project, as defined in BMC 23.328.020[a].
Alcohol Sales/Service	No	The project is not proposing any alcohol sales or service with this permit.
Bird Safe Buildings (BMC Section 23.304.150)	No	The project does not include any buildings.
Coast Live Oak Trees (BMC Chapter 6.52)	No	There no Coast Live Oak (*Quercus agrifolia*) trees on the project site.
Creeks	No	No creek or culvert, as defined by BMC Chapter 17.08, exists on or within 30 feet of the project site.
Density Bonus	No	The project does not include any buildings.
Hard Hats (BMC Chapter 13.107)	No	The applicant is the City of Berkeley, not a private entity, and not a "Covered Project" as defined in this section.
Historic Resources	No	The project does not include demolition of any buildings. Reconstruction of the existing Pier is not a new use, and not subject to this Use Permit.
Housing Accountability Act (HAA) (Gov't Code Section 65589.5(j))	No	The project does not include housing.
Housing Crisis Act of 2019 (SB 330)	No	The project does not include housing.
Opportunity Sites	No	The subject site is in the San Francisco Bay and not an opportunity site.
Rent Controlled Units	No	The project does not include existing or new housing.
Residential Preferred Parking (RPP)	No	The project does not include housing.

Characteristic	Applicability	Explanation
Seismic Hazards (SHMA)	Yes	The project site is in San Francisco is not mapped by the State Seismic Hazard Zones map. [c] Based on nearby geologic mapping and project specific geotechnical analyses and reporting it is expected that the project site has "very high" liquefaction risks and is not susceptible to landslide. Project would be designed as an essential facility to withstand maximum credible earthquake scenario. Environmental impact related to this topic will be analyzed in the project EIR.
Soil/Groundwater Contamination	No	There are no Cortese Listed [d] sites within or adjacent to the project site. The project site is located within the City's Environmental Management Area. Environmental impact related to this topic will be analyzed in the project EIR.
Transit	Yes	The project site is currently served by an AC Transit bus line, and would establish new public transit via zero emission electric ferry service to San Francisco.

Notes:

a. BMC 23.328.020(E) defines a "Housing Development Project" for purposes of inclusionary housing requirements as "a development project, including a Mixed-Use Residential project involving the new construction of at least one Residential Unit. Projects with one or more buildings or projects including multiple contiguous parcels under common ownership or control shall be considered as a sole Housing Development Project and not as individual projects.

b. Government Code Section 65589.5(h)(2) "Housing development project" means a use consisting of any of the following: (A) residential units only, (B) mixed-use developments consisting of residential and nonresidential uses in which at least two-thirds of the square footage is designated for residential use, and (C) transitional or supportive housing. Government Code Section 65905.5(b)(3)(C) "Housing development project" includes a proposal to construct a single dwelling unit. This subparagraph shall not affect the interpretation of the scope of paragraph (2) of subdivision (h) of Section 65589.5.

c. California Department of Conservation. DOC Maps: Geologic Hazards. Available: https://maps.conservation.ca.gov/geologichazards/

d. Cortese List is an annually updated list of hazardous materials sites complied pursuant Government Code Section 65962.5.

Zoning Adjustments Board Findings

App #ZP2026-0014 Use Permit to Establish Transportation Use (ferry service) at Berkeley Pier

February 26, 2026

Project Facts	Project Description:
Applicant: City of Berkeley Department of Parks, Recreation, and Waterfront **Property Owner**: City of Berkeley **Project Address:** 201 University Avenue **GP Land Use:** Waterfront / Marina (W) **Zoning:** Unclassified District (U) **Council Authority:** ZAB decision is not effective until after action by the City Council (BMC Section 23.208.020(C)) **CEQA:** NOP Published May 2025. Draft EIR to be published on February 27, 2026. **Project Planner:** Singeh Saliki **Prepared by:** Liza McNulty, Parks, Recreation and Waterfront Department	The applicant is seeking approval to establish transportation via public ferry service as an allowable use at the Berkeley Pier. Constructed elements associated with the new use include a universal charging float (5,700 square feet), ferry gate and landing (750 square feet), gangway (1,200 square feet) and breakwater (4,300 square feet).
	Zoning Permits Requested:
	1. **New Use.** Use Permit under BMC Section 23.208.020(B), **"Unclassified District Allowed Uses"** to establish transportation use at the Berkeley Pier.
	Staff Recommendation
	Staff recommends that ZAB approve ZP2026-0014 pursuant to BMC Section 23.406.040 (E) "**Findings for Approval**" and subject to the attached Findings and Conditions of Approval. Because an approval by ZAB is not effective until Council action pursuant to BMC Section 23.208.020(C) "Unclassified District Use Permit Procedures", ZAB is not required to make a CEQA determination at this time. Rather, Council will make a CEQA determination before or concurrent with final action on this permit pursuant to BMC Section 23.208.020(C).

CEQA

The City published a Notice of Preparation (NOP) of an Environmental Impact Report (EIR) for the Pier-Ferry Project in May 2025. A Draft EIR for the Project is expected to be published for public review in late February 2026. ZAB is not required to make a CEQA determination concurrent with this permit approval because the permit is not effective until Council action pursuant to BMC Section 23.208.020 (C) "Unclassified District Use Permit Procedures". Council, as the decision maker, will make a CEQA determination before or concurrent with final action on this permit pursuant to BMC Section 23.208.020.

FINDINGS FOR APPROVAL

As required by BMC Section 23.406.040 (E) (1-4) "Findings for Approval," the following findings shall be made:

1. To approve a Use Permit, the ZAB shall find that the proposed project or use:
   (a) Will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or visiting in the area or neighborhood of the proposed use; and

   Evidence: The project will not be detrimental to the health, safety, peace, morals, comfort or general welfare of persons residing or visiting in the area because the proposed use will establish a new transportation option for commuting, recreational or personal travel to San Francsico, which is a benefit to persons working, residing or visiting the area. The project will not be detrimental to the general welfare of persons who use the Berkeley Waterfront because the City has conducted an analysis of parking that demonstrates that there is sufficient parking available to accommodate this use.

   (b) Will not be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood, or to the general welfare of the City.

   Evidence: The project will not be detrimental or injurious to property and improvements of the adjacent properties because the Berkeley Waterfront is a single property, owned and managed by the City of Berkeley and because the use of a public ferry is a water-related use consistent with the Public Trust Doctrine governing Berkeley waterfront land use. The project will not be detrimental to the general welfare of the City because establishing ferry service in Berkeley has been identified as a goal in multiple City and regional planning documents to improve the general welfare of the City by reducing greenhouse gases, improving transportation access and providing emergency response and disaster recovery. In addition, the findings for required discretionary permits are satisfied per the Evidence in 2 and 3 below.

2. To approve the Use Permit, the ZAB must also make any other Use Permit findings specifically required by the Zoning Ordinance for the proposed project.

   Evidence: N/A

3. When taking action on a Use Permit, the ZAB shall consider in its findings:

   (a) The proposed land use; and

   Evidence: The project is consistent with the proposed land use because all uses not prohibited by law are permitted in the U District pursuant to BMC Section 23.208.020 (B) "Allowed Uses" and because the project is consistent with the general plan policies and designated Waterfront / Marina land use which includes water transit facilities.

   (b) The structure or addition that accommodates the use.

   Evidence: The structure that accommodates the use is in-water ferry infrastructure, including a breakwater, gate and landing/boarding platform, gangway and float. This infrastructure is consistent with the allowable uses governing the site.

4. Required findings shall be made based on the circumstances existing at the time a decision is made on the application.

   Evidence: The required findings are satisfied because the project has been determined to be fully compliant with all applicable regulations based on the project plans submitted on January 13, 2026 and evaluated based on the existing conditions of the subject site and surrounding neighborhood at the time of decision.

5. The Zoning Officer shall deny an AUP application if unable to make any of the required findings.

   Evidence: N/A

LAND USE PLANNING

STANDARD CONDITIONS OF APPROVAL
APPLICABILITY

Use Permits approved through the City of Berkeley are subject to Standard Conditions of Approval (Standard COAs). The City of Berkeley has established Standard COAs that identify requirements for the construction and operation of the approved project or use. This includes general administrative conditions, permitting requirements, project construction and the regulation of on-going, on-site uses. Compliance requirements with the Berkeley Municipal Code, building permit review and issuance process, construction, final inspection requirements, certificate of occupancy, and on-going operations of the approved use are included in this document.

The Standard COAs may vary based on site size, location, environmental settings, topography, historic alteration or approved uses. Variations in the application of the Standard COAs may occur based on the project scope and site-specific characteristics including but not limited to parcel size, location, topography, and use.

Conditions which have specified thresholds due to size, uses, and other characteristics are identified.

Part I. Administrative Conditions
- A. General Project Conditions
- B. Project Specific Conditions

Part II. Prior to Issuance of Demolition Permit

Part III. At the Time of Building Permit Submittal

Part IV. Prior to Issuance of Building Permit
- A. Toxics

Part V. During Demolition/Construction
- A. Building & Safety
- B. Land Use Planning
- C. Public Works

Part VI. Fees

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1.	**Project Approval.** This Project approval is for Berkeley Pier-Ferry (201 University Avenue), as substantially shown and described on the Project plans dated January 13, 2026, except as required to be modified by Conditions of Approval herein and plans as presented to the Zoning Adjustments Board on February 26, 2026 ("Approval Date"). For any Condition herein that requires preparation of a Final Plan where the project applicant has submitted a conceptual plan, the Project applicant shall submit final plan(s) in substantial conformance with the conceptual plan and incorporate any required modifications.	City of Berkeley	On-Going	Land Use Planning
2.	**Approval Limited to Proposed Project and Replacement of Existing Uses.** This Use Permit authorizes only the Proposed Project described in the application. This project approval does not authorize other uses, structures or activities not included in the Project Description. When the City approves a new use that replaces an existing use, any prior approval of the existing use becomes null and void when permits for the new use are exercised (e.g., building permit or business license issued). To reestablish the previously existing use, an applicant must obtain all permits required by the Zoning Ordinance for the use. (BMC Sections 23.404.060.B.1 and 2)	City of Berkeley BMC Sections 23.404.060	On-Going	Land Use Planning
3.	**Compliance Required.** All land uses and structures in the City of Berkeley must comply with the Zoning Ordinance and all applicable City ordinances and regulations.	City of Berkeley BMC Section 23.102.050(B)	On-Going	Land Use Planning
4.	**Other Regulations.** Compliance with the Zoning Ordinance does not relieve an applicant from requirements to comply with other federal, state, and City regulations that also apply to the property.	City of Berkeley BMC Section 23.102.050 (E)		

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
5.	**Conformance with Approved Plans.** All work performed under an approved Use Permit shall follow the approved plans as presented to ZAB on Month, date, year and any Conditions of Approval.	City of Berkeley BMC Section 23.404.060 (B)(4)	On-Going	Land Use Planning
6.	**Permit Modifications.** No change in the use or structure for which this Permit is issued is permitted unless the Permit is modified by the Zoning Adjustments Board. The Zoning Officer may approve changes to plans approved by the Board which reduce the size of the Project, consistent with the Board's policy adopted on May 24, 1978.	City of Berkeley BMC Section 23.404.070	On-Going	Land Use Planning
7.	**Permit Revocation.** The City may revoke or modify a discretionary permit for completed projects due to: 1) Violations of permit requirements; 2) Changes to the approved project; and/or 3) Vacancy for one year or more. No lawful residential use can lapse, regardless of the length of time of the vacancy. Proceedings to revoke or modify a permit may be initiated by the Zoning Officer, Zoning Adjustments Board, or City Council referral.	City of Berkeley BMC Section 23.404.080	On-Going	Land Use Planning

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
8.	**Permit Remains Effective for Vacant Property.** Once a permit for a use is exercised and the use is established, the permit authorizing the use remains effective even if the property becomes vacant. The same use as allowed by the original permit may be re-established without obtaining a new permit, except as set forth in Standard COA #5 above.	City of Berkeley BMC Section 23.404.060	On-Going	Land Use Planning
9.	**Exercise and Expiration of Permits** A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. A. A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. B. A permit authorizing construction is exercised when both a valid City building permit (if required) is issued and construction has lawfully begun. C. The Zoning Officer may declare a permit lapsed if it is not exercised within one year of its issuance, except if the applicant has applied for a building permit or has made a substantial good faith effort to obtain a building permit and begin construction. The Zoning Officer may declare a permit lapsed only after 14 days written notice to the applicant. A determination that a permit has lapsed may be appealed to the Zoning Adjustments Board in accordance with Chapter 23.410 (Appeals and Certification).	City of Berkeley BMC Section 23.404.060 (C)	On-Going	Land Use Planning

LAND USE PLANNING

CONDITIONS OF APPROVAL

Site Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

I. Administrative Conditions A. General Project Conditions		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
	D. A permit declared lapsed shall be void and of no further force and effect. To establish the use or structure authorized by the lapsed permit, an applicant must apply for and receive City approval of a new permit.			
10.	**Compliance with Conditions of Approval and Environmental Mitigations**. The Building Permit application is subject to verification of compliance of these Conditions of Approval and any applicable Mitigation Measures. The applicant shall be responsible for demonstrating compliance with all Conditions of Approval per the timeline set forth by this Permit.	City of Berkeley	On-Going	Land Use Planning
11.	**Demolition.** Demolition of the existing structures cannot commence until a complete building permit application is submitted for the project. All plans presented to the City to obtain a building permit to allow the demolition are subject to these Conditions of Approval.	City of Berkeley	On-Going	Building & Safety/ Land Use Planning

LAND USE PLANNING

CONDITIONS OF APPROVAL

Property Address: Berkeley Pier-Ferry (201 University Ave)

	II. Prior to Issuance of Demolition Permit	Regulation Source	Timing/Implementation	Enforcement/Monitoring
3.	**Construction Noise Management - Public Notice Required**. At least two weeks prior to initiating any construction activities at the site, the applicant shall provide notice to businesses and residents within **500 feet** of the project site. This notice shall at a minimum provide the following: (1) Project Description, (2) description of construction activities during extended work hours and reason for extended hours, (3) daily construction schedule (i.e., time of day) and expected duration (number of months), (4) the name, e-mail, and phone number of the Project Liaison for the Project that is responsible for responding to any local complaints, and (5) that construction work is about to commence. The liaison would determine the cause of all construction-related complaints (e.g., starting too early, bad muffler, worker parking, etc.) and institute reasonable measures to correct the problem. A copy of such notice and methodology for distributing the notice shall be provided in advance to the City for review and approval.	City of Berkeley	Prior to Demolition Permit Issuance (At least Two Weeks Prior to Construction Commencement)	Building & Safety Division
4.	**Construction Phases**. The applicant shall provide the Zoning Officer with a schedule of major construction phases with start dates and expected duration, a description of the activities and anticipated noise levels of each phase, and the name(s) and phone number(s) of the individual(s) directly supervising each phase. The Zoning Officer or their designee shall have the authority to require an on-site meeting with these individuals as necessary to ensure compliance with these Conditions of Approval. The applicant shall notify the Zoning Officer of any changes to this schedule as soon as possible.	City of Berkeley	Prior to Demolition Permit Issuance	Building & Safety/Land Use Planning

CONDITIONS OF APPROVAL

Property Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

IV. Prior to Issuance of Building Permit: A. Toxics		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1.	**Demolitions & Renovations – Building Materials Survey.** A hazardous materials survey shall be prepared by qualified professionals and submitted to the Toxics Management Division (TMD) prior to issuance of the building permit. The survey shall identify building materials, plans for hazardous materials, hazardous waste removal and disposal, the identification of all materials to be disturbed for lead-based paints, PCB containing equipment and caulking, hydraulic fluids, refrigerants, treated wood, and mercury containing devices (including fluorescent light bulbs and mercury switches), asbestos and other hazardous materials and chemicals. The report to the TMD shall include, in addition to the survey, plans on hazardous materials and hazardous waste removal and disposal that comply with State and Federal codes including California Code of Regulations (CCR) 66260 et seq.	City of Berkeley	Prior to Issuance of Building Permit	Toxics Management Division

V. During Demolition/Construction A. Building & Safety		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1	**Construction Hours.** Construction activity shall be limited to between the hours of 7:00 AM and 6:00 PM on Monday through Friday, and between 9:00 AM and 4:00 PM on Saturday. No construction-related activity shall occur on Sunday or any Federal holiday.	City of Berkeley BMC 13.40.070 (B) (7)	During Demolition/Construction	Building & Safety

CONDITIONS OF APPROVAL

Property Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

V. During Demolition/Construction A. Building & Safety		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
2.	**Construction Hours Exceptions**. Prior to initiating any activity that might require a longer period, the applicant shall notify the Zoning Officer in writing and request an exception for a specific period of time. If an exception is approved, then the applicant shall notify businesses and residents within 500 feet of the Project site describing the expanded construction hours two weeks prior to the expanded schedule start.	City of Berkeley	During Demolition/Construction	Environmental Health & Land Use Planning
3.	**Project Construction Website.** The applicant shall establish a project construction website with the following information clearly accessible and updated monthly or more frequently as changes warrant: • Contact information (i.e. "hotline" phone number, and email address) for the Project construction manager • Calendar and schedule of daily/weekly/monthly construction activities • The final Conditions of Approval, Mitigation Monitoring and Reporting Program, Transportation Construction Plan, Construction Noise Reduction Program, and any other reports or programs related to construction noise, air quality, and traffic.	City of Berkeley	During Demolition/Construction	Building & Safety
4.	**Construction / No Parking Permits**. If "Construction/No Parking Permits" are required, the applicant shall contact the Permit Service Center for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). The Zoning Officer and/or Traffic Engineer may limit off-site parking of construction-related vehicles if necessary to protect the health or safety of the surrounding neighborhood.	City of Berkeley	During Demolition/Construction	Building & Safety

CONDITIONS OF APPROVAL

Property Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

V. During Demolition/Construction: B. Land Use Planning		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
1.	**Avoid Disturbance of Nesting Birds.** Initial site disturbance activities, including vegetation and concrete removal, shall be prohibited during the general avian nesting season (February 1 to August 30), if feasible. If nesting season avoidance is not feasible, the applicant shall retain a qualified biologist to conduct a preconstruction nesting bird survey to determine the presence/absence, location, and activity status of any active nests on or adjacent to the Project site. The extent of the survey buffer area surrounding the site shall be established by the qualified biologist to ensure that direct and indirect effects to nesting birds are avoided. To avoid the destruction of active nests and to protect the reproductive success of birds protected by the Migratory Bird Treaty Act and the California Fish & Game Code, nesting bird surveys shall be performed not more than 14 days prior to scheduled vegetation and concrete removal. In the event that active nests are discovered, a suitable buffer (typically a minimum buffer of 50 feet for passerines and a minimum buffer of 250 feet for raptors) shall be established around such active nests and no construction shall be allowed inside the buffer areas until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). No ground-disturbing activities shall occur within this buffer until the qualified biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Nesting bird surveys are not required for construction activities occurring between August 31 and January 31.	Federal Government State of California	During Demolition/Construction	Land Use Planning
2.	**Unanticipated Discovery of Paleontological Resources.** In the event of an unanticipated	City of Berkeley	During Demolition/Construction	Land Use Planning

CONDITIONS OF APPROVAL

Property Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

V. During Demolition/Construction: B. Land Use Planning		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
	discovery of a paleontological resource during construction, excavations within 50 feet of the find shall be temporarily halted or diverted until the discovery is examined by a qualified archeologist (per Secretary of Professional Qualification Standards National Park Service 1983). The qualified paleontologist shall document the discovery as needed, evaluate the potential resource, and assess the significance of the find. The archeologist shall notify the appropriate agencies to determine procedures that would be followed before construction is allowed to resume at the location of the find. If the City determines that avoidance is not feasible, the archeologist shall prepare an excavation plan for mitigating the effect of the Project on the qualities that make the resource important, and such plan shall be implemented. The plan shall be submitted to the City for review and approval.			
3.	**Unanticipated Discovery of Tribal Cultural Resources.** In the event that Tribal Cultural Resources are identified during construction, all work within 50 feet of the discovery shall be redirected. The Project applicant and Project construction contractor shall notify the Land Use Planning Division within 24 hours. The City will contact any tribes who have requested consultation under AB 52 (if applicable), as well as contact a qualified archaeologist, to evaluate the resources and situation and provide recommendations. If it is determined that the resource is a Tribal Cultural Resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with State guidelines and in consultation with Native American groups. If the resource cannot be avoided, additional measures to avoid or reduce impacts to the resource and to address tribal concerns may be required. Property Address: Berkeley Pier-Ferry (201 University Ave)
Application Number: ZP#2026-0014

V. During Demolition/Construction: B. Land Use Planning		Regulation Source	Timing/ Implementation	Enforcement/Monitoring
4.	**Unanticipated Discovery of Archeological Resources.** Pursuant to CEQA Guidelines section 15064.5(f), "provisions for historical or unique paleontological resources accidentally discovered during construction" should be instituted. Therefore: **A**. In the event that any prehistoric or historic subsurface cultural resources are discovered during ground disturbing activities, all work within a minimum of 50 feet of the resources shall be halted and the Project applicant and/or lead agency shall consult with a Registered Professional Archeologist or paleontologist, and the culturally-affiliated California Native American Tribe ("Tribe") to assess the significance of the find. **B.** If any find is determined to be significant, representatives of the Project proponent and/or the lead agency and the Tribe shall meet to determine the appropriate avoidance measures or other appropriate measures to mitigate impacts to the Tribal Cultural Resource., **C.** In considering any suggested measure proposed by the Registered Professional Archeologist, the Tribe and the lead agency shall confer and such consultation will be considered concluded when either of the following occurs: (1) the parties agree to mitigation measures to mitigate or avoid a significant effect, if a significant effect exists, on a Tribal Cultural Resource or (2) A party, acting in good faith after reasonable effort, concludes that mutual agreement cannot be reached. **D.** If avoidance is unnecessary or infeasible, other appropriate measures such as removal and reburial of the Tribal Cultural Resource in an alternate location with tribal cultural monitor such as removal and reburial of the Tribal Cultural Resource in an alternate location with tribal cultural monitors may be instituted. Work may proceed on other parts of the Project site while	City of Berkeley	During Demolition/Construction	Land Use Planning

	mitigation measures for cultural resources is carried out. **E.** If significant materials are recovered, the Registered Professional Archeologist shall prepare a report on the findings for submittal to the Northwest Information Center.			
5.	**Discovery of Human Remains.** In the event that human skeletal remains are uncovered at the Project site during ground-disturbing activities, all work shall immediately halt and the Alameda County Coroner shall be contacted to evaluate the remains, and following the procedures and protocols pursuant to Section 15064.5 (e)(1) of the CEQA Guidelines Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this section, with the most likely descendants regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment. A. The descendants' preferences for treatment may include the following: i. The nondestructive removal and analysis of human remains and items associated with Native American human remains. ii. Preservation of Native American human remains and associated items in place.	City of Berkeley	During Demolition/Construction	Land Use Planning

V. During Demolition/Construction: B. Land Use Planning	Regulation Source	Timing/ Implementation	Enforcement/Monitoring
iii. Relinquishment of Native American human remains and associated items to the descendants for treatment. iv. Other culturally appropriate treatment. B. The parties may also mutually agree to extend discussions, taking into account the possibility that additional or multiple Native American human remains, as defined in this section, are located in the Project area providing a basis for additional treatment measures. C. For the purposes of this section, "conferral" or "discuss and confer" means the meaningful and timely discussion and careful consideration of the views of each party, in a manner that is cognizant of all parties' cultural values, and where feasible, seeking agreement. Each party shall recognize the other's needs and concerns for confidentiality of information provided to the other. i. Human remains of a Native American may be an inhumation or cremation, and in any state of decomposition or skeletal completeness. ii. Any items associated with human remains that are placed or buried with Native American human remains are to be treated in the same manner as the remains, but do not by themselves constitute human remains. D. Whenever the commission is unable to identify a descendant, or the descendants identified fail to make a recommendation, or the landowner or his or her authorized representative rejects the recommendation of the descendants and the mediation provided for in subdivision (k) of Public Resources Code Section 5097.94. if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items

	associated with Native American human remains with appropriate dignity on the property in a location not subject to further and future subsurface disturbance. To protect these sites, that landowner shall do one or more of the following: i. Record the site with the commission or the appropriate Information Center. ii. Utilize an open-space or conservation zoning designation or easement. ii. Record a document with the county in which the property is located. F. Upon the discovery of multiple Native American human remains during a ground disturbing land development activity, the landowner may agree that additional conferral with descendants is necessary to consider culturally appropriate treatment of multiple Native American human remains. Culturally appropriate treatment of such a discovery may be ascertained from review of the site utilizing cultural and archaeological standards. Where the parties are unable to agree on the appropriate treatment measures the human remains and buried with Native American human remains shall be reinterred with appropriate dignity, pursuant to subdivision (e). G. Per State law, any action taken to implement an agreement developed pursuant to this Condition of Approval shall be exempt from the CEQA.

ZONING ADJUSTMENTS BOARD

NOTICE OF PUBLIC HEARING - REVISED

Berkeley Pier-Ferry (201 University Ave)

Use Permit #ZP2026-0014 to establish transportation via public ferry service as an allowable use at the Berkeley Pier. Constructed elements to support the new use include a universal charging float (5,700 square feet), ferry gate and landing (750 square feet), gangway (1,200 square feet) and breakwater (4,300 square feet).

The Zoning Adjustments Board of the City of Berkeley will hold a public hearing on the above matter, pursuant to Zoning Ordinance, Section 23.404.050 (Public Hearings and Decisions)

When: Thursday, February 26, 2026, 7:00 pm
Where: Berkeley Unified School District meeting room, 1231 Addison Street, (wheelchair accessible) with remote/hybrid option (via Zoom).

Please visit: https://berkeleyca.gov/your-government/boards-commissions/zoning-adjustments-board and click on the hearing date to access the most up-to-date meeting information, or call the Land Use Planning division (510) 981-7410.

PUBLIC ADVISORY*: *THIS MEETING WILL BE CONDUCTED IN A HYBRID MODEL WITH BOTH IN-PERSON ATTENDANCE AND VIRTUAL PARTICIPATION AVAILABLE FOR MEMBERS OF THE PUBLIC.

For in-person attendees, face coverings or masks that cover both the nose and mouth are encouraged. If you're feeling sick, please do not attend the meeting in-person as a public health precaution.

Currently, there are no physical distancing requirements in place by the State of California or the Local Health Officer for an indoor event similar to a Commission meeting. However, all attendees are requested to be respectful of the personal space of other attendees. An area of the public seating area will be designated as "distanced seating" to accommodate persons that need to distance for personal health reasons.

Land Use Planning Division
1947 Center Street, Second Floor, Berkeley, CA 94704 Tel: 510.981.7410 TDD: 510.981.7474 Fax: 510.981.7420
E-mail: zab@berkeleyca.gov

A. Land Use Designations:

- General Plan: Waterfront / Marina (W)
- Zoning: Unclassified District (U)

B. Zoning Permits Required:

- **New Use.** Use Permit under BMC Section 23.208.020(B) "Unclassified District, Allowed Uses" to establish transportation use (ferry service) at the Berkeley Pier.

C. CEQA Recommendation: A Draft Environmental Impact Report (EIR) is being prepared to evaluate the potentially significant environmental impacts of the proposed project, pursuant to the California Environmental Quality Act (CEQA). The City published a Notice of Preparation (NOP) for an EIR for the Pier-Ferry Project in May 2025. The Draft EIR for the Project is expected to be published for public review on February 27, 2026. City Council would need to certify the Final EIR before or concurrent with final action on the use permit pursuant to BMC Section 23.208.020(C) "Unclassified District, Use Permit Procedures".

D. Project Recommendation: Approve Use Permit #ZP2026-0014, pursuant to BMC Section 23.406.040(E) "Findings for Approval"

E. Parties Involved:

- Applicant City of Berkeley, Parks, Recreation & Waterfront Department
- Property Owner City of Berkeley

Further Information:
All application materials are available online at:
https://aca.cityofberkeley.info/CitizenAccess/Welcome.aspx.

The Zoning Adjustments Board final agenda and staff reports will be available online 6 days prior to this meeting at: https://berkeleyca.gov/your-government/boards-commissions/zoning-adjustments-board.

Questions about the project should be directed to the project planner, Liza McNulty, lmcnulty@berkeleyca.gov, (510) 542-4131, or Singeh Saliki, ssaliki@berkeleyca.gov, (510) 981-7412.

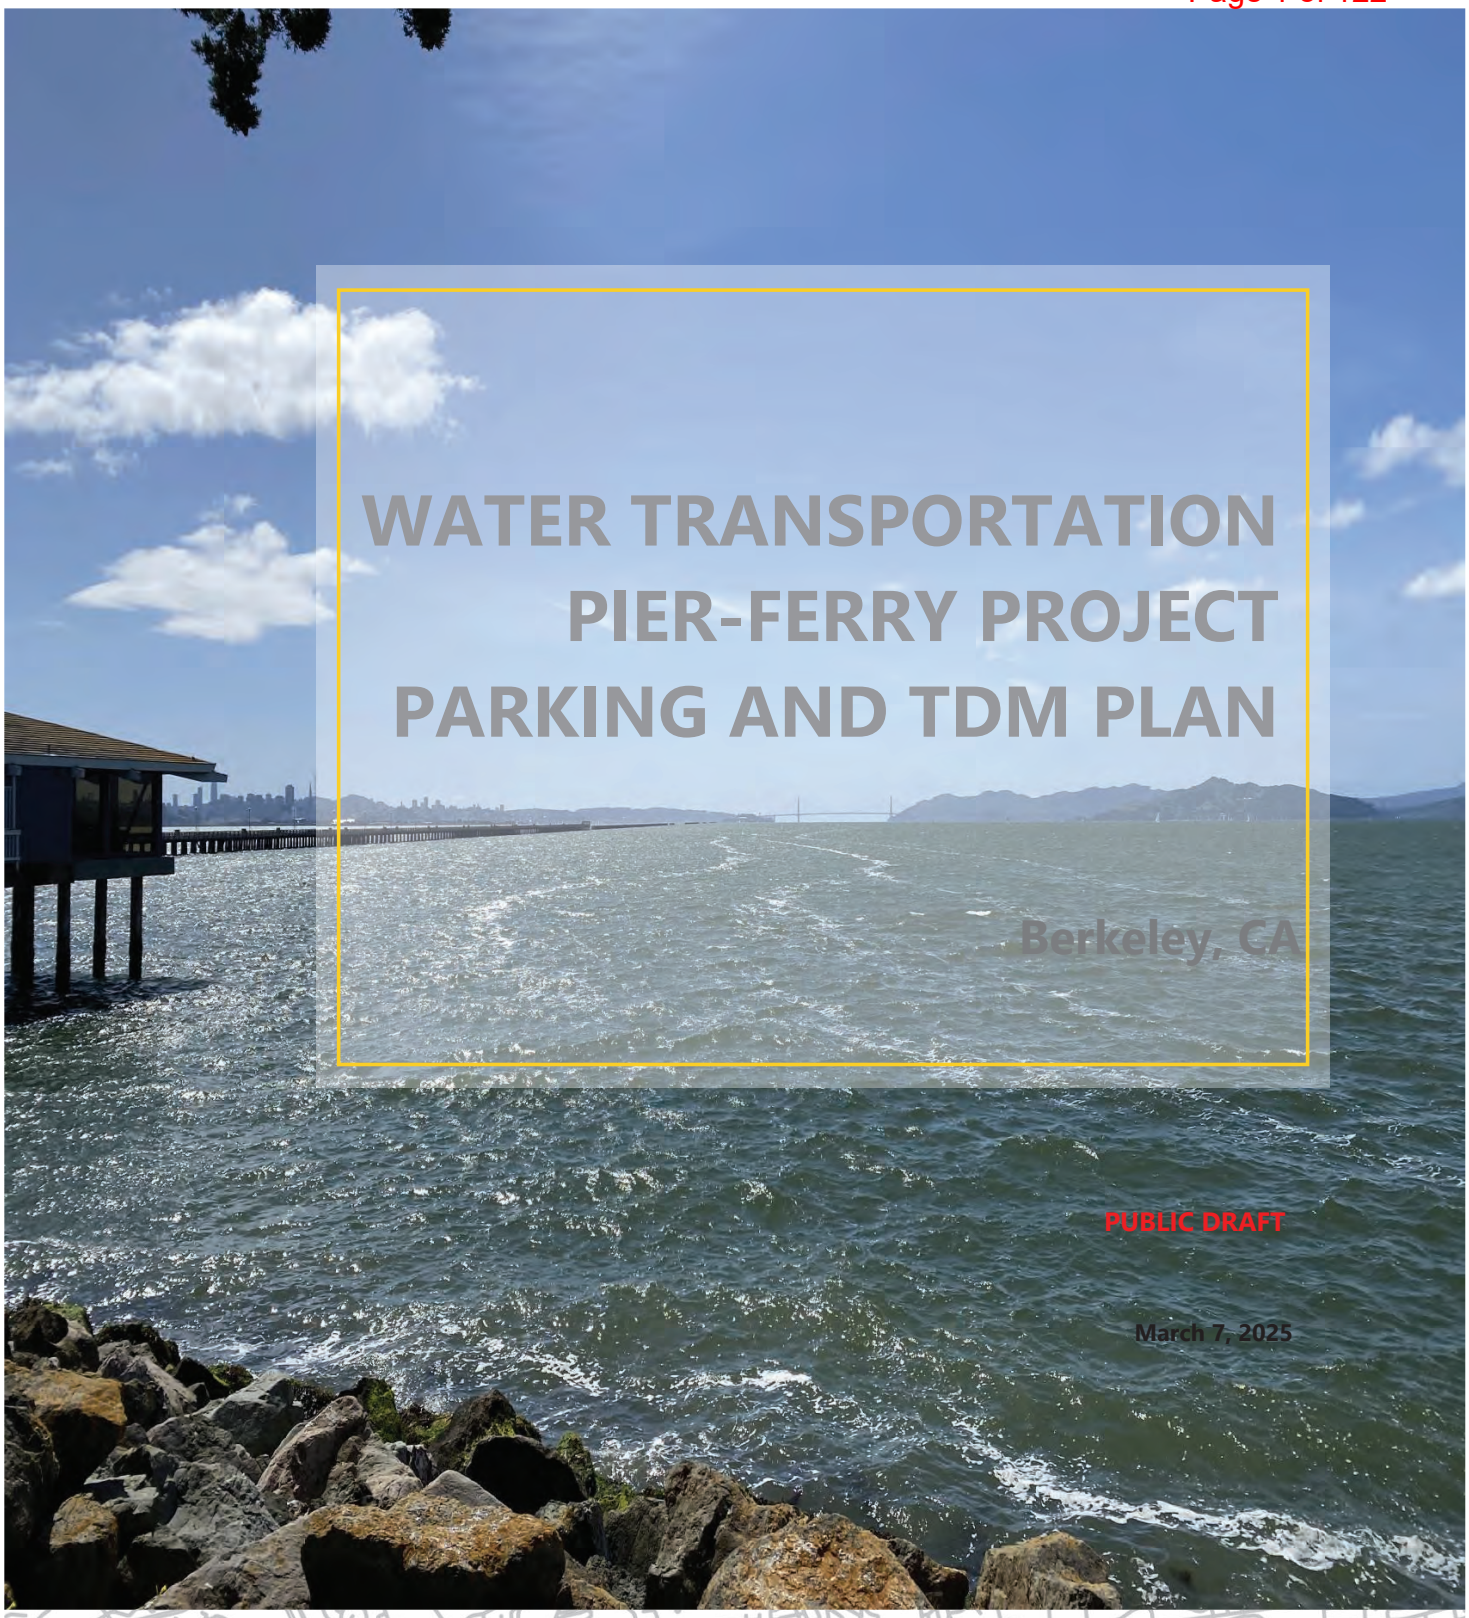
Written comments or a request for a Notice of Decision should be directed to the Zoning Adjustments Board Secretary at zab@berkeleyca.gov.

Communication Disclaimer:
Communications to Berkeley boards, commissions or committees are public record and will become part of the City's electronic records, which are accessible through the City's website. **Please note: e-mail addresses, names, addresses, and other contact information are not required, but if included in any communication to a City board, commission or committee, will become part of the public record.** If you do not want your e-mail address or any other contact information to be made public, you may deliver communications via U.S. Postal Service or in person to the secretary of the relevant board, commission or committee. If you do not want your contact information included in the public record, please do not include that information in your communication. Please contact the secretary to the relevant board, commission or committee for further information.

Written Comments, Communications, and Reports:
Written comments must be directed to the ZAB Secretary at the Land Use Planning Division (Attn: ZAB Secretary), or via e-mail to: zab@berkeleyca.gov. All materials will be made available via the Zoning Adjustments Board Agenda page online at this address: https://berkeleyca.gov/your-government/boards-commissions/zoning-adjustments-board

All persons are welcome to attend the hearing and will be given an opportunity to address the Board. Comments may be made verbally at the public hearing and/or in writing before the hearing. The Board may limit the time granted to each speaker.

Correspondence received by 5:00 PM, eight days before this public hearing, will be provided with the agenda materials provided to the Board. Note that if you submit a hard copy document of more than 10 pages, or in color, or with photos, you must provide 15 copies. Correspondence received after this deadline will be conveyed to the Board in the following manner:



- **Correspondence received by 5:00 PM, two days before** this public hearing, will be conveyed to the Board in a Supplemental Communications and Reports #1, which is released around noon one day before the public hearing.
- **Correspondence received by 12:00 PM, the day of** this public hearing, will be conveyed to the Board in a Supplemental Communications and Reports #2, which is released around noon the day of the public hearing.
- **Correspondence received after 12:00 PM, the day of** this public hearing will be saved in the project administrative record.

Accessibility Information / ADA Disclaimer:
To request a disability-related accommodation(s) to participate in the meeting, including auxiliary aids or services, please contact the Disability Services specialist at 981-6342 (V) or 981-6345 (TDD) at least three business days before the meeting date.

SB 343 Disclaimer:
Any writings or documents provided to a majority of the Commission regarding any item on this agenda will be made available to the public. Please contact the Land Use Planning Division (zab@berkeleyca.gov) to request hard-copies or electronic copies.

Notice Concerning Your Legal Rights:
If you object to a decision by the Zoning Adjustments Board regarding a land use permit project, the following requirements and restrictions apply:

1. If you challenge the decision of the City in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice.
2. You must appeal to the City Council within 14 days after the Notice of Decision of the action of the Zoning Adjustments Board is mailed. It is your obligation to notify the Land Use Planning Division in writing of your desire to receive a Notice of Decision when it is completed.
3. Pursuant to Code of Civil Procedure Section 1094.6(b) and Government Code Section 65009(c)(1), no lawsuit challenging a City Council decision, as defined by Code of Civil Procedure Section 1094.6(e), regarding a use permit, variance or other permit may be filed more than 90 days after the date the decision becomes final, as defined in Code of Civil Procedure Section 1094.6(b). Any lawsuit not filed within that 90-day period will be barred.
4. Pursuant to Government Code Section 66020(d)(1), notice is hereby given to the applicant that the 90-day protest period for any fees, dedications, reservations, or other exactions included in any permit approval begins upon final action by the City, and that any challenge must be filed within this 90-day period.
5. If you believe that this decision or any condition attached to it denies you any reasonable economic use of the subject property, was not sufficiently related to a legitimate public purpose, was not sufficiently proportional to any impact of the project, or for any other reason constitutes a “taking” of property for public use without just compensation under the California or United States Constitutions, the following requirements apply:
    a. That this belief is a basis of your appeal.
    b. Why you believe that the decision or condition constitutes a "taking" of property as set forth above.
    c. All evidence and argument in support of your belief that the decision or condition constitutes a “taking” as set forth above. If you do not do so, you will waive any legal right to claim that your property has been taken, both before the City Council and in court.

Executive Summary

1. EXECUTIVE SUMMARY

The City of Berkeley completed a feasibility study for a ferry facility at the Berkeley Municipal Pier in December 2021 and is now progressing with detailed engineering and environmental studies for the Water Transportation Pier-Ferry (WTPF) Project. To support the proposed ferry service and potential future waterfront development, this Parking and Transportation Demand Management (TDM) Plan evaluates existing parking conditions and proposes strategies to address current and potential parking needs and current stakeholder concerns.

The Waterfront staff currently uses several parking and circulation management strategies, including a slipholder permit program, time-limited parking, gate controls, and paid parking. An analysis of parking counts conducted between May 2021 and February 2024 shows that peak weekday parking utilization Waterfront-wide was 50%, while peak Saturday utilization reached 72%. Certain lots, such as South Cove East/West, J&K lot, and Spinnaker Way lot, experienced near 100% utilization during specific times. However, even though this high utilization was occurring more than 300 parking spaces remained available across various other lots. The primary concern among some stakeholders during these peak periods is not finding a parking space at all, but finding one near the desired destination.

The Feasibility Study estimated 250 parking spaces at the 199 Seawall Drive lot (Hs Lordship) would be utilized by weekday ferry riders. The Water Emergency Transportation Authority (WETA) projects that 915 average weekday passengers per day will use the Berkeley ferry terminal initially, increasing to 1,055 by 2040. Based on WETA's onboard survey data and business plan methodology, Kittelson estimates that in the absence of TDM measures, 40% of ferry riders will drive alone, and 12% will carpool to the terminal. This results in a peak weekday parking demand of 421 spaces, 171 more than the baseline 250 spaces, without TDM measures.

TDM strategies, such as well-designed and convenient loading zones for family drop-off and rideshare vehicles, enhanced bicycle and pedestrian access, improved secure bike parking, expanded shared micromobility options (e.g., scooters, e-bikes, etc.), paid and time-limited parking could reduce parking demand by 65 spaces. Additionally, parking management strategies, including increased capacity at the 199 Seawall Drive lot, overflow parking, and wayfinding signage could provide the City with additional tools to manage potential increased demand for parking at the Waterfront.

The Plan also considers future waterfront development outlined in the Waterfront Specific Plan (WSP) that projects future parking demands. Recommendations include valet parking services, satellite parking lots, demand-based paid parking, and shuttle services. With full implementation of the development considered in the WSP the existing surface parking lots would be redeveloped for proposed developments which could reduce public parking capacity by 81 spaces. However, efficient lot redesign, and developer agreements could recover and potentially enhance the parking at the Waterfront.

The Plan concludes that the Waterfront will have sufficient parking spaces to accommodate the parking demand from future uses in the WSP. However, while the overall parking demand for the area can be met, there will be instances where individuals might not park near their desired destinations during peak times on peak days. This could be frustrating for Waterfront visitors, and this occurs on occasion in the current

environment at the Waterfront. Implementing dynamic wayfinding and clear messaging strategies could help enhance the overall parking experience of visitors.

Section 2
Introduction

2. INTRODUCTION

The City of Berkeley (City) completed the feasibility study for the ferry facility at Berkeley Municipal Pier (Feasibility Study) in December 2021 and is now beginning detailed engineering and environmental studies for the Water Transportation Pier-Ferry (WTPF) Project. This Parking and Transportation Demand Management Plan (Parking and TDM Plan) evaluates the existing parking conditions and parking demand for the proposed ferry service and future development at the Berkeley Waterfront.

2.1. Purpose of the Report

The Parking and TDM Plan aims to address stakeholder concerns related to parking. It provides the City with a comprehensive review of current parking conditions, as well as for Ferry and Cumulative Conditions. This document will serve as an actionable guide for the City, and provides strategies to address future parking needs with the implementation and phasing of a range of TDM measures at different phases of future development.

2.2. Study Area

The study area (Berkeley Waterfront or Waterfront) is the area west of the McLaughlin Eastshore State Park, bordered by Spinnaker Way to the north and South Sailing Basin to the south, see Figure 1. University Avenue provides vehicle connection between the Waterfront, Downtown Berkeley and Highway 80.

AC Transit Bus Route 51B connects the Waterfront and Rockridge BART via College Avenue, Downtown Berkeley BART, and University Avenue. Only one out of every three scheduled bus trips between 7 am and 9 pm serves the Waterfront; all other trips terminate at the Berkeley Amtrak station, resulting in a frequency of two (2) buses every hour to the Waterfront.

The San Francisco Bay Trail Extension provides bicycle and pedestrian access to the Waterfront from the intersection of University Avenue and Frontage Road. The bicycle and pedestrian bridge across I-80 connects the Waterfront with the City of Berkeley. Additionally, the Virginia Street Right-of-Way (a dirt pathway) offers another bike and pedestrian connection.

The Study Area is located entirely on public tidelands held in trust by the City. There are over 100 acres of uplands and 5 miles of pedestrian trails within the Waterfront. Centered within this landscape is the Berkeley Marina, the largest public marina in the San Francisco Bay with 1,000 boat slips. The Berkeley Waterfront also includes three public access docks, a boat launch ramp, nine public parking lots, five on-street parking facilities, slipholder permit lots and privately leased parking lots.

In addition to various recreation opportunities, current businesses and attractions include 1 hotel, 4 restaurants, 1 boatyard, a yacht club, two non-profit sailing clubs, a nature center, a two-story office building (commercially leased), and 9 restroom buildings (including both public and slip-holder only facilities), as shown in Figure 2.

Source: Draft Waterfront Specific Plan, 2023

The proposed ferry terminal at the Waterfront will be located at Berkeley Pier, ~1.100-feet of which will be reconstructed to provide a dual-purpose pier for both ferry and recreation access. The study focuses on the following nine (9) public parking lots and five (5) on-street parking facilities. Private, paid and slipholder only parking lots (Boat Launch Stalls – Paid, Doubletree Stalls – Private/Paid, and Berkeley Marine Center) were not included in the analysis, as it is assumed that neither ferry riders nor the general public will have utilize these locations for parking.

Public parking lots

1. Spinnaker Way Lot
2. J & K Lot
3. L Lot
4. M Lot
5. South Cove East Lot
6. South Cove West Lot
7. Seawall Drive Lot
8. Skates/N Lot
9. O Lot

On-street parking facilities

1. Spinnaker Way
2. Marina Blvd
3. University Ave Shoulder (at West Frontage Rd)
4. Seawall Drive North
5. Seawall Drive South

Slipholder Permit Lots

1. D&E Lot
2. F&G Lot
3. H&I Lot
4. Dry Boat Storage Lot

Limited Parking Area (Not included in the analysis)

1. Launch Ramp Paid (Public Lot)
2. Berkeley City Vehicle Parking
3. Berkeley PD Leased Lot
4. Doubletree Leased Lot
5. Marine Center Leased Lot

Potential future redevelopment is limited to the existing developed land at the Waterfront comprised of leased land and surface parking lots. Future redevelopment at the Waterfront over the next several decades may bring in more visitors and hence, an increase in the need for parking and TDM.

2.3. MTC TOC Parking Management Policy

The MTC Transit-Oriented Communities (TOC) parking management policy is designed to reduce automobile trips and prioritize the limited land near transit for shared and active transportation modes. Parking management complements increased residential and commercial density, supporting higher transit ridership on the region's existing and planned fixed-guideway transit systems.[1]

To comply with the TOC Policy, MTC mandates adherence to parking standards based on the level of transit service. Ferry terminals, such as the Berkeley Ferry Terminal, qualify as Tier 4, requiring parking maximums of 4 spaces per 1,000 square feet or fewer for commercial developments and 1.5 spaces per unit or fewer for residential developments. Additionally, AB 2097 prohibits public agencies from imposing or enforcing parking minimums on residential, commercial, or other developments within ½ mile of a major transit stop.[2]

The design standards outlined in the Waterfront Specific Plan, combined with recommendations from this Parking and TDM Plan, ensure compliance with the MTC TOC parking management policy by meeting both residential and commercial parking maximum requirements.

Section 3
Existing Conditions

3. EXISTING CONDITIONS

3.1. Existing Parking Management

Existing parking facilities at the Berkeley Waterfront are managed using a variety of parking regulations. Currently, 8 out of 14 parking lots have no parking restrictions beyond overnight parking restrictions and 72-hour limits set in the Berkeley Municipal Code. The remaining lots are restricted either using manual gate openings at peak periods or via permits for berth holders. Table 1 catalogues existing parking regulations at Waterfront parking facilities and proposes new time-limited regulations to reduce the impact of ferry users on other parking lots. While parking facilities on the North side of the Waterfront are unlikely to experience direct impacts from ferry vehicle trips, facilities in the Waterfront's South and Central facilities are within easy walking distance of the ferry terminal site and have regular visitation throughout the week that could be impacted by overflow ferry parking.

Table 1 should be considered preliminary, and public feedback from waterfront visitors will help the City develop parking restrictions that would best balance the needs of different users while ensuring that commuters cannot leave vehicles in those locations for the 8+ hour duration between morning and evening ferry commute trips.

Separate from ferry parking demand management, the City can evaluate the process for issuing parking permits to non-recreational or commercial visitors to the Waterfront, including boaters with a permit to live aboard their recreational vessel and employees at Waterfront businesses. One common piece of feedback from the parking intercept survey was that the permit parking procedures in the M Lot were opaque to frequent paddlers who were not slip holders. Clarifying and enforcing existing and/or changed permit parking restrictions and procedures would improve the overall parking experience for both frequent and occasional visitors (see Appendix A).

The City has the opportunity at the Berkeley Waterfront to regularly review and revise its parking restrictions and policies. In addition to revisions specifically related to the WTPF, parking regulations should be regularly updated to reflect parking practices among current Waterfront users, as determined from parking data collection, intercept surveys and public outreach and feedback. Generally, parking time restrictions are a powerful tool that should be implemented more broadly throughout the Waterfront, coordinated with the destinations and activities that are served by specific parking lots. Parking facilities optimal uses should be encouraged with parking regulations, such as time-limited parking.

Table 1: Existing and Potential Parking Regulations

#	Parking Lot / Street Parking	Waterfront Area	Existing Regulations[1]	Potential Regulations[2]	Key Stakeholder Group
1	D&E Lot	North	Berther Permit Parking Only	No Change	Slip holders
2	Spinnaker Way Lot	North	No Additional Restrictions	No Change	General Recreation
3	Marina Blvd	North	No Additional Restrictions	No Change	General recreation
4	Spinnaker Way	North	No Additional Restrictions	No Change	General recreation
5	F & G Lot	North	Berther Permit Parking Only	No Change	Slip holders
6	H, & I Lot	North	Berther Permit Parking Only	No Change	Slip holders
7	J & K Lot	Central	No Additional Restrictions	No Change	Boaters / Diners
8	South Cove West Lot	Central	No Additional Restrictions	5-Hour Parking	Charters / Boaters / Adventure Playground / Shorebird Park
9	South Cove East Lot	Central	Limited access hours via manual gate operations	5-Hour Parking	Boaters / Adventure Playground / Shorebird Park
10	L[3] Lot	Central	Berther Permit Parking on weekends and between 8 pm and 10 am on weekdays	5-Hour Parking	Boaters / Nature Center
11	M Lot	Central	Berther Permit Parking on weekends and between 8 pm and 10 am on weekdays	5-Hour Parking	Boaters / Nature Center
12	O Lot	South	No Additional Restrictions	Slip Holder / Permit Parking	Slip holders, Yacht Club Visitors
13	Seawall Drive	South	No Additional Restrictions	3-Hour Parking	General Recreation / In-Car Bay Viewing
14	Skates/N Lot	South	No Additional Restrictions	3-Hour Parking	Diners / General Recreation
15	Seawall Lot	South	Open only during high use periods via manual gate operation	No Regulation	Diners / Pier & Ferry Access / Shorebird Park / General Recreation

Source: Kittelson & Associates, Inc. 2024
[1]Excluding overnight parking restrictions, which vary by lot / location. All public parking has a maximum of 72-hour parking without a permit per Berkeley Municipal Code.
[2] Possible parking regulations. Final recommendations should account for measured parking turnover rates and stakeholder outreach. Paid parking is not included in this table, but should be considered by the City, in particular for full-day parking.
[3] Does not include the Berkeley Police Department lot (gated)

3.2. Existing Parking Utilization

The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time to better support parking management objectives. Kittelson reviewed data from May 2021 to February 2024. During data processing, some lots had to be merged for various reasons, such as a lack of physical boundaries between them or combined data reporting for adjacent lots.

Limitations: The data may not reflect peak utilization which could occur at times other than 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points,

Table 2 measures parking utilization by lot for average and peak weekdays and Saturdays. Across all lots, parking utilization averaged around 31% on weekdays and 49% on Saturdays. Peak weekday parking was 50% utilized, while peak Saturday parking was 79%. This Waterfront-wide peak period occupancy estimate is a conservative aggregation of each lot's individual peak utilization. It is therefore likely that, even during peak periods, the Waterfront has more than 300 available spaces, spread across various lots.

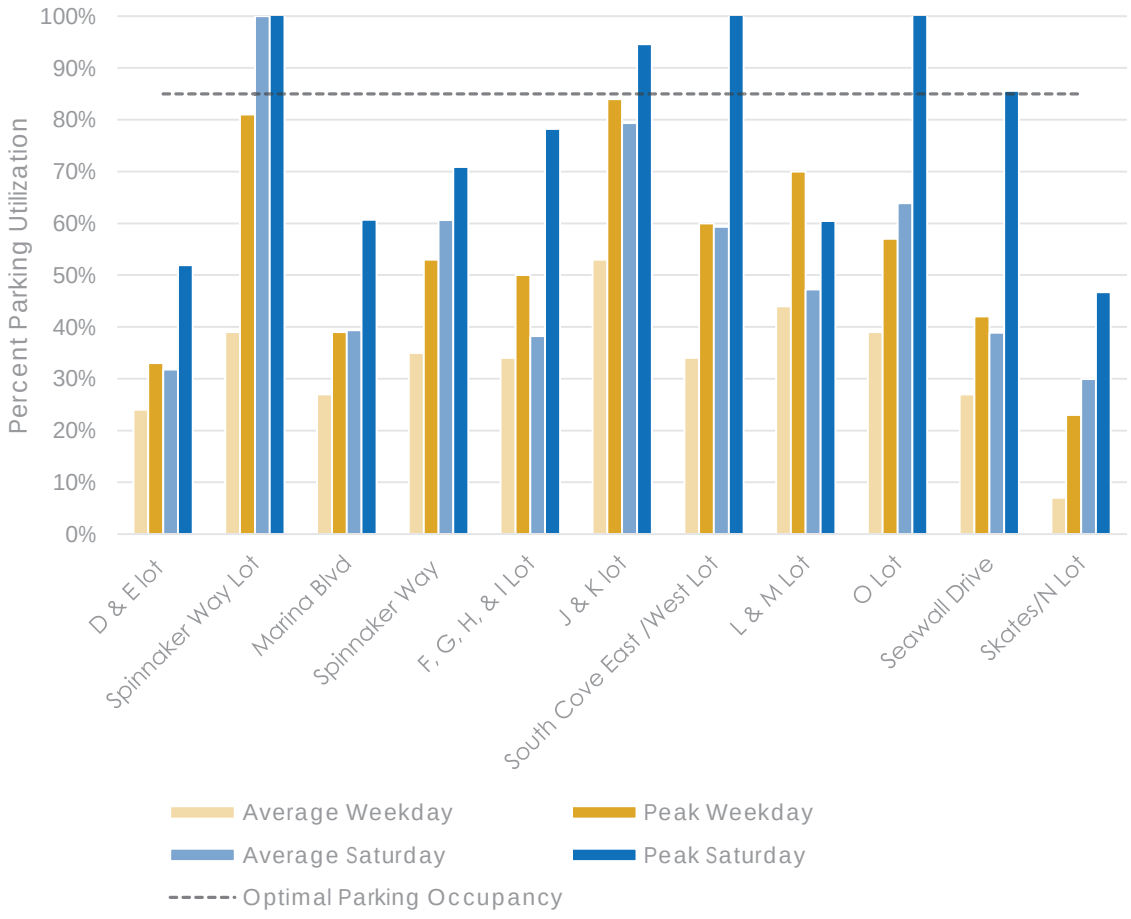

Table 2: June Parking Utilization at the Berkeley Marina, 2021-2023

Parking Lot	Existing Capacity	Utilization (taken spaces, % of spaces occupied)							
		Average Weekday		Peak Weekday		Average Saturday		Peak Saturday	
D&E lot	129	31	24%	42	33%	41	32%	67	52%
Spinnaker Way Lot	36	14	39%	29	81%	36	100%	71	197%
Marina Blvd	150	41	27%	59	39%	59	39%	91	61%
Spinnaker Way	127	45	35%	67	53%	77	61%	90	71%
F, G, H, & I Lot	115	39	34%	57	50%	44	38%	90	78%
J&K lot	92	49	53%	77	84%	73	79%	87	95%
South Cove East /West Lot	182	62	34%	110	60%	108	59%	191	105%
L&M[3] Lot	91	40	44%	64	70%	43	47%	55	60%
O Lot	72	28	39%	41	57%	46	64%	87	121%
Seawall Drive	90	24	27%	38	42%	35	39%	77	86%
Skates/N Lot	137	10	7%	31	23%	41	30%	64	47%
Totals	1,221	383	31%	615	50%	603	49%	970	79%

Source: Kittelson & Associates, Inc. 2024
Note: The peak Saturday utilization for Spinnaker Way Lot exceeded the capacity due to data collection error in which some of the Launch Ramp Paid parking was counted as the adjacent Spinnaker Way Lot.

Figure 3 visualizes the same data, along with a dotted line marker at 85% parking utilization. As a rule of thumb, when parking occupancy is over 85%, drivers have to spend more time looking for parking, increasing congestion, and negatively impacting the experience of visiting a destination. Only the Spinnaker Way lot saw average June occupancies meet or exceed this optimal parking level. In addition, several other locations, including the J&K lot, South Cove East / West, O lot, and Seawall Drive saw individual, peak observation periods exceed this same threshold. This indicates that, while parking at the Waterfront is generally well below optimal utilization, there are periods when parking spaces are difficult to find in individual lots.

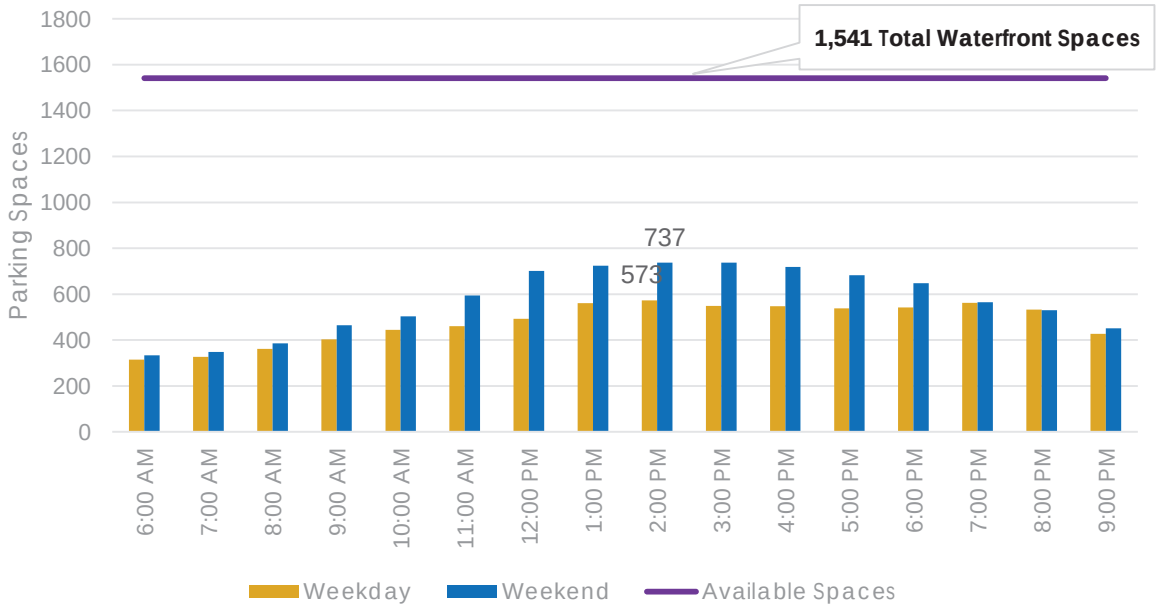
Figure 3: Average and Peak Utilization by Lot

Source: Kittelson & Associates, Inc. 2024

Note: The peak Saturday utilization for Spinnaker Way lot exceeded the capacity due to data collection error in which some of the Launch Ramp Paid parking was counted as the adjacent Spinnaker Way Lot.

When all of the Waterfront's parking resources are considered together, peak parking utilization would reach just 72% of available spaces, with around 340 spaces unoccupied. Effective parking management strategies, including wayfinding, time restrictions, and permit holder restrictions could help to better distribute the demand for parking around the Waterfront. This would allow more visitors to park closer to their destination on a more predictable basis.

3.3. Time of Day Utilization



Kittelson retained Quality Counts (QC) to collect hourly parking counts between 5:30 am and 9:30 pm on Saturday, and 8 am to 10 pm on Thursdays on the following dates in 2024:

- Saturday, April 6
- Thursday, April 11
- Thursday, August 1
- Thursday, August 22
- Saturday, August 24

The counts were collected using go-pro dash cams while slowly driving through all parking lots once per hour during the count period. Post-processing involved the analysis of GoPro footage, the partial license plate, make, model, and color to demarcate specific individual vehicles and the time a vehicle remained in parking stall.

Figure 4 displays the number of parking spaces occupied at the Waterfront each day. As expected, the parking utilization was higher on weekends compared to weekdays, especially during midday hours (10 am – 2 pm). The peak usage occurred at 2 pm on weekends (48% occupied, 737 spaces) and weekdays (37% occupied, 573 spaces).

Figure 4: Parking Utilization by Time of Day

Source: Kittelson & Associates, Inc. 2024

Note: The total available spaces include 320 parking spaces on Seawall Lot, bringing the total to 1,541.

Section 4

Year 1 Parking Management and TDM Strategies

4. YEAR 1 FERRY CONDITIONS

3.4. Year-One Ferry Conditions

In this scenario, it is assumed that the Waterfront will continue to operate under typical baseline conditions, with the addition of the Project. The recommended parking and TDM strategies are specifically tailored to address the needs of the Project but are designed to provide benefits to the other uses at the Waterfront.

3.4.1. RIDERSHIP PROJECTIONS

The proposed ferry terminal at the Waterfront would be located at the Berkeley Pier, a portion of which would be reconstructed to provide both ferry and recreation access. WETA estimates a total of 1,830 average weekday boardings. Conservatively, this would result in 915 riders boarding at the Berkeley Terminal, assuming all riders are round-trip traveling between Berkeley and San Francisco and originating in Berkeley. WETA projects that the average weekday boardings could reach 2,110 by 2040, as shown in Table 3.

The Feasibility Study and WETA Business Service Plan separately estimated the travel mode share of future ferry riders, as shown in Table 4. The Feasibility Study estimated that 54% of the ferry riders would drive alone and 9% would carpool to the ferry terminal. The remaining ferry riders would arrive by bicycle, ride-share, public transit or other modes of transportation that would not require a vehicle parking space. The WETA Business Service Plan estimated that only 31% would be driving alone and 15% would be carpooling to the ferry terminal.

Kittelson reviewed updated on-board survey data from WETA, which included surveys conducted in 2022. Using the WETA Business Plan methodology and updated data, Kittelson estimated that approximately 44% of trips would be drive-alone, which is 13 percentage points higher than the WETA Business Service Plan estimate. Using the 2022 data, the results for the lower mode shares for walking (4%) and biking (11%), as well as public transit 2%), are very low, likely due to pandemic conditions, as people were avoiding public transportation.

The Kittelson recommended baseline mode share, shown in bold in Table 4, references the three sources and reflects the local context and our understanding of the existing travel patterns at the Waterfront. These baseline values represent the estimated mode share prior to the implementation of TDM strategies.

Table 3: Ferry Ridership Estimates (Total Boardings)

1Kiss-and-ride is drop off in personal vehicle; 2TNC is transportation network or "rideshare" company, e.g., Uber/Lyft; 3Other includes multiple modes and private shuttle. Note: Autonomous Vehicles (AV) have not been included.

3.4.2.MODE SHARE ESTIMATES

Using WETA's projected ridership figures and the latest baseline mode share, it is estimated that without implementation of any TDM strategies there will be a weekday peak demand for 421 parking spaces after the implementation of ferry service (Table 5).The City and WETA have conceptually planned for 250 vehicle parking spaces in the Seawall Drive Lot (formerly known as HS Lordship lot) to be utilized by weekday ferry riders (i.e. commuters). The estimated demand for vehicle parking spaces, without implementation of any TDM measures, exceeds this number by 171 parking spaces. The following sections of this memorandum identify strategies to (1) reduce the number of vehicle trips and parking demand and (2) effectively manage and distribute the resulting parking demand.

Table 5: Estimated Year 1 Weekday Ferry Ridership by Mode and Parking Demand (no TDM)

Mode	Mode Share	PersonTrips[1]	Base Parking Demand for Ferry Riders[1]
Drive Alone	40%	366	366
Carpool	12%	110	55
Kiss-and-Ride	8%	73	0

Note: [1]A person trip is a trip taken by a ferry rider using any mode of transportation. Rounded to the nearest integer.

3.4.3. TRANSPORTATION DEMAND MANAGEMENT ESTIMATES

Based on the estimated ferry ridership and mode share, there will be a peak weekday demand for 421 vehicle parking spaces. With the implementation of TDM measures identified in the Berkeley Waterfront Parking and TDM Toolkit (see Appendix B), demand for parking in the ferry terminal lot could be reduced by between 8% and 15%, resulting in a demand for between 356 and 389 parking spaces each day.

The effectiveness of potential TDM strategies was estimated using formulas from the California Air Pollution Control Officer's Association (CAPCOA) Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (CAPCOA Handbook), informed by case studies from peer projects and our understanding of the Waterfront. However, estimating the reduction in parking demand through TDM measures is challenging due to limited comparable studies, and none of the available studies are specific to the Waterfront context. Table 6 provides the methodology used for each strategy, and key assumptions are included in the Appendix C of this report. A conceptual design showing bicycle, pedestrian and bus stop improvements at University Avenue and Seawall Drive is included in Appendix D.

The calculated reductions in vehicle trips and parking demand associated with implementation of these TDM strategies is presented in Table 6. Based on these calculations, parking demand from ferry users could be reduced by 32 to 65 spaces. This analysis utilizes the higher range of this expected reduction to reflect the large-scale changes to travel patterns that the City expects as a result of improving bicycle network connections to the WTPF. This reduction would result in a weekday demand for 356 parking spaces at the ferry terminal parking lot, 106 more than the 250 spaces planned for in the Feasibility Study.

Table 6: Estimated Effectiveness of Parking and TDM Strategies

Strategy	Weekday Ferry Parking Lot Demand Reduction (spaces)	Calculation Source
Bicycle and pedestrian access	2	CAPCOA T-20
Improved bicycle facilities and secure bike parking	9–42	CAPCOA T-10

CAPCOA Handbook- California Air Pollution Control Officer's Association Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity; TNC - Transportation Network Companies

Appendix D includes bicycle and pedestrian improvements at University Avenue and Seawall Drive.

In addition to the strategies mentioned above, demand-based paid parking has proven to be highly effective in reducing vehicle trips and parking demand. The implementation of a paid parking program was the primary recommendation of the Berkeley Marina Area Specific Plan Parking and Mobility Framework. However, public feedback from parking intercept surveys conducted in Summer 2024 as part of this Plan indicates that many current Waterfront visitors are reluctant to pay for parking when visiting for recreational purposes. While this strategy is not included in the Plan, it has the potential to reduce parking demand by an additional 42 vehicles. Further details on paid parking and other TDM strategies can be found in Appendix C.

3.4.4. YEAR-ONE PARKING MANAGEMENT STRATEGIES

After the implementation of TDM strategies, the Waterfront will need to accommodate ferry rider demand for approximately 106 more parking spaces than are planned to be made available in the 199 Seawall Drive lot. The city can meet this excess demand by implementing three strategies for year-one of ferry operations, including 1) maximizing the number of spaces made available in the renovation of the 199 Seawall Drive lot, 2) by directing drivers to designated low-occupancy lots in other locations around the Waterfront to be used as overflow parking when 199 Seawall Drive reaches capacity, and 3) by establishing a wayfinding program that can help drivers locate parking that is best suited for their trip purpose, such as clarifying where all-day parking is and is not allowed.

It should be noted that it is very unlikely that the WETA projected Ferry ridership will actually be achieved within the first year of service. As ridership increases and all-day parking becomes less desirable for ferry riders, they are more likely to switch to alternative modes of transportation including bike, AC transit and ride shares. The approach to TDM planning should allow for a dynamic approach to implementation of TDM strategies based on actual mode shares and parking demand patterns over time. While not evaluated in this study, it should also be noted that the growth of Autonomous Vehicles in urbanized areas is anticipated to growth significantly in the next five to ten years, which is likely to reduce the need for all-day ferry parking at the Berkeley Waterfront.

1. Maximize Parking Capacity at 199 Seawall Drive Lot

The City of Berkeley will consider design strategies to maximize the number of parking spaces available in the 199 Seawall Drive lot, marked by #1 in Figure 5. By accommodating full-day parking in this area, the City can reduce the number of drivers who need to seek parking elsewhere in the Waterfront or who will have to adjust their travel habits to travel to the ferry earlier, when parking is available, or who will have to access the ferry terminal by other modes.

2. Provide Overflow Parking

The City of Berkeley can designate formal overflow lots to provide full-day parking spaces when the 199 Seawall Drive Lot becomes full. Overflow parking can be established in locations that have low existing parking utilization on weekdays and that are within walking distance of the Berkeley Pier, including possible sites at the Marina Boulevard lot or at the Skates/N Lot.

The public street parking on Marina Boulevard could serve as an ideal location for overflow parking (see #2 in Figure 5). On weekdays, the average parking utilization is below 40%, and even at peak occupancy of 53% (as shown in Table 2), it could provide up to 90 additional all day parking spaces. Current observations

indicate that much of the existing utilization is from employees and visitors of the Doubletree Hotel, which has existing parking within their leased premises. With additional management of those vehicles, Marina Boulevard will conservatively accommodate over 100 full-day parkers. However, the walking distance from this lot ranges from approximately 0.4 miles to 0.75 miles away from the Berkeley Pier, for walks of between 10 and 17 minutes respectively, according to Google Maps.

The Skates / N Lot has a similarly low weekday utilization of just 7% and a peak utilization of 22% and is located adjacent to the Berkeley Pier. At its peak 10:00 AM weekday occupancy, the Skates / N Lot can accommodate 108 additional vehicles. However, the Skates / N Lot serves the Skates on the Bay restaurant and is close enough to serve as an informal overflow lot for higher occupancy lots including the O Lot, L&M Lots, and South Cove Lots. Though it has a slightly higher weekday utilization rate, the Marina Boulevard lot may be better suited for use as a formally designated overflow area.

Using these two TDM strategies, the combined overflow capacity at both the Marina Boulevard Lot and Skates / N Lot can easily accommodate the unmet demand for 106 parking spaces from the 199 Seawall Drive Lot.

3. Implement Wayfinding Program

To successfully shift vehicles to overflow lots, the City can implement a Waterfront-wide wayfinding program to clarify parking options for full-day parkers who arrive later in the day, or for whom walking from an overflow lot is not a physical constraint. Key locations for year-one wayfinding are indicated by the circles marked with #3 in Figure 5. Instead of circling the 199 Seawall Drive lot looking for spaces on busy days, these riders would know that they could immediately park at a formally-designated overflow location. Wayfinding can also be used to improve current parking conditions by leading visitors to the lots closest to their destinations or to areas with existing capacity that are a short walk from more popular lots.

Wayfinding measures are split up into two categories, static and dynamic wayfinding. Static wayfinding consists of signage to direct drivers to lots that best suit their needs and most effectively distribute demand across the Waterfront. Static wayfinding is critical as well as cost-effective for managing parking at the Waterfront and should be implemented before or concurrent with the launch of the ferry service. Dynamic wayfinding would use parking occupancy sensors and message boards at key access points around the Waterfront to provide drivers of information regarding the relative occupancy levels of parking lots and direct them to lots with more availability. Dynamic wayfinding would be an addendum to static wayfinding and is not critical for year-one ferry operations. It would also involve installation, operations and maintenance costs that would need to be planned by the City.

Wayfinding improvements would allow the City to effectively distribute parking demand around the ample occupancy in Waterfront lots. A wayfinding plan for the Waterfront would allow the City to strategically direct drivers to available parking that they were not aware of. This strategy can reduce the locations where shorter duration recreational and commercial visitors compete with full-day parkers, and will also more effectively manage weekend and special event parking loads outside of peak commuting hours.

Year One Parking Management Strategies

1. Maximize parking at 199 Seawall Drive
2. Provide overflow parking
3. Implement wayfinding program

KITTELSON & ASSOCIATES

Static Wayfinding

Improving wayfinding is a critical strategy for leveraging the existing resources of the Waterfront. The future ferry terminal site is immediately surrounded by low utilization parking lots. However, drivers pass some of the higher occupancy lots in the Marina on the way to the ferry terminal, including the J&K Lot and South Cove Lots. Improved wayfinding would help drivers find the parking facility that best suits their needs without infringing on the access of other visitors. To successfully implement a static wayfinding plan, the city must:

1. Update parking regulations based on best uses for each parking lot at the Waterfront (Table 1)
2. Identify key wayfinding locations
3. Install critical wayfinding signage as part of the WTPF project scope.

1. **Coordinate parking regulations**. Static wayfinding can direct drivers to specific lots, but the city must first determine the desired use for each lot at the Waterfront. For example, if the main desired usage of the South Cove lots is for access to watersports and Adventure Playground, then picknickers traveling toward Shorebird Park could be directed towards the M Lot or to spaces along Seawall Drive. Appropriate parking regulations should be aligned with the preferred uses at each parking lot. This step can be completed as part of the parking regulation review recommended in this report. See also Section 4.1.5 regarding types of implementation and enforcement for time-limited parking regulations.

2. **Identify key wayfinding locations**. Following the classification of parking lot purpose and regulation, the city should identify key wayfinding decision points around the Waterfront where drivers make parking lot usage choices. Key location might include: the University Ave roundabout, lot entrances to Central Facilities along University Ave, and at the intersection of University Ave and Seawall Dr, show in Figure 5. These locations should be selected to ensure that all drivers who arrive at the Waterfront are presented with a series of options that can help them park in a location that is most convenient for them without inconveniencing other Waterfront visitors.
3. **Implement a wayfinding program**. The City should implement a new wayfinding program before or concurrent with the launch of ferry service. This means that the capital investment in the program should be scaled to match the ferry service project timeline. More ambitious wayfinding could include new branding and features that would emphasize the difference between parking at the Waterfront and parking in the rest of the City. See a mockup of a wayfinding program in Estes Park, Colorado in Figure 6. In this wayfinding program, signs offer drivers a variety of parking options to suit their needs, including directions to specific destinations, directions to free parking with shuttle service, and paid parking closest to key destinations.

Figure 6: Parking Wayfinding Example

Source: e.holdings inc.

Note: This example is from the City of Estes Park, Colorado for implementation of a paid parking program. Notice signs to emphasize free parking, paid parking, and shuttle services.

Dynamic Wayfinding

Dynamic wayfinding techniques could serve as an additional tool to distribute parking effectively around the Marina and avoid excessive circling for spaces and illegal parking practices, especially during peak demand hours. Dynamic wayfinding could be implemented in select parking facilities as demand warrants and is not essential for year-one ferry operations.

Dynamic wayfinding systems use sensors to track parking occupancy across a parking facility. The number of available spaces can then be displayed at a remote wayfinding board before drivers make the decision to enter a facility.

Dynamic wayfinding at the Waterfront could be utilized to monitor the occupancy of spaces available for all day use by ferry riders. A dynamic wayfinding board could be installed in coordination with the provision of alternative parking locations of ferry riders, either to direct them to less occupied lots near the ferry, or to a satellite parking facility with shuttle service to the ferry terminal.

See Figure 7 for an example of dynamic wayfinding in Redwood City, California. In 2022, Redwood City completed a dynamic wayfinding project that monitors over 4,000 parking spaces throughout their downtown area. The occupancy of those spaces is then communicated to drivers at key locations as they approach the downtown area, including in the underpass under Caltrain tracks, as shown in Figure 7.[3] These boards provide information that can improve the visitor experience of parking in Redwood City and more effectively utilize existing parking facilities and helps the City to avoid the need for costly expansion or restructuring of parking.

Figure 7: Dynamic Wayfinding Signage Example

Source: Google Streetview

Note: This example is from Redwood City, CA.

3.4.5. IMPLEMENTATION & ENFORCEMENT OF TIME LIMITED PARKING

Section 4.1.4 provides parking management strategies to manage the projected demand for parking through the use of over-flow full-day parking options. As described in Table 1, while some parking lots have hours of no parking (via either use of permits or gates), no parking lots have enforced time limited parking. In order to ensure that full-day parking for ferry riders only occurs at locations where such use has been planned for, the City will need to create and enforce a means of limiting parking access or duration in those areas where full-day parking by ferry riders is not intended.

[3]Redwood City Pulse. (2022). *Redwood City installs digital parking signs downtown*. Retrieved from https://www.rwcpulse.com/express-newsletter-content/2022/05/17/redwood-city-installs-digital-parking-signs-downtown/

Table 1 provides an example of what those time limits could be at various parking lots; actual durations for time-limited parking should be determined, and adjusted if needed, based on feedback from the public and Waterfront Visitors.

There are a variety of ways to implement time-limited or access-limited parking.

- Free Time Limited Parking. Many areas in Berkeley have 2-hour time limits for on-street parking unless a residential parking permit for that zone is displayed. A similar type of restriction and enforcement could be used in specific Waterfront parking lots. This approach has the advantage of not requiring infrastructure beyond signage, but enforcement is costlier since it requires multiple passes by parking enforcement staff. Berther parking that exceeds the time limit could be accommodated via permits.
- Paid Parking. Similar to many locations in the City, the use of paid parking with maximum time limits allows for enforcement via the issuance of parking passes. This approach would require installation and maintenance of kiosks/meters at parking lots where implemented and enforcement.
- Gated Lots. Use of manual gates to limit the period of access instead of time-limited parking spaces is currently used at the South Cove East Lot. The gate is not opened until after the early-morning boaters depart, ensuring that those primarily full-day parkers use Marina Blvd and South Cove West lot. This system could be refined and expanded in various ways. The use of gates requires staff time, which is costly due to frequent maintenance needs, and can be occasionally variable due to limited staff resources.

Section 5

Future Conditions

5. FUTURE CONDITIONS

5.1. Future Ferry Conditions

In this scenario, it is assumed that the Waterfront will continue to operate under typical baseline conditions with no new development but with an increase in ferry ridership. As outlined in Section 2.3.1, WETA anticipates that average weekday ridership will increase to 1,160 by 2040 under full service which includes connecting service between the San Francisco Ferry Terminal and Mission Bay, reflecting a growth of approximately 15%. These ridership projections are based on pre-COVID assumptions but have been adjusted to account for a "pandemic recovery" fare structure, as well as shifting commuter travel patterns and demand for services. Changes in costs, services, or overall economic conditions may impact these assumptions, so WETA will update the projections as new information becomes available. The City of Berkeley staff should also implement parking and TDM strategies based on the needs of ferry riders and Waterfront visitors. This section is intended for planning purposes, and the recommended strategies will be revisited in the future to assess how ferry ridership aligns with the projections.

5.1.1. RIDERSHIP AND MODE SHARE

This analysis conservatively assumes that the mode share will remain unchanged under future conditions. This would result in a parking demand of 534 spaces without implementing any TDM measures.

Table 7: Future 2040 Ferry Mode Share and Parking Demand (no TDM)

Mode	Mode Share	Person Trips[1]	Base Parking Demand for Ferry Riders[1]
Drive Alone	40%	464	464
Carpool	12%	139	70
Kiss-and-Ride	8%	93	0
Transit	5%	58	0
Bike	16%	186	0
Walk	4%	46	0
Taxi / TNC	5%	58	0
Other	10%	116	0
Total	100%	1,160	534

Source: Kittelson & Associates, Inc. 2024

Note: [1]A person trip is a trip taken by a ferry rider using any mode of transportation. Rounded to the nearest integer.

5.1.2. TRANSPORTATION DEMAND MANAGEMENT STRATEGIES

Applying the same TDM strategies from the Year 1 scenario, parking demand from ferry users could be reduced by 67 to 108 spaces, as shown in Table 8. The higher reduction is attributed to increased ridership, as more individuals would opt for more sustainable modes of accessing the ferry terminal instead of driving, thereby enhancing the effectiveness of the TDM strategies. This reduction would result in a weekday

demand for 467 parking spaces at the ferry terminal parking lot, 217 more than planned (250) for within the 199 Seawall Drive parking lot in the Feasibility Study.

Table 8: Estimated Effectiveness of Parking and TDM Strategies

CAPCOA Handbook- California Air Pollution Control Officer's Association Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity; TNC - Transportation Network Companies

5.1.3.PARKING MANAGEMENT STRATEGIES

Similar to the TDM strategies, the parking management strategies outlined in Section 4.1.4 for Year 1 Ferry Conditions will help address the additional peak parking demand of 217 spaces from ferry riders. To be conservative, it is assumed that these strategies will be as effective as they were under the Year 1 Ferry Conditions, which would reduce the need by 106 spaces. This means that under Future Ferry Conditions, additional parking management strategies will be necessary to accommodate the remaining demand of approximately 111 spaces.

Based on the Parking and TDM Toolkit presented in Appendix B, the following strategies in combination would be effective in addressing the remaining demand of 111 spaces.

5.1.4. Valet Service

Valet Service would maximize finite space in existing lots by allowing valet attendants to tandem park vehicles. Likewise, valet parking can turn underutilized parking lots into an efficient tool for parking management. Valet parking is well-suited for the Waterfront's parking and usage patterns, which are characterized by an overabundance of parking capacity on most days and congestion and high occupancy levels in certain lots during events and peak periods of good weather and boating conditions. Additional details on the implementation of this strategy are provided in Appendix B.

5.1.5. Satellite Parking Facilities

The City could establish a satellite parking facility at Golden Gate Fields or other public parking lots that could be used by ferry riders or other visitors during special events. The satellite lot would be a tool for transferring parking demand away from Waterfront lots for those who have the flexibility to then proceed

to the Waterfront by shuttle, AC Transit service, or by biking and walking. A satellite parking facility could maximize the space devoted to vehicle parking for recreational uses at the Waterfront without limiting access to the ferry service. Additional details on the implementation of this strategy are provided in Appendix B.

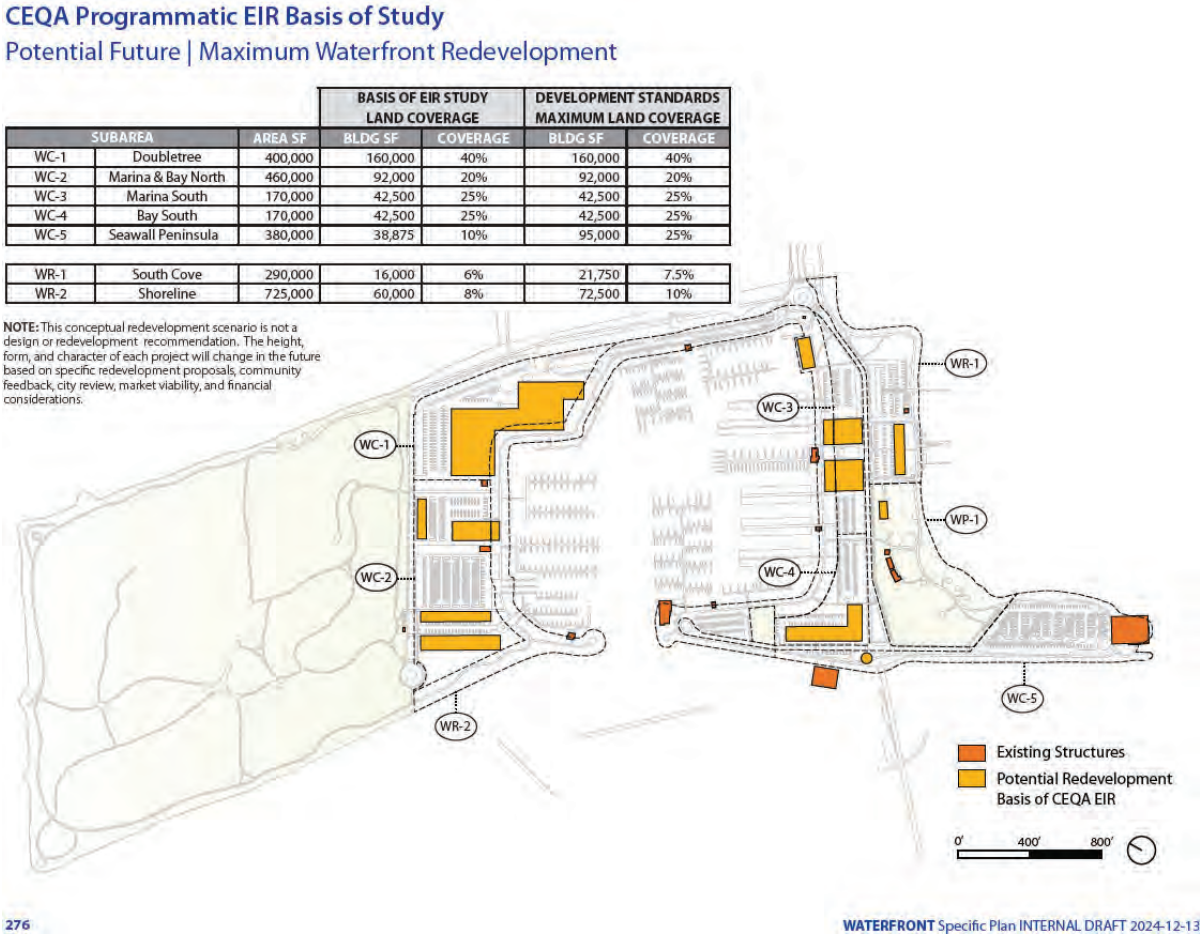
5.1.6. Demand Based Paid Parking

Paid parking can be an effective tool for managing parking demand from ferry users. Its implementation should be carefully designed to accommodate the needs of ferry riders while ensuring sufficient availability for a wide range of Waterfront visitors. A well-executed paid parking program is anticipated to reduce the demand by approximately 53 parking spaces. Additional details on the implementation of this strategy are provided in Appendix B.

5.1.7. Shuttle Service to the Waterfront

A shuttle service to the Berkeley Waterfront that is aligned with the ferry schedule could serve as an alternative to car trips for ferry riders. This shuttle would need to connect commuters and visitors from various origins throughout Berkeley to the Waterfront. Currently, UC Berkeley operates a shuttle bus under the Bear Transit program that loops between the campus and the Downtown Berkeley BART Station.[4] Another West Berkeley Shuttle, funded by Bayer HealthCare and Wareham provides a last-mile connection between Ashby BART Station and businesses in the West Berkeley Area.[5]

The City could consider extending this service to the Ferry Terminal, facilitating a seamless transfer for users. A shuttle service is anticipated to reduce the demand by approximately 53 parking spaces. Additional details on the implementation of this strategy are provided in Appendix B.



These two strategies would be sufficient to meet the future ferry ridership parking demand and transportation needs. However, the City could explore more strategies in the future based on the updated projections and changes to mode share splits that are not currently foreseeable.

5.2. Cumulative Conditions

This scenario considers the potential maximum development informed by the Draft Waterfront Specific Plan (WSP) combined with projected future ferry ridership. The Draft WSP is currently being developed by City staff in collaboration with Hargreaves Jones. As a part of this effort, the City desires to understand the potential impact of the development considered in the WSP on future Waterfront parking and transportation demands. Kittelson received land use data from City staff to evaluate the High Redevelopment Scenario, which anticipates 1.2 million square feet of development, including the existing 404,150 square feet of structures. The potential redevelopment locations and subareas are illustrated in Figure 8.

Note: Represents a hypothetical configuration of uses that could potentially be developed at the Waterfront with an estimated size of development.
F&B = food and beverage

The potential development would necessitate the redevelopment of the existing surface parking lots, leading to the reconfiguration of current parking spaces. Table 10 outlines the number of parking spaces affected by the future redevelopment as envisioned in the WSP. It is estimated that the Waterfront would experience a loss of four (4) public spaces, with an overall gain of 40 parking spaces due to the parking lots reconfiguration. Additionally, private parking is projected to increase by 150 spaces, whereas permit parking will decrease by 106 spaces.

However, efficient lot redesign, and developer agreements could recover and potentially enhance the parking at the Waterfront.

Table 10: Reconfiguration of Existing Parking Lots

	Existing			Future			Change

Source: Hargreaves Jones, for the Waterfront Specific Plan, 2024

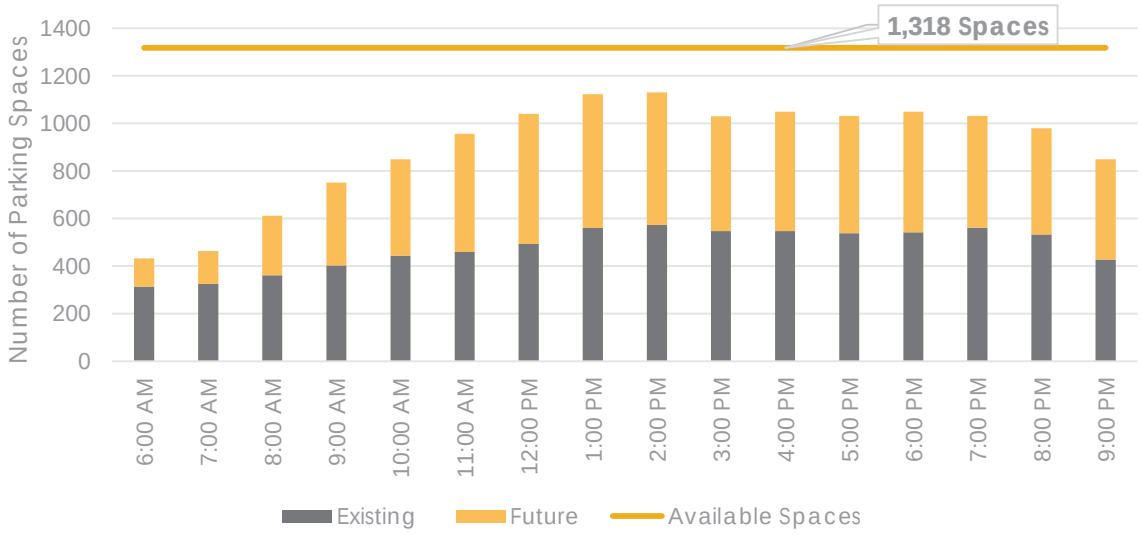
Note: Estimate of change in parking spaces based on the conceptual Maximum Waterfront Redevelopment scenario shown in Figure 8; Includes Marina Boulevard Trail, Access and Shoreline Improvements, dated 7-9-2020.

The City of Berkeley has developed conceptual plans to realign and develop Marina Boulevard, increasing the total parking capacity from 150 to 204 spaces. Details of the conceptual plan can be found in Appendix E.

A parking demand analysis has been prepared to estimate the future parking needs associated with the proposed developments in the WSP, helping to evaluate the requirements for future parking facilities and management strategies. Only certain developments are expected to influence parking demand, while others, such as restrooms and cafés, are considered auxiliary uses that will not generate additional trips to the Waterfront. The developments anticipated to have an effect on parking demand include:

- X1 Bay North Hotel
- X2 Recreation/F&B Complex
- X4 Bay South Hotel
- S1 Hana Japan & Sportsman's Center expansion
- S4 199 Seawall (i.e. Hs Lordship)
- S5 Aquatic Center / F&B/ Cal Adventure & Cal Sailing
- X6 Old Ferry Dock F&B
- Among these developments, the two hotels (Bay North and Bay South) would be required to provide off-street parking at a rate of 0.5 spaces per room, as specified in the development standards section of the WSP. The other five recreational and food establishment uses would not be required to provide off-street parking and would rely on the public parking spaces currently available at the Waterfront. Kittelson conservatively estimated the peak parking demand for these uses using the ITE Parking Generation, 6th Edition. It is estimated during the weekday peak hour the demand would be 461 spaces and during the weekend peak hour demand would be 450 spaces. Different land-uses have varying parking demand across the day. Kittelson utilized the Urban Land Institute (ULI) Shared Parking model, 3rd edition, to estimate the time-of-day rates for each future use. Table 11 presents weekday and weekend parking demand calculations for uses that will rely on public parking spaces.

Table 11: Weekday and Weekend Parking Demand



Location	Description	ITE Land Use Code	Weekday Average Rate	Weekend Average Rate	Weekday Peak Parking Demand	Weekend Peak Parking Demand
X2	Recreation/F&B Complex[1]	Food Hall (928) & Recreational Community Center (495)	3.96	2.72	87	60
S1	Hana Japan & Sportsman's Center	Food Hall (928)	3.96	2.72	44	30
S4	Hs Lordship	Fine Dining Restaurant (931)	16.18	18.23	239	270
S5	Aquatic Center / F&B Cal Adventure & Cal Sailing[1]	Food Hall (928) & Recreational Community Center (495)	3.96	2.72	25	17
X6	Old Ferry Dock F&B	Fine Dining Restaurant (931)	16.18	18.23	65	73
Total					461	450

Source: ITE Parking Generation Manual, 6th Edition
Note: [1]It assumes that only 40% of the GFA will be allocated for Food Hall (928) and the remaining 60% will be used for recreational purposes. F&B = food and beverage

The ULI Shared Parking model considers that while each land use generates demand for a certain number of parking spaces, these parking demands fluctuate hour-by-hour and day-by-day and shared parking between land uses can minimize the amount of space and resources devoted to parking.

Figure 9 shows the average weekday parking demand for existing in addition to the future uses by time of day. The "future uses" included in this figure include both ferry riders and the WSP High Redevelopment scenario. The peak demand is expected to be around 2 PM, with 1,131 parking spaces occupied (86% utilization), which remains below the 1,318 publicly available future parking spaces, excluding 76 Launch Ramp Paid parking spaces.

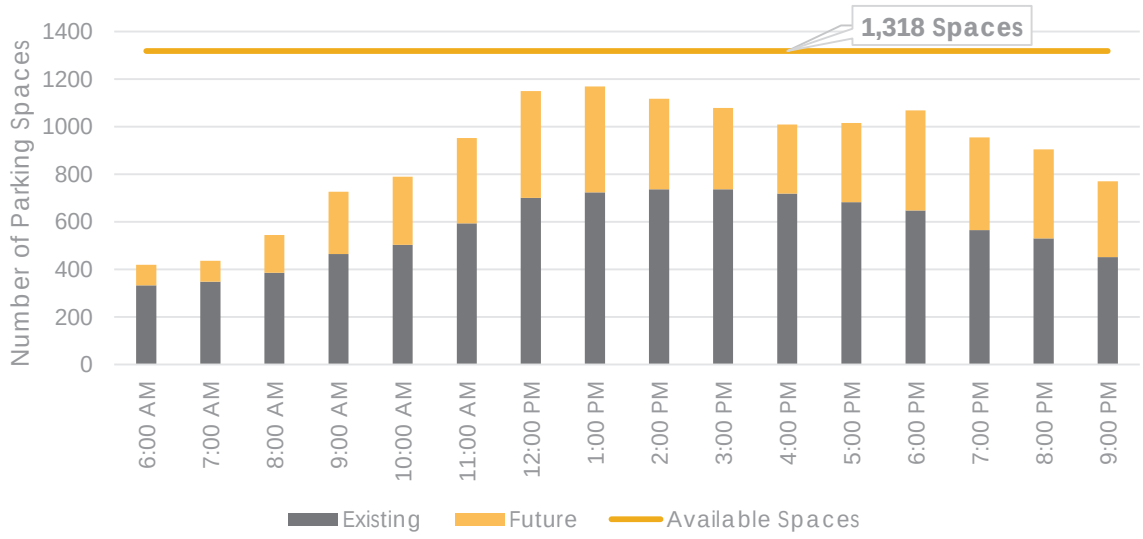


Figure 9: Weekday Parking Demand for Existing and Future Uses

Source: Kittelson & Associates, Inc. 2024

Figure 10 illustrates the average weekend parking demand for existing and future uses at the Waterfront, compared to the available parking spaces by time-of-day. The peak demand occurs around 1 PM, with 1,169 spaces utilized (89% utilization), which remains slightly below the total available spaces.

Figure 10: Weekend Parking Demand for Existing and Future Uses

Source: Kittelson & Associates, Inc. 2024

Based on the parking demand analysis, it can be concluded that the Waterfront will generally have sufficient parking spaces to accommodate the parking demand from future uses in the WSP. However, while the overall parking demand for the area can be met, there will be instances where individuals cannot park near their desired destinations, mainly during peak days and times. This could negatively impact the parking experience and cause frustration for some visitors. Implementing dynamic wayfinding and clear messaging strategies could help enhance the overall parking experience for visitors to the Berkeley Waterfront.

As noted earlier, AB 2097 prohibits public agencies from enforcing parking minimums for developments within ½ mile of a ferry terminal. However, the City can still require developers to implement Transportation Demand Management (TDM) strategies, such as providing bicycle parking, transit subsidies, or contributing to shuttle service programs. Developers must also submit a project-specific TDM plan that aligns with the City's monitoring and reporting requirements.[6]

TECHNICAL MEMORANDUM

February 28, 2025 Project# 19867.006

To: Liza McNulty, PE, Capital Improvement Program Manager
City of Berkeley Parks, Recreation & Waterfront (PRW) Department
2180 Milvia Street, 3rd Floor.
Berkeley, CA 94704

From: Kittelson & Associates, Inc.

CC: Ali Endress and Roger Miller

RE: Berkeley WTPF Baseline Parking Conditions

1.0 Background

The City of Berkeley (City) completed the feasibility study for the ferry facility at Berkeley Municipal Pier (Feasibility Study) in December 2021 and is now beginning detailed engineering and environmental studies for the Water Transportation Pier-Ferry (WTPF) Project. Kittelson & Associates, Inc. (Kittelson) is working with the City to develop a Parking and Transportation Demand Management (TDM) Plan that will support the proposed ferry service and future development at the Waterfront ("Parking and TDM Plan").

The purpose of this technical memorandum is to establish a baseline condition for the Parking and TDM Plan. The memorandum is organized into the following sections:

- Study Area
- Review of Existing Documents
  - Parking Issues and Needs
  - Past and Current Parking Management Solutions
  - Historic Parking Utilization
  - Ridership and Mode Share Estimates
- Case Study Interviews
- Staff Working Group Sessions
- Review of Parking Counts
  - Parking Inventory
  - Historical Count Data
  - All Day Count Data
- Intercept Survey
  - Survey Response Summary

2.0 Study Area

The study area (Berkeley Waterfront or Waterfront) is the area west of the McLaughlin Eastshore State Park, bordered by Spinnaker Way to the north and South Sailing Basin to the south, see **Figure 1**. University Avenue provides vehicle connection between the Waterfront, Downtown Berkeley and Highway 80.

AC Transit Bus Route 51B connects the Waterfront and Rockridge BART via College Avenue, Downtown Berkeley BART, and University Avenue. Only one out of every three scheduled bus trips between 7 am and 9 pm serves the Marina; all other trips terminate at the Berkeley Amtrak station, resulting in a frequency of two (2) buses every hour.

The San Francisco Bay Trail Extension provides bicycle and pedestrian access to the Waterfront from the intersection of University Avenue and Frontage Road. The bicycle and pedestrian bridge across I-80 connects the Waterfront with the City of Berkeley. Additionally, the Virginia Street Right-of-Way (a dirt pathway) offers another bike and pedestrian connection.

The Study Area is entirely public tidelands held in trust by the City. There are over 100 acres of uplands and 5 miles of pedestrian trails within the Waterfront. Centered within this landscape is the Berkeley Marina, the largest public marina in the San Francisco Bay with 1,000 boat slips. The Berkeley Waterfront also includes three public access docks, a boat launch ramp, and 11 parking lots.

Current businesses and attractions include 1 hotel, 4 restaurants, 1 boatyard, a yacht club, two non-profit sailing clubs, a nature center, a two-story office building (commercially leased), and 9 restroom buildings, as shown in **Figure 2**.

LEGEND

Source: City of Berkeley, MTC

KITTELSON & ASSOCIATES

Figure 2: Existing Businesses and Landmarks

Source: Draft Waterfront Specific Plan, 2023

The proposed ferry terminal at the Waterfront will be located at the Berkeley Pier, which will be reconstructed to provide dual ferry and recreation access. The study focuses on the following nine (9) public parking lots and three (3) on-street parking facilities. Private, paid and slipholder only parking lots (Boat Launch Stalls – Paid, Doubletree Stalls – Private/Paid, and Berkeley Marine Center) were not included in the analysis, as it is assumed that ferry riders will not use these locations for parking.

- **Public parking lots**
  - Spinnaker Way Lot
  - J&K Lot
  - L&M Lot
  - South Cove East/West Lot
  - Seawall Drive Lot
  - Skates/N Lot
  - O Lot

- **On-street parking facilities**
  - Spinnaker Way
  - Marina Blvd
  - University Ave Shoulder (at West Frontage Rd)
  - Seawall Drive North/South

- **Slipholder Permit Lots**
  - D&E Lot
  - F&G Lot
  - H&I Lot

Potential future redevelopment is limited to the existing developed land at the Waterfront comprised of leased land and surface parking lots Future redevelopment at the Waterfront over the next several decades may bring in more visitors and hence, an increase in the need for parking and TDM.

3.0 Review of Existing Documents

The following relevant documents and programs were reviewed for this task:

- Berkeley Marina Ferry Parking & Transportation Demand Management Strategy (Appendix D), Nelson Nygaard, October 2021
    - Appendix A: Revised Short-Term Recommendations for Parking Management, December 2018
- WETA Berkeley Ferry Service, Business Plan Version 1.0, March 2022
    - The Business Plan is intended to be a "living" document that will be updated as needed to respond to new information, new data, and emerging ideas.
- Parking and Mobility Framework, Draft, Berkeley Marina Area Specific Plan, January 2022
- Draft Waterfront Specific Plan, November 2, 2023
- Traffic Assessment of University Avenue Concept Study, December 2017

The following relevant topics were summarized for each document.

- Parking issues and needs
- Past and current parking management solutions
- Historic parking utilization
- Ridership and mode share estimates

3.1 PARKING ISSUES AND NEEDS

The 2021 Berkeley Marina Ferry Parking & TDM Strategy was developed as part of the Feasibility Study to support the needs of future ferry riders travelling to and from the Waterfront. The study analyzed existing conditions and transportation facilities near the proposed ferry terminal location, and was based largely on the 2018 Short-Term Recommendations for Waterfront Parking Management (Appendix of the Feasibility Study). The following parking issues were highlighted in the 2018 Report:

- **Small Scale Ferry Service:** Small scale ferry service was initiated in 2017 by two independent providers (Tideline and Prop SF). Small scale ferry service increased the demand for all-day parking at the Waterfront, particularly surrounding K-Dock, where ferries depart. It should be noted that both of these services were suspended in 2020 during the COVID pandemic.

- **Overcrowding at South Cove lots due to mixed uses/user groups.** The South Cove lots have multiple users that come to the Waterfront at similar or overlapping times, resulting in peak periods in which the lots are full. Users of South Cove include public access for water activities, Cal Sailing and Cal Adventures, Adventure Playground patrons, small scale ferry passengers, charter boat customers, Hana Japan and Bait Shop customers, and employees who work on the Waterfront.

- **All-day visitors (charter and ferry customers) occupy parking spaces for relatively long periods of time.** Ferry and charter boat customers tend to arrive early and utilize the highest demand spots closest to K-Dock. Their vehicles remain in the prime spots in excess of eight hours per day and leave no room for turnover. This creates an issue for those making shorter trips to the South Cove for sailing and boating (Cal Sailing/Cal Adventures), Adventure Playground, Nature Center, Summer Camp drop off, and customers of the marina office, Berkeley Sportsman's Center, and the 125-127 University Avenue office buildings. Many small-scale ferry and charter boat customers show a preference for the newly paved South Cove East Lot over the unpaved South Cove West Lot, in addition to J&K and M Lots. Ferry customers have not heeded recent [2018] City signage (placed on South Cove, J&K, and M Lots) to park on Marina Boulevard instead.

- **Locations needed for watersports community to park.** Many recreational watersports activities (such as windsurfing and winger watersports) require the use of the new green turf area on the northern edge of the South Cove East lot to prepare and rig their large equipment, the adjacent parking stalls (for convenient loading and unloading), and the adjacent wide path of travel (to access the launching docks in the South Sailing Basin). The parking spaces adjacent to the turf are also desirable for small scale ferry and charter customers because of their proximity to K-Dock and attractive appearance. Over the summer, some windsurfers reported that they were unable to find parking next to the turf on weekday afternoons. Several complaints by windsurfers seeking safe and convenient access to the rigging area from their vehicles were filed with PRW Staff in the months of June, July, and August of 2018. A-Frame signs placed in August 2018, were moderately effective at reserving the parking stalls adjacent to the turf for watersports users.

- **Importance of maintaining adequate slipholder parking close to docks.** Every dock at the Marina has a nearby shared parking lot. Some shared lots fill with the vehicles of other park users, limiting access for slipholders at peak times.

- **Importance of maintaining parking for Hana Japan customers in lot.** Hana Japan is only open for dinner when other Waterfront users tend to be leaving. However, in the summer, parking for Hana Japan customers often overflows to the unlit South Cove lots across University Avenue.

This 2024 Parking and TDM Plan will be reviewing and updating this information based on the changes that occurred during the past few years, in particular changes to parking management activities by the City and post COVID cuts to small scale ferry service.

3.2 PAST AND CURRENT PARKING MANAGEMENT SOLUTIONS

Since at least 2016, parking management at the Waterfront has been an evolving and dynamic effort, with the City implementing various lot-specific parking management strategies. This includes various pilot programs, some of which have been abandoned and others expanded based on their efficacy and public feedback. This section describes the parking management strategies that have previously been implemented or are currently in effect.

Slipholder Permit Program: This program became effective on June 4, 2018, for the three northern slipholder lots (D&E, F&G, H&I Lots).[1] The Program prohibits unpermitted overnight parking (12 am – 10 am). For slipholders at those locations, hangtag overnight permits are distributed by Marina staff, and guest permits are granted upon request. Waterfront staff have issued citations to vehicles parked overnight without a permit, or without payment in the Boat Launch Ramp lot. This Program was subsequently expanded to J&K lot and Skates/N Lot. A similar version of this program was implemented in L&M and O Lots, as a mix of public parking/slipholder only parking depending on time of day and day of week. Since the implementation of this permit program, vehicle counts in north facilities have indicated[2]:

- a 60% reduction of unpermitted parked vehicles.
- a reduction of total cars parked by up to 20%.

Time Limited Parking: In 2018, the City introduced time limited (i.e. maximum allowable parking duration) parking in J&K lot for 5 hours between 8 am and 8 pm. This was to ensure that the visitors to Hana Japan have spaces available and are not affected by all day parkers. This system was subsequently replaced with the Slipholder Permit Program described above. Throughout the Waterfront, virtually all public parking areas (streets and lots) have a maximum 72-hour parking limit (per Berkeley Municipal Code).

Gate Control: The Waterfront staff manage the opening and closing of gates at South Cove East and Seawall Drive as necessary, especially during peak summer months to prevent overnight parking.

Paid parking: There is a gate controlled paid parking at the Boat Launch ramp lot on the northern side of the Waterfront, charging $15 per entry for 76 paid stalls. On the northern side of this lot, referred to as the Spinnaker Way lot, there are 36 free public stalls used primarily by visitors to Cesar Chavez Park. DoubleTree Hotel provides parking for $8/hour or $40/day for its 408 spots.

A summary of the existing parking rules currently enforced at the Waterfront is provided in **Appendix A**.

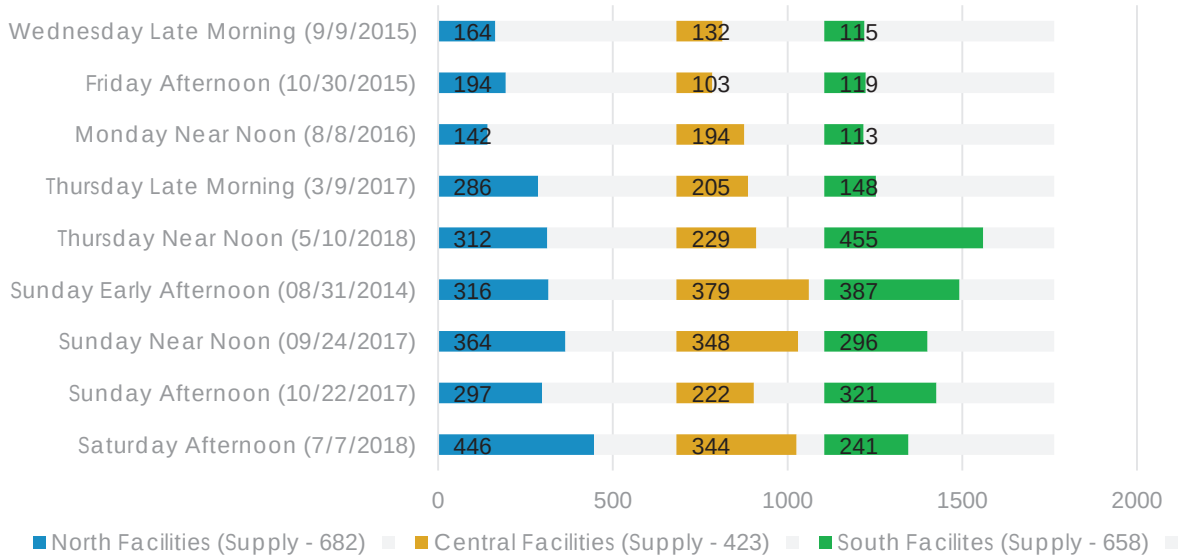
3.3 HISTORIC PARKING UTILIZATION

The parking utilization summary below and in Figure 3 is based on analysis conducted during the Feasibility Study, which used aerial parking utilization counts taken on several days between 2014 and 2018. **Figure 3** shows the specific days on which car counts were conducted for this analysis. The lots were divided into three subareas based on the geographic location of each facility.

- **Central Facilities** consist of L&M lot, J&K lot, South Cove West, South Cove East, and the "Small Boat Launch". The 10 parking spaces in the small boat launch ramp area were permanently removed in 2020 to make way for improvements to the Bay Trail Extension and access road. During the peak parking demand periods, the J&K Lot and L&M Lot, experienced as much as 89% and 93%

[1] *The Parking Permit Program does not apply to the paid launch ramp lot.*

[2] *Nelson\Nygaard. Revised Short-Term Recommendations for Waterfront Parking Management, 2018*



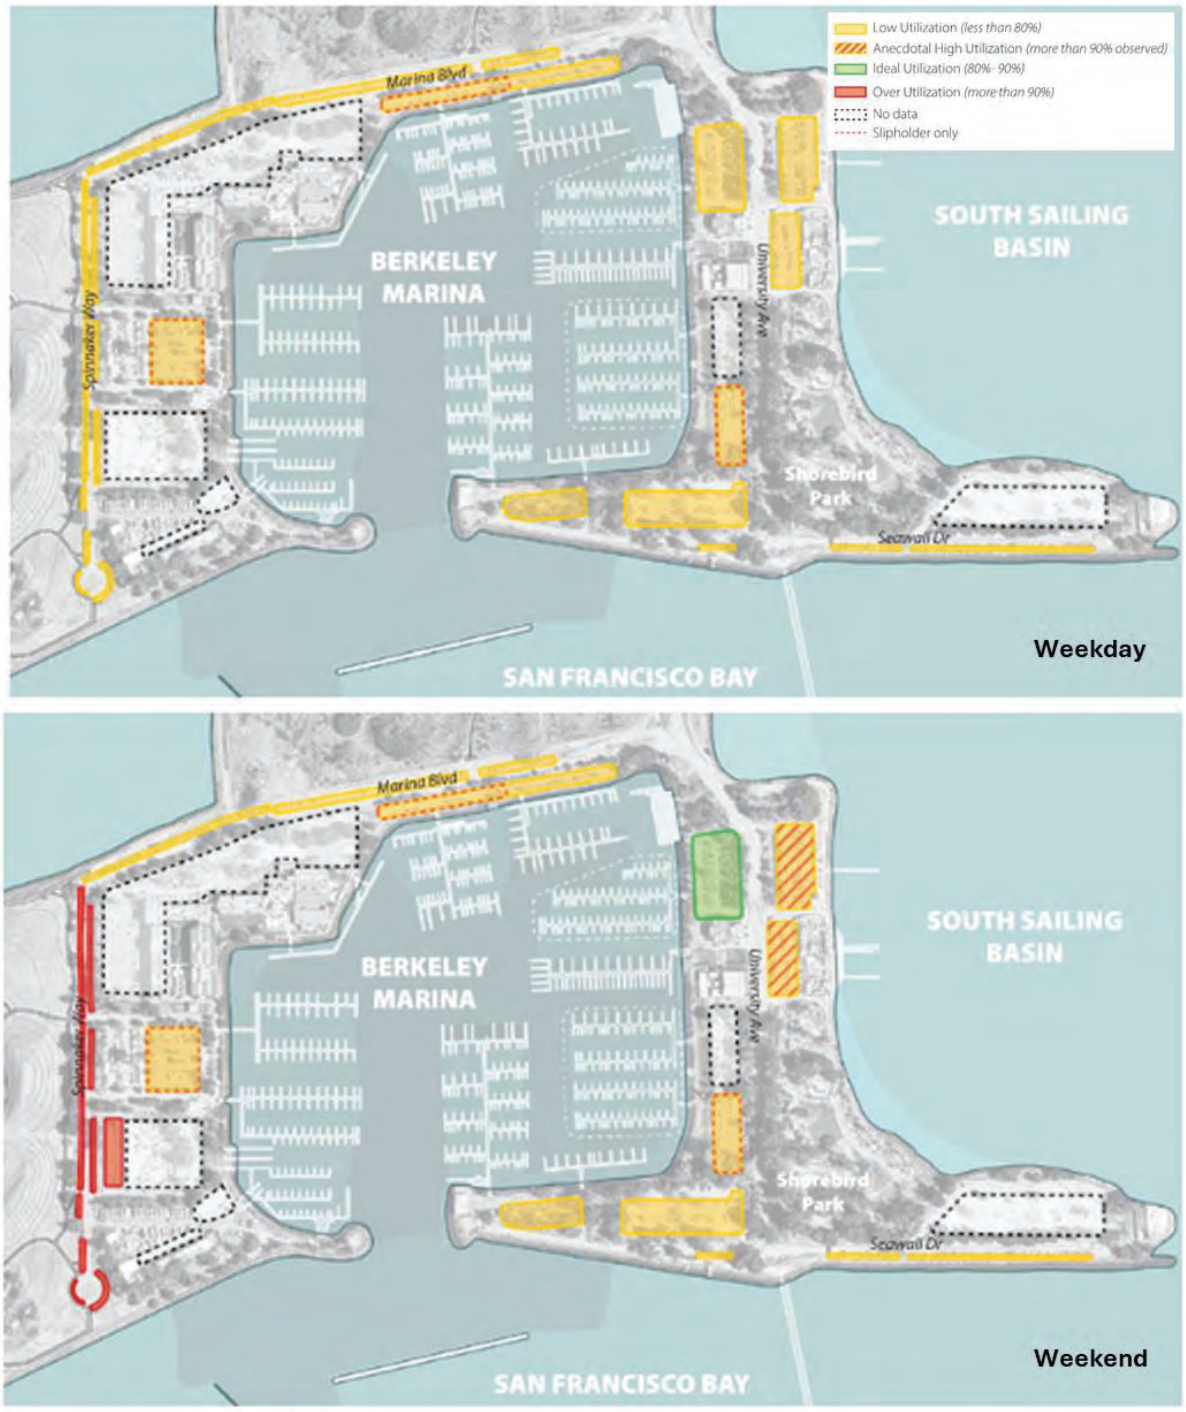
occupancy, respectively. Overall, the Central Facilities experienced 81% occupancy on Saturday afternoon and 90% occupancy on Sunday afternoon during the peak July-August parking periods.

- **South Facilities** consists of Skates/N Lot, O Lot, 199 Seawall Drive Lot, and Seawall Drive. The peak parking period for south facilities was Thursday afternoon with 69% occupancy.

- **North Facilities** consists of D&E Lot, F&G Lot, H&I Lot, Marina Blvd, the Boat Launch Ramp, Spinnaker Circle, and Spinnaker Way. Spinnaker Way had 97% occupancy during the Saturday afternoon surveyed. In aggregate, the parking lot facilities in the north observed the highest demand during Saturday afternoon with 65% occupancy.

Figure 3 shows parking utilization by facilities and time of day.

Figure 3: Parking Utilization by Facilities by Time of Day (2015 – 2018)



Source: Nelson\Nygaard. 2018. Berkeley Waterfront Parking Study. Appendix A

The data includes private lots such as the Marine Center Leased Lot, DoubleTree Leased Lot, Berkeley Police Department Leased Lot, and Berkeley City Vehicle Parking Lot, which results in the parking supply being 1,763 spaces higher than the public lots (1,566) analyzed in this report.

Figure 4 shows average weekday and weekend parking utilization based on the data collected for the Draft Waterfront Specific Plan in 2022-2023. During the weekend, the parking utilization was higher in the northern facilities – Spinnaker Way on-street parking and Spinnaker Way Lot. The figure also shows high utilization at South Cove lots during the weekend based on anecdotal information, including feedback provided from City staff and community members.

Figure 4: Average Weekday and Weekend Parking Demand (Draft Waterfront Specific Plan)

Source: Draft Waterfront Specific Plan, October 2023

3.4 RIDERSHIP AND MODE SHARE ESTIMATES

The proposed ferry terminal at the Waterfront will be located at the Berkeley Pier, which will be reconstructed to provide dual ferry and recreation access WETA estimates a total of 1,830 average weekday boardings. Conservatively, this would result in 915 riders boarding at the Berkeley Terminal, assuming all riders are round-trip traveling between Berkeley and San Francisco and originating in Berkeley. It is projected that the average weekday boardings would reach 2,110 by 2040.

The Feasibility Study and WETA Business Service Plan separately estimated the travel mode share of future ferry riders, as shown in **Table 1**. The Feasibility Study estimated that 54% of the ferry riders will drive alone and 9% will carpool to the Ferry Terminal. The remaining ferry riders will arrive by bicycle, ride-share, public transit or other modes of transportation that would not require a vehicle parking space. WETA Berkeley Ferry Service Business Plan estimates that only 31% will be driving alone and 15% will be carpooling to the Ferry Terminal.

Kittelson reviewed updated on-board survey data from WETA, which included surveys conducted in 2022. Using the WETA Business Plan methodology, Kittelson estimated the mode share based on the new data. The results estimate that 44% of trips were drive-alone, which is higher than the WETA business plan estimate. The 2022 estimates also estimate lower shares for walking (4%) and biking (11%). Public transit mode share was estimated at 2%, which could be largely attributed to pandemic conditions, as people were avoiding public transportation.

Comparing the three sources of data, Kittelson has recommended a baseline (i.e. pre-TDM implementation) mode-share that reflects the local context and our understanding of the existing travel patterns at Berkeley Waterfront. The baseline mode share, shown in bold in Table 1 below, represents the assumed mode share before implementation of new TDM strategies at the Waterfront. TDM strategies that further reduce the parking demand for Ferry Riders are in development.

Table 1: Mode Share Summary for Ferry Riders

Source	Drive Alone	Carpool	Kiss-and-Ride	Public Transit	Bike	Walk Only	TNC/ Taxi	Other[1]
WETA Business Plan, 2017-2019	31%	15%	15%	5%	16%	8%	8%	2%
Feasibility Study (Baseline)	54%	9%	8%	4%	18%	3%	3%	1%
WETA Updated Survey - 2022	44%	8%	8%	2%	11%	4%	2%	21%
Recommended Baseline (no TDM)	**40%**	**12%**	**8%**	**5%**	**16%**	**4%**	**5%**	**10%**

[1]Other includes multiple modes and private shuttle

4.0 Case Study Interviews

Kittelson conducted three case study interviews with agency staff who were either involved in implementing parking and transportation demand management strategies or are familiar with the parking management at the selected locations. The details of the interviews and key takeaways are presented in this section.

4.1 ALAMEDA HARBOR BAY FERRY PAID PARKING APPROACHES

- **Interview date**: August 8th, 2024
- **Participants**: Lisa Foster, Acting Transportation Planning Manager, City of Alameda

In an attempt to prevent spillover parking from the adjacent Harbor Bay Ferry Terminal, three home owners associations (HOAs) in the City of Alameda were given the authority to issue free residential parking permits to residents. The permits went into effect in 2017 with limited public oversight and subsequent turnover of City staff, and there is limited knowledge on the success of the program. As of now, the City of Alameda suspects that the HOAs are no longer issuing new permits for the permitted parking zones. Signs indicating the permit only parking restrictions are still present in the neighborhood, but it is unclear if enforcement is active.

In the meantime, the City moved forward with its own paid parking program to manage demand for parking at the Harbor Bay and Seaplane Lagoon ferry terminals. This plan was approved by the Alameda City Council prior to the pandemic, and was reauthorized in both 2022 and 2023.

The City of Alameda's ferry terminal management strategies offer important lessons for the parking management at the Berkeley Waterfront, including that:

- Paid parking may be most easily implemented at ferry terminals if introduced at the inception of a new service, or if there is regularly high occupancy at terminal parking lots.
    - The City of Alameda intended to introduce paid parking at the opening of the Seaplane Lagoon Ferry Terminal, but delayed due to the pandemic. The City is now in their third year of trying to implement paid parking at that location.
- The City of Alameda is partially reinvesting paid parking revenue to enhance security at parking lots. This serves to ease riders' concerns over theft and vandalism, as well as to ease public acceptance of new parking fees.
- Coordinating public bus or shuttle service can be difficult due to the relative infrequency of both ferry services and of bus routes that serve waterfront areas. AC Transit discontinued a shuttle service to the Seaplane Lagoon Ferry Terminal after low ridership and AC Transit Route 21 receives low ridership to the Harbor Bay Ferry Terminal.

4.2 BERRYESSA BART URBAN VILLAGE PLAN

- **Interview date**: August 16th, 2024
- **Participants**:
    - Jessie O'Malley Solis, Director of Real Estate and Transit Oriented Development, VTA
    - Charla Gomez, Planning Project Manager, City of San Jose
    - Wilson Tam, Transportation Planning Manager, City of San Jose

In 2021, the City of San Jose approved the Berryessa BART Urban Village Plan (UVP), which established guidance for mixed-use development around the newly opened Berryessa BART Station. One of the plan's main objectives is to enable high-density residential and commercial development around the station without overwhelming the project site with parking facilities which would diminish the urban character of the new development. The UVP's main goal is to plan for density around the BART station, and all of its parking recommendations are designed to support that goal.

The UVP's binding recommendations include the formation of a transportation management authority (TMA) to oversee parking and TDM policy in the new developments. The UVP also dovetails with a city-wide parking reform process that eliminated mandatory parking minimums[3] and established TDM incentives for new development.

Key takeaways for the Berkeley Waterfront include:

- The Berryessa BART UVP's progressive parking policy recommendations were supported by ongoing citywide planning initiatives.
    - If the UVP's parking recommendations had been a standalone deviation from San Jose's parking guidelines, they would have been more difficult to adopt.
    - The City of Berkeley should consider how the introduction of mass transit service to the Waterfront interacts with the city's recent and ongoing land use and TDM planning processes, including the city's VMT criteria and thresholds.[4]
- Publicly owned land can provide important opportunities for setting the tone for new development.
    - The UVP was developed for land owned by VTA, which enabled more restrictive criteria for developments than if the land had been privately owned.
    - The City of Berkeley can capitalize on its public property at the Waterfront to ensure that any new development or transportation investments meet rigorous standards for sustainability and equity goals.

[3] Since 1965, the City of San Jose's municipal zone code required new develops to build a minimum number of parking spaces based on size and land use type. With its 2022 parking reform, San Jose became the largest US city to eliminate parking minimums.
[4] City of Berkeley, *VMT Criteria and Thresholds*. 2020.

4.3 EMERY GO-ROUND

- **Interview date**: August 21st, 2024
- **Participants**:
    - Daniel Olver, Executive Director, AlTrans
    - Wendy Silvani, Principal, Silvani Transportation Consulting

The City of Emeryville has been running free public shuttle service since the 1990s to connect the city to MacArthur BART Station in Oakland. At first the service was funded by a few major employers, but eventually transitioned to a property-based improvement district (PBID) funding model, where all Emeryville residents contribute based on their property tax assessments. Today, 80% of Emery Go-Round's funding comes from the PBID, 11% from the City's budget, and the rest from state and federal grants.

Emery Go-Round consists of two routes that provide local service across Emeryville and provide more bus to rail transfers at MacArthur BART than AC Transit does. However, Emery Go-Round ridership is still recovering from the pandemic, when it lost 90% of its ridership in one year. As of May 2024, Emery Go-Round had recovered to just 40% of its 2019 weekday ridership, but was up to 80% of its weekend ridership.

Key takeaways for the Berkeley Waterfront include:

- Successful shuttle services tend to rely on robust private sector financing from major employers or commercial destinations. However, once established, funding for shuttles can be transitioned into public control using mechanisms like PBIDs.
    - Shuttle service to the Berkeley Waterfront would likely need to be subsidized by major private sector institutions in either Berkeley and/or in San Francisco. The current commercial activity at the Waterfront is not likely able to support a shuttle service on its own.
- Shuttle services tend to rely primarily on commute trips, which can be carefully coordinated around timetables at rail stations or ferry terminals, but are easily disrupted by changes to employment markets and commute travel patterns.

5.0 Staff Working Group Sessions

Kittelson met with the City and Waterfront staff on May 23, 2024, to discuss the vehicle parking issues and challenges at the Waterfront. Some of the key themes from this discussion are listed below:

Parking Management

- High tides and holidays affect parking lot usage as high tides attract regular sailors and holidays attract a surge of recreational users. Nature Center and Adventure Playground are closed on City holidays.
- Waterfront Monitors play a key role in managing parking and vehicle circulation during peak times.
- Slipholder lots (e.g., M) require overnight permits, but illegal parking is common during peak times.
- There is a need for wayfinding signage to help users access the lots that are underused. The University Roundabout was identified as a potential site for decision-making and parking.
- There is a need for designated passenger drop-off and pick-up and loading and unloading zones.
- Challenges with managing large groups and bus parking on weekends. Tour buses sometimes park without a permit at the Marina Boulevard lot.

Major Destinations

- Seawall Drive View, Restaurants (Hana Japan and Skates on the Bay), Cal Sailing Club and Cesar Chavez Park are major destinations.
- Adventure Playground is popular for birthday parties and there is a need for nearby parking and loading zones to accommodate pick-ups and drop-offs.
- Cal Sailing Open House introduces many new visitors, in particular UC Berkeley students, to the Berkeley Waterfront and generates a lot of visitors (many hundreds) on event days, which occur about 10 times per year.
- Roaming Bean Coffee primarily serves existing users.
- Fishing pier used to attract large number of visitors before it closed down.

Other Modes of Transportation

- There is a need for more bike parking spaces and enhanced wayfinding signage throughout the Waterfront and especially near recreational activities.
- Inner Harbor Walkway and other areas are used for biking.
- AC Transit Bus Route 51B is popular among the UC Berkeley Students and provides students and other visitors without cars a transportation option to the Waterfront.

Upcoming projects

- Projects include South Cove West Parking Lot, Cesar Chavez Perimeter Path and restroom, restrooms upgrades, replacing D&E dock and Harbor Entrance dredging.
- Identifying a new leaseholder for the former HS Lordship building at 199 Seawall Drive is a high priority.

Potential Solutions Brainstorm

- Charging for parking should be considered though it may not be a popular option for Waterfront visitors or businesses.

- Valet parking should only be considered if it is self-sustaining and does not require ongoing funding.
- Gated parking should be self-regulated, and the exit must be secured.
- Consider shuttle to offsite parking, e.g., at Golden Gate fields and other major destinations (Amtrak and Fourth Street).

Other Considerations

- Car break-ins have been an ongoing issue - the police department's presence has reduced criminal activity at the Waterfront.
- Camera surveillance and lift gates would enhance security.
- Integrate public art and placemaking along Seawall Drive promenade.
- Non-residents contribute significantly to the Waterfront revenue.
- Dry storage at D&E Lot generates revenue, however, there may be other uses that provide greater benefit.
- Install additional electric vehicle charging stalls.

6.0 Review of Parking Counts

The parking demand at the Waterfront is inherently variable and influenced by a range of environmental, seasonal, and human factors. For instance, on sunny days, the area is likely to experience a surge in visitors, including beachgoers, sailors, and recreational users, all of whom contribute to increased parking demand. Conversely, cloudy or rainy days can lead to a significant drop in visitors, reducing the need for parking.

Additionally, peak recreational use is closely linked to natural conditions such as tides, winds, and surfing seasons. For surfers, optimal conditions may not always align with predictable weather patterns or typical peak hours, leading to fluctuating demand that can be difficult to anticipate. Similarly, other water-based activities, like boating or fishing, can see spikes in participation based on favorable weather and tide conditions.

Given these dynamics, conducting a comprehensive parking study that accurately accounts for all these variables is challenging. Normal parking evaluation methodology relies on typical conditions and average usage rates, and will likely not completely capture the complexities introduced by fluctuating weather and seasonal recreational patterns. While this document can provide a baseline understanding, it has its limitation to predict demand with precision due to the highly variable nature of Waterfront use driven by weather and natural conditions.

Kittelson reviewed parking counts from two data sources — Historical Count Data from May 2021 to February 2024 and All-Day Counts collected for five days in 2024.

Historical Count Data: The City of Berkeley Waterfront Monitors have been consistently collecting daily parking counts at the Waterfront since May 2021. The data is collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with the results recorded on a paper survey form that is later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time to better support parking management objectives. Kittelson reviewed data from 2021 to

2024. During data processing, some lots had to be merged for various reasons, such as a lack of physical boundaries between them or combined data reporting for adjacent lots. The lots that were merged are:

- F&G and H&I Lots
- South Cove East and South Cove West Lots

Limitations: The data may not reflect peak utilization which could occur outside of the hours of 10 am and 8 pm. In Spring, 2024, staff began collecting data at additional time points (2 pm and 4 pm), which was not used for this study due to the comparatively limited number of data points,

All-Day Count Data: Kittelson in partnership with Quality Counts (QC) collected hourly parking counts between 5:30 am and 9:30 pm on Saturday, and 8 am to 10 pm on Thursdays on the following dates:

- Saturday, April 6
- Thursday, April 11
- Thursday, August 1
- Thursday, August 22
- Saturday, August 24

The counts were collected using go-pro dash cams while slowly driving through all parking lots once per hour during the count period. Post-processing involves reviewing the GoPro footage and recording each vehicle parked. QC recorded the partial license plate, make, model, and color to demarcate specific individual vehicles and the time a vehicle remained in parking stall.

Limitations: The data was collected on typical Thursdays and Saturdays with pleasant weather, chosen to reflect peak Waterfront activity while avoiding any events that might skew the results.

Additionally, Kittelson with the help of Waterfront monitors conducted parking intercept surveys to understand the trip purpose and travel behavior of the visitors. More information on Parking Intercept surveys is presented in the next section.

The following section summarizes key findings from the data analysis.

6.1 PARKING INVENTORY

Based on a field survey conducted in 2024 and validated by City staff, there are 1,566 public free vehicle parking spaces throughout the Waterfront. The survey was necessary due to the presence of unstriped parking lots, making it challenging to accurately determine the number of spaces. **Table 2** presents the parking inventory (number of vehicle spaces) by lot. The inventory does not include the paid parking spaces available at the Boat Launch or Double Tree Hotel. A summary of the parking counts by location is provided in **Appendix A**.

Table 2: Parking Inventory

Lot Location	Number of Spaces	Type	Surface Type
North Facilities			
Marina Blvd	150	Unstriped	Unpaved
Spinnaker Way	127	Striped	Paved
Spinnaker Way Lot	36	Striped	Paved
D & E Lot	129	Striped	Paved
F & G Lot	63	Unstriped	Paved
H & I Lot	52	Striped	Paved
Central Facilities			
J & K Lot	92	Striped	Paved
L Lot	14	Striped	Paved

South Cove East Lot	96	Striped	Paved
South Cove West Lot	86	Unstriped	Unpaved
University Avenue	25	Unstriped	Paved
South Facilities			
Skates/N Lot	137	Striped	Paved
O Lot	72	Striped	Paved
Seawall Drive North	6	Unstriped	Paved
Seawall Drive South	84	Partially Striped	Paved
Seawall Lot	320	Striped	Paved
Total Public Parking Spaces	**1,566**		

Source: Kittelson & Associates, Inc.

6.1.1 Bicycle Parking Inventory

There are 149 short-term bicycle parking spaces located in racks across the site and 10 BikeLink lockers for secure bike storage located near the Bait Shop and Hana Japan. As shown in **Figure 5,** most of the bike parking is located near the major destinations near central and south vehicle parking facilities.

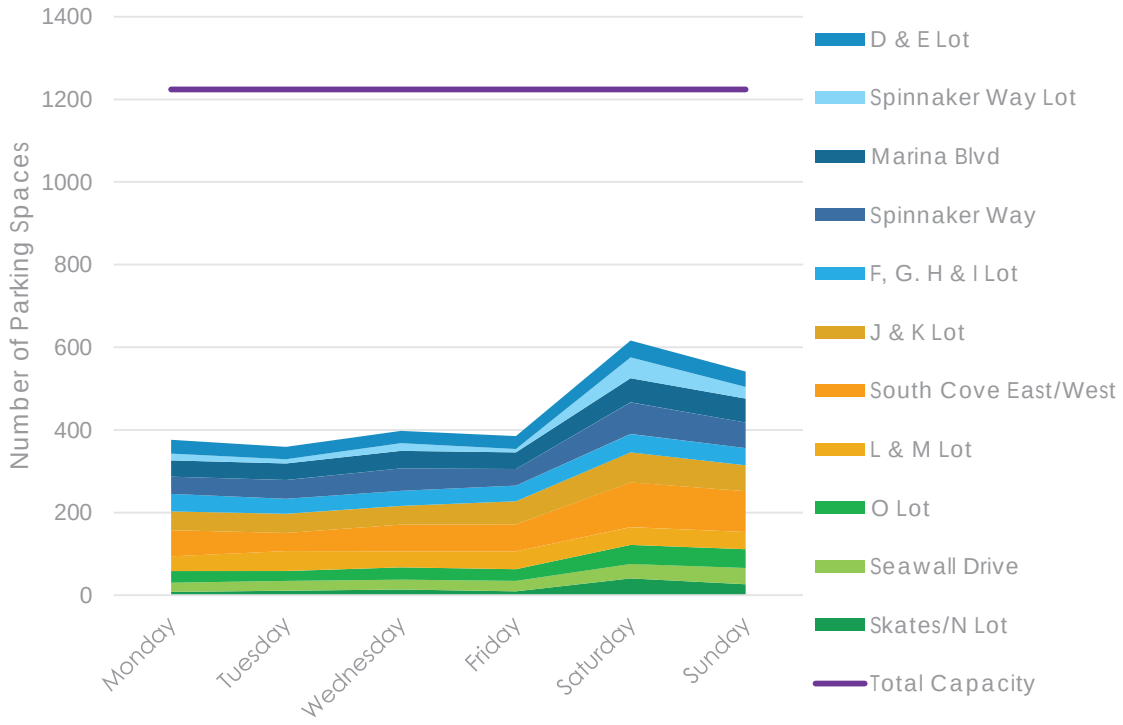
KITTELSON & ASSOCIATES

6.2 HISTORICAL COUNT DATA

6.2.1 Parking Utilization by Month

Figure 6 shows the average monthly parking utilization at the Waterfront. The highest utilization occurs during the late spring and summer seasons, with the peak occurring in June, where 36% (440) of the total public parking spaces were occupied. Overall, the total occupancy rate fluctuates between 26% (318) and 36% (440) over the two time periods of data collection.

Figure 6: Parking Utilization by Month (2021-2024)



Source: Daily Parking Counts by Waterfront Staff 2021-2024, Data Compiled by Kittelson & Associates, Inc. 2024

Note: Data does not include Seawall Drive Lot and University Avenue (320 + 25 parking spaces) in counts or capacity.

6.2.2 Parking Utilization by Day

Figure 7 depicts daily parking utilization by day at the Waterfront for the peak month of June. Utilization peaks on weekends, with Saturday experiencing up to 50% occupancy across the entire waterfront. Significant increases in weekend usage are observed in the Launch Ramp-Public, J&K Lot, South Cove East and West, O Lot, and Skates/N Lot, likely due to the increase in the number of water-based recreational and restaurant visitors.

Figure 7: Parking Utilization by Day (June)

Source: Parking Counts by Waterfront Staff, Data Compiled by Kittelson & Associates, Inc. 2024

Note: Data does not include Seawall Drive Lot and University Avenue (320 + 25 parking spaces) in counts or capacity.

6.3.3 Parking Availability on Weekdays

Figure 8 shows the average parking occupancy by lots on weekdays. Only J & K Lot is more than 50% occupied during the peak month of June.

Source: City of Berkeley, MTC

KITTELSON & ASSOCIATES

6.3.4 Parking Availability on Weekends

As seen in **Figure 7**, the parking utilization during weekend is higher than weekdays. **Figure 9** shows the average parking occupancy on weekends during the month of June.

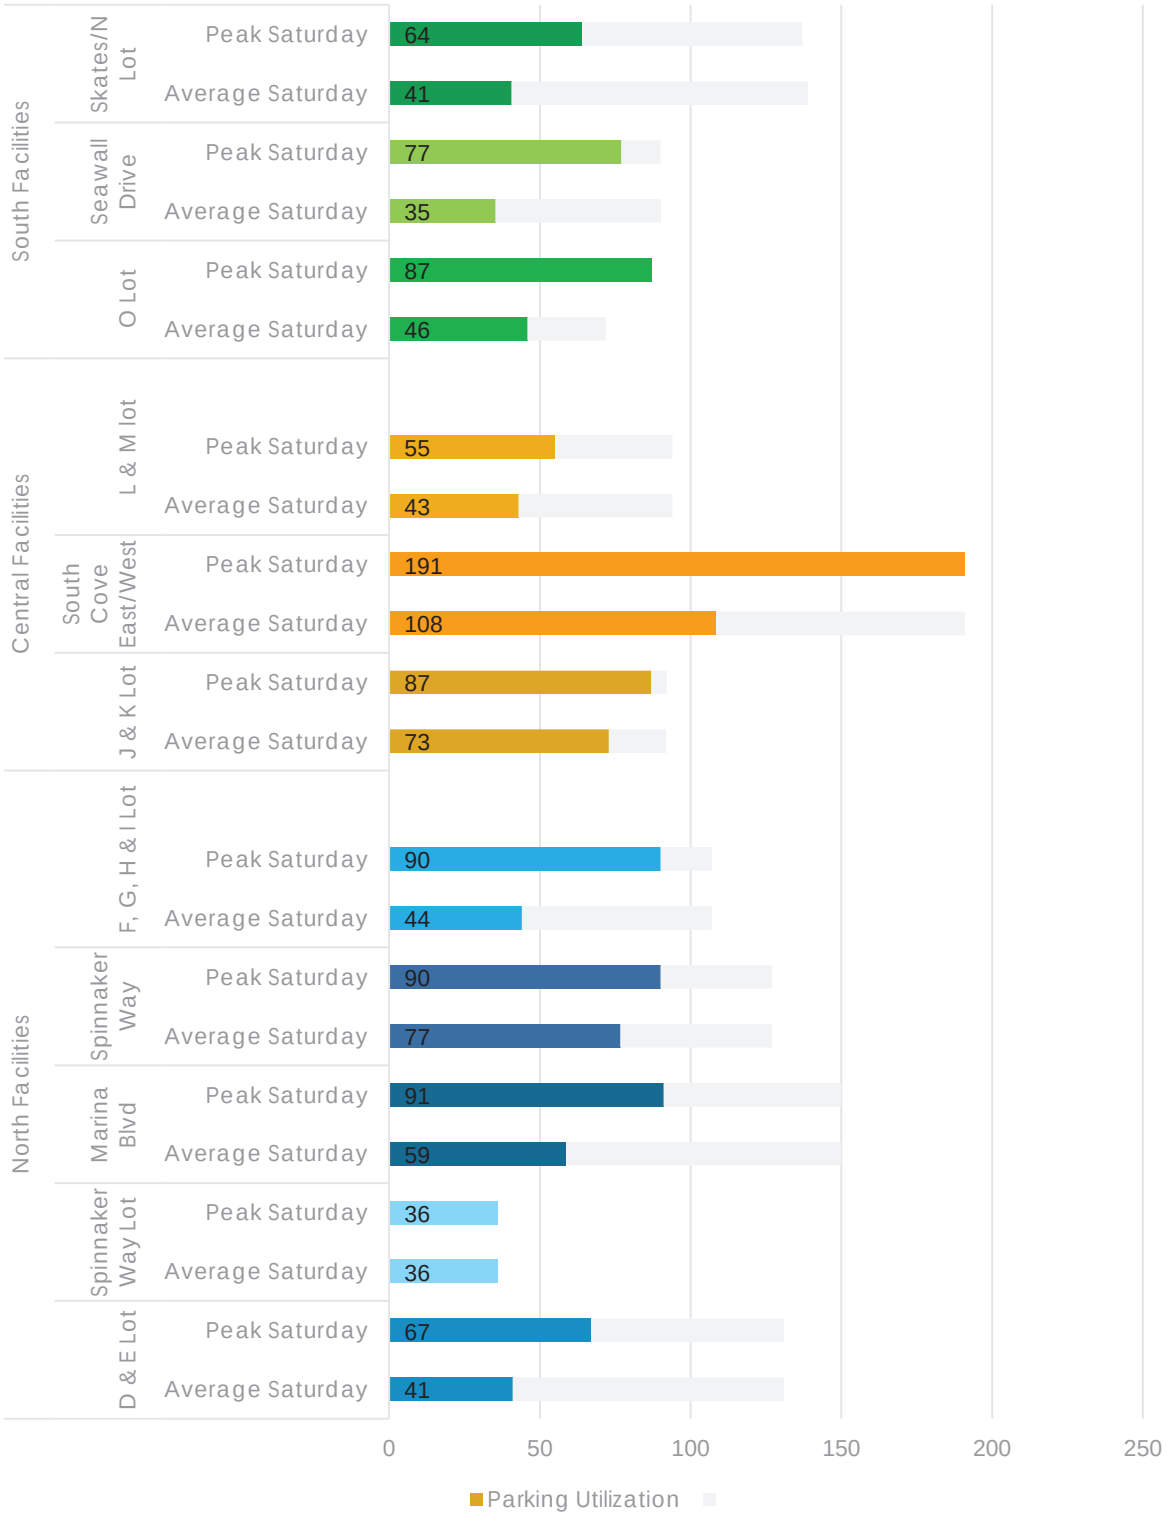


Figure 10 compares parking utilization on an average Saturday with that of the peak Saturday on April 1, 2023. The comparison reveals that certain lots had more than double the occupancy on the peak Saturday compared to an average Saturday. Nevertheless, even on the peak Saturday, overall Waterfront public parking was 75% occupied with 306 spaces remaining. During the peak Saturday, centrally located lots observed 82% occupancy, while South Cove East/West reached full occupancy at 100%.

Source: City of Berkeley, MTC

KITTELSON & ASSOCIATES

Figure 10: Parking Utilization on Weekends (Average Saturday vs Peak Saturday)

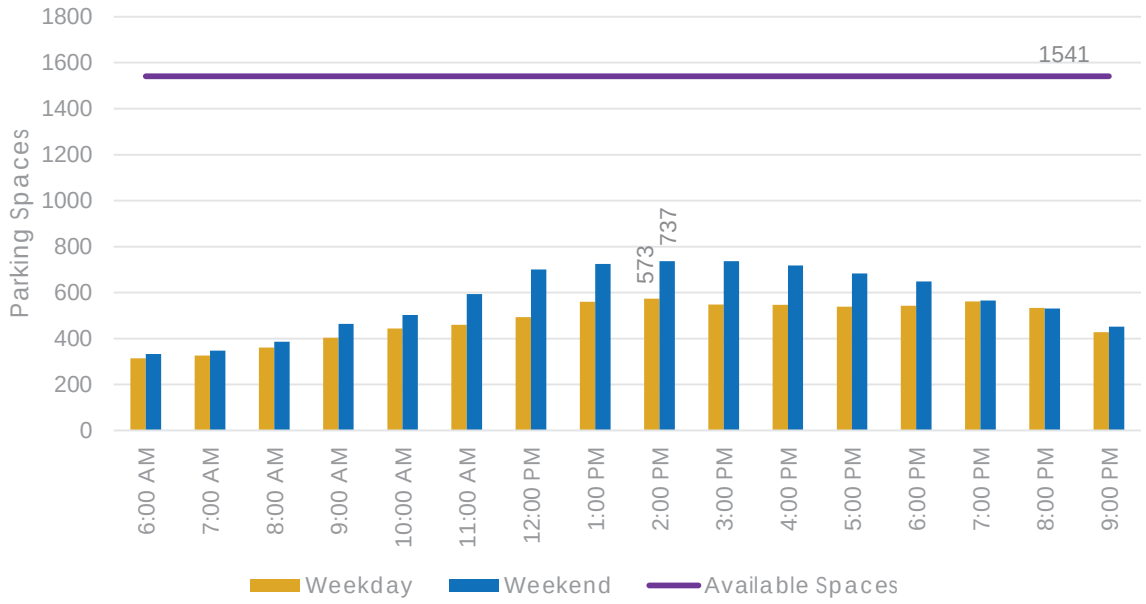
Source: Parking Counts by Waterfront Staff, Data Compiled by Kittelson & Associates, Inc. 2024
Note: Data does not include Seawall Drive/ Shorebird Lot.

6.3.5 Parking Utilization at Seawall Drive Lot

The Seawall Drive Lot (also commonly known as the HS Lordship Lot) was analyzed separately as the data collection was conducted on fewer days than other lots due to lot closures for public safety. The Waterfront staff will open the gates to the parking lot only as needed, for example, during peak summer months and during camp drop off times. Based on the available parking counts, the lot was 21% (67 spaces of 318 available) occupied on an average Saturday.

Figure 11: Gates at Seawall Drive Lot

Photo credit: Kittelson



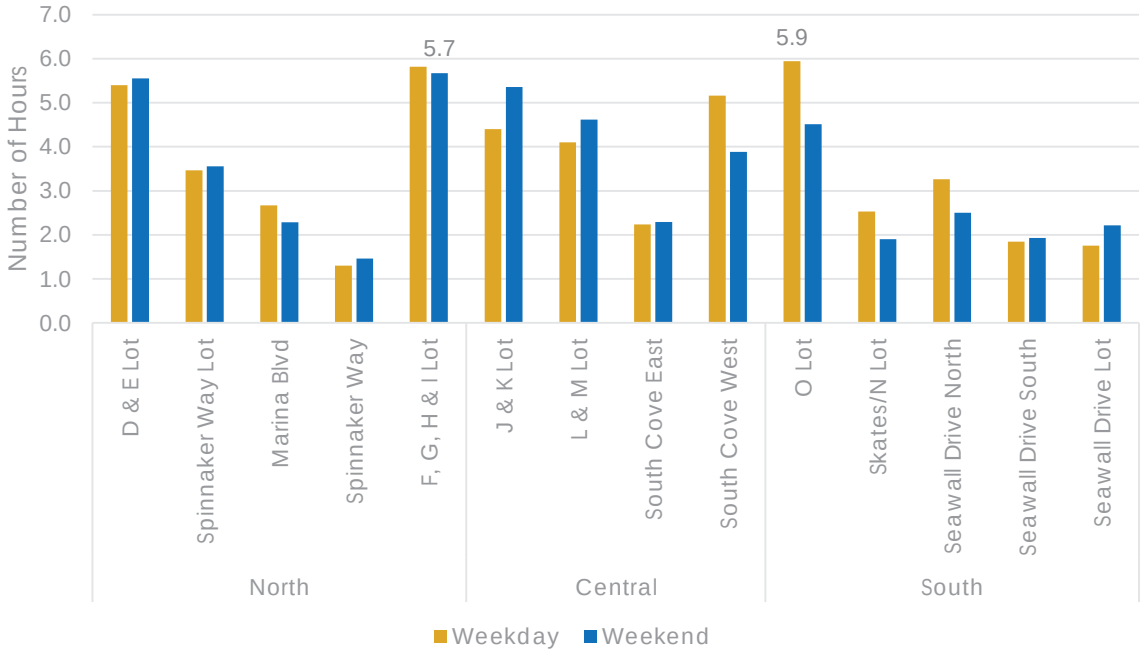
6.4 ALL DAY COUNT DATA

Quality Counts collected hourly parking counts on three weekdays and two weekends as mentioned in the introduction of this section. The hourly counts were collected to understand the parking turnover and duration at each public parking location.

6.4.1 Hourly Parking Demand

Figure 12 displays the number of parking spaces occupied at the Waterfront each day, The parking utilization is higher on weekends compared to weekdays, especially during midday hours (10 am – 2 pm). The peak usage occurred at 2 pm on weekends (48% occupied, 737 spaces) and weekdays (37% occupied, 573 spaces).

Figure 12: Parking Occupancy by Time of Day



Source: Kittelson & Associates, Inc. 2024

6.4.2 Parking Duration

Parking duration indicates the average time a car remains parked in a space. **Figure 13**, **Figure 14** and **Figure 15** shows the parking duration by lot for both days. On Thursday, the O Lot had the highest average parking duration at approximately 6 hours. Additionally, the D&E Lot, F, G, H & I Lot, J & K Lot and L&M Lot all recorded vehicles being parked for over 4 hours on both days.

6.4.3 Parking Turnover

Parking turnover refers to the number of parking spaces that either become occupied or vacated within a given period, reflecting the rate of use of a facility. For example, if two cars leave a parking lot and two new cars park in the same lot, the turnover value for that lot would be 4. **Figure 16** shows the total waterfront public parking turnover by time of day. The turnover is higher on Saturday as compared to Thursday and between 4 pm and 7 pm. On weekends, the highest turnover occurred at 6 pm with 28% (429 turnovers) of the total available spaces.

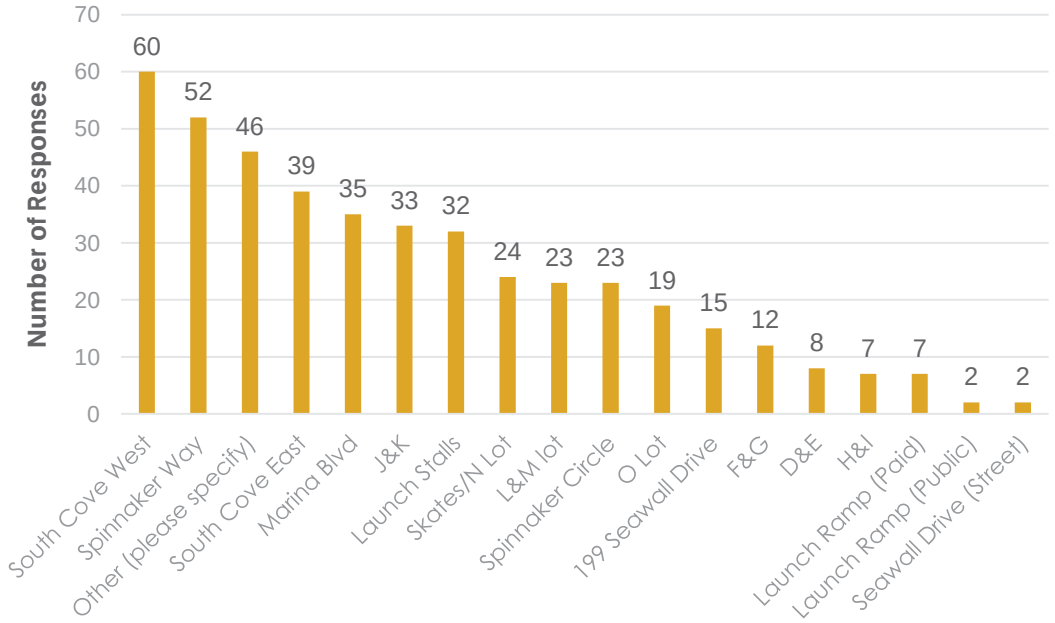
Figure 16: Parking Turnover by Time of Day

Source: Kittelson & Associates, Inc. 2024

7.0 Intercept Survey

To understand the trip purpose and parking habits of Waterfront visitors, Kittelson, with the help of Waterfront monitors, conducted parking intercept surveys on seven days between April and August 2024. The dates and times of the completed surveys are listed in **Table 3**. The surveys were administered in-person to gather firsthand insights into participants' parking concerns. Respondents were given the option to skip questions if they felt uncomfortable answering them. This section presents summary of the findings from the analysis of 455 responses. The survey questionnaire is included in **Appendix B**.

Table 3: Parking intercept survey dates



Survey No.	Survey Date	Survey Time
1	Saturday, April 6th	12:00 pm – 4:00 pm
2	Thursday, July 18th	3:30 pm – 7:30 pm
3	Thursday, August 1st	3:30 pm – 7:30 pm
4	Saturday, August 17th	12:00 pm – 4:00 pm
5	Thursday August 22nd	3:30pm – 7:30 pm
6	Saturday, August 22nd	12:00 pm – 4:00 pm
7	Tuesday, August 27th	3:30 pm – 7:30 pm

Source: Kittelson & Associates, Inc. 2024

7.1 SURVEY RESPONSE SUMMARY

Figure 17 shows the number of responses by lot names. The highest number of responses were received from the Northern facilities (41%), followed by Central facilities (35%).

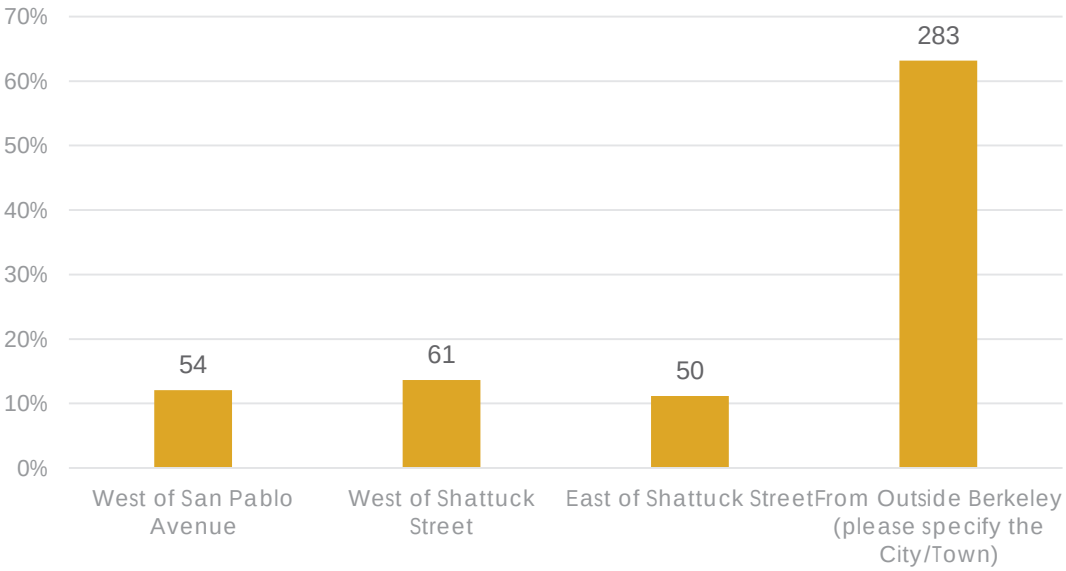


Figure 17: Parking lot location

Number of responses: 437
Source: Kittelson and Associates, Inc. 2024

Figure 18 shows the location of the respondent. Approximately 63% (283) of the respondents came from Outside of Berkeley which included visitors from Oakland, San Francisco, Emeryville and Walnut Creek.

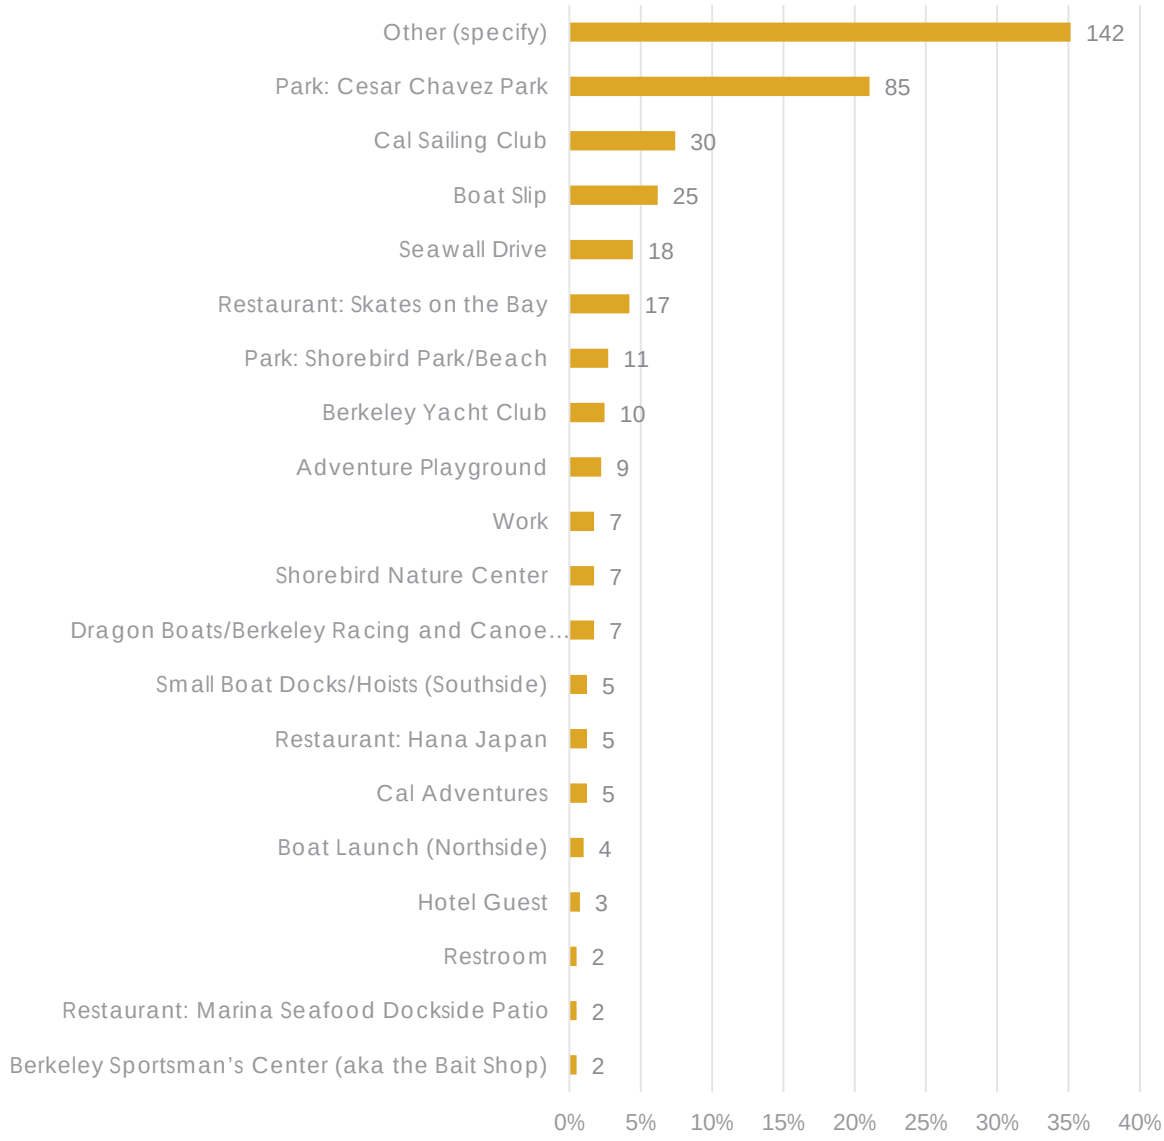

Figure 18: Where do you live?

Number of responses: 448
Source: Kittelson and Associates, Inc. 2024

The parking intercept survey reached a wide range of Berkeley Waterfront visitors, with the most popular visitor destinations including Cesar Chavez Park (21% of respondents), Cal Sailing Club (7%), and boat slips (6%), as shown in **Figure 19**. The rest of responses were scattered across a wide array of destinations, including specific institutions at the Waterfront.

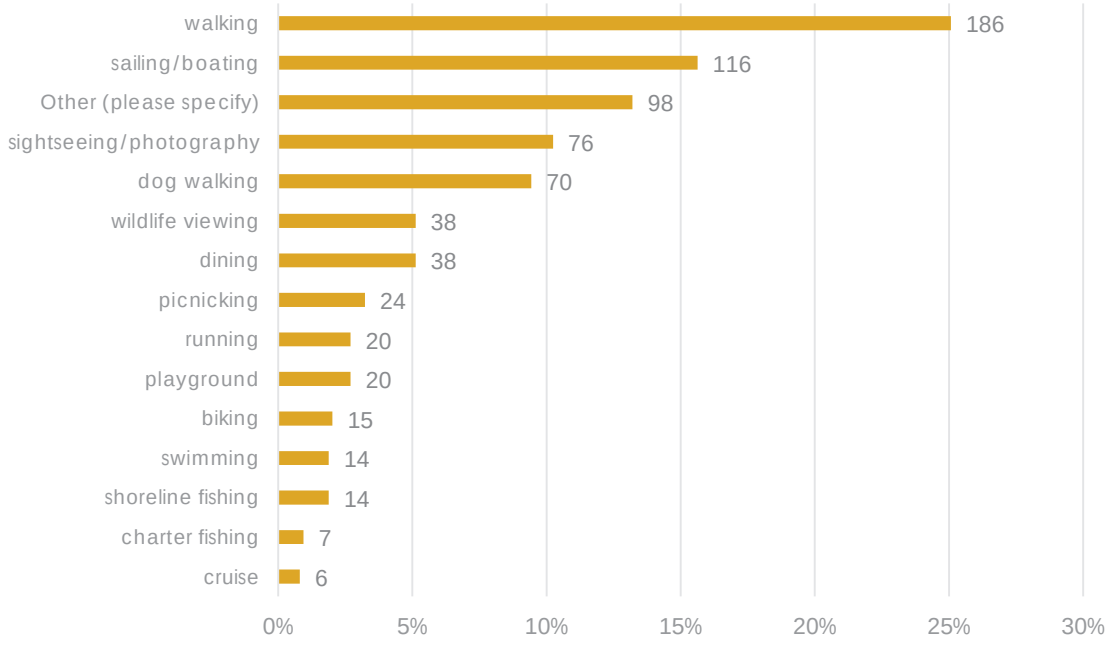

Figure 19: What is the name of the destination that you are visiting today?

Note: *38% of respondents listed a destination not included in the set list of options. Chart only includes destinations listed more than once. "Work" category includes: "deck hand, commercial fishing captain, hotel employee, etc."*
Number of responses: 404
Source: Kittelson and Associates, Inc. 2024

The most common activities were consolidated among outdoor recreation, including walking, sailing/boating, and sightseeing / photography, which together made up around 50% of responses, see **Figure 20**. However, respondents visited the Waterfront for a wide variety of reasons, with almost 100 noting that they made their trip for a reason other than options offered in the survey.

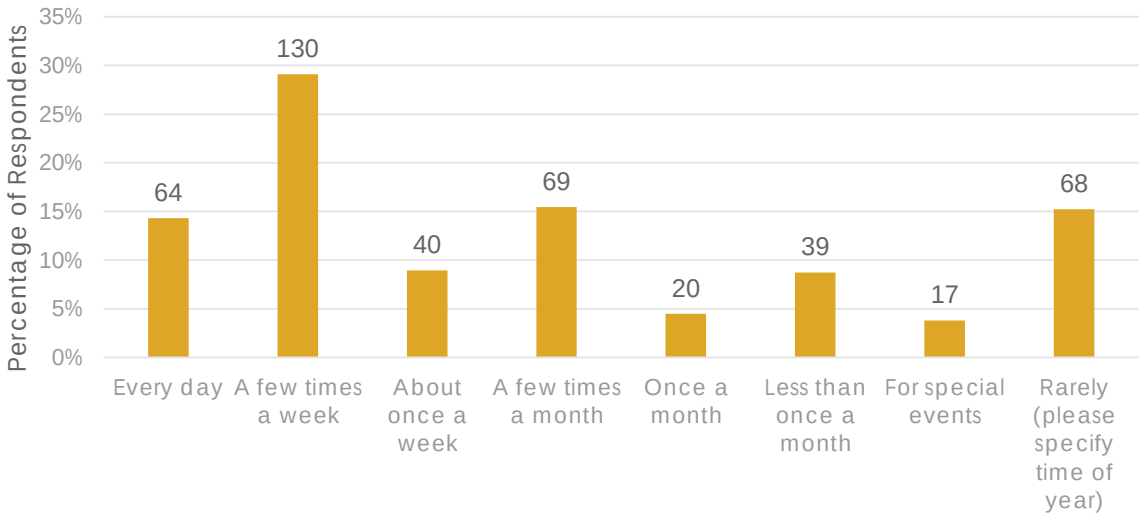

Figure 20: What brings you to the Waterfront?

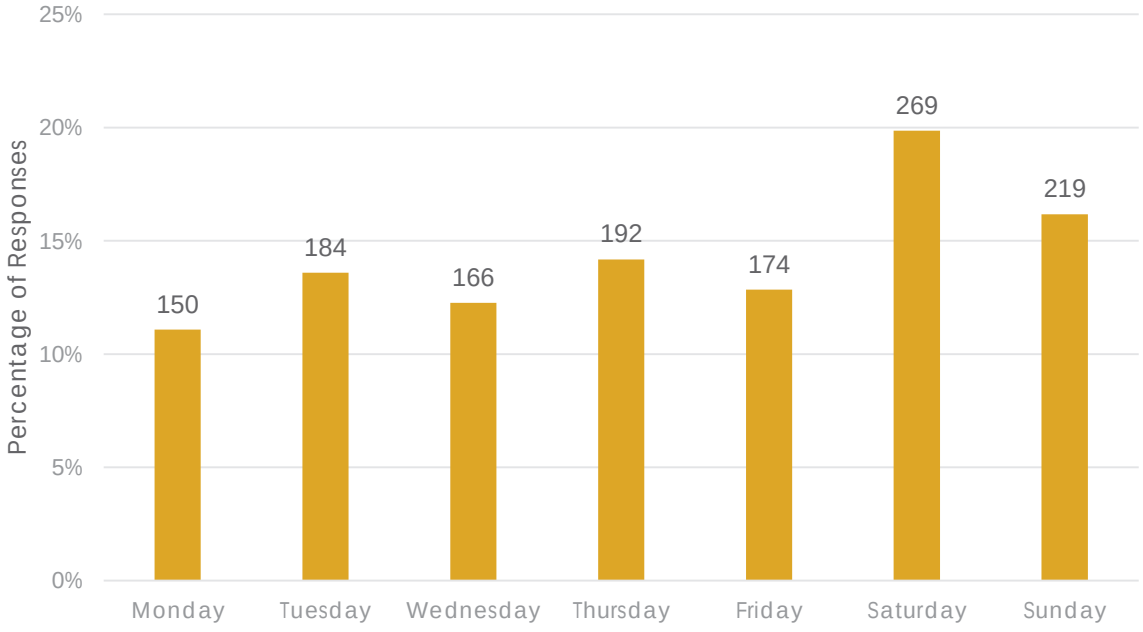
Number of responses: 742 (Respondents were allowed to select multiple options)
Source: Kittelson and Associates, Inc. 2024



Respondents tended to visit the Waterfront often, with over 50% noting that they visited at least once a week or more (**Figure 21)**, and with Saturday (approximately 20%) being the most visited day by the respondents (**Figure 22**).

Figure 21: How frequently do you visit the Waterfront?

Number of responses: 447

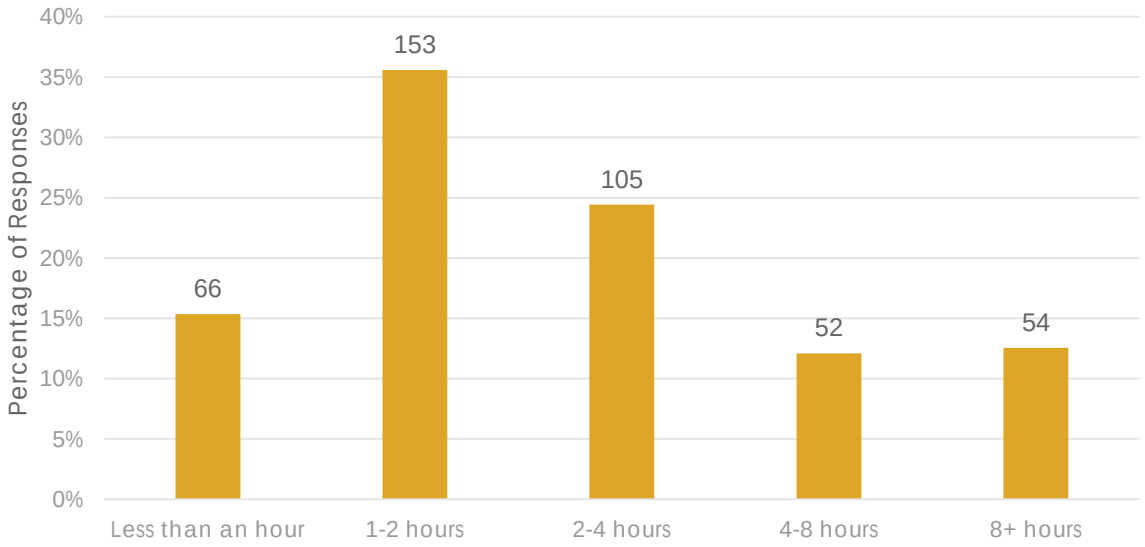

Figure 22: Typical days that you visit the Waterfront? (select all that apply)

Number of responses: 1,354 (Respondents were allowed to select multiple options).
Source: Kittelson and Associates, Inc. 2024

Figure 23 illustrates the duration of time respondents parked for their activities. The largest group (35%) parked for 1-2 hours, with 153 respondents. This is followed by 2-4 hours (24%), reported by 105 respondents.

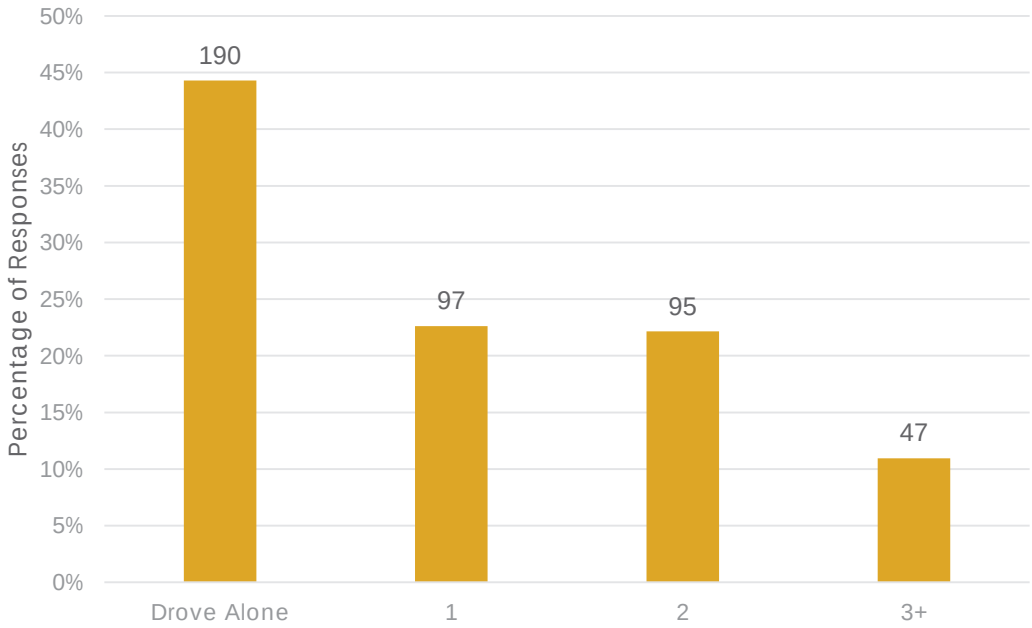

Figure 23: How long did you park for your activity today?

Number of responses: 430
Source: Kittelson and Associates, Inc. 2024

Respondents primarily drove alone to the Waterfront, with 44% stating that they had no other passengers in the vehicle, while 22% stated that they drove with one passenger (**Figure 24**).

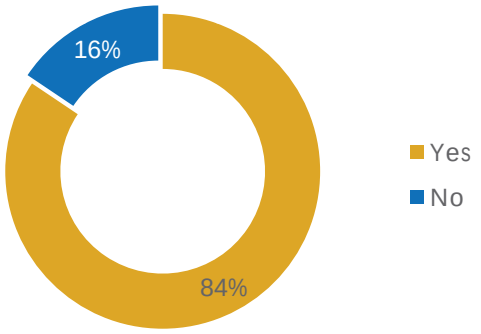

Figure 24: How many passengers other than you were there in your vehicle?

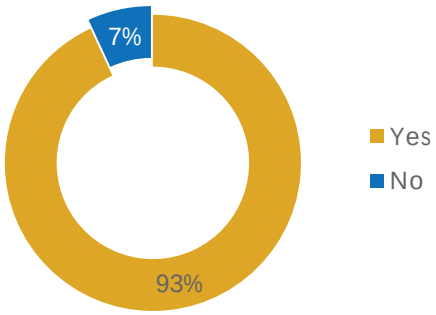
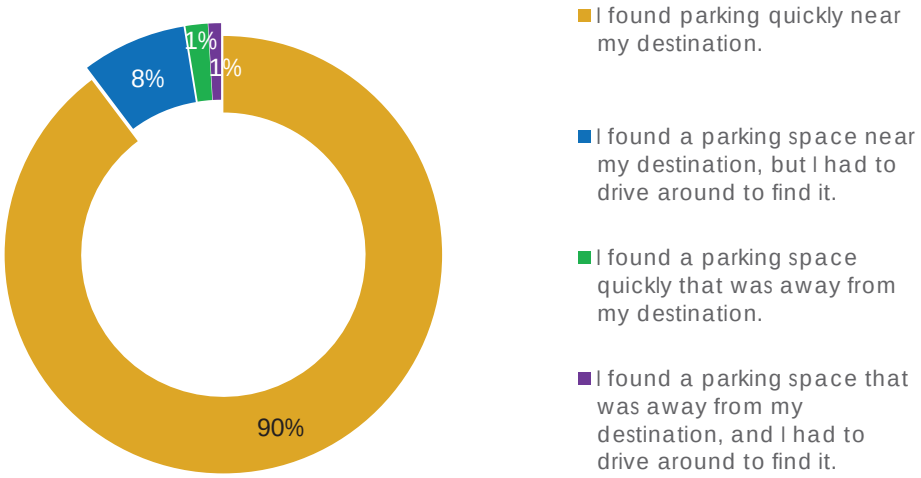
Number of responses: 429
Source: Kittelson and Associates, Inc. 2024



Waterfront visitors indicated that they have predictable and easy parking on their visits. 84% typically park in the same location, 93% said the parking is close to their destination, and 90% mentioned they were able to park quickly near their destination (**Figure 27)**.

Figure 26: Do you normally park at this location?

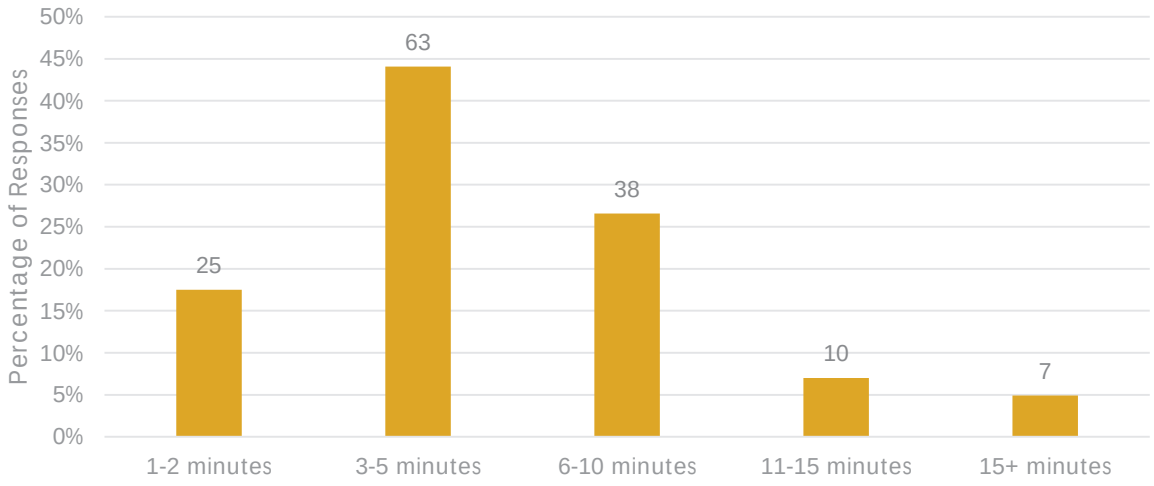


Number of responses: 417
Source: Kittelson and Associates, Inc. 2024

Figure 25: Did you park near your destination?

Number of responses: 419
Source: Kittelson and Associates, Inc. 2024

Figure 27: How was your experience of finding parking today?



Number of responses: 428

Source: Kittelson and Associates, Inc. 2024

Figure 28 illustrates how far respondents are willing to walk from their parking spot to their destination, based on 143 responses. The majority (44%) are willing to walk 3-5 minutes, followed by 27% who are comfortable with a 6–10-minute walk. The average reported walking time is 7.3 minutes, and the median is 5 minutes.

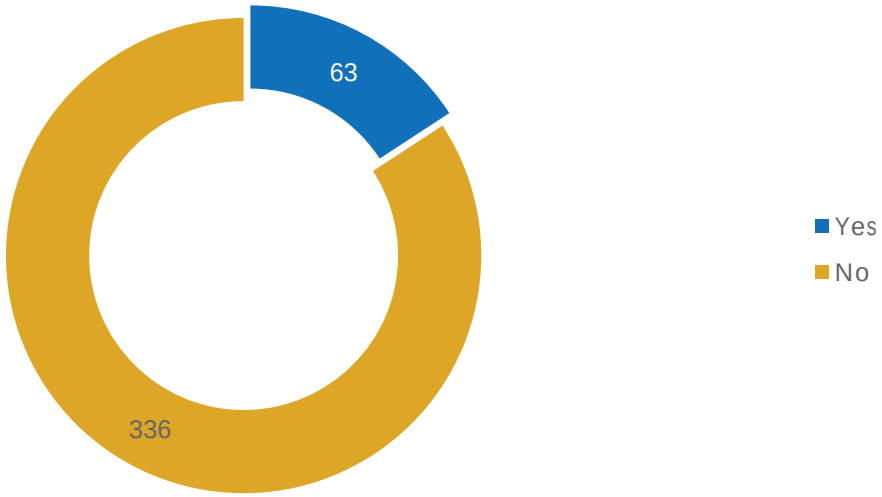


Figure 28: How far are you willing to walk from the parking spot to your destination?

Note: *Mean response = 7.3 minutes, median response = 5 minutes, responses answered in distance were converted to minutes based on an average walking pace of 3mph.*
Number of responses: 143
Source: Kittelson and Associates, Inc. 2024

84% of respondents said that they had never cancelled a trip to the Berkeley Marina out of concern that they would be unable to park (Figure 29).

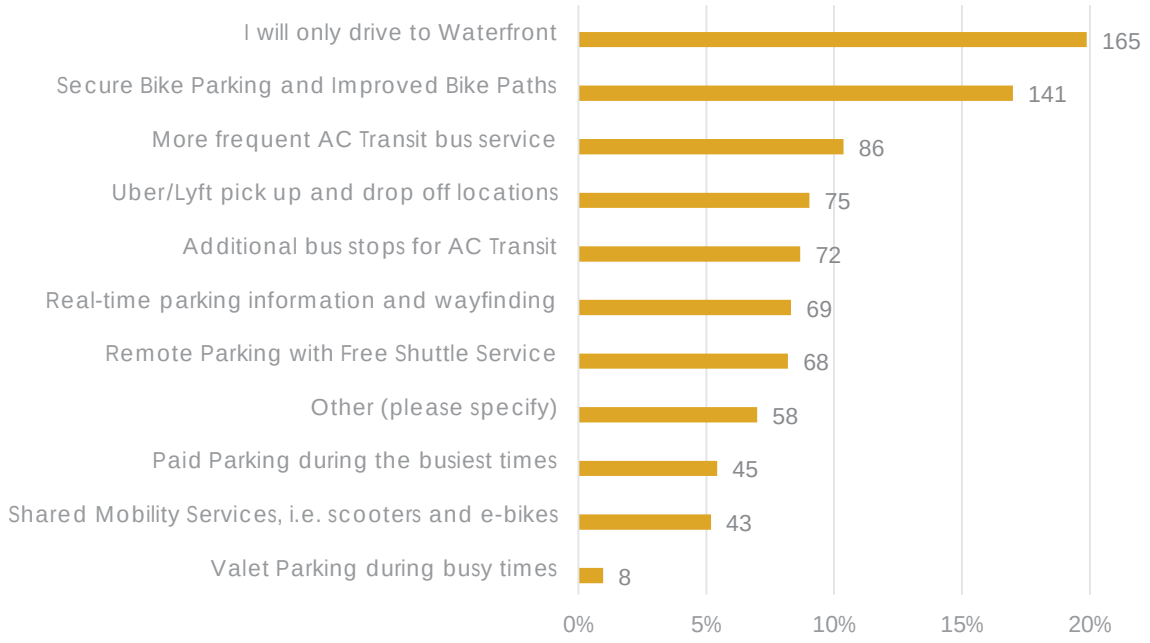

Figure 29: Have you ever cancelled your visit to the Waterfront because you could not park here?

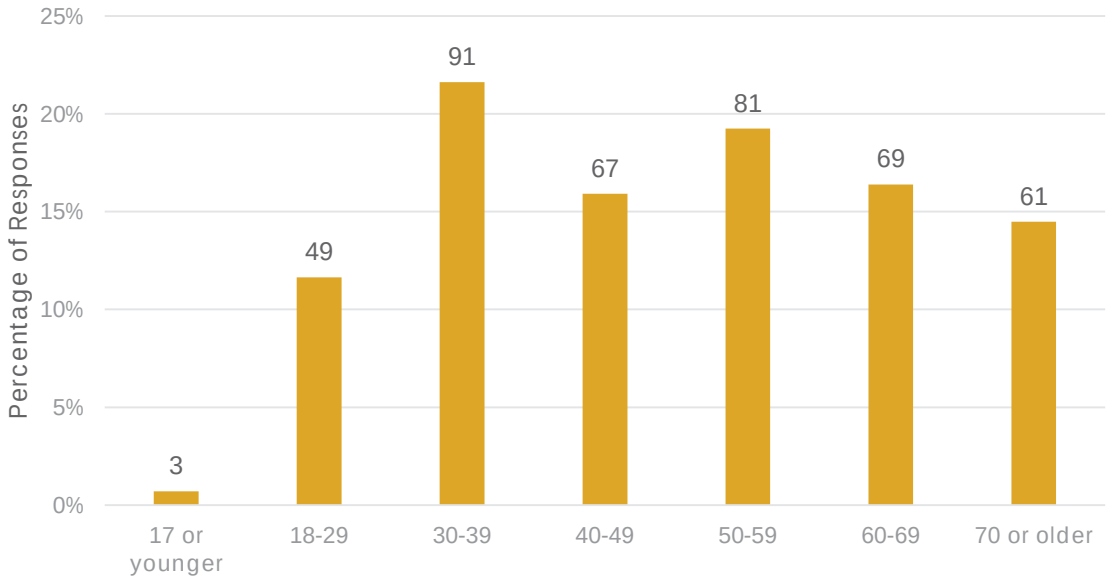
Number of responses: 399
Source: Kittelson and Associates, Inc. 2024

When asked about future methods for accessing the Waterfront, respondents were open to a variety of methods, including secure bike parking and improve bike paths (17%), more frequent AC Transit bus service (10%), and Uber/Lyft pick up and drop off locations (9%). However, a sizeable portion of respondents (20%) indicated that they would only ever drive to the Waterfront (**Figure 30**).

Figure 30: What method would you likely use in the future to reduce cars at the Waterfront? (Select all that apply)

Number of responses: 830, (Respondents were allowed to select multiple options)
Source: Kittelson and Associates, Inc. 2024



Along with the quantifiable responses to the parking intercept survey questions, respondents provided a plethora of written feedback and engaged in extensive conversation with surveyors about the Waterfront, the Pier Ferry Project, and their own travel patterns. Common responses include, "older people want to be able to drive, parking is usually plentiful," indicating a trepidation over future limitations on accessibility. Many responses also called out the needs of specific waterfront hobbyists who feel they will be impacted by a ferry: "Please keep waterfront available and FREE to the Berkeley Community and open for boating and sailing people." However, survey takers generally held the Berkeley Waterfront in high regard as a place where they could recreate peacefully and escape the bustle of their everyday lives, even if this often manifested in hostile attitudes towards the prospect of the Waterfront changing in any way. Many handwritten comments include frustration with the Pier Ferry Project and antagonism towards paid parking at the Waterfront, but very few cite parking occupancy as a problem. This dynamic is put simply but when respondent: "Parking isn't hard. Paid parking would be a deterrent."

Based on the other results of the parking intercept survey, it appears that high parking occupancy is rarely, if ever a barrier for visitor access to the Waterfront. It seems that the existing parking facilities at the Waterfront are able to accommodate the Marina's current recreational uses, and with tailored TDM strategies, could be minimally impacted by the introduction of ferry service to the Waterfront.

7.1.1 Demographics

Kittelson staff and Waterfront monitors were able to successfully reach a diverse set of respondents with the parking intercept survey. Each age bracket of driving age was represented by between 12% and 22% of respondents (**Figure 31**).

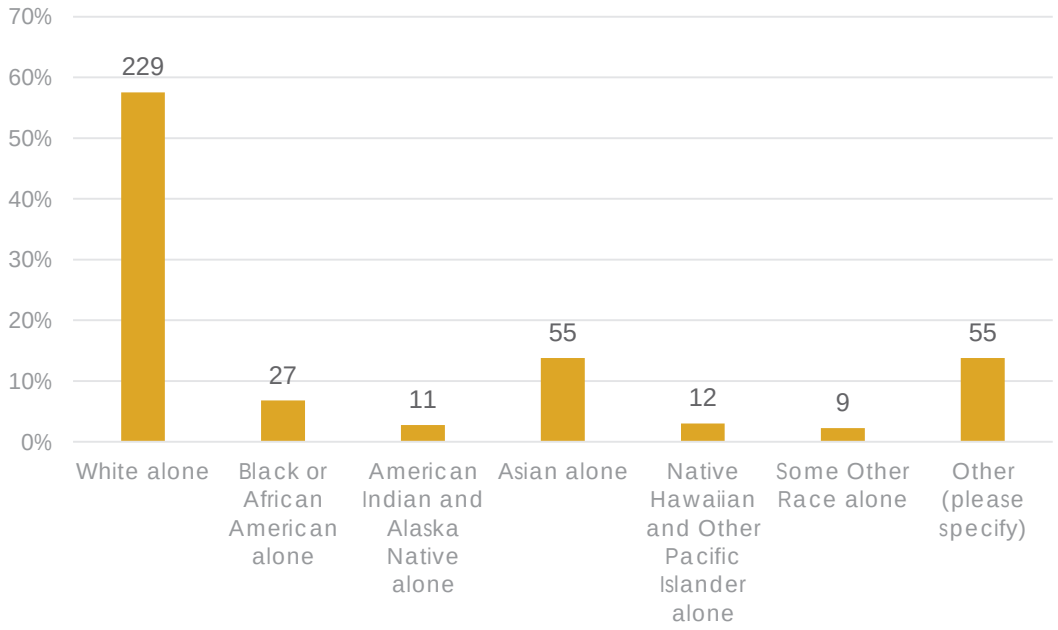


Figure 31: Which category below includes your age?

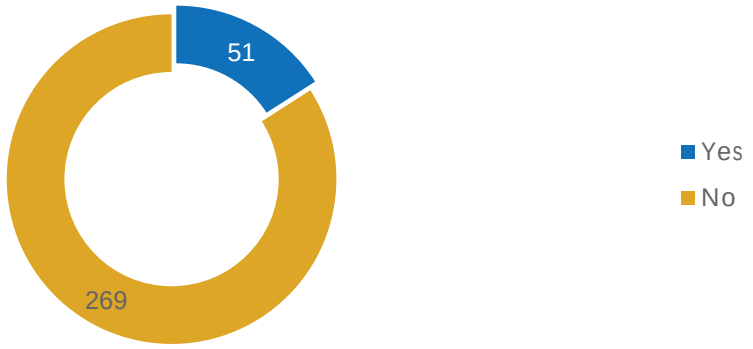
Number of responses: 421
Source: Kittelson and Associates, Inc. 2024

Figure 32 and **Table 4** show how, though respondents predominantly identified as White alone (58%), the general makeup of respondents roughly reflects that of the City of Berkeley. This is an important reference point, however visitation to the Waterfront does not necessarily reflect the demographics of the rest of the City. As shown in **Figure 18**, 63% of survey respondents noted that they lived outside of the City of Berkeley. Approximately 84% of respondents identified as non-Hispanic or non-Latino (**Figure 33**).

Figure 32: How do you identify your race/ethnicity?



Number of responses: 398
Source: Kittelson and Associates, Inc. 2024

Table 4 Race and ethnicity of survey respondents, compared with City of Berkeley

Race / Ethnicity	Survey Responses	City of Berkeley
White alone	57.5%	55.5%
Black or African American alone	6.8%	7.8%
American Indian and Alaska Native alone	2.8%	0.7%
Asian alone	13.8%	20.8%
Native Hawaiian and Other Pacific Islander alone	3.0%	0.2%
Other (please specify)	16.08%	9.8%
Hispanic or Latino	15.9%	12.1%

Source: Kittelson and Associates, Inc. 2024, 2023 ACS 5-Year Estimates

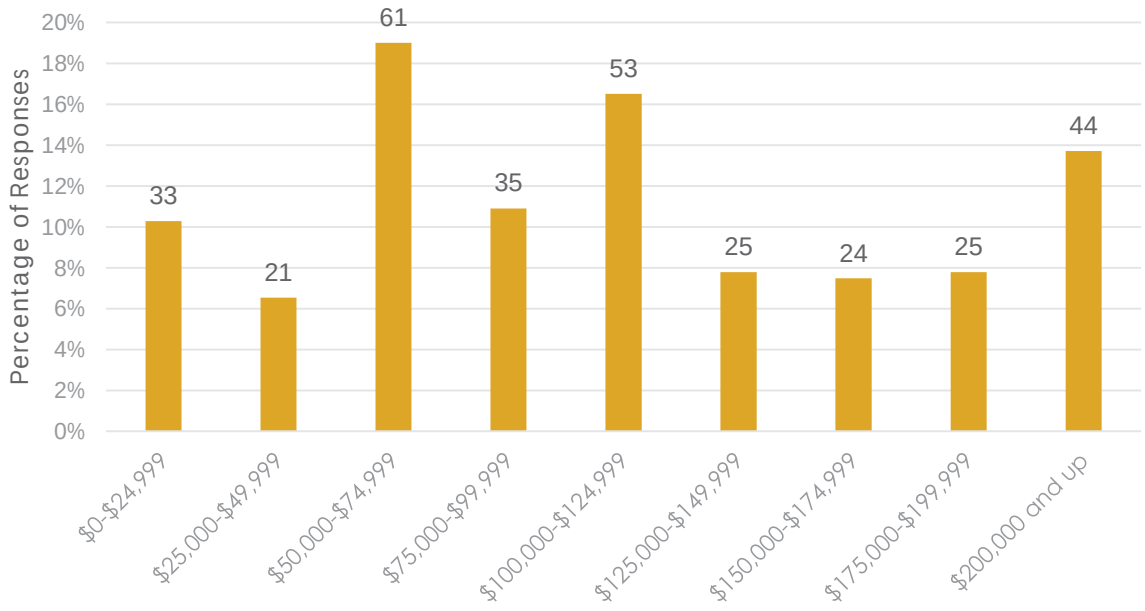


Figure 33: Are you of Hispanic or Latino origin or descent?

Number of responses: 320
Source: Kittelson and Associates, Inc. 2024

Figure 34 illustrates the average household income of the respondent. The largest group indicated that their household earned between $50,000 and $75,000, while the next two highest brackets were $100,000 - $125,000 and $200,000+. These figures compare to a Berkeley median household income of around $95,000 in 2023.[5]

Figure 34: What is your approximate average household income?

Number of responses: 321
Source: Kittelson and Associates, Inc. 2024

Appendix B : Survey Questionnaire

General Questions

1. Date and Time of Parking

☐ Date: _____

☐ Time: _____ ☐ am ☐ pm

2. Parking Lot Location

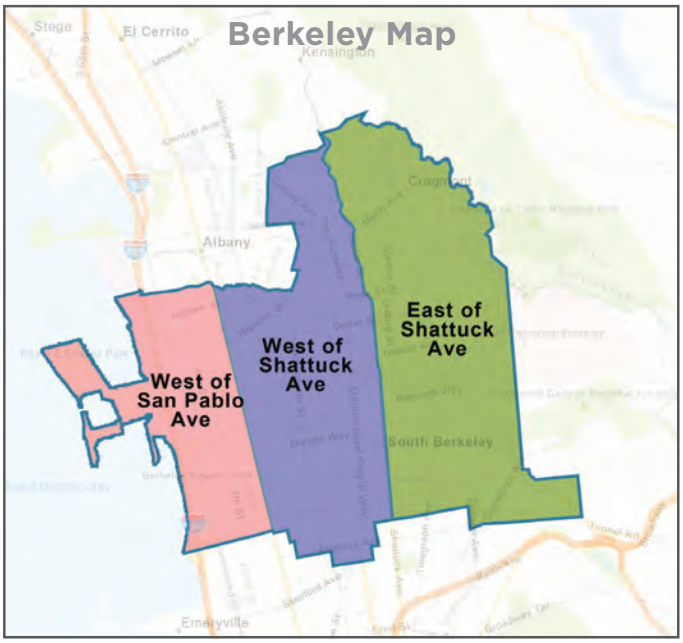
_____

_____

3. Where do you live? (see map)

☐ West of San Pablo Avenue

☐ West of Shattuck Street



☐ East of Shattuck Street

☐ From Outside Berkeley
(please specify the City/Town)

_____

_____

_____

Destination and Duration

4. What is the name of the destination that you are visiting today?

_____

_____

_____

_____

_____

5. What brings you to the Waterfront? (Select all that apply)

☐ sailing/boating
☐ sightseeing/photography
☐ dog walking
☐ shoreline fishing
☐ picnicking
☐ biking
☐ wildlife viewing
☐ cruise
☐ swimming
☐ dining
☐ charter fishing
☐ running
☐ playground
☐ walking

Other (please specify)

_____

_____

_____

6. How frequently do you visit the Waterfront?

☐ Every day
☐ A few times a week
☐ A few times a month
☐ Less than once a month
☐ Rarely (please specify time of year)
☐ About once a week
☐ Once a month
☐ For special events

_____

_____

_____

7. Typical days that you visit the Waterfront? (Select all that apply).

☐ Monday ☐ Tuesday ☐ Wednesday
☐ Thursday ☐ Friday ☐ Saturday ☐ Sunday

8. How long did you park for your activity today?

☐ Less than an hour
☐ 1-2 hours
☐ 2-4 hours
☐ 4-8 hours
☐ 8+ hours

9. How many passengers other than you were there in your vehicle?

☐ Drove Alone ☐ 1 ☐ 2 ☐ 3+

10. Do you normally park at this location?

☐ Yes ☐ No

11. Did you park near your destination?

☐ Yes ☐ No

Parking Experience and Recommended Strategies

12. How was your experience of finding parking today?

- ☐ I found parking quickly near my destination.
- ☐ I found a parking space near my destination, but I had to drive around to find it.
- ☐ I found a parking space quickly that was away from my destination.
- ☐ found a parking space that was away from my destination, and I had to drive around to find it.

13. How far are you willing to walk from the parking spot to your destination?

14. Have you ever cancelled your visit to the Waterfront because you could not park here?

☐ Yes ☐ No

15. What method would you likely use in the future to reduce cars at the Waterfront? (Select all that apply)

- ☐ Secure Bike Parking and Improved Bike Paths
- ☐ Uber/Lyft pick up and drop off locations
- ☐ Additional bus stops for AC Transit
- ☐ More frequent AC Transit bus service
- ☐ Real-time parking information and wayfinding
- ☐ Remote Parking with Free Shuttle Service
- ☐ Shared Mobility Services, i.e. scooters and e-bikes
- ☐ Paid Parking during the busiest times
- ☐ Valet Parking during busy times
- ☐ I will only drive to Waterfront
- ☐ Other (please specify)

16. Share additional thoughts related to access, parking, and circulation in the Waterfront.

Demographic Information

17. Which category below includes your age?

- ☐ 17 or younger
- ☐ 18-29
- ☐ 30-39
- ☐ 40-49
- ☐ 50-59
- ☐ 60-69
- ☐ 70 or older

18. How do you identify your race/ethnicity?

- ☐ White alone
- ☐ Black or African American alone
- ☐ American Indian and Alaska Native alone
- ☐ Asian alone
- ☐ Native Hawaiian and Other Pacific Islander alone
  Some Other Race alone
- ☐ Other (please specify)

19. Are you of Hispanic or Latino origin or descent?

☐ Yes ☐ No

20. What is your approximate average household income?

- ☐ $0-$24,999
- ☐ $25,000-$49,999
- ☐ $50,000-$74,999
- ☐ $75,000-$99,999
- ☐ $100,000-$124,999
- ☐ $125,000-$149,999
- ☐ $150,000-$174,999
- ☐ $175,000-$199,999
- ☐ $200,000 and up

RE: Berkeley Waterfront – TDM Vehicle Trip and Parking Reduction Methodology - DRAFT

The following are the assumptions and calculations that inform the theoretical parking demand reduction. Three of the strategies were estimated using information gathered from peer case studies and from research papers on transportation demand management. The other strategies were estimated using formulas from the CAPCOA Handbook Chapter 3, Measures to Reduce GHG Emissions: Transportation.[1] This memo includes the CAPCOA formulas used, as well as the specific value inputs gathered from the CAPCOA handbook, from ACS 5-Year Estimates for the City of Berkeley, and from project mode share assumptions.

Shuttle service to the Waterfront and satellite parking facilities

- **Ferry parking demand reduction estimate:** 25-100 spaces

These estimates are based on case study interviews with the City of Alameda and Emery Go-Round (included in Attachment A).

- Limited circulator shuttle service around the Berkeley Waterfront would allow ferry riders to leave their vehicles at low-occupancy lots around the Waterfront (including golden gate fields parking lot) or nearby in the City of Berkeley and take a van or bus shuttle trip to the ferry.
- Low estimates account for a shuttle service run by a 12-seater van, which could run a minimum of two timed services to connect ferry riders to daily ferry departures and arrivals during year one operations.
- High estimates for vehicle trip reduction account for shuttle service to trip origins outside of the Waterfront, including to Downtown Berkeley and / or to satellite parking facilities.
- High estimates for vehicle trip reduction account for the use of 25 foot or equivalent buses to offer increased shuttle capacity.

[1] https://www.caleemod.com/handbook/chapter_3_1transportation.html

- Parking demand reduction could be on the higher end of the provided range if implemented alongside paid parking at the ferry parking lot. Shuttle service would give commuters the option to park for free if paid parking were implemented.

Paid parking program

- **Ferry parking demand reduction estimate:** 42 spaces

This estimate uses CAPCOA strategy T-12: Price workplace parking.

- Results in a 10% reduction in vehicle trips, or demand for 42 fewer parking spaces.
- CAPCOA formula: $\% \ GHG \ Reduction = \frac{B-C}{C} \ x \ E \ x \ D \ x \ F$ where:
  - $\frac{B-C}{C}$ = Rate of change in parking price = .25 (CAPCOA default for introduction of paid parking)
  - E = Elasticity of parking demand with respect to parking price = -.4 (CAPCOA)
  - D = Share of employees paying for parking = 100% (assumption that all ferry riders would be subject to the paid parking program)
  - F = Ratio of vehicle trip reduction to VMT = 1 (CAPCOA)
  - Results in projected 10% reduction in vehicle trips, or demand for 42 fewer parking spaces.

Valet parking

- **Ferry parking demand reduction estimate:** 50-100 spaces

This estimate is based on research on the efficiency of valet parking systems and the relative weekday occupancy of parking lots near the proposed ferry parking facility.

- Research shows that valet parking is able to achieve parking occupancy rates 25% higher than self-parked lots (Banzhaf, et al. 2017).[2]
- Valet parking options for ferry riders could be established within existing parking facilities in the Marina Boulevard Lot or in the Skates / N Lot. Both lots are within walking distance of ferry service and cater to dining or recreational trips that have minimal overlap with ferry parking.
- There were 98 available spaces in the Skates / N Lot and 109 available spaces in the Marina Blvd lot midday on a weekday during data collected in June 2024. If 40-80 of the available spaces in these lots were assigned for valet parking on peak days for ferry ridership, then they could accommodate 50-100 cars that otherwise would be turned away from the ferry parking lot.

Bicycle and pedestrian access

- **Ferry parking demand reduction estimate:** 2 spaces

This estimate uses CAPCOA strategy T-20: Expand bike network.

[2] Banzhaf, Holger & Nienhüser, Dennis & Knoop, Steffen & Zöllner, J.. (2017). The future of parking: A survey on automated valet parking with an outlook on high density parking. 1827-1834. 10.1109/IVS.2017.7995971.

- Results in a 0.4% reduction in vehicle trips, or demand for two fewer parking spaces. This figure would be as high as 40 fewer parking spaces if the calculation accounted for the ongoing implementation of the entire Berkeley Bike Plan.
- Length of bike network expansion set to .38 miles to represent the proposed addition of the "streetscape connector" cycling facility in Figure 2-27 of the September 2023 draft of the Berkeley Waterfront Specific Plan. The streetscape connector would run from along University Ave from the Berkeley Pier to the point where the Bay Trail runs adjacent to the roadway, just west of the traffic circle.
- CAPCOA formula: $\%\ GHG\ Reduction = -1\ x\ \frac{\left(\frac{C-B}{B}\ x\ D\ x\ F\ X\ H\right)}{E\ x\ G}$ where:
  - $\frac{C-B}{B}$ = Change in bike network miles = .38 (estimated additional bikeway lane miles after implementation of Waterfront Specific Plan Draft "streetway connector" section on University Ave)
  - D = Bicycle mode share in plan/community = 6.2% (2023 ACS 5-Year Estimate)
  - E = Vehicle mode share in plan/community = 40% (project mode share estimate)
  - F = Average one-way bicycle trip length in plan/community = 2.1 miles (CAPCOA)
  - G = Average one-way bicycle trip length in plan/community = 12.4 miles (CAPCOA)
  - H = Elasticity of bike commuters with respect to bikeway miles per 10,000 population = 0.25 (CAPCOA)

Improved bicycle facilities and secure bike parking

- **Ferry parking demand reduction estimate:** 9 - 42 spaces

This estimate uses CAPCOA strategy T-10: Provide end-of-trip bicycle facilities.

- Results in a 2% reduction in vehicle trips with low bike mode adjustment factor and a 10% reduction with high bike mode adjustment factor, for demand for 9 to 42 fewer parking spaces.
- CAPCOA formula: $\%\ GHG\ Reduction = \frac{C\ x\ (E-(B\ x\ E))}{D\ x\ F}$ where:
  - B = Bike adjustment mode factor (1.78 or 4.86, depending on facilities, CAPCOA)
    - Low bike mode share adjustment factor estimates for if only bike parking were provided.
    - High bike moder share adjustment factor estimates for if amenities including showers, lockers, secure bike parking, and bike repair tools were provided.
    - Year-one implementation could exceed the impacts of the low adjustment factor but is unlikely to reach the high adjustment factor. Trip reduction estimates should be somewhere in between.
  - C = Existing bicycle trip length for all trips in region (2.1 miles, CAPCOA)
  - D = Existing vehicle trip length for all vehicles in the region (12.4 miles, CAPCOA)
  - E = Existing bicycle mode share for work trips in region (6.2%, ACS 5-year estimate for Berkeley)
  - F = Existing vehicle mode share for work trips in region (40%, project mode share estimate)

Shared micromobility expansion

- **Ferry parking demand reduction estimate:** 12 spaces

This estimate uses CAPCOA strategy T-22-B: Implement electric bike share program.

- Results in a 3% reduction in vehicle trips, or demand for 12 fewer parking spaces.
- CAPCOA formula: $\% \ GHG \ Reduction = -1 \ x \ \frac{(C-B) \ x \ D \ x \ E \ x \ F}{G \ x \ H}$ where:
  - B = Percent of residents in community with access to system without measure = 0% (introduction of new service area)
  - C = Percent of residents in community with access to system with measure = 60% (Access to Baywheels across Berkeley)
  - D = Daily electric bike share trips per person = .021 (CAPCOA)
  - E = Vehicle to electric bikeshare substitution rate = 35% (CAPCOA)
  - F = Electric bikeshare one-way trip length = 2.1 miles (CAPCOA)
  - G = Daily vehicle trips per person = 2.7 (CAPCOA)
  - H = Regional average one way vehicle trip length = 12.4 miles (CAPCOA)
- Assumes implementation of electric, rather than conventional bike share and does not estimate effects of structuring scooter shared services at the Waterfront.

Pick-up / drop-off zones

- **Ferry parking demand reduction estimate:** 5 spaces

This estimate is based on research that identifies increases in transportation network company (TNC) trip satisfaction among riders when trips utilize designated pick-up and drop-off zones and increases in average traffic speed when TNC companies are provided with discrete pick-up / drop-off zones.

- Results in a 7% increase in TNC or kiss-and-ride trips due to shift from drive alone or carpool trips, or a demand for 5 fewer parking spaces.
- Research shows that dedicated pick-up /drop-off zones increased user satisfaction by as much as 7% to 11% (Shaheen, et al. 2021).[3]
- A traffic simulation experiment showed that, when TNC vehicles were provided with pick-up/drop-off locations on side streets, average traffic speeds increased by as much as 37% during peak periods (Stueger, et al. 2022). [4]
- Establishing dedicated pick-up / drop-off zones will improve the comfort of TNC users and the experience of park-and-ride drivers, encouraging them to avoid drive-along trips in personal vehicles to access the ferry.
- Pick-up / drop-off zones would also improve the experiences of non-TNC users, who may be more comfortable relying on being driven to the Waterfront.

[3] Shaheen, S., Darling, W., Broader, J., & Cohen, A. (2021). Understanding Curb Management and Targeted Incentive Policies to Increase Transportation Network Company Pooling and Public Transit Linkages. *UC Berkeley: Transportation Sustainability Research Center*. Retrieved from https://escholarship.org/uc/item/6gz9w0v9

[4] Stueger, P. N., Fehn, F., & Bogenberger, K. (2023). Minimizing the Effects of Urban Mobility-on-Demand Pick-Up and Drop-Off Stops: A Microscopic Simulation Approach. Transportation Research Record, 2677(1), 814-828. https://doi.org/10.1177/03611981221101894

- If the 7% satisfaction increase indicated by one study resulted in equal mode shift to TNC or kiss-and-ride from drive alone or carpool trips, then there would be a reduction in demand for parking at the ferry lot by 5 spaces.

Transit subsidy for ferry riders

- **Ferry parking demand reduction estimate:** 4 spaces

This estimate uses CAPCOA strategy T-9: Implement subsidized or discounted transit program.

- Results in a 1% reduction in vehicle trips, or demand for 4 fewer parking spaces.
- CAPCOA formula: % $GHG\ Reduction = \frac{C}{B}\ x\ G\ x\ D\ x\ E\ x\ F\ x\ H\ x\ I$, where:
  - C = Subsidy amount = $2.25 (Cost of AC Transit fare)
  - B = Average transit fare without subsidy = $6.95 ($2.25 for AC Transit + $4.70 for ferry)
  - G = Elasticity of transit boardings with respect to transit fare price = -.43 (CAPCOA)
  - D = Percent of riders eligible for discount = 100% (project assumption)
  - E = Percent of project-generated VMT from riders = 100% (project assumption)
  - F = Transit mode share = Transit mode share of work trips = 14.4% (ACS 5-Year Estimate)
  - H = Percent of transit trips that would otherwise be made in a vehicle = 50% (CAPCOA)
  - I = Conversion factor of vehicle trips to VMT = 1 (CAPCOA)

Expanded AC Transit service

- **Ferry parking demand reduction estimate:** 7 spaces

This estimate uses CAPCOA strategy T-26: Increase transit service frequency.

- Results in 2% reduction in vehicle trips, or demand for 7 fewer parking spaces.
- CAPCOA formula: % $GHG\ Reduction = -C\ x\ \frac{B\ x\ E\ x\ D\ x\ G}{F}$, where:
  - B = Percent increase in transit frequency = 100% (doubling of 51B service frequency to the Waterfront from 24 minutes to 12 minutes (matching frequency east of Berkeley Amtrak Station))
  - C = Level of implementation = 8% (represents treatment on one of twelve AC Transit routes with regular service schedules to Downtown Berkeley)
  - D = Elasticity of transit ridership with respect to frequency of service = .5 (CAPCOA)
  - E = Transit mode share in plan or community = 14.4% (ACS 5-Year Estimate)
  - F = Vehicle mode share in plan or community = 40% (project mode share estimate)
  - G = Statewide mode shift factor = 57.8 (CAPCOA)

Appendix C :

Berkeley Waterfront Parking and TDM Toolkit

BERKELEY WATERFRONT PARKING AND TRANSPORTATION DEMAND MANAGEMENT TOOLKIT

This parking and transportation demand management (TDM) toolkit (referred to as the TDM toolkit) is part of an ongoing effort to manage access and circulation to and around the Berkeley Waterfront. TDM is the use of strategies to inform and encourage travelers to maximize the efficiency of our transportation systems leading to improved mobility, reduced congestion, and lower vehicle emissions.[1] TDM aims to provide all people with real transportation options that enable them to travel from their location to a destination in an affordable, efficient, and sustainable way.

This document presents parking and transportation demand management strategies for use at the Berkeley Waterfront, with a focus on managing the influx of commuters driving to the ferry terminal after implementation of new ferry service. The initial list of parking and TDM strategies under consideration for the Waterfront is presented in Table 1 (in no particular order / priority) and strategies are further described in the sections following the table.

Table 1: Parking and TDM Strategies

	Strategy	Effectiveness[1]	Ease of Implementation[2]	Cost[3]
Vehicle Management Strategies				
	Wayfinding	+	✓	$$
	Satellite parking facilities	++	✓	$
	Shuttle service to the Waterfront	++	✓	$$$
	Circulator shuttle service around the Waterfront	+	✓	$$
	Vehicle parking regulations	++	✓	$
	Paid parking	+++	✓	$
	Valet service (free or low cost)	+	✓	$$
	Parking Benefit District	+++	✓	$
	Parking enforcement	+	✓	$
Vehicle Reduction Strategies				
	Bicycle and pedestrian access	++	✓	$$
	Bicycle facilities	++	✓	$$
	Secure bicycle parking	++	✓	$
	Shared micromobility	++	✓	$
	Pick-up/drop-off zones	+	✓	$
	Transit subsidy for ferry riders	++	✓	$$
	Expanded AC Transit service	+++	✓	$$
	Transportation Management Agency	+++	✓	$$$

Notes:
1 Effectiveness: + small effect on mode shift; ++ moderate effect on mode shift; +++ highly effective at mode shift
2 Ease of implementation: ✓easy, short timeline, minimal administrative costs; ✓(medium, longer timeline, requires added administrative duties; ✓difficult, politically or administratively difficult on any timeline
3 Cost: $ low cost, short timeline; $$ medium cost; $$$ high cost

[1] Association for Commuter Transportation. www.actweb.org

In selecting TDM strategies to address circulation and access to and around the Waterfront, it is useful to know how effective measures might be at changing travel behavior, how much they might cost, and how challenging they might be to implement. The empirical evidence on TDM effectiveness, cost, and ease of implementation is sporadic and incomplete. It is also difficult to compare across all measures, as the performance measures and method of evaluation vary from one measure to the next. Studies often lack controls, and external variables, such as the price of gasoline and unemployment rates, affect travel behavior changes. For comparison purposes, Table 1 and the following descriptions present a high-level qualitative rating of these factors (effectiveness, ease of implementation, and cost) based on a review of literature and research and conversations with implementing agencies. These strategies are not presented in any particular order, and have not been prioritized or ranked. The City intends to present these strategies and gather public feedback prior to ranking/prioritizing the various strategies.

VEHICLE MANAGEMENT STRATEGIES

WAYFINDING

Effectiveness: + **Ease of Implementation: ✓** **Cost: $$**

Overview: While the Waterfront has a variety of parking lot locations and types, the total volume of spaces are not well utilized, causing high occupancy at desirable lots when adjacent lots sit mostly empty. Improved wayfinding around the Waterfront can help drivers know where available lots are located and how they can access their destinations from those lots. Improved wayfinding will be an essential tool for managing the influx of new trips to the Waterfront for a new ferry service, and for managing flows of visitors at peak times. Digital parking monitoring tools can also be utilized to help drivers locate open spaces without having to circle multiple locations looking for them. Enhanced wayfinding and monitoring will improve visitors' experiences at the Waterfront and ease the strain on the most desirable parking locations.

For the greatest impact, wayfinding improvements should be paired with pedestrian improvements to ensure comfortable access between parking lots and destinations. Should wayfinding signs direct drivers to lower occupancy lots away further from their destinations, pedestrian improvements should ensure that trips to and from those lots are safe, comfortable, and intuitive.

Implementation: Improving wayfinding is a logistically easy and financially attainable parking management strategy. While technologically advanced parking occupancy counters and directions would increase the difficulty of implementation, basic wayfinding improvements could be made with improved physical signage and online information well in advance of new ferry service.

Internal pedestrian improvements are comparably more expensive and would have to be rolled out on a longer timeline. However, quick-build projects, including enhanced crosswalk paint and temporary pedestrian bulbouts can be used to enhance the effectiveness of wayfinding improvements in the meantime.

Figure 1 Example wayfinding signs

Source: BART, *Station Access Signage & Wayfinding Guidelines*, 2022.

SATELLITE PARKING FACILITIES FOR WATERFRONT VISITORS

Effectiveness: ++ **Ease of Implementation:** ✓ **Cost:** $

Overview: The City could establish a satellite parking facility for the Waterfront, which could be used by ferry riders or by general Waterfront visitors. The satellite lot would be a tool for transferring parking demand away from Waterfront lots for those who have the flexibility to then proceed to the Waterfront by shuttle, AC Transit service, or by biking and walking. A satellite parking facility could maximize the space devoted to vehicle parking for recreational uses at the Waterfront without limiting access to the ferry service.

Implementation: Feasibility of establishing satellite lots depends on the location and ownership of lots, as well as the necessary complimentary measures needed to help users access the Waterfront – including, but not limited to, shuttle service and bike and pedestrian improvements. Implementation would be made easier if satellite lots were sited in less-used areas, where parkers could easily access the Waterfront's recreational facilities, but wouldn't take up spaces at in-demand parking locations. This proposition would be more convenient, reliable, and economical to satellite lots that are privately owned, or that are located a significant distance from the Waterfront.

Peer Case Studies: Muir Woods Shuttle

SHUTTLE SERVICE TO THE WATERFRONT

Effectiveness: ++ **Ease of Implementation:** ✓ **Cost:** $$$

Figure 2 Temporary free shuttle offered from North Berkeley BART to the Solano Stroll event *(Source: Jonathan Zisk)*

Overview: A shuttle service to the Berkeley Waterfront could replace car trips taken by ferry riders and could be coordinated with the ferry schedule to reduce the time penalties associated with transfers to / from local bus service. Shuttle service would need to link commuter and other visitors' origins across Berkeley to their destinations at the Waterfront. This would require service to locations throughout the City of Berkeley, or to established satellite parking lots located outside the Waterfront.

Ease of access to the Waterfront for recreational and commercial users must be prioritized. Inefficient shuttle services would deter recreational users or restaurant patrons from using the service, while commuters and longer-term parkers are more easily able to schedule trips around shuttle service.

Implementation: Running a shuttle service is a logistically and financially difficult project. Shuttle services need regular operational funding, on top of startup costs. The necessary condition of an effective shuttle service is that its benefits – increased visitation, environment stewardship, equitable site access – must far outweigh its costs. When successful, shuttle services can enable significant cuts to on-site parking and reduction in single occupancy vehicle trips.

Based on our literature review and discussions with Emery Go-Round staff, peer regional shuttles are supported by robust private employers, commercial districts, and property-based improvement districts (PBIDs). While a shuttle service to the Berkeley Waterfront could be effective at shifting trips away from cars, it may not have the necessary private sector backing to support its operations.

Peer case studies: Emery Go-Round, Harbor Bay Business Park Shuttle, West Berkeley Shuttle, Muir Woods Shuttle

CIRCULATOR SHUTTLE SERVICE AROUND THE WATERFRONT

Effectiveness: + **Ease of Implementation:** ✓ **Cost: $$**

Overview: Shuttles could also be used to improve parking utilization around the Waterfront. An internal circulator shuttle service would not replace car trips to the Waterfront but would enable visitors to park in underutilized lots within the Waterfront and then proceed to their destinations via complimentary shuttle service. The shuttle could operate on a fixed-route or provide on-call and demand-responsive service using vans, buses, or golf carts. Vehicles would be sized appropriately, and hours of operation and routes could be adjusted as needed. This kind of shuttle service could be an invaluable tool for distributing peak demand for parking during the summer and popular events. If well utilized, it could also delay the need for paid parking or other parking restrictions.

Implementation: Running a shuttle within the Waterfront would be comparatively easier than initiating and operating shuttle service between the Waterfront and other destinations, but it would still require investment in vehicles, equipment, and ongoing operations.

Peer case studies: Emery Go-Round, Harbor Bay Business Park Shuttle, West Berkeley Shuttle, Muir Woods Shuttle

VEHICLE PARKING REGULATIONS

Effectiveness: ++ **Ease of Implementation:** ✓ **Cost: $**

Overview: This strategy would evaluate existing vehicle parking regulations and restrictions and identify opportunities to optimize use of existing parking lots. In 2019, the City implemented changes to parking permits and established time limits and regulations tailored to each Waterfront parking lot. The goal was to (1) maximize parking availability for recreational users and shorter term visitors, (2) maximize proximity to end-destinations, and (3) push the Waterfront's long-term parkers to less convenient parking lots, including staff serving various Waterfront businesses, charter fishing customers and small-scale ferry commuters who park at the Waterfront for the majority of a day. City staff shared that this was effective when paired with ample outreach prior to implementation, and with enforcement after the outreach effort. Without enforcement during Covid, the regulations became substantially less effective.

This strategy would anticipate the nature and volume of demand of ferry parking and set regulations accordingly. Factors that affect the demand for ferry-related parking spots include regularity and frequency of ferry service, infrastructure for accessing the ferry via alternative modes of transportation, and incentives for carpooling or shifting visitors away from single occupancy vehicle trips to the Waterfront. A key component in setting parking regulations is understanding how the amount and availability of parking shapes parking demand. By appropriately regulating the parking lots at the Waterfront, the City of Berkeley

can ensure that they both enable access to destinations and avoid causing negative effects to the surrounding natural features of the Waterfront and its recreational uses.

Implementation: Implementing modifications to existing vehicle parking regulations would require new signage and may be paired with driver education campaigns and increased enforcement.

Peer Case Studies: Berryessa BART Urban Village Plan

Figure 3 Parking facilities currently occupy 20% of the Waterfront's in-demand space for natural recreation. Right-sizing and regulating parking facilities is a critical step in preserving both natural resources and visitors' access to them. *(Source:* City of Berkeley, *Waterfront Specific Plan (Draft)*, 2023.*)*

DEMAND-BASED / PAID PARKING

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $**

Overview: Paid parking is an essential tool for managing occupancy in high-demand parking lots. Over the last decades, parking professionals have established that paid parking can increase the availability of parking spaces for those that need them the most, while helping shift other trips away from single occupancy vehicles.[2]

Implementation of a paid parking program was the first recommendation of the Berkeley Marina Area Specific Plan Parking and Mobility Framework. However, public feedback gathered as part of parking intercept surveys collected in Summer 2024 for this Waterfront Parking and Transportation Demand Management Plan effort indicates that many current Waterfront visitors are not willing to pay to park when accessing the Waterfront for recreational uses. Additionally, paid parking was proposed in 2019 at the South Cove parking lots in association with small scale ferry service and commuter charter service that was in operation at the time (the small-scale public ferry service closed during Covid).[3] The public was not in

[2] https://www.sfmta.com/getting-around/drive-park/demand-responsive-pricing/sfpark-evaluation
[3] https://berkeleyca.gov/sites/default/files/documents/2019-04-30%20Item%2026%20New%20Marina%20Fee%20%E2%80%93%20South%20Cove.pdf

support of any paid parking at that time, an alternative was identified, and the City did not proceed with paid parking implementation.

Despite the logistical hurdles involved in the separation of ferry riders from other Waterfront visitors, a paid parking program may be most effective if clearly tailored to meet the unique demands of ferry riders, while leaving other Waterfront users to continue to park for free, especially at off-peak times.

The objective of paid parking is to shift trips to more sustainable modes of transportation without negatively impacting overall access to the Waterfront. Any proposal for paid parking would be clearly tied to measurable benefits for visitors, including ease of access to recreation, restaurants, marina slips, and for the preservation of the Waterfront's natural resources. Paid parking fees at the Waterfront would be directly invested in the beautification, safety, and security projects within the vicinity of parking facilities.

Implementation: Paid parking may be the single most powerful tool for managing parking in a high demand site and would provide revenue that could be reinvested in the Waterfront. However, implementing paid parking presents a logistical and a political challenge.

The logistics of paid parking at the Berkeley Waterfront are eased by the pre-existing paid parking program at the boat launch ramps off Spinnaker Way, as well as by the potential ease of controlling vehicular access to the Waterfront along University Avenue. The political challenges of implementing paid parking are much more complex. To facilitate implementation of a paid parking program, the City could coordinate paid parking with the launch of new ferry service. This would allow paid parking to piggy-back on other changes to the Waterfront and would clarify the relationship between paid parking and expected increases in Waterfront visitation.

Peer case studies: City of Alameda Ferry Terminal Paid Parking Program

The City of Alameda planned to implement paid parking at the 2021 launch of the Seaplane Lagoon Ferry Terminal but opted not to due to decreased ridership resulting from the Covid-19 Pandemic. Alameda plans to launch its paid parking program at both the Seaplane Lagoon and Harbor Bay terminals in the near future.

VALET SERVICE FOR FERRY RIDERS

Effectiveness: + **Ease of Implementation: ✓** **Cost: $$**

Overview: Valet service at the Berkeley Waterfront would maximize finite space in existing lots by allowing valet attendants to tandem park vehicles. Likewise, valet parking can turn underutilized parking lots into an efficient tool for parking management. Valet parking is well-suited for the Waterfront's parking and usage patterns, which are characterized by an overabundance of parking capacity on most days and congestion and high occupancy levels in certain lots during events and peak weather conditions.

Implementation: Valet parking is a relatively infrastructure-light and flexible way of managing parking supply. A valet program could be run only on the highest demand days, while self-parking would be allowed at all other times. In valet parking, traffic management costs are paid through staff expenses, rather than through long-range infrastructure improvements. For this reason, valet parking could be a niche solution for a period with increased visitation at the Waterfront. Likewise, the associated costs of valet service could be borne by the user, the City, the ferry, or the end-user destinations, such as restaurants.

ESTABLISH A PARKING BENEFIT DISTRICT

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $**

Overview: A parking benefit district (PBD) is an entity that would manage parking revenue and allow for direct policy and financial input from a broader group of stakeholders and oversight from community members. PBDs typically have a broad mandate that includes supporting parking maintenance and operations and investing in other transportation systems and services. Establishing a PBD is an effective strategy for generating stakeholder buy-in and support for paid parking initiatives. Stakeholders' involvement with a PBD would allow them to reinvest parking proceeds directly to improvement projects around the Waterfront, including for facility modernization, parking lot maintenance, and beautification projects.

Implementation: To establish a PBD, the City would need to organize a group of enthusiastic and dedicated stakeholders in the Waterfront, including commercial businesses, clubs, and regular users of the Waterfront. Once the PBD was established, it would theoretically manage most of its own affairs, with some assistance from and collaboration with the City. Balancing the interest of various stakeholders in the Waterfront would be a difficult long-term task, especially when current stakeholders at the Waterfront may have opposing stances on the need for increased visitation and parking management. The waterfront has relatively few of these entities relative to other locations, i.e. downtowns or shopping districts, where this has been successful.

Figure 4 A parking meter in the Old Pasadena parking benefits district reminds parkers that their fees are reinvested directly to the place where they just parked Source: Mike Linksvayer, via Flickr

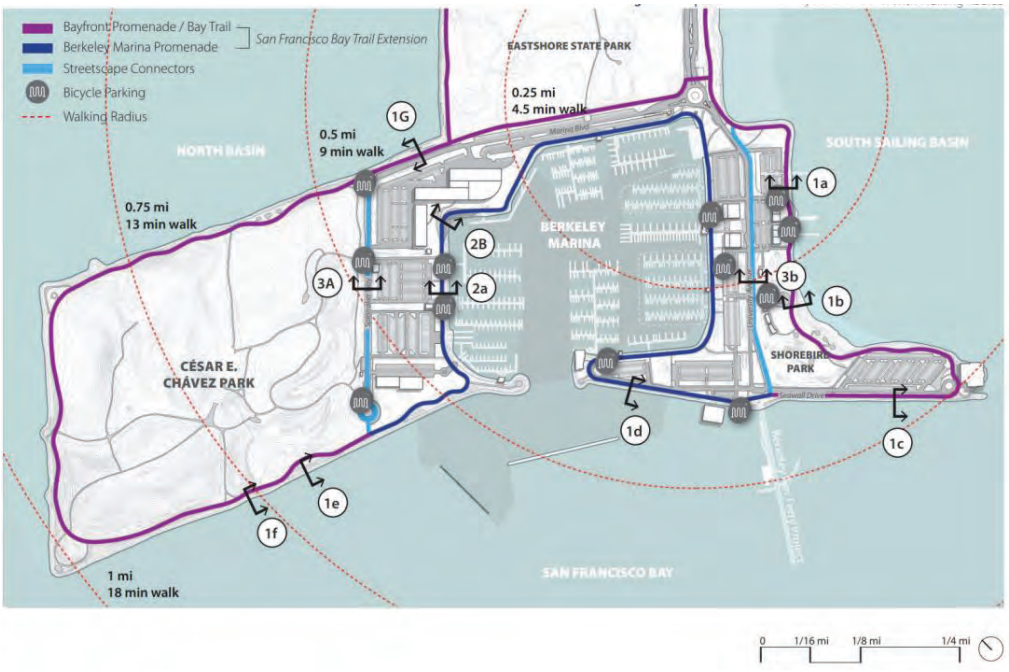
PARKING ENFORCEMENT

Effectiveness: + **Ease of Implementation: ✓** **Cost: $**

Overview: Enforcement of vehicle parking permits, time limits, and other restrictions would encourage adherence with parking regulations. Increased enforcement of existing restrictions could be a key strategy for delaying or avoiding the need for further restrictions or for paid parking.

Implementation: The Waterfront could shape its parking climate and occupancy without implementing paid parking initiatives by increasing parking enforcement. Key points of enforcement would include enforcing permit / slip holder parking areas, overnight parking, and time-limited parking. The Waterfront's hosting of the city's parking enforcement fleet could serve to ease the demands of increased enforcement.

VEHICLE REDUCTION STRATEGIES



BICYCLE AND PEDESTRIAN ACCESS

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $$**

Overview: The Berkeley Waterfront's geographic isolation from the rest of the City poses several challenges for bicycle and pedestrian access. While this planning process can recommend improvements for bicycle and pedestrian facilities in the Waterfront, it cannot do the same for facilities in the rest of Berkeley. Nevertheless, connectivity is of critical importance – safe, comfortable facilities at the Waterfront will not shift trips away from cars without compatible infrastructure off-site. This TDM measure considers both what bicycle and pedestrian improvements can be made at the Waterfront, and how those internal improvements can connect to and enhance improvements outside the Waterfront.

Bicycle and pedestrian infrastructure at the Waterfront: The Waterfront already hosts an extensive series of low-stress, class I, cycling trails. Closing the gaps in this network, as proposed by the draft Waterfront Specific Plan, would continue to establish the Waterfront as a safe and inclusive space for recreational walkers and cyclists.[4]

Figure 5 Pedestrian and Bicycle Circulation within Walking Radius (Source: Figure 2-51 from the Waterfront Specific Plan Public Draft)

Bicycle and pedestrian infrastructure to the Waterfront: Under current conditions, bicyclists and pedestrians access the Berkeley Waterfront via the Bay Trail and Pedestrian/Bicycle Bridge over I-580 just south of University Avenue, and a new pedestrian bridge over I-580 at Gilman Street. While these access points provide low stress connections, they are indirect and require bicyclists and pedestrians to travel out of their way to access the Waterfront. University Avenue would be a more direct method of accessing the waterfront

[4] https://berkeleyca.gov/your-government/our-work/capital-projects/waterfront-specific-plan

for cyclists and pedestrians. However, the University Avenue bridge does not currently have any bicycle or pedestrian facilities on it. Likewise, University Avenue is on the Berkeley's High Injury Network for most of its length, from Oxford Street to Frontage Road, all of which lies outside of the direct purview of the Berkeley Waterfront.[5] If implemented, recommendations in the 2020 Berkeley Pedestrian Plan would improve safety and comfort for vulnerable road users along University Avenue, who might be traveling to or from the Waterfront. Coordinating bicycle and pedestrian improvements in the Waterfront with those in the rest of the City will be a key factor in shifting more trips away from cars.

There are ongoing and planned improvements to Berkeley's cycling network that will make it easier for cyclists to access the Waterfront. On Gilman Street, the City is constructing a cycletrack, (class IV bike facility) which allows for two-way bicycle traffic, protected from vehicular traffic by concrete curbs. The complete portions of the cycletrack are already providing a better, safer path for cyclists traveling to and from the Waterfront on the Gilman Side of the overpass. Planned improvements to the City's cycling network in the 2017 City of Berkeley Bicycle Plan include two projects that would significantly enhance access to the Waterfront. One proposal is for the study of a cycletrack on University Avenue to the east of I-580, and another for the extension of a neighborhood bikeway on Addison Street, between the Bay Trail Bridge and Downtown Berkeley.[6]

Implementation: Creating direct, low stress bike and pedestrian connections to the Waterfront would be a long-term goal involving projects both in and outside of the Waterfront. Fortunately, there are ongoing planning processes to pursue both of those types of improvements. Existing recreational trails at the Waterfront can be supplemented with quick-build enhancements to bike and pedestrian access to the Berkeley Pier. Likewise, this planning process can lend its recommendations to the buildout of the 2017 Berkeley Bicycle Plan and 2020 Berkeley Pedestrian plan which, would neatly align with internal bicycle and pedestrian facilities if completed. A more difficult and longer-term project would be to pursue improvements to bike and pedestrian facilities on the elevated portion of University Avenue, between Sixth Street and Frontage Road, and would have to plan interventions around I-580 freeway ramps. Projects in this stretch of road are outside of the Waterfront, but shape the experience of accessing its many destinations.

Figure 6 Two-way protected cycletrack on Fulton St in Downtown Berkeley. Cycletracks (class IV bike facilities), like those recently constructed in Downtown Berkeley, would be key for the Waterfront's long-range reduction in single occupancy vehicle trips. *(Source: Jonathan Zisk)*

[5] https://berkeleyca.gov/your-government/our-work/adopted-plans/pedestrian-plan-2020
[6] https://berkeleyca.gov/your-government/our-work/adopted-plans/berkeley-bicycle-plan

BICYCLE FACILITIES AT FERRY TERMINAL

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $$**

Overview: Travel by bicycle, much like commutes by car, can be limited by parking presence and availability at the destination. Providing secure bike parking and amenities, including: bike repair stations, lockers (such as those currently at the Berkeley Waterfront Park Office area), and other supporting facilities can make biking a more feasible option for many. Increasing the share of people who access the ferry by bike can help mitigate the overall demand for vehicle parking and reduce the greenhouse gas emissions.[7]

Implementation: The difficulty of implementation varies widely depending on the type and scale of amenities. Well-positioned bike racks and bike maintenance stations could be readily implemented before or concurrent with the implementation of ferry service. However, more secure bicycle parking and facilities, including changing rooms would be more effective at shifting trips to bike. These amenities would also require more space and would be more expensive to construct and operate.

INCREASED SECURE BICYCLE PARKING THROUGHOUT THE WATERFRONT

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $**

Overview: There are currently 20 secure BikeLink lockers in the Waterfront, located on University Ave in front of the Berkeley Waterfront Park Office.[8] For a small fee, those lockers allow cyclists to access the Waterfront without worrying about bike theft or damage. As visitation to the Waterfront grows, increasing the availability of similar bike locker services around the Waterfront would encourage regular and occasional visitors to the Waterfront to choose to ride their bikes rather than traveling by other modes. Ensuring that expanded secure bicycle lockers can accommodate e-bikes and cargo bikes will also encourage families and riders of all abilities to ride to the Waterfront.

Figure 7 BikeLink lockers installed at the Santa Clara Caltrain station. Secure bike parking is an essential and attainable strategy for increasing cycling trips. Source: Caltrain

Implementation: Secure bike lockers can be developed via multiple means, either by a third party like BikeLink, which is the main supplier of secure bike parking around the Bay Area, or directly by a public agency. Though the City of Berkeley does not currently provide secure bike parking directly, there is an active movement for the City to develop its own secure bike parking facilities.[9] Provision of secure bike parking is a feasible and cost-effective strategy for encouraging and improving the overall experience of cycling to the Waterfront.

EXPAND SHARED MICROMOBILITY SERVICES

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $**

Figure 8 Veo scooters parked at the Waterfront. Source: Amanda Leahy

Overview: There are several different ways that visitors can access the Berkeley Waterfront via shared micromobility, including using Bay Wheels bikes, Veo, and Lyft electric scooters. While these devices can be found parked at bike racks around the Waterfront, there is currently no micromobility-specific infrastructure present at the Waterfront. Designating scooter drop-off sites, areas for bike share, and clearly posted shared-micromobility regulations can increase the overall ease and comfort of shifting trips away from cars.

Implementation: The City of Berkeley would work with operators to implement and administer shared micromobility programs at the Waterfront. Bay Wheels has already expanded their docks as far as Addison Street and Fourth Street and is adding 24 new docks in the East Bay this year.[10] Bay Wheels has also shown a recent commitment to expanding bike share service into recreational areas, with the 2023 expansion of bike docking stations into Golden Gate Park.[11]

ESTABLISH PICK-UP/DROP-OFF ZONES

Effectiveness: + **Ease of Implementation: ✓** **Cost: $**

Overview: Establish pick-up/drop-off zones near activity centers, such as the new ferry terminal, Cesar Chavez Park, and Adventure Playground. Establishing clearly marked pick-up/drop-off and loading zones can help visitors with diverse needs accessing the Waterfront, including those with mobility impairments, and those utilizing ride share services. Clearly marked loading zones can allow those with picnic supplies or boating equipment to unload near their destinations before parking slightly further away, thereby reducing the demand for parking in the immediate vicinity of key Waterfront destinations.

Implementation: The City can quickly and cheaply identify suitable pick-up/drop-off zones near destinations around the Waterfront. Zones can be marked with new wayfinding and road paint, before eventually being permanently built into roadways. This has already been conducted successfully during special events at the Waterfront.

FREE/REDUCED TRANSIT PASSES OR MICROMOBILITY SERVICE MEMBERSHIPS FOR FERRY RIDERS

Effectiveness: ++ **Ease of Implementation: ✓** **Cost: $$**

Overview: This TDM measures would entail the subsidization of public transit fares and micromobility service memberships to encourage the use of bus or micromobility (e.g., bike share, scooter share).

[10] https://mtc.ca.gov/news/mtc-lyft-kick-bay-wheels-east-bay-expansion
[11] https://www.sf.gov/news/san-francisco-announces-expansion-lyfts-bike-share-program-golden-gate-park

Removing some of the out-of-pocket cost of transit travel would be an effective way of shifting trips to non-auto modes, reducing VMT, and reducing the vehicle parking demand at the Berkeley Waterfront. There has been a recent movement towards integrating fare structures between regional transit operators, including through the pilot Clipper Bay Pass program.[12] The success of that program could be used as inspiration for coordinating fare payments for riders who use AC Transit to access a ferry at the Waterfront.

Implementation: The difficulty of this strategy varies widely, depending on who subsidizes transit fares. If discounts can be applied directly to riders' Clipper cards, then logistical hurdles may be minimal. Micromobility solutions in the City (i.e. VEO scooters) also provide reduced fee programs for those in need. Negotiations with AC Transit, WETA, and any other parties would likely be the major challenge of implementing this strategy. The Parks, Recreation & Waterfront Department would need to work closely with the City's Transportation Department to determine if this is a feasible measure.

EXPANDED AC TRANSIT SERVICE TO THE WATERFRONT

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $$**

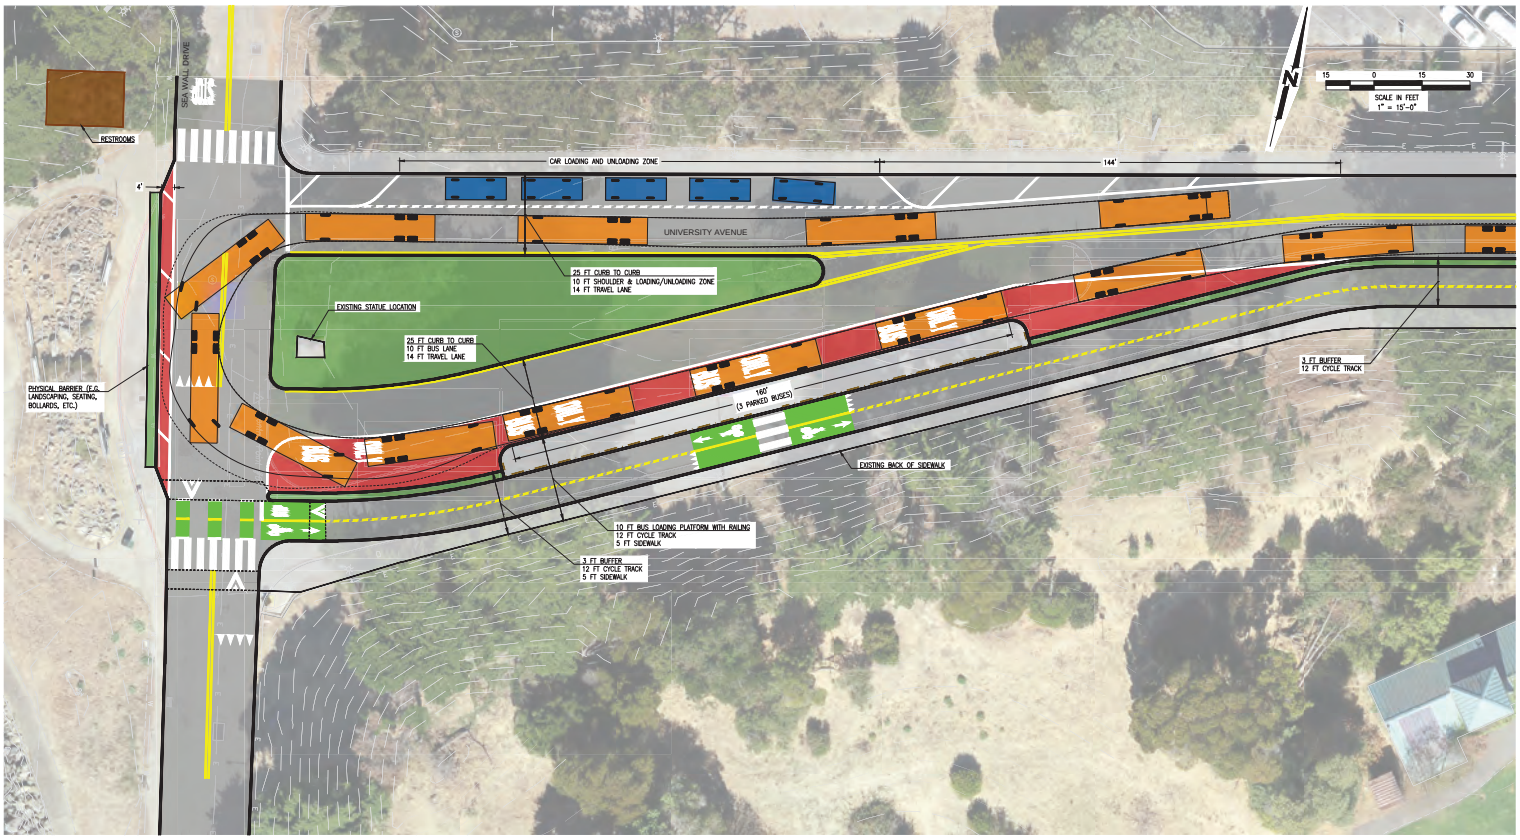
Overview: Currently, as of September 2024, AC Transit's Route 51B runs just one third of its routes to the Berkeley Waterfront, with the rest terminating around one mile to the east on University Avenue, at Berkeley Amtrak station. This alternating schedule results in service to the Waterfront only once every 30 minutes. Increasing the frequency of AC Transit service to the Waterfront could be an important step in shifting trips away from single occupancy vehicles. Frequent transit service is especially important when riders have to transfer between vehicles that each run infrequently, increasing the likelihood of long layovers and discouraging transit ridership.

Implementation: Ferry service at the Berkeley Waterfront may be cause enough for AC Transit to increase its usage of the Berkeley Waterfront as a terminus for Route 51B, especially if facilities at the pier can serve as layover facilities for bus operators. Otherwise, increasing transit frequency to the Waterfront would require significant coordination with AC Transit, and potentially subsidies from the City. Fortunately, there is existing 51B bus route infrastructure at the Waterfront, so the major hurdle would be securing increased operating resources for the expanded service.

ESTABLISH A TRANSPORTATION MANAGEMENT AGENCY

Effectiveness: +++ **Ease of Implementation: ✓** **Cost: $$$**

Overview: A transportation management agency (TMA) would be responsible for reducing single-occupant vehicle trips, reducing congestion and demand for vehicle parking, and improving access and circulation to and around the waterfront by increasing transportation options. A TMA would operate independently from the City and receive funding through various sources, including the City of Berkeley, board member dues, and the private sector.



Implementation: The success of establishing a TMA would depend on securing ongoing funding and committed participation of employers, businesses, and other interested parties who face parking and traffic challenges at the waterfront. Finding a balance between TMA activity and City staff would be a significant challenge, given the extensive role that the City of Berkeley already plays in managing the Waterfront.

WATER TRANSPORTATION PIER-FERRY PROJECT PARKING AND TDM PLAN

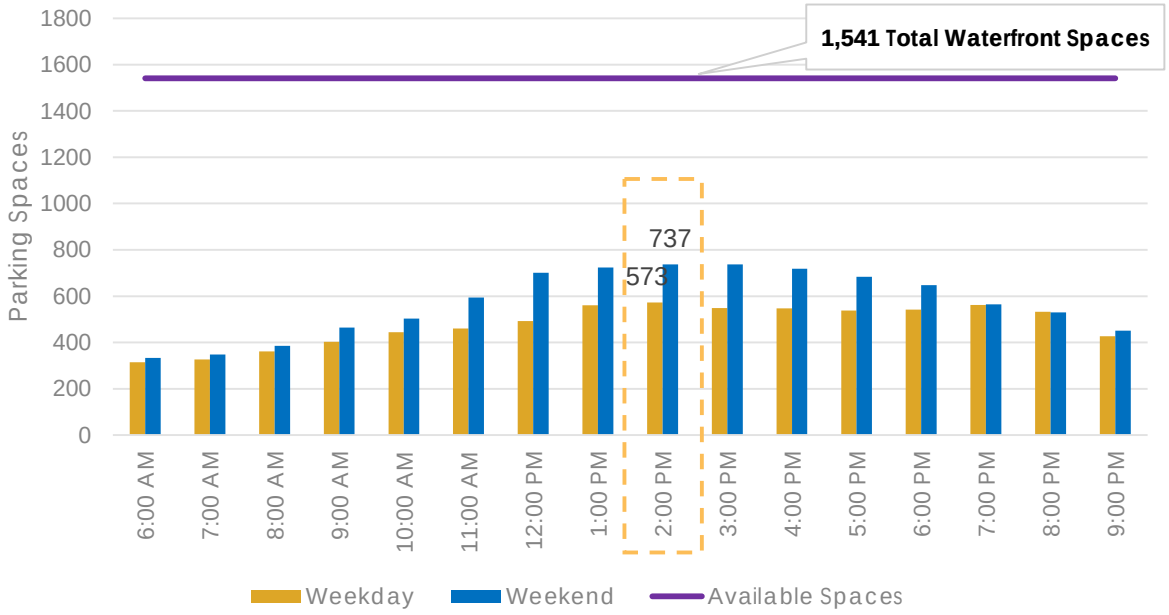
REVISED DRAFT Addendum

Introduction

This addendum supplements the parking analysis presented in the Berkeley Waterfront Transportation Pier-Ferry Project Parking and Transportation Demand Management (TDM) Plan (published March 7, 2025) by incorporating data recently collected by Waterfront Monitors and presenting additional analysis in response to public comments on the Plan.

The Final Draft Parking and TDM Plan (March 7, 2025) presented the analysis of hourly parking counts collected by Quality Counts between 5:30 am and 9:30 pm on the following dates:

- Saturday, April 6, 2024
- Thursday, April 11, 2024
- Thursday, August 1, 2024
- Thursday, August 22, 2024
- Saturday, August 24, 2024



Additionally, Waterfront Monitors collected parking counts on 554 days over the course of three years (May 28, 2021- February 12, 2024). The data was collected by counting the number of occupied spaces at each lot at 10 am and 8 pm, with limited counts also collected at 2 pm and 4 pm. The results were recorded on a paper survey form that was later entered into a spreadsheet maintained by Waterfront staff. The data collection methods have been refined over time and continued through Spring 2024, including parking counts at 2 pm and 4 pm.

At the Parks, Recreation and Waterfront Commission meeting on March 12, 2025, some members of the public and some commissioners inquired about the number of midday (i.e. 2 pm or 4 pm) counts included in the data that is presented in the analysis. The purpose of this addendum is to provide additional information about the hourly and historical parking counts included in the Final Draft Report and supplement the analysis with the data collected from April 2024 to August 2024 that included additional counts collected at 2 pm. This addendum also re-evaluates the availability of parking in the proposed ferry rider overflow lots at Marina Blvd and Skates/N Lot given the additional mid-day data. As discussed in the Parking and TDM Plan, City staff will use TDM and parking management strategies such as time restrictions and paid parking to ensure that ferry riders do not significantly impact current and future recreational activities.

WHEN IS THE PEAK DEMAND?

As shown in Figure 1, using hourly counts collected by Quality Counts, the Parking and TDM Plan concluded that 2 pm is the time of day when peak parking occupancy occurs throughout the Waterfront.

Figure 1: Parking Utilization by Time of Day

Source: Parking and TDM Plan, Figure 4, Kittelson & Associates, Inc. 2024
Note: Total available spaces include 320 parking spaces in Seawall Lot, bringing the total to 1,541.

Table 1 and Table 2 present weekday and weekend parking occupancy by time of day for each public lot. Darker red shades indicate higher parking utilization relative to capacity. As expected, peak parking demand varies by lot depending on the location and types of activities it serves. For instance, the Skates/N Lot located near the Skates by the Bay restaurant experiences higher demand around 7 pm (dinner time). The South Cove West Lot reaches peak occupancy between 1 and 3 pm on both weekdays and weekends, reflecting the concentration of recreation activities that are typically busier during that time frame.

The City and WETA have conceptually planned for 250 vehicle parking spaces in the Seawall Drive Lot (formerly known as HS Lordship lot) to be utilized by weekday ferry riders (i.e. commuters). The Parking and TDM Plan recommends using Marina Blvd and/or Skates/N Lot as designated overflow parking areas for the ferry riders because these lots were shown to be underutilized during the weekdays when commuter ferry riders would want to park. As shown in Table 1, on weekdays, in addition to the 250 dedicated spaces on the Seawall Drive Lot, ferry riders can access 83 (capacity (150) minus peak occupancy (67)) unutilized spaces on Marina Blvd and at least 66 (137 minus 71) spaces in the Skates/N Lot. This value is quite conservative, since the peak occupancy in the Skates/N Lot occurs at 8 pm, long after most ferry riders would have departed. If only considering peak occupancy between 8 am – 6 pm, up to 84 spaces would be available for ferry rider parking in the Skates/N Lot. On weekends, as shown in Table 2, based on the QualityCounts data ferry riders have access to 80 (150 minus 70) unoccupied spaces

on Marina Blvd and 35 (137 - 103) spaces in the Skates/N Lot (increasing to 75 spaces if only 8 am – 6 pm is considered).

Note: Darker Red lighted cells represent the higher parking occupancy number relative to capacity.

WEEKDAY MIDDAY PARKING OCCUPANCY, SPRING-SUMMER 2024

The following analysis is based on the parking counts collected by Waterfront Monitors over 29 days from April 2024 to August 2024 for the midday period (2 pm or 4 pm). As noted previously, this data was not included in the Final Draft Study because it was collected after that work had been initiated. Figure 2 illustrates the average mid-day occupancy during each weekday by lot. The overall highest parking demand is observed on Wednesdays with 31% (470) spaces occupied.

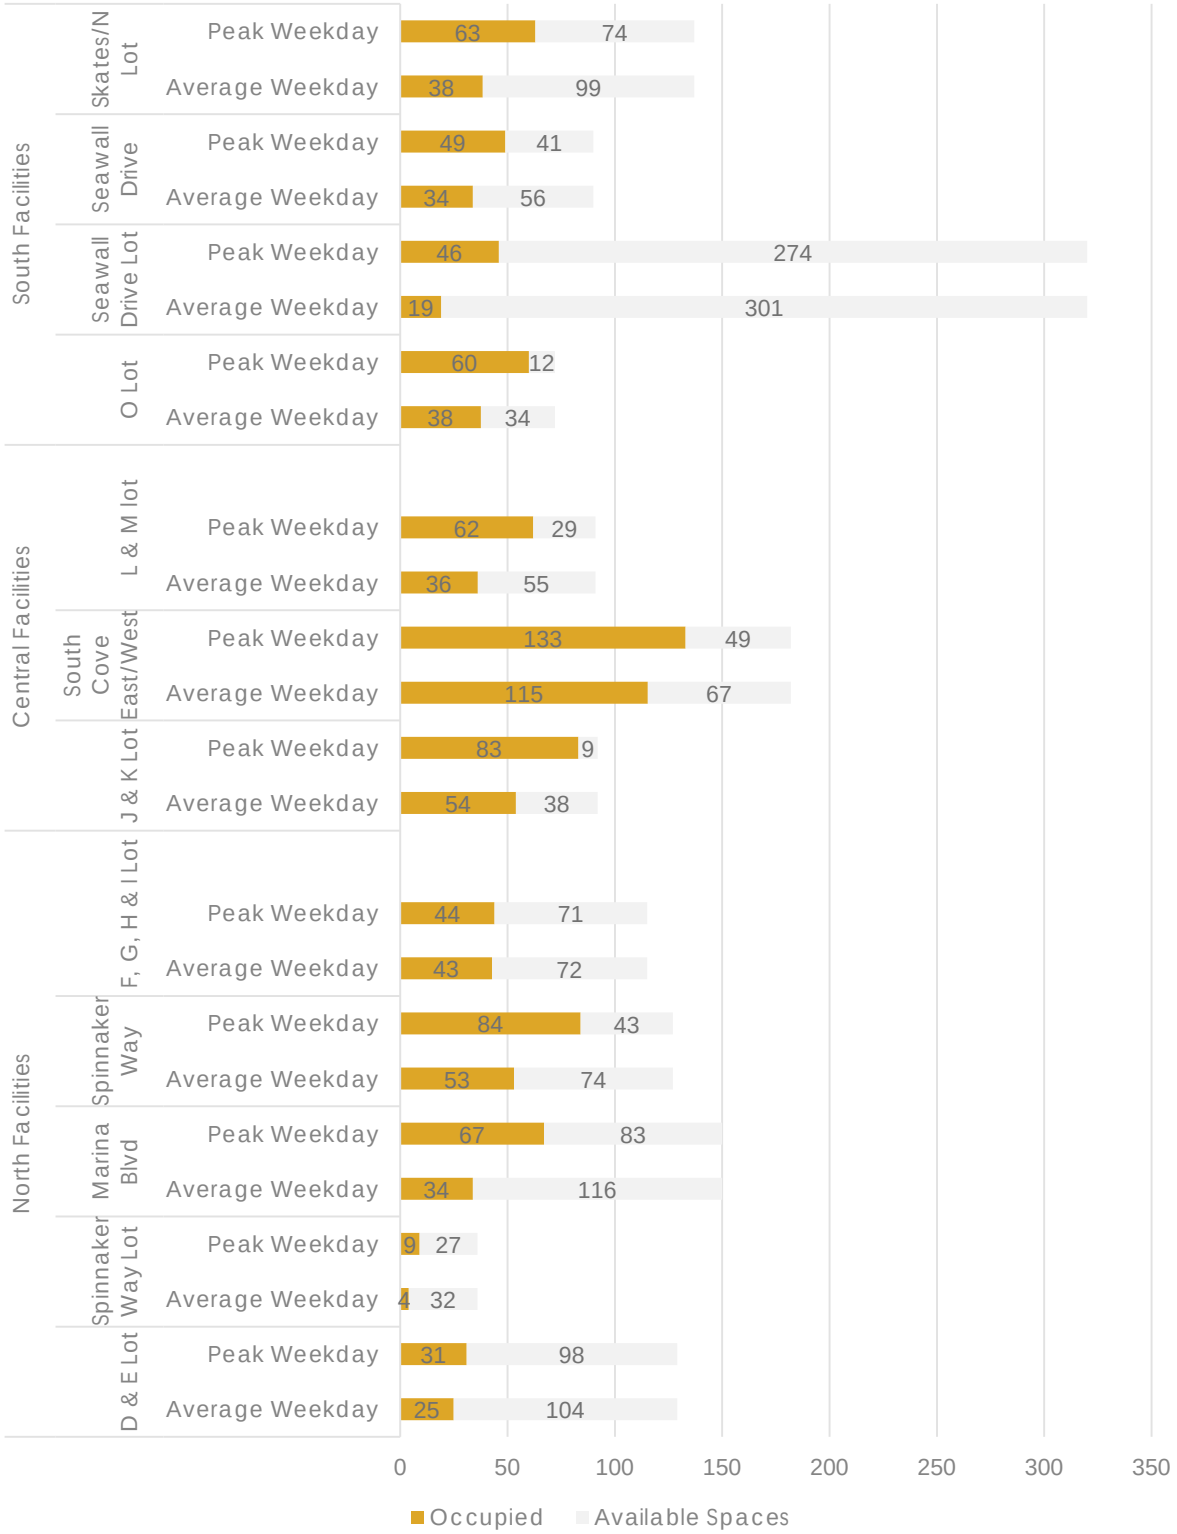

Figure 2: Weekday Midday Parking Occupancy

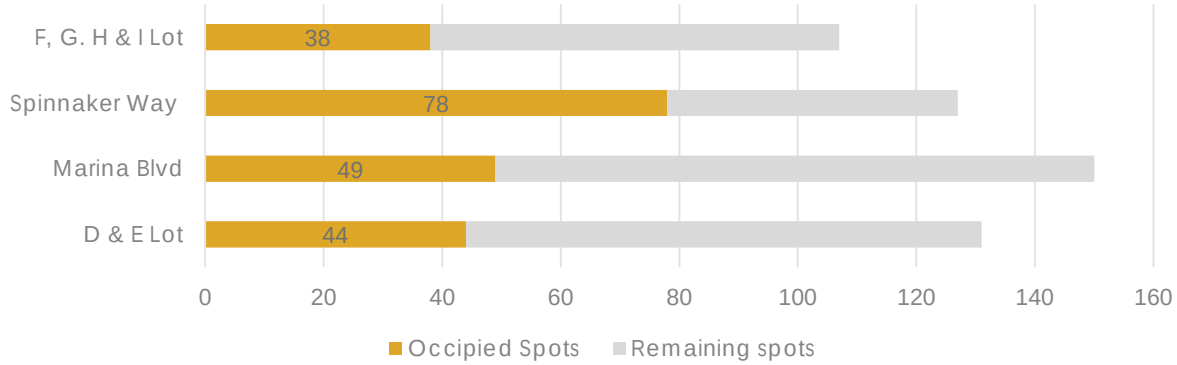
Source: Data Collected by Waterfront Monitors between April 2024 and August 2024, compiled by Kittelson & Associates, Inc. 2025

Figure 3 compares weekday peak parking counts with average parking counts for this midday April-August data set. The data shows that during the peak mid-day weekday demand, approximately 83 parking spaces are available at Marina Blvd. and 74 parking spaces are available at Skates/N Lot. This is very similar to the findings from the hourly Quality Counts data regarding the available capacity at these specific parking lots.

Figure 3: Peak Weekday vs Average Weekday Midday Parking Counts

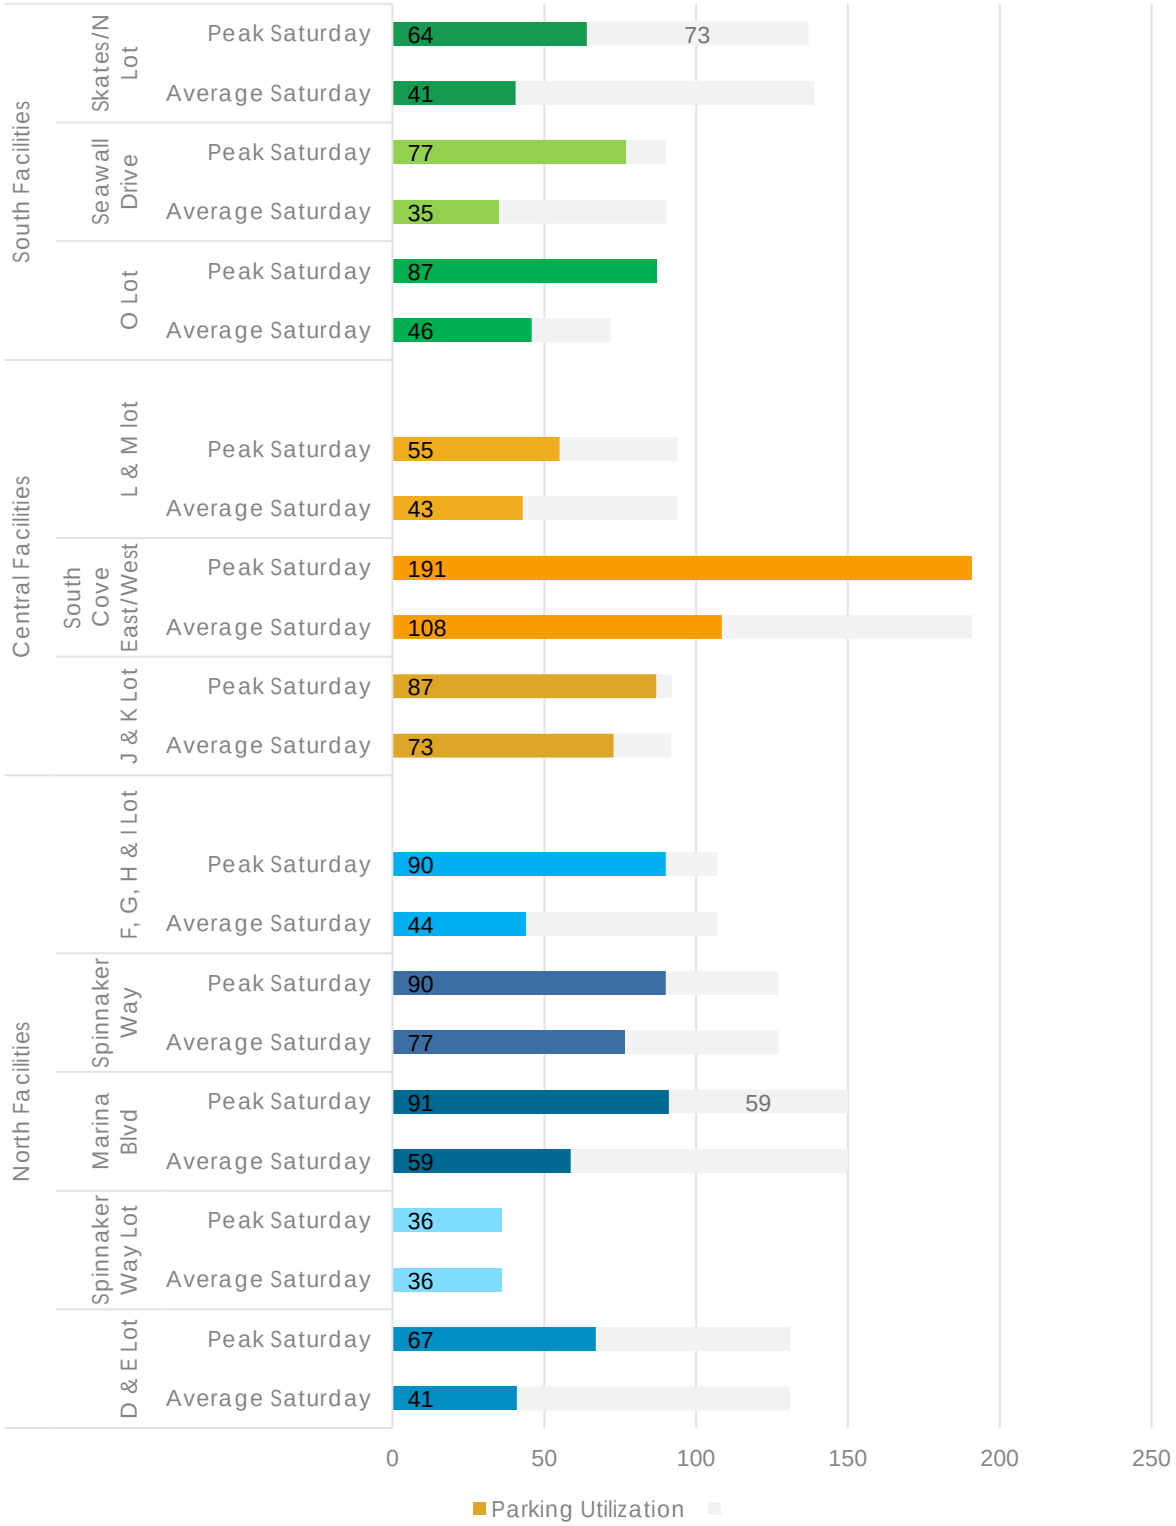


Source: City of Berkeley, Data Collected by Waterfront Monitors between April 2024 and August 2024
Compiled by Kittelson & Associates, Inc., 2025

WEEKEND MIDDAY PARKING OCCUPANCY

The dataset analyzed in the Final Draft Study included mid-day car counts on 26 weekend days. In April – August, 2024, the focus was on weekday data collection, and only one additional weekend midday parking count was collected (on May 25, 2024). Figure 4 presents the May 25, 2024, weekend midday parking count.

Figure 4: Weekend Midday Parking Data



Source: City of Berkeley, Data Collected by Waterfront Monitors on May 25, 2024.
Compiled by Kittelson & Associates, Inc., 2025

The Final Draft Study identified April 1, 2023 as the peak Saturday of the data analyzed. Figure 5 (which was included in the Final Draft Study) shows the average parking utilization on weekends (Saturday) in comparison with the peak Saturday on April 1, 2023. As shown in Figure 5, certain lots had more than double the occupancy on the peak Saturday compared to an average Saturday. Nevertheless, even on the peak Saturday, overall Waterfront public parking was 75% occupied with 306 spaces remaining. During the peak Saturday, centrally located lots observed 82% occupancy, and South Cove East/West reached full occupancy at 100%.

Comparing Figure 4, which reflects data collected on May 25, 2024 and Figure 5, which reflects data collected from 2021 to 2024 that was presented in the Parking and TDM Plan, Marina Blvd. has a similar occupancy level of about 33% with between 91 and 101 spaces available on average weekends.

Figure 5: Parking Utilization on Weekends (Average Saturday vs Peak Saturday)

Source: Parking Counts collected by Waterfront Staff from 2021 to 2024, data compiled by Kittelson & Associates, Inc. 2024

Note: Data does not include Seawall Drive/ Shorebird Lot.

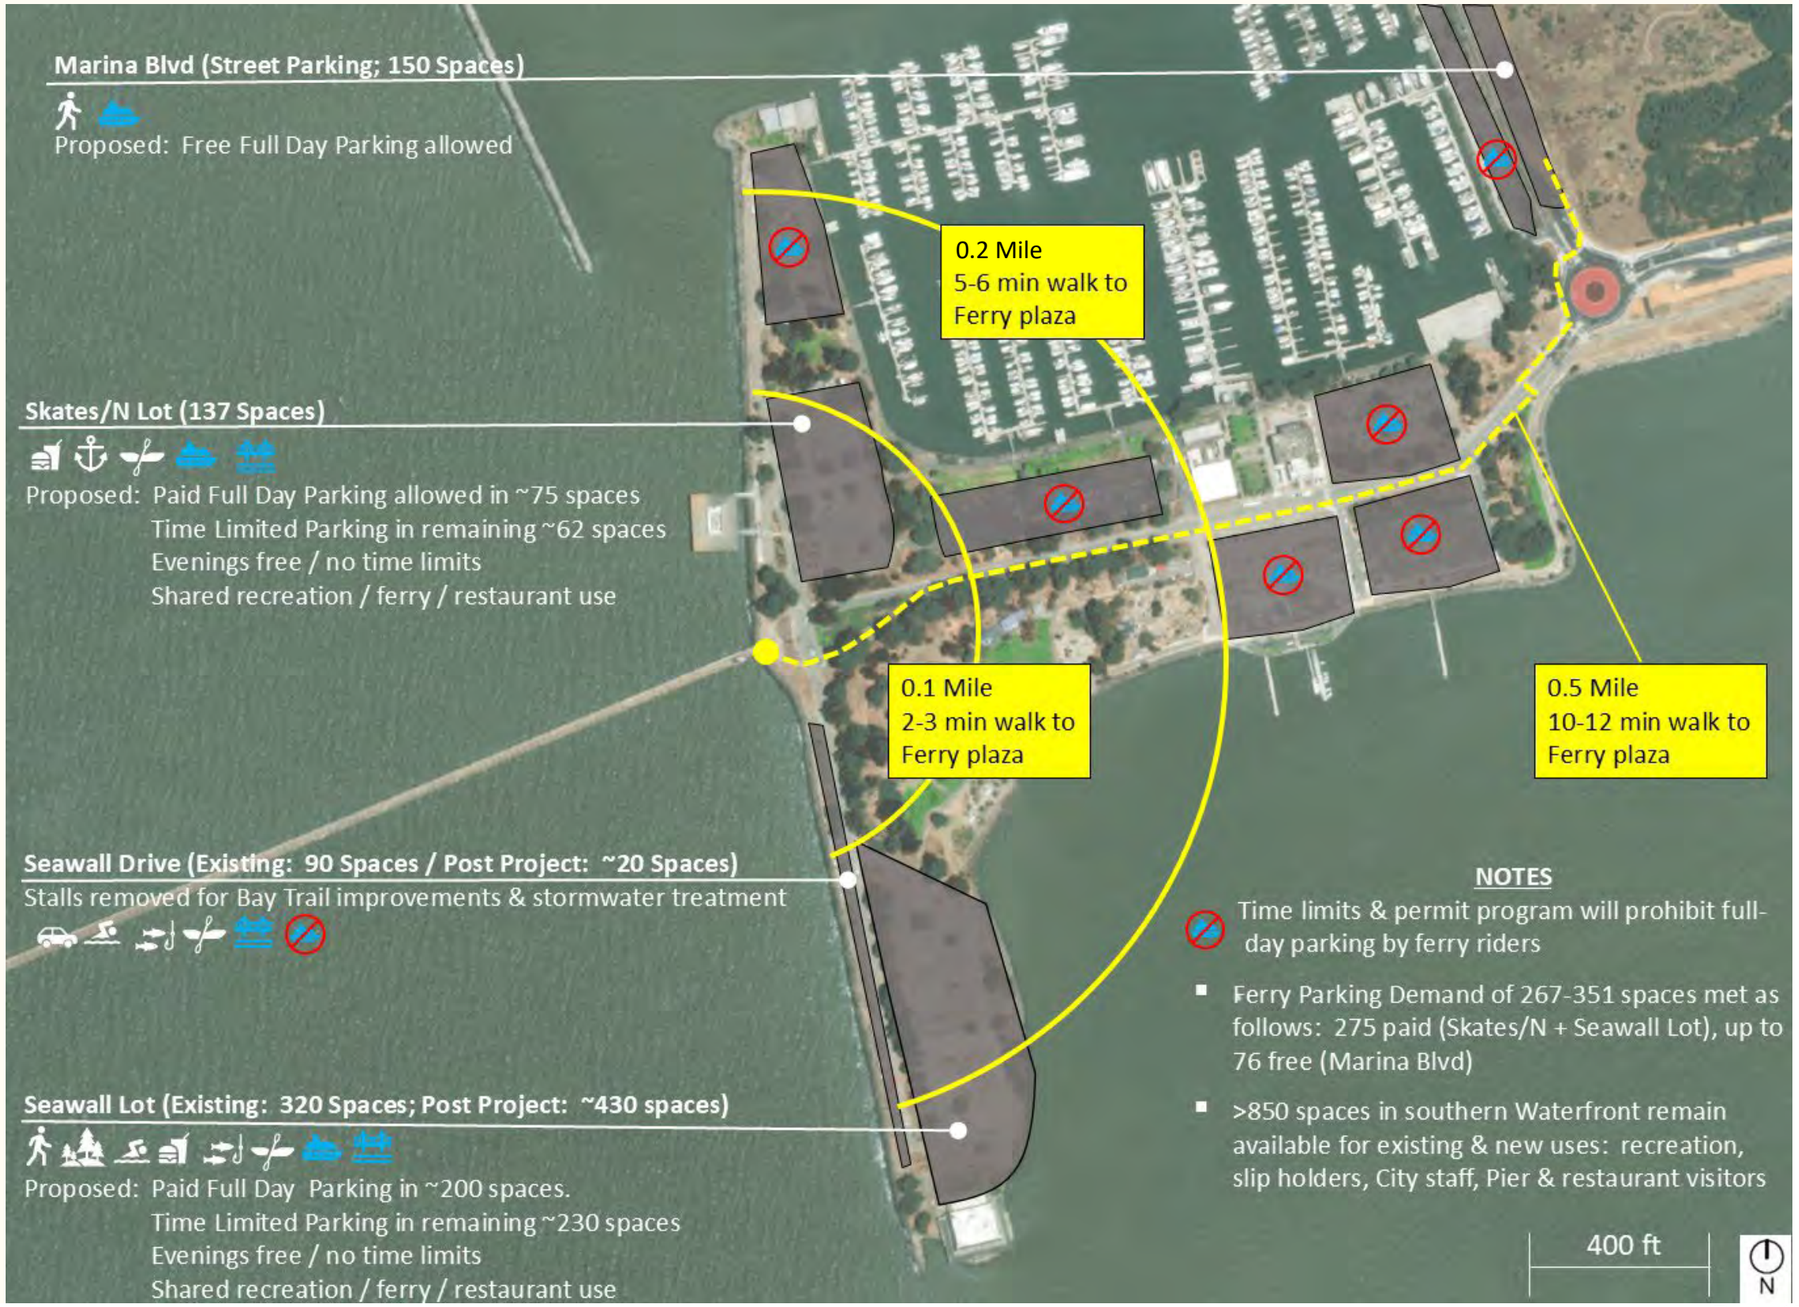
Conclusion

The parking occupancy data by time-of-day (i.e. Quality Counts data) indicates that while peak demand varies based on the parking lot, the overall peak demand for parking at the Waterfront occurs around 2 pm on both weekdays and weekends. Based on the Quality Counts data set, during the weekday peak period, approximately 83 parking spaces are available at Marina Blvd. and 74 parking spaces are available at Skates/N Lot. On weekends, 59 spaces remain available at Marina Blvd. and 73 spaces are available at Skates/N Lot. This midday analysis confirms that although the mid-day data gathered in April-August 2024 varies somewhat from the Quality Counts Data previously presented, the recommended overflow lots—Marina Blvd. and Skates/N Lot— offer sufficient capacity to accommodate overflow demand for parking from ferry riders on both weekdays and weekends.

The parking occupancy data collected from April to August 2024 aligns well with the earlier data collected between May 2021 and February 2024 that informed the Parking and TDM Plan. That plan estimated a weekday parking demand of 421 spaces for ferry users (171 more than the 250 spaces currently available at Seawall Drive) without TDM measures. With TDM strategies in place, demand is projected to drop by 65 spaces to 356. Additional parking management tools, such as expanding capacity at the Seawall Drive and/or Skates/N lots and adding wayfinding signage, could further help to manage parking. Combined, the Seawall parking lot, together with overflow parking at the Marina Blvd. and Skates/N Lot, offer sufficient parking stalls to accommodate ferry riders in currently unoccupied parking stalls without any impact to parking availability in other parking lots.

Pier-Ferry Preliminary Parking Management Plan

Ferry Parking Demand



Weekday: 318 – 351 spaces
Weekend: 267 – 300 spaces

Project Transportation Demand Management (TDM) Measures

- University Ave. CycleTrack
- Secure Bike Parking
- Paid Parking
- Rideshare loading zones
- Shared Micromobility Stations

Future TDM Measures

- Increased AC Transit
- Shuttle Services
- Valet Parking
- Marina Blvd. Improvements
- Additional Bike Parking
- Expanded Micromobility Stations

ATTACHMENT 1

PLANNING COMMISSION
RESOLUTION NO. 2026-01

A RESOLUTION OF THE CITY OF BERKELEY PLANNING COMMISSION RECOMMENDING THE ZONING ADJUSTMENTS BOARD AND CITY COUNCIL APPROVE THE USE PERMIT FOR THE BERKELEY PIER-FERRY PROJECT

WHEREAS, the Berkeley Waterfront is a single parcel with an Unclassified zoning district; and

WHEREAS, the City of Berkeley proposes establishing a new transportation use at the Berkeley Pier for public ferry service; and

WHEREAS, establishing Berkeley ferry service is identified as a high priority action in the City of Berkeley Local Hazard Mitigation Plan; and

WHEREAS, establishing Berkeley ferry service is identified as a goal in the City of Berkeley Climate Action Plan; and

WHEREAS, a public ferry is consistent with the allowable water-dependent uses of public tidelands that are subject to the Public Trust Doctrine; and

WHEREAS, establishing transportation as an allowable use at the Berkeley Pier is critical to overall schedule and progress of the Berkeley Pier-Ferry Project; and

WHEREAS, on January 21, 2026, the Planning Commission held a duly-noticed meeting and considered all public comments received, the presentation by City staff, the staff report, and all other pertinent documents regarding the proposed request; and

WHEREAS all documents constituting the record of this proceeding are and shall be retained by the City of Berkeley Planning and Development Department, Land Use Planning Division, at 1947 Center Street, Berkeley, California.

WHEREAS, the Use Permit is not effective until after action by Berkeley City Council, who may affirm, reverse or modify the Zoning Adjustment Board decision; and

WHEREAS, the Berkeley City Council would need to certify a Final Environmental Impact Report for the Project prior to the Project receiving permits from the City, including the Use Permit;

NOW, THEREFORE, IT BE RESOLVED that the Planning Commission does hereby recommend the Zoning Adjustments Board and the City Council of the City of Berkeley approve the Use Permit for the Berkeley Pier-Ferry Project

Pursuant to Berkeley Municipal Code Section 23.208.020(E), the Planning Commission makes the following findings to support its recommendation for the Use Permit:

(a) Will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of persons residing or working in the area or neighborhood, of the proposed use; and

Rationale: There are no permanent residences within 0.5 miles of the project. Persons working in the area or residing on live-aboard boats or floating homes in the Marina would gain an additional transportation option for commuting or personal travel to San Francisco. The City has conducted an analysis of parking and transportation demand management measures that have been incorporated into the project to ensure that the project will not be detrimental to the general welfare of persons who use the Berkeley Waterfront.

(b) Will not be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood or to the general welfare of the City.

Rationale: Establishing a ferry service in Berkeley has been identified as a goal in multiple City and regional planning documents to improve the general welfare of the City by reducing greenhouse gases, improving transportation access and providing emergency response and disaster recovery. The use of a public ferry is a water-related use consistent with the Public Trust Doctrine governing Berkeley waterfront land use. The project is subject to the City's standard conditions of approval regarding noise and air quality, waste diversion, toxics and stormwater requirements, thereby ensuring the project will not be detrimental.

I HEREBY CERTIFY the foregoing resolution was passed and adopted by the Planning Commission of the City of Berkeley, at a regular meeting thereof, held on the 21st day of January 2026, by the following vote:

AYES: Marthinsen, Vincent, Oatfield, Twu, Hauser, Wang

NOES: None

ABSENT: Owens, Kahn, Merker

ABSTAIN: None

JUSTIN HORNER,
SECRETARY TO THE PLANNING COMMISSION

Attachment 6: Public Hearing Notice

NOTICE OF PUBLIC HEARING
BERKELEY CITY COUNCIL

BERKELEY WATER TRANSPORTATION PIER-FERRY PROJECT ENVIRONMENTAL IMPACT REPORT, PROJECT APPROVAL AND USE PERMIT

The public may participate in this hearing by remote video or in-person.

The Department of Parks, Recreation & Waterfront is proposing that the City Council:

(1) Adopt a Resolution certifying the Berkeley Water Transportation Pier Ferry Project Environmental Impact Report (EIR) (SCH #2025040995) and adopt related California Environmental Quality Act (CEQA) findings, a statement of overriding considerations, mitigation measures, and a mitigation monitoring and reporting program, and
(2) Adopt a Resolution Approving the Berkeley Water Transportation Pier-Ferry Project and affirming, as modified to incorporate the CEQA findings and mitigation measures, the decision of the Zoning Adjustments Board to approve Use Permit #ZP2026-0014 to establish transportation via public ferry service as an allowable use at the Berkeley Pier.

The hearing will be held on, November 17, 2026 at 6:00 p.m. in the School District Board Room, located at 1231 Addison Street, Berkeley CA 94702.

A copy of the agenda material for this hearing will be available on the City's website at https://berkeleyca.gov/ as of November 5, 2026. **Once posted, the agenda for this meeting will include a link for public participation using Zoom video technology, as well as any health and safety requirements for in-person attendance.**

For further information, please contact Scott Ferris, Director of Parks, Recreation & Waterfront at (510)-981-6700.

Written comments should be mailed or delivered directly to the City Clerk, 2180 Milvia Street, Berkeley, CA 94704, or e-mailed to council@berkeleyca.gov in order to ensure delivery to all Councilmembers and inclusion in the agenda packet.

Communications to the Berkeley City Council are public record and will become part of the City's electronic records, which are accessible through the City's website. **Please note: e-mail addresses, names, addresses, and other contact information are not required, but if included in any communication to the City Council, will become part of the public record.** If you do not want your e-mail address or any other contact information to be made public, you may deliver communications via U.S. Postal Service or in person to the City Clerk. If you do not want your contact information included in the public record, please do not include that information in your communication. Please contact the City Clerk at (510) 981-6900 or clerk@berkeleyca.gov for further information.

Mailed by: November 3, 2026
Noticed pursuant to Berkeley Municipal Code Section 23.404.040

Office of the City Manager

PUBLIC HEARING
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jordan Klein, Director, Planning and Development Department

Subject: Ashby BART West Lot Transit Oriented Development Objective Design Standards

RECOMMENDATION

Conduct a public hearing and upon conclusion adopt a Resolution approving the Ashby West Lot Transit Oriented Development Objective Design Standards.

SUMMARY

The proposed Objective Design Standards (ODS) for the Ashby BART West Lot (Attachment 1) establish requirements for land use, ground-floor activation, the public realm, and building design. They implement adopted City and BART policies and agreements while balancing housing and affordable housing objectives, urban design priorities, and the site's physical and infrastructure constraints.

The ODS were informed by prior public planning processes, technical and economic feasibility analyses, community and Planning Commission input, and coordination with BART and the West Lot developer. The Planning Commission recommended adoption of the "Revised ODS" on September 16, 2026; those standards are included with the Resolution proposed for adoption with this staff report. On October 7, 2026, the Planning Commission forwarded supplemental public realm and open space recommendations to Council (Attachment 2). and requested staff review for objectivity and consistency with the City–BART Exchange Agreement. As of the drafting of this report, staff are reviewing the October 7 recommendations and considering associated amendments to the ODS. This analysis and any revisions will be published as supplemental materials in advance of the November 17, 2026, City Council meeting.

The Exchange Agreement establishes process and minimum development capacity requirements and a November 27, 2026 adoption deadline. Provided the applicable requirements are met, BART, as property owner, will require compliance with specified ODS through its real estate agreements.

FISCAL IMPACTS OF RECOMMENDATION

Adopting Objective Design Standards for the West Lot will not result in direct fiscal impacts. There are a variety of potential future fiscal impacts to the City related to Ashby

BART TOD that will require additional Council action, including the allocation of City Housing Trust Fund for affordable housing, capital expenditures related to the Adeline Street roadway reconfiguration, and potential establishment of financing districts

CURRENT SITUATION AND ITS EFFECTS

Adopting the Ashby BART West Lot Transit Oriented Development Objective Design Standards advances the Strategic Plan goal to create affordable housing and housing support services for our most vulnerable community members.

Pursuant to the City and BART Exchange Agreement for Ashby BART Transit Oriented Development (TOD), staff recommend that the City Council adopt the Ashby BART West Lot ODS (Attachment 1, Exhibit A). On September 16, 2026, the Planning Commission recommended that the Council adopt the ODS presented by staff. On October 7, 2026, the Commission voted to forward supplemental recommendations addressing the public realm and open space for Council consideration. The proposed ODS, supplemental recommendations, and applicable Exchange Agreement requirements are summarized below.

A. City and BART Exchange Agreement Requirements for Ashby BART West Lot Objective Design Standards[1]

The City and BART Exchange Agreement for Ashby BART TOD establishes requirements for the timeline, process, development capacity requirements and compliance and enforcement provisions for ODS for the Ashby BART West Lot (bounded by Ashby Avenue, Adeline Street and Martin Luther King Jr. Way):

- **Timeline.** The Exchange Agreement requires the City to adopt Final ODS for the West Lot "no later than 9 months after execution of the Exclusive Negotiating Agreement" (ENA) between BART and the selected developer team. Based on the February 27, 2026 ENA effective date, the ODS adoption deadline is November 27, 2026.[2]

- **Process.** The Exchange Agreement states that the City "shall consider the input of the public, BART, and the West Lot Developer in the preparation of Final ODS to be considered for adoption by the Planning Commission and City Council and shall make a good faith effort to address any objections raised by BART and the West Lot Developer relating to the impact of ODS on project feasibility or design."

[1] Article 9, Schedule 9.2.1 and Schedule 9.2.2 – City and BART Exchange Agreement for Ashby BART TOD (December 2024).

[2] BART selected Adeline Alliance Partners (AAP) and Resources for Community Development ("AAP team") following a competitive Request for Proposals (RFP) in July 2025 and entered into an ENA with the AAP team with an effective date of February 27, 2026.

- **Development Capacity.** The Exchange Agreement stipulates that the ODS must accommodate a development capacity of at least 600,000 gross residential square feet (sf) within buildings that have a height no greater than eight stories; and at least 750,000 sf within buildings that have a height of over 85 feet but within the maximum height allowed by the ODS (see Exchange Agreement, Schedule 9.2.1 ODS Requirements and Schedule 9.2.2 Capacity Study).

- **Compliance and Enforcement.** Future development at the Ashby BART West Lot will likely qualify for ministerial approval under applicable State laws (e.g., AB 2923, SB 35, AB 2011), meaning staff will review the project for conformance with objective standards without discretionary review by City boards or commissions.[3] Projects may also use the State Density Bonus Law to obtain concessions or waivers of local development standards when needed for feasibility and/or potentially other State laws, such as SB 79, to modify development standards. The City of Berkeley will review all entitlement applications for development at the Ashby BART West Lot for compliance with the ODS, in accordance with State law.

  Provided the Final ODS adopted by City Council meet the Exchange Agreement's capacity, process and schedule requirements, the Exchange agreement identifies the categories of ODS that will bind the developer, BART in its role as property owner, to require compliance through its real estate agreements. The Exchange Agreement establishes that developers may still request State Density Bonus waivers, but only for zoning standards not set by the ODS, ODS requirements pertaining to minimum square footage of active or non-residential ground-floor uses, or other ODS requirements that do not pertain to height limits, setbacks/step-backs, open space, or massing breaks.

B. Proposed ODS for Council Adoption

The ODS document is organized in two parts. Part I provides the site context and policy framework for the ODS for the Ashby BART station site. Part II contains the objective standards addressing Land Use, Public Realm and Building Design. Certain standards reflect the development requirements established through the City and BART Exchange Agreement and anticipate potential use of applicable State Density Bonus provisions to modify otherwise applicable Residential-BART Mixed Use (R-BMU) zoning standards. A brief overview is provided below; the complete standards, including applicable dimensions and other requirements, are provided in Attachment 1, Exhibit A.

- **Land Use.** The ODS establish requirements for ground-floor uses and frontages, including locations where active and publicly accessible non-residential uses are

[3] For comparison, the North Berkeley BART TOD project application was submitted and approved under AB 2011 (PLN # 2024-0010, December 11, 2024).

required; standards for the design of those spaces; and maximum building heights within Development Areas A, B, and C.

- **Public Realm.** The ODS establish standards for streetscape design and the relationship between buildings and required access along perimeter streets, the Station Entrance Plaza and internal access drives and areas adjacent to the BART Traction Power Substation. These standards address pedestrian circulation, landscaping, building frontages.

- **Building Design.** The ODS establish standards for building massing and facade design, including building and facade-plane lengths, building and major breaks, corner-building treatments, facade articulation, and selected architectural elements such as windows, materials, public art, and utility locations.

This organization has remained consistent through the Preliminary, Revised, and Final Draft ODS. The design standards themselves have evolved over time, in response to feedback, as described below.

1. Preliminary ODS

The City released Preliminary ODS in December 2024 concurrently with BART's Request for Proposals (RFP) for Developers for the Ashby BART West Lot.[4] As described in Part I: Policy Framework of the ODS, the Preliminary ODS were informed by City and BART adopted policies and agreements, and detailed technical analysis. This included the City and BART Joint Vision and Priorities for Transit Oriented Development at the Ashby and North Berkeley BART Station Areas (2022), the City and BART Ashby BART Station Transit-Oriented Development Exchange Agreement (2024) and related technical studies, such as the Ashby BART West Lot Circulation Framework (2024) and the Adeline Connection Memo (2024)[5]. Releasing the Preliminary ODS with the RFP gave prospective developers a more complete understanding of the applicable development requirements and site constraints to address in their proposals.

2. Revised ODS

Based on input from the public, Planning Commission, as well as BART and the Adeline Alliance Partners (AAP) team, staff presented Revised ODS at the September 16, 2026 Planning Commission meeting. Most standards remained unchanged from the Preliminary ODS. Revisions to Part II focused on three topics:

- **Ground-floor activation, uses and design**. Revisions focused on required active uses at key corners, broadened the range of publicly accessible non-residential uses allowed along Adeline Street that would also support ground-

[4] Ashby BART West Lot Transit Oriented Development Preliminary Objective Design Standards (December 2024; https://berkeleyca.gov/sites/default/files/documents/24_1209_AshbyTODPrelimODS3-22PM.pdf).
[5] These are included as attachments to the Ashby BART West Lot RFP and NOFA, December 2024 (https://www.bart.gov/sites/default/files/2024-12/24-1203%20Ashby%20RFP%20FINAL%20reduced.pdf).

floor activation, and refined design requirements to support viable commercial and community-serving uses.

- **Public realm**. Revisions updated the Martin Luther King Jr. Way street and sidewalk configuration to accommodate an on-street protected cycle track and provided flexibility in internal access-drive widths based on their intended use. More specific tree, landscaping and frontage requirements strengthen the pedestrian character of these internal connections, with alternatives where tree planting is infeasible.
- **Building massing and articulation**. Revisions clarified definitions and adjusted building-length, facade-plane and building-break requirements to provide flexibility on the constrained site while retaining standards that break up large building masses and long facades. Separate vertical articulation standards for buildings over 85 feet account for taller buildings' structural and floor-layout constraints while maintaining the urban design objectives.

The September 16, 2026 Planning Commission staff report provides a more detailed description of the revisions.[6] The Commission recommended that the City Council adopt that version, referred to as the "Revised ODS," which is presented without further changes as the proposed ODS in Attachment 1, Exhibit A.

3. Supplemental Planning Commission Recommendations

On September 16, 2026, the Planning Commission established a subcommittee to develop potential supplemental ODS recommendations for the full Commission's consideration. On October 7, 2026, the Commission voted to forward the subcommittee's supplemental recommendations to the City Council as recommendations of the full Commission (Attachment 2). The Commission also requested that staff review the recommendations in consultation with the City Attorney's Office and relevant City departments for objectivity and consistency with the City–BART Exchange Agreement. The recommendations address:

- Street Trees and Planting Area/Amenity Zone (Section 2.1.2);
- Station Entrance Plaza Design (Section 2.2);
- Internal Access Drives and Emergency Vehicle Access Design (Section 2.3);
- TPSS Access and Staging Area Design (Section 2.4); and
- Design Elements (Section 3.3).

Staff's review of the Planning Commission's supplemental recommendations is still underway as of the drafting of this report. The resulting analysis, and any proposed

[6] Staff report regarding Ashby BART West Lot Objective Design Standards (Planning Commission, September 16, 2026: https://berkeleyca.gov/sites/default/files/2026-09-16_PC_Item%2010A_Ashby%20WL%20ODS.pdf).

revisions to the ODS, will be published as supplemental materials in advance of the November 17, 2026 City Council meeting.

BACKGROUND

The development of ODS for the Ashby BART West Lot is part of a multi-year process to transform the existing surface parking lots into a vibrant neighborhood center with high-density mixed-use development, ground floor commercial and civic uses, and new public space that was envisioned in the Adeline Corridor Specific Plan.[7] Passage of Assembly Bill 2923 in 2018 provided further impetus for close collaboration between the City and BART to advance transit-oriented development at the station. A summary of the adopted plans, policies and technical analysis that shaped the ODS is provided in Attachment 3. A summary of the Ashby West Lot ODS process is provided below.

A. Site Conditions and Technical Constraints

The West Lot is a complex site that includes a partially underground station and substantial infrastructure serving active BART operations. The Circulation Framework, developed jointly by the City and BART, identifies requirements for emergency access and egress, public access to the station, BART operations and maintenance, BART's Traction Power Substation (TPSS), circulation, and grading. These requirements limit where development can occur and how buildings, open space, and circulation can be configured.

Additional engineering analysis evaluated the feasibility of connecting new TOD buildings to Adeline Street, considering the structural integrity of the BART station box, existing infrastructure and utilities, and varying conditions at connections to existing sidewalks and plazas. These connections must also accommodate uninterrupted station operations and customer access during construction.

The Preliminary ODS were informed by these studies, and by site capacity and massing analyses.[8]

B. ODS Development and Public Review

The Preliminary ODS have been publicly available since December 2024, with multiple opportunities since their release for input from the community, Planning Commission, BART and Adeline Alliance Partners (AAP) team. The City hosted a public open house on February 10, 2025 to introduce the Preliminary ODS and solicit feedback.

---

[7] The Adeline Corridor Specific Plan planning process began in 2015 and culminated with City Council adoption in December 2020: https://berkeleyca.gov/sites/default/files/2022-03/Adeline-Corridor-Specific-Plan.pdf

[8] See attachments to the Dec. 2024 Ashby BART West Lot RFP and NOFA: https://www.bart.gov/sites/default/files/2024-12/24-1203%20Ashby%20RFP%20FINAL%20reduced.pdf

At the July 1, 2026 Planning Commission meeting, staff provided an overview of the Ashby BART West Lot Transit-Oriented Development Preliminary ODS and summarized key background information, including the role of the ODS, the planning process to date, and the policy and technical framework that informed the Preliminary ODS.[9]

Following selection of the AAP team and initiation of project design, the City, BART, and the AAP team co-hosted another in-person public open house on July 16, 2026, and online office hours on July 22, 2026. The July open house covered the Preliminary ODS, the AAP team's proposed project for the Ashby BART West Lot, and related planning efforts, including the City's work to redesign Adeline Street to improve safety and increase public open space at Ashby BART and along Adeline Street between Ashby Avenue and the Berkeley-Oakland border. City staff also participated with the AAP team in smaller meetings hosted by community organizations to share information and hear feedback regarding the Preliminary ODS and project design. Together, these meetings provided opportunities to consider the ODS both independently and in the context of the AAP team’s emerging project design concept.

At the September 16, 2026 Planning Commission meeting, staff presented Revised Draft ODS which reflected staff's review of input received, in continued coordination with BART and the AAP team. At this meeting, the Planning Commission made a recommendation to Council to adopt the Revised ODS as presented by staff, and also to create a subcommittee to further consider potential supplemental standards to address the public realm.

At the October 7, 2026 Planning Commission meeting, the Commission voted to forward the subcommittee letter to the City Council as recommendations of the full Commission, and requested that staff, in consultation with the City Attorney’s Office and relevant City departments, review these supplemental recommendations and make any necessary revisions to ensure they qualify as objective design standards, are written in objective terms, and are consistent with the City–BART Exchange Agreement.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

Creating equitable, transit-oriented mixed-use development that includes affordable housing and housing support services for Berkeley’s most vulnerable community members is a City Strategic Plan goal, which also helps advance the goals of being a global leader in addressing climate change, advancing environmental justice and protecting the environment.

Environmental Review

[9] Planning Commission meeting materials for the July 1, 2026 meeting are available at: https://berkeleyca.gov/your-government/boards-commissions/planning-commission

The proposed objective design standards were evaluated in (1) the Ashby and North Berkeley BART Stations Transit-Oriented Development (TOD) Zoning Project Environmental Impact Report (SCH #: 2020110320), which was certified by the City Council on June 2, 2022; and (2) the "Ashby BART TOD Contractual Agreement" Addendum, which amended that Report and the Adeline Corridor Specific Plan Environmental Impact Report (SCH # 2018072009), and which was approved by the City Council on December 3, 2024, such that no further environmental review is required.

RATIONALE FOR RECOMMENDATION

The proposed ODS (Attachment 1, Exhibit A) build upon and further implement the adopted Residential-BART Mixed Use (R-BMU) zoning, the City and BART Joint Vision and Priorities (JVP), the Ashby BART Transit-Oriented Development Exchange Agreement, and related adopted policies and regulations. They were informed by a thorough analysis of site conditions, City and BART requirements for station operations, access and safety, and development capacity and economic feasibility studies. They also reflect community and Planning Commission input and coordination with BART and the developer team regarding architectural and design feasibility.

The proposed ODS balance the housing and design objectives in adopted City and BART policy and agreements, including the JVP guidance for future development about housing density and affordability, connection to Adeline Street and Ashby Avenue, responsiveness to neighborhood scale and character, creating smaller blocks and regular breaks in building forms, and providing architectural variety. They also reflect the JVP's direction to concentrate larger building forms and height toward Adeline Street and Ashby Avenue and encourage outward-facing entrances.

Staff recommend adoption because the proposed ODS establish clear, site-specific requirements for buildings, active ground-floor uses, and a high-quality public realm while accommodating the Exchange Agreement's affordable housing and development capacity requirements. They retain flexibility for feasible building types and design approaches within the site's physical and infrastructure constraints, described in the Background section above.

ALTERNATIVE ACTIONS CONSIDERED

Staff considered requests for additional requirements, changes to the proposed standards, and changes to the adoption process. The principal alternatives and staff's reasons for not recommending them are summarized below.

- Transportation, parking and station access. Comments included requests and concerns regarding neighborhood and resident parking, loading and drop-off, bicycle and pedestrian connections, intersection improvements, and other station-access and circulation issues. Some of these topics fall outside the scope of the ODS or are being addressed through BART's West Lot Station Access

Plan and the City's Adeline Transportation and Open Space Improvements Project.

- Additional public open space requirements. Staff considered requests during development of the Preliminary and Revised ODS for substantially more public open space, large contiguous open spaces, and additional requirements for permeable or landscaped areas. Staff recommend retaining the proposed open-space requirements to balance publicly accessible space and its design with housing capacity, station operations, and other site constraints. The Adeline Open Space Improvements Project, including the Adeline Main Plaza at Ashby BART, will also advance the Specific Plan's vision for new public space throughout the Plan Area.
- More prescriptive use and design requirements. Staff considered requirements for particular community-serving uses, building configurations, architectural features, materials, and amenities. The proposed ODS address many of these topics while allowing flexibility for feasible project design. Staff do not recommend additional requirements where they would exceed the scope of the ODS or unnecessarily constrain development, given the site's physical and technical constraints.
- Modifications to circulation and building-design requirements. Staff considered developer requests to allow private vehicle and service access on the narrower internal access drive option and reduce certain building-design requirements. Staff recommend retaining the proposed standards to preserve the pedestrian character of internal connections and the architectural depth and articulation of building facades, while providing flexibility elsewhere in the ODS.
- Additional affordable housing and housing program requirements. Comments included requests for greater amounts or different levels of affordable housing than established through the City and BART Exchange Agreement, as well as housing preferences or right-to-return programs, and measures addressing vacancies or rents for market-rate units. Affordable housing requirements and housing program or operational requirements are established through the Exchange Agreement, applicable law, and other applicable citywide regulations. The requested additions or changes are outside the scope of objective design standards, and staff therefore do not recommend incorporating them into the ODS.
- Changes to the adoption process and timing. Staff considered requests for additional public meetings and more time before adoption. The Exchange Agreement, adopted by the City Council and BART Board, establishes process and timeline requirements that must be met for BART to require the West Lot developer to comply with specified ODS through its real estate agreements. Staff therefore recommend proceeding within that timeline, following the public engagement and review described above. Additional opportunities for community engagement will occur through the West Lot developer's project-design process and the City's planning and design of public space along southern Adeline Street, including the new Main Plaza adjacent to Ashby BART station.

RESOLUTION NO. ##,###-N.S.

A RESOLUTION OF THE CITY COUNCIL TO ADOPT THE ASHBY BART WEST LOT TRANSIT ORIENTED DEVELOPMENT OBJECTIVE DESIGN STANDARDS

WHEREAS, the City of Berkeley and the San Francisco Bay Area Rapid Transit District (BART) have been collaborating since the 2018 passage of Assembly Bill 2923 to effectuate transit-oriented development at the North Berkeley BART and Ashby BART station areas; and

WHEREAS, in 2020, the Parties entered into a memorandum of understanding ("MOU") to identify their shared vision and priorities for transit-oriented development at the North Berkeley and Ashby BART Stations, to provide clarity on the process and timelines for pursuing development, and to begin to identify the roles and responsibilities of the City and BART in that process. Among other things, the MOU called on the City to establish a Community Advisory Group, reserve funding to support affordable housing development at the sites, and adopt zoning for the sites consistent with Assembly Bill 2923 (California Public Utilities Code sections 29010.1 et seq.) ("AB 2923"); and

WHEREAS, on April 27, 2021, the Berkeley City Council unanimously adopted Resolution 69,833-N.S. which, in part, provisionally reserved $53 million of City-controlled funds as the subsidy needed to achieve at least 35% affordable housing at each of the Ashby and North Berkeley BART sites, and allowed for a portion of the funding to be allocated to predevelopment uses; and

WHEREAS, on June 2, 2022, the Berkeley City Council approved the Joint Vision & Priorities ("JVP") in Resolution 70,402-N.S., and on June 9, 2022, the BART Board approved the JVP. The JVP expresses the City and BART's shared, high-level expectations for future development of both the Ashby and North Berkeley BART stations. The JVP was incorporated into BART's Request for Qualifications ("RFQ") for development of the North Berkeley BART Station site and the Request for Proposals ("RFP") for development of the Ashby BART West Lot; and

WHEREAS, on June 28, 2022, the Berkeley City Council adopted Chapter 23.202.150 in its Zoning Ordinance, as part of the City of Berkeley Municipal Code, adding a "Residential - BART Mixed Use (R-BMU)" zoning district, as well as additional conforming amendments to the General Plan and other sections of the Municipal Code in order to ensure that the provisions are comprehensively and consistently incorporated into its Zoning Ordinance, to govern development at the North Berkeley and Ashby BART Stations consistent with AB 2923; and

WHEREAS, on June 30, 2022, the City and BART entered into a Memorandum of Agreement ("MOA") amending and expanding upon the MOU; and

WHEREAS, on November 29, 2022, the Berkeley City Council adopted Resolution No. 70,622-N.S. approving a conceptual design for a street reconfiguration and new plaza along Adeline Street between Ashby Avenue and Martin Luther King, Jr., Way, in order to increase safety for pedestrians and bicyclists and to enhance access to the Ashby BART Station; and

WHEREAS, on December 3, 2024, the City of Berkeley Council adopted Ordinance No. 7,939-N.S. approving the Ashby BART Station Transit-Oriented Development Exchange Agreement ("Exchange Agreement"), which provided for the relinquishment of the City's option to purchase air rights over the West Lot in exchange for the City's fee simple ownership of the East Lot, and established certain minimum community benefits and project requirements for development of the West Lot and East Lot; and

WHEREAS, the City and BART subsequently executed the Exchange Agreement, effective on December 20, 2024; and

WHEREAS, Article 9 and Schedules 5.2 and 9.2.1 of the Exchange Agreement established the process, timeline, and parameters for the City's adoption of Objective Design Standards for the Ashby BART West Lot, bounded by Adeline Street, Ashby Avenue, and Martin Luther King Jr. Way, and identified as Assessor Parcel Number 053-1597-039-04, including a requirement in Schedule 5.2 that the City adopt the Final ODS within nine months after BART enters into an Exclusive Negotiating Agreement with a developer for the West Lot; and

WHEREAS, the City released Preliminary Objective Design Standards on December 6, 2024, concurrent with BART's RFP process for the Ashby BART West Lot; and

WHEREAS, following release of the Preliminary ODS, the City received and considered input from community members, the Planning Commission, BART, the selected developer team, City departments, and other stakeholders through community-wide meetings held on February 10, 2025 and July 16, 2026, smaller meetings hosted by community organizations, written comments, the July 1, 2026 Planning Commission meeting, and ongoing coordination with BART and the selected developer team; and

WHEREAS, the ODS are based on analysis of the applicable policy framework and site-specific technical constraints at the Ashby BART West Lot, including emergency responder access, station access, and BART infrastructure requirements, as further described in the Ashby BART West Lot Circulation Framework and Connections Memo included as an attachment to BART's Ashby BART West Lot RFP; and

WHEREAS, the proposed ODS are consistent with the process, timeline, parameters, and requirements for the Final ODS established by Article 9, Schedule 5.2 and Schedule 9.2.1 of the Exchange Agreement; and

WHEREAS, the ODS were developed within the framework of the R-BMU zoning (BMC Section 23.202.150), the City and BART Exchange Agreement, and applicable State law; and

WHEREAS, the ODS reflect the City and BART Joint Vision and Priorities for the North Berkeley and Ashby BART station areas, site-specific technical constraints and project requirements, and input from the community, Planning Commission, City, BART, and the selected developer team; and

WHEREAS, the City's ODS for the West Lot shall be binding on BART and the West Lot Developer without respect to any waivers, incentives or other exceptions that may otherwise be available under the Density Bonus Law or other provision of law, and BART shall require the West Lot Developer to comply with the Final ODS utilizing its real estate agreements, provided that the ODS meet requirements outlined in Exchange Agreement Schedule 9.2.1; and

WHEREAS, notice of the Planning Commission's September 16, 2026 public hearing on the Ashby BART West Lot Objective Design Standards was published in the Berkeley Voice and posted in three public places on September 4, 2026, pursuant to California Government Code Section 65090; and

WHEREAS, on September 16, 2026, the Planning Commission held a public hearing on the Ashby BART West Lot Objective Design Standards and considered all public comments received, the City staff presentation, the staff report, and other pertinent documents; and

WHEREAS, on September 16, 2026, the Planning Commission recommended that the City Council adopt the Revised Ashby BART West Lot Objective Design Standards as presented by staff and established a subcommittee to develop potential supplemental recommendations; and

WHEREAS, on October 7, 2026, the Planning Commission voted to forward the subcommittee letter to the City Council as recommendations of the full Commission and requested that staff, in consultation with the City Attorney's Office and relevant City departments, review the recommendations and make any necessary revisions to ensure they qualify as objective design standards, are written in objective terms, and are consistent with the City–BART Exchange Agreement; and

WHEREAS, all documents constituting the record of this proceeding are and shall be retained by the City of Berkeley Planning and Development Department, Land Use Planning Division, at 1947 Center Street, Berkeley, California; and

WHEREAS, the proposed objective design standards were evaluated in (1) the Ashby and North Berkeley BART Stations Transit-Oriented Development (TOD) Zoning Project Environmental Impact Report (SCH #: 2020110320) which was certified by the City

Council on June 2, 2022; and (2) the “Ashby BART TOD Contractual Agreement” Addendum, which amended that Report and the Adeline Corridor Specific Plan Environmental Impact Report (SCH # 2018072009) and which was approved by the City Council on December 3, 2024, such that no further environmental review is required.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the Council adopts the Ashby BART West Lot Objective Design Standards attached hereto as Exhibit A.

Part I: Introduction and Policy Framework

Introduction

The Objective Design Standards (ODS) for the Ashby BART West Lot establish detailed design standards for future transit-oriented development (TOD). Part I of this document provides the site context and applicable policy framework for ODS for the Ashby BART station site, followed by Part II: the Objective Design Standards for the West Lot (Figure 1). The ODS reflect the policy framework, site constraints and input from the public, BART and the West Lot Developer.

Figure 1. Ashby BART Site Context

Site Context

The Ashby BART station site consists of two areas, the East Lot and the West Lot.

The East Lot currently serves as parking for BART riders and sits behind the Ed Roberts Campus, a prior phase of TOD consisting of an 80,000 square foot universally-designed campus offering disability-related programs and services. In addition to the Ed Roberts Campus to the west, the East Lot is bounded by Tremont Street on the east, Woolsey Street on the south, and private properties to the north.

The West Lot is a triangular site that provides the primary access to the Ashby BART station for BART riders, including those driving and parking, getting dropped off, walking/rolling, and bicycling. It is bounded by Ashby Street to the north, Adeline Street to the east, and Martin Luther King (MLK) Jr. Way to the west. An existing Traction Power Substation (TPSS), as well as the footprint of a future TPSS replacement and its required maintenance and staging area, are located adjacent to Adeline, north of the station entrance area. There is a significant change in elevation across the site

with the corner of Ashby and Adeline at 124 feet, the corner of MLK Jr. Way and Adeline at 115 feet, and the corner of Ashby and MLK Jr. Way at 114 feet. The main station entrance faces the surface parking lot, and the entrance is located at 105 feet, approximately 15 feet below Adeline Street and 10 feet below MLK Jr. Way.

Future development on the West Lot and changes to Adeline Street will dramatically transform the way BART riders and community members navigate the area by limiting car access and creating walking and biking paths throughout the site. These changes, including areas for new plazas, potential development areas and circulation needs are illustrated in the diagram below (Figure 2) and described in greater detail in the *Ashby Station West Lot TOD Circulation Framework. Note that Figure 2 and similar diagrams in this document are illustrative only, and dimensions are flexible as long as all performance metrics are met.*

Figure 2. Ashby West Lot - Future Plazas and Potential Development Areas

Policy Framework

The City and BART have been closely collaborating over the past several years to advance TOD at the Ashby BART station. The City's and BART's adopted agreements, policies, and regulations form the framework for the Objective Design Standards (ODS) for the Ashby BART West Lot. In addition to the adopted agreements, policies and regulations highlighted below, development on the West Lot will also be guided by the *Ashby Station West Lot TOD Circulation Framework (*Circulation Framework*).* The *Circulation Framework* outlines requirements for fire and life safety, public access to the station, BART maintenance, TPSS, and other constraints that limit the location of development. The ODS reflect consideration of these documents, as well as State law, site planning and financial feasibility studies, and the extensive community engagement undertaken as part of the planning process to build transit-oriented development at the Ashby and North Berkeley BART sites.

Key guidance is provided by:

City and BART Ashby BART Station Transit-Oriented Development Exchange Agreement

On December 3, 2024, the City Council authorized the City Manager to execute an Exchange Agreement (Agreement) with BART to effectuate TOD at Ashby BART. Pursuant to the Agreement, the City will relinquish its air rights over the West Lot and any public rights in an adjacent area, in return for fee simple ownership of the East Lot and specified community benefits. The Agreement also defines the manner in which the City and BART will work together on developer solicitations, conditions for the City's affordable housing funding, requirements and responsibilities for public infrastructure, minimum standards and process requirements to develop City Objective Design Standards, and schedule milestones.

Regarding the West Lot, the Agreement sets forth minimum requirements for the future development project and the development capacity that the ODS will need to accommodate, as well as the process by which the ODS will be developed, approved and enforced (summarized below).

a. West Lot Development Program – Minimum Requirements. The Agreement requires that the program of the actual development must include:
   - Affordable housing meeting specified requirements,
   - A commercial component that includes a minimum of 5,000 net rentable square feet, based on BOMA ANSI[1] 2017 standards, of ground floor interior space for community-based organizations, non-profits, and/or small and minority-owned businesses, including the Berkeley Flea Market.

b. West Lot ODS – Process to Develop and Approve. The Agreement sets forth a process to develop ODS for the West Lot in phases:
   - The City has developed a set of Preliminary ODS (Part II of this document) based on the R-BMU zoning, the Joint Vision and Priorities for Transit-Oriented Development for Ashby and North Berkeley BART Stations, the Circulation Framework and other analyses of site constraints (described further below).
   - Following developer selection, the Preliminary ODS will be refined based on input from the community, the selected developer(s), BART and the City.
   - City staff will bring the revised ODS to the City Planning Commission for review and recommendation to the City Council, and the Council will consider the ODS for adoption no later than 9 months from execution of the Exclusive Negotiating Agreement between BART and the selected Developer.

c. West Lot ODS – Development Capacity and Enforcement.
   - The City's Final ODS (approved by City Council) will be binding on the selected developer(s) provided that the ODS meet the requirements outlined within Schedule

[1] BOMA ANSI: Building Owners and Managers Association American National Standards Institute.

9.2.1 of the Exchange Agreement, in which case BART will require the selected developer(s) to comply with the Final ODS for the West Lot through its real estate agreements.

- The West Lot developer(s) may invoke waivers, incentives or other exceptions, to the extent permitted by the state density bonus law (Government Code section 65915 *et seq*.) or other law, but only with respect to (i) zoning requirements other than those set forth in, or modified by, the ODS, (ii) ODS requirements pertaining to minimum square footage of active or non-residential ground floor uses, but only to the extent such requirements exceed 15,000 square feet, inclusive of the 5,000 sf minimum of ground-floor commercial space noted above, and (iii) other ODS requirements that do not pertain to height limits, setbacks/step-backs, open space or massing breaks.

City of Berkeley Zoning

In June 2022, the City Council adopted a new zoning district for the North Berkeley and Ashby BART station areas – BMC Section 23.202.150 Residential – BART Mixed Use Zoning District (R-BMU) – and related amendments to the Berkeley Municipal Code.[2] The zoning includes development standards, open space requirements, parking requirements (for the mixed-use development), and permitted uses, as well as some limited requirements relating to shaping the volume and massing of future development. Greater detail related to building form was not included because it would be addressed during the subsequent process to prepare ODS for each station area. The R-BMU zoning district includes development standards that address the following:

- Street-Facing Ground Floor Frontages
- Open Space
- Setbacks and Step-Backs
- Frontage Improvements
- Ground Floor Residential and Non-Residential Frontage
- On-Site Pedestrian Access
- Transparency
- Building Entrances
- Parking Design and Access

To satisfy requirements set forth in the City and BART-approved Exchange Agreement, the ODS account for the possibility of waivers and incentives under the state density bonus law, which a developer may use to avoid some zoning standards in the R-BMU zoning.

City and BART Joint Vision and Priorities for Transit-Oriented Development for the Ashby and North Berkeley BART Stations[3]

In June 2022, the City and BART adopted the Joint Vision and Priorities for Transit-Oriented Development for Ashby and North Berkeley Stations (JVP). The JVP expresses the City and BART's shared, high-level expectations for future development. The JVP provides important guidance on the following topics: Affordable Housing, Public and Civic Space, Land Use, Building Form, and Station Access and Parking. The JVP includes aspirational statements as well as minimum requirements. Each topic includes an overall vision statement, followed by shared priorities for both station areas and additional priorities specific to each station, where applicable.

Adeline Street Transportation Improvements Project (City of Berkeley)

As part of a larger City-led project, two of the existing four traffic lanes of Adeline Street adjacent to the West Lot will be repurposed to create a new public pedestrian plaza (Adeline Main Plaza). The Adeline Main Plaza is intended to provide a permanent home for the Berkeley Flea Market (which

[2] https://berkeley.municipal.codes/BMC/23.202.150.
[3] https://berkeleyca.gov/sites/default/files/documents/JVP%20-%20final%20adopted.pdf.

currently uses the Ashby BART parking lot on weekends) as well as open space and space for community events like Juneteenth and other programming. The project scope of work also includes redesigning the intersections of Adeline/Ashby, Adeline/Woolsey and Adeline/MLK Jr. Way adjacent to Ashby BART. The scope of the full project will include protected bikeways, upgraded traffic signal infrastructure, enhanced public transit operations, and intersection realignment to create new opportunities for public space on Adeline Street from Ashby Ave to the Berkeley/Oakland border at Adeline St./Stanford Ave./62nd St./MLK Jr. Way intersection. The goals of the project are to improve safety and access for all modes of transportation and all ages and abilities, while also meeting the needs of public transit and emergency vehicles. In addition to the public plaza at the Ashby BART Station, the Adeline Street/MLK Jr. Way and Adeline Street/Stanford Avenue/MLK Jr. Way intersections have been identified through the Adeline Corridor Specific Plan as opportunities for future public space or development.

2020 Pedestrian Plan, 2017 Berkeley Bicycle Plan

The City's 2020 Pedestrian Plan and 2017 Bicycle Plan set policy for streetscape design and character including preferred sidewalk widths.[4, 5]

[4] https://berkeleyca.gov/your-government/our-work/adopted-plans/pedestrian-plan-2020.
[5] https://berkeleyca.gov/your-government/our-work/adopted-plans/berkeley-bicycle-plan.

Part II: Objective Design Standards

1 Land Use

1.1 Ground Floor Frontages

Commercial Location Requirements

The R-BMU zoning sets requirements for permitted street-facing ground floor uses in BMC 23.202.150(F)(2), Table 23.202-22. The ODS modifies the R-BMU requirements as outlined in sections 1.1.1 and 1.1.2 below.

These standards anticipate that the project will utilize a waiver under the state density bonus law of R-BMU zoning standards in Table 23.202-20 for minimum active ground floor commercial frontage requirements, consistent with the minimum ground-floor use requirements established by the City and BART Ashby BART TOD Exchange Agreement.

Pursuant to the Exchange Agreement: a minimum floor area of 15,000 square feet of active or non-residential ground-floor uses shall be provided on the site.[6] These uses are generally permitted anywhere on the site except as specified below.

1.1.1 Ground Floor Active and Other Publicly Accessible Non-Residential Uses

1. "Active Uses", as defined in BMC Section 23.202.150(F)(2) Table 23.202-20, Note 1) , consist of commercial uses in the following categories: Retail, Personal and Household Services, Food and Alcohol Service and Entertainment. Active Uses shall also include Bar/Cocktail Lounge/Tavern/Tap Room/Wine Tasting as defined in BMC Chapter 23.502.
2. Other Publicly Accessible Non-Residential Uses. For purposes of these standards, "Other Publicly-Accessible Non-Residential Uses" include the following uses as defined in BMC Chapter 23.502, Glossary:

    a. Group Instruction
    b. Health and Fitness Center
    c. Child Care Center
    d. Community Care Facility
    e. Community Center
    f. Library
3. Active Uses, as defined above and shown in **Figure 3**, are required at the following three locations:
    a. **Ashby Avenue and Adeline Street (Development Area A)** with a minimum floor area of 1,200 square feet. If the proposed project does not have an at-grade connection to the Ashby/Adeline Corner Plaza, this requirement does not apply.
    b. **Ashby Avenue and Martin Luther King Jr. Way (Development Area A)** with a minimum floor area of 1,200 square feet.
    c. **Martin Luther King Jr. Way and Station Entrance Plaza** (**Development Area B**) with a minimum of two spaces with at least 1,200 square feet of floor area each, or one space with a minimum floor area of 2,400 square feet.
    d. **Restaurant-Ready Design.** The Active Use spaces required at the three locations above shall be designed as "restaurant-ready" spaces, with installed equipment or space

[6] City and BART Ashby BART TOD Exchange Agreement (December 2024).

designed to allow tenant spaces to be retrofitted to restaurant-use standards, including required enhancements for HVAC exhaust shaft to the roof and stub-outs for plumbing and grease traps.

4. **Adeline Street Frontage.**
    a. In Development Area B, between the TPSS and Station Entrance Plaza, where a building provides an at-grade connection to the Adeline Main Plaza, a minimum of 60% of continuous ground-floor building frontage shall be occupied by Active Uses and/or Other Publicly-Accessible Non-Residential Uses, as defined above.
    b. In Development Area C, between the Station Entrance Plaza and the south BART exhaust vent, a minimum of 40 percent of the ground-floor building frontage shall be occupied by Active Uses and/or Other Publicly-Accessible Non-Residential Uses, as defined above.
5. **Design Standards for Active Uses and Other Publicly Accessible Non-Residential Uses.** All ground floor spaces occupied by an Active Use or Other Publicly-Accessible Non-Residential Use, wherever located on the site, shall comply with the following standards:
    a. **Minimum Depth.** Spaces shall have a minimum depth of 30 feet, except in Development Area C, where spaces shall have a minimum average depth of 30 feet and total minimum depth of 25 feet.
    b. **Flexible Subdivision.** Spaces shall be able to be subdivided into leasable commercial area widths between 15 and 20 feet and have potential for individual entries.
    c. **Warm Shell/White Box Ready.** Spaces shall be constructed to warm shell standards with necessary infrastructure to be leased. Cold shells are prohibited.
    d. **Storefront Transparency.** Spaces shall be 50% transparent between 3 feet and 7 feet from sidewalk grade.

1.1.2 Ground Floor Residential Uses

1. Ground floor Residential Uses are permitted where Active Uses or Other Publicly-Accessible Non-Residential Uses are required pursuant to Section 1.1.1.

Figure 3. Ground-Floor Requirements: Active Uses and Other Publicly Accessible Non-Residential Uses

1.2 Building Height

The R-BMU development standards provide for a maximum building height of 80 feet and 7 stories. See BMC Section 23.202.150 (Table 23.202-21). However, future development on the West Lot may be eligible to utilize provisions of the State Density Bonus law for increases in density and/or a certain number of concessions and/or waivers of development standards (such as height) which would otherwise physically preclude the construction of the development. In the event that a building or buildings taller than 80 feet and 7 stories (pursuant to BMC Section 23.202.150(F)(1)) are permitted by State Density Bonus law, the standards described below shall apply.

The goal of the height distribution is to locate the tallest buildings along Adeline Street, step down to MLK Jr. Way, and to limit height along Ashby Avenue to reduce shadow impacts on the neighborhood to the north.[7] See Figure 4.

1. Buildings fronting MLK Jr. Way north of the Station Entrance Plaza shall not exceed 85 feet in height, as measured from average sidewalk grade, for the first 60 feet of building depth along MLK Jr. Way.
2. Buildings fronting MLK Jr. Way south of the Station Area shall not exceed 85 feet in height, as measured from average sidewalk grade, for the first 60 feet of building depth as measured perpendicular to Adeline Street and then parallel to Adeline Street until it meets MLK Jr. Way.
3. Buildings located in area A shall not exceed 120 feet in height.
4. Buildings located in area B shall not exceed 200 feet in height.
5. Buildings located in area C shall not exceed 160 feet in height.

Figure 4. Maximum Height (State Density Bonus Eligible Project)

[7] The 85-foot height limit along portions of Martin Luther King Jr. Way may be modified to a 95-foot height limit for projects that meet eligibility requirements of SB 79.

2 Public Realm

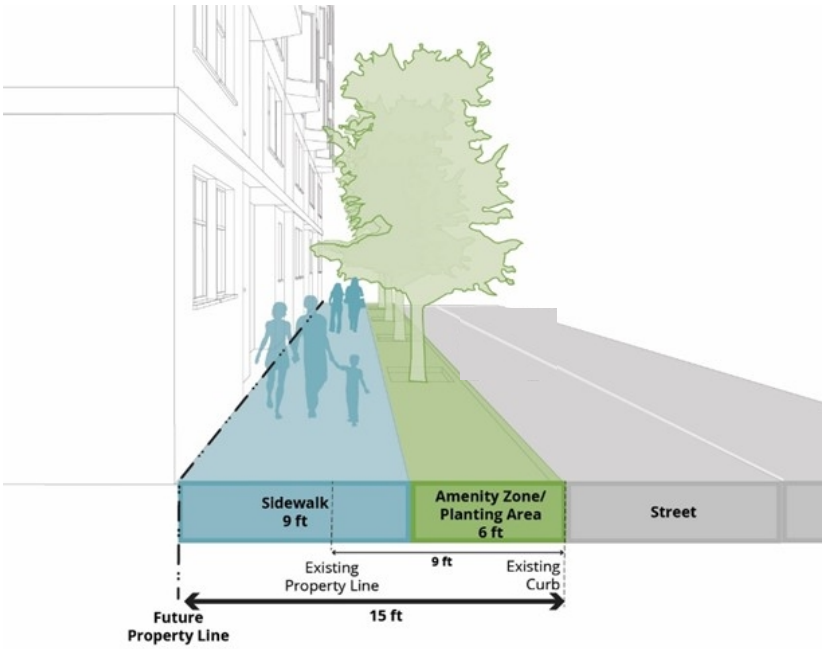
2.1 Streetscape Design

2.1.1 Sidewalk Design

The Circulation Framework for the Ashby BART West Lot TOD established the City and BART's high-level requirements related to fire and life safety, station access, BART maintenance and operations, the Traction Power Substation, sidewalk design and pedestrian, bicycle, and vehicle circulation.

Figures 5 and 6 below establish the applicable sidewalk sections along Ashby Avenue and Martin Luther King Jr. Way. The sidewalk section shown for Martin Luther King Jr. Way north of the Station Entrance Plaza also applies south of the Station Entrance Plaza and supersedes the sidewalk-level cycle track configuration shown in the Circulation Framework. Exceptions may be made in locations where existing trees outside of the existing ROW are maintained.

It is not anticipated that the existing curb line to median dimension will change along Martin Luther King Jr. Way (MLK Jr. Way). North of the Station Entrance Plaza, MLK Jr. Way will include a parking/loading lane and two travel lanes. South of the Station Entrance Plaza, MLK Jr. Way will include a two-way on-street protected cycle track and two lanes of traffic.



As the West Lot TOD project and Station Access Plan advance through more detailed design, modifications to the street and sidewalk dimensions shown below may be approved by the City, in coordination with BART where site circulComation affects the public right-of-way, provided that the modified design continues to meet applicable requirements for pedestrian circulation and accessibility, bicycle connectivity, station access, emergency response, BART operations, and other City circulation functions.[8]

[8] All changes to the public right-of-way as part of the Ashby BART West Lot TOD project will receive final design review by and be subject to approval of City of Berkeley Public Works staff pursuant to the established City development review process. Street frontage improvements, including signing and striping, shall be included with the building permit submittal, designed and constructed as directed by the Public Works Engineering, Public Works Transportation, and Fire Departments in their approval of the building permit sets, and constructed by the building permit holder prior to certificate of occupancy.

Figure 5. Diagram of Ashby Avenue

Figure 6. Diagram of MLK Jr. Way

2.1.2 Street Trees + Planting Area/Amenity Zone

The following standards apply to Ashby Avenue and MLK Jr. Way.

1. Pattern. Trees shall be planted with a minimum of one tree per 25 linear feet of sidewalk length. Exceptions may be made in locations where existing infrastructure, utilities, or BART tunnel prohibit planting of trees. Existing trees should be maintained where possible.

2. Location. Trees shall be evenly spaced between the curb and sidewalk or evenly spaced within the width of a planting strip. Trees shall be planted so that at maturity the trunk is at least three feet from the face of curb where loading occurs.

3. Ground Plane. Trees shall be provided in planters a minimum of three feet wide and a minimum of six feet long located 18 inches from the face of curb. Exceptions may be made in locations where existing infrastructure, utilities, or BART tunnel prohibit planting of trees.

4. Subsurface design for new trees.

    a) A minimum of 120 cubic feet of well aerated soil per inch of trunk diameter at maturity shall be located within six feet of each tree.

    b) Continuous structure soil with a minimum width of four feet shall connect all consecutive street trees.

2.1.3 Frontage Character and Building Setbacks

The R-BMU zoning regulates building setbacks, residential ground floor character, and location/frequency of building entrances.

Martin Luther King Jr. Way

1. Where ground floor residential units front MLK Jr. Way, the first two floors or first floor with a minimum 15 feet clear height from sidewalk grade shall be set back a minimum of 5 feet to provide space for stoops, landscaping, and improve privacy for ground floor units.

2. Where a building is directly fronting a bikeway or multi-use path, rather than a sidewalk, the ground floor shall be set back a minimum of 3 feet to create a buffer to the cycle track.

    a. The buffer shall have a dimensional depth to include all door swings, utility areas, or other staging areas so that at no point shall the bikeways be impacted with building access.

    b. Where building lobby entrances are located, doorways shall be set back a minimum of 8 feet and include a minimum 64 square foot area between the doorway and bikeway.

    c. Planters located in the setback area shall not exceed 18 inches in height.

2.2 Station Entrance Plaza Design

The *Circulation Framework* identifies the functional requirements of the Station Entrance Plaza including a bicycle and pedestrian ramp that will line the Development Area C frontage of the Station Entrance Plaza. The ODS sets requirements for buildings facing the Station Entrance Plaza.

2.2.1 Frontage Character

1. See also Section 1.1.1(3)(c) for ground-floor requirements.

2. Where blank walls, maintenance, and utility areas are located, a minimum 2 feet wide planter shall be provided to create a landscaped buffer between pedestrian areas and the building facade. Bicycle facilities, such as bicycle parking, may be located within the buffer area and may be paved rather than landscaped.

3. Door swings on building frontages shall not encroach on identified paths of travel.

4. Blank walls greater than 6 feet in height shall not exceed 30 feet in length or shall include public art.

2.3 Internal Access Drives and Emergency Vehicle Access (EVA) Design

The *Circulation Framework* identifies the functional requirements for access drives to the Traction Power Substation (TPSS) staging area and an EVA connection from the TPSS access drive to the Station Entrance Plaza. The access drive will also be used for private vehicle access to parking structures located within the TOD buildings. The following standards add design guidance for these circulation and emergency access requirements. Please refer to the *Circulation Framework* for dimensional requirements.

2.3.1 Access Drive Design

1. Access drives (see Figure 7)

    a) Access drives with public vehicle access shall have a minimum building-to-building width of 56 feet.

    b) Access drives used solely for emergency vehicle access shall have a minimum average building-to-building width of 48 feet and an absolute minimum building-to-building width of 40 feet.

2. Emergency Vehicle Access shall be designed to the minimum width allowed by Berkeley Fire Department to reduce hardscape and increase tree canopy coverage.

    a) The access drive shall have a minimum 26-foot width where fire units may need to lay fire water supply hose or set up an aerial fire apparatus. If there are areas where this does not apply, then a 20-foot width may be acceptable upon review and approval by the Berkeley Fire Department. The secondary EVA may include building bridges over the access drive.

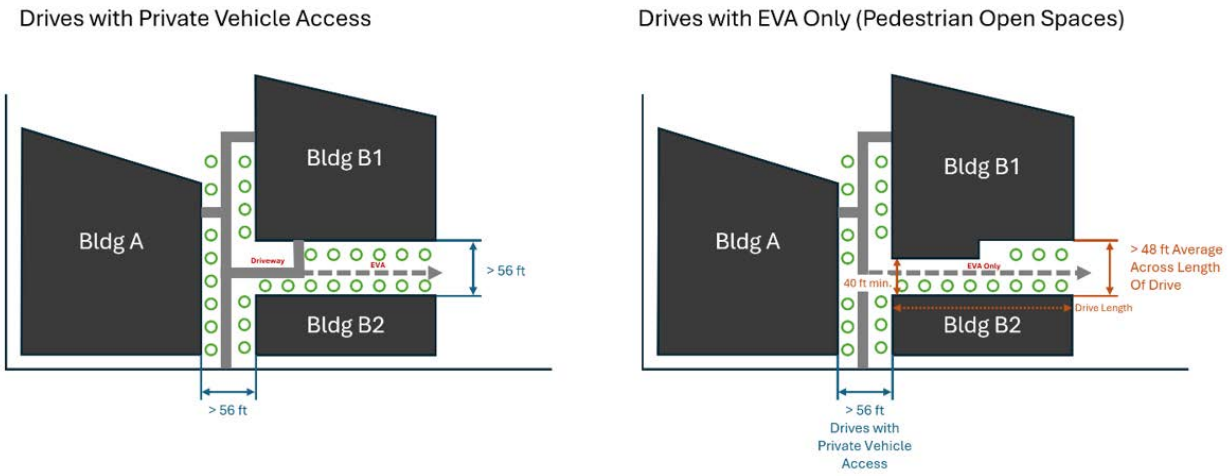
3. If a building bridge is located over the EVA, the overhead bridges shall have a minimum 20 feet clear height from grade to create inviting space and gateway. In addition, the following fire department requirements shall be met:

    a) Where the EVA passes under any overhead bridges, other than a momentary overhead obstruction, an Alternative Materials and Methods Request (AMMR) will be required by the Fire Department. Building bridges shall have a minimum 13.5-foot height clearance and shall not be deeper than 30 feet.

    b) The access drive shall have a minimum 26-foot width where fire units may need to lay fire water supply hose or set up an aerial fire apparatus. If there are areas where this does not apply, then a 20-foot width may be acceptable upon review and approval by the Berkeley Fire Department.

4. Where private vehicle access is not required, the required EVA width shall be designed primarily for pedestrian use as pedestrian pathways. See Figure 7. Dimensions for EVA may vary and are subject to Berkeley Fire Department Review.

5. Trees shall be located on either side of the access drive to make the access drive look and feel like a street or pedestrian pathway. Where trees are not provided on both sides of the access



drive, additional planting, art, or other elements shall be provided to enhance the pedestrian experience and buffer parking and utility area frontages.

6. Planting in above grade courtyards and parking podiums shall have a minimum soil depth of 12 inches for ground cover, 20 inches for shrubs, and 36 inches for trees. Trees planted shall have minimum of 120 cubic feet of well aerated soil per inch of trunk diameter at maturity.

2.3.2 Frontage Character fronting Internal Access Drives

1. **Building Setbacks.** Ground floor residential units shall be set back a minimum of 5 feet from a publicly accessible sidewalk or pedestrian pathway. Building setbacks shall have a minimum 60% landscaped area.

Figure 7. Diagram of Access Drive Required Dimensions through Development Areas A and B (Illustrative Concept)

2.4 TPSS Access and Staging Area Design

The *Circulation Framework* provides design guidance for TPSS staging area and access to the TPSS and BART station facilities. The following standards address the buildings fronting these areas and areas outside of required staging and access areas.

2.4.1 TPSS Access and Staging Area

1. A planting area shall be located between the TPSS access and staging area and TOD buildings.
2. The planting area shall be designed to include trees. The planting area may be adjacent to the building facade or offset to provide pedestrian pathways.
3. Trees planted shall have minimum of 120 cubic feet of well aerated soil per inch of trunk diameter at maturity.

2.4.2 Frontage Character

1. Where blank walls, maintenance, and utility areas are located, a minimum 2 feet wide planter shall be provided to create a landscaped buffer between pedestrian areas and the building

facade. Bicycle facilities, such as bicycle parking, may be located within the buffer area and may be paved rather than landscaped.

2. Door swings on building frontages shall not encroach on identified paths of travel.

3. Blank walls greater than 6 feet in height shall not exceed 30 feet in length or shall include public art.

3 Building Design

3.1 Building Massing

3.1.1 Maximum Building Length and Facade Lengths

Ashby Avenue Frontages

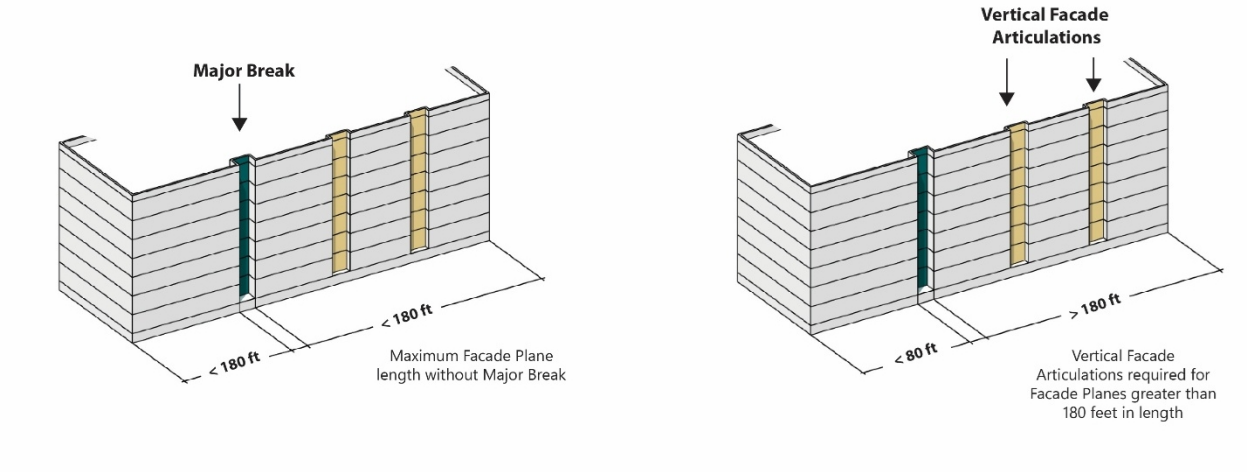
1. Buildings fronting Ashby Avenue shall not exceed 275 feet in length unless there a Building Break meeting the requirements below is provided.
2. A Building Break is a substantial break in the overall building massing that extends from the ground through the roof plane of the building. Building Breaks shall have a minimum width and depth of 25 feet and shall extend to a circulation or common space with visual access through to the other side of the building. Glazing used to provide visual access shall meet bird safe design requirements.
   (Note: *Existing continuous block from Martin Luther King Jr. Way to Adeline Street is approximately 370 feet in length).*

All Frontages

3. A Facade Plane is the portion of a building facade located between building corners, Building Break or Major Break. Facade Planes shall not exceed 180 feet in length.
4. A Major Break shall have a minimum width of 5 feet, minimum depth of 3 feet and a minimum horizontal area of 36 square feet.

3.1.2 Corner Buildings and Vertical Height

Buildings located on Ashby Avenue at the corner of MLK Jr. Way and Adeline Street shall have a distinct corner building form. The distinct corner form shall be a minimum 25 feet in length along each facade and include one or more of the following:



1. A change in roof form from the other portions of the building.
2. A change of building facade height greater than 8 feet from other portions of the building. Change in height can be higher or lower than the adjacent other portion of the building.

3.2 Facade Design

3.2.1 Vertical Rhythm and Pattern

Building facades facing publicly accessible places shall express a vertical rhythm and pattern that reflects the size and scale of a residential unit and/or individual rooms or shall be designed with custom details to create an ornamental facade. Facade planes fronting a public street or publicly accessible space exceeding 80 feet in length shall meet the following standards for either Vertical Facade Articulations or Ornamental Facades (see Figure 7). Facade planes are measured from corner of building to corner of building or Major Break as defined in 3.1.1.

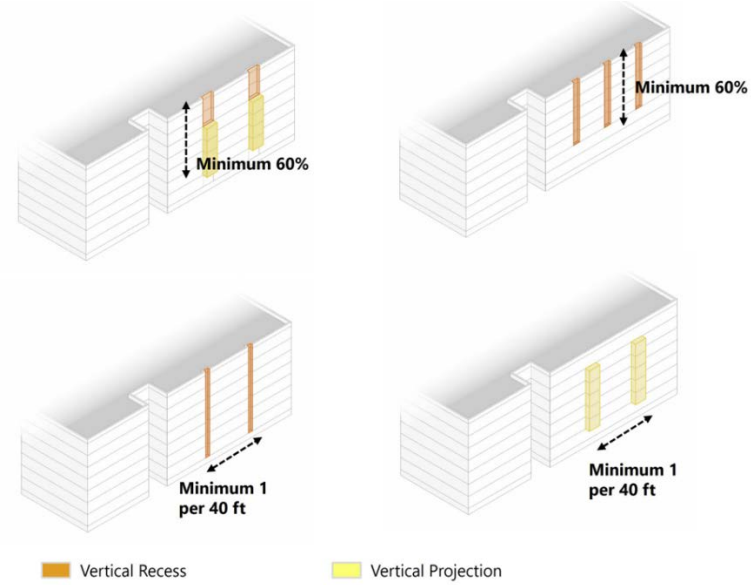


Figure 8. Diagram of Major Breaks and Vertical Façade Articulations

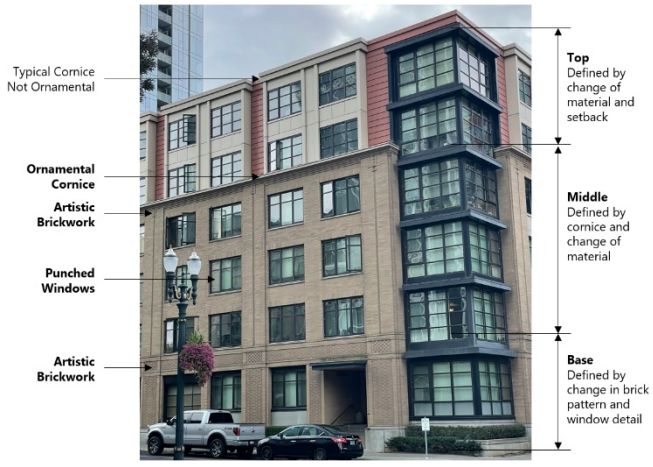
3.2.1.1 Vertical Facade Articulations:

1. A vertical recess, projection, or change in the facade plane of the building massing shall meet the following spacing requirements:
    a. For buildings less than or equal to 85 feet in height: A vertical recess, projection, or change in the facade plane of the building massing occur at an average minimum of one per 40 feet of linear facade length with no facade length greater than 50 feet in width without a vertical recess, projection, or change in the facade plane that meets the standards below.
    b. For buildings greater than 85 feet in height: A vertical recess, projection, or change in the facade plane of the building massing shall occur at an average minimum of one per 80 feet of linear facade length, with no facade length greater than 110 feet in width without a vertical recess, projection, or change in the facade plane that meets the standards below.
2. The vertical recess, projection, or change in the facade plane of the building massing shall have a minimum depth of 2 feet.
3. The vertical recess, projection, or change in the facade plane shall occur for a minimum 60% of the facade height measured from the average ground plane to the top of structure for the specific facade plane of the minor break/modulation.
4. The minimum width of a recess or change in the facade plane shall be 2 feet and maximum width shall not exceed 40 feet. Recesses and changes in the facade plane shall extend through the roof plane.
5. The minimum width of a projection shall be 4 feet, and maximum width shall not exceed 15 feet.

Figure 9. Diagram of Vertical Façade Articulation Types



3.2.1.2 Ornamental Facade.

1. Ornamental facades shall include a distinct building base, middle, and top defined by a cornice with a minimum height of 8 inches and minimum projection depth of 6 inches. Cornices defining a building top shall have a minimum of two depth levels.

2. Ornamental facades shall exceed 5% of the facade area. Ornament shall include features such as cornices, sculptures, artistic inlays or reliefs, decorative tile, decorative molding around windows, or other artistic add-ons to the facade. Ornamentation must deviate in color or material from the wall material behind it or be of high- quality material such as brick, stone, ceramics, metal, wood, tile, or fiber-cement board. Ornament shall not include built-up stucco trim or molding (also known as “plant-ons”).

3. Windows shall be punched with a minimum recess of 4 inches from the facade.

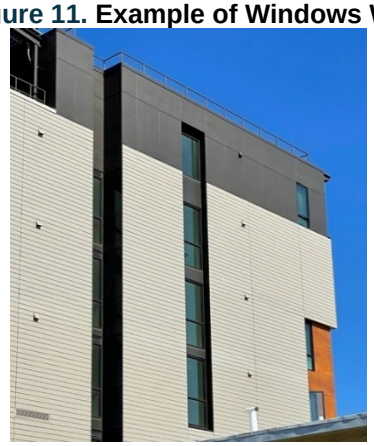
Figure 10. Example of Ornamental Façade

3.2.2 Building Projections

1. Stoops, porches, decks, landings, and stairs less than 6 feet in height may project into required setback areas (less than 8 feet in height along Ashby Ave).
2. Building features including eaves, cornices, canopies, awnings, and other weather protection features like sun-shades may project a maximum of 3 feet into required setback areas. Weather protection over stoops, porches, and building lobbies may project to the property line.
3. Building projections including balconies and bay windows features may project a maximum of 3 feet into required setback areas or public right-of-way. Projections over the right-of-way require a Minor Encroachment Permit from the Department of Public Works.
    a. Building projections shall not exceed 25% of the facade length of the building wall to which it is attached.
    b. Building projections shall have a minimum 12 feet clear height from sidewalk grade.
4. Building projections are not allowed over interior lot lines. Required vertical rhythm and pattern articulation for building facades shall occur within the interior parcel lines.

3.2.3 Additional Facade Standards

1. **Ground Floor Residential Entries** All ground floor residential units fronting a public street, an interior access drive or EVA shall provide entries to a publicly access pathway in the form of stoops or other exterior entries, or balcony or patio without entrance to the pathway or sidewalk, with a minimum area of 20 square feet. Senior units or other deed-restricted units for special needs populations are exempt.
2. **Required Openings**. Ground-level exterior walls facing and within 20 feet of a front lot line or publicly accessible pathway or Public Open Space shall run in a continuous plane for no more than 30 feet without a window, door, or other similar building opening.
3. **Light Screening.** Parking garages shall be designed such that interior lighting is fully shielded, and automobile headlamps are not visible from adjacent buildings, parcels, streets, public parks, publicly accessible outdoor space or designated open space area.



3.3 Design Elements

3.3.1 Fenestration

Windows shall meet one of the following requirements:

1. Windows shall be punched with a minimum recess of 2 inches from the facade or shall be framed with a minimum projection of 4 inches from the facade. Built-up stucco trim or molding (also known as “plant-ons”) are prohibited.
2. Windows that are flat or flush with the facade are prohibited unless applied to a recessed portion of the building facade with a minimum of four inches in depth. Vertical window edges shall be directly adjacent to recess.

Figure 11. Example of Windows Within a Recess and Framed Windows

3.3.2 Materials

No single material shall cover more than 80% of the cumulative facade area (excluding windows, doors, garage doors, and building trim) of a building except for high-quality materials such as brick, stone, ceramics, metals, fiber-cement panels, or other composite panel systems.

3.3.3 Public Art

Public art shall be distributed sitewide.

Attachment 2

Planning Commission Supplemental Recommendations for the Ashby BART West Lot Objective Design Standards

Background:

On September 16, 2026, the Planning Commission recommended that the City Council adopt the Revised Ashby BART West Lot Objective Design Standards (ODS) as presented by staff and established a subcommittee to develop potential supplemental public-realm recommendations.

On October 7, 2026, the subcommittee shared their recommendation to the full Commission. The Commission voted to forward the subcommittee's letter to the City Council as recommendations of the full Commission. It also requested that staff, in consultation with the City Attorney's Office and relevant City departments, review the recommendations and make any necessary revisions to ensure they qualify as objective design standards, are written in objective terms, and are consistent with the City–BART Exchange Agreement.

The subcommittee letter follows.

Planning Commission Subcommittee Report
Ashby BART Objective Design Standards (ODS)
October 5, 2026

Dear Planning Commissioners:

Planning Commissioners Alfred Twu, Angela Wang and Blaine Merker met as a subcommittee to further study the Ashby BART objective design standards proposed by staff at the 9/16/26 Planning Commission Meeting. The Planning Commission voted to recommend that the standards as proposed by staff be forwarded to the City Council as-is, with the provision that this subcommittee would study and develop additional improvements or additions to be included as a letter to Council. This report includes the additional recommendations from this subcommittee.

During the 9/16/26 meeting, some public commenters expressed concern that the ODS didn't adequately address provisions for community open space, ecological features and public gathering in the neighborhood and within the project. Many of the issues raised were complex and cannot be addressed within the framework of ODS. Some are being addressed in separate projects, are larger scale city issues, have significant technical constraints on this site, or would impact the target capacity for housing already settled through years of public process and set forth in the Joint Vision and Priorities document and BMU zoning.

Without weighing in on all of the comments expressed at the public hearing, this subcommittee feels that there are some improvements to be made to the ODS that will allow for a more vibrant, high quality and human scale public realm that serves both the many future residents on this site and the general public who will use the BART station. We have focused our recommendations only on factors that can be addressed through ODS and that we understand are practical and feasible to implement, without impacting the housing goals of the project.

The Ashby BART project will be home to hundreds of future residents of all ages and household types, living in denser and more urban conditions than are typical of the neighborhood today. Therefore it is critical that the public spaces of the project be of a quality and robustness that invites the fullest level of vibrancy possible, accommodates both moving and staying, and supports users of all ages. We believe the additions detailed below can meet these goals in accordance with the Exchange Agreement and expressed community needs without delaying the project.

Additions and Modifications to the ODS for Consideration
Rationale discussed by the subcommittee is shown in italics

2.1 Streets and Sidewalks
The current ODS provides tree spacing requirements on MLK and Ashby but does not ensure their installation size, mature size, or establishment requirements.

2.1.2 Street Trees + Planting Area/Amenity Zone

- Street trees shall be selected from city approved list that, at mature size, provide at least 40' crown diameter. Trees shall be planted as a minimum 24" box and provided irrigation and no less than three years' establishment warranty.

2.2 Station Entrance Plaza Design
The current ODS has little to say about the station entrance plaza (144 of the 4280 words in the ODS), though it is one of the most central public features of the project and will be used by large numbers of people. It is arguably the living room and heart of the project. These recommendations address elements that the ODS was silent on but would provide for the structural conditions of successful public spaces: 1) comfort and protection, 2) access to nature, 3) places to gather, 4) places to sit or stay, 5) provisions for different aged users.

- Trees shall be planted in the plaza to provide not less than 25% canopy coverage at maturity, as a portion of the total plaza area. Trees shall be planted as a minimum 24" box and provided irrigation and no less than three years' establishment warranty.
- Seating shall be provided within the plaza to accommodate at least ⅓ of the number of users in an active period. Because the exact plaza size is not fixed and "active" is open to interpretation, we recommend calculating this number based on the following formula:
    - Size in square feet x 0.005 x 33% (based on 50 users per 10,000 square feet as a target for active use – typical of other plazas in the region when active). Example: 24,000 square foot plaza x 0.005 x 33% = 40 seats
    - This provision may be satisfied with site furnishings or integral site elements such as seatwalls, provided the geometry is equivalent to a typical seat.
    - Not less than 50% of the seating shall be shaded by tree canopy coverage at its mature size.
- The plaza shall provide not less than one drinking fountain.
- A children's play feature shall be provided within the Station Entrance Plaza. This requirement can be satisfied with formal or informal play features.

2.3 Internal Access Drives and Emergency Vehicle Access (EVA) Design
The internal EVA drives can function as public spaces and extensions of the station entrance plaza, providing additional capacity and options for residents. We assume at least the B1/B2 street will be provided as the EVA-only option, which effectively makes it a resident woonerf-

style public space. Current ODS does not specify tree spacing, which makes the requirement for either trees or public art ineffective since there's no way to measure fulfillment.

2.3.1 Access Drive Design

- Internal access drives shall provide pedestrian amenities along both sides, including but not limited to seating, at the rate provided in the plaza requirements in Section 2.2.
- Emergency Vehicle Access drives within the Station Entrance Plaza and the internal north-south street between buildings B1 and B2 shall be curbless.
- Trees shall be provided on both sides of the street to the specifications listed for MLK and Ashby in Section 2.1.2, but if a tree is not feasible within 10' of a specified location, substitutions with "other elements" that "enhance the pedestrian experience and buffer parking and utility area frontages" as specified in Section 2.3.1 (5) shall be of similar height to the mature clear trunk of the street trees or 20% of the width of their mature crown. *(This ensures any tree substitute that is not public art is not simply a trash can, but would need to be of a scale that reads as a continuation of the tree pattern.)*

2.4 TPSS Access and Staging Area

The current ODS does not specify the amount/coverage of trees, their size at maturity or planting, or provide the elements for long-term health and establishment. We understand the TPSS Staging Area can be used as an ad-hoc public space when not in use by BART for staging. However, the ODS does not provide for "eyes on the space" safety principles or physical access that would be advisable for this use, given the staging area's isolated configuration on the site.

2.4.1 TPSS Access and Staging Area

- The TPSS Staging Area shall be designed to be accessible to residents when not in use for staging, with paving quality and exterior landscape finishes at least as high quality as the sidewalks of internal streets and the station entrance plaza.
- The TPSS Staging Area shall be lit similarly to other public spaces in the project and provide for sightlines that allow for substantial visibility both into and out of the staging area. At least two pedestrian exit points shall be provided.
- The public access point to the TPSS Staging Area shall be clear and visible from other public areas. Residential buildings may access the TPSS Staging Area directly from their ground floors and shall not be prohibited from access when TPSS Staging is not in use by BART.
- Trees shall be provided at a coverage of no less than 50% of the provided buffer planter area, measured by the mature crown width. Trees shall be provided with the same box size, irrigation and establishment warranty as those listed in the street tree section, Section 2.1.2. *(This allows for trees to be narrow if needed for TPSS staging requirements.)*

3.3 Design Elements

The conditions around the station entrance plaza and the future plaza along Adeline are significantly different given the cultural tradition of live music and public gathering that the project expects to continue. Given this outdoor condition of intermittent noise, buildings should be designed to minimize future conflicts between indoor and outdoor users.

3.3.4 Events and Noise

- Window glazing - Building design should assume there will be live music in the Station Entrance Plaza and Adeline Street Main Plaza

Attachment 3

Summary of Policy Framework, Technical Analyses and Public Engagement that Informed Ashby BART West Lot Objective Design Standards

This document summarizes adopted City policies, and City–BART agreements and policies and key technical analyses that shaped the ODS, along with the public engagement that informed their development.

A. Adopted Policies, Agreements and Regulations

Date(s)	Document(s)/Action(s)	Relationship to Ashby West Lot ODS
Sep. 2018	Assembly Bill 2923	AB 2923 required BART to establish transit-oriented development (TOD) zoning standards for eligible BART-owned properties within one-half mile of a BART station in Alameda, Contra Costa, and San Francisco counties. These standards address building height, residential density, floor area ratio, and parking. Local jurisdictions had until July 1, 2022, to adopt zoning that met or exceeded the applicable standards; otherwise, BART's standards would apply. The legislation prompted development of BART's TOD zoning standards, which informed the City's Residential-BART Mixed Use (R-BMU) zoning for the Ashby and North Berkeley station areas. That zoning forms part of the policy framework for the Ashby West Lot ODS.
Mar. 2020	City and BART Memorandum of Understanding	The 2020 City and BART MOU established a framework for development at the Ashby and North Berkeley BART stations. It called for a Community Advisory Group and other community engagement, reservation of City funding to support at least 35% affordable housing at both sites, and adoption of zoning consistent with AB 2923. These commitments helped establish the policy framework for the Ashby BART West Lot ODS.
Dec. 2020	Adeline Corridor Specific Plan, Zoning and General Plan Amendments and EIR[1]	The Adeline Corridor Specific Plan establishes a long-term vision and policies for housing, economic opportunity, transportation, and public space in South Berkeley, including mixed-use development at Ashby BART. Its adopted policies and related zoning helped inform the City–BART Joint Vision and Priorities and subsequent planning for the West Lot ODS.
Apr. 2021	City Council Affordable Housing Funding Reservation for the N. Berkeley BART and Ashby BART Station Areas[2]	Based on an economic feasibility analysis, Council provisionally reserved $53 million for both station areas to support at least 35% affordable housing at each station, fulfilling a funding milestone in the 2020 City–BART MOU. This reservation supported the affordable housing commitments subsequently reflected in the 2024 Ashby Exchange Agreement, which established development parameters for the West Lot ODS.

[1] Resolution No. 69,642–N.S. – Adoption of the Adeline Corridor Specific Plan and related General Plan text and map amendments; certified the EIR and made related CEQA findings (adopted December 8, 2020); Ordinance No. 7,744–N.S. Established the Commercial–Adeline Corridor zoning district, added BMC Chapter 23E.70, and adopted related zoning text and map changes. (adopted December 15, 2020)
[2] Resolution No. 69,833–N.S. – Approval of Funding Reservations for the Ashby and North Berkeley BART Stations and Approval of One or More Notices of Funding Availability to Support Affordable Housing Projects (adopted April 27, 2021).

Attachment 3

Date(s)	Document(s)/Action(s)	Relationship to Ashby West Lot ODS
Jun. 2022	City and BART Memorandum of Agreement (MOA)[3]	The 2022 MOA expands on the 2020 MOU and establishes City and BART commitments to cooperatively pursue TOD at both stations. For Ashby, it identifies steps and timelines to address the City's option to purchase West Lot air rights, development of ODS, developer solicitation, and a future location for the Berkeley Flea Market. These commitments helped establish the process and policy framework for the West Lot ODS.
	City and BART Joint Vision and Priorities for Ashby and North Berkeley BART Transit Oriented Development (JVP)	Approved by the City Council and BART Board, the JVP expresses shared expectations for development at both stations. It establishes shared and station-specific priorities across five topics: Affordable Housing, Public and Civic Space, Land Use, Building Form, and Station Access, including a priority of 500–1,200 homes at each station. Its development parameters and design guidance informed the West Lot ODS.
	City - Residential – BART Mixed Use Zoning District	To comply with AB 2923, the City Council adopted BMC Chapter 23.202.150, establishing the Residential-BART Mixed Use (R-BMU) zoning district for the North Berkeley and Ashby BART station areas. The zoning establishes development parameters and selected design standards, with more detailed, site-specific requirements anticipated through subsequent technical studies and ODS development. The R-BMU zoning provides the regulatory framework upon which the West Lot ODS build.
Nov. 2022	City – Adeline at Ashby Roadway Redesign Concept[4]	The City Council approved a conceptual design for a street reconfiguration and new plaza along Adeline Street between Ashby Avenue and Martin Luther King, Jr., Way, in order to create space for new plaza and increase safety for pedestrians and bicyclists and to enhance access to the Ashby BART Station. This conceptual design superseded the design in the Adeline Corridor Specific Plan for this section of Adeline Street and informed the development of the West Lot ODS.
Feb. 2023	BART's Berkeley-El Cerrito Corridor Access Plan (BECCAP)	The Berkeley–El Cerrito Corridor Access Plan (BECCAP) analyzes how residents who currently drive and park at BART stations could access the corridor's stations after TOD replaces the parking lots. It informed the BART Board's adoption of patron parking maximums for North Berkeley and Ashby. These maximums were used in the Exchange Agreement's West Lot ODS Capacity Study, informing the development capacity analysis that shaped the ODS.
Sep. 2024; Dec. 2024	City and BART Term Sheet for Ashby BART TOD; City and BART	The September 2024 nonbinding Term Sheet established the principal terms for exchanging the City's West Lot air-rights purchase option for ownership of the East Lot and for minimum community benefits and development requirements. The

[3] Resolution No. 70, 669-N.S. – Ashby and North Berkeley BART General Plan Amendments (adopted June 2, 2022) and Ordinance No. 7,815-N.S. – R-BMU Zoning District and Associated Zoning Amendments (adopted June 28, 2022)

[4] Resolution No. 70,622-N.S. – Adeline at Ashby Roadway Redesign Concept (adopted November 29, 2022)

Date(s)	Document(s)/Action(s)	Relationship to Ashby West Lot ODS
	Exchange Agreement for Ashby BART TOD[5]	December 2024 Exchange Agreement established binding commitments and superseded the MOU, MOA, and Term Sheet as they relate to Ashby TOD. Building on the JVP and prior City–BART planning, the Exchange Agreement establishes requirements that directly shaped the West Lot ODS, including the preparation process, adoption timeline, minimum development capacity, and provisions for BART enforcement of specified standards.

B. Technical Reports/Studies

Date(s)	Document(s)	Findings or Requirements that Informed the ODS
Apr. 2021	Estimating the Need for Housing Subsidy for the Ashby and North Berkeley BART Stations	The 2021 analysis estimated the City subsidy needed to achieve different affordable housing levels and development scales at both stations. It informed the City's $53 million funding reservation to support at least 35% affordable housing at each site and subsequent Exchange Agreement negotiations. These were planning estimates, rather than a limit on achievable affordability; actual affordability levels and subsidy needs depend on project-specific funding sources, costs, and development conditions. The Exchange Agreement subsequently established housing and development capacity requirements that informed the West Lot ODS.[6]
Feb. 2023	BART's Berkeley-El Cerrito Corridor Access Plan (BECCAP)	The Berkeley–El Cerrito Corridor Access Plan (BECCAP) analyzes how residents who currently drive and park at BART stations could access the corridor's stations after TOD replaces the parking lots. It informed the BART Board's adoption of patron parking maximums for North Berkeley and Ashby. These maximums were used in the Exchange Agreement's West Lot ODS Capacity Study, informing the development capacity analysis that shaped the ODS.
Dec. 2024	Ashby West Lot Circulation Framework[7]	Developed jointly by City and BART staff, the Circulation Framework identifies fire and life safety, station access, maintenance, and Traction Power Substation requirements that constrain future development locations, while identifying opportunities for design flexibility. It assumes a new public plaza along the BART property's Adeline Street frontage. These requirements informed the Exchange Agreement and West Lot ODS.
	Ashby West Lot Adeline Street Connections	The Adeline Street Connections memo examines the engineering and construction challenges of connecting TOD buildings to Adeline Street and the new Main Plaza while accommodating existing BART infrastructure. It identifies

[5] Resolution No. 71,514-N.S. – Approving nonbinding Term Sheet (adopted September 16, 2024); Ordinance 7,939-N.S – Authorizing Exchange of Real Property for Development of Ashby BART station property (adopted December 3, 2024)

[6] Attachment 2, Item 31 - City Affordable Housing Funds: Ashby and North Berkeley BART Station Areas and Future Housing Funding Notices of Funding Availability (NOFA), April 27, 2021.

[7] The Ashby West Lot Circulation Framework, Ashby West Lot Adeline Connections Memo and the City and BART Exchange Agreement are included as attachments in BART's Ashby BART West Lot Request for Proposals (December 2024).

Date(s)	Document(s)	Findings or Requirements that Informed the ODS
		technical requirements and design opportunities that informed the ODS for building frontages and connections at Adeline Street level.
	Schedule 9.2.2 Capacity Study — City and BART Exchange Agreement	The Capacity Study identifies the West Lot's Net Developable Area, excluding surface areas used for public circulation and BART infrastructure, and analyzes residential development capacity within that area. It provides the basis for evaluating whether the ODS accommodate the minimum gross residential floor area required by Schedule 9.2.1 of the Exchange Agreement.

C. Public Engagement

1. Adeline Corridor Specific Plan (2015 – 2020)

The Adeline Corridor Specific Plan was developed through a multi-year public process from 2015 to 2020 that included community forums and workshops, drop-in "IDEA Centers," open-house exhibits, surveys, walking and bicycle tours, community learning sessions on affordable housing, zoning and planning, and complete streets, stakeholder and focus-group meetings, and review by a Planning Commission subcommittee, the full Commission, and City Council. Engagement addressed affordable housing, economic opportunity, transportation, public space, and the future of the Ashby BART station area. The subsequent City–BART planning process built on this work, drawing on the Plan's adopted vision and policies and the Commercial–Adeline Corridor (C-AC) zoning district to inform the City and BART Joint Vision and Priorities and the City's Residential-BART Mixed Use (R-BMU) zoning district. Pages 10–12 of the Plan provide a detailed description of the extensive engagement activities.

2. City and BART Planning and Public Review for North Berkeley BART and Ashby BART Station Areas (2020 – 2022)

The City and BART conducted a coordinated public process to develop the Joint Vision and Priorities (JVP), zoning and associated General Plan amendments for the Ashby and North Berkeley BART station areas. Engagement included a Community Advisory Group, public office hours, community workshops, educational materials, and Commission and City Council review. This process informed the JVP and R-BMU zoning adopted in 2022, establishing housing, land-use, building-form, public-space, and station-access priorities and requirements that shaped the Ashby West Lot ODS.

a. Community Advisory Group (CAG)

Pursuant to the City and BART 2020 Memorandum of Understanding (MOU), the City Council established a 15-member Community Advisory Group (CAG). Membership included representatives from the Planning Commission, Housing Advisory Commission, Transportation Commission, and Commission on Disability, together with

11 community members representing homeowners, renters, neighborhoods affected by station development, the Berkeley Flea Market, and faith-based communities. Members brought expertise in planning, architecture, transit, and environmental sustainability, as well as diverse life experiences.

The CAG provided input on zoning consistent with AB 2923 and the City–BART JVP, and helped connect the Planning Commission's work with neighborhood groups and the broader community.

Between June 2020 and December 2021, the CAG held eight numbered meetings, including a two-session third meeting. All meetings were open to the public. The City also held 11 public office-hour sessions, during which City, BART, and consultant staff answered follow-up questions about meeting topics.

Table 2a: Community Advisory Group Meetings

Mtg.	Date	Topic(s)
1	June 8, 2020	Introductions, Project Overview, CAG process, Review of Existing Conditions and Relevant Adopted Laws, Plans, Policies and Development Parameters[8]
2	August 3, 2020	Process Overview, Introduction to AB 2923 and Zoning, Preliminary Site Concepts[9]
3a	October 14, 2020	Financial Feasibility, Affordable Housing, and Building Form[10]
3b	October 21, 2020	Introduction to City-BART Joint Vision and Priorities (JVP)
4	December 14, 2020	Zoning and Development Parameters, Building Form, and Land Uses[11]
5	March 22, 2021	Draft City-BART JVP on Affordable Housing, Public and Civic Space, Land Use and Building Form and Draft Zoning[12]
6	April 29, 2021	Draft City-BART JVP on BART Station Access and Draft Zoning and Introduction to BECCAP[13][14]
7	June 21, 2021	Review of Revised Draft Joint Vision and Priorities and Zoning[15]
8	December 6, 2021	Process Wrap-Up and Next Steps in the Ashby and North Berkeley Transit-Oriented Development Planning Process

[14] https://www.bart.gov/about/planning/station-access/berkeley-elcerrito-corridor-plan/faq
[15] Community Advisory Group (CAG) Meeting #7 Summary

Four informational videos were prepared for the CAG and the general public to support the discussion of project economics and design:

- Market Rate Housing[16]
- Affordable Housing[17]
- Public Value Recapture[18]
- Building Form and Density[19]

b. Community Workshops/Meetings

Three community workshops were held to introduce the overall planning process for the Ashby and North Berkeley BART station areas, as well as to solicit feedback on the draft zoning and the City-BART Joint Vision and Priorities document. Summaries of the community workshops, including copies of all written comments received were provided to CAG members to inform their work.

Table 2b: Community Workshops

Date	Topic(s)
August 31, 2020	Planning Overview, Project Goals/Parameters and Preliminary Concepts[20]
February 8, 2021	Draft City-BART Joint Vision and Priorities (JVP)[21]
June 26, 2021	Review of JVP and Zoning[22]

c. Commission and City Council Review

Public meetings of various Boards and Commissions and the City Council addressed the proposed zoning, General Plan amendments, environmental review, affordable housing funding, and City and BART agreements.

		Amendments for the Ashby and North Berkeley BART Station Areas
Feb. 1, 2020 and March 1, 2021	Measure O Bond Oversight Committee	Reserving City Affordable Housing Funds for the Ashby and North Berkeley BART Station Areas
Feb. 10, 2020 and March 4, 2021	Housing Advisory Commission	Reserving City Affordable Housing Funds for the Ashby and North Berkeley BART Station Areas
April 27, 2021	City Council	Reserving City Affordable Housing Funds for the Ashby and North Berkeley BART Station Areas
Sep. 1, 2021	Planning Commission	Informational Meeting on the Proposed Zoning and General Plan Amendments and City-BART Joint Vision and Priorities for TOD at the Ashby and North Berkeley BART Station Areas
Nov. 3, 2021	Planning Commission	Public Hearing on the Draft Environmental Impact Report (EIR)
April 6, 2022	Planning Commission	Recommendation to City Council – Ashby and North Berkeley BART Station Areas: Proposed Zoning and General Plan Amendments, City and BART Joint Vision and Priorities, Associated Environmental Review Documents
June 2, 2022 and June 28, 2022	City Council	Consideration of approval of Ashby and North Berkeley BART Station Areas: Proposed Zoning and General Plan Amendments, City and BART Joint Vision and Priorities, Associated Environmental Review Documents and City and BART Memorandum of Agreement

3. Adeline Street at Ashby BART Conceptual Design (2022)

The City, in coordination with BART, conducted extensive public and stakeholder engagement to develop a conceptual redesign of Adeline Street at Ashby BART. The process included the Berkeley Flea Market Board and vendors, AC Transit staff, Ed Roberts Campus management and tenant organizations, and the broader community. Input informed the concept recommended by the Transportation and Infrastructure Commission and approved by the City Council in October and November 2022, respectively, which provided a framework for street reconfiguration and new public plaza space assumptions that informed the West Lot ODS.

Table 3a: Public and Stakeholder Engagement

Date	**Topic(s)**
January–August 2022	Meetings with the Berkeley Flea Market Board to discuss the project and obtain input
Multiple weekends during 2022	Site visits to engage Flea Market vendors

September 17, 2022	Flea Market information table and vendor survey
September 28, 2022	In-person meeting with Flea Market Vendors to receive input on the proposed concept
October 3, 2022	Community meeting to review two options for conceptual design

Table 3b: Commission and Council Review

Date	Body	Topic
October 20, 2022	Transportation and Infrastructure Commission	Review of conceptual design options
November 29, 2022	City Council	Adoption of a preferred design concept for Adeline Street at Ashby BART

4. BART-Led Berkeley–El Cerrito Corridor Access Plan, 2021–2023

As noted in above, BART led development of the Berkeley–El Cerrito Corridor Access Plan (BECCAP) to evaluate how residents who currently drive and park at BART's Richmond line stations could access BART after transit-oriented development replaces station parking lots. BART's Summary of Reference Material and Public Outreach and the individual milestone and survey reports provide further detail on the engagement process and public input.[23]

Table 4: Public Engagement

Date	Topic(s)
April – August 2021	Outreach Milestone Report #1; first online open house and survey, July 2–August 20, 2021
September 2021–May 2022	Outreach Milestone Report #2; second online open house and survey, April 20–May 18, 2022
June 2022–February 2023	Outreach Milestone Report #3; third online open house and survey, December 16, 2022–January 8, 2023

5. Equitable Black Berkeley and Healthy Black Families Engagement, 2022–2024

The Mayor's Office, under Mayor Jesse Arreguín, partnered with Healthy Black Families on the Equitable Black Berkeley (EBB) initiative to explore funding approaches and policies supporting equity, opportunity, and the well-being of Berkeley's Black community. The initiative addressed historical harms associated with redlining and

[23] BECCAP Summary of Reference Material and Public Outreach.

construction of the Ashby BART station, with a focus on affordable housing, displacement, right to return, and community benefits.[24]

Healthy Black Families conducted engagement through People's Assemblies, surveys, and participation in BART community and Board meetings to identify and communicate community priorities. As noted in the September 2024 Term Sheet staff report, EBB input, alongside the Adeline Corridor Specific Plan, MOA, and JVP, informed the framework for community benefits and other project requirements.

6. City and BART Ashby BART Term Sheet and Exchange Agreement

The Term Sheet and Exchange Agreement built on years of public engagement and planning, including the Adeline Corridor Specific Plan, City–BART Joint Vision and Priorities (JVP), and R-BMU zoning described above. Negotiations between the City and BART, led by then-Mayor Jesse Arreguín and BART Board Director Lateefah Simon, also drew on technical studies of site constraints and development feasibility. City and BART real estate consultants, Century | Urban and Economic & Planning Systems, respectively, evaluated the agencies' property interests and financial positions, including the value of the City's West Lot air-rights purchase option. These analyses informed the proposed property exchange and community benefits.

The negotiations culminated in the 2024 Term Sheet and binding Exchange Agreement. The Agreement established community benefits and development requirements, including the process, timeline, minimum development capacity, and enforcement provisions that shaped the West Lot ODS. Public meetings and Council consideration during this phase are summarized below.

Table 6: Community Meetings and Council Review

Date	Topic(s)
April 20, 2023	BART hosted Community Meeting – Ashby Transit Oriented Development – BART Operations and Adeline Street Connection
November 8, 2023	BART hosted Community Meeting – BART Traction Power Substation (TPSS) Update
September 12, 2024	Ashby BART Community Meeting and Open House: Planning process update, technical constraints and design opportunities on the site and along Adeline Street[25]
September 16, 2024	City Council – Approval of the Nonbinding Term Sheet for Ashby BART Transit Oriented Development

[24] City Council staff report, November 29, 2022, Item 8, "Grant Approval: San Francisco Foundation to Support the Equitable Black Berkeley Initiative."
[25] September 13, 2023, Ashby BART Community meeting: Presentation; Video Presentation; Open House Station Boards

November 19 and December 3, 2024	City Council – Approval of the City and BART Exchange Agreement for Ashby BART Transit Oriented Development (First and second reading)

7. Ashby West Lot ODS Development and Public Review (2024–2026)

The Preliminary ODS was published in December 2024 concurrently with BART's Request for Proposals for the Ashby BART West Lot. The City provided opportunities for community input through public open houses, community-hosted meetings, and Planning Commission review, alongside coordination with BART and the selected developer team, Adeline Alliance Partners (AAP). These activities informed the Revised ODS presented in September 2026 and subsequent consideration of supplemental recommendations.

a. Public and Community-Hosted Engagement
   The table below summarizes completed City-hosted or co-hosted engagement and community-hosted meetings at which City staff presented the ODS and solicited feedback. The public engagement provided opportunities to comment on the ODS both independently and in the context of the emerging West Lot project design and related Adeline Street transportation and open space improvements. Additional engagement is anticipated before Council consideration, including a November 5, 2026 meeting co-hosted by the City, BART, and the West Lot Developer.

Table 7a: Public Engagement

Date	Topic(s)
February 10, 2025	City-hosted open house introducing the Preliminary ODS and soliciting feedback and online feedback form
May 12, 2026	City staff and the West Lot Developer presented and solicited feedback about the Preliminary ODS and West Lot Project Design, hosted by Healthy Black Families at the Maudelle Miller Shirek Community Room
May 26, 2026	City staff and the West Lot Developer presented and solicited feedback about the Preliminary ODS and West Lot Project Design, hosted by Healthy Black Families at Harriet Tubman Terrace
June 20, 2026	City staff/consultant and the West Lot Developer presented and solicited feedback about the Preliminary ODS, the City's Adeline Main Plaza design planning process and West Lot Project Design, hosted by South Berkeley NOW and the Lorin Business Association
July 16, 2026 and July 22, 2026	Community Open house and subsequent (virtual) Office Hours co-hosted by the City, BART, and AAP covering the Preliminary ODS, a draft design concept from the West Lot Developer, and related City projects about Adeline Street transportation and open space improvements

b. Planning Commission Review

The Planning Commission reviewed the Preliminary and Revised ODS and subsequently considered supplemental recommendations developed by its subcommittee.

Table 7b: Planning Commission Review

Date	Topic(s)
July 1, 2026	Staff introduced the Preliminary ODS and explained their role, the planning process, and the policy and technical framework informing the standards
September 16, 2026	Staff presented Revised ODS reflecting public and Commission input and continued coordination with BART and AAP. The Commission recommended Council adoption of the Revised ODS and established a subcommittee to explore supplemental recommendations.
October 7, 2026	The Commission voted to forward supplemental recommendations to Council for consideration; the recommendations are included as an attachment to the November 17, 2026 Council item on the Ashby BART West Lot ODS.

Attachment 4

NOTICE OF PUBLIC HEARING
BERKELEY CITY COUNCIL
ADOPTION OF ASHBY BART WEST LOT TRANSIT ORIENTED DEVELOPMENT OBJECTIVE DESIGN STANDARDS

The public may participate in this hearing by remote video or in-person.

The Department of Planning and Development is proposing Objective Design Standards (ODS) for future transit-oriented development at the Ashby BART West Lot, bounded by Ashby Street to the north, Adeline Street to the east, and Martin Luther King (MLK) Jr. Way to the west and has the Assessor's Parcel Number: 053-1597-039-04. The proposed ODS build upon, and further implement the adopted zoning (BMC Chapter 23.202.150 Residential-BART Mixed Use Zoning District), the goals and priorities identified in the City and BART Joint Vision and Priorities for Transit-Oriented Development at the Ashby and North Berkeley BART Station, the City and BART Ashby BART Station Transit Oriented Development Exchange Agreement (adopted by the Berkeley City Council on December 3, 2024 pursuant to Ordinance No. 7,939-N.S.), as well as other related adopted policies and regulations. More information about the overall planning effort to plan for transit-oriented development at the North Berkeley and Ashby BART stations is available at www.berkeleyca.gov/bartplanning.

The proposed objective design standards were evaluated in (1) the Ashby and North Berkeley BART Stations Transit-Oriented Development (TOD) Zoning Project Environmental Impact Report (SCH #: 2020110320) which was certified by the City Council on June 2, 2022; and (2) the "Ashby BART TOD Contractual Agreement" Addendum, which amended that Report and the Adeline Corridor Specific Plan Environmental Impact Report (SCH # 2018072009) and which was approved by the City Council on December 3, 2024. No further environmental review is required.

The hearing will be held on November 17, 2026 at 6:00 p.m. in the School District Board Room, located at 1231 Addison Street, Berkeley CA 94702.

A copy of the agenda material for this hearing will be available on the City's website at https://berkeleyca.gov/ as of November 5, 2026. **Once posted, the agenda for this meeting will include a link for public participation using Zoom video technology, as well as any health and safety requirements for in-person attendance.**

For further information, please contact Alisa Shen, Principal Planner at (510) 981-7409. Written comments should be mailed or delivered directly to the City Clerk, 2180 Milvia Street, Berkeley, CA 94704, or e-mailed to council@berkeleyca.gov in order to ensure delivery to all Councilmembers and inclusion in the agenda packet.

Communications to the Berkeley City Council are public record and will become part of the City's electronic records, which are accessible through the City's website. **Please note: e-mail addresses, names, addresses, and other contact information are not required, but if included in any communication to the City Council, will become**

Attachment 4

part of the public record. If you do not want your e-mail address or any other contact information to be made public, you may deliver communications via U.S. Postal Service or in person to the City Clerk. If you do not want your contact information included in the public record, please do not include that information in your communication. Please contact the City Clerk at (510) 981-6900 or clerk@berkeleyca.gov for further information.

Office of the City Manager

ACTION CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jennifer Louis, Chief of Police

Subject: Pursuant to Chapter 2.99 of the Berkeley Municipal Code - Annual Surveillance Technology Report for Body Worn Cameras, GPS Trackers, Fixed Surveillance Video Cameras, Parking Enforcement Officer Automated License Plate Readers, the Street Level Imagery Project, Unmanned Aerial Systems, and Fixed Automated License Plate Readers

RECOMMENDATION

Pursuant to Chapter 2.99 of the Berkeley Municipal Code, adopt a Resolution accepting the Surveillance Technology Report for Body Worn Cameras, GPS Trackers, Fixed Surveillance Video Cameras, Automated License Plate Readers, the Street Level Imagery Project, Unmanned Aerial Systems, and Fixed Automated License Plate Readers.

FISCAL IMPACTS OF RECOMMENDATION

These technologies have existing budget approval and there are no new fiscal impacts associated with adopting the attached resolution.

CURRENT SITUATION AND ITS EFFECTS

On March 27, 2018, the City Council adopted Ordinance 7,592-N.S., adding Chapter 2.99 to the Berkeley Municipal Code, which is also known as the Surveillance Technology Use and Community Safety Ordinance (referred to here as the Ordinance). Section 2.99.070 of the Ordinance requires that the City Manager must submit to the City Council a Surveillance Technology Report as defined by Section 2.99.020(2) of the Ordinance annually, at the first regular City Council meeting in November. On September 29, 2026, Council adopted an amended ordinance wherein the next reporting period after this report shall be March of 2028, covering the 15 month period from October 1, 2026 to December 31, 2027. Subsequent reporting periods will cover the preceding calendar year.

The purpose of the Ordinance is to provide transparency surrounding the use of surveillance technology, as defined by Section 2.99.020 in the Ordinance, and to ensure that decisions surrounding the acquisition and use of surveillance technology consider the impacts that such technology may have on civil rights and civil liberties. Further, the

Ordinance requires that the City evaluate all costs associated with the acquisition of surveillance technology and regularly report on their use.

The staff report and attached resolution satisfy the annual reporting requirement as outlined in Section 2.99.070. For each of the seven approved technologies, Annual Surveillance Technology Report and accompanying audits (where required by Council-approved BPD policy) are attached to this report. These reports fulfill all section-by-section reporting requirements of the Ordinance.

Complaints

One reporting category is whether the Department has received community complaints about these technologies. Community members may submit complaints in writing, by email, in person, or by telephone, either directly to the Internal Affairs Bureau (IAB) or to any member of the Department, who forwards them through the chain of command. If a community member initiates a complaint and the investigation finds that the subject employee misused a technology in violation of policy, the Chief of Police initiates an additional complaint. Community members may also file complaints directly with the Office of the Director of Police Accountability (ODPA). The Director of Police Accountability notifies the Chief of Police when the ODPA opens an investigation, which prompts a parallel IAB investigation.

During this reporting period, as part disciplinary reviews, the ODPA raised procedural concerns about body worn camera activation. The Department reviewed these concerns and found while there were cases where officers failed to activate or explain muting of their BWC there were no instances of intentional non-activation during the reporting period. These incidents have highlighted the need for the department to update policy and clarify training and expectations around BWC.

The Department received no complaints regarding its ALPR system during this reporting period. The Department acknowledges, however, the news coverage and concerns raised by advocacy groups about ALPR technology generally, as well as reported misuse in specific cases in other jurisdictions. When such reports surface, the Department reviews its own policies, system configuration, and practices to identify and address any similar vulnerabilities.

No other complaints related to the remaining technologies were received during this reporting period.

Audits

All audits required by policy, including of parking enforcement ALPRs, fixed cameras, and fixed ALPRs, were completed during this reporting period and are included with the individual technology reports attached to this report. BPD recognizes the public safety value of its surveillance technologies and the responsibility that comes with them to use

each system carefully and audit it rigorously. The audits follow consistent methodologies from year to year, testing compliance with the applicable Department policies, so that the PAB and Council can compare results across reporting periods.

Separately, during this reporting period the Department became aware of federal access by Western States Information Network (WSIN) analysts of San Francisco PD ALPR data through the Northern California Regional Intelligence Center (NCRIC). These searches did not occur in Berkeley due to the department's sharing settings. The Department turned off Flock's statewide lookup setting in July 2025 and limited sharing to Bay Area agencies. The reported NCRIC and WSIN incident occurred after that change. The reports of this access were published after BPD's audit of the corresponding time period (July-Dec 2025) but upon hearing of the issue the Department retroactively confirmed that no WSIN searches appeared on Berkeley's network and advised Council and PAB of the findings.

The Department has offered to work with the PAB on continuing to strengthen its audit protocols across all surveillance technologies.

Technology Updates

The fixed ALPR network of 52 Council-approved cameras completed its first full year of operation following the end of its introductory phase in January 2025. During this reporting period, the Department documented at least 101 cases supported by the system, including 59 arrests that likely would not have occurred without it. The system also generated 71 felony vehicle alerts, 610 stolen vehicle alerts, and 759 alerts from the Department's own hotlists.

The Department is also pursuing a more comprehensive update to the City's public safety technology. In July 2026, the City issued a Request for Proposals (Specification No. 26-11794-C) covering six areas: automated license plate recognition, fixed video cameras, drone as first responder, field-deployed drones, voluntary community video stream integration, and investigative software. The RFP made data security, privacy, and compliance the most heavily weighted scoring criterion, and required proposers to address restrictive-by-default data sharing, City ownership of all data, alignment with the City's sanctuary ordinances and SB 34, granular auditing, a prohibition on facial recognition, and financial penalties for unauthorized disclosure. The RFP process has concluded, and the Department looks forward to bringing the results to Council in the near future. Any new or expanded technology will continue to be subject to the review and approval requirements of BMC 2.99 and BMC 2.100.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

There are no identifiable environmental effects or opportunities associated with the content of this report.

RATIONALE FOR RECOMMENDATION

City Council is being requested to adopt the attached resolution for the City to be in compliance with the Ordinance.

RESOLUTION NO. XX,XXX-N.S.

ACCEPTING THE SURVEILLANCE TECHNOLOGY REPORT FOR BODY WORN CAMERAS, GPS TRACKERS, FIXED SURVEILLANCE VIDEO CAMERAS, AUTOMATED LICENSE PLATE READERS, THE STREET LEVEL IMAGERY PROJECT, UNMANNED AERIAL SYSTEMS, AND FIXED AUTOMATED LICENSE PLATE READERS

WHEREAS, on March 27, 2018, the City Council adopted Ordinance 7,592-N.S., which is known as the Surveillance Technology Use and Community Safety Ordinance ("Ordinance"); and

WHEREAS, Section 2.99.070 of the Ordinance requires that the City Manager must submit to the City Council a Surveillance Technology Report as defined by Section 2.99.020(2) of the Ordinance at the first regular City Council meeting in November; and

WHEREAS, the Surveillance Technology Reports satisfy the requirements of the Ordinance.

NOW THEREFORE, BE IT RESOLVED by the Council of the City of Berkeley that the Council hereby accepts the Surveillance Technology Reports for Body Worn Cameras, GPS Trackers, Fixed Surveillance Video Cameras, Automated License Plate Readers, the Street Level Imagery Project, and Unmanned Aerial Systems, and Fixed Automated License Plate Readers.

Surveillance Technology Report: Body Worn Cameras

October 1, 2025 – Sept. 30, 2026

Description	A description of all non-privileged and non-confidential information about use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report shall include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. Body Worn Cameras are used to capture video recordings of contacts between department personnel and the public, to provide an objective record of these events. These recording are used in support of criminal prosecutions, to limit civil liability, increase transparency and enhance professionalism and accountability in the delivery of police services to the community. Body Worn Camera (BWC) files are shared with the Alameda County District Attorney's office in support of prosecution for crime and may be shared with other law enforcement agencies to support criminal investigations. **Policy regarding activation of the Body Worn Camera BPD Policy 425.7** Members shall activate the BWC as required by this policy in (a)-(f) below and may activate the BWC at any time the member believes it would be appropriate or valuable to record an incident within the limits of privacy described herein. The BWC shall be activated in any of the following situations: (a) All in-person enforcement and investigative contacts including pedestrian stops and field interview (FI) situations. (b) Traffic stops including, but not limited to, traffic violations, stranded motorist assistance and all crime interdiction stops. (c) Self-initiated field contacts in which a member would normally notify the Communications Center. (d) Any search activity, including the service of search or arrest warrants; probation, parole, or consent searches where the member is seeking evidence of an offense, or conducting a safety sweep or community caretaking sweep of the premises. Once a location has been secured and the member is not interacting with detainees or arrestees, the member may mute their BWC when conducting a search for evidence. (e) Any other contact that the member determines has become adversarial after the initial contact in a situation where the member would not otherwise activate BWC recording. (f) Transporting any detained or arrested person and where a member facilitates entry into or out of a vehicle, or any time the member expects to have physical contact with that person. **What data is captured by this technology:** BWC use is limited to enforcement and investigative activities involving members of the public. The BWC recordings will capture video and audio evidence for use in criminal investigations, administrative reviews, training, civil litigation, and other proceedings protected by confidentiality laws and department policy. Improper use or release of BWC recordings may compromise ongoing criminal and administrative investigations or violate the privacy rights of those recorded and is prohibited.

How the data is stored:

BWC videos are stored on a secure server. All BWC data will be uploaded and stored on Axon Cloud Services, Evidence.com. Axon complies with the EU-U.S. Privacy Shield Framework and the Swiss-U.S. Privacy Shield Framework as set forth by the U.S. Department of Commerce regarding the collection, use, and retention of personal information transferred from the European Union and Switzerland to the United States (collectively, "Privacy Shield"). Axon has certified to the U.S. Department of Commerce that it adheres to the Privacy Shield Principles.

Retention duration of digital data:

All BWC videos and digital evidence are assigned a category. The categories are used to organize data. Each category also defines the retention duration. The category definitions and retention durations are as follows:

Category	Retention Duration
Uncategorized	Until manually deleted
187 / Felony Sex Assault	Until manually deleted
Civil / City / Non-Evidence	1 year
Collision	2 years
Consent / Aid	108 weeks
Detention / Warrant Only	108 weeks
Felony Evidence	5 years
Litigation	Until manually deleted
Misdemeanor Evidence	2 years
Officer Injury	Until manually deleted
OIS / Critical Incident	Until manually deleted
Pending Review	Until manually deleted
Personnel / VSA	3 years
Personnel Complaint	Until manually deleted
Traffic Stop	108 weeks
Training	60 days
Use of Force	108 weeks

Summary of Body Worn Camera Videos Uploaded Oct. 1, 2025 to Sept. 30, 2026:

Metric	Value
Number of BWC Videos	50,044
Hours of Videos	11,982
GB of Videos	20,876

Summary of all other active digital evidence uploaded, Oct. 1, 2025 to Sept. 30, 2026:

Type	File Count
Audio	1,434
Document	4,365

	<table><tr><td>Image</td><td>67,862</td></tr><tr><td>Other</td><td>988</td></tr><tr><td>Other Video*</td><td>10,540</td></tr><tr><td>Total</td><td>85,189</td></tr></table> * Includes all uploaded non-BWC videos and other videos booked into the evidence management system. Other videos include iPhone videos, security camera video, and copies of BWC videos (for redaction, etc.).
Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. Body Worn Cameras are worn by all BPD uniformed officers city-wide at all times; BWC's are not deployed based on geographic considerations.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology. During this reporting period, as part disciplinary reviews, the ODPA raised procedural concerns about body worn camera activation. The Department reviewed these concerns and found while there were cases where officers failed to activate or explain muting of their BWC there were no instances of intentional non-activation during the reporting period. These incidents have highlighted the need for the department to update policy and clarify training and expectations around BWC.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. File meta-data are routinely reviewed by our BWC manager, to ensure required metadata fields are completed. There have been no complaints with regards to violations of the Surveillance Use Policy.
Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There have been no known data breaches or other unauthorized access to BWC data.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. Body Worn Cameras have proven effective in supporting criminal prosecutions, as video footage is available for all criminal prosecutions. Body Worn Cameras have been effective for training purposes, as footage can be reviewed in incident de-briefs. Body Worn Cameras have been extremely effective in support of Internal Affairs investigations and Use of Force Review.
Costs	Total annual costs for the Surveillance Technology, including personnel and other ongoing costs. The annual cost for the Body Worn Cameras, including cameras, replacement cameras, software, and Axon's secure digital evidence management system is $222,442 per year over a five-year, $1,112,213 contract. The contracted started in 2022 and will expire in August, 2027. There is one full-time employee assigned to the BWC program, an Applications Programmer Analyst II, at a cost of $168,940 per year, including benefits.

Surveillance Technology Report: Global Positioning System Tracking Devices

October 1, 2025 – Sept. 30, 2026

Description	A description of all non-privileged and non-confidential information about use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report shall include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. Global Positioning System Trackers are used to track the movements of vehicles, bicycles, other items, and/or individuals. **What data is captured by this technology:** A GPS Tracker data record consists of date, time, latitude, longitude, map address, and tracker identification label. The data does not contain any images, names of subjects, vehicle information or other identifying information on individuals. **How the data is stored:** The data from the GPS tracker is encrypted by the vendor. The data is only accessible through a secure website to BPD personnel who have been granted security access. **Retention period of data:** Tracker data received from the vendor shall be kept in accordance with applicable laws, BPD policies that do not conflict with applicable law or court order, and/or as specified in a search warrant. The Global Positioning System "Electronic Stake Out" (ESO) devices were not deployed during this reporting period. COVERTTRACK Stealth V GPS devices were used in two separate investigations during this reporting period: • An investigation of a shooting. The suspect was arrested for PC 187 among numerous other violations. • An investigation of a robbery. The suspect was arrested for PC 211, PC 459 and PC 10851. Data may be shared with the District Attorney's Office for use as evidence to aid in prosecution, in accordance with laws governing evidence; other law enforcement personnel as a part of an active criminal investigation; and other third parties, pursuant to a court order.
Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. COVERTTRACK Stealth V GPS devices are deployed with judicial pre-approval, based on suspect location, rather than geographical consideration.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology. There were no complaints made regarding GPS Trackers.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. There were no known violations relating to GPS Trackers.

Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There were no known data breaches relating to GPS Trackers.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. The GPS ESO trackers were not used during this time period. The program was suspended in mid-March 2020 due to the COVID-19 pandemic and has not been reimplemented. Our subscription was renewed and we upgraded our equipment, however, we have not used the trackers during this reporting period. COVERTTRACK Stealth V GPS trackers are effective in that they provide invaluable information on suspect vehicle locations. During complex investigations, many suspects are moving throughout the Bay area and beyond. These devices assist investigators with developing information regarding suspect locations that may never have been discovered without GPS assistance. GPS trackers greatly reduce costs associated with surveillance operations. Surveillance operations generally involve three or more officers for the entire duration of an operation. A moving surveillance is extremely resource-intensive, requiring multiple officers in multiple vehicles for extended periods of time. Evidence can be fleeting, and GPS trackers allow officers to investigate in a timely manner. GPS trackers have assisted officers with recovering evidence that may have been removed or discarded if officers were unable to quickly develop a location for a suspect.
Costs	Total annual costs for the Surveillance Technology, including personnel and other ongoing costs. The annual cost for the COVERTTRACK Stealth V GPS data service is $1,834.53. There was no cost for the GPS “Electronic Stake Out” (ESO) this year. In April of 2022, the police department paid $2,364.88 to upgrade the devices and for three years of tracking service. There are staff time costs associated with preparing and placing COVERTTRACK GPS trackers. The investigator must prepare a search warrant and obtain a judge’s approval, and a small number of officers must place the tracker on the suspect’s car. The total number of hours is a fraction of the time it would take to do a full surveillance operation involving numerous officers. There are staff time costs associated with preparing ESO trackers and placing ESO tracker-equipped bikes for bait bike operations. The time associated to prepare an ESO GPS equipped surveillance is approximately two-four hours. The total number of hours is extremely small, given the large number of operations, and resulting arrests from prior cases.

Surveillance Technology Report: External Fixed Surveillance Video Cameras

October 1, 2025 – Sept. 30, 2026

Description	A description of all non-privileged and non-confidential information about use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report shall include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. External fixed surveillance cameras record video (without audio) to support investigations. Officers can view live feeds and access recordings stored for up to 180 days. These cameras provide situational awareness during active incidents and supply evidence that strengthens investigations and helps the District Attorney make charging decisions. **What data is captured by this technology:** The external fixed surveillance cameras record and capture non-audio activity (data) for the following purposes: i. To address identified areas of criminal activity. ii. To respond to critical incidents. iii. To assist in identifying, apprehending and prosecuting offenders. iv. To document officer and offender conduct during interactions to safeguard the rights of the public and officers. v. To monitor pedestrian and vehicle traffic activity in order to assist with traffic related investigations. vi. To document employee, employer, and/or customer conduct during interactions to safeguard the employee, employer, and customer from misconduct. **How the data is stored:** The data on the external fixed video surveillance cameras is stored in secure servers that are managed by the City of Berkeley Radio Shop. Each camera system (San Pablo Park, Berkeley Marina, University Avenue and Sixth Street) has its own respective server for data storage. **Retention period of data:** Video surveillance recordings are not government records pursuant to California Government Code 34090 in and of themselves. Except as otherwise permitted in this section, video surveillance recordings shall be purged within one hundred and eighty (180) days of recording. The external fixed video surveillance cameras at University Avenue and Sixth Street were accessed 9 times during this reporting period for investigations of robbery, traffic, and assault with a deadly weapon cases. The external fixed video surveillance cameras at San Pablo Park were accessed 2 times during this reporting period for investigations of shooting and robbery cases.

	The external fixed video surveillance cameras at the Berkeley Marina were accessed 21 times during this reporting period for investigations of auto burglary, traffic, theft, and robbery cases. Data may be shared with the District Attorney's Office for use as evidence to aid in prosecution, in accordance with laws governing evidence; other law enforcement personnel as a part of an active criminal investigation; and other third parties, pursuant to a court order.
Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. The external fixed video surveillance cameras are geographically deployed at San Pablo Park, the Berkeley Marina, and at the intersection of University Avenue and Sixth Street.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology. There were no known complaints associated with the external fixed video surveillance cameras.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. The required audits were completed and are attached below.
Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There were no known data breaches related to the external fixed video surveillance cameras.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. External fixed video surveillance cameras monitor pedestrian and vehicle activity and can assist investigators with criminal and traffic related investigations. The cameras are also meant to prevent and deter criminal activity and augment police resources in a cost-effective manner. A 2019 meta-analysis by Piza et al., covering 40 years of research, found that cameras are associated with a significant but modest decrease in crime. Vehicle crime and property crime fell significantly, but there was no significant effect on violent crime or disorder. The authors recommend targeting cameras at vehicle and property crime and not using them as a stand-alone measure.
Costs	Total annual costs for the Surveillance Technology, including personnel and other ongoing costs. The initial cost of the San Pablo Park Cameras was $64,829.46 The initial cost of the Marina cameras was $106,620.14 The annual cost for maintenance and other ongoing costs, including compliance and other reporting and oversight requirements is $13,443.20.

Berkeley Police Department Memorandum

To: Chief Louis

From: Arlo Malmberg, Strategic Planning and Accountability Manager

RE: Avigilon Surveillance Camera Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of the Avigilon camera system to assess compliance with Policy 1304, Surveillance Use Policy – External Fixed Video Surveillance Cameras. The audit scope included access records for the Avigilon camera system between July 1, 2025 and December 31, 2025 at the following locations: Marina, San Pablo Park, and the intersection of 6th Street and University Avenue. The audit methodology involved analyzing these access records for unauthorized access, data breaches, and prohibited uses.

The audit found full compliance with Policy 1304, with no instances of unauthorized access, data breaches, data errors, or prohibited uses detected. All system access was made by authorized personnel as stipulated in the policy.

BACKGROUND

Policy 1304 requires that surveillance camera data may only be accessed by trained and authorized BPD members for legitimate law enforcement purposes. Prohibited uses include discriminatory targeting, unauthorized dissemination of video footage, or surveillance inconsistent with civil liberties protections

SCOPE AND METHODOLOGY

The scope of this audit included all access records for the Avigilon camera system between July 1, 2025 and December 31, 2025.

The audit methodology involved:

1. Retrieving Avigilon camera system access records for the specified timeframe from the Avigilon platform.
2. Analyzing the records for any instances of unauthorized access, data breaches, or prohibited uses.
3. Verifying that all system access was made by authorized personnel as stipulated in Policy 1304.

FINDINGS

Objective 1: Authorized access

Criteria:

Berkeley Police Department Memorandum

1304.4 DATA ACCESS: “Access to video surveillance cameras data shall be limited to BPD personnel utilizing the camera database for uses described above and pursuant to Use Policy 351”

Inspection Procedure:

- Review all access records for the Avigilon camera system during the audit period.
- Verify that all access was made by authorized personnel.

Findings:

- All access by BPD staff to the Avigilon camera system was made by authorized personnel.
- System maintenance access by other City of Berkeley staff was also noted.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 2: No prohibited uses

Criteria:

1304.11 AUDITING AND OVERSIGHT: " BPD will enforce against prohibited uses of this policy pursuant to Policy 1010, Personnel Complaints or other applicable law or policy. The City Manager shall enforce against any prohibited use of the cameras and/or access to data by other City of Berkeley personnel.”

Inspection Procedure:

- Review access records for any indication of prohibited uses of the camera system or data.

Findings:

- No prohibited uses of the camera system or associated data were detected during the audit period.
    - Marina- 16 accesses for property crimes and robbery investigations, and for administrative purposes.
    - San Pablo Park- 9 accesses for shooting, domestic violence and traffic investigations, and for administrative purposes.
    - 6th Street & University- 11 accesses for brandishing, disturbance, robbery, stolen vehicle and traffic investigations, and for administrative purposes.

Recommendations:

- None. The 100% compliance rate meets department standards.

Berkeley Police Department Memorandum

To: Chief Louis

From: Arlo Malmberg, Strategic Planning and Accountability Manager

RE: Avigilon Surveillance Camera Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of the Avigilon camera system to assess compliance with Policy 1304, Surveillance Use Policy – External Fixed Video Surveillance Cameras. The audit scope included access records for the Avigilon camera system between January 1, 2026 and June 30, 2026 at the following locations: Marina, San Pablo Park, and the intersection of 6th Street and University Avenue. The audit methodology involved analyzing these access records for unauthorized access, data breaches, and prohibited uses.

The audit found full compliance with Policy 1304, with no instances of unauthorized access, data breaches, data errors, or prohibited uses detected. All system access was made by authorized personnel as stipulated in the policy.

BACKGROUND

Policy 1304 requires that surveillance camera data may only be accessed by trained and authorized BPD members for legitimate law enforcement purposes. Prohibited uses include discriminatory targeting, unauthorized dissemination of video footage, or surveillance inconsistent with civil liberties protections

SCOPE AND METHODOLOGY

The scope of this audit included all access records for the Avigilon camera system between January 1, 2026 and June 30, 2026.

The audit methodology involved:

1. Retrieving Avigilon camera system access records for the specified timeframe from the Avigilon platform.
2. Analyzing the records for any instances of unauthorized access, data breaches, or prohibited uses.
3. Verifying that all system access was made by authorized personnel as stipulated in Policy 1304.

FINDINGS

Objective 1: Authorized access

Criteria:

1304.4 DATA ACCESS: “Access to video surveillance cameras data shall be limited to BPD personnel utilizing the camera database for uses described above and pursuant to Use Policy 351”

Inspection Procedure:

- Review all access records for the Avigilon camera system during the audit period.
- Verify that all access was made by authorized personnel.

Findings:

- All access by BPD staff to the Avigilon camera system was made by authorized personnel.
- System maintenance access by other City of Berkeley staff was also noted.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 2: No prohibited uses

Criteria:

1304.11 AUDITING AND OVERSIGHT: " BPD will enforce against prohibited uses of this policy pursuant to Policy 1010, Personnel Complaints or other applicable law or policy. The City Manager shall enforce against any prohibited use of the cameras and/or access to data by other City of Berkeley personnel.”

Inspection Procedure:

- Review access records for any indication of prohibited uses of the camera system or data.

Findings:

- No prohibited uses of the camera system or associated data were detected during the audit period.
    - Marina- 15 accesses for property crimes and robbery investigations.
    - San Pablo Park- 1 access for a robbery investigation.
    - 6th Street & University- 3 accesses for collision investigations and for the investigation of a sexual assault of a minor.

Recommendations:

- None. The 100% compliance rate meets department standards.

Surveillance Technology Report: PEO Automated License Plate Readers

October 1, 2025 – Sept. 30, 2026

Description	A description of all non-privileged and non-confidential information about use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report shall include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. Automated License Plate Readers (ALPRs) are used by Parking Enforcement Officers (PEOs) for time zone parking. The City's Transportation Division uses anonymized information for purposes of supporting the City's Go Berkeley parking management program. PEO ALPR use replaced the practice of physically "chalking" tires, which a more effective means of identifying violators. **What data is captured by this technology:** ALPR technology functions by automatically capturing an image of a vehicle's license plate, transforming that image into alphanumeric characters using optical character recognition software, and storing that information, along with relevant metadata (e.g. geo-location and temporal information, as well as data about the PEO ALPR). **How the data is stored:** The data is stored on a secure server by the vendor. **Retention period of data:** During this reporting period collected images and metadata of hits were stored no more than 365 days. Reads and metadata of reads were not stored more than 14 days in accordance with policy 1302. Current use policy adopted September 13, 2022 sets retention periods that are now in effect. **Summary of PEO ALPR Time Zone Enforcement Data** Genetec is the vendor for the PEO ALPR Time Zone enforcement system. A "read" indicates the PEO ALPR system successfully read a license plate. The information that is generated when a plate is viewed by the PEO ALPR camera is the license plate number, state and geographical (GPS) location it was viewed. A "hit" indicates the PEO ALPR system detected a possible violation, which prompts the Parking Enforcement Officer to further assess the vehicle. At hit is when the read information is recognized as a license plate that matches, or does not match an entry in a list such as permit list or the stolen vehicle "hot list". In many cases, hits are "rejected" or "not enforced", meaning no enforcement action is taken, because the Parking Enforcement Officer determines the vehicle has an appropriate placard or permit, or there is other information or assignment which precludes citation. The following are key statistics for this reporting period: • 2,791,090 reads • 115,395 hits • 39,525 enforced hits resulted in citation issuance. • 2,221 not-enforced hits due to either, 1) PEO ALPR experiencing technical issues and PEO unable to validate the hit in the system, which only gives option to not enforce, or 2) PEO error in accepting the hit initially.

	• 73,649 hits were not acted upon for a variety of reasons including but not limited to: o Customer comes out to move a vehicle. PEO's are directed not to issue that citation. o PEO gets to the dashboard and sees a permit not visible from a previous location. o PEO does a vehicle evaluation and confirms that the vehicle moved from the hit location (e.g. across the street within GPS range). o Stolen car. o Similar plates. o GIG cars or Revel scooters. o PEOs mistakenly leave their PEO ALPR on collecting data, but leave the area being enforced to drive to another location on another assignment, such as a traffic post at a collision scene. All BPD PEO ALPR data may only be shared with other law enforcement or prosecutorial agencies for official law enforcement purposes, or as otherwise permitted by department policy and law. All PEO ALPR data is subject to the provisions of BPD Policy 415 - Immigration Law, and therefore may not be shared with federal immigration enforcement officials. During this reporting period there were no law enforcement investigative vehicle inquiries.
Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. Only Parking Enforcement Vehicles are equipped with PEO ALPRs. PEO ALPRs are deployed based on areas where there are parking time restrictions. PEO ALPRs are not deployed based on geographic considerations not related to parking enforcement.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology. There have been no complaints about the deployment and use of Automated License Plate Readers.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. The required audits were completed and are attached below.
Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There have been no known data breaches or other unauthorized access to Automated License Plate Reader data.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. PEO ALPRs have proven effective in parking enforcement for time zone enforcement. The PEO ALPRs' ability to read and check license plates while being driven greatly increases efficiency, allowing an operator to cover larger areas more quickly without having to stop except to confirm a hit.

	An additional benefit of the Parking Enforcement PEO ALPR system is that sometimes hits indicate a possible stolen vehicle. These hits allow for the timelier recovery of stolen vehicles in the City of Berkeley.
Costs	Total annual costs for the Surveillance Technology, including personnel and other ongoing costs. The annual system maintenance cost for Genetec is $51,720. This cost is borne by the Transportation Division, which covers warranties, support, and cellular connection costs. Genetec PEO ALPR units are installed on 22 Parking Enforcement vehicles. Parking Enforcement personnel perform a variety of parking enforcement activities and are not limited solely to time zone enforcement. Therefore, personnel costs specifically attributable to time zone enforcement are not tracked.

Berkeley Police Department Memorandum

To: Chief Louis

From: Arlo Malmberg, Strategic Planning and Accountability Manager

RE: Genetec Automated License Plate Reader Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of the Genetec ALPR system to assess compliance with Policy 1302, Surveillance Use Policy- Automated License Plate Reader (ALPR). The audit scope included access records for the Genetec ALPR system between July 1, 2025 and December 31, 2025. The audit methodology involved analyzing these access records for unauthorized access, data breaches, and prohibited uses.

The audit found full compliance with Policy 1302, with no instances of unauthorized access, data breaches, data errors, or prohibited uses detected. All system access was made by authorized personnel as stipulated in the policy.

BACKGROUND

Policy 1302 outlines the requirements for use and access to the Genetec ALPR systems by Parking Enforcement Officers. The policy mandates biannual audits of the ALPR system to ensure compliance and detect any unauthorized access or data breaches.

PRIOR AUDITS

The last audit was conducted in July 2025. No findings were recorded. The next audit will be conducted in July 2026.

SCOPE AND METHODOLOGY

The scope of this audit included all access records for the Genetec ALPR system between July 1, 2025 and December 31, 2025.

The audit methodology involved:

1. Retrieving Genetec ALPR system access records for the specified timeframe from the Parking Enforcement Manager.
2. Analyzing the records for any instances of unauthorized access, data breaches, or prohibited uses.
3. Verifying that all system access was made by authorized personnel as stipulated in Policy 1302.

FINDINGS

Objective 1: Authorized access to ALPR system

Criteria:

1302.5 DATA ACCESS (a): "Only properly trained Parking Enforcement Officers, Sworn Officers as selected by the Investigation's Division Captain, and Information Technology personnel are allowed access to the Genetec ALPR system or to collect ALPR information."

Inspection Procedure:

- Review all access records for the Genetec ALPR system during the audit period.
- Verify that all access was made by authorized personnel.

Findings:

- All access to the Genetec ALPR system was made by authorized personnel
- System maintenance access by Genetec personnel and City of Berkeley IT was also noted and deemed appropriate.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 2: No data breaches

Criteria:

1302.11 AUDITING AND OVERSIGHT (1): "Any unauthorized access or data breach shall be reported immediately to the City Manager..."

Inspection Procedure:

- Analyze access records for any signs of data breaches.
- Confirm with the Parking Enforcement Manager that no data breaches were reported during the audit period.

Findings:

- No data breaches were detected or reported during the audit period.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 3: No prohibited uses

Criteria:

1302.11 AUDITING AND OVERSIGHT (1): "...BPD will enforce against prohibited uses of the Genetec ALPR system, associated ALPR Read and Hit metadata, and lists and databases pursuant to Policy P-26, or other applicable law or policy."

Berkeley Police Department Memorandum

Inspection Procedure:

- Review access records for any indication of prohibited uses of the ALPR system or data.

Findings:

- No prohibited uses of the ALPR system or associated data were detected during the audit period.
- The majority of system accesses were by Genetec personnel for IT support and user management. The remaining accesses were primarily by the Parking Enforcement Manager and Parking Enforcement Officer Supervisors for reviewing system configurations and usage.

Recommendations:

- None. The 100% compliance rate meets department standards.

Berkeley Police Department Memorandum

From: Arlo Malmberg, Strategic Planning and Accountability Manager

RE: Genetec Automated License Plate Reader Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of the Genetec ALPR system to assess compliance with Policy 1302, Surveillance Use Policy- Automated License Plate Reader (ALPR). The audit scope included access records for the Genetec ALPR system between January 1, 2026 and June 30, 2026. The audit methodology involved analyzing these access records for unauthorized access, data breaches, and prohibited uses.

The audit found full compliance with Policy 1302, with no instances of unauthorized access, data breaches, data errors, or prohibited uses detected. All system access was made by authorized personnel as stipulated in the policy.

BACKGROUND

Policy 1302 outlines the requirements for use and access to the Genetec ALPR systems by Parking Enforcement Officers. The policy mandates biannual audits of the ALPR system to ensure compliance and detect any unauthorized access or data breaches.

SCOPE AND METHODOLOGY

The scope of this audit included all access records for the Genetec ALPR system between January 1, 2026 and June 30, 2026.

The audit methodology involved:

1. Retrieving Genetec ALPR system access records for the specified timeframe from the Parking Enforcement Manager.
2. Analyzing the records for any instances of unauthorized access, data breaches, or prohibited uses.
3. Verifying that all system access was made by authorized personnel as stipulated in Policy 1302.

FINDINGS

Objective 1: Authorized access to ALPR system

Criteria:

1302.5 DATA ACCESS (a): "Only properly trained Parking Enforcement Officers, Sworn Officers as selected by the Investigation's Division Captain, and Information Technology personnel are allowed access to the Genetec ALPR system or to collect ALPR information."

Inspection Procedure:

- Review all access records for the Genetec ALPR system during the audit period.
- Verify that all access was made by authorized personnel.

Findings:

- All access to the Genetec ALPR system was made by authorized personnel
- System maintenance access by Genetec personnel and City of Berkeley IT was also noted and deemed appropriate.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 2: No data breaches

Criteria:

1302.11 AUDITING AND OVERSIGHT (1): "Any unauthorized access or data breach shall be reported immediately to the City Manager..."

Inspection Procedure:

- Analyze access records for any signs of data breaches.
- Confirm with the Parking Enforcement Manager that no data breaches were reported during the audit period.

Findings:

- No data breaches were detected or reported during the audit period.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 3: No prohibited uses

Criteria:

1302.11 AUDITING AND OVERSIGHT (1): "...BPD will enforce against prohibited uses of the Genetec ALPR system, associated ALPR Read and Hit metadata, and lists and databases pursuant to Policy P-26, or other applicable law or policy."

Inspection Procedure:

- Review access records for any indication of prohibited uses of the ALPR system or data.

Findings:

- No prohibited uses of the ALPR system or associated data were detected during the audit period.
- The majority of system accesses were by Genetec personnel for IT support and user management. The remaining accesses were primarily by the Parking Enforcement Manager and Parking Enforcement Officer Supervisors for reviewing system configurations and usage.

Recommendations:

- None. The 100% compliance rate meets department standards.

Surveillance Technology Report: Street Level Imagery Project

October 1, 2025 – Sept. 30, 2026

Description	A description of all non-privileged and non-confidential information about the use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report will include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. Street level imagery is utilized exclusively by authorized City staff for infrastructure asset management and planning activities. The street level imagery of City infrastructure assets in the Public Right of Way that is provided to the City will not consist of information that is capable of being associated with any individual or group.
Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. Street level imagery was collected by driving through the entire community over a three week period in December of 2020. It is accessible to the City through a proprietary third-party application, Street Smart TM.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology. There have been no complaints about the use of Street Smart TM.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. There have been no complaints with regards to the Street Level Imagery Project.
Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There have been no known data breaches or other unauthorized access to Cyclomedia Street Level Imagery data.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. Staff considered hiring contractors to use GPS in the field to create and update the infrastructure asset GIS data. This method is costly and time consuming. Cyclomedia's unique and patented processing techniques allow positionally-accurate GIS data to be collected in a cost-effective way and over a shorter period of time than a "boots on the ground" GPS field survey. The Imagery extracted the following Citywide Infrastructure assets to create accurate and current Geographic Information Systems (GIS) data inventories: • Bus pads / stops • Maintenance Access Holes • Pavement Striping • Curb paint color • Parking meters • Pedestrian Signal • Pavement marking • Storm drains • Signs • Street trees • Traffic lights The street level imagery captured was used to: Create a street sign GIS layer with condition assessment to support compliance with the Manual on Uniform Traffic Control Devices Code and provide an accurate inventory of

City signs. The prior sign inventory is contained in a spreadsheet that does not have accurate location data.

Created a curb color layer with condition assessment to indicate where there are red, yellow, blue, white and green colors. This is critical to support Public Safety.

Created pavement striping and paint symbol layers to support Transportation Planning and Vision Zero.

Benefits:

The data from the street level imagery was integrated into the City's work order and asset management system for planning activities and to document repair and maintenance.

Planners can use the street level imagery provided to the City to take measurements remotely, such as sidewalk width and public right of way impacts at proposed development locations.

The data provides a comprehensive snapshot of the City that would be helpful for cost recovery in the event of a major disaster.

City staff can use the street level imagery to plan the location of road markings for pedestrian crossings, bike lanes or other striping.

City staff can remotely take accurate measurements of infrastructure assets to adequately plan for repair and replacement.

City staff can use street level imagery to enhance community engagement. The street level imagery can be used to identify and depict the impact of development such as an intersection restriping plan in order to article before and after conditions.

Costs

Total annual costs for the Surveillance Technology, including personnel and other ongoing costs.

The total cost of the system is $230,277 and is itemized below.

Year No.	Description	Cost	Notes
1	Licenses	$48,000	Resolution No: 69,482-N.S. 30JUN20
1	Professional Services for asset extraction	$122,337	Resolution No: 69,482-N.S. 30JUN20
2	Licenses and Support – One-Time	$43,500	Resolution No: 70,487-N.S. 26JUL22
3	License and Support – Ongoing Annual Costs	$4,110	Resolution No: 70,487-N.S. 26JUL22
4	License and Support – Ongoing Annual Costs	$4,110	Resolution No: 70,487-N.S. 26JUL22
5	License and Support – Ongoing Annual Costs	$4,110	Resolution No: 70,487-N.S. 26JUL22
6	License and Support –	$4,110	Resolution No: 70,487-N.S.

		Ongoing Annual Costs		26JUL22

Surveillance Technology Report: Unmanned Aerial Systems

October 1, 2025 – Sept. 30, 2026

Description	A description of all non-privileged and non-confidential information about use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report shall include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. Unmanned Aerial Systems (UAS) also commonly referred to as a drone are requested pursuant to our Mutual Assistance protocols. If a situation arises wherein the safety to the community, officers, or the offender can be increased through the means of de-escalation (adding time and distance to the situation) a supervisor can make the request. During this reporting period, the Police Department sought mutual assistance for drones on 5 occasions. **What data is captured by this technology:** Unmanned Aerial Systems are owned and operated by the respective agency. While each piece of equipment is unique, generally UAS can both record video and audio, while transmitting the data to the operator, thereby qualifying as a piece of Surveillance Technology pursuant to BMC 2.99.020. **How the data is stored:** During this reporting period Alameda County Sherriff's Office (ACSO) assisted the Berkeley Police Department by providing drones. Per their policy, ACSO retains images captured during a UAS mission if there is reasonable suspicion of criminal activity. BPD personnel would request that evidence from those agencies if it was needed in support of criminal activity. During this reporting period no data was stored by BPD. **Retention period of data:** Policy 1303.7: If available, any data collected by the use of a UAS should be purged by BPD within 60 days if it doesn't contain any data of evidentiary value. If the data has evidentiary value, it should be uploaded into BPD's evidence database and kept pursuant to the established retention guidelines set forth in policy 804-Records Maintenance and Release. **Summary of Uses of UAS** • Training (11/7/25): BPD hosted a demonstration of Drone as First Responder technology. • Training (1/7/26): BPD hosted a demonstration of Drone as First Responder technology. • Case 25-00011468 (3/12/26): ACSO drone deployed in Berkeley during a warrant service for homicide suspects. Use aligned with policy provisions for service of high-risk warrants and arrest of armed and/or dangerous persons. • Case 26-00032972 (07/29/2026): ACSO drone deployed as SRT served a high-risk warrant for an attempted murder suspect in San Leandro. Use aligned with policy provisions for service of high-risk warrants and arrest of armed and/or dangerous persons. • Training (9/22/26): BPD hosted a demonstration of Drone as First Responder technology.

Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. A UAS was used 5 times during this reporting period; 4 times in Berkeley, once in San Leandro.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology. During this reporting period the City received no complaints about the deployment of UAS.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. There were no known violations relating to the UAS Surveillance Use Policy.
Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There have been no known data breaches or other unauthorized access to any of the data from UAS.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. UAS are often used to search properties before officers. This allows officers to see video from the UAS and confirm a suspect is not waiting inside with a weapon. By sending the UAS in before officers, the risk of a confrontation that could result in death or serious injury to the suspect, others inside the house and officers, is significantly reduced. This was a lower-use year, though longer-term trends show regular use. The drop partly reflects the time it takes to get a drone from an outside agency, which makes requesting one less practical. In one instance, personnel on scene waited over an hour and a half for a UAS to arrive. Having equipment in the city can reduce that delay and increase safety. Adding enough officers to match aerial coverage is not feasible given hiring and training challenges, and ground-based units lack the elevated perspective needed for efficient searches and for maintaining the additional time and distance for de-escalation that UAS provide.
Costs	Total annual costs for the Surveillance Technology, including personnel and other ongoing costs. The annual cost for UAS is zero as the uses were covered by the responding agencies under the Mutual Assistance agreement. The only costs associated is staff time at each respective incident, however no costs for the use of the technology were incurred. It should be noted that some agencies have indicated an intent to charge for personnel costs associated with providing a drone.

Berkeley Police Department Memorandum

To: Chief Louis

From: Arlo Malmberg, Strategic Planning and Accountability Manager

RE: Unmanned Aerial Systems Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of Unmanned Aerial System (UAS) use to assess compliance with Policy 1303, Surveillance Use Policy – Unmanned Aerial System, and Policy 611, Unmanned Aerial System Operations. The audit scope covered all UAS requests and deployments between July 1, 2025 and December 31, 2025.

The audit reviewed two UAS deployments. The uses complied with the mutual assistance requirements outlined in the policies. No unauthorized deployments, prohibited uses, or data handling violations were identified.

BACKGROUND

Policies 1303 and 611 limit UAS use to specific circumstances, including hazardous incidents, rescues, high-risk warrant services, and other situations where remote aerial support enhances safety. BPD personnel may not operate drones directly; instead, UAS are deployed through mutual aid agreements with outside agencies.

The policies also require that data collection, storage, and sharing be restricted to legitimate law enforcement purposes. UAS data must be purged within 60 days unless it holds evidentiary value, in which case it is retained under Policy 804 (Records Maintenance and Release).

SCOPE AND METHODOLOGY

The scope of this audit included all UAS deployments between January 1, 2025 and June 30, 2025.

The audit methodology involved:

1. Reviewing case reports and deployment records for all UAS uses during the audit period.
2. Confirming that each deployment met the authorized use criteria in Policies 1303 and 611.

Berkeley Police Department Memorandum

SUMMARY OF FINDINGS

Objective #	Audit Objectives	% Meeting Standards
1	Authorized deployments	100%
2	No prohibited uses	100%

DETAILED FINDINGS

Objective 1: Authorized deployments

Criteria:

611.5 AUTHORIZED USE: "The use of the UAS shall only occur as the result of a mutual assistance request, and no BPD personnel will be allowed to operate a UAS. UAS may only be requested for the purposes of remote surveillance and monitoring in the following specified situations: … arrest of armed and/or dangerous persons; service of high risk search and arrest warrants involving armed and/or dangerous persons; other unforeseen exigent circumstances"

Inspection Procedure:

- Reviewed each deployment for compliance with authorized categories.

Findings:

Case 25-00027771 (9/3/25, San Francisco):

San Francisco PD drone deployed during a high-risk homicide warrant service. Two suspects were taken into custody, and firearms were recovered. Use aligned with policy provisions for high-risk warrant service.

Training (11/7/25)

BPD hosted a demonstration of Drone as First Responder technology.

Recommendations:

- None. The 100% compliance rate meets department standards.

Objective 2: No prohibited uses

Criteria:

611.4 PROHIBITED USE: "The UAS video surveillance equipment shall not be used:

- To conduct random surveillance activities.

- To target a person based solely on actual or perceived characteristics, such as race, ethnicity, national origin, religion, sex, sexual orientation, gender identity or expression, economic status, age, cultural group, or disability.
- To harass, intimidate, or discriminate against any individual or group.
- To conduct personal business of any type.

The UAS shall not be weaponized"

Inspection Procedure:

- Reviewed deployment records and summaries for any evidence of prohibited activity.

Findings:

- Reviewed deployment records and summaries for any evidence of prohibited activity.

Recommendations:

- None. The 100% compliance rate meets department standards.

Berkeley Police Department Memorandum

To: Chief Louis

From: Arlo Malmberg, Strategic Planning and Accountability Manager

RE: Unmanned Aerial Systems Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of Unmanned Aerial System (UAS) use to assess compliance with Policy 1303, Surveillance Use Policy – Unmanned Aerial System, and Policy 611, Unmanned Aerial System Operations. The audit scope covered all UAS requests and deployments between January 1, 2026 and June 30, 2026.

The audit reviewed three UAS deployments. Each use complied with the mutual assistance requirements outlined in the policies. No unauthorized deployments, prohibited uses, or data handling violations were identified.

BACKGROUND

Policies 1303 and 611 limit UAS use to specific circumstances, including hazardous incidents, rescues, high-risk warrant services, and other situations where remote aerial support enhances safety. BPD personnel may not operate drones directly; instead, UAS are deployed through mutual aid agreements with outside agencies.

The policies also require that data collection, storage, and sharing be restricted to legitimate law enforcement purposes. UAS data must be purged within 60 days unless it holds evidentiary value, in which case it is retained under Policy 804 (Records Maintenance and Release).

SCOPE AND METHODOLOGY

The scope of this audit included all UAS deployments between January 1, 2025 and June 30, 2025.

The audit methodology involved:

1. Reviewing case reports and deployment records for all UAS uses during the audit period.
2. Confirming that each deployment met the authorized use criteria in Policies 1303 and 611.

Berkeley Police Department Memorandum

SUMMARY OF FINDINGS

Objective #	Audit Objectives	% Meeting Standards
1	Authorized deployments	100%
2	No prohibited uses	100%

- Reviewed deployment records and summaries for any evidence of prohibited activity.

Findings:

- Reviewed deployment records and summaries for any evidence of prohibited activity.

Recommendations:

- None. The 100% compliance rate meets department standards.

Surveillance Technology Report: Fixed Automated License Plate Readers

October 1, 2025 – September 30, 2026

Description	A description of all non-privileged and non-confidential information about use of the Surveillance Technology, including but not limited to the quantity of data gathered and sharing of data, if any, with outside entities. If sharing has occurred, the report shall include general, non-privileged and non-confidential information about recipient entities, including the names of the entities and purposes for such sharing. Fixed Automated License Plate Readers (ALPRs) capture images of license plates and convert them to alphanumeric characters. Each detection includes time, GPS location, plate state, and camera ID. The system flags plates against hotlists or BOLOs set by BPD for law-enforcement purposes. No facial recognition is used. **What data is captured by this technology:** • Plate image and cropped plate image • Parsed plate number and state • Date/time and GPS location • Camera identifier and system metadata **How the data is stored:** Flock hosts the data in its secure cloud environment. **Retention period of data:** Retention follows BPD's ALPR policy for fixed systems. Plate detections ("reads") are retained 30 days. Images and metadata associated with investigative "hits" are retained 30 days unless preserved by case hold. **Summary of Fixed ALPR Data** The alert figures below represent the number of times the system flagged license plates during the reporting period. The first three categories—felony vehicle, stolen vehicle, and stolen license plate alerts—were generated through the California SVS (Stolen Vehicle System). The "hotlist alerts" reflect license plates tied to ongoing BPD investigations into specific crimes. o 71 felony vehicle alerts o 610 stolen vehicle alerts o 64,675 stolen license plate alerts o 759 hotlist alerts BPD shares ALPR data only with California law-enforcement agencies for official law-enforcement purposes, not for federal immigration enforcement. During this period, access was limited to California agencies that signed a letter agreeing to follow state law with respect to ALPR usage.
Geographic Deployment	Where applicable, non-privileged and non-confidential information about where the surveillance technology was deployed geographically. The 52 cameras are fixed at locations across Berkeley. Positioning focuses on city ingress/egress points and high-traffic corridors that support crime-prevention and investigative leads.
Complaints	A summary of each complaint, if any, received by the City about the Surveillance Technology.

	There have been no submitted complaints about the deployment and use of Automated License Plate Readers. During this reporting period the Department became aware of federal access by Western States Information Network (WSIN) analysts of San Francisco PD ALPR data through the Northern California Regional Intelligence Center (NCRIC). These searches did not occur in Berkeley due to the department's sharing settings. The Department turned off Flock's statewide lookup setting in July 2025 and limited sharing to Bay Area agencies. The reported NCRIC and WSIN incident occurred after that change. The reports of this access were published after BPD's audit of the corresponding time period (July-Dec 2025) but upon hearing of the issue the Department retroactively confirmed that no WSIN searches appeared on Berkeley's network and advised Council and PAB of the findings.
Audits and Violations	The results of any non-privileged internal audits, any information about violations or potential violations of the Surveillance Use Policy, and any actions taken in response. The required audit was completed and is attached below. During this reporting period, the PAB expressed interest in the department's audit practices and in response the Department has offered to work with the PAB on continuing to strengthen its audit protocols across all surveillance technologies.
Data Breaches	Non-privileged and non-confidential information about any data breaches or other unauthorized access to the data collected by the surveillance technology, including information about the scope of the breach and the actions taken in response. There have been no known data breaches or other unauthorized access to Fixed Automated License Plate Reader data.
Effectiveness	Information that helps the community assess whether the Surveillance Technology has been effective in achieving its identified outcomes. Effectiveness in public safety is a multifaceted concept that cannot be captured by a single metric. While statistical data is a critical component, the Department evaluates the utility of these tools through a variety of lenses to ensure a holistic assessment of their value to the community. The identified outcomes for fixed ALPRs are to aid criminal investigations and recover stolen property. During the reporting period, the technology was effective in meeting these outcomes: the system was instrumental in at least 59 arrests, assisted in at least 101 investigations, including those for homicides, robberies and commercial burglaries, and led to the recovery of at least 18 stolen vehicles. Additionally, robbery closure rates jumped 10 percentage points in the nine months after ALPR implementation compared to the previous nine month period. The strongest evidence on effectiveness comes from a 2026 study by University of South Carolina criminologists Scott Mourtgos and Ian Adams. It is the first large-scale causal evaluation of fixed ALPR networks. The study tracked 216 agencies as they deployed fixed ALPRs at different times, using official FBI crime data. It found that motor vehicle theft fell 11 percent after deployment, and arrest clearance rates for motor vehicle theft rose by 16 percent. Motor vehicle theft is historically one of the hardest crimes to clear by arrest, and Mourtgos said the results suggest a real public safety benefit for jurisdictions that adopt the technology. Local experience is consistent with this. When Richmond turned its cameras off, its police chief reported that auto thefts rose 33 percent and there was a slowdown in arrests and vehicle recoveries.

Costs	Total annual costs for the Surveillance Technology, including personnel and other ongoing costs. $179,500 for year one, and $165,000 in year two and any subsequent years.

Berkeley Police Department Memorandum

To: Chief Louis
From: Arlo Malmberg, Strategic Planning and Accountability Manager
RE: Flock Automated License Plate Reader Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of the Flock ALPR system to assess compliance with Policy 1305, Surveillance Use Policy- Fixed Automated License Plate Reader (ALPR). The audit scope included access records for the Flock ALPR system between July 1, 2025 and December 31, 2025. The audit methodology involved analyzing these access records for unauthorized access, data breaches, and prohibited uses.

BACKGROUND

Policy 1305 outlines the requirements for use and access to the Flock ALPR systems by BPD staff. The policy mandates biannual audits of the ALPR system to ensure compliance and detect any unauthorized access or data breaches.

SCOPE AND METHODOLOGY

The scope of this audit included all access records for the Flock ALPR system between July 1, 2025 and December 31, 2025.

The audit methodology involved:

1. Reviewing system access records for the specified timeframe from the Flock platform.
2. Analyzing the records for any instances of unauthorized access, data breaches, or prohibited uses as stipulated in Policy 1305.

FINDINGS

Objective 1: BPD - Authorized Access

Criteria:

1305.3 AUTHORIZED AND PROHIBITED USES (j): " Login/Log-Out Procedure. To ensure proper operation and facilitate oversight of the ALPR system, all users will be required to have individual credentials for access and use of the systems and/or data, which has the ability to be fully audited."

Inspection Procedure:

- Review all access records for the Flock ALPR system during the audit period.
- Verify user roles.

Findings:

- All access to the Flock ALPR system was made by authorized personnel.

Berkeley Police Department Memorandum

Objective 2: BPD - Permitted Uses

Criteria:

1305.3 AUTHORIZED AND PROHIBITED USES (k): "Permitted/Impermissible Uses. The ALPR system, and all data collected, is the property of the Berkeley Police Department. Department personnel may only access and use the ALPR system for official and legitimate California law enforcement purposes consistent with this Policy. The following uses of the ALPR system are specifically prohibited:

1. Invasion of Privacy: Except when done pursuant to a court order such as a search warrant, is a violation of this Policy to utilize the ALPR to record license plates except those of vehicles that are exposed to public view (e.g., vehicles on a public road or street, or that are on private property but whose license plate(s) are visible from a public road, street, or a place to which members of the public have access, such as the parking lot of a shop or other business establishment).
2. Harassment or Intimidation: It is a violation of this Policy to use the ALPR system to harass and/or intimidate any individual or group.
3. Use Based on a Protected Characteristic. It is a violation of this policy to use the LPR system or associated scan files or hot lists solely because of a person's, or group's race, gender, religion, political affiliation, nationality, ethnicity, sexual orientation, disability, or other classification protected by law.
4. Personal Use: It is a violation of this Policy to use the ALPR system or associated scan files or hot lists for any personal purpose.
5. First Amendment Rights. It is a violation of this policy to use the LPR system or associated scan files or hot lists for the purpose or known effect of infringing upon First Amendment rights."

Inspection Procedure:

- Query access records for terms associated with impermissible use.
- Confirm that each search recorded a case/incident number and/or reason.
- Randomly select 100 searches and verify alignment between investigation and search.

Findings:

- No impermissible uses detected across officer activity. Reasons documented in line with Policy 1305's requirement to capture case/incident number and/or reason.
- All randomly selected searches were verified to align with the documented case/incident.

Berkeley Police Department Memorandum

Objective 3: External - Authorized Access

Criteria:

1305.10 THIRD PARTY DATA-SHARING: "The ALPR data may be shared only with other law enforcement or prosecutorial agencies for official law enforcement purposes or as otherwise permitted by law....The Berkeley Police Department does not permit the sharing of ALPR data gathered by the City or its contractors/subcontractors for purpose of federal immigration enforcement, these federal immigration agencies include Immigrations and Customs Enforcement (ICE) and Customs and Border Patrol (CBP)."

Inspection Procedure:

- Query access records for Federal and out-of-state agencies.

Findings:

- No Federal or out-of-state agencies searched across BPD's ALPR network.

Objective 4: External – Permitted Uses

Criteria:

1305.10 THIRD PARTY DATA-SHARING: "The ALPR data may be shared only with other law enforcement or prosecutorial agencies for official law enforcement purposes or as otherwise permitted by law....The Berkeley Police Department does not permit the sharing of ALPR data gathered by the City or its contractors/subcontractors for purpose of federal immigration enforcement, these federal immigration agencies include Immigrations and Customs Enforcement (ICE) and Customs and Border Patrol (CBP)."

Inspection Procedure:

- Query access records for terms associated with impermissible use.

Findings:

- 0 searches referenced "ICE" or "CBP"
- In the period following the departmental actions taken after the previous audit, one agency made a series of searches with the search reason "HSI." During a routine review of search records, BPD discovered the searches, promptly revoked the agency's sharing access and notified the City Council via the City Manager as well as the Director of Police Accountability and the Police Accountability Board. BPD leadership contacted the agency directly and upon further investigation, the searches were found to be for a local violence suppression investigation and not connected to federal immigration agencies or investigations. After confirming that the search reason was within 1305.10 permissible sharing, the agency's access was restored.

Berkeley Police Department Memorandum

From: Arlo Malmberg, Strategic Planning and Accountability Manager
RE: Flock Automated License Plate Reader Audit

OVERVIEW

The Berkeley Police Department's Strategic Planning and Accountability Manager conducted an audit of the Flock ALPR system to assess compliance with Policy 1305, Surveillance Use Policy- Fixed Automated License Plate Reader (ALPR). The audit scope included access records for the Flock ALPR system between January 1, 2026 and June 30, 2026.

BACKGROUND

Policy 1305 outlines the requirements for use and access to the Flock ALPR systems by BPD staff. The policy mandates biannual audits of the ALPR system to ensure compliance and detect any unauthorized access or data breaches.

SCOPE AND METHODOLOGY

The scope of this audit included all access records for the Flock ALPR system between January 1, 2026 and June 30, 2026.

The audit methodology involved:

1. Reviewing system access records for the specified timeframe from the Flock platform.
2. Analyzing the records for any instances of unauthorized access, data breaches, or prohibited uses as stipulated in Policy 1305.
3. For each search pattern flagged by Flock's audit assistance tools, reviewing the associated incident documentation to verify that the queried license plate was connected to the underlying incident.

FINDINGS

Objective 1: BPD - Authorized Access

Criteria:

1305.3 AUTHORIZED AND PROHIBITED USES (j): " Login/Log-Out Procedure. To ensure proper operation and facilitate oversight of the ALPR system, all users will be required to have individual credentials for access and use of the systems and/or data, which has the ability to be fully audited."

Inspection Procedure:

- Review all access records for the Flock ALPR system during the audit period.
- Verify user roles.

Berkeley Police Department Memorandum

Findings:

- All access to the Flock ALPR system was made by authorized personnel.

Objective 2: BPD - Permitted Uses

Criteria:

1305.3 AUTHORIZED AND PROHIBITED USES (k): "Permitted/Impermissible Uses. The ALPR system, and all data collected, is the property of the Berkeley Police Department. Department personnel may only access and use the ALPR system for official and legitimate California law enforcement purposes consistent with this Policy. The following uses of the ALPR system are specifically prohibited:

1. Invasion of Privacy: Except when done pursuant to a court order such as a search warrant, is a violation of this Policy to utilize the ALPR to record license plates except those of vehicles that are exposed to public view (e.g., vehicles on a public road or street, or that are on private property but whose license plate(s) are visible from a public road, street, or a place to which members of the public have access, such as the parking lot of a shop or other business establishment).
2. Harassment or Intimidation: It is a violation of this Policy to use the ALPR system to harass and/or intimidate any individual or group.
3. Use Based on a Protected Characteristic. It is a violation of this policy to use the LPR system or associated scan files or hot lists solely because of a person's, or group's race, gender, religion, political affiliation, nationality, ethnicity, sexual orientation, disability, or other classification protected by law.
4. Personal Use: It is a violation of this Policy to use the ALPR system or associated scan files or hot lists for any personal purpose.
5. First Amendment Rights. It is a violation of this policy to use the LPR system or associated scan files or hot lists for the purpose or known effect of infringing upon First Amendment rights."

Inspection Procedure:

- Query access records for terms associated with impermissible use.
- Confirm that each search recorded a case/incident number and/or reason.
- Randomly select 100 searches and verify alignment between investigation and search.
- Review all search patterns flagged by Flock's audit assistance tools during the audit period.

Findings:

- No impermissible uses detected across officer activity. Reasons documented in line with Policy 1305's requirement to capture case/incident number and/or reason.
- All randomly selected searches were verified to align with the documented case/incident.

Berkeley Police Department Memorandum

- Flock's audit assistance tools flagged 35 search patterns during the audit period. For each, the associated incident documentation was reviewed and the queried plate was verified as connected to the incident. No pattern lacked a corresponding incident connection.

Objective 3: External - Authorized Access

Criteria:

1305.10 THIRD PARTY DATA-SHARING: "The ALPR data may be shared only with other law enforcement or prosecutorial agencies for official law enforcement purposes or as otherwise permitted by law....The Berkeley Police Department does not permit the sharing of ALPR data gathered by the City or its contractors/subcontractors for purpose of federal immigration enforcement, these federal immigration agencies include Immigrations and Customs Enforcement (ICE) and Customs and Border Patrol (CBP)."

Inspection Procedure:

- Query access records for Federal and out-of-state agencies.

Findings:

- No Federal or out-of-state agencies searched across BPD's ALPR network.

Objective 4: External – Permitted Uses

Criteria:

1305.10 THIRD PARTY DATA-SHARING: "The ALPR data may be shared only with other law enforcement or prosecutorial agencies for official law enforcement purposes or as otherwise permitted by law....The Berkeley Police Department does not permit the sharing of ALPR data gathered by the City or its contractors/subcontractors for purpose of federal immigration enforcement, these federal immigration agencies include Immigrations and Customs Enforcement (ICE) and Customs and Border Patrol (CBP)."

Inspection Procedure:

- Query access records for terms associated with impermissible use.

Findings:

- 0 searches referenced "ICE" or "CBP"

Submitted by: David White, Deputy City Manager

Subject: Staff Shortages: City Services Constrained by Staff Retention Challenges and Delayed Hiring Audit Status Report

INTRODUCTION

On July 11, 2023, the City Auditor submitted a *Staff Shortages: City Services Constrained by Staff Retention Challenges and Delayed Hiring* audit report[1] to the City Council with recommendations that the City establish retention goals, conduct an analysis of staff needed for city services and consider staff capacity around new legislation. It was also recommended that the City take steps to address employee satisfaction and improve the recruiting and hiring process. Further, the audit recommended that the City expand the telework policy to align with best practices and regularly collect data on employee satisfaction and on diversity, equity, inclusion, and accessibility.

The purpose of this information item is to update City Council on the status of implementation of the audit report's recommendations. This is the fourth status report regarding this audit.

CURRENT SITUATION AND ITS EFFECTS

The audit included 25 recommendations. As detailed in Attachment 1, 21 of the audit's 25 recommendations (84%) have been implemented, an increase of six since the previous status update. As of the writing of this report, one (1) of those recommendations have not been started, three (3) have been partially implemented and twenty one (21) have been implemented. The City has maintained progress on implementation and demonstrated commitment to addressing audit findings despite fiscal constraints and staffing reductions that resulted from the adoption of the FY 27 – FY 28 Biennial Budget that impacted both the City Manager's Office and Human Resources Department. The progress made by staff is a testament to the organization's focus not only on addressing audit findings but strengthening the workforce.

[1] Staff Shortages: City Services Constrained by Staff Retention Challenges and Delayed Hiring (https://berkeleyca.gov/sites/default/files/documents/Staff%20Shortages%20--%20City%20Services%20Constrained%20by%20Staff%20Retention%20Challenges%20and%20Delayed%20Hiring_0.pdf)

The Human Resources Department continues to prioritize training, recruitment, and retention initiatives. Efforts include expanded organizational training opportunities to enhance employee development opportunities and career advancement, outreach strategies, and strengthened candidate pipelines. Technology and dashboards are leveraged to track vacancies, hiring timelines, and training completion data, providing visibility into workforce trends and allowing departments to target resources where they are most needed. These tools, paired with annual reporting requirements pursuant to state law, enhanced recruitment campaigns and consistent onboarding improvements, support the City's commitment to transparency and maintaining a skilled and engaged workforce despite fiscal and staffing challenges.

In addition, the City Manager's Office has expanded communication efforts through new platforms, regular engagement opportunities, and leadership convenings. These initiatives are being integrated into ongoing plans to strengthen transparency, employee engagement, and organizational culture.

Finally, of the items that are partially implemented, two of them are contingent on action to be taken by the Mayor and City Council. For Recommendation 2.2, the Mayor and City Council can determine whether additional guidance is needed regarding staff capacity when introducing new legislation. Also, for Recommendation 5.5, the City Auditor's Office indicated that the Mayor and City Council need to determine the best department to perform employee satisfaction surveys. Given staffing reductions, it would make sense for the Human Resources Department to lead this work, as resources allow.

Please see Attachment 1 for a detailed table of audit report recommendations, corrective action plans, and implementation progress. The next status report to Council is expected to be presented in Fall 2027.

BACKGROUND

The findings of the audit and implementing its recommendations have been valuable in strengthening the workforce and organization. While many of the recommendations require notable time and resources, progress has been made. Despite resource constraints, focus remains on enhancing employee satisfaction, retaining valuable staff members, refining hiring processes, and expanding training opportunities. A dedicated and motivated workforce is crucial to the successful functioning of the organization and the delivery of quality services to the Berkeley community.

The organization continues to focus on being an employer of choice, providing an environment that fosters growth, recognition, and professional development for employees. By creating a workplace that promotes job satisfaction and overall well-being, the organization can better prevent the challenges of the staffing crisis.

Staff will continue to keep the City Council informed of progress, sharing updates on the implementation of initiatives, and improvements made in staffing strategies.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS
There are no identifiable environmental effects, climate impacts, or sustainability opportunities associated with the subject of this report.

ALTERNATIVE ACTIONS CONSIDERED

1. Audit Findings, Recommendations, and Status Updates

Audit Title: Staff Shortages: City Services Constrained by Staff Retention Challenges and Delayed Hiring

Issue Date: June 22, 2023

Table: Audit Recommendation Statuses

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Staff shortages constrained city services.	**1.1** Establish citywide retention goals and report to City Council on progress towards those goals biennially.	City Manager	Partly Implemented	**Implemented.** Human Resources presents on the status of vacancies and recruitment and retention efforts at a public hearing before City Council once per fiscal year. Their last report to City Council noted above a 90% retention rate. Human Resources will continue to incorporate retention rates into the annual report and strive for at least a 90% retention rate.
Staff shortages constrained city services.	**1.2** Conduct a staffing analysis based on critical needs to identify the number and type of full-time equivalent positions needed for successful city operations and services. The City may consider conducting this analysis one department at a time based on available resources.	City Manager	Partly Implemented	**Implemented.** Various departments and divisions have performed staffing analyses to inform operations, including the Police department, Fire department, and Neighborhood Services division. Given the City's fiscal constraints, where possible, additional staffing analyses will be performed over time. Staffing levels will be aligned with available resources.
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.1** Review the highest priority city job descriptions to ensure they accurately reflect job duties.	City Manager	Implemented	**Implemented.** Human Resources identified the highest priority job descriptions for revisions and continues to revise job classification specifications and salaries in order to meet the City’s priority hiring needs on an ongoing basis. Recent examples include the modification of the Public Safety Dispatcher I and II specifications to create a career track for call takers.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.2** Consider staff capacity when introducing new legislation, and limit or prioritize new legislation during periods of short staffing.	Mayor and Council	Started	**Partly Implemented.** Staff communicate staff capacity and resource needs to inform legislative initiatives proposed by City Council. Through the budget process, City Council allocates the resources that are needed to advance referrals adopted by the City Council.
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.3** Report on the status of approved projects to City Council, including information about delays caused by staff vacancies.	City Manager	Implemented	**Implemented.** City departments provide updates to Council on the status of approved projects and the impacts of staff vacancies through information reports, presentations, off-agenda memos, and updates posted to the City's website.
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.4** Improve pathways for promotion in the City through a citywide succession plan, which may include cross-training for positions.	City Manager	Partly Implemented	**Partly Implemented.** In 2025, the City launched the Supervisory Leadership Program (SLP) with 44 participants. In January 2026, the City hired a Training Officer whose primary focus is strengthening pathways for promotion and advancing citywide succession planning through leadership development. The Training Officer is developing a new in-person Supervisory Training Program for the 200–300 classifications designated as supervisor-of-record. In addition, he has completed a citywide needs assessment and will present the findings and next steps for a comprehensive Citywide Training Program to SET in late fall 2026.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.5** Direct departments to ensure that all employees receive an annual performance evaluation.	City Manager	Started	**Implemented.** Departments have been directed to ensure that all employees should receive an annual performance evaluation. Performance Evaluations have been incorporated as a training topic in the Supervisor Learning Program. The Human Resources Department continues to work with the Information Technology Department on a plan to use the Tyler ERMA module to track performance evaluations. Until the Tyler ERMA module is in place, completed digital performance evaluations will continue to be submitted to the Human Resources Department for placement in employees' personnel files.
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.6** Implement a comprehensive training program that ensures staff at all levels receive the training they need to fulfill their job duties and develop their job skills as needed. Consider increasing the training budget and redesigning the training curriculum to best address the needs of a post-pandemic workforce, improving training for supervisors and managers, ensuring that experts conduct trainings, and allowing employees to request specific trainings.	Human Resources	Implemented	**Implemented.** Human Resources launched NEOGOV Learn as a training portal for all employees. As part of its NEOGOV launch, Human Resources piloted the City's Supervisor Learning Plan, a hybrid learning experience that combines self-paced online learning and engaging classroom discussions. Designed with a competency-based approach, the program focuses on the essential knowledge, skills, and behaviors needed for effective frontline leadership in the City of Berkeley.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.7** Ensure that all city employees complete mandatory trainings in accordance with the state law. Report data on mandated trainings to Council annually.	Human Resources	Implemented	**Implemented.** City Council receives weekly updates from Human Resources, which have included updates regarding the launch of NEOGOV Learn in January 2025, and the percentage of biannual mandatory trainings completed by city staff.
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.8** Update City Council on the recruitment status of hard-to-fill positions during the biennial budget process, as well as steps taken to fill these positions.	City Manager	Implemented	**Implemented.** The reporting of hard-to-fill positions has been rolled into the annual public hearing mandated under AB 2561, in which Human Resources presents on the status of vacancies and recruitment and retention efforts at a public hearing before City Council once per fiscal year, most recently on June 3, 2025.
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.9** Identify positions that are hard-to-recruit and retain and consider reassessing pay for those positions.	City Manager	Implemented	**Implemented.** Human Resources has identified hard-to- recruit and retain positions based on vacancies and reporting data. As consideration for reassessing pay for those positions the Human Resources department is in the process of completing classification and compensation studies for hard-to-fill and other agreed-upon classifications, which were agreed to during labor negotiations.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Some current city employees reported dissatisfaction and many have contemplated leaving.	**2.10** Assess employees' needs regarding communication from the City Manager's Office and design a communication strategy that addresses those needs.	City Manager	Implemented	**Implemented**. The City Manager's Office continues to incorporate new communication models. Over the past year, the City Manager has 1) conducted two online town halls with more scheduled for the future; 2) instituted the weekly wrap up, a summary of new and exciting work happening across all City departments; 3) conducted one annual managers meeting bringing together 80 of the top leadership team members in the City to discuss how to improve City services and employee engagement; 4) ensured that our open house rotation continues as planned. In alignment with the goals of the Employer of Choice initiative, these efforts are being integrated into annual plans to ensure continuation of effort.
Instability in Human Resources delayed hiring and impacted internal services.	**3.1** Assess the level of staff and resources needed to meet the City's recruitment and hiring needs. Prioritize filling these positions when vacancies in this area fall below a level that would jeopardize the City's ability to hire quickly.	City Manager	Implemented	**Implemented.** This recommendation has been fully implemented with the hiring of three additional employees: one Associate HR Analyst dedicated to recruitment; one Associate HR Analyst assigned to exams; and one Assistant HR Analyst supporting Benefits. HR's recruitment team additionally has standing meetings with departments during which they identify and prioritize hiring needs.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Instability in Human Resources delayed hiring and impacted internal services.	**3.2** Assess the approval process for hiring new employees and identify opportunities to reduce inefficiencies.	City Manager	Implemented	**Implemented.** This recommendation has been fully implemented with the development of exam plans at the outset of every hiring process. Human Resources (HR) has also changed the order by which hiring approvals are processed in NEOGOV, the City's hiring platform. HR has implemented additional steps to reduce inefficiencies including e-offers and e-reference checks through the NEOGOV hiring system. HR has also obtained LiveScan certifications for some staff members and will be moving the fingerprinting process in-house as soon as they receive final approval.
Instability in Human Resources delayed hiring and impacted internal services.	**3.3** Develop and execute a plan to modernize recruitment and hiring using social media and community engagement.	Human Resources	Implemented	**Implemented.** Human Resources has completed the engagement with marketing agency, Sensis, which resulted in the creation of a career website (https://www.berkeley.careers), increased social media presence across different platforms, creative advertisements, algorithm tools for candidate outreach, and direct marketing campaigns. Human Resources will maintain these tools with individual consultants and continue to employ digital recruiting strategies.
Instability in Human Resources delayed hiring and impacted internal services.	**3.4** Communicate standard procedures and trainings for NEOGOV and the City's hiring process to all department heads and hiring managers.	Human Resources	Implemented	**Implemented.** Human Resources hosted training sessions with each department's hiring managers and distributed step-by-step instructions on the hiring process and how to utilize NEOGOV's Online Hiring Center (OHC).

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Instability in Human Resources delayed hiring and impacted internal services.	**3.5** Improve the employee onboarding process so employees have the tools and information they need to do their jobs.	Human Resources	Implemented	**Implemented.** The corrective action has been fully implemented with the automation of Onboarding through NEOGOV and the launch of the new, in-person "Welcome to Berkeley" orientation program.
Telework can benefit the City but the current policy is limited.	**4.1** Identify ways of reducing unused space in city buildings to save on overhead costs. This initiative may require additional resources beyond city staff.	City Manager	Started	**Implemented.** The City's approach to remote work has changed since the audit's release with more employee onsite days**.** Departments routinely evaluate space needs and prioritize the use of available city space. For example, the Fire Department completed a Facility Master Plan to provide City leaders with a ten-year strategic approach for addressing the City's aging, undersized, and outdated fire and emergency services facilities. Space that is not used by the City, where possible, will be made available for lease.
Telework can benefit the City but the current policy is limited.	**4.2** Expand the citywide telework policy to include elements that align with best practices. This can include eligibility, employee accountability, equipment requests, telework training, and justifications for denying employee requests to telework.	City Manager	Partly Implemented	**Implemented.** The City revised and approved Administrative Regulation 2.23 for Telework. This policy aligns with best practices including eligibility, accountability, and justifications for denying employee requests to telework through an appeal process.
The City lacked reliable data to address staff shortages.	**5.1** Clean up personnel data in ERMA to ensure all employee data is accurate.	Human Resources	Implemented	**Implemented.** Human Resources hired a consultant to standardize abbreviations and other information within ERMA, which ensures data integrity and accuracy.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
The City lacked reliable data to address staff shortages.	**5.2** Develop standardized procedures for entering and managing personnel data in ERMA.	Human Resources	Partly Implemented	**Partly Implemented.** No change from previous update. Human Resources has created Standardized Operating Procedures (SOPs) for entering and managing personnel data in ERMA, which are undergoing final review.
The City lacked reliable data to address staff shortages.	**5.3** Produce reports that can be used to inform retention and hiring efforts, which may include data on vacancies, recruitments, turnover, or other useful data. Human Resources should also report to City Council on staff vacancies by department and how long those positions have been vacant.	Human Resources	Implemented	**Implemented.** Human Resources has created dashboards in PowerBI which track vacancies, time to hire, and attrition rates on a monthly basis. On an annual basis, under AB 2561, Human Resources presents on the status of vacancies and recruitment and retention efforts at a public hearing before City Council once per fiscal year.
The City lacked reliable data to address staff shortages.	**5.4** Consistently conduct exit surveys or interviews and share results with departments.	Human Resources	Started	**Implemented.** Human Resources developed an Exit Process Checklist that outlines all shared steps triggered when an employee leaves the City, including steps for sending an exit survey to the departing employee and sharing the compiled results with the department.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
The City lacked reliable data to address staff shortages.	**5.5** Determine the appropriate city department or other body to regularly collect data on employee satisfaction. Data collection should include employees' perceptions about diversity, equity, inclusion, and accessibility in the workplace. The department should consider publishing the data and comparing it to previous years to help inform retention efforts.	Mayor and Council	Not Started	**Not Started.** The original Corrective Action Plan for this recommendation stated that "The Special Projects team working on the Employer of Choice initiative will collaborate with the to-be-hired DEI officer to implement a methodology to collect and report back on employees' perceptions about diversity, equity, inclusion, and accessibility in the workplace." Since the Audit was finalized, the City has implemented reductions in programs and services to address a $30 million deficit in the General Fund. In the City Manager's Office, this resulted in the elimination of the Office of Diversity, Equity and Inclusion and a 66% staffing reduction in the Special Projects Division. While the City remains committed to being an Employer of Choice, implementing the corrective action plan is not feasible at this time.
The City lacked reliable data to address staff shortages.	**5.6** Resume data collection and production of Year End Workforce Reports on demographic workforce trends at least annually. Consider expanding Human Resources' performance measure reported in the budget book to capture diversity at all levels of city employment.	City Manager	Implemented	**Implemented.** Human Resources has created dashboards in PowerBI which tracks demographics in applicant and hiring efforts. Reports are regularly shared with the Personnel Board.

Subject: City Contracts Audit Status Report

INTRODUCTION

On March 10, 2026, the City Auditor submitted a City Contracts audit report[1] to the City Council with recommendations to improve transparency, efficiency, and accountability in how the City solicits and awards contracts. The purpose of this information item is to update the City Council on the status of implementation of the audit report's recommendations. This is the first status report regarding this audit.

CURRENT SITUATION AND ITS EFFECTS

The audit included thirteen recommendations. As of this report, two of those recommendations have been implemented, two have been partially implemented, seven have been started, and two have not been started. Since the audit's release, the Finance Department prioritized filling critical vacancies in its General Services Division, which is now fully staffed. Additionally, the Finance Department took immediate action following the audit's release to align guidance and protocols for non-competitive procurement to increase transparency and competition. Finally, the General Services Division has launched a comprehensive review of the City's Purchasing Manual to improve transparency and efficiency in all procurement and contracting processes.

Please see Attachment 1 for a detailed table of audit report recommendations, corrective action plans, implementation program. The next status report to Council is expected to be presented in Fall 2027.

BACKGROUND

The City uses contracts for most services that are not done by city staff, like public artwork and towing, and to procure specialized goods, like fire trucks. The City typically uses simpler purchase orders rather than contracts to buy goods, like office furniture and equipment for parks maintenance. The General Services Division in the Finance Department reviews and processes all purchases of goods and services for the entire

[1] Audit: City_Contracts:_Outdated_Process_Led_to_Non-Competitive_Contracts

City, but staff in each department are responsible for initiating purchasing goods and services for their department.

Competition among contractors helps ensure that the City is accountable for public funds spent on contracts and can get the best value for Berkeley residents. However, competition is not always possible or appropriate, so City policies allow for non-competitive contracts in specific circumstances, such as when emergency maintenance is needed. This primarily occurs through either Council authorization or a waiver of competition approved by the City Manager.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

There are no identifiable environmental effects associated with the subject of this report.

POSSIBLE FUTURE ACTION

The Finance Department will continue to work with all City Departments to ensure adherence to the Purchasing Manual to improve transparency, efficiency, and accountability in how the City solicits and awards contracts.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION

None at this time.

1: Audit Findings, Recommendations, and Status Updates

Attachment 1

Audit Title: City Contracts: Outdated Process Led to Non-Competitive Contracts

Issue Date: February 19, 2026

Table: Audit Recommendation Statuses

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Berkeley spent millions of dollars on noncompetitive contracts when competition was likely possible.	**1.1** To ensure Berkeley is getting the best value for recycling services, we recommend that Public Works pursue open competition on the City's recycling contracts.	Public Works	Not Started	**Started.** The Ecology Center and Community Conservation Center (CCC) contracts were extended for two years through June 30, 2028, instead of five years. According to Public Works, the extension maintains uninterrupted zero-waste services while the Public Works Department Zero Waste staff prepare competitive Requests for Proposals, consistent with the audit recommendation. Staff anticipate releasing the RFP in Spring 2027, to leave sufficient time for contract award well in advance of the June 30, 2028 expiration of the current contract.
Berkeley spent millions of dollars on noncompetitive contracts when competition was likely possible.	**1.2** To ensure large contracts have adequate competition, we recommend City Council work with City management and the City Attorney to propose updates to the Berkeley Municipal Code Chapter 7.18 to require competition for service contracts that City Council approves.	City Manager	Not Started	**Partly Implemented.** Mayor Ishii and Councilmember Kesarwani submitted an item that proposes amendments to Chapter 7.18 of the Berkeley Municipal Code to explicitly require competitive procurement for services. The item was discussed at the Budget and Finance Policy Committee on September 24, 2026 and on October 5, 2026.
Berkeley spent millions of dollars on noncompetitive contracts when competition was likely possible.	**1.3** To ensure clear standards for waiving competition, we recommend that the Finance Department update the waiver of competitive solicitation form to be consistent with the Purchasing Manual.	Finance	Not Started	**Implemented.** The Finance Department has updated the waiver of competitive solicitation form to be consistent with the Purchasing Manual.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Berkeley spent millions of dollars on noncompetitive contracts when competition was likely possible.	**1.4** To ensure transparency, we recommend that City management work with the Finance Department, Human Resources, and the City Attorney's office to strengthen the City's existing ethical standards, including guidance for City officials, staff, and contractors regarding disclosing personal, professional, and business relationships.	City Manager	Not Started	**Not Started.** An interdepartmental team will be convened to implement this recommendation.
Berkeley spent millions of dollars on noncompetitive contracts when competition was likely possible.	**1.5** To ensure City staff have guidance on how to appropriately use amendments, we recommend that the Finance Department develop and distribute written policies and procedures on contract amendments, including when contracts are required to go back out for competition.	Finance	Not Started	**Started.** Finance added the requirement for most contracts to be re-bid every five to seven years to the Purchasing Manual. The new General Services Manager, who was hired in August 2026, has also begun a review of the Purchasing Manual. An updated version is being drafted and is expected to include detailed protocols around contract amendments, piggybacking, and clear expectations for competition.
Berkeley spent millions of dollars on noncompetitive contracts when competition was likely possible.	**1.6** To increase transparency of spending on legal services contracts, we recommend that the City Attorney's Office regularly report legal services contracts and amendments to City Council.	City Attorney	Not Started	**Started.** On October 5, 2026, the Budget and Finance Committee voted to send amendments to BMC Chapter 7.18 to Council with a qualified positive recommendation. This recommendation includes annual reporting from the City Attorney's Office related to legal services contracts and amendments. The City Attorney's Office will work to establish regulations that meet the intent of the required annual reporting.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.1** To increase efficiency and accountability in the contract process, we recommend that City management work with the Finance Department to adopt a comprehensive and integrated electronic contract management system, as funds are available.	City Manager	Not Started	**Started.** While a full enterprise Contract Lifecycle Management (CLM) system remains unfunded due to budget and staffing constraints, IT and Finance have completed extensive discovery and vendor evaluations alongside key stakeholders. In the interim, Finance and IT are actively revising and refining DocuSign/AdobeSign routing workflows to digitize core contract execution and approvals. However, automated records retention, central repository tracking, and end-to-end contract governance will still require a dedicated enterprise CLM platform once dedicated funding and resources are secured.
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.2** To more easily assess the use of non-competitive contracts, we recommend that the Finance Department track what type of competition is used for each contract and maintain documentation in an accessible format as part of the new contract management system.	Finance	Not Started	**Partly Implemented.** The GS Contract Log now includes a column which identifies which type of competition is used (RFP, piggyback, non-competitive waiver). However, the information is just starting to be tracked as of August 2026 and has not been entered consistently.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.3** To ensure consistent application of standards, we recommend the Finance Department update the Purchasing Manual and any additional guidance documents for staff to include complete sections on key topics such as amendments, piggybacking, ethics, and suspension or debarment of contractors who engage in misconduct.	Finance	Not Started	**Started.** The new General Services Manager, who was hired in August 2026, has begun a review of the Purchasing Manual. An updated version is being drafted and is expected to include detailed protocols and expectations around contract amendments, piggybacking, ethics, and suspension or debarment of contractors who engage in misconduct.
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.4** To ensure clarity in the primary guidance on purchasing for all City staff and consistent application of standards, we recommend the Finance Department work with the City Attorney and City management to update the Purchasing Manual with a table of contents, clear definitions, and consistent language and standards across the Purchasing Manual and related forms, boilerplates, templates, and other additional guidance documents.	Finance	Not Started	**Started.** The new General Services Manager has begun a review of the Purchasing Manual. An updated version is being drafted.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.5** To ensure that City staff know how to use the contracting process correctly and efficiently, we recommend that the Finance Department offer and publicize a regular procurement training program for staff from other departments.	Finance	Not Started	**Started.** Several contracts trainings occurred in 2025. However, due to the General Services Manager vacancy, trainings have not been offered since then. According to Finance, a new training is currently planned for November 2026.
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.6** To ensure adequate resource support for City contracts, we recommend that City management assess Finance Department staff positions needed to provide oversight and prioritize filling these positions when possible.	City Manager	Not Started	**Implemented.** Both the General Services Manager and all the Buyer positions have been filled. HR will continue prioritizing these important positions if they become vacant.
Paper contracts, unclear guidance, and short staffing led to delays and overuse of noncompetitive contracts.	**2.7** To ensure the City makes progress towards promoting fairness in contracts, we recommend that City management formally assign responsibility for managing the demographic data from potential contractors to facilitate data analytics and implementing prior recommendations related to contractor outreach and the contracting process.	City Manager	Not Started	**Not Started.** This work would have been assigned to staff in the Office of Diversity, Equity and Inclusion. However, as part of the FY 27- FY 28 budget, in order to address a $30 million deficit, staff assigned to the Office of DEI were eliminated (all vacant positions at the time that the budget was adopted). This work has yet to be reassigned.

Subject: Expiration of Temporary Cannabis Business Tax Exemption

INTRODUCTION

On June 27, 2023, the City Council adopted Ordinance No. 7,880-N.S., which temporarily exempted cannabis related businesses from business license taxes at their ordinary rates and instead imposed the rates applicable to non-cannabis related businesses. The exemption period lasted until July 1, 2025, at which time those businesses were again subject to the original rates established for cannabis-related businesses.

When the exemption was passed, the Council made a referral to the now defunct Cannabis Commission to re-examine the Cannabis tax rate structure and make a recommendation to the Council. Since no Commission re-evaluation took place, the Finance Department researched the rates of other nearby cities and found that the City's pre-exemption rates would be competitive if reinstated. The City will now send a courtesy notice to existing businesses notifying them that the exemption has expired, and rates have reverted to their pre-exemption level per Ordinance No. 7,880-N.S. The City will begin to collect business license taxes for Cannabis-related businesses at the rates established in BMC 9.04.240 effective January 1, 2027.

CURRENT SITUATION AND ITS EFFECTS

In 2023, with the passage of Ordinance 7,880-N.S., a temporary exemption was granted to cannabis businesses, and they were only required to pay the standard business license tax rates (e.g., retail tax rate for cannabis retail businesses).

Concurrent with the adoption of Ordinance 7,880-N.S., the City Council made a referral to City Staff to analyze and develop an ordinance to adjust rates if warranted.

An evaluation of surrounding cities found that most cities that allowed cannabis businesses to operate charged a tax rate between 3% and 7% for retail sales, although

Oakland uses a tiered rate structure with rates ranging from 0.12% on the smallest businesses up to 5% for larger businesses. Dublin, Fremont, Livermore, Newark, Piedmont and Pleasanton prohibit commercial cannabis sales, thereby generating no tax revenue. The table below shows existing assessed cannabis tax rates for cities in Alameda County plus two nearby cities in Contra Costa County that permit cannabis sales.

City	Currently Assessed Rate	Authorized Maximum Rate
Alameda	0%	0%
Albany	2.5% + $25/sq ft[a]	2.5%
Emeryville	3%	6%
Oakland	5%[b]	5%
Hayward	7%	15%
Richmond	5%	5%
San Pablo	5%	7%
San Leandro	5%	10%
Union City	4%	6%
Average Rate	**4.1%**	**6.3%**
Berkeley Exemption Rate	**0.12%**	**0.12%**
Berkeley Standard Rate[c]	**5.0% (AU) / 2.5% (M)**	**5.0% (AU) / 2.5% (M)**

[a]Albany uses a hybrid structure that assesses based on gross receipts and building square footage

[b]Oakland uses a tiered/threshold rate structure up to 5%

[c]No other cities have reduced rates for medicinal use cannabis businesses. AU represents Adult Use and M represents Medicinal

Prior to the 2023 exemption, medical cannabis businesses paid $25 per $1,000 (2.5%) of gross receipts and adult use cannabis businesses paid $50 per $1,000 (5.0%) of gross receipts, which resulted in up to $1.8M in annual revenue. With the expiration of the

exemption, the City projects annual revenues to be approximately $1.2M annually, up from the $25,251 collected in FY 2026.

BACKGROUND

In 2018, the State established the Medical and Adult Use Cannabis Regulation and Safety Act (MAUCRSA), a regulatory framework for the medicinal and adult use cannabis industry. Among other things, this law allowed local jurisdictions to set business license requirements for cannabis businesses. Berkeley ultimately set business license tax rates of $25 per $1,000 of gross receipts for medical cannabis businesses and $50 per $1,000 of gross receipts for adult use cannabis businesses (the current rates seen in BMC 9.04.240). In 2023, City Council passed a temporary tax exemption for all cannabis businesses, reducing their tax rate to the standard business tax rate (e.g., retail cannabis businesses pay the same tax rate as all other retail businesses). This temporary tax exemption expired in June 2025, by which point the City's Cannabis Commission was to have re-evaluated the rates going forward. Since no Commission re-evaluation took place, Finance reviewed rates being assessed in surrounding municipalities and determined that the existing rate collected before the exemption was appropriate.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

No effects found.

POSSIBLE FUTURE ACTION

The City Council could choose to change the applicable business tax rates to a rate that differs from surrounding municipalities.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION

Lower rates would deprive the City of revenues that are comparable to nearby cities.

From: Paul Buddenhagen, City Manager

Submitted by: Jordan Klein, Director, Planning and Development Department

Subject: Landmark Preservation Ordinance Notice of Decision: 2845 Woolsey Street (Norton Family House) / #LMSAP2026-0003

INTRODUCTION

The attached Landmarks Preservation Commission Notice of Decision (NOD) is presented to the Mayor and City Council pursuant to Berkeley Municipal Code/Landmarks Preservation Ordinance (BMC/LPO) Section 3.24.240.A, which requires that "a copy of the Notice of Decision shall be filed with the City Clerk and the City Clerk shall present said copy to the City Council at its next regular meeting."

CURRENT SITUATION AND ITS EFFECTS

The Landmarks Preservation Commission (LPC/Commission) has approved a Structural Alteration Permit (SAP) for the subject Landmark property. This action is subject to a 14-day appeal period, which began after the notice was mailed on November 3, 2026.

BACKGROUND

BMC/LPO Section 3.24.300 allows City Council to appeal any action of the Landmarks Preservation Commission in granting or denying a Structural Alteration Permit. For Council to review the decision on its merits, Council must appeal the Notice of Decision. To do so, a Council member must move this Information Item to Action and then move to set the matter for hearing on its own. Such action must be taken within 14 days of the mailing of the Notice of Decision, or by November 17, 2026.

If the Council chooses to appeal the action of the Commission, then a public hearing will be set. The Council must then rule on the SAP within 30 days of closing the hearing, otherwise the decision of the Commission is automatically deemed affirmed.

Unless the Council wishes to review the determination of the Commission and make its own decision, the attached NOD is deemed received and filed.

ENVIRONMENTAL SUSTAINABILITY & CLIMATE IMPACTS

Landmark designation and discretionary alteration reviews by staff and LPC provide opportunities for the adaptive re-use and rehabilitation of historic resources within the City. The rehabilitation of these resources, rather than their removal, achieves construction and demolition waste diversion, and promotes investment in existing urban centers.

POSSIBLE FUTURE ACTION

The Council may choose to appeal the decision, in which case it would conduct a public hearing at a future date.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION

There are no known fiscal impacts associated with this action.

FINDINGS AND CONDITIONS OF APPROVAL AND APPROVED PLANS ARE ATTACHED TO THIS NOTICE

COMMISSION VOTE: 7-0-0-1

YES: ANDERSON, CRANDALL, FINACOM, GORDON, GREENE, MONTGOMERY, SCHWARTZ

NO: NONE

ABSTAIN:

ABSENT: SCHNIETZ (recused as she lives within 500 feet)

TO APPEAL THIS DECISION (see Section 3.24.300 of the Berkeley Municipal Code):

To appeal a decision of the Landmarks Preservation Commission to the City Council you must:

1. Submit a letter clearly and concisely setting forth the grounds for the appeal to the City Clerk, located at 2180 Milvia Street, 1st Floor, Berkeley. The City Clerk's telephone number is (510) 981-6900.
   a. Pursuant to BMC Section 3.24.300.A, an appeal may be taken to the City Council by the application of the owners of the property or their authorized agents, or by the application of at least 200 residents of the City aggrieved or affected by any determination of the commission made under the provisions of Chapter 3.24.
2. Submit the required fee (checks and money orders must be payable to 'City of Berkeley'):
   a. The basic fee for persons other than the applicant is $3,000. This fee may be reduced to $1,000 if the appeal is signed by persons who lease or own at least 50 percent of the parcels or dwelling units within 300 feet of the project site, or at least 25 such persons (not including dependent children), whichever is less. Signatures collected per the filing requirement in BMC Section 3.24.300.A may be counted towards qualifying for the reduced fee, so long as the signers are qualified. The individual filing the appeal must clearly denote which signatures are to be counted towards qualifying for the reduced fee.
   b. The fee for all appeals by Applicants is $6,000.
3. The appeal must be received prior to 5:00 p.m. on the "APPEAL PERIOD EXPIRATION" date shown above (if the close of the appeal period falls on a weekend or holiday, then the appeal period expires the following business day).

If no appeal is received, the Structural Alteration Permit will be final on the first business day following expiration of the appeal period.

Mailed: November 3, 2026
Page 4 of 5

NOTICE CONCERNING YOUR LEGAL RIGHTS:

If you object to this decision, the following requirements and restrictions apply:

1. If you challenge this decision in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Landmarks Preservation Commission at, or prior to, the public hearing.
2. You must appeal to the City Council within fifteen (15) days after the Notice of Decision of the action of the Landmarks Preservation Commission is mailed. It is your obligation to notify the Land Use Planning Division in writing of your desire to receive a Notice of Decision when it is completed.
3. Pursuant to Code of Civil Procedure Section 1094.6(b) and Government Code Section 65009(c)(1), no lawsuit challenging a City Council decision, as defined by Code of Civil Procedure Section 1094.6(e), regarding a use permit, variance or other permit may be filed more than ninety (90) days after the date the decision becomes final, as defined in Code of Civil Procedure Section 1094.6(b). Any lawsuit not filed within that ninety (90) day period will be barred.
4. Pursuant to Government Code Section 66020(d)(1), notice is hereby given to the applicant that the 90-day protest period for any fees, dedications, reservations, or other exactions included in any permit approval begins upon final action by the City, and that any challenge must be filed within this 90-day period.
5. If you believe that this decision or any condition attached to it denies you any reasonable economic use of the subject property, was not sufficiently related to a legitimate public purpose, was not sufficiently proportional to any impact of the project, or for any other reason constitutes a “taking” of property for public use without just compensation under the California or United States Constitutions, your appeal of this decision must include the following information:

   A. That this belief is a basis of your appeal.

   B. Why you believe that the decision or condition constitutes a "taking" of property as set forth above.

   C. All evidence and argument in support of your belief that the decision or condition constitutes a “taking” as set forth above.

   If you do not do so, you will waive any legal right to claim that your property has been taken, both before the City Council and in court.

Structural Alteration Permit for 2845 Woolsey Street

Quick Facts	Project Description:
Applicant: Jeremy Butler-Pinkham **Property Owner**: Mike Pearson and Annette Blum **Project Address:** 2845 Woolsey Street **GP Land Use**: Medium Density Residential **Zoning:** Residential Multi-Unit 2 District (R-2) **Historic District:** N/A **CEQA**: Categorically exempt pursuant to CEQA Guidelines Section 15331 for *Historical Resource Restoration/Rehabilitation*. **Submittal Date**: February 11, 2026 **Date Deemed Complete**: March 13, 2026 **Project Planner:** Marytonae Sanchez	The applicant is seeking approval to replace non-original vinyl windows; add corbels/modillions to the first floor west elevation; add new windows and doors to the north and east elevations; and deconstruct the non-original porch and restore the entry porch, second-story balcony, and original door and sidelights.
	Zoning Permits Requested:
	Structural Alteration Permit pursuant to 3.24.200.
	Staff Recommendation:
	Staff recommends that LPC approve LMSAP2026-0003 pursuant to BMC Section 3.24.260 "**Permit application–Review standards and criteria**" and subject to the attached Findings and Conditions of Approval.

CEQA

The project is categorically exempt from the provisions of the California Environmental Quality Act (CEQA, Public Resources Code §21000, et seq. and California Code of Regulations, §15000, et seq.) pursuant to Section 15331 of the CEQA Guidelines ("Historic Resource Restoration/Rehabilitation" because the project proposes to repair and replace character defining features, and remove non-original materials and features in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties.

FINDINGS RELATED TO THE SECRETARY OF THE INTERIOR'S STANDARDS

Regarding the Secretary of the Interior's Standards (SOI) for Rehabilitation, the Landmarks Preservation Commission of the City of Berkeley makes the following findings:

1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.

   Evidence: The proposed project does not require a change of use. The property will remain a single-family residential dwelling.

2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.

   Evidence: The historic character of the Norton Family House will be retained and preserved with the proposed repairs and replacement of distinctive First Bay Tradition features, such as the cast stone (concrete) retaining wall, the wooden planter boxes and wooden shingled siding. Therefore, the proposal is consistent with SOI Standard 2.

3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.

   Evidence: This property will continue to be recognized as a physical record of its time, place, and use as a result of the approved project. The proposed alterations to the windows and entry porch are to restore the property to its original construction and will not use materials or architectural elements from other buildings. Proposed landscaping and hardscaping will have a contemporary design and will be distinguished from the historic components of the house. Therefore, the proposal is consistent with SOI Standard 3.

4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.

   Evidence: Evidence provided displays a timeline of changes to the exterior of the main building during the time of conversion from a residential dwelling to a pre-school, and ultimately back into a residential dwelling, including the alterations to the north elevation and the front entry on the east elevation. No changes to this property that have acquired historical significance in their own right have been identified or are of concern for this project. Therefore, the proposal is consistent with SOI Standard 4.

5. Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a historic property shall be preserved.

   Evidence: The project proposes repair and replacement of significant features including the cast stone retaining wall, and the wooden planter boxes. Significant features that will not be altered include the location of the property at the northwest corner of the site and large northeast setback from Claremont Avenue; the building's two-story height; and the hip roof with flared, overhanging eaves. Therefore, the proposal is consistent with SOI Standard 5.

6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.

   Evidence: The proposed scope of work includes deconstruction of the entry porch to enclose the existing footprint and create a second-floor balcony to match documentation of the original construction. Materials including the decorative beams and rafters will be salvaged and reused. Two leaded-glass windows located on the walls of a closet of the first floor will be removed and reused for the new front door entry of the porch. Therefore, the proposal is consistent with SOI Standard 6.

7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.

   Evidence: Chemical treatments are not anticipated; however, if they are appropriate, they will be undertaken using the gentlest means possible. Standard conditions of approval would require any chemical or physical treatment to be undertaken using the gentlest means possible.

8. Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.

   Evidence: The project will not affect any archaeological resources as it does not require any excavation. Standard conditions of approval include preserving and protecting unexpected discoveries during project construction.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

    Evidence: New windows and doors on all elevations are compatible in scale, proportion, and placement with the existing windows. New windows will be constructed with a wooden exterior trim to match existing window designs and are proposed to have the same number of muntins on the upper sashes to restore the design from original construction.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

    Evidence: The enclosure of the porch is considered an addition. The enclosed porch could be removed in the future and the essential form and integrity of property would remain.

FINDINGS REQUIRED UNDER LANDMARKS PRESERVATION ORDINANCE

Pursuant to BMC Section 3.24.260(C)(1), approval of permit applications pursuant to this section may be granted only upon determination that the proposal conforms to the criteria set forth in paragraphs 1.

1. For permit applications for construction, alteration or repair:

    a. For applications relating to landmark sites, the proposed work shall not adversely affect the exterior architectural features of the landmark and, where specified in the designation for a publicly owned landmark, its major interior architectural features; nor shall the proposed work adversely affect the special character or special historical, architectural or aesthetic interest or value of the landmark and its site, as viewed both in themselves and in their setting.

    Evidence: N/A. The site is a designated City Structure of Merit and not a Landmark property.

    b. For applications relating to property in historic districts, the proposed work shall not adversely affect the exterior architectural features of the subject property or the relationship and congruity between the subject structure or feature and its neighboring structures and surroundings, including facade, setback and height; nor shall the proposed work adversely affect the special character or special historical, architectural or aesthetic interest or value of the district. The proposed work shall also conform to such further standards as may be embodied in the designation of the historic district.

    Evidence: N/A. The site is designated as a City Structure of Merit and not located within a Historic District.

c. For applications relating to structure of merit sites, the proposed work shall not adversely affect the architectural features if architectural merit is the basis for designation; nor shall the proposed work adversely affect the special cultural, educational or historical interest or value if that is the basis for designation.

Evidence: The proposal includes rehabilitation of the exterior features of the main building, landscaping and hardscaping of the property; and restoration of the property's significant features around the entry porch and windows on the west, east, and south elevations. This would be to conduct repair, and in-kind replacements that match the existing materials and design. Therefore, these changes would not adversely affect the historic exterior features.

Conditions of Approval

October 1, 2026

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Project Approval**. This Structural Alteration Permit approval is for 2845 Woolsey Street, as substantially shown and described on the project plans dated September 24, 2026, except as required to be modified by conditions herein and plans as presented to the Landmarks Preservation Commission on October 1, 2026 (“Approval Date.”). For any condition herein that requires preparation of a Final Plan where the project applicant has submitted a conceptual plan, the project applicant shall submit final plan(s) in substantial conformance with the conceptual plan, but incorporate the modifications required bythe conditions herein for approval by the City.	City of Berkeley	On-Going	Land Use Planning
2.	**Approval Limited to Proposed Project.** This Permit authorizes only the proposed project described in the application. In no way does an approval authorize other uses, structures or activities not included in the project description.	City of Berkeley BMC Section 23.404.060	On-Going	Land Use Planning
3.	**Compliance Required.** All land uses and structures in Berkeley must comply with the Zoning Ordinance and all applicable City ordinances and regulations. Compliance with the Zoning Ordinance does not relieve an applicant from requirements to comply with other federal, state, and City regulations that also apply to the property.	City of Berkeley	On-Going	Land Use Planning
4.	**Conformance to Approved Plans.** All work performed under an approved permit shall be in compliance with the approved plans and any Conditions of Approval.	City of Berkeley BMC Section 23.404.060.B.4	On-Going	Land Use Planning
5.	**Permit Revocation.** The City may revoke or modify a discretionary permit for completed projects due to: 1) violations of permit requirements; 2) Changes to the approved project; and/or 3) Vacancy for one year or more. However, no lawful residential use can lapse, regardless of the length of time of the vacancy. Proceedings to revoke or modify a permit may be initiated by the Landmarks Preservation Commission (LPC), or City Council referral.	City of Berkeley BMC Section 23.404.080	On-Going	Land Use Planning

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
6.	**Exercise and Expiration of Permits** A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. A. A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. B. A permit authorizing construction is exercised when both a valid City building permit (if required) is issued and construction has lawfully begun. C. The Zoning Officer may declare a permit lapsed if it is not exercised within one year of its issuance, except if the applicant has applied for a building permit or has made a substantial good faith effort to obtain a building permit and begin construction. The Zoning Officer may declare a permit lapsed only after 14 days written notice to the applicant. A determination that a permit has lapsed may be appealed to the ZAB in accordance with Chapter 23.410 (Appeals and Certification). D. A permit declared lapsed shall be void and of no further force and effect. To establish the use or structure authorized by the lapsed permit, an applicant must apply for and receive City approval of a new permit.	City of Berkeley BMC Section 23.404.060 (C) "Time Limits"	On-Going	Land Use Planning
7.	**Hold Harmless.** The permittee agrees as a condition of approval of this application to indemnify, protect, defend with counsel selected by the City, and hold harmless, the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees and agents, from and against any and all liabilities, claims, actions, causes of action, proceedings, suits, damages, judgments, liens, levies, costs and expenses of whatever nature, including reasonable attorney's fees and disbursements (collectively, "Claims") arising out of or in any way relating to the approval of this application, any actions taken by the City related to this entitlement, or any environmental review conducted under the California Environmental Quality Act, Public Resources Code Section 210000 et seq., for this entitlement and related actions. The indemnification shall include any Claims that may be asserted by any person or entity, including the permittee, arising out of or in connection	City of Berkeley	On-Going	Land Use Planning

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
	with the approval of this application, whether or not there is concurrent, passive or active negligence on the part of the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees and agents. The permittee's duty to defend the City shall not apply in those instances when the permittee has asserted the Claims, although the permittee shall still have a duty to indemnify, protect and hold harmless the City.			

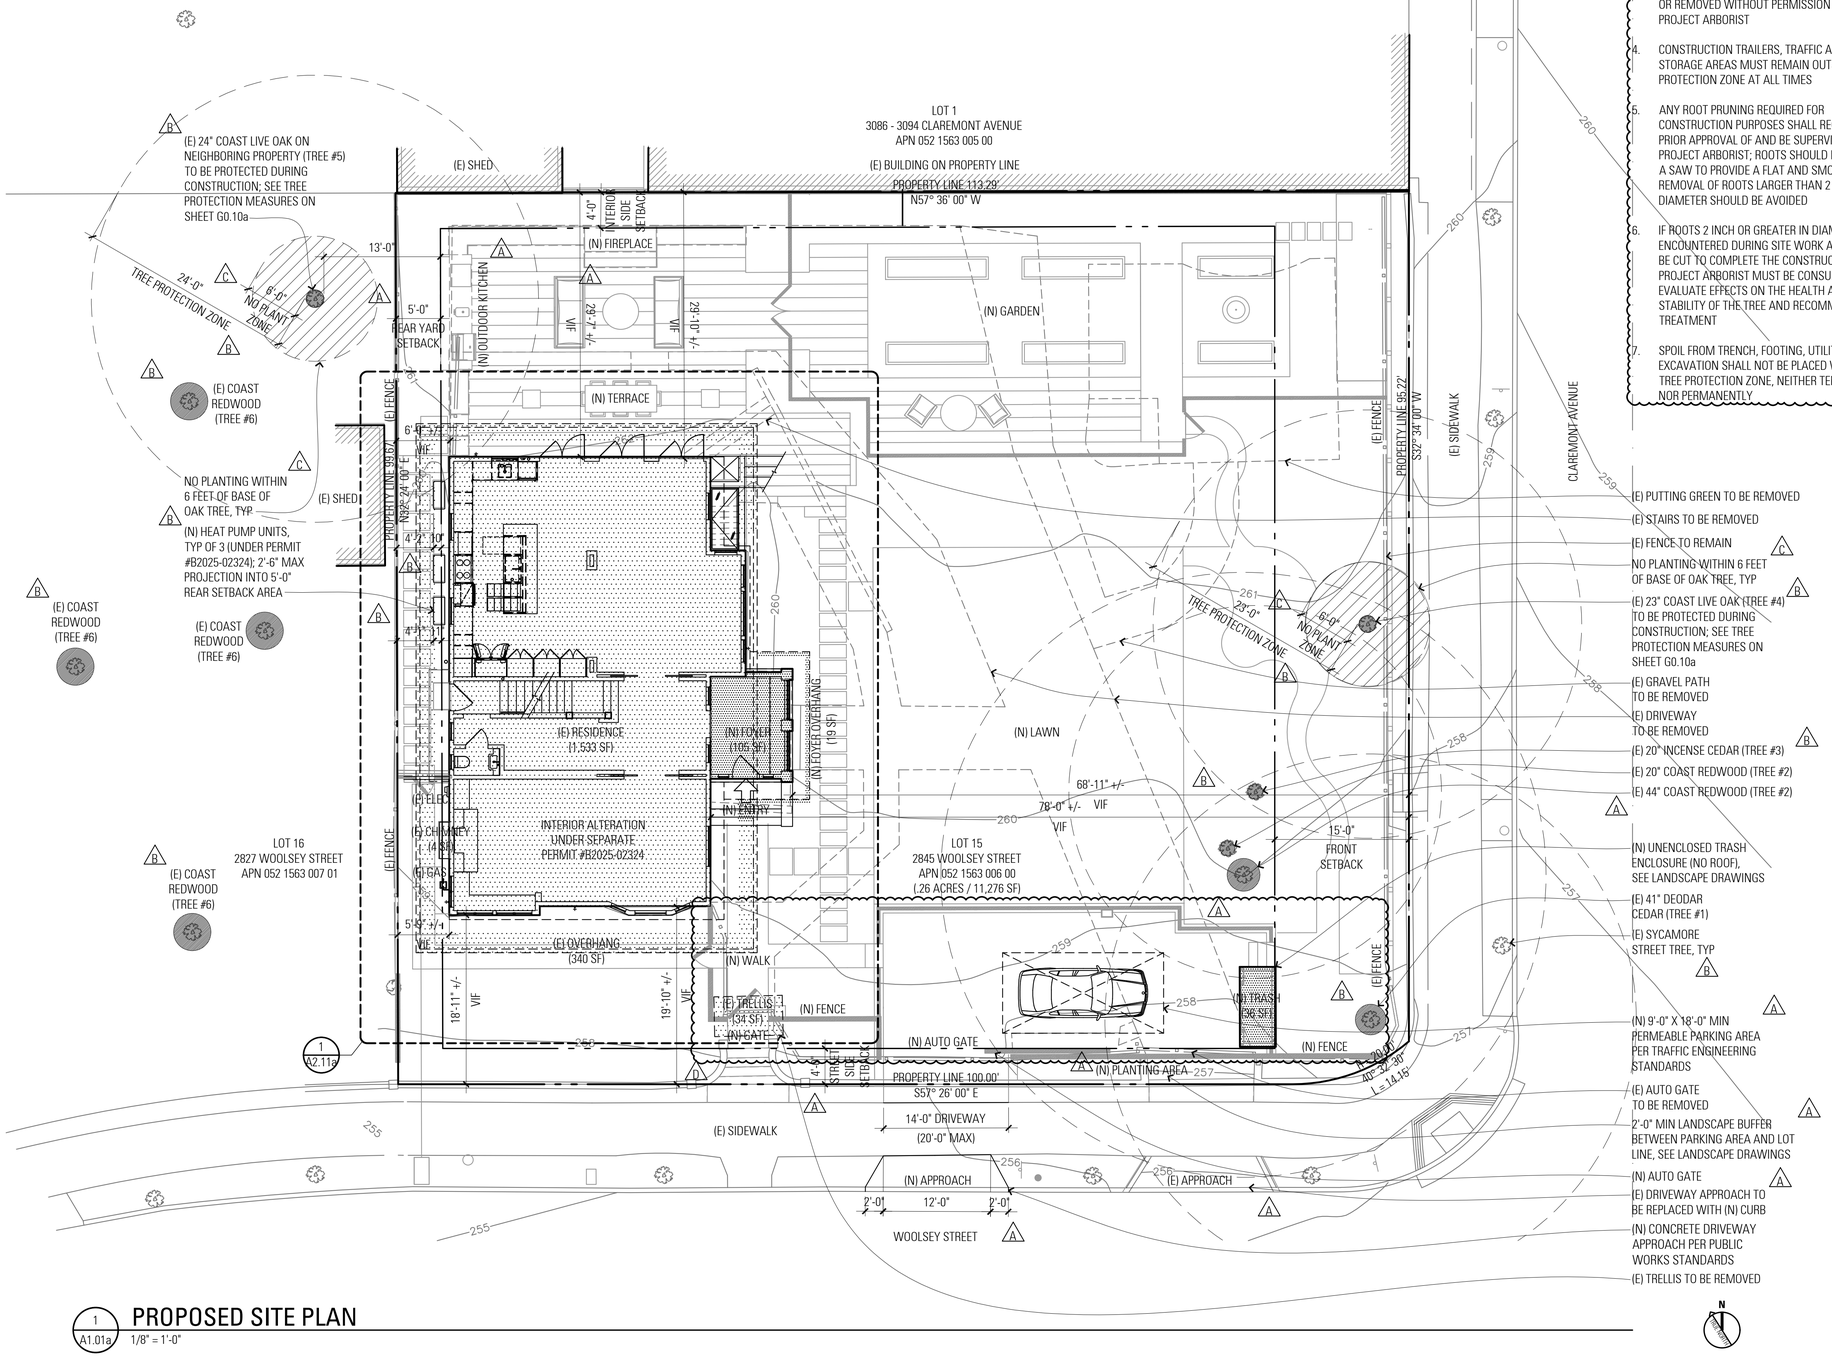
II. At Building Permit Submittal		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Conditions of Approval on Building Permit Plan Submittal** **Structural Alteration Permit.** The Conditions of Approval for this Structural Alteration Permit shall be printed on the *second* sheet of each plan set submitted for a building permit pursuant to this Structural Alteration Permit, under the title 'Structural Alteration Permit Conditions.	City of Berkeley	At the Time of Building Permit Submittal	Building & Safety/Land Use Planning
2.	**Project Liaison.** The applicant shall include in all building permit plans and post onsite the name and telephone number of an individual empowered to manage construction-related complaints generated from the project. The individual's name, telephone number, and responsibility for the project shall be posted at the project site for the duration of the project in a location easily visible to the public. The individual shall record all complaints received and actions taken in response, and submit written reports of such complaints and actions to the project planner on a weekly basis. **Please designate the name of this individual below:** ☐ **Project Liaison** _____ Name Phone #	City of Berkeley	At the Time of Building Permit Submittal	Building & Safety/Land Use Planning

3.	**Construction and Demolition Diversion.** The applicant shall submit a Construction Waste Management Plan that meets the requirements of BMC Chapter 19.37 including 100% diversion of asphalt, concrete, excavated soil and land-clearing debris and a minimum of 65% diversion of other nonhazardous construction and demolition waste.	City of Berkeley BMC Chapter 19.37	At Building Permit Submittal	Building & Safety Division

III. During Construction A. Building & Safety Division		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1	**Construction Hours.** Construction activity shall be limited to between the hours of 7:00 AM and 6:00 PM on Monday through Friday, and between 9:00 AM and 4:00 PM on Saturday. No construction-related activity shall occur on Sunday or any Federal Holiday.	City of Berkeley	During Construction	Building & Safety
2.	**Construction Hours- Exceptions**. It is recognized that certain construction activities, such as the placement of concrete, must be performed in a continuous manner and may require an extension of these work hours. Prior to initiating any activity that might require a longer period, the developer must notify the Zoning Officer and request an exception for a finite period of time. If the Zoning Officer approves the request, then two weeks prior to the expanded schedule, the developer shall notify businesses and residents within 500 feet of the project site describing the expanded construction hours. A copy of such notice and methodology for distributing the notice shall be provided in advance to the City for review and approval. The project shall not be allowed more than 15 extended working days.	City of Berkeley	During Construction	Building & Safety
3.	**Construction / No Parking Permits**. Contact the Permit Service Center (PSC) at 1947 Center Street, Third Floor or (510) 981-7500 for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). Please note that the Zoning Officer and/or Traffic Engineer may limit off-site parking of construction-related vehicles if necessary to protect the health, safety or convenience of the surrounding neighborhood. A current copy of this Plan shall be available at all times at the construction site for review by City Staff.	City of Berkeley	During Construction	Building & Safety

IV. During Construction B. Land Use Planning		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Paleontological Resources (Ongoing throughout demolition, grading, and/or construction)**. In the event of an unanticipated discovery of a paleontological resource during construction, excavations within 50 feet of the find shall be temporarily halted or diverted until the discovery is examined by a qualified paleontologist (per Society of Vertebrate Paleontology standards [SVP 1995,1996]). The qualified paleontologist shall document the discovery as needed, evaluate the potential resource, and assess the significance of the find. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction is allowed to resume at the location of the find. If the City determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of the project on the qualities that make the resource important, and such plan shall be implemented. The plan shall be submitted to the City for review and approval.	City of Berkeley	During Construction	Land Use Planning
2.	**Halt Work/Unanticipated Discovery of Tribal Cultural Resources. In the event that cultural resources of Native American origin are identified during construction,** all work within 50 feet of the discovery shall be redirected. The project applicant and project construction contractor shall notify the City Planning Department within 24 hours. The City will again contact any tribes who have requested consultation under AB 52, as well as contact a qualified archaeologist, to evaluate the resources and situation and provide recommendations. If it is determined that the resource is a tribal cultural resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with State guidelines and in consultation with Native American groups. If the resource cannot be avoided, additional measures to avoid or reduce impacts to the resource and to address tribal concerns may be required.	City of Berkeley	During Construction	Land Use Planning
3.	**Archaeological Resources (Ongoing throughout demolition, grading, and/or construction**). Pursuant to CEQA Guidelines section 15064.5(f), “provisions for historical or unique archaeological resources accidentally discovered during construction” should be instituted. Therefore:	City of Berkeley	During Construction	Land Use Planning

	A. In the event that any prehistoric or historic subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant and/or lead agency shall consult with a qualified archaeologist, historian or paleontologist to assess the significance of the find. **B.** If any find is determined to be significant, representatives of the project proponent and/or lead agency and the qualified professional would meet to determine the appropriate avoidance measures or other appropriate measure, with the ultimate determination to be made by the City of Berkeley. All significant cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by the qualified professional according to current professional standards. **C.** In considering any suggested measure proposed by the qualified professional, the project applicant shall determine whether avoidance is necessary or feasible in light of factors such as the uniqueness of the find, project design, costs, and other considerations. **D.** If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery) shall be instituted. Work may proceed on other parts of the project site while mitigation measures for cultural resources is carried out. **E.** If significant materials are recovered, the qualified professional shall prepare a report on the findings for submittal to the Northwest Information Center.			



IV. During Construction **C. During Construction: Public Works**		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Site Debris.** All piles of debris, soil, sand, or other loose materials shall be covered at night and during rainy weather with plastic at least one-eighth millimeter thick and secured to the ground.	City of Berkeley	During Construction	Public Works
2.	**Street & Sidewalk Damages.** Subject to approval of the Public Works Department, the applicant shall repair any damage to public streets and/or sidewalks by construction vehicles traveling to or from the project site.	City of Berkeley	During Construction	Public Works

3.	**Underground Utilities.** If underground utilities leading to adjacent properties are uncovered and/or broken, the contractor involved shall immediately notify the Public Works Department and the Building & Safety Division, and carry out any necessary corrective action to their satisfaction	City of Berkeley	During Construction	Public Works
4.	**Hauling of Debris.** Trucks hauling debris, soil, sand, or other loose materials shall be covered or required to maintain at least two feet of board.	City of Berkeley	During Construction	Public Works

V. Structural Alteration Permit Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Repair and replacement of character-defining features.** Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old or historic feature in design, color, texture, and, where possible, materials. Replacement of missing features shall be substantiated by documentary and physical evidence.	City of Berkeley	On-Going	Land Use Planning
2.	**Chemical Treatments.** With respect to historic resources located on this site or within the propose project area, any chemical treatments needed as construction progresses will be undertaken using the gentlest means possible.	City of Berkeley	On-Going	Land Use Planning
3.	**Equipment.** Any above ground or roof equipment, such as transformer(s), utilities, fire apparatus, air conditioning units, compressors, etc. shall be shown to scale on the architectural drawings of the building permit set of drawings in both plan and elevation, in order to determine if additional screening and SAP may be required.	City of Berkeley	At the Time of Building Permit Submittal	Land Use Planning
4.	**Glass.** All glass is assumed to be clear glass. Any proposed glass that is not clear glass, shall be indicated on all drawings, and shall be reviewed for approval by staff.	City of Berkeley	At the Time of Building Permit Submittal	Land Use Planning

5.	**Exterior Lighting.** Exterior lighting shall be downcast and not cause glare on the public right-of-way and abutting parcels.	City of Berkeley	On-Going	Land Use Planning
6.	**Landscaping.** The applicant shall provide irrigation for all landscaped areas. This shall be called out on Landscape building permit drawings.	City of Berkeley	At the Time of Building Permit Submittal	Land Use Planning
7.	**Other Permits.** The applicant shall be responsible for identifying and securing all applicable permits from the Building and Safety Division and all other affected City divisions/departments prior to the start of work.	City of Berkeley	On-Going	Land Use Planning
8.	**Coast Live Oak.** The applicant/owner shall implement all recommended actions described in the arborist report prepared by SBCA Tree Consulting, dated June 22, 2026, and the City's Arborist recommendations, dated August 20, 2026. The arborist report and the City arborist's recommendations shall be incorporated into the plan set.	City of Berkeley	At the Time of Building Permit Submittal; On-Going	Land Use Planning

1 A1.01a PROPOSED SITE PLAN

1/8" = 1'-0"

TREE PROTECTION MEASURES:

1. ANY APPROVED GRADING, CONSTRUCTION, DEMOLITION OR OTHER WORK WITHIN THE TREE PROTECTION ZONE SHOULD BE MONITORED BY THE PROJECT ARBORIST
2. ALL CONTRACTORS SHALL CONDUCT OPERATIONS IN A MANNER THAT WILL PREVENT DAMAGE TO TREES TO BE PRESERVED
3. TREE PROTECTION DEVICES ARE TO REMAIN UNTIL ALL SITE WORK HAS BEEN COMPLETED WITHIN THE WORK AREA; FENCES OR OTHER PROTECTION DEVICES MAY NOT BE RELOCATED OR REMOVED WITHOUT PERMISSION OF THE PROJECT ARBORIST
4. CONSTRUCTION TRAILERS, TRAFFIC AND STORAGE AREAS MUST REMAIN OUTSIDE TREE PROTECTION ZONE AT ALL TIMES
5. ANY ROOT PRUNING REQUIRED FOR CONSTRUCTION PURPOSES SHALL RECEIVE THE PRIOR APPROVAL OF AND BE SUPERVISED BY THE PROJECT ARBORIST; ROOTS SHOULD BE CUT WITH A SAW TO PROVIDE A FLAT AND SMOOTH CUT; REMOVAL OF ROOTS LARGER THAN 2 INCHES IN DIAMETER SHOULD BE AVOIDED
6. IF ROOTS 2 INCH OR GREATER IN DIAMETER ARE ENCOUNTERED DURING SITE WORK AND MUST BE CUT TO COMPLETE THE CONSTRUCTION, THE PROJECT ARBORIST MUST BE CONSULTED TO EVALUATE EFFECTS ON THE HEALTH AND STABILITY OF THE TREE AND RECOMMEND TREATMENT
7. SPOIL FROM TRENCH, FOOTING, UTILITY OR OTHER EXCAVATION SHALL NOT BE PLACED WITHIN THE TREE PROTECTION ZONE, NEITHER TEMPORARILY NOR PERMANENTLY

EXISTING DRAWING NOTES

1. THIS IS A SIMPLE SITE PLAN; SITE DETAILS ARE NOT SHOWN UNLESS OTHERWISE NOTED
2. PROPERTY LINES ARE BASED ON TOPOGRAPHIC SURVEY PREPARED BY MORAN ENGINEERING, INC AND DATED AUGUST 3, 2022
3. THIS SITE PLAN MAY CONTAIN INACCURACIES, INTENTIONAL OR OTHERWISE, AND ALTHOUGH APPROPRIATE FOR FOR USE IN GENERAL PLANNING AND DESIGN, SHOULD NOT BE USED TO ESTABLISH PRECISE MEASUREMENTS OF SPACES OR OBJECTS FOUND HEREIN FOR ANY PURPOSE

SITE PLAN NOTES

1. PROVIDE 2% MIN SLOPE AWAY FROM BUILDING TO CONTROL AND DRAIN SURFACE WATER FLOWS
2. PROVIDE SWALE OR GUTTER PARALLEL TO SIDE PROPERTY LINES TO CONVEY STORM WATER DRAINING FROM ROOFS, PAVED AREAS, YARDS, COURTS, COURTYARDS, VENT SHAFTS, LIGHT WELLS, OR SIMILAR AREAS HAVING RAINWATER AWAY FROM ADJOINING PROPERTIES PER CPC SECTION 1101.2; STORM WATER SHALL BE PERMITTED TO BE DISCHARGED ON FLAT AREAS, SUCH AS STREETS OR LAWNS, SO LONG AS THE STORM WATER SHALL FLOW AWAY FROM THE BUILDING AND AWAY FROM ADJOINING PROPERTY, AND SHALL NOT CREATE A NUISANCE
3. STORM WATER SHALL NOT BE DRAINED INTO SEWERS INTENDED FOR SANITARY DRAINAGE PER CPC SECTION 1101.3
4. AN ENGINEERING PERMIT WILL BE REQUIRED FOR ANY WORK IN THE PUBLIC RIGHT-OF-WAY, INCLUDING BUT NOT LIMITED TO CONSTRUCTION STAGING, RESERVED CONSTRUCTION PARKING, SIDEWALK, DRAINAGE, OR SEWER WORK; APPROVAL OF THIS BUILDING PERMIT DOES NOT AUTHORIZE WORK IN THE PUBLIC RIGHT-OF-WAY
5. PROJECTS WHICH DISTURB LESS THAN ONE ACRE OF SOIL AND ARE NOT PART OF A LARGER COMMON PLAN OF DEVELOPMENT WHICH IN TOTAL DISTURBS ONE ACRE OR MORE, SHALL MANAGE STORM WATER DRAINAGE DURING CONSTRUCTION IN ACCORDANCE WITH THE CALIFORNIA GREEN BUILDING STANDARDS CODE (CALGREEN), CHAPTER 4, DIVISION 4.1.

LOT COVERAGE CALCULATIONS:

(E) AREA COUNTING TOWARDS LOT COVERAGE

LOT AREA: 11,276 SF (PER SURVEY)

MAX LOT COVERAGE: 50% * 11,276 SF = 5,638 SF

(E) LOT COVERAGE: 1,533 SF (RESIDENCE)
4 SF (CHIMNEY)
139 SF (PORCH)
15 SF (PORCH OVERHANG)
34 SF (TRELLIS)
340 SF (OVERHANG)
2,065 SF (TOTAL)

(E) LOT COVERAGE = 2,065 SF / 11,276 SF = 18.3% < 60%

(N) AREA COUNTING TOWARDS LOT COVERAGE

(N) LOT COVERAGE: 1,533 SF (RESIDENCE)
4 SF (CHIMNEY)
105 SF (FOYER)
19 SF (FOYER OVERHANG)
340 SF (OVERHANG)
36 SF (TRASH)
2,037 SF (TOTAL)

(N) LOT COVERAGE = 2,037 SF / 11,276 SF = 18.1% < 60%

USEABLE OPEN SPACE CALCULATIONS:

MIN REQUIRED USABLE OPEN SPACE AREA = 553 SF
(3,686 SF / 1000 = 3.686 * 150 SF = 552.9 SF

(E) OPEN SPACE = 11,276 SF - 2,065 SF = 9,211 SF

(N) OPEN SPACE = 11,276 SF - 2,041 SF = 9,235 SF

PROPOSED SITE PLAN

A1.01a

Office of the City Manager

INFORMATION CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jordan Klein, Director, Planning and Development Department

Subject: Landmark Preservation Ordinance Notice of Decision: Daley's Scenic Park Tract / #LMSAP2026-0006

INTRODUCTION

The attached Landmarks Preservation Commission Notice of Decision (NOD) is presented to the Mayor and City Council pursuant to Berkeley Municipal Code/Landmarks Preservation Ordinance (BMC/LPO) Section 3.24.240.A, which requires that "a copy of the Notice of Decision shall be filed with the City Clerk and the City Clerk shall present said copy to the City Council at its next regular meeting."

CURRENT SITUATION AND ITS EFFECTS

The Landmarks Preservation Commission (LPC/Commission) has approved a Structural Alteration Permit (SAP) for the subject Landmark property. This action is subject to a 14-day appeal period, which began after the notice was mailed on November 3, 2026.

BACKGROUND

BMC/LPO Section 3.24.300 allows City Council to appeal any action of the Landmarks Preservation Commission in granting or denying a Structural Alteration Permit. For Council to review the decision on its merits, Council must appeal the Notice of Decision. To do so, a Council member must move this Information Item to Action and then move to set the matter for hearing on its own. Such action must be taken within 14 days of the mailing of the Notice of Decision, or by November 17, 2026.

If the Council chooses to appeal the action of the Commission, then a public hearing will be set. The Council must then rule on the SAP within 30 days of closing the hearing, otherwise the decision of the Commission is automatically deemed affirmed.

Unless the Council wishes to review the determination of the Commission and make its own decision, the attached NOD is deemed received and filed.

ENVIRONMENTAL SUSTAINABILITY & CLIMATE IMPACTS

Landmark designation and discretionary alteration reviews by staff and LPC provide opportunities for the adaptive re-use and rehabilitation of historic resources within the City. The rehabilitation of these resources, rather than their removal, achieves construction and demolition waste diversion, and promotes investment in existing urban centers.

POSSIBLE FUTURE ACTION

The Council may choose to appeal the decision, in which case it would conduct a public hearing at a future date.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION

There are no known fiscal impacts associated with this action.

CONTACT PERSON

Allison Riemer, Senior Planner, Planning and Development, 510-981-7433

LANDMARKS PRESERVATION COMMISSION

Notice of Decision

DATE OF BOARD DECISION: October 1, 2026
DATE NOTICE MAILED: November 3, 2026
APPEAL PERIOD EXPIRATION: November 17, 2026
EFFECTIVE DATE (Barring Appeal or Certification): November 18, 2026

Daley's Scenic Park Tract

Structural Alteration Permit #LMSAP2026-0006 to reconstruct/repair segments of retaining walls within the Daley's Scenic Park Tract near 2692 Hilgard Avenue and 1644 La Loma Avenue. Work near Hilgard Avenue was partially completed in 2025 and revisions are proposed to update previously completed work.

The Landmarks Preservation Commission of the City of Berkeley, after conducting a public hearing, **APPROVED** the following Structural Alteration Permit request:

- **Applicant** Randy (Wai) Kong, City of Berkeley
  1947 Center Street
  4th Floor
  Berkeley, CA 94704
- **Property Owner** City of Berkeley
  2180 Milvia Street
  Berkeley, CA 94704

ZONING DISTRICT: Residential Multi-Unit 2 District, Hillside Overlay (R-2H)

ENVIRONMENTAL REVIEW STATUS: The project is categorically exempt from further environment review in accordance with CEQA Guidelines Section 15331 for *Historical Resource Restoration/Rehabilitation*.

The application materials for this project are available online at:
https://berkeleyca.gov/construction-development/land-use-development/zoning-projects or

LANDMARKS PRESERVATION COMMISSION
NOTICE OF DECISION
#LMSAP2026-0006
Daley's Scenic Park Tract
Mailed: November 3, 2026
Page 2 of 4

FINDINGS AND CONDITIONS OF APPROVAL AND APPROVED PLANS ARE ATTACHED TO THIS NOTICE

COMMISSION VOTE: 8-0-0-0

YES: ANDERSON, CRANDALL, FINACOM, GORDON, GREENE, MONTGOMERY, SCHNIETZ, SCHWARTZ,

NO: NONE

ABSTAIN: NONE

ABSENT: NONE

TO APPEAL THIS DECISION (see Section 3.24.300 of the Berkeley Municipal Code):

To appeal a decision of the Landmarks Preservation Commission to the City Council you must:

1. Submit a letter clearly and concisely setting forth the grounds for the appeal to the City Clerk, located at 2180 Milvia Street, 1st Floor, Berkeley. The City Clerk's telephone number is (510) 981-6900.
   a. Pursuant to BMC Section 3.24.300.A, an appeal may be taken to the City Council by the application of the owners of the property or their authorized agents, or by the application of at least 200 residents of the City aggrieved or affected by any determination of the commission made under the provisions of Chapter 3.24.
2. Submit the required fee (checks and money orders must be payable to 'City of Berkeley'):
   a. The basic fee for persons other than the applicant is $3,000. This fee may be reduced to $1,000 if the appeal is signed by persons who lease or own at least 50 percent of the parcels or dwelling units within 300 feet of the project site, or at least 25 such persons (not including dependent children), whichever is less. Signatures collected per the filing requirement in BMC Section 3.24.300.A may be counted towards qualifying for the reduced fee, so long as the signers are qualified. The individual filing the appeal must clearly denote which signatures are to be counted towards qualifying for the reduced fee.
   b. The fee for all appeals by Applicants is $6,000.
3. The appeal must be received prior to 5:00 p.m. on the "APPEAL PERIOD EXPIRATION" date shown above (if the close of the appeal period falls on a weekend or holiday, then the appeal period expires the following business day).

If no appeal is received, the Structural Alteration Permit will be final on the first business day following expiration of the appeal period.

Daley's Scenic Park Tract
Mailed: November 3, 2026
Page 3 of 4

NOTICE CONCERNING YOUR LEGAL RIGHTS:

If you object to this decision, the following requirements and restrictions apply:

1. If you challenge this decision in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Landmarks Preservation Commission at, or prior to, the public hearing.
2. You must appeal to the City Council within fifteen (15) days after the Notice of Decision of the action of the Landmarks Preservation Commission is mailed. It is your obligation to notify the Land Use Planning Division in writing of your desire to receive a Notice of Decision when it is completed.
3. Pursuant to Code of Civil Procedure Section 1094.6(b) and Government Code Section 65009(c)(1), no lawsuit challenging a City Council decision, as defined by Code of Civil Procedure Section 1094.6(e), regarding a use permit, variance or other permit may be filed more than ninety (90) days after the date the decision becomes final, as defined in Code of Civil Procedure Section 1094.6(b). Any lawsuit not filed within that ninety (90) day period will be barred.
4. Pursuant to Government Code Section 66020(d)(1), notice is hereby given to the applicant that the 90-day protest period for any fees, dedications, reservations, or other exactions included in any permit approval begins upon final action by the City, and that any challenge must be filed within this 90-day period.
5. If you believe that this decision or any condition attached to it denies you any reasonable economic use of the subject property, was not sufficiently related to a legitimate public purpose, was not sufficiently proportional to any impact of the project, or for any other reason constitutes a "taking" of property for public use without just compensation under the California or United States Constitutions, your appeal of this decision must include the following information:

   A. That this belief is a basis of your appeal.

   B. Why you believe that the decision or condition constitutes a "taking" of property as set forth above.

   C. All evidence and argument in support of your belief that the decision or condition constitutes a "taking" as set forth above.

   If you do not do so, you will waive any legal right to claim that your property has been taken, both before the City Council and in court.

Structural Alteration Permit for Daley's Scenic Park Tract

Quick Facts	Project Description:
Applicant: City of Berkeley Public Works Engineering Division **Property Owner:** City of Berkeley **Project Address:** Daley's Scenic Park Tract **Site Size:** n/a **GP Land Use:** Medium Density Residential **Zoning:** Residential Multi-Unit 2 District (R-2H) **CEQA:** Exempt pursuant to CEQA Section 15331 **Date Submitted:** April 30, 2026 **Date Deemed Complete:** June 1, 2026 **Project Planner:** JulieAnn Murphy, Rincon Consultants	The applicant is seeking approval to reconstruct/repair segments of retaining walls within the Daley's Scenic Park Tract near 2692 Hilgard Avenue and 1644 La Loma Avenue. Work near Hilgard Avenue was partially completed in 2025 and revisions are proposed to update previously completed work. **Zoning Permits Requested:** Structural Alteration Permit pursuant to 3.24.200 to make repairs/alterations to a City of Berkeley Landmark. **Staff Recommendation:** Staff recommends that LPC approve LMSAP2026-0001 pursuant to BMC Section 3.24.260 "**Permit application–Review standards and criteria**" and subject to the attached Findings and Conditions of Approval.

CEQA

The project is categorically exempt from the provisions of the California Environmental Quality Act (CEQA, Public Resources Code §21000, et seq. and California Code of Regulations, §15000, et seq.) pursuant to Section 15331 of the CEQA Guidelines ("Historic Resource Restoration/Rehabilitation" because the project will preserve and restore the existing retaining walls.

FINDINGS RELATED TO THE SECRETARY OF THE INTERIOR'S STANDARDS

Regarding the Secretary of the Interior's Standards (SOI) for Rehabilitation, the Landmarks Preservation Commission of the City of Berkeley makes the following findings:

Standard 1: *A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.*

Evidence. The proposed scope of work will not result in a change of use of the retaining walls or any of other associated features of Daley's Scenic Park Tract. The proposed project is consistent with Standard 1.

Standard 2: *The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.*

Evidence. The proposed scope of work will retain the property's existing historic character. Distinctive materials will be preserved. The proposed design refinement and replacement of retaining walls and pavement will be undertaken in a manner that retains the existing spaces and spatial relationships that characterize the Daley's Scenic Park Tract. Retaining walls will be replaced in kind. The proposed scope of work is consistent with Standard 2.

Standard 3: *Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.*

Evidence. The proposed scope of work will not introduce materials that create a false sense of historical development. Standard 3 is not applicable.

Standard 4: *Changes to a property that have acquired historic significance in their own right will be retained and preserved.*

Evidence. Daley's Scenic Park Tract retains its original design. No changes have occurred that have acquired historic significance. Standard 4 is not applicable.

Standard 5: *Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.*

Evidence. The proposed scope of work is limited to replacing damaged materials in kind. Distinctive materials, features, and finishes that characterize Daley's Scenic Park Tract will be preserved. The proposed scope of work is consistent with Standard 5.

Standard 6: *Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.*

Evidence. The proposed scope of work proposes to replace existing deteriorated materials and revise previously completed work to ensure it matches the historic in material, color, profile, and finish. Due to the extent and type of material damage, repair is not suitable or possible. Proposed replacement is limited to segments that are damaged beyond repair. New retaining

wall material will match the existing in design, color, texture, and materials. Replacement is based on existing physical evidence. The proposed scope of work is consistent with Standard 6.

Standard 7: *Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.*

Evidence. No chemical or physical treatments are proposed as part of this scope of work. Standard 7 is not applicable.

Standard 8: *Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.*

Evidence. The proposed project is not expected to encounter archaeological resources. The proposed work is subject to the City's existing guidelines and conditions on the treatment of archaeological resources. The proposed scope of work is consistent with Standard 8.

Standard 9*: New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.*

Evidence. The proposed scope of work is limited to replacing materials that are deteriorated by repair and revising previously completed work to ensure it matches the historic in material, color, and finish. All work will be consistent with the historic design and materials. The proposed scope of work will not destroy historic materials, features, and spatial relationships that characterize the property. No additional alterations or additions are proposed. The proposed project is consistent with Standard 9.

Standard 10: *New additions and adjacent or related new construction will be undertaken in a such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.*

Evidence. The proposed scope of work does not include new additions or new construction. Standard 10 is not applicable.

FINDINGS REQUIRED UNDER THE LANDMARKS PRESERVATION ORDINANCE

Pursuant to BMC Section 3.24.260(C)(1), approval of permit applications pursuant to this section may be granted only upon determination that the proposal conforms to the criteria set forth in paragraphs 1.

1. For permit applications for construction, alteration or repair:

    a. For applications relating to landmark sites, the proposed work shall not adversely affect the exterior architectural features of the landmark and, where specified in the designation for a publicly owned landmark, its major interior architectural features; nor shall the proposed work adversely affect the special character or special historical, architectural or aesthetic interest or value of the landmark and its site, as viewed both in themselves and in their setting.

    Evidence: The proposed project will restore the historic appearance of a retaining wall at Hilgard Avenue and replace in-kind the existing retaining walls at La Loma Avenue. The proposed scope of work is consistent with the Secretary of the Interior's Standards for Rehabilitation and will retain Daley's Scenic Park Tract's character-defining features. As such, the proposed scope of work will not adversely affect the special character or value of Daley's Scenic Park Tract.

b. For applications relating to property in historic districts, the proposed work shall not adversely affect the exterior architectural features of the subject property or the relationship and congruity between the subject structure or feature and its neighboring structures and surroundings, including facade, setback and height; nor shall the proposed work adversely affect the special character or special historical, architectural or aesthetic interest or value of the district. The proposed work shall also conform to such further standards as may be embodied in the designation of the historic district.

Evidence: N/A. The site is not in a Historic District.

c. For applications relating to structure of merit sites, the proposed work shall not adversely affect the architectural features if architectural merit is the basis for designation; nor shall the proposed work adversely affect the special cultural, educational or historical interest or value if that is the basis for designation.

Evidence: N/A. The site is a designated City Landmark and not a Structure of Merit.

Conditions of Approval

October 1, 2026

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Project Approval**. This Structural Alteration Permit approval is for Daley's Scenic Park Tract, as substantially shown and described on the project plans dated February 27, 2026, except as required to be modified by conditions herein and plans as presented to the Landmarks Preservation Commission on October 1, 2026 ("Approval Date."). For any condition herein that requires preparation of a Final Plan where the project applicant has submitted a conceptual plan, the project applicant shall submit final plan(s) in substantial conformance with the conceptual plan, but incorporate the modifications required bythe conditions herein for approval by the City.	City of Berkeley	On-Going	Land Use Planning
2.	**Approval Limited to Proposed Project.** This Permit authorizes only the proposed project described in the application. In no way does an approval authorize other uses, structures or activities not included in the project description.	City of Berkeley BMC Section 23.404.060	On-Going	Land Use Planning
3.	**Compliance Required.** All land uses and structures in Berkeley must comply with the Zoning Ordinance and all applicable City ordinances and regulations. Compliance with the Zoning Ordinance does not relieve an applicant from requirements to comply with other federal, state, and City regulations that also apply to the property.	City of Berkeley	On-Going	Land Use Planning
4.	**Conformance to Approved Plans.** All work performed under an approved permit shall be in compliance with the approved plans and any Conditions of Approval.	City of Berkeley BMC Section 23.404.060.B.4	On-Going	Land Use Planning
5.	**Permit Revocation.** The City may revoke or modify a discretionary permit for completed projects due to: 1) violations of permit requirements; 2) Changes to the approved project; and/or 3) Vacancy for one year or more. However, no lawful residential use can lapse, regardless of the length of time of the vacancy. Proceedings to revoke or modify a permit may be initiated by the Landmarks Preservation Commission (LPC), or City Council referral.	City of Berkeley BMC Section 23.404.080	On-Going	Land Use Planning

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
6.	**Exercise and Expiration of Permits** A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. A. A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. B. A permit authorizing construction is exercised when both a valid City building permit (if required) is issued and construction has lawfully begun. C. The Zoning Officer may declare a permit lapsed if it is not exercised within one year of its issuance, except if the applicant has applied for a building permit or has made a substantial good faith effort to obtain a building permit and begin construction. The Zoning Officer may declare a permit lapsed only after 14 days written notice to the applicant. A determination that a permit has lapsed may be appealed to the ZAB in accordance with Chapter 23.410 (Appeals and Certification). D. A permit declared lapsed shall be void and of no further force and effect. To establish the use or structure authorized by the lapsed permit, an applicant must apply for and receive City approval of a new permit.	City of Berkeley BMC Section 23.404.060 (C) "Time Limits"	On-Going	Land Use Planning
7.	**Hold Harmless.** The permittee agrees as a condition of approval of this application to indemnify, protect, defend with counsel selected by the City, and hold harmless, the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees and agents, from and against any and all liabilities, claims, actions, causes of action, proceedings, suits, damages, judgments, liens, levies, costs and expenses of whatever nature, including reasonable attorney's fees and disbursements (collectively, "Claims") arising out of or in any way relating to the approval of this application, any actions taken by the City related to this entitlement, or any environmental review conducted under the California Environmental Quality Act, Public Resources Code Section 210000 et seq., for this entitlement and related actions. The indemnification shall include any Claims that may be asserted by any person or entity, including the permittee, arising out of or in connection	City of Berkeley	On-Going	Land Use Planning

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
	with the approval of this application, whether or not there is concurrent, passive or active negligence on the part of the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees and agents. The permittee's duty to defend the City shall not apply in those instances when the permittee has asserted the Claims, although the permittee shall still have a duty to indemnify, protect and hold harmless the City.			

II. At Building Permit Submittal		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Conditions of Approval on Building Permit Plan Submittal** **Structural Alteration Permit.** The Conditions of Approval for this Structural Alteration Permit shall be printed on the *second* sheet of each plan set submitted for a building permit pursuant to this Structural Alteration Permit, under the title 'Structural Alteration Permit Conditions.	City of Berkeley	At the Time of Building Permit Submittal	Building & Safety/Land Use Planning
2.	**Project Liaison.** The applicant shall include in all building permit plans and post onsite the name and telephone number of an individual empowered to manage construction-related complaints generated from the project. The individual's name, telephone number, and responsibility for the project shall be posted at the project site for the duration of the project in a location easily visible to the public. The individual shall record all complaints received and actions taken in response, and submit written reports of such complaints and actions to the project planner on a weekly basis. **Please designate the name of this individual below:** ☐ **Project Liaison** _____ Name Phone #	City of Berkeley	At the Time of Building Permit Submittal	Building & Safety/Land Use Planning

3.	**Construction and Demolition Diversion.** The applicant shall submit a Construction Waste Management Plan that meets the requirements of BMC Chapter 19.37 including 100% diversion of asphalt, concrete, excavated soil and land-clearing debris and a minimum of 65% diversion of other nonhazardous construction and demolition waste.	City of Berkeley BMC Chapter 19.37	At Building Permit Submittal	Building & Safety Division

III. During Construction A. Building & Safety Division		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1	**Construction Hours.** Construction activity shall be limited to between the hours of 7:00 AM and 6:00 PM on Monday through Friday, and between 9:00 AM and 4:00 PM on Saturday. No construction-related activity shall occur on Sunday or any Federal Holiday.	City of Berkeley	During Construction	Building & Safety
2.	**Construction Hours- Exceptions**. It is recognized that certain construction activities, such as the placement of concrete, must be performed in a continuous manner and may require an extension of these work hours. Prior to initiating any activity that might require a longer period, the developer must notify the Zoning Officer and request an exception for a finite period of time. If the Zoning Officer approves the request, then two weeks prior to the expanded schedule, the developer shall notify businesses and residents within 500 feet of the project site describing the expanded construction hours. A copy of such notice and methodology for distributing the notice shall be provided in advance to the City for review and approval. The project shall not be allowed more than 15 extended working days.	City of Berkeley	During Construction	Building & Safety
3.	**Construction / No Parking Permits**. Contact the Permit Service Center (PSC) at 1947 Center Street, Third Floor or (510) 981-7500 for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). Please note that the Zoning Officer and/or Traffic Engineer may limit off-site parking of construction-related vehicles if necessary to protect the health, safety or convenience of the surrounding neighborhood. A current copy of this Plan shall be available at all times at the construction site for review by City Staff.	City of Berkeley	During Construction	Building & Safety

IV. During Construction B. Land Use Planning		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Paleontological Resources (Ongoing throughout demolition, grading, and/or construction)**. In the event of an unanticipated discovery of a paleontological resource during construction, excavations within 50 feet of the find shall be temporarily halted or diverted until the discovery is examined by a qualified paleontologist (per Society of Vertebrate Paleontology standards [SVP 1995,1996]). The qualified paleontologist shall document the discovery as needed, evaluate the potential resource, and assess the significance of the find. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction is allowed to resume at the location of the find. If the City determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of the project on the qualities that make the resource important, and such plan shall be implemented. The plan shall be submitted to the City for review and approval.	City of Berkeley	During Construction	Land Use Planning
2.	**Halt Work/Unanticipated Discovery of Tribal Cultural Resources. In the event that cultural resources of Native American origin are identified during construction,** all work within 50 feet of the discovery shall be redirected. The project applicant and project construction contractor shall notify the City Planning Department within 24 hours. The City will again contact any tribes who have requested consultation under AB 52, as well as contact a qualified archaeologist, to evaluate the resources and situation and provide recommendations. If it is determined that the resource is a tribal cultural resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with State guidelines and in consultation with Native American groups. If the resource cannot be avoided, additional measures to avoid or reduce impacts to the resource and to address tribal concerns may be required.	City of Berkeley	During Construction	Land Use Planning
3.	**Archaeological Resources (Ongoing throughout demolition, grading, and/or construction**). Pursuant to CEQA Guidelines section 15064.5(f), “provisions for historical or unique archaeological resources accidentally discovered during construction” should be instituted. Therefore:	City of Berkeley	During Construction	Land Use Planning

	A. In the event that any prehistoric or historic subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant and/or lead agency shall consult with a qualified archaeologist, historian or paleontologist to assess the significance of the find. **B.** If any find is determined to be significant, representatives of the project proponent and/or lead agency and the qualified professional would meet to determine the appropriate avoidance measures or other appropriate measure, with the ultimate determination to be made by the City of Berkeley. All significant cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by the qualified professional according to current professional standards. **C.** In considering any suggested measure proposed by the qualified professional, the project applicant shall determine whether avoidance is necessary or feasible in light of factors such as the uniqueness of the find, project design, costs, and other considerations. **D.** If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery) shall be instituted. Work may proceed on other parts of the project site while mitigation measures for cultural resources is carried out. **E.** If significant materials are recovered, the qualified professional shall prepare a report on the findings for submittal to the Northwest Information Center.			

IV. During Construction **C. During Construction: Public Works**		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Site Debris.** All piles of debris, soil, sand, or other loose materials shall be covered at night and during rainy weather with plastic at least one-eighth millimeter thick and secured to the ground.	City of Berkeley	During Construction	Public Works
2.	**Street & Sidewalk Damages.** Subject to approval of the Public Works Department, the applicant shall repair any damage to public streets and/or sidewalks by construction vehicles traveling to or from the project site.	City of Berkeley	During Construction	Public Works

3.	**Underground Utilities.** If underground utilities leading to adjacent properties are uncovered and/or broken, the contractor involved shall immediately notify the Public Works Department and the Building & Safety Division, and carry out any necessary corrective action to their satisfaction	City of Berkeley	During Construction	Public Works
4.	**Hauling of Debris.** Trucks hauling debris, soil, sand, or other loose materials shall be covered or required to maintain at least two feet of board.	City of Berkeley	During Construction	Public Works

V. Structural Alteration Permit Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Repair and replacement of character-defining features.** Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old or historic feature in design, color, texture, and, where possible, materials. Replacement of missing features shall be substantiated by documentary and physical evidence.	City of Berkeley	On-Going	Land Use Planning
2.	**Chemical Treatments.** With respect to historic resources located on this site or within the propose project area, any chemical treatments needed as construction progresses will be undertaken using the gentlest means possible.	City of Berkeley	On-Going	Land Use Planning

LEGEND

1.0' — SYMBOL DENOTES RETAINED WALL HEIGHT (DECIMAL FEET). WHERE WALL HEIGHT VARIES, MAX HEIGHT IS INDICATED. UNLESS NOTED ON PLAN, ALL TOP OF WALLS (TW) ARE INTENDED TO BE FLAT. FINISHED SURFACE (FS) CALLOUTS INDICATE THE FINISH SURFACE AT THE TOE OF WALL AND DO NOT ACCOUNT FOR THE GRADE DIFFERENCE BETWEEN FINISH SURFACE AND TOP OF FOOTING.

CONSTRUCTION NOTES:

1. SAWCUT EXISTING PAVEMENT AT LIMIT OF WORK, TYPICAL.
2. PROTECT AND PRESERVE ALL SURVEY MONUMENTS. SEE MONUMENT PRESERVATION NOTE.
3. PROTECT ALL DRAINAGE AND SEWAGE STRUCTURES AND PIPES FROM INFILTRATION OF ALL CONSTRUCTION DEBRIS FOR THE DURATION OF THE WORK.
4. CURB RAMPS SHALL BE LOCATED AS SHOWN WITHIN THESE PLANS AND ADJUSTED IN THE FIELD BY THE ENGINEER, IF NECESSARY.

GENERAL NOTES:

1. ALL DRAWINGS AND SPECIFICATIONS ARE CONSIDERED PART OF THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REVIEW AND COORDINATION OF ALL DRAWINGS AND SPECIFICATIONS PRIOR TO START OF CONSTRUCTION. ANY DISCREPANCIES THAT OCCUR SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO THE START OF CONSTRUCTION SO THAT A CLARIFICATION MAY BE ISSUED. WORK NOT CONFORMING TO THE CONTRACT DOCUMENTS SHALL BE CORRECTED BY THE CONTRACTOR AT NO EXPENSE TO THE CITY.

2. UTILITIES AS SHOWN CONFORM TO AVAILABLE RECORD DATA. THE EXISTENCE, LOCATION AND CHARACTERISTICS OF UNDERGROUND UTILITY INFORMATION SHOWN ON THESE PLANS HAVE BEEN OBTAINED FROM A REVIEW OF AVAILABLE RECORD DATA. NO REPRESENTATION IS MADE AS TO THE ACCURACY OR COMPLETENESS OF SAID UTILITY INFORMATION. IT IS THE CONTRACTOR'S RESPONSIBILITY REFEERENCE ALL SUBSURFACE UTILITIES PRIOR TO COMMENCING WORK AND TO VERIFY LOCATION AND DEPTHS BY POTHOLING OF ALL UTILITIES WITH APPROPRIATE AGENCIES, AND TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS. ANY CONFLICTS SHALL BE REPORTED IMMEDIATELY TO THE ENGINEER.

3. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING ADEQUATE DRAINAGE OF THE SITE, DURING INTERIM CONDITIONS OF CONSTRUCTION.

4. CONTRACTOR SHALL PROVIDE ALL MATERIAL, LABOR, EQUIPMENT, FOR INSTALLATION, IMPLEMENTATION, AND MAINTENANCE OF ALL SURFACE WATER POLLUTION PREVENTION MEASURES THROUGHOUT THE FULL EXTENT OF THE PROJECT. SURFACE WATER IS CLASSIFIED AS ANY BODY OF WATER ABOVE GROUND.

5. OVERHEAD UTILITY SERVICE ARE SHOWN APPROXIMATELY ON THE PLANS. THE CONTRACTOR SHALL INVESTIGATE THE SITE AND BE AWARE OF LIMITED OVERHEAD CLEARANCES.

6. ALL MAINTENANCE HOLES, CLEANOUTS AND WATER VALVES SHALL BE ADJUSTED TO GRADE WITHIN 48 HOURS OF PAVING. ALL PAVING SHALL BE COMPLETED WITHIN 24 HOURS OF RAISING THE UTILITY TO GRADE.

7. REVOCABLE ITEM - THE CONTRACTOR SHALL BE RESPONSIBLE FOR SETTING ALL UTILITY BOXES TO THE GRADE OF THE FINISHED SIDEWALK OR GUTTER PRIOR TO THE POUR, INCLUDING COORDINATING WITH ALL UTILITY PROVIDERS AND/OR CLEANING AND CLEARING OF CONCRETE MORTAR FROM ALL UTILITY BOXES IN THE AREA SO THEY ARE FULLY ACCESSIBLE UPON COMPLETION OF THE SIDEWALK INSTALLATION.

8. ALL STRIPING SHALL BE THERMOPLASTIC UNLESS OTHERWISE NOTED. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO MEASURE AND MARK EXISTING STRIPING , PAVEMENT MARKINGS, AND RAISED PAVEMENT MARKERS PRIOR TO AND DURING THE STREET WORK. LAYOUT MARKINGS SHALL BE LAID OUT IN ADVANCE OF FINAL STRIPING. ALL LAYOUT MARKINGS SHALL BE APPROVED IN WRITING BY THE CITY ENGINEER. THE CONTRACTOR SHALL PROVIDE A ONE WEEK TIME PERIOD FOR REVIEW OF LAYOUT MARKINGS. STRIPING CHANGES SHALL BE APPROVED BY THE CITY ENGINEER.

9. PAVEMENT MARKINGS DISTURBED, DAMAGED IN ANY FORM, OR TO ANY DEGREE WHILE THE CONTRACTOR HAS CUSTODY OF THE SITE SHALL BE REPLACED IN THEIR ENTIRETY AT CONTRACTOR'S EXPENSE.

10. CONTRACTOR SHALL CONTACT CITY ARBORIST AT LEAST 48 HOURS IN ADVANCE OF PERFORMING WORK UNDER THE DRIP LINE OF EXISTING TREES AND WHEN EXCAVATIONS IS PLANNED WITHIN THE ROOT SYSTEM OF THE TREE. THE CITY ARBORIST WILL REVIEW EACH LOCATION ON A CASE-BY-CASE BASIS TO CONFIRM THE ALLOWABLE EXTENT OF ROOT AND BRANCH PRUNING REQUIRED. CONTRACTOR SHALL ADHERE TO CITY SPECIFICATIONS AND RECOMMENDATIONS FOR TREE PRESERVATION.

11. TREE PROTECTION - PROVIDE FOR WRAPPING TREES, KEEPING EXPOSED ROOTS MOIST, AND USE OF AIR TOOLS FOR EXCAVATING. MEET WITH CITY ARBORIST BEFORE ANY WORK IS DONE.

12. ALL TREE REMOVALS ARE CONTINGENT UPON REVIEW AND RECOMMENDATION BY CITY'S PROJECT ARBORIST.

PRESERVATION OF SURVEY MONUMENTS

ALL CITY OF BERKELEY MONUMENTS LOCATED WITHIN THE PROJECT AREA MUST BE REFERENCED, PRIOR TO WORK COMMENCING, BY A LICENSED LAND SURVEYOR AS REQUIRED BY SECTION 8771 OF THE BUSINESS AND PROFESSIONS CODE. CORNER RECORDS OF THIS WORK MUST BE SUBMITTED FOR FILING TO BOTH THE COUNTY SURVEYOR OF ALAMEDA COUNTY, AND THE CITY OF BERKELEY PUBLIC WORKS DEPARTMENT, ENGINEERING DIVISION, SURVEY SECTION.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PRESERVATION OF EXISTING SURVEY MONUMENTS, BENCHMARKS, REFERENCE MARKS AND STAKES. SHOULD ANY SURVEY MONUMENTS, BENCHMARKS, REFERENCE POINTS, OR STAKES BE DAMAGED OR DESTROYED DURING THE PERFORMANCE OF THIS WORK, THE CONTRACTOR SHALL REPLACE SAID ITEMS PER CITY STANDARDS IN ACCORDANCE WITH THE SPECIAL PROVISIONS AND CONTACT A CITY OF BERKELEY, SURVEY SECTION, CHIEF OF PARTY FOR FINAL INSPECTION AND ACCEPTANCE OF THE WORK.

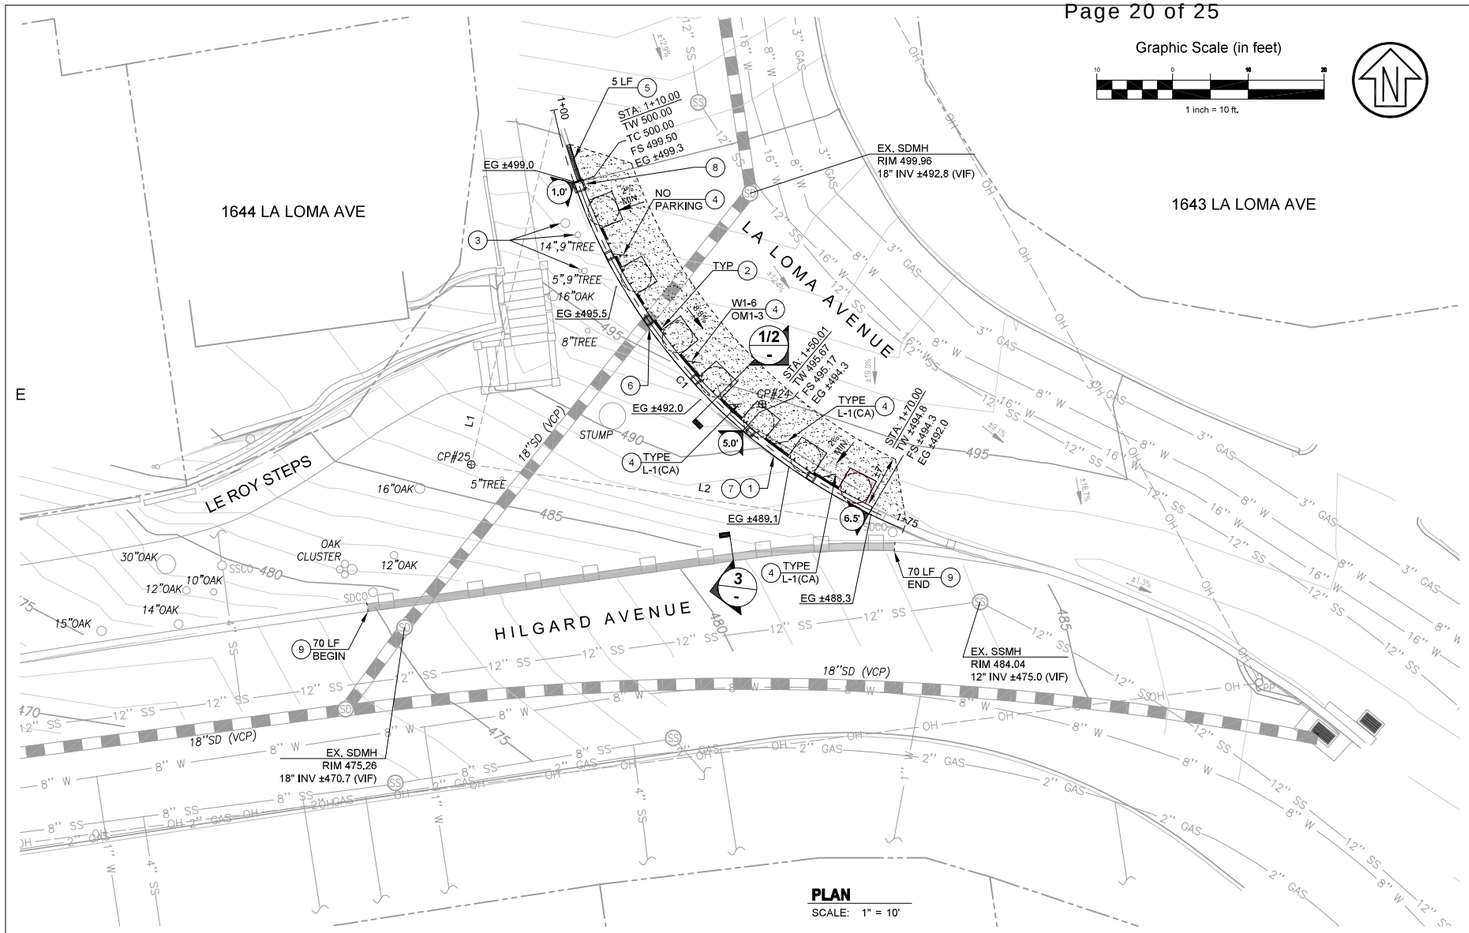
NOTE:

1. CONTROL POINTS 4, 5, 6, 10, 11, 15, 16, 19 & 23 ARE OUTSIDE OF THE LIMITS SHOWN ON THESE PLANS.

SURVEY NOTES

1. DISTANCES SHOWN ARE IN FEET AND DECIMALS THEREOF.
2. CONTRACTOR SHALL PROTECT IN PLACE ALL CITY MONUMENTS. SEE PRESERVATION OF SURVEY MONUMENT NOTES.
3. HORIZONTAL DATUM IS NORTH AMERICAN DATUM OF 1983 (NAD 83) PER CALIFORNIA REAL TIME NETWORK (CRTN). EPOCH 2017.5
4. VERTICAL DATUM WAS ESTABLISHED BY TRANSLATING TERRESTRIAL SURVEY CONTROL POINTS TO GPS CONTROL POINTS ON CALIFORNIA ZONE 3 STATE PLANES COORDINATE SYSTEM. THEN GIVEN AN ELEVATION BUMP OF -5.89 FEET TO BE PUT ON TO BERKELEY DATUM



LA LOMA AVENUE SURVEY (ONLY)

1. VERTICAL DATUM IS NORTH AMERICAN DATUM OF 1988 (NAVD88) PER CALIFORNIA REAL TIME NETWORK (CRTN), EPOCH 2017.5
2. MOUNT POINT P224 (SIBLEY VOLC) WAS USED AND SURVEY POINTS WERE ROTATED HORIZONTALLY AND BUMPED VERTICALLY ACCORDINGLY IN ADDITION TO A 5.89' LOWERING IN ELEVATION TO GET ON BERKELEY'S DATUM SYSTEM

MONITORING FOR EVALUATION OF CONSTRUCTION ACTIVITY IMPACT ON ADJACENT PROPERTIES FOR NEW RETAINING WALLS

1. THE CONTRACTOR SHALL HAVE A LICENSED SURVEYOR (LS) REFERENCE ALL EXISTING STRUCTURES/FOUNDATIONS WITHING A 50' READIUS OF THE LIMITS OF WORL. (50'-RADIUS FROM EXTENTS OF CONSTRUCTION AT LA LOMA AVENUE, WALNUT STREET, AND ROSE WALK).
2. LS SHALL INSTALL FIXED AND SECURE MARKERS ON THE EXISTING FOUNDATIONS OF NEIGHBORING PROPERTIES.
3. LS SHALL TAKE DATED AND TIMED PHOTOS OF EXISTING CONDITIONS AT THE FOUNDATIONS OF NEIGHBORING PROPERTIES.
4. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS PRIOR TO THE START OF CONSTRUCTION.
5. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS ON A WEEKLY BASIS TO COMPARE WITH EXISTING CONDITIONS.
6. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS AT THE END OF CONSTRUCTION.
7. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS ONE MONTH, 3 MONTHS, 6 MONTHS, AND ONE YEAR AFTER END OF CONSTRUCTION.
8. CONTRACTOR SHALL PROVIDE ALL FINDINGS TO THE CITY ENGINEER AT THE END OF EACH 3D SURVEY.

SHEET 24 OF 29

Pollution Prevention — It's Part of the Plan

Make sure your crews and subs do the job right!

Runoff from streets and other paved areas is a major source of pollution in San Francisco Bay. Construction activities can directly affect the health of the Bay unless contractors and crews plan ahead to keep dirt, debris, and other construction waste away from storm drains and local creeks. Following these guidelines will ensure your compliance with local ordinance requirements.

Materials storage & spill cleanup

Non-hazardous materials management

- ✓ Sand, dirt, and similar materials must be stored at least 10 feet from catch basins, and covered with a tarp during wet weather or when rain is forecast.
- ✓ Use (but don't overuse) reclaimed water for dust control as needed.
- ✓ Sweep streets and other paved areas daily. Do not wash down streets or work areas with water!
- ✓ Recycle all asphalt, concrete, and aggregate base material from demolition activities.
- ✓ Check dumpsters regularly for leaks and to make sure they don't overflow. Repair or replace leaking dumpsters promptly.

Hazardous materials management

- ✓ Label all hazardous materials and hazardous wastes (such as pesticides, paints, thinners, solvents, fuel, oil, and antifreeze) in accordance with city, state, and federal regulations.
- ✓ Store hazardous materials and wastes in secondary containment and cover them during wet weather.
- ✓ Follow manufacturer's application instructions for hazardous materials and be careful not to use more than necessary. Do not apply chemicals outdoors when rain is forecast within 24 hours.
- ✓ Be sure to arrange for appropriate disposal of all hazardous wastes.

Spill prevention and control

- ✓ Keep a stockpile of spill cleanup materials (rags, absorbents, etc.) available at the construction site at all times.
- ✓ When spills or leaks occur, contain them immediately and be particularly careful to prevent leaks and spills from reaching the gutter, street, or storm drain. Never wash spilled material into a gutter, street, storm drain, or creek!
- ✓ Report any hazardous materials spills immediately! Dial 911 or your local emergency response number.

Vehicle and equipment maintenance & cleaning

- ✓ Inspect vehicles and equipment for leaks frequently. Use drip pans to catch leaks until repairs are made; repair leaks promptly.
- ✓ Fuel and maintain vehicles on site only in a bermed area or over a drip pan that is big enough to prevent runoff.
- ✓ If you must clean vehicles or equipment on site, clean with water only in a bermed area that will not allow rinsewater to run into gutters, streets, storm drains, or creeks.
- ✓ Do not clean vehicles or equipment on-site using soaps, solvents, degreasers, steam cleaning equipment, etc.

Earthwork & contaminated soils

- ✓ Keep excavated soil on the site where it is least likely to collect in the street. Transfer to dump trucks should take place on the site, not in the street.
- ✓ Use fiber rolls, silt fences, or other control measures to minimize the flow of silt off the site.
- ✓ Avoid scheduling earth moving activities during the rainy season if possible. If grading activities during wet weather are allowed in your permit, be sure to implement all control measures necessary to prevent erosion.
- ✓ Mature vegetation is the best form of erosion control. Minimize disturbance to existing vegetation whenever possible.
- ✓ If you disturb a slope during construction, prevent erosion by securing the soil with erosion control fabric, or seed with fast-growing grasses as soon as possible. Place fiber rolls down-slope until soil is secure.
- ✓ If you suspect contamination (from site history, discoloration, odor, texture, abandoned underground tanks or pipes, or buried debris), call the Regional Water Quality Control Board or local hazardous waste management agency for help in determining what testing should be done, and manage disposal of contaminated soil according to their instructions.

Dewatering operations

- ✓ Reuse water for dust control, irrigation, or another on-site purpose to the greatest extent possible.
- ✓ Be sure to call your city's storm drain inspector before discharging water to a street, gutter, or storm drain. Filtration or diversion through a basin, tank, or sediment trap may be required.
- ✓ In areas of known contamination, testing is required prior to reuse or discharge of groundwater. Consult with the city inspector to determine what testing to do and to interpret results. Contaminated groundwater must be treated or hauled off-site for proper disposal.

Saw cutting

- ✓ Always completely cover or barricade storm drain inlets when saw cutting. Use filter fabric, catch basin inlet filters, or sand/gravel bags to keep slurry out of the storm drain system.
- ✓ Shovel, absorb, or vacuum saw-cut slurry and pick up all waste as soon as you are finished in one location or at the end of each work day (whichever is sooner!).
- ✓ If saw cut slurry enters a catch basin, clean it up immediately.

Paving/asphalt work

- ✓ Do not pave during wet weather or when rain is forecast.
- ✓ Always cover storm drain inlets and manholes when paving or applying seal coat, tack coat, slurry seal, or fog seal.
- ✓ Place drip pans or absorbent material under paving equipment when not in use.
- ✓ Protect gutters, ditches, and drainage courses with sand/gravel bags, or earthen berms.
- ✓ Do not sweep or wash down excess sand from sand sealing into gutters, storm drains, or creeks. Collect sand and return it to the stockpile, or dispose of it as trash.
- ✓ Do not use water to wash down fresh asphalt concrete pavement.

Concrete, grout, and mortar storage & waste disposal

- ✓ Be sure to store concrete, grout, and mortar under cover and away from drainage areas. These materials must never reach a storm drain.
- ✓ Wash out concrete equipment/trucks off-site or designate an on-site area for washing where water will flow onto dirt or into a temporary pit in a dirt area. Let the water seep into the soil and dispose of hardened concrete with trash.
- ✓ Divert water from washing exposed aggregate concrete to a dirt area where it will not run into a gutter, street, or storm drain.
- ✓ If a suitable dirt area is not available, collect the wash water and remove it for appropriate disposal off site.

Painting

- ✓ Never rinse paint brushes or materials in a gutter or street!
- ✓ Paint out excess water-based paint before rinsing brushes, rollers, or containers in a sink. If you can't use a sink, direct wash water to a dirt area and spade it in.
- ✓ Paint out excess oil-based paint before cleaning brushes in thinner.
- ✓ Filter paint thinners and solvents for reuse whenever possible. Dispose of oil-based paint sludge and unusable thinner as hazardous waste.

BASMAA Bay Area Stormwater Management Agencies Association (BASMAA)
1-888-BAYWISE

Storm drain polluters may be liable for fines of $10,000 or more per day!

Office of the City Manager

INFORMATION CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jordan Klein, Director, Planning and Development Department

Subject: Landmark Preservation Ordinance Notice of Decision: Rose Walk / #LMSAP2026-0005

INTRODUCTION

The attached Landmarks Preservation Commission Notice of Decision (NOD) is presented to the Mayor and City Council pursuant to Berkeley Municipal Code/Landmarks Preservation Ordinance (BMC/LPO) Section 3.24.240.A, which requires that "a copy of the Notice of Decision shall be filed with the City Clerk and the City Clerk shall present said copy to the City Council at its next regular meeting."

CURRENT SITUATION AND ITS EFFECTS

The Landmarks Preservation Commission (LPC/Commission) has approved a Structural Alteration Permit (SAP) for the subject Landmark property. This action is subject to a 14-day appeal period, which began after the notice was mailed on November 3, 2026.

BACKGROUND

BMC/LPO Section 3.24.300 allows City Council to appeal any action of the Landmarks Preservation Commission in granting or denying a Structural Alteration Permit. For Council to review the decision on its merits, Council must appeal the Notice of Decision. To do so, a Council member must move this Information Item to Action and then move to set the matter for hearing on its own. Such action must be taken within 14 days of the mailing of the Notice of Decision, or by November 17, 2026.

If the Council chooses to appeal the action of the Commission, then a public hearing will be set. The Council must then rule on the SAP within 30 days of closing the hearing, otherwise the decision of the Commission is automatically deemed affirmed.

Unless the Council wishes to review the determination of the Commission and make its own decision, the attached NOD is deemed received and filed.

ENVIRONMENTAL SUSTAINABILITY & CLIMATE IMPACTS
Landmark designation and discretionary alteration reviews by staff and LPC provide opportunities for the adaptive re-use and rehabilitation of historic resources within the City. The rehabilitation of these resources, rather than their removal, achieves construction and demolition waste diversion, and promotes investment in existing urban centers.

POSSIBLE FUTURE ACTION
The Council may choose to appeal the decision, in which case it would conduct a public hearing at a future date.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION
There are no known fiscal impacts associated with this action.

CONTACT PERSON
Allison Riemer, Senior Planner, Planning and Development, 510-981-7433

LANDMARKS PRESERVATION COMMISSION
NOTICE OF DECISION
#LMSAP2026-0005
Rose Walk
Mailed: November 3, 2026
Page 2 of 4

FINDINGS AND CONDITIONS OF APPROVAL AND APPROVED PLANS ARE ATTACHED TO THIS NOTICE

COMMISSION VOTE: 8-0-0-0

YES: ANDERSON, CRANDALL, FINACOM, GORDON, GREENE, MONTGOMERY, SCHNIETZ, SCHWARTZ,

NO: NONE

ABSTAIN: NONE

ABSENT: NONE

TO APPEAL THIS DECISION (see Section 3.24.300 of the Berkeley Municipal Code):

To appeal a decision of the Landmarks Preservation Commission to the City Council you must:

1. Submit a letter clearly and concisely setting forth the grounds for the appeal to the City Clerk, located at 2180 Milvia Street, 1st Floor, Berkeley. The City Clerk's telephone number is (510) 981-6900.
   a. Pursuant to BMC Section 3.24.300.A, an appeal may be taken to the City Council by the application of the owners of the property or their authorized agents, or by the application of at least 200 residents of the City aggrieved or affected by any determination of the commission made under the provisions of Chapter 3.24.
2. Submit the required fee (checks and money orders must be payable to 'City of Berkeley'):
   a. The basic fee for persons other than the applicant is $3,000. This fee may be reduced to $1,000 if the appeal is signed by persons who lease or own at least 50 percent of the parcels or dwelling units within 300 feet of the project site, or at least 25 such persons (not including dependent children), whichever is less. Signatures collected per the filing requirement in BMC Section 3.24.300.A may be counted towards qualifying for the reduced fee, so long as the signers are qualified. The individual filing the appeal must clearly denote which signatures are to be counted towards qualifying for the reduced fee.
   b. The fee for all appeals by Applicants is $6,000.
3. The appeal must be received prior to 5:00 p.m. on the "APPEAL PERIOD EXPIRATION" date shown above (if the close of the appeal period falls on a weekend or holiday, then the appeal period expires the following business day).

If no appeal is received, the Structural Alteration Permit will be final on the first business day following expiration of the appeal period.

LANDMARKS PRESERVATION COMMISSION
NOTICE OF DECISION
#LMSAP2026-0005
Rose Walk
Mailed: November 3, 2026
Page 3 of 4

NOTICE CONCERNING YOUR LEGAL RIGHTS:

If you object to this decision, the following requirements and restrictions apply:

1. If you challenge this decision in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Landmarks Preservation Commission at, or prior to, the public hearing.
2. You must appeal to the City Council within fifteen (15) days after the Notice of Decision of the action of the Landmarks Preservation Commission is mailed. It is your obligation to notify the Land Use Planning Division in writing of your desire to receive a Notice of Decision when it is completed.
3. Pursuant to Code of Civil Procedure Section 1094.6(b) and Government Code Section 65009(c)(1), no lawsuit challenging a City Council decision, as defined by Code of Civil Procedure Section 1094.6(e), regarding a use permit, variance or other permit may be filed more than ninety (90) days after the date the decision becomes final, as defined in Code of Civil Procedure Section 1094.6(b). Any lawsuit not filed within that ninety (90) day period will be barred.
4. Pursuant to Government Code Section 66020(d)(1), notice is hereby given to the applicant that the 90-day protest period for any fees, dedications, reservations, or other exactions included in any permit approval begins upon final action by the City, and that any challenge must be filed within this 90-day period.
5. If you believe that this decision or any condition attached to it denies you any reasonable economic use of the subject property, was not sufficiently related to a legitimate public purpose, was not sufficiently proportional to any impact of the project, or for any other reason constitutes a “taking” of property for public use without just compensation under the California or United States Constitutions, your appeal of this decision must include the following information:

   A. That this belief is a basis of your appeal.

   B. Why you believe that the decision or condition constitutes a "taking" of property as set forth above.

   C. All evidence and argument in support of your belief that the decision or condition constitutes a “taking” as set forth above.

   If you do not do so, you will waive any legal right to claim that your property has been taken, both before the City Council and in court.

Structural Alteration Permit for Rose Walk Pedestrian Walkway

Quick Facts	Project Description:
Applicant: City of Berkeley Public Works Engineering Division **Property Owner:** City of Berkeley **Project Address:** Rose Walk near 2555 Rose Street **Site Size:** n/a **GP Land Use:** Institutional, Low Density Residential (LDR) **Zoning:** Residential Multi-Unit 1 District (R-1H) **CEQA:** Exempt pursuant to CEQA Section 15331 for Historical Resource Restoration/Rehabilitation **Date Submitted:** February 27, 2026 **Date Deemed Complete:** June 1, 2026 **Project Planner:** JulieAnn Murphy, Rincon Consultants	The applicant is seeking approval to reconstruct/repair segments of retaining walls and concrete pathway material along Rose Walk between Euclid Avenue and Le Roy Avenue.
	Zoning Permits Requested:
	Structural Alteration Permit pursuant to 3.24.200 to make repairs/alterations to a City of Berkeley Landmark.
	Staff Recommendation:
	Staff recommends that LPC approve LMSAP2026-0005 pursuant to BMC Section 3.24.260 "**Permit application–Review standards and criteria**" and subject to the attached Findings and Conditions of Approval.

CEQA

The project is categorically exempt from the provisions of the California Environmental Quality Act (CEQA, Public Resources Code §21000, et seq. and California Code of Regulations, §15000, et seq.) pursuant to Section 15331 of the CEQA Guidelines ("Historic Resource Restoration/Rehabilitation" because the project will preserve and restore the existing retaining walls and walkway.

FINDINGS RELATED TO THE SECRETARY OF THE INTERIOR'S STANDARDS

Regarding the Secretary of the Interior's Standards (SOI) for Rehabilitation, the Landmarks Preservation Commission of the City of Berkeley makes the following findings:

Standard 1: *A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.*

Evidence. The proposed scope of work will allow for the Rose Walk to continue to be used as it was historically, as a pedestrian footpath that extends from Euclid Avenue to Rose Street and Le Roy Avenue. The proposed project is consistent with Standard 1.

Standard 2: *The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.*

Evidence. The proposed scope of work will retain the property's existing historic character. Distinctive materials will be preserved. The proposed replacement of retaining walls and walkway material will be undertaken in a manner that retains the existing spaces and spatial relationships that characterize the Rose Walk. Retaining walls and walkways will be replaced in-kind. The proposed scope of work is consistent with Standard 2.

Standard 3: *Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.*

Evidence. The proposed scope of work will not introduce materials that create a false sense of historical development. Standard 3 is not applicable.

Standard 4: *Changes to a property that have acquired historic significance in their own right will be retained and preserved.*

Evidence. The Rose Walk retains its original design. No changes have occurred that have acquired historic significance. Standard 4 is not applicable.

Standard 5: *Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.*

Evidence. The proposed scope of work is limited to replacing damaged materials in-kind. Distinctive materials, features, and finishes that characterize Rose Walk will be preserved. The proposed scope of work is consistent with Standard 5.

Standard 6: *Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.*

Evidence. The proposed scope of work proposes to replace existing deteriorated materials. Due to the extent and type of material damage, repair is not suitable. Proposed replacement is limited to segments that are damaged beyond repair. New retaining walls and walkway material will match the existing in design, color, texture, and materials. Replacement is based on existing

physical evidence. The proposed scope of work is consistent with Standard 6.

Standard 7: *Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.*

Evidence. No chemical or physical treatments are proposed as part of this scope of work. Standard 7 is not applicable.

Standard 8: *Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.*

Evidence. The proposed project is not expected to encounter archaeological resources. The proposed work is subject to the City's existing guidelines and conditions on the treatment of archaeological resources. The proposed scope of work is consistent with Standard 8.

Standard 9*: New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.*

Evidence. The proposed scope of work is limited to replacing materials that are deteriorated. All work will be consistent with the existing design and materials. The proposed scope of work will not destroy historic materials, features, and spatial relationships that characterize the property. No additional alterations or additions are proposed. The proposed project is consistent with Standard 9.

Standard 10: *New additions and adjacent or related new construction will be undertaken in a such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.*

Evidence. The proposed scope of work does not include new additions or new construction. Standard 10 is not applicable.

FINDINGS REQUIRED UNDER LANDMARKS PRESERVATION ORDINANCE

Pursuant to BMC Section 3.24.260(C)(1), approval of permit applications pursuant to this section may be granted only upon determination that the proposal conforms to the criteria set forth in paragraphs 1.

1. For permit applications for construction, alteration or repair:

   a. For applications relating to landmark sites, the proposed work shall not adversely affect the exterior architectural features of the landmark and, where specified in the designation for a publicly owned landmark, its major interior architectural features; nor shall the proposed work adversely affect the special character or special historical, architectural or aesthetic interest or value of the landmark and its site, as viewed both in themselves and in their setting.

   Evidence: The project proposes the in-kind replacement of existing retaining walls and concrete walkway material. Proposed replacement is limited to areas where materials are deteriorated beyond repair. The proposed scope of work is consistent with the Secretary of the Interior's Standards for Rehabilitation and will retain the Rose Walk's character-defining features. As such, the proposed scope of work will not adversely affect the special character or value of the Rose Walk.

   b. For applications relating to property in historic districts, the proposed work shall not adversely affect the exterior architectural features of the subject property or the relationship and congruity between the subject structure or feature and its neighboring structures and surroundings, including facade, setback and height; nor shall the proposed work adversely affect the special character or special historical, architectural or aesthetic interest or value of the district. The proposed work shall also conform to such further standards as may be embodied in the designation of the historic district.

   Evidence: N/A. The site is not in a Historic District.

   c. For applications relating to structure of merit sites, the proposed work shall not adversely affect the architectural features if architectural merit is the basis for designation; nor shall the proposed work adversely affect the special cultural, educational or historical interest or value if that is the basis for designation.

   Evidence: N/A. The site is a designated City Landmark and not a Structure of Merit.

Conditions of Approval

October 1, 2026

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Project Approval**. This Structural Alteration Permit approval is for Rose Walk, as substantially shown and described on the project plans dated February 27, 2026, except as required to be modified by conditions herein and plans as presented to the Landmarks Preservation Commission on October 1, 2026 ("Approval Date."). For any condition herein that requires preparation of a Final Plan where the project applicant has submitted a conceptual plan, the project applicant shall submit final plan(s) in substantial conformance with the conceptual plan, but incorporate the modifications required bythe conditions herein for approval by the City.	City of Berkeley	On-Going	Land Use Planning
2.	**Approval Limited to Proposed Project.** This Permit authorizes only the proposed project described in the application. In no way does an approval authorize other uses, structures or activities not included in the project description.	City of Berkeley BMC Section 23.404.060	On-Going	Land Use Planning
3.	**Compliance Required.** All land uses and structures in Berkeley must comply with the Zoning Ordinance and all applicable City ordinances and regulations. Compliance with the Zoning Ordinance does not relieve an applicant from requirements to comply with other federal, state, and City regulations that also apply to the property.	City of Berkeley	On-Going	Land Use Planning
4.	**Conformance to Approved Plans.** All work performed under an approved permit shall be in compliance with the approved plans and any Conditions of Approval.	City of Berkeley BMC Section 23.404.060.B.4	On-Going	Land Use Planning
5.	**Permit Revocation.** The City may revoke or modify a discretionary permit for completed projects due to: 1) violations of permit requirements; 2) Changes to the approved project; and/or 3) Vacancy for one year or more. However, no lawful residential use can lapse, regardless of the length of time of the vacancy. Proceedings to revoke or modify a permit may be initiated by the Landmarks Preservation Commission (LPC), or City Council referral.	City of Berkeley BMC Section 23.404.080	On-Going	Land Use Planning

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
6.	**Exercise and Expiration of Permits** A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. A. A permit authorizing a land use is exercised when both a valid City business license is issued (if required) and the land use is established on the property. B. A permit authorizing construction is exercised when both a valid City building permit (if required) is issued and construction has lawfully begun. C. The Zoning Officer may declare a permit lapsed if it is not exercised within one year of its issuance, except if the applicant has applied for a building permit or has made a substantial good faith effort to obtain a building permit and begin construction. The Zoning Officer may declare a permit lapsed only after 14 days written notice to the applicant. A determination that a permit has lapsed may be appealed to the ZAB in accordance with Chapter 23.410 (Appeals and Certification). D. A permit declared lapsed shall be void and of no further force and effect. To establish the use or structure authorized by the lapsed permit, an applicant must apply for and receive City approval of a new permit.	City of Berkeley BMC Section 23.404.060 (C) "Time Limits"	On-Going	Land Use Planning
7.	**Hold Harmless.** The permittee agrees as a condition of approval of this application to indemnify, protect, defend with counsel selected by the City, and hold harmless, the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees and agents, from and against any and all liabilities, claims, actions, causes of action, proceedings, suits, damages, judgments, liens, levies, costs and expenses of whatever nature, including reasonable attorney's fees and disbursements (collectively, "Claims") arising out of or in any way relating to the approval of this application, any actions taken by the City related to this entitlement, or any environmental review conducted under the California Environmental Quality Act, Public Resources Code Section 210000 et seq., for this entitlement and related actions. The indemnification shall include any Claims that may be asserted by any person or entity, including the permittee, arising out of or in connection	City of Berkeley	On-Going	Land Use Planning

I. General Administrative Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
	with the approval of this application, whether or not there is concurrent, passive or active negligence on the part of the City, and any agency or instrumentality thereof, and its elected and appointed officials, officers, employees and agents. The permittee's duty to defend the City shall not apply in those instances when the permittee has asserted the Claims, although the permittee shall still have a duty to indemnify, protect and hold harmless the City.			

II. At Building Permit Submittal		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Conditions of Approval on Building Permit Plan Submittal** **Structural Alteration Permit.** The Conditions of Approval for this Structural Alteration Permit shall be printed on the *second* sheet of each plan set submitted for a building permit pursuant to this Structural Alteration Permit, under the title 'Structural Alteration Permit Conditions.	City of Berkeley	At the Time of Building Permit Submittal	Building & Safety/Land Use Planning
2.	**Project Liaison.** The applicant shall include in all building permit plans and post onsite the name and telephone number of an individual empowered to manage construction-related complaints generated from the project. The individual's name, telephone number, and responsibility for the project shall be posted at the project site for the duration of the project in a location easily visible to the public. The individual shall record all complaints received and actions taken in response, and submit written reports of such complaints and actions to the project planner on a weekly basis. **Please designate the name of this individual below:** ☐ **Project Liaison** _____ Name Phone #	City of Berkeley	At the Time of Building Permit Submittal	Building & Safety/Land Use Planning

3.	**Construction and Demolition Diversion.** The applicant shall submit a Construction Waste Management Plan that meets the requirements of BMC Chapter 19.37 including 100% diversion of asphalt, concrete, excavated soil and land-clearing debris and a minimum of 65% diversion of other nonhazardous construction and demolition waste.	City of Berkeley BMC Chapter 19.37	At Building Permit Submittal	Building & Safety Division

III. During Construction A. Building & Safety Division		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1	**Construction Hours.** Construction activity shall be limited to between the hours of 7:00 AM and 6:00 PM on Monday through Friday, and between 9:00 AM and 4:00 PM on Saturday. No construction-related activity shall occur on Sunday or any Federal Holiday.	City of Berkeley	During Construction	Building & Safety
2.	**Construction Hours- Exceptions**. It is recognized that certain construction activities, such as the placement of concrete, must be performed in a continuous manner and may require an extension of these work hours. Prior to initiating any activity that might require a longer period, the developer must notify the Zoning Officer and request an exception for a finite period of time. If the Zoning Officer approves the request, then two weeks prior to the expanded schedule, the developer shall notify businesses and residents within 500 feet of the project site describing the expanded construction hours. A copy of such notice and methodology for distributing the notice shall be provided in advance to the City for review and approval. The project shall not be allowed more than 15 extended working days.	City of Berkeley	During Construction	Building & Safety
3.	**Construction / No Parking Permits**. Contact the Permit Service Center (PSC) at 1947 Center Street, Third Floor or (510) 981-7500 for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). Please note that the Zoning Officer and/or Traffic Engineer may limit off-site parking of construction-related vehicles if necessary to protect the health, safety or convenience of the surrounding neighborhood. A current copy of this Plan shall be available at all times at the construction site for review by City Staff.	City of Berkeley	During Construction	Building & Safety

IV. During Construction B. Land Use Planning		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Paleontological Resources (Ongoing throughout demolition, grading, and/or construction)**. In the event of an unanticipated discovery of a paleontological resource during construction, excavations within 50 feet of the find shall be temporarily halted or diverted until the discovery is examined by a qualified paleontologist (per Society of Vertebrate Paleontology standards [SVP 1995,1996]). The qualified paleontologist shall document the discovery as needed, evaluate the potential resource, and assess the significance of the find. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction is allowed to resume at the location of the find. If the City determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of the project on the qualities that make the resource important, and such plan shall be implemented. The plan shall be submitted to the City for review and approval.	City of Berkeley	During Construction	Land Use Planning
2.	**Halt Work/Unanticipated Discovery of Tribal Cultural Resources. In the event that cultural resources of Native American origin are identified during construction,** all work within 50 feet of the discovery shall be redirected. The project applicant and project construction contractor shall notify the City Planning Department within 24 hours. The City will again contact any tribes who have requested consultation under AB 52, as well as contact a qualified archaeologist, to evaluate the resources and situation and provide recommendations. If it is determined that the resource is a tribal cultural resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with State guidelines and in consultation with Native American groups. If the resource cannot be avoided, additional measures to avoid or reduce impacts to the resource and to address tribal concerns may be required.	City of Berkeley	During Construction	Land Use Planning
3.	**Archaeological Resources (Ongoing throughout demolition, grading, and/or construction**). Pursuant to CEQA Guidelines section 15064.5(f), “provisions for historical or unique archaeological resources accidentally discovered during construction” should be instituted. Therefore:	City of Berkeley	During Construction	Land Use Planning

	A. In the event that any prehistoric or historic subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant and/or lead agency shall consult with a qualified archaeologist, historian or paleontologist to assess the significance of the find. **B.** If any find is determined to be significant, representatives of the project proponent and/or lead agency and the qualified professional would meet to determine the appropriate avoidance measures or other appropriate measure, with the ultimate determination to be made by the City of Berkeley. All significant cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by the qualified professional according to current professional standards. **C.** In considering any suggested measure proposed by the qualified professional, the project applicant shall determine whether avoidance is necessary or feasible in light of factors such as the uniqueness of the find, project design, costs, and other considerations. **D.** If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery) shall be instituted. Work may proceed on other parts of the project site while mitigation measures for cultural resources is carried out. **E.** If significant materials are recovered, the qualified professional shall prepare a report on the findings for submittal to the Northwest Information Center.			

IV. During Construction **C. During Construction: Public Works**		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Site Debris.** All piles of debris, soil, sand, or other loose materials shall be covered at night and during rainy weather with plastic at least one-eighth millimeter thick and secured to the ground.	City of Berkeley	During Construction	Public Works
2.	**Street & Sidewalk Damages.** Subject to approval of the Public Works Department, the applicant shall repair any damage to public streets and/or sidewalks by construction vehicles traveling to or from the project site.	City of Berkeley	During Construction	Public Works

3.	**Underground Utilities.** If underground utilities leading to adjacent properties are uncovered and/or broken, the contractor involved shall immediately notify the Public Works Department and the Building & Safety Division, and carry out any necessary corrective action to their satisfaction	City of Berkeley	During Construction	Public Works
4.	**Hauling of Debris.** Trucks hauling debris, soil, sand, or other loose materials shall be covered or required to maintain at least two feet of board.	City of Berkeley	During Construction	Public Works

V. Structural Alteration Permit Conditions		Regulation Source	Timing/Implementation	Enforcement/Monitoring
1.	**Repair and replacement of character-defining features.** Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old or historic feature in design, color, texture, and, where possible, materials. Replacement of missing features shall be substantiated by documentary and physical evidence.	City of Berkeley	On-Going	Land Use Planning
2.	**Chemical Treatments.** With respect to historic resources located on this site or within the propose project area, any chemical treatments needed as construction progresses will be undertaken using the gentlest means possible.	City of Berkeley	On-Going	Land Use Planning

LEGEND

1.0' – SYMBOL DENOTES RETAINED WALL HEIGHT (DECIMAL FEET), WHERE WALL HEIGHT VARIES, MAX HEIGHT IS INDICATED. UNLESS NOTED ON PLAN, ALL TOP OF WALLS (TW) ARE INTENDED TO BE FLAT. FINISHED SURFACE (FS) CALLOUTS INDICATE THE FINISH SURFACE AT THE TOE OF WALL AND DO NOT ACCOUNT FOR THE GRADE DIFFERENCE BETWEEN FINISH SURFACE AND TOP OF FOOTING.

CONSTRUCTION NOTES:

1. SAWCUT EXISTING PAVEMENT AT LIMIT OF WORK, TYPICAL.
2. PROTECT AND PRESERVE ALL SURVEY MONUMENTS. SEE MONUMENT PRESERVATION NOTE.
3. PROTECT ALL DRAINAGE AND SEWAGE STRUCTURES AND PIPES FROM INFILTRATION OF ALL CONSTRUCTION DEBRIS FOR THE DURATION OF THE WORK.
4. CURB RAMPS SHALL BE LOCATED AS SHOWN WITHIN THESE PLANS AND ADJUSTED IN THE FIELD BY THE ENGINEER, IF NECESSARY.

GENERAL NOTES:

1. ALL DRAWINGS AND SPECIFICATIONS ARE CONSIDERED PART OF THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REVIEW AND COORDINATION OF ALL DRAWINGS AND SPECIFICATIONS PRIOR TO START OF CONSTRUCTION. ANY DISCREPANCIES THAT OCCUR SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO THE START OF CONSTRUCTION SO THAT A CLARIFICATION MAY BE ISSUED. WORK NOT CONFORMING TO THE CONTRACT DOCUMENTS SHALL BE CORRECTED BY THE CONTRACTOR AT NO EXPENSE TO THE CITY.

2. UTILITIES AS SHOWN CONFORM TO AVAILABLE RECORD DATA. THE EXISTENCE, LOCATION AND CHARACTERISTICS OF UNDERGROUND UTILITY INFORMATION SHOWN ON THESE PLANS HAVE BEEN OBTAINED FROM A REVIEW OF AVAILABLE RECORD DATA. NO REPRESENTATION IS MADE AS TO THE ACCURACY OR COMPLETENESS OF SAID UTILITY INFORMATION. IT IS THE CONTRACTOR'S RESPONSIBILITY REFEERENCE ALL SUBSURFACE UTILITIES PRIOR TO COMMENCING WORK AND TO VERIFY LOCATION AND DEPTHS BY POTHOLING OF ALL UTILITIES WITH APPROPRIATE AGENCIES, AND TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND ANY OTHER LINES NOT OF RECORD OR NOT SHOWN ON THESE PLANS. ANY CONFLICTS SHALL BE REPORTED IMMEDIATELY TO THE ENGINEER.

3. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING ADEQUATE DRAINAGE OF THE SITE, DURING INTERIM CONDITIONS OF CONSTRUCTION.

4. CONTRACTOR SHALL PROVIDE ALL MATERIAL, LABOR, EQUIPMENT, FOR INSTALLATION, IMPLEMENTATION, AND MAINTENANCE OF ALL SURFACE WATER POLLUTION PREVENTION MEASURES THROUGHOUT THE FULL EXTENT OF THE PROJECT. SURFACE WATER IS CLASSIFIED AS ANY BODY OF WATER ABOVE GROUND.

5. OVERHEAD UTILITY SERVICE ARE SHOWN APPROXIMATELY ON THE PLANS. THE CONTRACTOR SHALL INVESTIGATE THE SITE AND BE AWARE OF LIMITED OVERHEAD CLEARANCES.

6. ALL MAINTENANCE HOLES, CLEANOUTS AND WATER VALVES SHALL BE ADJUSTED TO GRADE WITHIN 48 HOURS OF PAVING. ALL PAVING SHALL BE COMPLETED WITHIN 24 HOURS OF RAISING THE UTILITY TO GRADE.

7. REVOCABLE ITEM - THE CONTRACTOR SHALL BE RESPONSIBLE FOR SETTING ALL UTILITY BOXES TO THE GRADE OF THE FINISHED SIDEWALK OR GUTTER PRIOR TO THE POUR, INCLUDING COORDINATING WITH ALL UTILITY PROVIDERS AND/OR CLEANING AND CLEARING OF CONCRETE MORTAR FROM ALL UTILITY BOXES IN THE AREA SO THEY ARE FULLY ACCESSIBLE UPON COMPLETION OF THE SIDEWALK INSTALLATION.

8. ALL STRIPING SHALL BE THERMOPLASTIC UNLESS OTHERWISE NOTED. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO MEASURE AND MARK EXISTING STRIPING , PAVEMENT MARKINGS, AND RAISED PAVEMENT MARKERS PRIOR TO AND DURING THE STREET WORK. LAYOUT MARKINGS SHALL BE LAID OUT IN ADVANCE OF FINAL STRIPING. ALL LAYOUT MARKINGS SHALL BE APPROVED IN WRITING BY THE CITY ENGINEER. THE CONTRACTOR SHALL PROVIDE A ONE WEEK TIME PERIOD FOR REVIEW OF LAYOUT MARKINGS. STRIPING CHANGES SHALL BE APPROVED BY THE CITY ENGINEER.

9. PAVEMENT MARKINGS DISTURBED, DAMAGED IN ANY FORM, OR TO ANY DEGREE WHILE THE CONTRACTOR HAS CUSTODY OF THE SITE SHALL BE REPLACED IN THEIR ENTIRETY AT CONTRACTOR'S EXPENSE.

10. CONTRACTOR SHALL CONTACT CITY ARBORIST AT LEAST 48 HOURS IN ADVANCE OF PERFORMING WORK UNDER THE DRIP LINE OF EXISTING TREES AND WHEN EXCAVATIONS IS PLANNED WITHIN THE ROOT SYSTEM OF THE TREE. THE CITY ARBORIST WILL REVIEW EACH LOCATION ON A CASE-BY-CASE BASIS TO CONFIRM THE ALLOWABLE EXTENT OF ROOT AND BRANCH PRUNING REQUIRED. CONTRACTOR SHALL ADHERE TO CITY SPECIFICATIONS AND RECOMMENDATIONS FOR TREE PRESERVATION.

11. TREE PROTECTION - PROVIDE FOR WRAPPING TREES, KEEPING EXPOSED ROOTS MOIST, AND USE OF AIR TOOLS FOR EXCAVATING. MEET WITH CITY ARBORIST BEFORE ANY WORK IS DONE.

12. ALL TREE REMOVALS ARE CONTINGENT UPON REVIEW AND RECOMMENDATION BY CITY'S PROJECT ARBORIST.

PRESERVATION OF SURVEY MONUMENTS

ALL CITY OF BERKELEY MONUMENTS LOCATED WITHIN THE PROJECT AREA MUST BE REFERENCED, PRIOR TO WORK COMMENCING, BY A LICENSED LAND SURVEYOR AS REQUIRED BY SECTION 8771 OF THE BUSINESS AND PROFESSIONS CODE. CORNER RECORDS OF THIS WORK MUST BE SUBMITTED FOR FILING TO BOTH THE COUNTY SURVEYOR OF ALAMEDA COUNTY, AND THE CITY OF BERKELEY PUBLIC WORKS DEPARTMENT, ENGINEERING DIVISION, SURVEY SECTION.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PRESERVATION OF EXISTING SURVEY MONUMENTS, BENCHMARKS, REFERENCE MARKS AND STAKES. SHOULD ANY SURVEY MONUMENTS, BENCHMARKS, REFERENCE POINTS, OR STAKES BE DAMAGED OR DESTROYED DURING THE PERFORMANCE OF THIS WORK, THE CONTRACTOR SHALL REPLACE SAID ITEMS PER CITY STANDARDS IN ACCORDANCE WITH THE SPECIAL PROVISIONS AND CONTACT A CITY OF BERKELEY, SURVEY SECTION, CHIEF OF PARTY FOR FINAL INSPECTION AND ACCEPTANCE OF THE WORK.

NOTE:

1. CONTROL POINTS 4, 5, 6, 10, 11, 15, 16, 19 & 23 ARE OUTSIDE OF THE LIMITS SHOWN ON THESE PLANS.

SURVEY NOTES

1. DISTANCES SHOWN ARE IN FEET AND DECIMALS THEREOF.
2. CONTRACTOR SHALL PROTECT IN PLACE ALL CITY MONUMENTS. SEE PRESERVATION OF SURVEY MONUMENT NOTES.
3. HORIZONTAL DATUM IS NORTH AMERICAN DATUM OF 1983 (NAD 83) PER CALIFORNIA REAL TIME NETWORK (CRTN). EPOCH 2017.5
4. VERTICAL DATUM WAS ESTABLISHED BY TRANSLATING TERRESTRIAL SURVEY CONTROL POINTS TO GPS CONTROL POINTS ON CALIFORNIA ZONE 3 STATE PLANES COORDINATE SYSTEM. THEN GIVEN AN ELEVATION BUMP OF -5.89 FEET TO BE PUT ON TO BERKELEY DATUM

LA LOMA AVENUE SURVEY (ONLY)

1. VERTICAL DATUM IS NORTH AMERICAN DATUM OF 1988 (NAVD88) PER CALIFORNIA REAL TIME NETWORK (CRTN), EPOCH 2017.5
2. MOUNT POINT P224 (SIBLEY VOLC) WAS USED AND SURVEY POINTS WERE ROTATED HORIZONTALLY AND BUMPED VERTICALLY ACCORDINGLY IN ADDITION TO A 5.89' LOWERING IN ELEVATION TO GET ON BERKELEY'S DATUM SYSTEM

MONITORING FOR EVALUATION OF CONSTRUCTION ACTIVITY IMPACT ON ADJACENT PROPERTIES FOR NEW RETAINING WALLS

1. THE CONTRACTOR SHALL HAVE A LICENSED SURVEYOR (LS) REFERENCE ALL EXISTING STRUCTURES/FOUNDATIONS WITHING A 50' READIUS OF THE LIMITS OF WORL. (50'-RADIUS FROM EXTENTS OF CONSTRUCTION AT LA LOMA AVENUE, WALNUT STREET, AND ROSE WALK).
2. LS SHALL INSTALL FIXED AND SECURE MARKERS ON THE EXISTING FOUNDATIONS OF NEIGHBORING PROPERTIES.
3. LS SHALL TAKE DATED AND TIMED PHOTOS OF EXISTING CONDITIONS AT THE FOUNDATIONS OF NEIGHBORING PROPERTIES.
4. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS PRIOR TO THE START OF CONSTRUCTION.
5. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS ON A WEEKLY BASIS TO COMPARE WITH EXISTING CONDITIONS.
6. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS AT THE END OF CONSTRUCTION.
7. LS SHALL PERFORM PRECISION 3D SURVEY OF THE MARKERS ONE MONTH, 3 MONTHS, 6 MONTHS, AND ONE YEAR AFTER END OF CONSTRUCTION.
8. CONTRACTOR SHALL PROVIDE ALL FINDINGS TO THE CITY ENGINEER AT THE END OF EACH 3D SURVEY.

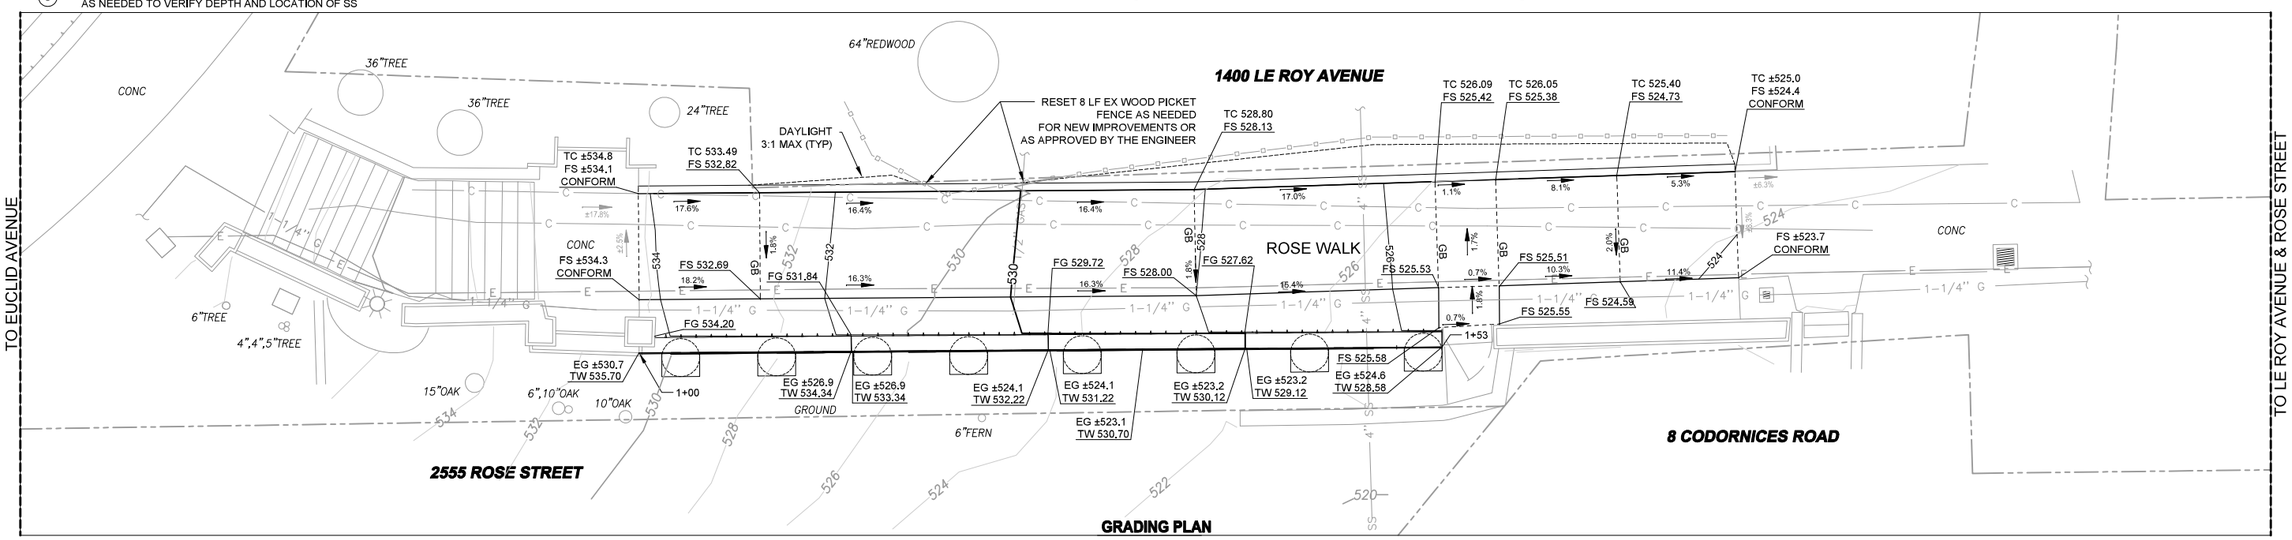
NOTES:

1. PROTECT IN PLACE ALL EX. UTILITIES.
2. PROTECT IN PLACE ALL EX. TREES UNLESS OTHERWISE DIRECTED BY THE CITY.
3. CONTRACTOR SHALL COORDINATE WITH CITY ARBORIST TO INSPECT TREES AND PROVIDE RECOMMENDATIONS PRIOR TO ANY CONSTRUCTION ACTIVITIES.
4. CONTRACTOR SHALL MAINTAIN CLEARANCES FOR FIRE APPARATUSES AT ALL TIME ON ROSE STREET, LE ROY AVENUE, AND EUCLID AVENUE. SHOULD ANY WORK LIMIT FIRE ACCESS, THE CONTRACTOR SHALL PROVIDE TWO BUSINESS DAYS NOTICE TO BERKELEY FIRE DEPARTMENT (BFD).
5. CONTRACTOR SHALL PROTECT IN PLACE ALL FIRE HYDRANTS AND MAINTAIN FIRE ACCESS AT ALL TIMES. ONE HYDRANT IS LOCATED AT LE ROY AVENUE AND ROSE STREET, ACROSS FROM 1400 LE ROY AVENUE. A SECOND HYDRANT IS AT THE NE CORNER OF EUCLID AVENUE AND CODORNICES ROAD.
6. CONTRACTOR SHALL NOTIFY PG&E A MINIMUM 5 BUSINESS DAYS IN ADVANCE OF DEMOLITION.
7. IF EXISTING UTILITIES ARE EXPOSED DURING OVER EXCAVATION FOR NEW WALL, SEE COB STD. PLAN 8136 FOR BACKFILL REQUIREMENTS OR AS DIRECTED BY GEOTECHNICAL ENGINEER.
8. NEW WALL SHALL MATCH EXISTING WALL IN APPEARANCE, BOTH COLOR AND FINISH, AS APPROVED BY THE ENGINEER.



NOTE:
1. FOOTING IS SCHEMATICALLY SHOWN FOR REFERENCE ONLY AND IS BASED ON AVAILABLE RECORD DATA. CONTRACTOR SHALL VERIFY IN FIELD THE DEPTH AND EXTENTS OF FOOTING FOR POTENTIAL CONFLICTS WITH NEW RETAINING WALL.

Pollution Prevention — It's Part of the Plan

Make sure your crews and subs do the job right!

Runoff from streets and other paved areas is a major source of pollution in San Francisco Bay. Construction activities can directly affect the health of the Bay unless contractors and crews plan ahead to keep dirt, debris, and other construction waste away from storm drains and local creeks. Following these guidelines will ensure your compliance with local ordinance requirements.

Materials storage & spill cleanup

Non-hazardous materials management

- ✓ Sand, dirt, and similar materials must be stored at least 10 feet from catch basins, and covered with a tarp during wet weather or when rain is forecast.
- ✓ Use (but don't overuse) reclaimed water for dust control as needed.
- ✓ Sweep streets and other paved areas daily. Do not wash down streets or work areas with water!
- ✓ Recycle all asphalt, concrete, and aggregate base material from demolition activities.
- ✓ Check dumpsters regularly for leaks and to make sure they don't overflow. Repair or replace leaking dumpsters promptly.

Hazardous materials management

- ✓ Label all hazardous materials and hazardous wastes (such as pesticides, paints, thinners, solvents, fuel, oil, and antifreeze) in accordance with city, state, and federal regulations.
- ✓ Store hazardous materials and wastes in secondary containment and cover them during wet weather.
- ✓ Follow manufacturer's application instructions for hazardous materials and be careful not to use more than necessary. Do not apply chemicals outdoors when rain is forecast within 24 hours.
- ✓ Be sure to arrange for appropriate disposal of all hazardous wastes.

Spill prevention and control

- ✓ Keep a stockpile of spill cleanup materials (rags, absorbents, etc.) available at the construction site at all times.
- ✓ When spills or leaks occur, contain them immediately and be particularly careful to prevent leaks and spills from reaching the gutter, street, or storm drain. Never wash spilled material into a gutter, street, storm drain, or creek!
- ✓ Report any hazardous materials spills immediately! Dial 911 or your local emergency response number.

Vehicle and equipment maintenance & cleaning

- ✓ Inspect vehicles and equipment for leaks frequently. Use drip pans to catch leaks until repairs are made; repair leaks promptly.
- ✓ Fuel and maintain vehicles on site only in a bermed area or over a drip pan that is big enough to prevent runoff.
- ✓ If you must clean vehicles or equipment on site, clean with water only in a bermed area that will not allow rinsewater to run into gutters, streets, storm drains, or creeks.
- ✓ Do not clean vehicles or equipment on-site using soaps, solvents, degreasers, steam cleaning equipment, etc.

Earthwork & contaminated soils

- ✓ Keep excavated soil on the site where it is least likely to collect in the street. Transfer to dump trucks should take place on the site, not in the street.
- ✓ Use fiber rolls, silt fences, or other control measures to minimize the flow of silt off the site.

- ✓ Avoid scheduling earth moving activities during the rainy season if possible. If grading activities during wet weather are allowed in your permit, be sure to implement all control measures necessary to prevent erosion.
- ✓ Mature vegetation is the best form of erosion control. Minimize disturbance to existing vegetation whenever possible.
- ✓ If you disturb a slope during construction, prevent erosion by securing the soil with erosion control fabric, or seed with fast-growing grasses as soon as possible. Place fiber rolls down-slope until soil is secure.
- ✓ If you suspect contamination (from site history, discoloration, odor, texture, abandoned underground tanks or pipes, or buried debris), call the Regional Water Quality Control Board or local hazardous waste management agency for help in determining what testing should be done, and manage disposal of contaminated soil according to their instructions.

Dewatering operations

- ✓ Reuse water for dust control, irrigation, or another on-site purpose to the greatest extent possible.
- ✓ Be sure to call your city's storm drain inspector before discharging water to a street, gutter, or storm drain. Filtration or diversion through a basin, tank, or sediment trap may be required.
- ✓ In areas of known contamination, testing is required prior to reuse or discharge of groundwater. Consult with the city inspector to determine what testing to do and to interpret results. Contaminated groundwater must be treated or hauled off-site for proper disposal.

Saw cutting

- ✓ Always completely cover or barricade storm drain inlets when saw cutting. Use filter fabric, catch basin inlet filters, or sand/gravel bags to keep slurry out of the storm drain system.
- ✓ Shovel, absorb, or vacuum saw-cut slurry and pick up all waste as soon as you are finished in one location or at the end of each work day (whichever is sooner!).
- ✓ If saw cut slurry enters a catch basin, clean it up immediately.

Paving/asphalt work

- ✓ Do not pave during wet weather or when rain is forecast.
- ✓ Always cover storm drain inlets and manholes when paving or applying seal coat, tack coat, slurry seal, or fog seal.
- ✓ Place drip pans or absorbent material under paving equipment when not in use.
- ✓ Protect gutters, ditches, and drainage courses with sand/gravel bags, or earthen berms.
- ✓ Do not sweep or wash down excess sand from sand sealing into gutters, storm drains, or creeks. Collect sand and return it to the stockpile, or dispose of it as trash.
- ✓ Do not use water to wash down fresh asphalt concrete pavement.

Concrete, grout, and mortar storage & waste disposal

- ✓ Be sure to store concrete, grout, and mortar under cover and away from drainage areas. These materials must never reach a storm drain.
- ✓ Wash out concrete equipment/trucks off-site or designate an on-site area for washing where water will flow onto dirt or into a temporary pit in a dirt area. Let the water seep into the soil and dispose of hardened concrete with trash.

- ✓ Divert water from washing exposed aggregate concrete to a dirt area where it will not run into a gutter, street, or storm drain.
- ✓ If a suitable dirt area is not available, collect the wash water and remove it for appropriate disposal off site.

Painting

- ✓ Never rinse paint brushes or materials in a gutter or street!
- ✓ Paint out excess water-based paint before rinsing brushes, rollers, or containers in a sink. If you can't use a sink, direct wash water to a dirt area and spade it in.
- ✓ Paint out excess oil-based paint before cleaning brushes in thinner.
- ✓ Filter paint thinners and solvents for reuse whenever possible. Dispose of oil-based paint sludge and unusable thinner as hazardous waste.

BASMAA Bay Area Stormwater Management Agencies Association (BASMAA)

Office of the City Manager

INFORMATION CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Paul Buddenhagen, City Manager

Submitted by: Jamie Parks, Director, Public Works

Subject: Audit Status Reports: Fleet Replacement Fund Short Millions

INTRODUCTION

On June 2, 2021, the City Auditor published the Fleet Replacement Fund Short Millions Audit Report[1], reviewing the sufficiency of the fund to replace vehicles and assessing whether Public Works has key information necessary for managing the fleet program.

This is the fifth status report to City Council on the efforts made to implement the Audit Report's recommendations for fleet. Previous reports were issued on November 3, 2022, March 19, 2024, December 10, 2024, and October 28, 2025.

CURRENT SITUATION AND ITS EFFECTS

The Fleet Audit Report provided two findings and twelve recommendations for the Public Works Department to review, implement and report to Council. Seven of the recommendations relate to the underfunding of the Equipment Replacement Fund. Six of these recommendations have been partly implemented, and the seventh recommendation has reverted from partly implemented in the 2025 status report to "started" in the current report.

The remaining five recommendations focused on Public Works having critical information available to inform management and decision making. One of these recommendations has been fully implemented while the other four are partly implemented.

The recommendation that reverted to a started status is to "Conduct an analysis of the City's current fleet and determine the optimal fleet size to provide services efficiently and effectively". This finding was reset to "started" to reflect a change in approach for the data collection process. Public Works originally intended to rely on a fleet analysis survey to determine appropriate fleet size, but lack of survey responses meant that the survey results were not reliable for this purpose. Instead, the Public Works Equipment Management Division will now use the results of fleetwide telematics program to provide

[1] https://berkeleyca.gov/sites/default/files/2022-01/Fleet-Replacement-Fund-Short-Millions.pdf

key insights into vehicle usage and allow for informed decisions about vehicle consolidation and replacement.

Importantly, Public Works filled the Equipment Superintendent position in June 2026 after an almost 18-month vacancy. As the Equipment Superintendent has primary responsibility for implementation of audit findings, filling this vacancy is a critical step to completing all twelve audit findings. The Senior Supervisor acted in a higher capacity during that time but was primarily focused on hiring mechanics, day-to-day operations, and continuing AssetWorks implementation. Now that the department has additional leadership capacity, it is anticipated that the audit findings will be fully implemented within the next year.

The attachment provides a detailed table of audit report recommendations, steps towards corrective action, and implementation progress updates. The next and final status report for the fleet is expected to be presented in Fall 2027.

BACKGROUND

Public Works manages the maintenance, purchase, and replacement of the City's assets such as fleet vehicles, heavy duty trucks and large equipment, including public safety vehicles.

These Audit Status Reports support the Strategic Plan Priority of advancing our goal to provide state-of-the-art, well-maintained infrastructure, amenities, and facilities.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

Public Works staff strive to procure electric vehicles or other low-emission, fuel-efficient vehicles and equipment suitable for required tasks. Staff also research the feasibility and availability of fully electric vehicles to support the City's transition away from fossil fuels towards an all-electric fleet.

POSSIBLE FUTURE ACTION

Public Works staff will continue their work to address the remaining partly implemented recommendations in the fleet audit. The draft proposed Administrative Regulation 7.6 Equipment and Vehicle Procurement and Replacement has been submitted to City Leadership for review and approval. Additionally, a contract for a fleetwide telematics program is anticipated to be submitted to City Council for approval by the end of 2026, which will greatly assist the Equipment Management Division with fleet utilization data.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION

Public Works will continue to work closely with the Budget office to ensure that the rate model accurately reflects the true costs of vehicle ownership for each Department; this will include personnel, fleet electrification charges and capital expenses related to fleet operations.

The Equipment Replacement Fund has been identified as the fund to be utilized for fleet electrification. The current electric charging infrastructure projects are utilizing fund 671 include the following: PWENEN2501 – Animal Shelter and Mental Health Clinic, PWENEN2502 – Corporation Yard, PWENEN2503/5 – Public Safety Building, PWENEN2504 – Marina and Parking Enforcement with $288,946.77 spent to date of $846,308.99 encumbered.

Attachment:
1. Fleet Audit Findings, Recommendations, and Status Updates

Audit Title: Fleet Replacement Fund Short Millions

Issue Date: June 2, 2021

Table: Audit Recommendation Statuses

Finding	Recommendation	Department	Previous Status Update	Current Status Update
The Replacement Fund is underfunded by millions of dollars.	**1.1** Calculate the dollar value of the City's replacement needs. Use results from the recent rate study to adjust departments' replacement fees to cover their share of the costs associated with vehicle replacement, including customization and personnel.	Public Works	Partly Implemented	**Partly Implemented.** The total replacement value estimate of all assets is still being developed as the Equipment Management team continues to implement AssetWorks. According to Public Works, it is anticipated to have the total number for all assets that contribute to the replacement fund within the next year.
The Replacement Fund is underfunded by millions of dollars.	**1.2** Conduct an analysis of the City's current fleet and determine the optimal fleet size to provide services efficiently and effectively. This analysis should include fleet units identified as reserve, backup, and "pool" vehicles. The outcome of the analysis should be a plan to achieve and provide funding for the optimal fleet size.	Public Works	Partly Implemented	**Started.** Mercury Associates delivered their 360 fleet assessment survey to City Council in September 2024. The assessment recommended the City conduct a right-sizing and right-typing study of the fleet. Many already replaced vehicles have been removed from service. Public Works decided not to move forward with the fleet size survey efforts noted in past updates. They are now working on telematics for the entire fleet, which will provide real-time data about vehicle usage which will in turn provide the key information to decide when to replace a vehicle. Some vehicles may be able to be kept past their planned retirement date due to low usage. Additionally, some vehicles may be found to not be needed at all and pool vehicle could be used instead. They are coordinating with AssetWorks on pool vehicle reservation system which will bill individual departments.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
The Replacement Fund is underfunded by millions of dollars.	**1.3** Work with the City Manager's Office to adjust the funding model of the Equipment Replacement Fund or adopt a new one to ensure appropriate funding for timely fleet replacement, such as annually transferring money from the General Fund based on an assessment of the City's overall fleet needs and priorities. Expand the current vehicle and equipment replacement policy to ensure transparency of key provisions of the new or updated model.	Public Works	Partly Implemented	**Partly Implemented.** There is no change on the funding model. However, the Budget office is recently engaged on evaluating changes to existing structure and will continue working with Public Works to develop a transparent process and model. Due to changes in Public Works leadership, there has been a delay in the approval process of the Equipment Replacement Policy. The draft policy is now with the Public Works Director for review and includes a process for additional funding requests based on an assessment of the City's overall fleet needs.
The Replacement Fund is underfunded by millions of dollars.	**1.4** Revise the vehicle and equipment replacement policy to include that Public Works should regularly assess the personnel expenditures related to vehicle and equipment replacement and ensure that they are appropriate and proportional to their duties.	Public Works	Partly Implemented	**Partly Implemented.** There is no change on funding model. The Budget office is evaluating changes to existing structure. The Equipment Replacement Policy is drafted and with the Department Director for review and includes reviewing personnel expenditures during the biennial budget process.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
The Replacement Fund is underfunded by millions of dollars.	**1.5** Revise the vehicle and equipment replacement policy to prevent replacing unfunded vehicles by ensuring that contributed funds are available for the purchase.	Public Works	Partly Implemented	**Partly Implemented.** Due to changes in Public Works leadership, there has been a delay in the approval process of the Equipment Replacement Policy. The draft policy is now with the Public Works Director for review. Draft Equipment Replacement Policy includes language that identifies the specific process for how underfunded vehicles should be managed.

The Replacement Fund is underfunded by millions of dollars.	**1.6** Develop an Administrative Regulation that clarifies Public Works' responsibilities to manage the fleet and maintain sufficient fleet replacement funding. Include the following provisions: - Public Works should provide an analysis of the impact on fleet replacement and overall costs when the City considers reallocating replacement funds or stopping payments into the Fund. - The City Manager should provide documented justification when deciding to use the Equipment Replacement Fund for non-replacement needs. The decision must be supported with a documented cost analysis from Public Works showing potential impact of insufficient funds on fleet replacement. - Public Works should report to Council annually on fleet funding needs and Replacement Fund sufficiency. - Public Works has the ultimate authority to make decisions about fleet replacement in consultation with	Public Works	Partly Implemented	**Partly Implemented.** Due to changes in Public Works leadership, there has been a delay in the approval process of the Equipment Replacement Policy. The draft policy is now with the Public Works Director for review.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
	departments and with consideration for departments' fleet needs. Departments can appeal decisions to the City Manager if they disagree with the decision. - The Replacement Fund is an internal service fund. Internal service funds are used to account for goods or services provided by one department or program to another on a cost reimbursement basis. Any funding departments contribute to the Replacement Fund is not dedicated to any specific department, but can be spent on fleet units throughout the City.			
The Replacement Fund is underfunded by millions of dollars.	**1.7** To help secure the funding needed for transitioning to electric vehicles by 2030, work with the City Manager's Office to develop a budgetary plan to purchase electric vehicles. The plan should align with the City's fleet electrification goals and take into consideration the current economic downturn, funding availability, available infrastructure, and electric vehicle availability.	Public Works	Partly Implemented	**Partly Implemented.** Electric vehicle purchases and charging are being funded by the Equipment Replacement Fund with reimbursement through the vehicle accrual charges.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Public Works lacks information on vehicle and equipment replacement for decision making.	**2.1** Conduct a needs assessment of vehicles overdue for replacement and create a plan that documents a timeline and cost for replacement. Report the findings to City Council.	Public Works	Partly Implemented	**Partly Implemented.** Public Works has decided not to move forward with the survey efforts noted in past updates, but will use telematics instead with expected full operation by July 2027, according to Public Works. Public Works staff say telematics will provide real time data about vehicle usage which will in turn provide the key information to decide when to replace a vehicle. Some vehicles may be able to be kept past their planned retirement date due to low usage. Additionally, some vehicles may be found to not be needed at all and pool vehicle could be used instead. Once telematics has been in place for 6 months, an evaluation of the fleet utilization will be completed and shared with Council.
Public Works lacks information on vehicle and equipment replacement for decision making.	**2.2** Update the vehicle and equipment replacement policy to include criteria for prioritizing fleet replacement. The policy should include a requirement to communicate a delay in replacement of their fleet to affected departments. In Administrative Regulation described in recommendation 1.6, specify that the vehicle and equipment replacement policy should include such criteria.	Public Works	Partly Implemented	**Partly Implemented.** Due to changes in Public Works leadership, there has been a delay in the approval process of the Equipment Replacement Policy. The draft policy is now with the Public Works Director for review. The draft policy includes criteria for adding a unit to the replacement list. Public Works is working on creating a prioritization list based on this same criteria.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Public Works lacks information on vehicle and equipment replacement for decision making.	**2.3** Work with the vendor of the new fleet management system to configure it to address the data issues identified in this report, including: - Tracking Replacement Funds collected and leftover funds by department; - Zeroing out the balance after a vehicle is replaced; - Adjusting the replacement date and reporting the rationale if a replacement is deferred; and - Displaying any information needed to prioritize replacements based on specified criteria.	Public Works	Partly Implemented	**Partly Implemented.** The new Equipment Superintendent is working closely with AssetWorks staff to utilize the full capacity of the system and implement fixes to the identified data issues. There is ongoing work with the Information Technology Department to implement Power BI Dashboards that would be available to City staff. This will provide financial and operational information on vehicles.
Public Works lacks information on vehicle and equipment replacement for decision making.	**2.4** Clean and update the vehicle and equipment database before migrating it to the new fleet management system to ensure accuracy and data integrity.	Public Works	Implemented	**Implemented.** AssetWorks is the only system used by the Equipment Maintenance Division as of May 2025. There have been continuous updates to the asset records to ensure it reflects the most accurate information.

Finding	Recommendation	Department	Previous Status Update	Current Status Update
Public Works lacks information on vehicle and equipment replacement for decision making.	**2.5** Update the vehicle and equipment replacement policy or develop a separate policy to require staff manage the City's data appropriately to ensure accurate complete information to support management decisions.	Public Works	Partly Implemented	**Partly Implemented.** The requirement to manage data is included in the draft Equipment Replacement Policy. Due to changes in Public Works leadership, there has been a delay in the approval process of the Equipment Replacement Policy. The draft policy is now with the Public Works Director for review.

Housing Advisory Commission

INFORMATION CALENDAR
November 17, 2026

To: Honorable Mayor and Members of the City Council

From: Housing Advisory Commission

Submitted by: Sarah Bell, Chairperson, Housing Advisory Commission

Subject: Housing Advisory Commission Fiscal Year 2026 – 2027 Work Plan

INTRODUCTION

This report transmits the Housing Advisory Commission's (HAC) work plan for Fiscal Year 2026 – 2027 (FY 2026 – 2027), as required by the City Council's July 2016 direction for all commissions to submit annual work plans detailing goals and objectives

CURRENT SITUATION AND ITS EFFECTS

In July 2016, the City Council directed all commissions (with certain exceptions) to submit work plans detailing goals and objectives for the year. Plans should be submitted at the start of each fiscal year.

At its June 2, 2026, meeting, the HAC approved its FY 2026 – 2027 work plan with the following vote:

Action: M/S/C (Twu/Vaughn Scott) to adopt the FY 2026 – 2027 work plan, as amended.

Vote: Ayes: Bell, Haycox, Shere, Simon-Weisberg, Twu, and Vaughn Scott. Noes: None. Abstain: None. Absent: Micael (excused) and Mirvish (excused).

BACKGROUND

The Housing Advisory Commission advises the City Council on housing matters, including affordable housing programs and policies and Community Development Blog Grant and Emergency Solutions Grants programs and their funding allocations. The Commission also recommends HTF allocations, serves as the oversight body for Measure O (the $135 million General Obligation bond for affordable housing development), and reviews items referred by the City Council, HAC members, or other commissions. When necessary, the HAC hears matters regarding abatement of substandard buildings and serves as the appeals board for relocation and correction of code violations pursuant to Chapter 19.40.

ENVIRONMENTAL SUSTAINABILITY AND CLIMATE IMPACTS

The work plan supports environmental sustainability and climate goals by promoting affordable housing development and preservation, which can reduce displacement and associated transportation emissions. Affordable housing projects funded through Housing Trust Fund allocations and CDBG programs often incorporate energy-efficient design and sustainable building practices.

POSSIBLE FUTURE ACTION

The Commission will implement the approved work plan activities throughout FY 2026 – 2027 and report back to City Council as appropriate on policy recommendations, funding allocations, and other matters within the Commission's purview.

FISCAL IMPACTS OF POSSIBLE FUTURE ACTION

There are no direct fiscal impacts from acceptance of this work plan. Future recommendations from the Commission regarding Housing Trust Fund allocations, Community Development Block Grant funding, and other housing programs will be presented to City Council with fiscal impact analyses as appropriate.

CONTACT PERSON

Snow Zhu, Commission Secretary, HHCS, 510-981-7774

Attachments:
1: Housing Advisory Commission Work Plan (FY 2026 – 2027)

Attachment 1: Housing Advisory Commission Work Plan (FY 2026 – 2027)

Mission Statement:

The Housing Advisory Commission:

- Advises the City Council on housing matters, including affordable housing programs and policies and Community Development Block Grant (CDBG) and Emergency Services Grant (ESG) programs and their funding allocations;
- Recommends to the City Council Housing Trust Fund (HTF) allocations;
- Serves as the oversight body for Measure O, the $135 million General Obligation bond to fund development of affordable housing; and
- Reviews and makes recommendations on items referred by the City Council, HAC members, or other commissions.

In addition, as necessary, the HAC:

- Hears matters regarding abatement of substandard buildings pursuant to Chapter 19.40; and
- Serves as the appeals board for relocation and correction of code violations as provided in Chapter 19.40.

When advising the City Council, the HAC is committed to addressing past and present racial and social inequities in housing and other community-development service delivery, approaching its recommendations through a social justice and tenant-centered lens and seeking to further the four P's of affordable housing: Production, Preservation, Protection, and Partnership.

Goal:

Recommend affordable housing and community development programs and policies that further social justice and address systemic racism, classism, and inequity in the city of Berkeley as outlined in HAC's FY 2026-27 work plan.

FY 2026-27 Work Plan Activities:

- Convene year-round subcommittees to work with staff on proposed HTF allocations and CDBG-funded public facilities improvements and make funding recommendations to the full HAC.
- Continue working with the Civic Arts Commission, via a joint subcommittee, regarding proposed artist housing initiatives and advocate for approval and implementation by City Council.
- Continue to be informed about CDBG-funded agencies and programs.
- Remain informed of and take action on any fiscal or budgetary impacts resulting from federal funding changes to funding streams that are the jurisdiction of the commission.

- Review and make recommendations to City Council regarding various affordable housing policies including updates on passed policy changes such as the Housing Preference Program implementation.

- Seek information via presentations, subcommittee work, etc. about Citywide initiatives that impact affordable housing preservation and development and make recommendations to City Council as appropriate. Initiatives include proposed and passed amendments to the demolition ordinance, the San Pablo Avenue Specific Plan, Middle Housing Ordinance and other policies that have been passed or are being considered by council.
- Continue to study, develop and support the recommendations from the Social Housing Report.
- Get data on unmet need for extremely low-income housing and identify ways to meet it.
- Stay informed on upcoming housing bond initiatives.

Outcomes:

- Social housing recommendations implemented.
- HTF monies pledged to affordable housing projects serving families and housing-insecure households.
- CDBG-funded public facilities in support of non-profits maintained and rehabilitated.
- Proposed initiatives to promote affordable artist housing to retain and build the city's cultural infrastructure passed.
- A more efficient and effective CDBG-funded affordable housing preservation strategy that maximizes services that allow people to stay in their homes and thrive.
- Outcomes that are reflective of the community's actual needs and concerns through increased consideration and inclusion of community voices.
- The city of Berkeley increases its supply of affordable housing and preserves present affordable housing stock.

Communications

All communications submitted to the City Council are public record. Communications are not published directly to the City's website. Copies of individual communications are available for viewing at the City Clerk Department and through Records Online.
