ariemer@berkeleyca.gov

5. Project Location

The project site is located in West Berkeley and is comprised of two adjacent parcels with frontages on both San Pablo Avenue and Tenth Street in Berkeley, California. The nearest cross streets are Grayson Street to the north and Heinz Avenue to the south. One parcel, located at 2820 San Pablo Avenue on the eastern portion of the project site, is 6,683 square feet (Assessor's Parcel Number 53-1661-11). The other parcel, located at 2817-2821 Tenth Street on the western portion of the project site, is 25,686 square foot (Assessor's Parcel Number 53-1661-27-1) lot. Collectively, the project site is approximately 32,369 square feet. Regional access to the site is available via San Pablo Avenue (State Route [SR] 123), Interstate 80/580, and Ashby Avenue (SR 13). The regional location of the project site is shown on Figure 1, and the neighborhood context is shown on Figure 2.

Figure 1 Regional Map

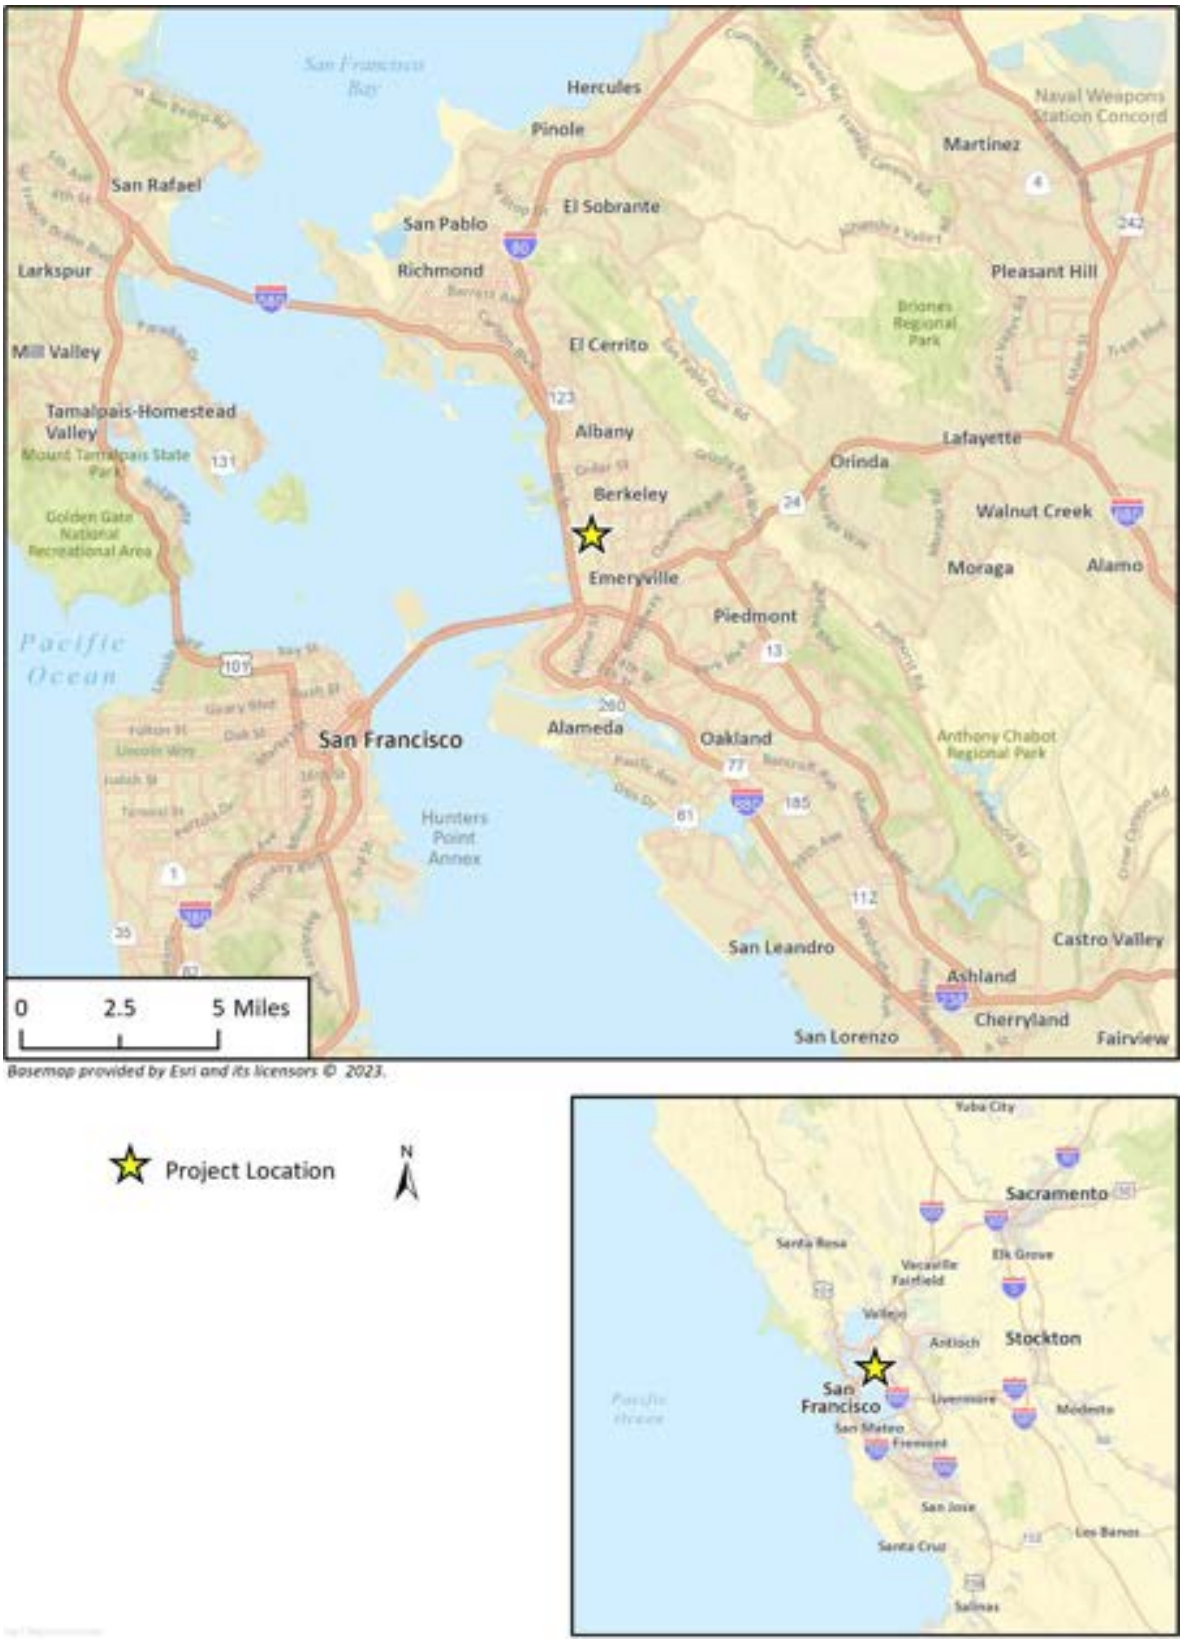

Figure 2 Project Location

6. General Plan Land Use Designation

The General Plan land use designation for the 2820 San Pablo parcel is Avenue Commercial. Uses permitted within the Avenue Commercial designation include a wide range of local-serving and regional-serving commercial, residential, office, community service, and institutional uses, such as cultural and performing arts centers, food and beverage, lodging, and retail shops. The land use designation for the 2817-2821 Tenth Street parcel is Manufacturing Mixed Use. Uses permitted within the Manufacturing Mixed-Use designation include lighter manufacturing and industrial uses and allow for additional uses, including residential. The proposed project is located in the West Berkeley Plan area. The West Berkeley Plan encourages a dynamic mix of industrial, office, arts and crafts, residential, retail and institutional activities and requires 75 percent on-site light manufacturing use by square footage.

7. Zoning

The parcel located at 2820 San Pablo Avenue is within the West Berkeley Commercial (C-W) District. The Berkeley Municipal Code (BMC) lists the following purposes for C-W District (BMC Section 23.204.140):

A. Implement the West Berkeley Plan's designation of a Commercial District;
B. Provide locations for commercial services which primarily serve area residents and/or businesses;
C. Support the retention and attraction of a balance of both smaller and larger stores and restaurants;
D. Provide appropriate locations, consistent with West Berkeley Plan policies, for commercial services which serve a citywide or broader clientele;
E. To provide a relatively compact, clearly bounded set of commercial areas in West Berkeley, so as to both improve the quality of West Berkeley shopping environments and to prevent commercial overspill into industrial areas;
F. Encourage the intensification of commercial activity at designated nodes to help develop more pedestrian-oriented environments at those locations;
G. Increase the opportunities for development of housing in commercial areas to support local retailing and use of transit lines and opportunities for mixed use projects combining pedestrian-oriented neighborhood-serving uses with mixed income housing in locations abutting residential districts;
H. Encourage appropriately intense development in underutilized portions of commercial streets;
I. Promote development compatible with adjacent commercial, residential and industrial areas;
J. Provide a location for cultural and performing arts activities;
K. Promote environmental protection for the residents and workers both within and adjacent to the District from such detriments as noise, fumes, and other detrimental environmental effects.

The parcel located at 2817-2821 Tenth Street is in the Mixed-Use Residential (MU-R) District. The BMC lists the following purposes for the MU-R district (BMC Section 23.206.090):

A. Implement the West Berkeley Plan Mixed Use/Residential District designation;
B. Support the continued development of a mixed-use district which combines residential, live/work, light industrial, arts and crafts and other compatible uses;
C. Strengthen residential concentrations which exist within the district;
D. Provide appropriate locations for a broad range of live/work activities to occur;
E. Provide a transitional district between the Residential Districts to the east of the district and the Manufacturing Districts to the west of the district;
F. Encourage light manufacturers and wholesalers which are compatible with a mixed use-residential district;
G. Support the development of businesses of all types which contribute to the maintenance and improvement of the environment;
H. Protect residents from unreasonably detrimental effect of nonresidential uses, such as noise, vibration, odors, smoke, fumes, gases, dust, heat and glare, to the extent possible and reasonable within a mixed-use West Berkeley context;
I. To the extent feasible, protect industrial uses, particularly light industrial uses, from unreasonable intrusions on their ability to operate lawfully; and
J. Permit retail and food service activities which are either limited and small scale, primarily serving persons living and/or working in the district, but not a citywide or regional clientele, or which are ancillary and designed to maintain and enhance the economic viability of manufacturers in the district.

8. Surrounding Land Uses and Existing Setting

The project site is located in the West Berkeley area, which is comprised of industrial, commercial, residential, and institutional uses. As shown in Figure 2, the project site is bordered by Tenth Street to the west, San Pablo Avenue to the east, a wellness center to the north of 2820 San Pablo Avenue, and commercial mixed-use buildings to the south. Industrial light-manufacturing building uses are located north of 2817 Tenth Street and to the south of 2821 Tenth Street. Across Tenth Street to the west, uses include commercial, residential, and institutional. Across San Pablo Avenue to the east, uses include commercial and residential. The City of Berkeley Bicycle Boulevard on Ninth Street is located one block away from the project site. Nearby public transportation includes AC Transit bus stops along San Pablo Avenue (lines 72, 72M, 72R, 802), Ashby Avenue (line J), and Seventh Street (line 36), and the Ashby Bay Area Rapid Transit (BART) station located approximately one mile east.

As shown on Figure 3, the 6,683 square foot parcel at 2820 San Pablo Avenue includes a metal fence along the perimeter of the site, a curb cut, and is capped with a concrete slab. The 25,686 square foot parcel located at 2817-2821 Tenth Street is developed with two single-story commercial buildings, one is 11,125 square feet in size and the other is 12,193 square feet in size. Both of the commercial buildings are occupied by light-industrial manufacturing uses. No known historic buildings or resources are located on the project site (Appendix A). Figure 3 shows the project site as viewed from Tenth Street and San Pablo Avenue.

Figure 3 Project Site Photographs

Photograph 1. Project site at 2820 San Pablo Avenue as viewed looking northwest from San Pablo Avenue.

Photograph 2. Project site at 2820 San Pablo Avenue as viewed looking west from San Pablo Avenue.

Photograph 3. Project site at 2817 and 2821 Tenth Street as viewed looking northeast from Tenth Street. One existing loading space is visible at 2817 Tenth Street (left).

Photograph 4. Project site at 2821 Tenth Street as viewed looking east from Tenth Street.

The 2821 Tenth Street portion of the project site is listed on several regulatory databases including the State Water Board's GeoTracker database and the USEPA's Superfund Enterprise Management System (SEMS)/Envirofacts database, and is associated with an on-site leaking underground storage tank (LUST) case that received a no further action letter from the City of Berkeley Toxic Management Division (TMD) in 1999 and was granted regulatory closure by the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) in 2000. Refer to Section 9, Hazards and Hazardous Materials, for more information regarding the status of the LUST case as it relates to the proposed project.

9. Project Description

The proposed project would demolish the existing building at 2821 Tenth Street. The building at 2817 Tenth Street would remain, with no interior or exterior modifications. The project site at 2820 San Pablo Avenue is vacant, no demolition would be required. Ground disturbing activity at 2820 San Pablo Avenue would include removal of the concrete cap and curb cut. The project would construct two connected, adjacent buildings at 2821 Tenth Street and 2820 San Pablo Avenue. The proposed building at 2821 Tenth Street would be a two-story mixed-use commercial office with light-industrial use, a ground floor parking garage and lobby, and a mezzanine above the second story. The proposed building at 2820 San Pablo Avenue would be a four-story mixed-use building with commercial offices on the first through third floors, a residential unit on the fourth floor, and a roof deck for use by the office and residential tenants. The two buildings would connect at the ground, second, and mezzanine/third floor levels. The project would include 23 automobile parking spaces (including one ADA Van parking space, and four EV charging spaces), 14 bicycle parking spaces, and three loading spaces for use by tenants. Table 1 includes a list of the existing and proposed project features. Figure 4 shows the proposed first floor plan, and Figure 5 and Figure 6 show the proposed south and west elevations.

The proposed project would not require amendments to the City's General Plan or BMC and would maintain the 75 percent on-site light manufacturing use by square footage, consistent with the West Berkeley Plan, which was adopted into the General Plan in 1993.

Access

Access to the building located at 2821 Tenth Street would be provided via the lobby on Tenth Street, and access to the building located at 2820 San Pablo Avenue would be provided via the lobby on San Pablo Avenue through an exterior entrance court on the southern side of the building. Tenants would have access to bicycle parking in a ground floor bike room accessed through the lobby entrance on the Tenth Street side, which would also include showers and lockers. Automobile parking would be available in a garage on the ground floor and would be accessed by vehicles from a driveway on Tenth Street.

Three loading spaces are proposed: two loading spaces on the west side of the 2817 Tenth Street building and one loading space on the west side of the 2821 Tenth Street building. Pursuant to BMC Section 23.302.020(B), in the MU-R zoning district, allowed loading hours are 6:00 a.m. to 10:00 p.m.

Landscaping and Open Space

The proposed project would include 7,041 square feet of usable open space. The proposed 2820 San Pablo Avenue building would include a 478-square-foot deck with 36 square feet of landscaped area on the fourth floor for use by the residential tenant. The proposed 2821 Tenth Street building would

include a 5,428-square-foot, mezzanine-level roof deck above the second floor, and a 1,135-square-foot deck on the second floor for use by commercial and office tenants. Landscaping would include seven fruitless olive trees on the mezzanine-level roof deck, and the remaining plantings would include shrubs, succulents, grasses, and perennial herbs.

Table 1 Proposed Project Features

Project Characteristic	Existing	Proposed	Allowed/Required
2817-2821 Tenth Street (MU-R Zoning)			
Lot Area (sf)	25,686	25,686	N/A
Lot Coverage (sf)	23,318	23,345	N/A

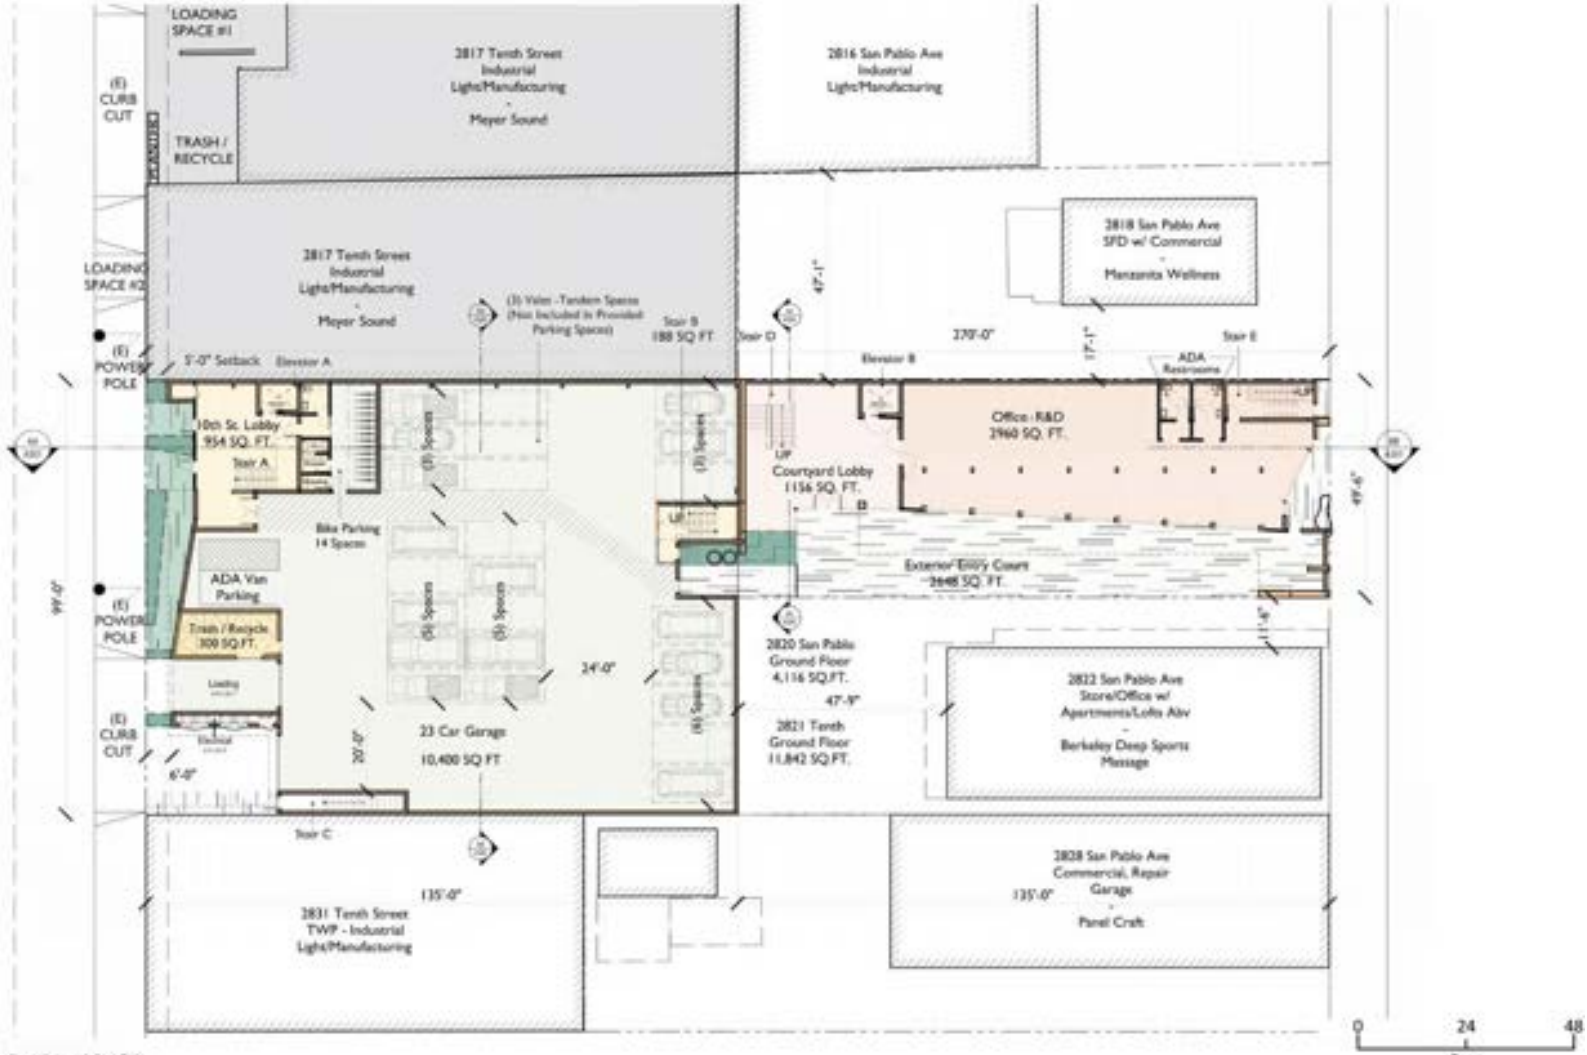
Vehicle Parking	1	23	0
Bicycle Parking		14	13
Loading Spaces[5]	2	3	3

sf: square feet

[1] Open space is proposed as a roof deck and balconies on the second floor.

[2] A residential building was previously demolished, and the 2820 San Pablo Avenue portion of the site has been vacant since December 2021.



[3] One residential unit is proposed on the fourth floor of 2820 San Pablo Avenue.

[4] Pursuant to BMC Table 23.204-42, a four-story building is allowed for a mixed-use project when the fourth floor is used for residential purposes.

[5] Existing spaces at 2817 Tenth Street and one additional space in the proposed parking garage.

Figure 6 Proposed South Elevation

Source: Studio KDA, 12/14/23.

Utilities

Water and wastewater service would be provided by the East Bay Municipal Utilities District (EBMUD) via existing municipal connections to the site. The City of Berkeley would provide solid waste collection and recycling services. Other utilities, such as electricity and telecommunications, exist adjacent to the project site and would serve the proposed project. Electricity would be delivered by Pacific Gas & Electric (PG&E) and procured by Ava Community Energy, formerly known as East Bay Community Energy or EBCE. The building would be all-electric and no natural gas hookups would be provided.

Construction

In compliance with BMC Section 13.40, construction would occur on weekdays between 7:00 a.m. and 7:00 p.m. and weekends between 9:00 a.m. and 8:00 p.m. The project would include demolition of the existing building at 2821 Tenth Street and removal of the cement slab and curb cut at 2820 San Pablo Avenue. The proposed new buildings would be constructed at-grade and with minimal cut and fill. To accommodate workers and equipment, a nearby staging area at 2825 San Pablo Avenue would be used.

Green Building Features

The proposed project would be required to comply with several City of Berkeley green building requirements, including the following:

- Pursuant to BMC Chapter 19.37, 100 percent of asphalt, concrete, excavated soil and land-clearing debris and a minimum of 65 percent of other nonhazardous construction and demolition waste would be recycled and/or salvaged for reuse. Cement used in concrete mix design would be reduced by at least 25 percent.
- Pursuant to BMC Chapter 19.37, twenty percent of the total number of parking spaces are required to be EV capable spaces.
- Pursuant to the California Water Efficient Landscape Ordinance (WELO), outdoor landscaped areas would employ landscape irrigation and water efficiency best practices.

The proposed project would also include a rainwater harvesting and storage system for water-efficient landscaping irrigation, a solar-ready rooftop, and mass-timber design. Additionally, the proposed new construction would be all-electric and would not use natural gas.

10. Other Public Agencies Whose Approval is Required

The project would require approval of several Use Permits by the City of Berkeley Zoning Adjustments Board. Approvals would include:

- **Use Permit**: BMC Section 23.326.070(A) to demolish a non-residential building.
- **Use Permit**: BMC Section 23.204.140(B)(2)(a) to construct a mixed-use development of more than 9,000 square-feet.
- **Use Permit:** BMC Section 23.204.020(A)(footnote 5) to establish more than 5,000 square feet of office.

- **Use Permit:** BMC Section 23.204.030(A)(1)(a) to construct more than 5,000 square feet of new gross floor area.
- **Use Permit:** BMC Section 23.206.030(A)(1) to construct more than 10,000 square feet of new gross floor area.
- **Use Permit:** BMC Section 23.206.020(A)(footnote 3) to establish more than 5,000 square feet of office.
- **Use Permit:** BMC Section 23.206.020(A)(footnote 3) to establish more than 5,000 square feet of light manufacturing.
- **Administrative Use Permit:** BMC Section 23.204.020(B) to permit an unlisted land use (research and development) in the C-W District.
- **Administrative Use Permit:** BMC Section 23.206.020(B) to permit an unlisted land use (research and development) in the MU-R District.

No additional discretionary public agency permits or approvals would be required for this project.

11. Have California Native American Tribes Traditionally and Culturally Affiliated with the Project Area Requested Consultation Pursuant to Public Resources Code Section 21080.3.1?

The City of Berkeley prepared and mailed a formal notification letter to 12 Native American Tribal representatives, in accordance with the provisions of Assembly Bill (AB) 52. The notification was sent out on February 10, 2023. The City of Berkeley met with the Indian Canyon Band of Costanoan Ohlone People on March 28, 2023, for consultation. No other tribes have requested consultation. The Confederated Villages of Lisjan requested information via email on February 15, 2023, and the City of Berkeley provided the requested information via email on March 7, 2023. Tribal Consultation is discussed in Section 18, *Tribal Cultural Resources*. No tribal cultural resources have been identified on-site.

Environmental Factors Potentially Affected

This project would potentially affect the environmental factors checked below, involving at least one impact that is "Potentially Significant" or "Less than Significant with Mitigation Incorporated" as indicated by the checklist on the following pages.

☐	Aesthetics	☐	Agriculture and Forestry Resources	☐	Air Quality
☐	Biological Resources	☐	Cultural Resources	☐	Energy
■	Geology and Soils	☐	Greenhouse Gas Emissions	■	Hazards and Hazardous Materials
☐	Hydrology and Water Quality	☐	Land Use and Planning	☐	Mineral Resources
■	Noise	☐	Population and Housing	☐	Public Services
☐	Recreation	☐	Transportation	■	Tribal Cultural Resources
☐	Utilities and Service Systems	☐	Wildfire	■	Mandatory Findings of Significance

Determination

Based on this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION (ND) will be prepared.

■ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions to the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT (EIR) is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "less than significant with mitigation incorporated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An EIR is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potential significant effects (a) have been analyzed adequately in an earlier EIR or ND pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or ND, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Environmental Checklist

1 Aesthetics

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	■	☐
b. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	■	☐
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	■	☐
d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	☐	☐	■	☐

Setting

As described in Section 2, *Project Description*, the project site is in an urbanized neighborhood in the West Berkeley area, which is comprised of industrial, commercial, residential, and institutional uses. The project site's surrounding land uses are shown in Figure 2 and described above in *Surrounding Land Uses and Existing Setting*. Existing conditions at the project site are shown in Figure 3.The project site is within a transit priority area (TPA) as defined by the Association of Bay Area Governments (ABAG) (ABAG/MTC 2021). The City of Berkeley Bicycle Boulevard on Ninth Street is located one block away from the project site. Nearby public transportation includes AC Transit bus stops along San Pablo Avenue (lines 72, 72M, 802), Ashby Avenue (lines 7 and J), and Seventh Street (Line 36) which are less than 0.5 miles from the project site, and the Ashby Bay Area Rapid Transit (BART) station located approximately one mile east.

Regulatory Setting

Senate Bill (SB) 743 (California Public Resources Code [PRC] Section 21099) passed in 2013, made changes to the California Environmental Quality Act (CEQA) for projects located in transit-oriented development areas. Among these changes are that a project's aesthetics impacts are no longer considered significant impacts on the environment if the project is a residential, mixed-use residential, or employment center project and if the project is located on an infill site within a TPA. Pursuant to Section 21099 of the PRC, an "infill site" is defined as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses (subsection (a)(4)); an "employment center project" is defined as a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a TPA (subsection (a)(1)); and a "transit priority area" is defined as an area within 0.5 mile of an existing or planned major transit stop (subsection (a)(7)). A "major transit stop" is defined in Section 21064.3 of the PRC as a rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

Impact Analysis

a. *Would the project have a substantial adverse effect on a scenic vista?*

b. *Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

c. *Would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

d. *Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?*

According to the ABAG/Metropolitan Transportation Commission (MTC) TPA map, the project site is within a TPA pursuant to California Public Resource Code Section 21099 as defined in the *Regulatory Setting* section above (ABAG/MTC 2021). The project site is also within 0.5 miles of several intersections of existing bus routes including San Pablo Avenue/Ashby Avenue which services lines 72, 72R, 72M, J, and 802. The 72R line has a frequency interval of 15 minutes or less during morning and afternoon periods (AC Transit 2023b). The San Pablo Avenue/Ashby Avenue intersection is defined by the ABAG/MCT Major Transit Stop map as a major transit stop (ABAG/MCT 2022b). The project site is also within 0.5 miles of three future planned Plan Bay Area 2050 Transportation projects including an AC Transit Local Service Frequency Increase, Transbay Service Increase Phase 1, and Bus Rapid Transit (BRT) improvements along San Pablo Avenue (ABAG/MCT 2022, ABAG/MCT 2021b). The proposed project has a floor area ratio of more than 0.75 and is located on a previously developed property zoned for commercial uses; therefore, it qualifies as an employment center project on an infill site as defined in the *Regulatory Setting* section above. Since the proposed project is an employment center on an infill site within a TPA, Senate Bill (SB) 743 applies to the project, and aesthetic impacts of the project may not be considered significant impacts on the environment; impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	■
b. Conflict with existing zoning for agricultural use or a Williamson Act contract?	☐	☐	☐	■
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	■
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	■
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	■

Setting

The project site is located on Urban and Built-Up Land, pursuant to the Department of Conservation's (DOC) Important Farmland Finder (DOC 2022). The project site is not identified as prime farmland, farmland of statewide importance, unique farmland, farmland of local importance, or grazing land. The project site is not enrolled in a Williamson Act contract, nor does it support forest land or resources; the site does not meet the definition of forest land, timberland, or timberland zoned Timberland Production in PRC 12220(g), 4526, and 51104(g). The project site is

not located on or adjacent to agricultural land or forest land and the proposed project would not involve development that could result in the conversion of farmland to non-agricultural uses.

Regulatory Setting

California Department of Conservation Farmland Mapping and Monitoring Program

The California DOC's Division of Land Resource Protection generates maps depicting farmlands including prime farmland, farmland of statewide importance, unique farmland, farmland of local importance, and grazing land.

Williamson Act

The Williamson Act also allows local governments to establish Agricultural Preserves, which are parcels of land for which cities or counties are willing to enter into Williamson Act contracts.

California Public Resources Code (PRC)

Forest land is defined by PRC Section 12220(g) as "land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits." Timberland is defined by PRC Section 4526 defines as "land, other than land owned by the federal government and land designated by the State Board of Forestry as experimental forest land, which is available for, and capable of, growing a crop of trees of any commercial species used to produce lumber and other forest products, including Christmas trees." Timberland production zone (TPZ) is defined in PRC Section 51104(g) as an area that has been zoned pursuant to California Government Code (CGC) Section 51112 or 51113 and is devoted to and used for growing and harvesting timber and compatible uses.

Impact Analysis

a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

b. Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?

c. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

d. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

The project site is not on or adjacent to agricultural or forest land or resources. The project would have no impact with respect to conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use; conflict with existing agricultural zoning

or Williamson Act contracts; result in the loss of forest land or conversion of forest land to non-forest use; or other conversion of farmland to non-agricultural use.

NO IMPACT

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	■	☐

Setting

Air Quality Standards and Attainment

The project site is located within the San Francisco Bay Area Air Basin (Basin), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). As the local air quality management agency, the BAAQMD is required to monitor air pollutant levels to ensure that state and federal air quality standards are met and, if they are not met, they are required to develop strategies to meet the standards.

Depending on whether or not the standards are met or exceeded, the Basin is classified as being in "attainment" or "nonattainment." Under state law, air districts are required to prepare a plan for air quality improvement for pollutants for which the district is in non-compliance. The BAAQMD is in non-attainment for the state and federal ozone standards, the state and federal $PM_{2.5}$ (particulate matter up to 2.5 microns in size) standards, and the state PM_{10} (particulate matter up to 10 microns in size) standards. Therefore, BAAQMD is required to prepare a plan to improve these standards (BAAQMD 2017a).

The health effects associated with criteria pollutants for which the Basin is in non-attainment are described in Table 2.

Table 2 Health Effects Associated with Non-Attainment Criteria Pollutants

Pollutant	Adverse Effects
Ozone	(1) Short-term exposures: (a) pulmonary function decrements and localized lung edema in humans and animals and (b) risk to public health implied by alterations in pulmonary morphology and host defense in animals; (2) long-term exposures: risk to public health implied by altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (3) vegetation damage; and (4) property damage.
Suspended particulate matter (PM_{10})	(1) Excess deaths from short-term and long-term exposures; (2) excess seasonal declines in pulmonary function, especially in children; (3) asthma exacerbation and possibly induction; (4) adverse birth outcomes including low birth weight; (5) increased infant mortality; (6) increased respiratory symptoms in children such as cough and bronchitis; and (7) increased hospitalization for both cardiovascular and respiratory disease (including asthma).[1]
Suspended particulate matter ($PM_{2.5}$)	(1) Excess deaths from short- and long-term exposures; (2) excess seasonal declines in pulmonary function, especially in children; (3) asthma exacerbation and possibly induction; (4) adverse birth outcomes, including low birth weight; (5) increased infant mortality; (6) increased respiratory symptoms in children, such as cough and bronchitis; and (7) increased hospitalization for both cardiovascular and respiratory disease, including asthma.[1]

[1] More detailed discussions on the health effects associated with exposure to suspended particulate matter can be found in the following document: United States Environmental Protection Agency, Air Quality Criteria for Particulate Matter, 2004.
Source: United States Environmental Protection Agency 2018

Regulatory Setting

Applicable Regulations

California Clean Air Act

The California Clean Air Act (CAA), signed into law in 1988, requires all areas of the State to achieve and maintain the California Ambient Air Quality Standards by the earliest practical date. California Air Resources Board CARB is the State air pollution control agency and is a part of CalEPA. CARB is the agency responsible for coordination and oversight of State and local air pollution control programs in California, and for implementing the requirements of the California CAA. CARB overseas local district compliance with federal and California laws, approves local air quality plans, submits the State implementation plans to the U.S. EPA, monitors air quality, determines and updates area designations and maps, and sets emissions standards for new mobile sources, consumer products, small utility engines, off-road vehicles, and fuels.

Air Emission Thresholds

This analysis relies on BAAQMD's *2022 CEQA Air Quality Guidelines* to evaluate air quality (BAAQMD 2022). Table 3 shows the significance thresholds for construction and operational-related criteria air pollutant and precursor emissions being used for the purposes of this analysis. These thresholds represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the Basin's existing air quality conditions. For the purposes of this analysis, the project would result in a significant impact if construction or operational emissions would exceed thresholds as shown in Table 3.

Table 3 Air Quality Thresholds of Significance

Pollutant/Precursor	Construction-Related Thresholds	Operation-Related Thresholds	
	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tpy)	Average Daily Emissions (lbs/day)
ROG	54	10	54
NO_X	54	10	54
PM_{10}	82 (exhaust)	15	82
$PM_{2.5}$	54 (exhaust)	10	54

tpy = tons per year; lbs/day = pounds per day; NOX = oxides of nitrogen; $PM_{2.5}$ = fine particulate matter with an aerodynamic resistance diameter of 2.5 micrometers or less; PM_{10} = respirable particulate matter with an aerodynamic resistance diameter of 10 micrometers or less; ROG = reactive organic gases.
Source: Bay Area Air Quality Management District 2022.

2017 Clean Air Plan

The BAAQMD adopted the 2017 Clean Air Plan (2017 Plan) as an update to the 2010 Clean Air Plan. The 2017 Plan provides a regional strategy to protect public health and protect the climate, which would apply to proposed projects in the San Francisco Bay Area Air Basin. To fulfill State ozone planning requirements, the 2017 control strategy includes all feasible measures to reduce emissions of ozone precursors—ROG and NO_X—and reduce transport of ozone and its precursors to neighboring air basins, such as: stationary-source control measures to be implemented through the BAAQMD regulations; mobile-source control measures to be implemented through incentive programs and other activities; and transportation control measures to be implemented through transportation programs in cooperation with the MTC, local governments, transit agencies, and others. In addition, the 2017 Plan builds upon and enhances the BAAQMD's efforts to reduce emissions of fine particulate matter and toxic air contaminants. The 2017 Plan also represents the Bay Area's most recent triennial assessment of the Region's strategy to attain the State 1-hour ozone standard (BAAQMD 2017a).

The 2017 Plan focuses on two goals:

- Protect air quality and health at the regional and local scale by attaining all national and state air quality standards and eliminating disparities among Bay Area communities in cancer health risk from TACs, and
- Protect the climate by reducing Bay Area GHG emissions to 40 percent below 1990 levels by 2030, and 80 percent below 1990 levels by 2050.

Impact Analysis

a. Would the project conflict with or obstruct implementation of the applicable air quality plan?

The California CAA, described above under Regulatory Setting, requires that air districts create a Clean Air Plan that describes how the jurisdiction will meet air quality standards. The most recently adopted air quality plan is the BAAQMD 2017 Plan. The 2017 Plan updates the most recent Bay Area plan, the 2010 Clean Air Plan, pursuant to air quality planning requirements defined in the California Health and Safety Code. To fulfill state ozone planning requirements, the 2017 control strategy includes all feasible measures to reduce emissions of ozone precursors—ROG and NO_X—and reduce transport of ozone and its precursors to neighboring air basins. The Clean Air Plan builds upon and

enhances the BAAQMD's efforts to reduce emissions of fine particulate matter and Toxic Air Contaminants (TAC). The 2017 Plan does not include control measures that apply directly to individual development projects. Instead, the control strategy includes control measures related to stationary sources, transportation, energy, buildings, agriculture, natural and working lands, waste management, water, and super-greenhouse gas (GHG) pollutants[1].

Under BAAQMD's methodology, a determination of consistency with the 2017 Plan should demonstrate that a project:

- Supports the primary goals of the air quality plan
- Includes applicable control measures from the air quality plan
- Does not disrupt or hinder implementation of any air quality plan control measures

A project that would not support the 2017 Plan's goals would not be considered consistent with the 2017 Plan. On an individual project basis, consistency with BAAQMD quantitative thresholds is interpreted as demonstrating compliance with the clean air plan's goals. As discussed under criterion (b) below, the project would not exceed BAAQMD significance thresholds related to air quality emission, the project would not result in exceedances of BAAQMD thresholds for criteria air pollutants, and thus would not conflict with the 2017 Plan's goal to attain air quality standards.

The 2017 Plan includes 85 control measures under the following sectors: stationary sources, transportation, energy, buildings, agriculture, natural and working lands, waste management, water, and super-GHG pollutants. Many of these measures are industry-specific and would not be applicable to development facilitated by the project (e.g., stationary sources, agriculture, and natural and working lands). Measures from transportation, energy, building, water, waste, and super-GHG pollutants sectors are focused on larger-scale planning efforts (e.g., transit funding, utility energy procurement, regional energy plans) and would not directly apply to the project. Applicable 2017 Plan goals and control measures includes increasing the use of bicycle and pedestrian facilities (Control Measure TR9: Bicycle and Pedestrian Access and Facilities), promoting the use of renewable energy (Control Measure BL1: Green Buildings), encouraging energy efficiency (Control Measure EN2: Decrease Electricity Demand), and supporting water conservation (Control Measure WR2: Support Water Conservation). The project includes features that are consistent with these goals and control measures, including meeting Berkeley's local amendments to the California Green Building Standards (2022 CALGreen) and the California Energy Commission 2022 Energy Code, omitting natural gas hookups, diverting construction waste pursuant to BMC Chapter 19.37, complying with California WELO, providing 14 bicycle parking stalls, and its location near transit (AC Transit bus stops along San Pablo Avenue [lines 72, 72M, 802], Ashby Avenue [line J], and Seventh Street [line 36], and the Ashby BART station located approximately one mile east), which would reduce reliance on single-occupancy vehicles and reduce VMT. Therefore, the project would not conflict with or obstruct the implementation of an applicable air quality plan and the project would have a less-than-significant impact.

LESS-THAN-SIGNIFICANT IMPACT

[1] Super GHG pollutants such as methane, black carbon, and hydrofluorocarbons remain in the atmosphere for less time than carbon dioxide but have a more potent impact on near-term global warming.

b. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Construction of the project would generate temporary construction emissions (direct emissions) and long-term operational emissions (indirect emissions). Project construction generated temporary air pollutant emissions are associated with fugitive dust (PM_{10} and $PM_{2.5}$) and exhaust emissions from heavy construction vehicles, in addition to reactive organic gases (ROG) that would be released during the drying phase following application of architectural coatings. Long-term emissions associated with project operation would include emissions from vehicle trips (mobile sources); and landscape maintenance equipment, consumer products, and architectural coating associated with on-site development (area sources).

Construction and operational emissions associated with the project were quantified using the California Emissions Estimator Model (CalEEMod) version 2022.1.1.20. Complete CalEEMod results and assumptions are provided in Appendix B.

Construction Emissions

Limited information on construction timing and methods is available, so defaults from CalEEMod for a project of this type and size were conservatively utilized to calculate emissions. Construction would occur over approximately 11 months. Additionally, the project would demolish a 12,193-square-foot commercial building at 2821 Tenth Street and remove a cement slab and curb cut at 2820 San Pablo Avenue. Demolition materials would be hauled off-site for disposal.

Construction of the project would be required to comply with the City of Berkeley's Standard Conditions of Approval (COA) for use permits. These include:

Standard COA: Diesel Particulate Matter Controls During Construction

All off-road construction equipment used for projects with construction lasting more than 2 months shall comply with one of the following measures:

A. The project applicant shall prepare a health risk assessment that demonstrates the project's on-site emissions of diesel particulate matter during construction will not exceed health risk screening criteria after a screening-level health risk assessment is conducted in accordance with current guidance from BAAQMD and the Office of Environmental Health Hazard Assessment (OEHHA). The health risk assessment shall be submitted to the Public Works Department for review and approval prior to the issuance of building permits.

B. All construction equipment shall be equipped with Tier 2 or higher engines and the most effective Verified Diesel Emission Control Strategies (VDECS) available for the engine type (Tier 4 engines automatically meet this requirement) as certified by the California Air Resources Board (CARB). The equipment shall be properly maintained and tuned in accordance with manufacturer specifications.

In addition, a Construction Emissions Minimization Plan (Emissions Plan) shall be prepared that includes the following:

- An equipment inventory summarizing the type of off-road equipment required for each phase of construction, including the equipment manufacturer, equipment identification number, engine model year, engine certification (tier rating), horsepower, and engine serial number. For all VDECS, the equipment inventory shall also include the technology type,

serial number, make, model, manufacturer, CARB verification number level, and installation date.

- A Certification Statement that the Contractor agrees to comply fully with the Emissions Plan and acknowledges that a significant violation of the Emissions Plan shall constitute a material breach of contract. The Emissions Plan shall be submitted to the Public Works Department for review and approval prior to the issuance of building permits.

Standard COA: Implement BAAQMD-Recommended Measures during Construction

For all proposed projects, the City of Berkeley requires that contractors follow BAAQMD's Basic Construction Mitigation Measures, listed below to meet the best management practices threshold for fugitive dust:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
- A publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints shall be posted. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible.

For the quantification of construction emissions, this analysis assumes that equipment would be equipped with US EPA Tier 4 engines.

Table 4 summarizes the estimated maximum daily emissions of pollutants during construction on the project site. As shown in the table, the BAAQMD thresholds would not be exceeded.

Table 4 Construction Emissions (pounds/day)

Sources	Average Daily Emissions (lbs/day)			
	ROG	NO_X	PM_{10} (exhaust)	$PM_{2.5}$ (exhaust)
Average Daily Construction Emissions	1	3	<1	<1

Threshold Exceeded?	No	No	No	No

See Appendix B for AQ CalEEMod worksheets.

N/A = not applicable; lbs/day = pounds per day; ROG = reactive organic gases; NO_X = oxides of nitrogen; CO = Carbon Monoxide; $PM_{2.5}$ = fine particulate matter with an aerodynamic resistance diameter of 2.5 micrometers or less; PM_{10} = respirable particulate matter with an aerodynamic resistance diameter of 10 micrometers or less; SO_x = oxides of sulfur.

No BAAQMD threshold for CO or SO_X

Operational Emissions

Table 5 and Table 6 summarizes the project's net operational daily and annual emissions, which were calculated by modeling the project's total projected emissions and subtracting the emissions from the existing uses on site. As shown in

Table 5 and Table 6, daily and annual operational emissions would not exceed BAAQMD criteria pollutant thresholds. The operational emissions account for the lack of natural gas consumption. Operational impacts would be less than significant.

Table 5 Daily Operational Emissions (pounds/day)

Sources	Estimated Emissions (lbs/day)			
	ROG	NO_X	PM_{10}	$PM_{2.5}$

No BAAQMD threshold for CO or SO_X

Carbon Monoxide Emissions

A CO hotspot is a localized concentration of CO that is above a CO ambient air quality standard. The entire Basin is in conformance with state and federal CO standards. There are no current exceedances of CO standards within the air district and the district has not had a CO exceedance in the Bay Area since before 1994.[2] Given the ambient concentrations, which includes mobile, as well as stationary sources, a project in the Bay Area would need to emit concentrations three times the hourly maximum ambient emissions for all sources before project emissions would exceed the 1-hour standard. Additionally, the project would need to emit seven times the daily average for ambient concentrations to exceed the 8-hour standards. Typical development projects, like the relatively small-scale proposed under this project, would not emit the levels of CO necessary to result in a localized hot spot. Therefore, impacts to CO hotspots would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

c. Would the project expose sensitive receivers to substantial pollutant concentrations?

Certain population groups such as children, the elderly, and people with health issues are particularly sensitive to air pollution. The majority of sensitive receptor locations are schools, residences and hospitals. The nearest sensitive receivers are single-family residences across Tenth Street from the project site, approximately 75 feet to the west. The following subsections discuss the project's potential to result in impacts related to TAC emissions during construction and operation.

[2] BAAQMD only has records for annual air quality summaries dating back to 1994.

Construction

Construction-related activities would result in temporary project-generated emissions of diesel particulate matter (DPM) exhaust emissions from off-road, heavy-duty diesel equipment for site preparation, grading, building construction, hauling and other construction activities. DPM was identified as a TAC by CARB in 1998 (CARB 2021).

Generation of DPM from construction projects typically occurs in a single area for a short period. Construction of the proposed project would occur over approximately 11 months. The dose to which the receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance or substances in the environment and the extent of exposure that person has to the substance. Dose is positively correlated with time, meaning that a longer exposure period would result in a higher exposure level for the Maximally Exposed Individual (MEI). The risks estimated for a MEI is higher if a fixed exposure occurs over a longer period of time. According to the OEHHA, health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 70-year exposure period; however, such assessments should be limited to the period/duration of activities associated with the project. Thus, the duration of proposed construction activities (i.e., 11 months) is approximately three percent of the total exposure period used for 30-year health risk calculations. Current models and methodologies for conducting health-risk assessments are associated with longer-term exposure periods of 9, 30, and 70 years, which do not correlate well with the temporary and highly variable nature of construction activities, resulting in difficulties in producing accurate estimates of health risk (BAAQMD 2017b).

The maximum PM_{10} and $PM_{2.5}$ emissions would occur during site preparation and grading activities. These activities would last for approximately six days. PM emissions would decrease for the remaining construction period because construction activities such as building construction and architectural coating would require less intensive construction equipment. This most intensive period of construction would represent less than one percent of the total 30-year exposure period for health risk calculation.

The project would use construction equipment equipped with US EPA Tier 4 engines to comply with Standard COA *Diesel Particulate Matter Controls During Construction*. In addition, as mentioned above, the construction impacts would be temporary, and the project would be required to comply with the Standard COA Implement BAAQMD-Recommended Measures during *C*onstruction to reduce dust emissions. Furthermore, the PM_{10} and $PM_{2.5}$ emissions are well below threshold as seen in Table 4. Therefore, project construction would not expose sensitive receptors to substantial TAC or $PM_{2.5}$ dust concentrations, and impacts would be less than significant.

Operation

The proposed building at 2821 Tenth Street would include commercial office and light industrial use, and the proposed building at 2820 San Pablo Avenue would include commercial offices and a residential unit. Operational emissions from the project would be generally limited to passenger vehicle mobile sources and other uses associated with commercial office, light industrial, and residential building areas which are not typically substantial sources of operation TACs. Sources of operational TACs include, but are not limited to, land uses such as freeways and high-volume roadways, truck distribution centers, ports, rail yards, refineries, chrome plating facilities, dry cleaners using perchloroethylene, and gasoline dispensing facilities. The project does not include construction of new gas stations, dry cleaners, highways, roadways, or other sources that could be

considered new permitted or substantial non-permitted sources of TAC or $PM_{2.5}$ in proximity to sensitive receptors. In addition, the project would not introduce a new stationary source of emissions and the mobile emissions generated from the project would be minimal and spread over a broad geographical area. Therefore, project operation would not expose sensitive receptors to substantial TAC concentrations, and impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

d. Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

BAAQMD's 2022 *CEQA Air Quality Guidelines* provides odor-screening distances for land uses that have the potential to generate substantial odor complaints. The uses in the table include wastewater treatment plants, landfills or transfer stations, refineries, composting facilities, confined animal facilities, food manufacturing, smelting plants, and chemical plants (BAAQMD 2022). Odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes, as well as sewage treatment facilities and landfills. The proposed building at 2821 Tenth Street would include commercial office and light industrial use, and the proposed building at 2820 San Pablo Avenue would include commercial offices and a residential unit. None of the proposed uses would have the potential to generate substantial odors. Pursuant BMC zoning provisions, the proposed development would not generate objectionable odors that would affect a substantial number of people. Tenants at 2820 San Pablo Avenue would be required to protect people and the environment from determinants, such as fumes, pursuant to BMC Section 23.204.140(A)(11), and tenants at 2817-2821 Tenth Street would be required to protect residents from detrimental effects of nonresidential uses, such as odors, smoke, fumes, and gases pursuant to BMC Section 23.206.090(A)(8). Therefore, impacts related to odor are less than significant.

During construction activities, heavy equipment and vehicles would emit odors associated with vehicle and engine exhaust and during idling. However, these odors would be intermittent and temporary and would cease upon completion. Overall, the proposed project would not generate objectionable odors affecting a substantial number of people. This impact would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

4 Biological Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	■
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	■
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	■
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	■
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	■	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	■

Setting

The project site is previously developed and located in an urbanized area in West Berkeley. There is currently a one-story commercial building at 2821 Tenth Street, which would be demolished, and the adjacent one-story commercial building at 2817 Tenth Street would remain. There is a vacant lot at 2820 San Pablo Avenue with a cement slab and curb cut. There are no existing trees on the project site; however, there is a protected street tree on the sidewalk adjacent to the project site on San Pablo Avenue.

The project site is located in an area characterized as Urban and Built-Up Land. The site does not contain riparian habitat or wetlands and is not located within a known regional wildlife movement corridor or other sensitive biological area as indicated by the United States Fish and Wildlife Service (USFWS) Critical Habitat portal or California Department of Fish and Wildlife (CDFW) Biogeographic Information and Observation System (BIOS) (USFWS 2023a, USFWS 2023b, CDFW 2023). The nearest critical habitat is that of the Alameda whipsnake, which is approximately 2 miles east of the project site. The project site is approximately 1.5 miles west of Strawberry Creek and 0.5 mile east of Aquatic Park. The project site is not located within an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan (CDFW 2019).

Regulatory Setting

BMC Section 12.44.020, requires permits and inspection for any cutting, trimming, or removal of any tree, shrub or plant being or growing in or on any street, parking strip, public square, park or playground.

Impact Analysis

a. *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

b. *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

d. *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

The site does not contain riparian habitat and is not located within a known regional wildlife movement corridor or other sensitive biological area as indicated by the United States Fish and Wildlife Service (USFWS) Critical Habitat portal or CDFW BIOS (USFWS 2023a, CDFW 2023). Consistent traffic, fencing around a large portion of the perimeter of the project site, and human-made barriers in the area minimize potential wildlife access to and from the site. Therefore, the project would have no impact on riparian habitat or a wildlife movement corridor.

The nearest critical habitat is that of the Alameda whipsnake, which is approximately 2 miles east of the project site. The project site is approximately 1.5 miles west of Strawberry Creek and 0.5 mile east of Aquatic Park. Neither construction nor operation would impact Strawberry Creek or Aquatic Park. Based on the developed nature of the site and area and lack of native or riparian habitat

located on the project site, no federal-or state-listed endangered, threatened, rare, or otherwise sensitive flora or fauna are anticipated to be located within the project site. Therefore, the project would have no impact on sensitive or special status species.

NO IMPACT

c. Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

The National Wetlands Inventory (NWI) was reviewed to determine if wetland and/or non-wetland waters had been previously documented and mapped on or in the vicinity of the project site (USFWS 2023b). No such features occur on or adjacent to the project site. The nearest body of water is at Aquatic Park, located approximately 0.5 miles from the site. No impact would occur.

NO IMPACT

d. Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

The project site is not located within a known regional wildlife movement corridor or other sensitive biological area as indicated by the USFWS Critical Habitat portal or National Marine Fisheries Service Critical Habitat Mapper (USFWS 2023a, NOAA 2023). Furthermore, the project site is within an urbanized area of Berkeley that already contains substantial impediments to wildlife movement. There would be no impact.

NO IMPACT

e. Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

There are no trees on the project site. Existing trees located around the project site, such as adjacent street trees, could contain bird nests and birds that are protected under the Migratory Bird Treaty Act (MBTA). Protected birds include all common songbirds, waterfowl, shorebirds, hawks, owls, eagles, ravens, crows, native doves and pigeons, swifts, martins, swallows, and others, including their body parts (feathers, plumes etc.), nests, and eggs. General demolition and construction activity associated with the project may affect protected nesting birds in existing trees. The City's Standard COA, described below, would be required, which would reduce potential impacts to nesting birds.

Standard COA: Avoid Disturbance of Nesting Birds

Initial site disturbance activities, including vegetation and concrete removal, shall be prohibited during the general avian nesting season (February 1 to August 30), if feasible. If nesting season avoidance is not feasible, the applicant shall retain a qualified biologist to conduct a preconstruction nesting bird survey to determine the presence/absence, location, and activity status of any active nests on or adjacent to the project site. The extent of the survey buffer area surrounding the project site shall be established by the qualified biologist to ensure that direct and indirect effects to nesting birds are avoided. To avoid the destruction of active nests and to protect the reproductive success of birds protected by the MBTA and CFGC, nesting bird surveys shall be performed not more than 14 days prior to scheduled vegetation and concrete removal.

In the event that active nests are discovered, a suitable buffer (typically a minimum buffer of 50 feet for passerines and a minimum buffer of 250 feet for raptors) shall be established around such active nests and no construction shall be allowed inside the buffer areas until a qualified biologist has determined that the nest is no longer active (e.g., the nestlings have fledged and are no longer reliant on the nest). No ground-disturbing activities shall occur within this buffer until the qualified biologist has confirmed that breeding/nesting is completed, and the young have fledged the nest. Nesting bird surveys are not required for construction activities occurring between August 31 and January 31.

Compliance with the Standard COA above would ensure protection of nesting would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

f. Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The project site is not located within an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan (CDFW 2019). Therefore, the project would not conflict with such a plan and no impact would occur.

NO IMPACT

5 Cultural Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	■	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	■	☐
c. Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	■	☐

Historical Resource Evaluation

In April of 2021, Left Coast Architectural History prepared a Historical Resource Evaluation (HRE) for the project site (Appendix A). The evaluation included California Department of Parks and Recreation (DPR) 523 Forms which present physical descriptions of the properties, a record of their history, and evaluation according to CRHR significance and integrity criteria, and City of Berkeley Landmark and Structure of Merit criteria.

Archaeological Resources Archival Review

A California Historical Resources Information System (CHRIS) records search was completed for the project site and a 0.5-mile radius at the Northwest Information Center (NWIC). The City also requested a Sacred Lands File (SLF) search from the Native American Heritage Commission (NAHC).

Setting

The project site includes an existing building at 2821 Tenth Street, and an existing building at 2817 Tenth Street. The HRE determined that one portion of the light-industrial building located at 2817-2821 Tenth Street dates to 1950 with substantial additions made in 1966 and 1970. The project site at 2820 San Pablo Avenue is currently vacant. The CHRIS records search determined that prehistoric resources have been previously recorded within the project site; however, one prehistoric resource is documented approximately 0.47 miles from the site. A response from the NAHC dated February 20, 2023, stated that the results of the SLF search were positive, indicating a recorded Sacred Land is present in the vicinity of the project site.

Regulatory Setting

This section provides an analysis of the project's impacts on cultural resources, including historical and archaeological resources, as well as human remains. CEQA requires a lead agency to determine whether a project may have a significant effect on historical resources (PRC Section 21084.1). A

historical resource is a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR); a resource included in a local register of historical resources; or any object, building, structure, site, area, place, record, or manuscript a lead agency determines to be historically significant (*CEQA Guidelines*, Section 15064.5[a][1-3]).

In addition, if it can be demonstrated that a project would cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that resources cannot be left undisturbed, mitigation measures are required (PRC Section 21083.2[a][b]).

PRC Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information;
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

California Register of Historical Resources

The State Historical Resources Commission has designed the CRHR program for use by state and local agencies, private groups and citizens to identify, evaluate, register and protect California's historical resources. The program encourages public recognition and protection of resources of architectural, historical, archeological and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding and affords certain protections under CEQA (Office of Historic Protection 2023).

The following criteria are used to evaluate a nominated resource:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States (Criterion 1).
2. Associated with the lives of persons important to local, California or national history (Criterion 2).
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values (Criterion 3).
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation (Criterion 4).

Codes Governing Human Remains

The disposition of human remains is governed by Section 7050.5 of the California Health and Safety Code and PRC Sections 5097.94 and 5097.98 and falls within the jurisdiction of the NAHC. If human remains are discovered, the County Coroner must be notified within 48 hours and there should be no further disturbance to the site where the remains were found. If the remains are determined by the coroner to be Native American, the coroner is responsible for contacting the NAHC within 24 hours. The NAHC, pursuant to Section 5097.98, will immediately notify those persons it believes to be most likely descended from the deceased Native Americans so they can inspect the burial site and make recommendations for treatment or disposal.

Impact Analysis

a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Left Coast Architectural History prepared a Historic Resource Evaluation (HRE) for the buildings at 2820 San Pablo Avenue and 2817-2821 Tenth Street (Appendix A).

The HRE determined that one portion of the light-industrial building located at 2817-2821 Tenth Street dates to 1950 with substantial additions made in 1966 and 1970; however, the portion is not a prime example of an architectural style, and the property does not appear to have significant associations with West Berkeley industrial history or important historical figures (Appendix A). The previously demolished building at 2820 San Pablo Avenue dated to 1901; however, it did not have significant associations with West Berkeley residential history or important historical figures (Appendix A). The HRE determined that the buildings located at 2820 San Pablo Avenue and 2817-2821 Tenth Street are ineligible for listing in the CRHR, and that neither property is historically significant at the local level, or would qualify as a historical resource for the purposes of CEQA.

Therefore, impacts to historical resources would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

The project site has been heavily disturbed due to the construction of the existing building and paving around the building. Based on the SLF and NWIC search results, the archaeological site sensitivity is considered low to moderate.

Compliance with the City's Standard COA, included below, would be required and would address potential impacts to unanticipated discoveries during construction:

Standard COA: Archaeological Resources (Ongoing Throughout Demolition, Grading, and/or Construction)

Pursuant to *CEQA Guidelines*, Section 15064.5(f), "provisions for historical or unique archaeological resources accidentally discovered during construction" should be instituted. Therefore:

a. In the event that any prehistoric or historic subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant and/or lead agency shall consult with a qualified archaeologist, historian or paleontologist to assess the significance of the find.
b. If any find is determined to be significant, representatives of the project proponent and/or lead agency and the qualified professional would meet to determine the appropriate avoidance measures or other appropriate measure, with the ultimate determination to be made by the City of Berkeley. All significant cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by the qualified professional according to current professional standards.
c. In considering any suggested measure proposed by the qualified professional, the project applicant shall determine whether avoidance is necessary or feasible in light of factors such as the uniqueness of the find, project design, costs, and other considerations.

d. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery) shall be instituted. Work may proceed on other parts of the project site while mitigation measures for cultural resources is carried out.

e. If significant materials are recovered, the qualified professional shall prepare a report on the findings for submittal to the Northwest Information Center.

By adhering to the City's Standard COA discussed above, the City would evaluate and protect significant archaeological resources if unexpectedly encountered during implementation of the proposed project. Therefore, impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

c. Would the project disturb any human remains, including those interred outside of formal cemeteries?

No human remains are known to be present within the project site based on the CHRIS search. If human remains are found, the State of California Health and Safety Code Section 7050.5 states that no further disturbance may occur until the county coroner has made a determination of origin and disposition pursuant to PRC Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner must be notified immediately. If the human remains are determined to be prehistoric, the Coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a most likely descendant (MLD). The MLD would complete the inspection of the project site and provide recommendations for treatment to the landowner within 48 hours of being granted access. If human remains are found, the City's Standard COA discussed below would also be applicable:

Standard COA: Human Remains (Ongoing throughout Demolition, Grading, and/or Construction)

In the event that human skeletal remains are uncovered at the project site during ground-disturbing activities, all work shall immediately halt, and the Alameda County Coroner shall be contacted to evaluate the remains and following the procedures and protocols pursuant to Section 15064.5 (e)(1) of the CEQA Guidelines. If the County Coroner determines that the remains are Native American, the City shall contact the California NAHC, pursuant to subdivision (c) of Section 7050.5 of the Health and Safety Code, and all excavation and site preparation activities shall cease within a 50-foot radius of the find until appropriate arrangements are made. If the agencies determine that avoidance is not feasible, then an alternative plan shall be prepared with specific steps and timeframe required to resume construction activities. Monitoring, data recovery, determination of significance and avoidance measures (if applicable) shall be completed expeditiously.

With adherence to existing regulations and the City's Standard COAs, impacts to human remains would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

6 Energy

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	■	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	■	☐

Setting

According to the City of Berkeley's Household VMT per Capita map, the proposed project site is located within a TPA (City of Berkeley 2020). Nearby public transportation includes AC Transit bus stops along San Pablo Avenue (lines 72, 72M, 802), Ashby Avenue (lines 7 and J), and Seventh Street (line 36) located within 0.5 miles of the project site, and the Ashby BART station located approximately 1 mile east which would reduce necessary reliance on single-occupancy vehicles and VMT. The City of Berkeley Bicycle Boulevard on Ninth Street is located one block away from the project site, which would facilitate bicycle transportation for employees and residents to and from the project site.

Electricity at the project site would be supplied by Ava Community Energy, which sources 100 percent GHG-free energy under their Renewable 100 plan.

Regulatory Setting

California Code of Regulations Title 24 (California Building Code)

Updated every three years through a rigorous stakeholder process, Title 24 of the California Code of Regulations requires California homes and businesses meet strong energy efficiency and sustainability measures, thereby lowering their energy consumption. Title 24 contains numerous subparts, including Part 1 (Administrative Code), Part 2 (Building Code), Part 3 (Electrical Code), Part 4 (Mechanical Code), Part 5 (Plumbing Code), Part 6 (Energy Code), Part 8 (Historical Building Code), Part 9 (Fire Code), Part 10 (Existing Building Code), Part 11 (Green Building Standards Code), Part 12 (Referenced Standards Code). The California Building Code is applicable to all development in California (Health and Safety Code Sections 17950 and 18938[b]).

The regulations receive input from members of industry, as well as the public, with the goal of "[r]educing of wasteful, uneconomic, inefficient, or unnecessary consumption of energy" (Public Resources Code Section 25402). These regulations are scrutinized and analyzed for technological

and economic feasibility (Public Resources Code Section 25402[d]) and cost effectiveness (Public Resources Code Sections 25402[b][2] and [b][3]).

Bay Area Air Quality Management District Minimum Design Thresholds

For building energy use, BAAQMD's minimum design threshold prohibits the use of natural gas appliances and natural gas pipelines. The minimum threshold also requires that building construction not result in any wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b). In addition, the design threshold requires projects to meet a locally adopted SB 743 VMT target or achieve the following reductions: a reduction in project-generated VMT per capita at least 15 percent below the regional average for residential and office projects; and no net increase in existing VMT for retail projects. The minimum design thresholds also require CALGreen Tier 2 electric vehicle parking (BAAQMD 2023).

City of Berkeley Screening Criteria

CEQA Guidelines Section 15064.3(b) indicates that land use projects would have a significant impact if the project resulted in VMT exceeding an applicable threshold of significance. In June 2020, the City of Berkeley developed VMT Criteria and Thresholds for VMT analysis, according to the guidance from OPR (Berkeley 2020):

- A residential project's VMT impact is considered less than significant if its household VMT per capita is at least 15 percent below the regional average Household VMT per capita.
- An employment-generating project's VMT impact is considered less than significant if its home-work VMT per worker is at least 15 percent below the regional average home-work VMT per worker.

In addition, the City of Berkeley has developed screening criteria to provide project applicants with a conservative indication of whether a project could result in potentially significant VMT impacts. If the screening criteria are met by a project, the applicant would not need to perform a detailed VMT assessment for their project. The City's screening criteria include the following:

- Projects within TPAs that meet characteristics outlined below under Impact a
- Low-income housing projects
- Small Projects: Projects defined as generating 836 daily VMT or less
- Locally Serving Public Facility: Projects that generally encompass government, civic, cultural, health, and infrastructure uses, which contribute to and support community needs and mostly generate trips within the local area
- Projects in Low VMT Areas: Projects that are located in low-VMT areas and that have characteristics similar to other uses already located in those areas can be presumed to generate VMT at similar rates. The low-VMT areas in Berkeley are defined based on the results of the Alameda CTC model, and maps of these areas are attached to this report.
- Residential projects will be screened out if located in an area that has household VMT per capita that is 15 percent lower than the baseline regional average.
- Office and industrial projects will be screened out if located in an area that has home-work VMT per worker that is 15 percent lower than the baseline regional average.

City of Berkeley Municipal Code

BMC Chapter 19.37 outlines the City's amendments to CALGreen including the following green building requirements:

- 100 percent of asphalt, concrete, excavated soil and land-clearing debris and a minimum of 65 percent of other nonhazardous construction and demolition waste would be recycled and/or salvaged for reuse. Cement used in concrete mix design would be reduced by at least 25 percent.
- Twenty percent of the total number of parking spaces are required to be EV capable spaces and ten percent are required to be EV charging stations.

City of Berkeley Climate Action Plan

The City of Berkeley adopted a Climate Action Plan (CAP) in 2009 with the goal of reducing communitywide GHG emissions by 80 percent below 2000 levels by 2050. The core recommendation strategies and actions of the CAP center around the following topics (City of Berkeley 2009):

1. Sustainable Transportation and Land Use
2. Building Energy Use
3. Waste Reduction and Recycling
4. Community Outreach and Empowerment
5. Preparing for Climate Change Impacts

Impact Analysis

a. Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

According to the analysis by Abrams and Associates, the proposed project is located in an area with an average VMT per resident and worker that is at least 15 percent below the respective Bay Area averages (Appendix E). OPR's 2018 Technical Advisory also states the following: "Presumption of Less Than Significant Impact Near Transit Stations – Proposed *CEQA Guidelines* Section 15064.3, subdivision (b)(1), states that lead agencies generally should presume that certain projects (including residential, retail, and office projects, as well as projects that are a mix of these uses) proposed within 0.5 mile of an existing major transit stop or an existing stop along a high quality transit corridor will have a less-than-significant impact on VMT." However, the City of Berkeley VMT analysis guidelines specify that the presumption of a less-than-significant VMT impact might not be appropriate if the project:

- Has a FAR of less than 0.75;
- Includes more than 200,000 square feet of office or commercial space;
- Includes more parking supply than the project's estimated demand;
- Is inconsistent with the City's General Plan, an applicable Specific Plan, or an applicable Sustainable Communities Strategy (as determined by the City, with input from the MTC);
- Replaces affordable residential units with market-rate residential units; or

- Has project-specific or location-specific information that indicates that the project will generate significant levels of VMT.

The analysis included in Appendix E concluded that none of the above factors would apply to the proposed project, and the project would have a less-than-significant impact on VMT. Additionally, as discussed above in *Setting*, the proposed project is located within a TPA. Because the project is within a TPA, meets the City's VMT screening criteria and would not exceed the City's thresholds of significance; the project would have less-than-significant impacts on transportation energy. Construction of the proposed project would result in short-term consumption of energy from the use of construction equipment and processes. Energy use during construction would be primarily from fuel consumption to operate heavy equipment, light-duty vehicles, machinery, and generators. Temporary grid power may also be needed for construction trailers or electric construction equipment. Energy use during construction would be temporary in nature, and construction equipment used would be typical of construction projects in the region. Table 7 shows the total consumption of gasoline and diesel fuel during project construction which was estimated using the assumptions and factors from CalEEMod modeling (Appendix B).

Table 7 Project Construction Estimated Fuel Consumption

	Fuel Consumption (gallons)	
Source	**Gasoline**	**Diesel**
Construction Equipment	–	25,086
Construction Vendor Haul Trips	–	2,008
Construction Worker Vehicle Trips	2,328	–
Total	**2,328**	**27,094**

See Appendix C for energy calculation sheets.

It is reasonable to assume contractors would avoid wasteful, inefficient, and unnecessary fuel consumption during construction to reduce construction costs. Additionally, the project would be required to comply with the CARB In-Use Off-Road Diesel-Fueled Fleets Regulation, which imposes limits on idling and restricts the use of older vehicles. This would reduce fuel consumption and lead to the use of fuel-efficient vehicles on the construction site. Construction equipment would be maintained to applicable standards, and construction activity and associated fuel consumption and energy use would be temporary and typical for construction sites. The CALGreen Building Standards Code includes specific requirements related to recycling, construction materials, and energy efficiency standards that would apply to construction of the proposed project to minimize wasteful, inefficient, and unnecessary energy consumption.

Operational energy use would include the use of transportation fuel due to the potential for some residents and employees to commute in fossil-fuel powered vehicles. California requires that all motorists use California Reformulated Gasoline, a cleaner formulation of gasoline that results in lower emissions of ozone, CO and other air pollutants when burned, as compared to traditional gasoline. While the proposed project would result in additional daily vehicle trips as compared to existing conditions, the increase would be due to the introduction of new residential units in central Berkeley. Further, the potential increase in vehicle miles traveled (VMT) analyzed herein does not reflect the efficiency of transportation energy use (that is, it assumes that all VMT will be via fossil-fuel powered vehicles, as opposed to electric vehicles). Moreover, the introduction of mixed light industrial, commercial, and residential land uses, in proximity to one another, further promotes a

higher-density mixed-use land use pattern that is intended to reduce vehicle trip lengths and subsequent transportation energy use in the area.

Operation of the project would consume electricity for building heating and power, lighting, and water conveyance, among other operational requirements. The proposed project would increase the amount of electricity consumed compared to the existing uses on the project site. The project would be all electric and would not utilize natural gas. Table 8 summarizes the estimated operational energy consumption for the proposed project and existing conditions based upon the CalEEMod modeling (Appendix B).

Table 8 Operational Energy Consumption

	Source	
Proposed Project	**Annual Energy Consumption[1]**	
Gasoline	25,396 gallons	2,788 MMBtu
Diesel	6,762 gallons	862 MMBtu
Electricity	1,054,145 kWh/year	3,597 MMBtu
Existing Uses to be Removed		
Gasoline	15,712 gallons	1,725 MMBtu
Diesel	2,953 gallons	376 MMBtu
Electricity	254,403 kWh/year	868 MMBtu
Net Energy Consumption (Proposed Project minus Existing)		
Gasoline	9,684 gallons	1,063 MMBtu
Diesel	3,809 gallons	486 MMBtu
Electricity	799,742 kWh/year	2,729 MMBtu

MMBtu = million metric British thermal units; kWh = kilowatt-hours

[1] Energy consumption is converted to MMBtu for each source

See Appendix C for energy calculation sheets and Appendix B for CalEEMod output results for electricity and natural gas usage.

As shown in Table 8, project energy consumed would represent an incremental increase in energy usage compared to existing energy use in Berkeley, and the proposed project would implement energy-efficient components to reduce energy demand pursuant to BMC Section 19.37. Additionally, the project would meet CALGreen-specific requirements for energy efficiency in new development and would incorporate WELO features. Therefore, construction and operation of the proposed project would not result in potentially significant environmental effects due to the wasteful, inefficient, or unnecessary consumption of energy and this impact would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The City of Berkeley's Climate Action Plan (CAP) sets a goal of 80 percent emission reductions by 2050. The CAP contains GHG-reduction policies for transportation and land use, building energy use, as well as waste reduction and recycling. More recently, the Berkeley City Council has adopted several additional climate commitments including Net Zero Carbon Emissions by 2045, in alignment with Governor Brown's Executive Order B-55-18, and declared a Climate Emergency and resolved to become a Fossil Fuel Free City as soon as possible.

The project would be designed to achieve Berkeley's local amendments to the CALGreen requirements and would include energy efficient appliances and lighting as well as water efficient fixtures and irrigation. Additionally, the project would place the proposed residence and commercial and light manufacturing space in a transit-accessible area. Nearby public transportation includes AC Transit bus stops along San Pablo Avenue (lines 72, 72M, 802), Ashby Avenue (lines 7 and J), and Seventh Street (line 36) within 0.5 miles of the project site, and the Ashby BART station located approximately one mile east which would reduce necessary reliance on single-occupancy vehicles and VMT. The project would be all electric and electricity would be supplied by Ava Community Energy, which sources 100 percent GHG-free energy under their Renewable 100 plan. Overall, the project would be consistent with the climate commitments and the energy efficiency strategies contained therein. Therefore, the project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency and this impact would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

7 Geology and Soils

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	■	☐	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	■	☐	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	■
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	■	☐

Geotechnical Investigation Report

A Geotechnical Investigation Report was conducted for the project site by Fugro in January 2022 (Appendix D). The report identifies key geologic and geotechnical aspects of the site and summarizes results of site data review, field exploration, laboratory testing and geologic and liquefaction hazards evaluation for the site. The report also provides geotechnical recommendations for the design and construction of the project.

Setting

The project site is located along the western shoreline of the east side of the San Francisco Bay in the Coast Ranges geomorphic province. This area is considered one of the most seismically active regions in the United States. The Coast Ranges extend about 600 miles from the Oregon border to the Santa Ynez River in Santa Barbara County and are characterized by numerous north-south–trending peaks and valleys that range in elevation from approximately 500 feet above mean sea level to 7,581 feet above mean sea level (Norris and Webb 1976).

Structurally, the project site is in an area dominated by the San Andreas Fault system and subduction style faulting (Appendix D). The project site is underlain by Holocene alluvial fan and fluvial deposits (Qhaf) that consist of brown or tan, medium dense to dense, gravelly sands or sandy gravels that generally grade upward to sandy or silty clays (Appendix D).

Seismic Setting

Similar to much of California, the project site is located in a seismically active region. The USGS defines active faults as those that have had surface displacement within the Holocene period (about the last 11,000 years). Surface displacement can be recognized by the existence of cliffs in alluvium, terraces, offset stream courses, fault troughs and saddles, the alignment of depressions, sag ponds, and the existence of steep mountain fronts. Potentially active faults are those that have had surface displacement during the last 1.6 million years, and inactive faults have not had surface displacement within that period. Several faults are near the project site, including those listed below:

- **The San Andreas Fault**, the most likely source of a major earthquake in California, is located approximately 15.7 miles southwest of the project site (Appendix D). The San Andreas Fault is the primary surface boundary between the Pacific and the North American plates. There have been numerous historic earthquakes along the San Andreas Fault, and it generally poses the greatest earthquake risk to California. In general, the San Andreas Fault is likely capable of producing a Maximum Credible Earthquake of 8.0.
- **The Hayward Fault**, one of 10 major faults that make up the San Andreas Fault Zone, runs east of the along the eastern portion of Berkeley and links with the Rodgers Creek Fault to the north. Although the last major earthquake generated by the Hayward Fault was in 1868, pressure is slowly building again and will begin to overcome the friction and other forces that cause the fault zone to stick. The Hayward Fault would likely cause extensive damage throughout Berkeley area due to its close proximity to urban communities and infrastructure. The Hayward Fault and surrounding area is a designated Alquist-Priolo Zone. The project site is approximately 2.3 miles northwest of the Hayward Fault (Appendix D).

Liquefaction and Seismically Induced Settlement

Liquefaction is defined as the sudden loss of soil strength due to a rapid increase in soil pore water pressure resulting from seismic ground shaking. Liquefaction potential is dependent on such factors as soil type, depth to ground water, degree of seismic shaking, and the relative density of the soil. When liquefaction of the soil occurs, buildings and other objects on the ground surface may tilt or sink, and lightweight buried structures (such as pipelines) may float toward the ground surface. Liquefied soil may be unable to support its own weight or that of structures, which could result in loss of foundation bearing or differential settlement. Liquefaction may also result in cracks in the ground surface followed by the emergence of a sand-water mixture. Earthquake hazard maps produced by MTC/ABAG indicate that a large Hayward Fault quake would trigger severe shaking throughout Berkeley and a moderate risk of liquefaction across the city (ABAG and MTC 2020).

Seismically induced settlement occurs in loose to medium dense unconsolidated soil above groundwater. Soils compress (settle) when subject to seismic shaking. The settlement can be exacerbated by increased loading, such as from the construction of buildings. Settlement can also result solely from human activities including improperly placed artificial fill, and structures built on soils or bedrock materials with differential settlement rates. As mentioned above in *Setting*, the project site is underlain by medium dense to dense, gravelly sands or sandy gravels that generally grade upward to sandy or silty clays (Appendix D). The site is located in an identified liquefaction zone (DOC 2021); the geotechnical report concludes that the site is located in an area characterized as having moderate liquefaction susceptibility and that the risk for liquefaction-induced densification occurring at the site is high (Appendix D).

Landslides

Landslides result when the driving forces that act on a slope (i.e., the weight of the slope material, and the weight of objects placed on it) are greater than the slope's natural resisting forces (i.e., the shear strength of the slope material). Slope instability may result from natural processes, such as the erosion of the toe of a slope by a stream, or by ground shaking caused by an earthquake. Slopes can also be modified artificially by grading, or by the addition of water or structures to a slope. Development that occurs on a slope can substantially increase the frequency and extent of potential slope stability hazards.

Areas susceptible to landslides are typically characterized by steep, unstable slopes in weak soil/bedrock units which have a record of previous slope failure. Landslide risk is low throughout the majority of Berkeley, particularly West Berkeley where the project site is located (ABAG and MTC 2020).

Expansive Soils

Expansive soils can change dramatically in volume depending on moisture content. When wet, these soils can expand; conversely, when dry, they can contract or shrink. Sources of moistures that can trigger this shrink-swell phenomenon include seasonal rainfall, landscape irrigation, utility leakage, and/or perched groundwater. Expansive soil can develop wide cracks in the dry season, and changes in soil volume have the potential to damage concrete slabs, foundations, and pavement. Special building/structure design or soil treatment are often needed in areas with expansive soils. The geotechnical investigation identifies the presence of expansive soils as a potential hazard at the project site (Appendix D).

Erosion

Erosion is the wearing away of the soil mantle by running water, wind or geologic forces. It is a naturally occurring phenomenon and ordinarily is not hazardous. However, excessive erosion can contribute to landslides, siltation of streams, undermining of foundations, and ultimately the loss of structures. Removal of vegetation tends to heighten erosion hazards. The City enforces grading and erosion control ordinances to reduce these hazards.

Regulatory Setting

Berkeley Municipal Code

The BMC contains multiple ordinances that are applicable to this project to minimize erosion impacts. Specifically, BMC Chapter 21.40 which requires that proposed projects comply with grading, erosion, and sediment control regulations on file in the Public Works Department, and BMC Chapter 17.20 which requires that federal, state, and local erosion and sediment control Best Management Practices (BMP) be implemented to minimize erosion during construction would apply to the proposed project.

California Building Code

The City of Berkeley has adopted the 2022 California Building Code (CBC) Guidelines as part of their municipal code (Chapter 19.28.010) effective January 2023. These guidelines would be applicable to the proposed project as they contain specific requirements for structural design, including seismic loads and soil investigations.

Impact Analysis

a.1. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

The project site is not located within an identified earthquake fault zone as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map (DOC 2021). No known fault lines are located on the project site. The closest active fault is the Hayward Fault, located approximately 2.3 miles southeast of the project site (Appendix D). Thus, the likelihood of surface rupture occurring from active faulting at the project site is remote. The project site would not likely be subject to ground rupture. There would be no impact.

NO IMPACT

a.2. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

As with any site in the San Francisco Bay Area region, the project site would be susceptible to strong seismic ground shaking in the event of a major earthquake. Nearby active faults include the Hayward Fault (2.3 miles east), and the San Andreas Fault (18.6 miles west), (DOC 2021). These faults are capable of producing strong seismic ground shaking at the project site.

The structure would be required to be constructed to meet current seismic standards in the 2022 CBC intended to ensure that buildings could withstand the adverse effects of strong ground shaking.

The City of Berkeley has adopted the 2022 CBC Guidelines as part BMC Section 19.28.010 effective January 2023. The CBC contains specific requirements for structural design, including seismic loads. The CBC requires that structures be designed and constructed to resist seismic hazards, including through foundation design and the completion of soil investigations prior to construction. The City of Berkeley would ensure that the project would be designed and constructed consistent with the current CBC, thereby ensuring that appropriate investigations and design measures have been employed to effectively minimize or avoid potential hazards associated with redevelopment and/or new building construction.

With required compliance with applicable City building and fire code standards, as well as the CBC (CBC, Title 24 of the CCR) regarding seismic safety, design and construction of the proposed project would be engineered to withstand the expected ground acceleration that may occur at the project site. Project construction would also be subject to review and approval by City building and safety officials prior to project approval. Therefore, impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

a.3. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

Liquefaction is a condition that occurs when unconsolidated, saturated soils change to a near-liquid state during ground shaking. The project site is located in an identified liquefaction zone (DOC 2021), and the geotechnical report concluded that the site is located in an area characterized as having moderate liquefaction susceptibility, and that the risk for liquefaction-induced densification occurring at the site is high (Appendix D). The proposed building would be required to be constructed in compliance with the CBC, which requires structures to be designed and constructed to resist liquefaction potential from seismic-related ground failure.

Mitigation Measure GEO-1 would require implementation of the geotechnical recommendations included in Appendix D.

GEO-1 Geotechnical Investigation Report Recommendations

- The recommendations included in the 2022 geotechnical investigation report conducted by Fugro (Appendix D), or an equivalent alternative design measure recommended by a qualified engineer and approved by the Chief Building Official, shall be incorporated into the proposed project demolition, construction, and building plans.
- A qualified geotechnical consultant shall be retained to review the geotechnical aspects of the project structural, civil, and landscape plans and specifications, allowing sufficient time to provide the design team with comments prior to submitting project grading and building plans for City review.
- A qualified geotechnical consultant shall be present to provide geotechnical observation and testing during earthwork and foundation construction.

With required adherence to CBC requirements, existing regulations, and implementation of Mitigation Measure GEO-1, the likelihood of significant damage to the proposed buildings from expansive and unstable soils would be reduced and the proposed project would not expose people or property to major geologic hazards that cannot be mitigated through the use of standard engineering design and seismic safety techniques. Impacts would be less than significant with mitigation.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

a.4. Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

A landslide is the movement of surface material down a slope. Lateral spread and liquefaction are processes in which material flows in a fluid-like movement and lateral spread refers to this movement over a gentle slope during a landslide. Landslides are typically a hazard on or near slopes or hillside areas, rather than generally level areas such as the project site and vicinity. According to the California Earthquake Hazards Zone map, the project site is not located in an earthquake-induced landslide hazard zone (DOC 2021). The project site is generally flat and is not surrounded by hillsides. Therefore, the project has a low potential for slope instability occurring at the project site and impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project result in substantial soil erosion or the loss of topsoil?

c. Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

d. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

The proposed project would include construction activities that could potentially result in soil erosion. The project would be required to follow applicable CBC requirements related to soil found in the Uniform Building Code to reduce soil erosion.

The project site is not within an area mapped as having landslides (DOC 2021). The Geotechnical Report concluded that there is low potential for lateral spreading but the risk for liquefaction-induced densification at the site is high (Appendix D). Mitigation Measure GEO-1 would require implementation of the geotechnical recommendations included in Appendix D to address potential for liquefaction and soil stability. Compliance with State and City regulations and Mitigation Measure GEO-1 would reduce impacts related to unstable soils to a less than significant level.

Fluctuations in soil moisture can cause expansive soils to shrink and swell, thereby compromising the integrity of foundations or pavements. The project site is located on urban land that is underlain by clear lake soils which are classified as poorly drained (NRCS 2021). The near-surface clayey fills have medium plasticity and moderate expansion potential and the underlying native fat clays have a moderate to high plasticity and high expansion potential (Appendix D). The Geotechnical report concluded that surficial fills have a moderate expansion potential and the underlying native soils have a moderate to high expansion potential (Appendix D). Compliance with State and City regulations, and Mitigation Measure GEO-1, which requires geotechnical measures to address expansive soils, would reduce impacts related to expansive soils to a less than significant level.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

e. Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

The proposed project would not include components that would require the use of septic tanks or alternative wastewater disposal systems. The proposed project would connect to the City of Berkeley's municipal sewer system. There would be no impact.

NO IMPACT

f. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

The project would include demolition of the existing building at 2821 Tenth Street and removal of the cement slab and curb cut at 2820 San Pablo Avenue. Construction of the project would be constructed at-grade with little if any excavation below previous disturbance (Appendix D). Although for this reason it is unlikely that paleontological resources may be encountered, the following Standard COA would be required and would address potential impacts in the unexpected event that such resources are encountered.

Standard COA: Paleontological Resources (Ongoing throughout Demolition, Grading, and/or Construction)

> In the event of an unanticipated discovery of a paleontological resource during construction, excavations within 50 feet of the find shall be temporarily halted or diverted until the discovery is examined by a qualified paleontologist (per Society of Vertebrate Paleontology standards [SVP 1995,1996]). The qualified paleontologist shall document the discovery as needed, evaluate the potential resource, and assess the significance of the find. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction is allowed to resume at the location of the find. If the City determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of the project on the qualities that make the resource important, and such plan shall be implemented. The plan shall be submitted to the City for review and approval.

By adhering to this Standard COA, the City would evaluate and protect significant paleontological resources if unexpectedly encountered during demolition or construction, resulting in a less-than-significant impact.

LESS-THAN-SIGNIFICANT IMPACT

8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	■	☐
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	■	☐

Setting

Climate Change and Greenhouse Gas Emissions

Climate change is the observed increase in the average temperature of the earth's atmosphere and oceans along with other substantial changes in climate (such as wind patterns, precipitation, and storms) over an extended period. Climate change is the result of numerous, cumulative sources of GHG, gases that trap heat in the atmosphere, analogous to the way in which a greenhouse retains heat. Common GHGs include water vapor, carbon dioxide (CO_2), methane (CH_4), nitrous oxides (N_2O), fluorinated gases, and ozone (O_3). GHGs are emitted by both natural processes and human activities. Of these gases, CO_2 and CH_4 are emitted in the greatest quantities from human activities. Emissions of CO_2 are largely by-products of fossil fuel combustion, whereas CH_4 results from off-gassing associated with agricultural practices and landfills. Anthropogenic GHGs, many of which have greater heat-absorption potential than CO_2, include fluorinated gases, such as hydrofluorocarbons (HFC), perfluorocarbons (PFC), and sulfur hexafluoride (SF_6) (National Aeronautics and Space Administration [NASA] 2018).

The accumulation of GHGs in the atmosphere regulates the earth's temperature. Without the natural heat trapping effect of GHGs, the average temperature of the Earth would be about 15° C cooler (NASA 1998). However, emissions from human activities, particularly the consumption of fossil fuels for electricity production and transportation, have elevated the concentration of these gases in the atmosphere beyond the level of naturally occurring concentrations.

Regulatory Setting

Thresholds

The vast majority of individual projects do not generate sufficient GHG emissions to influence climate change directly. However, physical changes caused by a project can contribute incrementally to significant cumulative effects, even if individual changes resulting from a project are limited. The issue of climate change typically involves an analysis of whether a project's

contribution towards an impact would be cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (*CEQA Guidelines*, Section 15064[h][1]).

In the 2022 BAAQMD *CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans*, the BAAQMD outlines an approach to determine the climate change-related significance of projects. BAAQMD presents two options for projects to meet the significance thresholds: a) include minimum project design thresholds, or b) be consistent with a local GHG reduction strategy that meets the criteria under State *CEQA Guidelines* Section 15183.5(b) (BAAQMD 2023). The minimum project design elements listed in the adopted BAAQMD thresholds are described below.

For building energy use, BAAQMD's minimum design threshold prohibits the use of natural gas appliances and natural gas pipelines. The minimum threshold also requires that building construction not result in any wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b). In addition, the design threshold requires projects to meet a locally adopted SB 743 VMT target or achieve the following reductions: a reduction in project-generated VMT per capita at least 15 percent below the regional average for residential and office projects; and no net increase in existing VMT for retail projects. The minimum design thresholds also require CALGreen Tier 2 electric vehicle parking (BAAQMD 2023).

City of Berkeley Climate Action Plan

The City of Berkeley adopted a Climate Action Plan (CAP) in 2009 with the goal of reducing communitywide GHG emissions by 80 percent below 2000 levels by 2050. The core recommendation strategies and actions of the CAP center around the following topics (City of Berkeley 2009):

1. Sustainable Transportation and Land Use
2. Building Energy Use
3. Waste Reduction and Recycling
4. Community Outreach and Empowerment
5. Preparing for Climate Change Impacts

While the CAP is not considered a "qualified greenhouse gas reduction plan" for the purposes of streamlining GHG emissions analysis under CEQA, it is actively used by the City for guiding GHG emission reduction efforts. Since publication of the CAP, the City has outlined several additional climate commitments:

- 100 percent renewable electricity by 2035
- Net-Zero Carbon Emissions by 2045, in alignment with Governor Brown's Executive Order B-55-18
- Declared a Climate Emergency and resolved to become a Fossil Fuel Free City

Impact Analysis

a. Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

The project would not include natural gas infrastructure. The project would comply with the City's standard condition of approval, *Air Quality – Diesel Particulate Matter Controls During Construction* (included under Section 3, *Air Quality,* which requires use of construction equipment equipped with Tier 2 or higher engines and preparation of a Construction Emissions Minimization Plan to reduce GHG emissions during construction). In compliance with this condition of approval, and as discussed in Section 6, *Energy*, construction and operation of the project would not result in wasteful, inefficient, or unnecessary energy usage.

As part of the City's implementation of SB 743 and in accordance with the Technical Advisory on Evaluating Transportation Impacts in CEQA, the City developed the VMT screening approach (see Section 17, *Transportation*). Reductions in VMT are directly linked to reductions in GHGs, and statewide VMT reduction would promote achievement of statewide GHG emissions reduction targets. The VMT screening criteria for projects in a TPA is applicable to the proposed project. A project would meet the screening criteria if it:

- Has a Floor Area Ratio (FAR) of more than 0.75;
- Includes less than 200,000 square feet of office or commercial space;
- Includes less parking supply than the project's estimated demand;
- Is consistent with the City's General Plan, an applicable Specific Plan, or an applicable Sustainable Communities Strategy;
- Does not replace affordable residential units with market-rate residential units; and
- Does not have project-specific or location-specific information that indicates that the project will generate significant levels of VMT.

The project would have a FAR of 2.27 and 1 (at 2820 San Pablo Avenue and 2817-2821 Tenth Street, respectively), would include 38,048 square feet of commercial and light manufacturing space, provides less parking than the project's demand (Appendix E), and would not replace affordable residential units with market-rate units. The project's proposed land uses and development program would be generally consistent with the City's General Plan, as discussed in Section 11, *Land Use and Planning*. Furthermore, as discussed in Section 17, *Transportation*, the project site is located in proximity to a variety of transit options and there is no indication that the project would generate significant levels of VMT. Therefore, the project would satisfy the TPA criteria and is therefore presumed to meet the City's adopted SB 743 VMT target.

Although BAAQMD does not have numeric thresholds for GHG emissions under the updated guidelines, the project's emissions inventory is presented for informational purposes. Table 9 shows the estimated annual operational GHG emissions associated with the project.

Table 9 Combined Annual Emissions of Greenhouse Gases

	Emission Source
Project Operation	**Annual Emissions (MT CO_2e)**
Mobile	293
Area	1
Energy	99
Water	9
Waste	13
Refrigerants	1
Total Emissions from Proposed Project	**415**

Source: Appendix B

In conclusion, the project would have a less-than-significant impact when evaluated using the BAAQMD-recommended GHG thresholds of significance.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The project would be consistent with the City's Climate Action Plan, which outlines actions to implement in order to achieve a greenhouse gas reduction target of 80 percent below 2000 emission levels by the year 2050, consistent with the State's direction to local governments at the time of adoption of the City's Climate Action Plan. In 2018, then-Governor Brown committed California to carbon neutrality by 2045, the Berkeley City Council resolved to become a "Fossil Fuel Free City," and the Council declared a Climate Emergency, all steps to signal the urgency of these ambitious goals and the need to act on climate threats in an equitable manner. The project would be consistent with Sustainable Transportation and Land Use Goal 1, which aims to increase density along transit corridors, by providing a four-story mixed-use building near transit. The project would be consistent with Sustainable Transportation and Land Use Goal 2, which aims to foster walking and cycling, by providing buildings for a residence, jobs, and services in proximity to transit and with bicycle parking. The project would be consistent with Building Energy Use Goals 1 and 4, which call for green building and renewable energy use, by complying with CALGreen and excluding natural gas usage.

The principal State plans and policies for reducing GHG emissions are SB 32 and AB 1279. The quantitative goal of SB 32 is to reduce GHG emissions to 40 percent below 1990 levels by 2030; and the goal of AB 1279 is to achieve net zero greenhouse gas emissions no later than 2045, and reduce GHG emissions by 85 percent below 1990 levels no later than 2045. The 2022 Scoping Plan expands upon earlier plans to include the AB 1279 targets. The 2022 Scoping Plan's strategies that are applicable to the proposed project include reducing fossil fuel use and VMT; decarbonizing the electricity sector; maximizing recycling and diversion from landfills; and increasing water conservation. The project would be consistent with these goals since the proposed project would be required to comply with the latest Title 24 CALGreen standards, as well as the recycling and organics waste diversion requirements of SB 1383. The proposed project would also comply with California Energy Commission 2022 Energy Code, divert construction waste pursuant to BMC Chapter 19.37, comply with WELO, exclude natural gas hookups, provide 14 bicycle parking stalls, and be located

near transit. Therefore, the project would not conflict with the 2022 Scoping Plan and impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

This page intentionally left blank.

9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	■	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	■	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	☐	■	☐	☐
d. Be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	■	☐
e. For a project located in an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	■
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	■	☐
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	■

Phase I Environmental Site Assessment

A Phase I Environmental Site Assessment (ESA) for the project site was completed in February 2022 by Terraphase (Appendix F). The report indicated that the project site was developed with a warehouse (2817-2821 Tenth Street) occupied by Meyer Sound and Wheelskins, and an unoccupied single-family residence (2820 San Pablo Avenue). Operations at Meyer Sound and Wheelskins were reported to be research and development for acoustic electronic systems and fabrication of leather automotive steering wheel covers, respectively.

Terraphase indicated in the Phase I ESA that Emerald Packaging, a plastic bag printing and shipping business, operated at the project site from 1963 through 1994 and used an underground storage tank (UST) to store volatile organic compounds (VOCs) in the northwestern corner of the project site. According to the report, the UST at Emerald Packaging was removed in 1990 and subsurface investigations conducted in 1990 through 1996 identified VOCs in soil and VOCs and gasoline-range total petroleum hydrocarbons (TPH-g) in groundwater at the project site; this was considered a recognized environmental condition (REC) and a vapor encroachment concern by Terraphase. The LUST case associated with the former onsite UST was closed in 2000 and therefore considered a historical REC by Terraphase. No other vapor encroachment concerns were identified by Terraphase in the vapor encroachment screening conducted as part of the Phase I ESA (Appendix F).

Terraphase concluded that the former industrial and manufacturing use of the project site, including printing, plastic bag manufacturing, and electronics manufacturing, from at least 1950 through 1994 was also considered a REC (Appendix F). The report noted that the portion of the project site occupied by Meyer Sound could not be accessed during the Phase I ESA site reconnaissance and was therefore considered a “significant data gap.” No recommendations were included in the Terraphase Phase I ESA report.

Setting

The project site is associated with a San Francisco Bay RWQCB Cleanup Program case (#01S0401 at 2821 Tenth Street, Berkeley) that received regulatory closure in 2000 and a San Francisco Bay RWQCB leaking underground storage tank (LUST) case (#01-0557 at 2821 Tenth Street, Berkeley) that was recommended for closure by the City of Berkeley Toxic Management Division (TMD) in 1999 and received regulatory closure by the San Francisco Bay RWQCB in 2000 (State Water Resources Control Board [SWRCB] 2023a). Although the LUST case was closed in 2000, an October 16, 2008 letter from TMD to the San Francisco Bay RWQCB indicated that the TMD “believe[s] the LUST case is erroneous” because "there is no indication of a petroleum release at the Former Emerald Packaging site [2821 Tenth Street, Berkeley]”, and “TMD would like to correct this apparent error in GeoTracker and close the erroneously listed LUST case” (City of Berkeley 2008). Following the discontinuation of site cleanup program case oversight by the TMD in 2013, the LUST case status for the project site (case #01-0557) on GeoTracker was updated in 2017 to “completed – case closed.”

Although the City’s TMD believed the LUST case to be erroneously listed, based on Rincon’s review of case documents available on SWRCB’s online GeoTracker database, a former solvent UST was removed in 1990 from Emerald Packaging Incorporated at 2821 Tenth Street in Berkeley. Based on a review of a January 28, 1993 Quarterly Groundwater Monitoring report (CCI 1993) and a July 25, 1994 Quarterly Groundwater Monitoring report located on GeoTracker (CCI 1994), it is believed that this solvent UST was formerly located at 2817 Tenth Street, rather than 2821 Tenth Street, as

Emerald Packaging included the use of all three structures at 2817, 2819 and 2821 Tenth Street during this time.

The project site is listed in the USEPA's Superfund Enterprise Management System (SEMS)/ Envirofacts database as Emerald Packaging Inc. and Meyer Sound at 2821 Tenth Street (EPA 2023). Information regarding these listings is included in the 2022 Terraphase Phase I ESA.

The project site is not listed in the Department of Toxic Substances Control (DTSC) EnviroStor database, or other Cortese List data resources available via the California EPA (CalEPA; CalEPA 2023). The project site is located within the City's Environmental Management Area (EMA) (City of Berkeley 2023).

Additionally, the project site is not located within an oil/gas field, and no oil/gas wells are located within 0.25 mile of the project site (California Geologic Energy Management Division 2023). No landfills are located within 2,000 feet of the project site (California Department of Resources, Recycling, and Recovery [CalRecycle] 2023). There are no current landfill, airport, chrome plating, publicly owned treatment works, Department of Defense, or bulk fuel storage terminal/refinery sites with per- and polyfluoroalkyl substances (PFAS) orders located within 1 mile of the project site (SWRCB 2023b).

The site is within 0.25 miles of Global Montessori International School, which is an immersive bilingual Montessori preschool, and Ecole Bilingue de Berkeley, which is a private bilingual K-8 school; both are located approximately 0.1 miles west of the project site.

Regulatory Setting

Department of Toxic Substances Control

As a department of the California Environmental Protection Agency, the DTSC is the primary agency in California that regulates hazardous waste, cleans up existing contamination, and looks for ways to reduce the hazardous waste produced in California. DTSC regulates hazardous waste in California primarily under the authority of the Resource Conservation and Recovery Act (RCRA) and the California Health and Safety Code.

DTSC also administers the California Hazardous Waste Control Law (HWCL) to regulate hazardous wastes. The HWCL lists 791 chemicals and approximately 300 common materials that may be hazardous; establishes criteria for identifying, packaging, and labeling hazardous wastes; prescribes management controls; establishes permit requirements for treatment, storage, disposal, and transportation; and identifies some wastes that cannot be disposed of in landfills.

Government Code Section 65962.5 requires the DTSC, the State Department of Health Services, the SWRCB, and CalRecycle to compile and annually update lists of hazardous waste sites and land designated as hazardous waste sites throughout the state. The Secretary for Environmental Protection consolidates the information submitted by these agencies and distributes it to each city and county where sites on the lists are located. Before the lead agency accepts an application for a development project as complete, the applicant must consult these lists to determine if the site at issue is included.

If any soil is excavated from a site containing hazardous materials, it is considered a hazardous waste if it exceeds specific criteria in Title 22 of the CCR. Remediation of hazardous wastes found at a site may be required if excavation of these materials is performed, or if certain other soil disturbing activities would occur. Even if soil or groundwater at a contaminated site does not have

the characteristics required to be defined as hazardous waste, remediation of the site may be required by regulatory agencies subject to jurisdictional authority. Cleanup requirements are determined on a case-by-case basis by the agency taking jurisdiction.

Government Code Section 65962.5 (Cortese List)

Section 65962.5 of the Government Code requires CalEPA to develop and update a list of hazardous waste and substances sites, known as the Cortese List. The Cortese List is used by state, local agencies, and developers to comply with CEQA requirements. The Cortese List includes hazardous substance release sites identified by DTSC, SWRCB, and CalRecycle.

Berkeley Toxics Management Division

The Emergency Planning and Community Right-to-Know Act (EPCRA) of 1986 requires industry to report on the storage, use, and releases of certain chemicals to federal, state, tribal, territorial, and/or local governments (EPA 2023). It also requires these reports to be used to prepare for and protect their communities from potential risks. The Toxics Management Division (TMD) is the Certified Unified Program Agency (CUPA) for the City of Berkeley. TMD administers various CUPA and other environmental programs and maintains documents related to the Emergency Planning and EPCRA (City of Berkeley 2023).

California has requirements known as the Hazardous Materials Business Plan (HMBP) per California Health and Safety Code, Division 20, Chapter 6.95. The TMD maintains HMBP files for Berkeley facilities. In addition, the TMD maintains inspection and enforcement history for this and other CUPA programs and the industrial stormwater pollution prevention program.

Impact Analysis

a. Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Construction

The proposed project would demolish an existing building at 2821 Tenth Street. Construction activities may include the temporary transport, storage, use, or disposal of potentially hazardous materials including fuels, lubricating fluids, cleaners, or solvents. If spilled, these substances could pose a risk to the environment and to human health. However, the transport, storage, use, or disposal of hazardous materials is subject to various federal, state, and local regulations designed to reduce risks associated with hazardous materials, including potential risks associated with upset or accident conditions. Hazardous materials would be required to be transported under U.S. Department of Transportation (DOT) regulations (DOT Hazardous Materials Transport Act, 49 Code of Federal Regulations), which stipulate the types of containers, labeling, and other restrictions to be used in the movement of such material on interstate highways. In addition, the use, storage, and disposal of hazardous materials are regulated through RCRA. Compliance with existing regulations would reduce the risk of potential release of hazardous materials during construction.

The existing building to be demolished may contain asbestos and/or lead-based paint (LBP). Structures built before the 1970s were typically constructed with asbestos-containing materials (ACM). Because the building was constructed before the time of the federal ban on the manufacture of polychlorinated biphenyls (PCB), it is possible that light ballasts in the onsite building contain PCBs. Demolition of the existing structure could result in health hazard impacts to workers if not remediated prior to construction activities. However, demolition and construction activities would be required to adhere to BAAQMD Regulation 11, Rule 2, which governs the proper handling and disposal of ACM for demolition, renovation, and manufacturing activities in the Bay Area, and California Occupational Safety and Health Administration (CalOSHA) regulations regarding lead-based materials. Title 8 of the CCR, Section 1532.1, requires testing, monitoring, containment, and disposal of lead-based materials, such that exposure levels do not exceed CalOSHA standards. DTSC has classified PCBs as a hazardous waste when concentrations exceed 50 parts per million in non-liquids, and the DTSC requires that materials containing those concentrations of PCBs be transported and disposed of as hazardous waste. Light ballasts to be removed would be evaluated for the presence of PCBs and managed appropriately. Based on the potential for ACM, LBP, and PCB impacts to be present on-site, project construction/excavation and operation could potentially create a significant hazard to the public, construction workers, future project site residents, or the environment. However, with required adherence to BAAQMD, CalOSHA, and DTSC regulations regarding ACM, LBP, and PCBs, impacts would be less than significant.

Operation

Residential uses typically do not use or store large quantities of hazardous materials other than those typically used for household cleaning, maintenance, and landscaping. Additionally, the project would retain one existing building and develop two buildings to be occupied by light industrial and commercial office uses, which would likely store limited quantities of potentially hazardous materials, such as operational supplies and maintenance materials for the proposed industrial uses. Both of the existing commercial buildings are already occupied by light-industrial manufacturing uses; therefore, a portion of the proposed project would generally be a continuation of existing uses. Hazardous materials transportation, use, and disposal would be subject to state and federal hazardous materials laws and regulations. Hazardous materials would be required to be transported under DOT regulations. Hazardous materials use, storage, and disposal would be subject to hazardous materials programs administered by TMD. As required by the following City of Berkeley Standard COA, the project applicant would be required to contact the TMD to determine the appropriate documentation to submit:

Standard COA: Toxics

The applicant shall contact the TMD at 1947 Center Street or (510) 981-7470 to determine which of the following documents are required and timing for their submittal:

Building Materials Survey

1) Prior to approving any permit for partial or complete demolition and renovation activities involving the removal of 20 square or linear feet of interior or exterior walls, a building materials survey shall be conducted by a qualified professional. The survey shall include, but not be limited to, identification of any LBP, asbestos, PCB-containing equipment, hydraulic fluids in elevators or lifts, refrigeration systems, treated wood, and mercury containing devices (including fluorescent light bulbs and mercury switches). The survey shall include plans on hazardous waste or hazardous materials removal, reuse, and/or disposal

procedures to be implemented that fully comply with state hazardous waste generator requirements (22 CCR 66260 et seq). Completion of the survey becomes a condition of any building or demolition permit for the project. Documentation evidencing disposal of hazardous waste in compliance with the survey shall be submitted to TMD within 30 days of the completion of the demolition. If asbestos is identified, pursuant to BAAQMD Regulation 11-2-401.3 a notification must be made and the J number must be made available to the City of Berkeley Permit Service Center.

Hazardous Materials Business Plan

1) An HMBP in compliance with BMC Section 15.12.040 shall be submitted electronically at http://cers.calepa.ca.gov/ within 30 days if on-site hazardous materials exceed the limits set forth in BMC 15.20.040. HMBP requirement can be found at http://ci.berkeley.ca.us/hmr/

TMD programs applicable to the project include provisions of a HMBP, aboveground and underground storage tank programs, and RCRA hazardous waste generator programs. Compliance with federal and state regulations pertaining to the transport, handling, and disposal of hazardous materials, and the City's Standard COAs would be mandatory and would ensure minimal upset risk or hazards. Impacts would be less than significant.

Although construction and operation impacts would be less than significant, the City's Standard COA would be required and would address potential impacts resulting from the routine transport, use, or disposal of hazardous materials and reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

LESS-THAN-SIGNIFICANT IMPACT

c. Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?

As discussed above in *Setting*, the site is within 0.25 miles of one preschool, and one K-8 school; both are located approximately 0.1 miles west of the project site. Construction activities would be required to comply with RCRA and DOT regulations, as discussed above. This includes regulations related to the transport of hazardous materials during the construction process. Neither school is on Tenth Street or San Pablo Avenue, which are the main streets that would be used to access the project site. The designated staging area for construction workers and vehicles would also be located on San Pablo Avenue (see *Project Description).*

Furthermore, neither project construction nor operation would emit substantial hazardous emissions or handle substantial amounts of hazardous or acutely hazardous materials, substances, or waste. Residential uses typically do not use or store large quantities of hazardous materials other than those typically used for household cleaning, maintenance, and landscaping. The project would retain one existing building and develop two buildings to be occupied by light industrial and commercial office uses, including research and development, which would likely store limited quantities of potentially hazardous materials, such as operational supplies and maintenance materials for the proposed light industrial uses. Both of the existing commercial buildings are already occupied by light-industrial manufacturing uses; therefore, a portion of the proposed project would generally be a continuation of existing uses.

With required implementation of the City's standard COAs and applicable state and federal regulations, impacts related to hazardous emissions, materials, substances, or waste would be less

than significant. Additionally, while not required to reduce this impact to a less-than-significant level, Mitigation Measures HAZ-1 through HAZ-5 (below) would apply to the project and further reduce impacts.

LESS-THAN-SIGNIFICANT IMPACT

d. Would the project be located on a site that is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

As described in the Phase I ESA, the project site is listed as two regulatory agency cleanup cases (closed San Francisco Bay RWQCB Cleanup Program Site case #01S0401 and closed San Francisco Bay RWQCB LUST case #01-0557); therefore, the project site is included on a list of hazardous material sites compiled pursuant to Government Code Section 65962.5.

Based on the Phase I ESA conducted for the project site, hazardous material soil and groundwater impacts are present onsite, and it is unknown whether soil vapor impacts are also present onsite (Appendix F). Additionally, the project site is located within the City's EMA.

The City's Standard COA, discussed below, would be required and would address potential impacts resulting from the soil and groundwater contamination on site.

Standard COA: Toxics

The applicant shall contact the TMD at 1947 Center Street or (510) 981-7470 to determine which of the following documents are required and timing for their submittal:

A. Environmental Site Assessments

1) Phase I and Phase II ESAs (latest ASTM 1527-13). A recent Phase I ESA (less than 6 months old*) shall be submitted to TMD for developments for:
   - All new commercial, industrial and mixed-use developments and all large improvement projects.
   - All new residential buildings with 5 or more dwelling units located in the EMA.
   - EMA is available online at: http://www.cityofberkeley.info/uploadedFiles/IT/Level_3_-_General/ema.pdf.

2) Phase II ESA is required to evaluate RECs identified in the Phase I or other RECs identified by TMD staff. The TMD may require a third-party toxicologist to review human or ecological health risks that may be identified. The applicant may apply to the appropriate state, regional or county cleanup agency to evaluate the risks.

3) If the Phase I is over 6 months old, it will require a new site reconnaissance and interviews. If the facility was subject to regulation under Title 15 of the BMC since the last Phase I was conducted, a new records review must be performed.

B. Soil and Groundwater Management Plan

1) A Soil and Groundwater Management Plan (SGMP) shall be submitted to TMD for all non-residential projects, and residential or mixed-use projects with five or more dwelling units, that: (1) are in the EMA and (2) propose any excavations deeper than 5 feet below grade. The SGMP shall be site specific and identify procedures for soil and groundwater management including identification of pollutants and disposal methods.

The SGMP will identify permits required and comply with all applicable local, state and regional requirements.

2) The SGMP shall require notification to TMD of any hazardous materials found in soils and groundwater during development. The SGMP will provide guidance on managing odors during excavation. The SGMP will provide the name and phone number of the individual responsible for implementing the SGMP and post the name and phone number for the person responding to community questions and complaints.
3) TMD may impose additional conditions as deemed necessary. All requirements of the approved SGMP shall be deemed conditions of approval of this Use Permit.

Under this COA, the TMD may require implementation of an updated Phase I ESA, a Phase II ESA, and/or a SGMP. The COA discussed above would be applicable to the project. However, as discussed above, potentially significant impacts may result from project grading and construction; based on the unknown and known hazardous material site conditions, there is a potential for construction workers, maintenance workers, and future project site occupants to be exposed to contaminants via soil, soil vapor, and groundwater at the project site. Therefore, the following mitigation measures would be required to reduce onsite hazardous material impacts.

Mitigation Measures

HAZ-1 TMD Regulatory Agency Submittal

Prior to commencement of demolition and construction/grading activities at the project site, the project applicant shall submit the following documents to TMD:

- Current development plan and any modifications to the development plan
- All environmental documents completed for the project, including this Initial Study document
- San Francisco Bay RWQCB Cleanup Program Site case #01S0401 documents and closed San Francisco Bay RWQCB LUST case #01-0557 documents (available online)
- Following demolition and construction grading activities, all future environmental documents completed for the project

Upon submittal of the information above, TMD may require actions such as development of subsurface investigation workplans; completion of soil, soil vapor, and/or groundwater subsurface investigations; installation of soil vapor or groundwater monitoring wells; soil excavation and off-site disposal; completion of human health risk assessments; and/or completion of remediation reports or case closure documents. Subsurface soil, soil vapor, and groundwater investigations, if required, shall be conducted in accordance with a sampling plan that shall be reviewed and approved by TMD.

The TMD closure and approval documents shall be submitted and reviewed by the project applicant prior to issuance of grading permits.

It should also be noted that TMD may determine that San Francisco Bay RWQCB or DTSC may be best suited to perform the oversight agency duties for the assessment and/or remediation of the project. Should the cleanup oversight agency be transferred from TMD to San Francisco Bay RWQCB or DTSC, this and other mitigation measures will still apply.

HAZ-2 Subsurface Investigation

Prior to commencement of demolition and construction/grading activities at the project site, the project applicant shall retain a qualified environmental consultant (Professional Geologist [PG] or Professional Engineer [PE]) to conduct a subsurface investigation, as required by the TMD. The subsurface investigations may include, but are not limited to, completion of:

- Geophysical surveys
- Soil, soil vapor, and/or groundwater sampling assessments
- Laboratory analysis for total petroleum hydrocarbons (full range), VOCs, semi-volatile organic compounds, and metals

The subsurface investigations shall provide recommendations to address identified hazards and indicate when to apply those recommended actions in relation to proposed project activities. As part of the subsurface investigation, analytical results shall be screened against the San Francisco Bay RWQCB's Environmental Screening Levels (ESL), which are commonly used throughout the State of California and have been adopted by other RWQCBs. These ESLs are risk-based screening levels for direct exposure of a construction worker and residential and commercial/industrial land use. The subsurface investigation report(s) shall include recommendations to address identified hazards and indicate when to apply those recommended actions in relation to project activities.

If contaminants are detected at the project site, appropriate steps shall be undertaken to protect site workers during project construction. This would include the preparation of a SGMP (see Mitigation Measure HAZ-4).

If contaminants are detected at concentrations exceeding hazardous waste screening thresholds for contaminants in soil (CCR Title 22, Section 66261.24), appropriate steps shall be undertaken to protect site workers during project construction and if necessary, the public during project operation (see Mitigation Measure HAZ-5).

HAZ-3 Remediation

Where soil is known to be impacted, or is identified during implementation of Mitigation Measure HAZ-2 (subsurface investigation) to be present, within the construction envelope at chemical concentrations exceeding ESLs and/or hazardous waste screening thresholds for contaminants in soil (CCR Title 22, Section 66261.24), the project applicant shall retain a qualified environmental consultant (PG or PE) to properly dispose of the contaminated soil. The qualified environmental consultant shall utilize the project site analytical results for waste characterization purposes prior to offsite transportation or disposal of potentially impacted soils or other impacted wastes. The qualified consultant shall provide disposal recommendations and arrange for proper disposal of the waste soils or other impacted wastes (as necessary), and/or provide recommendations for remedial engineering controls, if appropriate.

Remediation of impacted soils and/or implementation of remedial engineering controls may require additional delineation of sub-surface impacts; additional analytical testing per landfill or recycling facility requirements; soil excavation; and offsite disposal or recycling.

TMD shall review and approve the project site disposal recommendations prior to transportation of waste soils off-site and review and approve remedial engineering controls, prior to construction.

The project applicant shall review and implement the disposal recommendations prior to transportation of waste soils off-site and review and implement the remedial engineering controls prior to construction.

The City shall review the project site disposal recommendations and remedial engineering controls prior to issuing grading permits.

HAZ-4 Soil and Groundwater Management Plan

Prior to commencement of demolition and construction/grading activities at the project site, the project applicant shall retain a qualified environmental consultant (PG or PE) to prepare a SGMP for the project site. Where groundwater impacts are identified during implementation of mitigation measures HAZ-1 and HAZ-2, a groundwater management section shall be added to the SGMP. The SGMP shall address:

1. On-site handling and management of impacted soils or other impacted wastes (e.g., stained soil, and soil or groundwater with solvent or chemical odors) if such soils or impacted wastes are encountered, and
2. Specific actions to reduce hazards to construction workers and off-site receptors during the construction phase.

The plan must establish remedial measures and soil management practices to ensure construction worker safety, the health of future workers and visitors, and the off-site migration of contaminants from the project. These measures and practices shall include, but are not limited to:

- Stockpile management, including stormwater pollution prevention and the installation of BMPs
- Proper disposal procedures of contaminated materials
- Investigation procedures for encountering known and unexpected odorous or visually stained soils, other indications of hydrocarbon piping or equipment, and/or debris during ground-disturbing activities
- Monitoring and reporting
- A health and safety plan for contractors working at the project site that addresses the safety and health hazards of each phase of site construction activities with the requirements and procedures for employee protection
- The health and safety plan shall outline proper soil handling procedures and health and safety requirements to minimize worker and public exposure to hazardous materials during construction.

TMD shall review and approve the SGMP prior to construction (demolition and grading) activities at the project site. The City shall review the SGMP prior to issuing grading permits. The project applicant shall implement the SGMP during demolition, grading, and construction at the project site.

HAZ-5 Vapor Intrusion Mitigation System

Where soil vapor is known (or is identified during implementation of Mitigation Measures HAZ-2, HAZ-3, or HAZ-4) to be present at chemical concentrations exceeding the ESLs for sub-slab/soil gas (vapor) intrusion, the project applicant shall retain a qualified environmental

consultant (PG or PE) or other qualified person to prepare a vapor intrusion mitigation system design for the proposed project.

The plan shall include, but is not limited to:

- Design specifications
- Material specifications
- Installation requirements
- Monitoring requirements

The project applicant shall design and implement engineering measures or institutional controls (e.g., soil vapor barrier) to prevent potential soil vapor intrusion into new residences or businesses in accordance with the measures included in the San Francisco Bay RWQCB's Vapor Intrusion Mitigation Guidance Technical Resource Document (June 2022).

TMD shall review and approve the Vapor Intrusion Mitigation System Design prior to construction. Engineering measures or institutional controls shall be submitted to the City's Planning and Development Department prior to the issuance of any grading or building permits. The project applicant and/or contractor shall incorporate a sub-slab vapor barrier during construction, the implementation of which would prevent the potential for soil gas VOCs from migrating to indoor air.

The project applicant shall retain a qualified professional to certify that the accepted measures and controls are properly constructed and functioning at the project site. The efficacy of the measures and controls shall be confirmed and certified by a qualified professional pursuant to the construction quality assurance/quality control testing guidance in the San Francisco Bay RWQCB's Vapor Intrusion Mitigation Guidance Technical Resource Document (June 2022). Written verification shall be submitted to TMD and the City.

TMD may require the creation of an Operations and Maintenance Plan to ensure that future operational activities (e.g., underground utility repairs), do not alter the effectiveness of the selected vapor intrusion mitigation system.

TMD shall review and approve the Operations and Maintenance Plan (if required) prior to occupancy. The City shall review the Operations and Maintenance Plan (if required) prior to issuing an occupancy permit. The project applicant shall implement the Operations and Maintenance Plan during occupancy at the project site.

Implementation of the City's Standard COA and mitigation measures HAZ-1 through HAZ-5 during demolition, construction, and operation of the project would reduce potential hazardous material impacts at the project site below applicable thresholds of significance by ensuring additional investigation and remedial measures, transportation of impacted materials, and/or site management practices ensure construction worker safety and the health of future workers, occupants, and visitors.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

The project site is not within two miles of a public use airport. The closest airport to the project site is Oakland International Airport which is approximately nine miles from the project site. Therefore, there would be no impact.

NO IMPACT

f. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The City of Berkeley has established emergency preparedness procedures and programs for the preparation and response to a variety of natural and manmade disasters that could affect the City. The City's Emergency Operations Plan (EOP) establishes policy direction for emergency planning, mitigation, response, and short-term recovery activities in Berkeley. The EOP outlines the authorities, structures, and responsibilities of the Policy Level, departments, and the Emergency Operations Center and describes the City's coordination with county, regional, state, and federal entities (City of Berkeley 2017a). The project would not change the surrounding streets, access or evacuation opportunities in the vicinity, and project construction would not require full street closures. The following standard condition of approval would be applicable to the proposed project to ensure that potential temporary road closures during construction would not impair or otherwise interference with emergency response or evacuation:

Standard COA: Transportation Construction Plan

The applicant and all persons associated with the project are hereby notified that a Transportation Construction Plan (TCP) is required for all phases of construction, particularly for the following activities:

- Alterations, closures, or blockages to sidewalks, pedestrian paths or vehicle travel lanes (including bicycle lanes);
- Storage of building materials, dumpsters, debris anywhere in the public ROW;
- Provision of exclusive contractor parking on-street; or
- Significant truck activity.

The applicant shall secure the City Traffic Engineer's approval of a TCP. Please contact the Office of Transportation at 981-7010, or 1947 Center Street, and ask to speak to a traffic engineer. In addition to other requirements of the Traffic Engineer, this plan shall include the locations of material and equipment storage, trailers, worker parking, a schedule of site operations that may block traffic, and provisions for traffic control. The TCP shall be consistent with any other requirements of the construction phase.

Contact the Permit Service Center at 1947 Center Street or 981-7500 for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). Please note that the Zoning Officer and/or Traffic Engineer may limit off-site parking of construction-related vehicles if necessary to protect the health, safety or convenience of the surrounding neighborhood. A current copy of this plan shall be available at all times at the construction site for review by City staff.

The proposed project would be required to adhere to the aforementioned Standard COA and current and future requirements by the City of Berkeley's EOP once operational. Accordingly, impacts related to interference with an adopted emergency response plan or emergency evacuation plan during operations would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

g. Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?

As described below in Section 20, *Wildfire*, the project site is in a developed urban area and is not within or adjacent to a designated very high wildland fire hazard area. Therefore, the project would not expose people or structures to a significant risk involving wildland fires. There would be no impact.

NO IMPACT

This page intentionally left blank.

10 Hydrology and Water Quality

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	■	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	■	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:	☐	☐	■	☐
(i) Result in substantial erosion or siltation on- or off-site;	☐	☐	■	☐
(ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	■	☐
(iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	■	☐
(iv) Impede or redirect flood flows?	☐	☐	■	☐
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	■
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	■	☐

Preliminary Stormwater Requirements Package Report

A Preliminary Stormwater Requirements Package report was prepared for the project by Northstar Engineering Group, Inc. in March 2024 (Appendix G). The report by Northstar Engineering Group concluded that the existing project site has 31,465 square feet of impervious surfaces (including roof areas and floor areas like driveways and sidewalks) and the project would result in 14,877 square feet of impervious surface that would replace existing roof and ground impervious surfaces and would result in 864 square feet of new roof impervious surface. Additionally, 12,292 square feet of existing impervious surface would remain. The project would include roof planters, permeable pavement, rainwater harvesting and flow through planters. The project would decrease impervious surfaces by approximately 3,432 square feet compared to existing conditions (Appendix G).

Setting

The project site is under the jurisdiction of the San Francisco Bay RWQCB. The project site is located in the San Francisco Bay hydrologic region that extends from southern Santa Clara County north to San Pablo Bay in Sonoma County, and inland to the confluence of the Sacramento and San Joaquin rivers. The water in the region flows to the San Francisco Bay estuary or directly to the Pacific Ocean.

Groundwater Resources

The city of Berkeley is within the East Bay Plain Subbasin. This Subbasin covers approximately 71,000 acres (EBMUD 2022) The East Bay Municipal Utility District Groundwater Sustainability Agency (GSA) oversees the groundwater sustainability plan (GSP) for this subbasin for the city of Berkeley. The most recent GSP, released in 2022, found that the Intermediate and Deep Aquifer Zones (depth intervals greater than 200 feet below ground surface) are generally not impacted by contaminants attributed to environmental sites.

Regulatory Setting

Numerous federal, state, and local laws, regulations, and policies define the framework for regulating hydrology and water quality in the project area. Water quality in California is regulated through the federal Clean Water Act, which is managed by the USEPA, with implementation largely delegated to the SWRCB and nine RWQCBs. Water quality at the project site is regulated primarily by the San Francisco Bay RWQCB.

Sustainable Groundwater Management Act

In September 2014, California Governor Jerry Brown signed a three-bill package known as the Sustainable Groundwater Management Act (SGMA) into law. SGMA establishes a framework for local groundwater management and requires local agencies to bring overdrafted basins into balanced levels of pumping and recharge. The California Statewide Groundwater Elevation Model Priority List ranks groundwater basins across the state with assessment rankings of High, Medium, Low, or Very Low. In unmanaged groundwater basins, SGMA requires the formation of locally controlled GSAs. GSAs are responsible for developing and implementing GSPs to guide groundwater management decisions and ensure long-term sustainability in their basins. In adjudicated basins, the court-identified Watermaster serves the purpose of the GSA, and the adjudication Judgment serves as the GSP.

Impact Analysis

a. Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Construction activities for the proposed project could cause soil erosion from exposed soil, an accidental release of hazardous materials used for equipment such as vehicle fuels and lubricant, or temporary siltation from storm water runoff. Soil disturbance would occur during demolition, site preparation, grading, and paving, including for improvements to landscaped areas. However, construction activities would be required to comply with state and local water quality regulations designed to control erosion and protect water quality during construction. This includes compliance with BMC Chapter 21.40, which requires that proposed projects comply with grading, erosion, and sediment control regulations on file in the Public Works Department, and BMC Chapter 17.20, which requires that BMPs, including those adopted by the State Water Resources Control Board be implemented to minimize non-stormwater discharges during construction. Construction BMPs would include scheduling inlet protection, silt fencing, fiber rolls, stabilized construction entrances, stockpile management, solid waste management, and concrete waste management. In the event that groundwater is encountered during construction activities, the Public Works Department would require that discharge be pumped through a pipe system that is connected to the fully piped storm drain or sewer main in order to avoid discharge at street crossings and other hazards.

The project involves minimal cut and fill; however, the Geotechnical Investigation Report (Appendix D) states that the design level for groundwater should be 5 feet below ground surface. Therefore, there is the potential that dewatering may be necessary if, for example, excavation for foundations or utility connections extends below that depth. Dewatering activities would be required to comply with BMC Chapter 17.20, which regulates non-stormwater drainage into the City's storm drain system. Dewatering discharge can enter the City sanitary sewer system with permits from both EBMUD and the City of Berkeley. With compliance with these city requirements and BMC ordinances, dewatering would not result in a violation of water quality standards or otherwise substantially degrade surface or ground water quality (the potential for discovery of and mitigation for contaminated groundwater is discussed in Section 9, *Hazards and Hazardous Materials*). Post-construction stormwater performance standards are also required to specifically address water quality and channel protection events. Implementation of these BMPs would prevent or minimize environmental impacts and ensure that discharges during construction of the proposed project would not cause or contribute to the degradation of water quality in receiving waters. The proposed project therefore would not result in the degradation of water quality in receiving waters; construction-related water quality impacts would be less than significant.

Compliance with local and state regulatory requirements and implementation of construction BMPs would minimize discharges during the construction phase of the proposed project. The project would also be required to comply with the following Standard COA:

Standard COA: Stormwater Requirements

A. The applicant shall demonstrate compliance with the requirements of the City's National Pollution Discharge Elimination System (NPDES) permit as described in BMC Section 17.20. The following conditions apply:

B. The project plans shall identify and show site-specific Best Management Practices (BMPs) appropriate to activities conducted on-site to limit to the maximum extent practicable the discharge of pollutants to the City's storm drainage system, regardless of season or weather conditions.

C. Trash enclosures and/or recycling area(s) shall be covered; no other area shall drain onto this area. Drains in any wash or process area shall not discharge to the storm drain system; these drains should connect to the sanitary sewer. Applicant shall contact the City of Berkeley and EBMUD for specific connection and discharge requirements. Discharges to the sanitary sewer are subject to the review, approval and conditions of the City of Berkeley and EBMUD.

D. Landscaping shall be designed with efficient irrigation to reduce runoff, promote surface infiltration and minimize the use of fertilizers and pesticides that contribute to stormwater pollution. Where feasible, landscaping should be designed and operated to treat runoff. When and where possible, xeriscape and drought tolerant plants shall be incorporated into new development plans.

E. Design, location and maintenance requirements and schedules for any stormwater quality treatment structural controls shall be submitted to the Department of Public Works for review with respect to reasonable adequacy of the controls. The review does not relieve the property owner of the responsibility for complying with BMC Chapter 17.20 and future revisions to the City's overall stormwater quality ordinances. This review shall be conducted prior to the issuance of a Building Permit.

F. All paved outdoor storage areas must be designed to reduce/limit the potential for runoff to contact pollutants.

G. All on-site storm drain inlets/catch basins must be cleaned at least once a year immediately prior to the rainy season. The property owner shall be responsible for all costs associated with proper operation and maintenance of all storm drainage facilities (pipelines, inlets, catch basins, outlets, etc.) associated with the project, unless the City accepts such facilities by Council action. Additional cleaning may be required by City of Berkeley Public Works Engineering Dept.

H. All on-site storm drain inlets must be labeled "No Dumping – Drains to Bay" or equivalent using methods approved by the City.

I. Most washing and/or steam cleaning must be done at an appropriately equipped facility that drains to the sanitary sewer. Any outdoor washing or pressure washing must be managed in such a way that there is no discharge or soaps or other pollutants to the storm drain. Sanitary connections are subject to the review, approval and conditions of the sanitary district with jurisdiction for receiving the discharge.

J. All loading areas must be designated to minimize "run-on" or runoff from the area. Accumulated waste water that may contribute to the pollution of stormwater must be drained to the sanitary sewer or intercepted and pretreated prior to discharge to the storm drain system. The property owner shall ensure that BMPs are implemented to prevent potential stormwater pollution. These BMPs shall include, but are not limited to, a regular program of sweeping, litter control and spill cleanup.

K. Sidewalks and parking lots shall be swept regularly to prevent the accumulation of litter and debris. If pressure washed, debris must be trapped and collected to prevent entry to the storm drain system. If any cleaning agent or degreaser is used, wash water shall not discharge to the storm drains; wash waters should be collected and discharged to the

sanitary sewer. Discharges to the sanitary sewer are subject to the review, approval and conditions of the sanitary district with jurisdiction for receiving the discharge.

L. The applicant is responsible for ensuring that all contractors and sub-contractors are aware of and implement all stormwater quality control measures. Failure to comply with the approved construction BMPs shall result in the issuance of correction notices, citations, or a project stop work order.

With adherence to requirements listed above, the project would not violate water quality standards, waste discharge requirements, degrade water quality, or substantially decrease groundwater supplies. Impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

The proposed project would not use or deplete groundwater resources. Water supply for the project site is provided by EBMUD. The groundwater aquifer beneath Berkeley is not currently used for water storage or drinking water supply. The project would not involve installation of new groundwater wells or use of groundwater from existing wells.

Dewatering may be needed during construction if groundwater is encountered during grading. Temporary dewatering during construction would not substantially affect groundwater levels; because of the relatively small area of the project site and minimal amounts of excavation proposed, the project would not result in a significant depletion of groundwater supply.

Existing impervious surfaces cover most of the site (roughly 31,465 square feet) (Appendix G). The project would replace existing roof and ground impervious surfaces and create 864 square feet of new impervious roof surfaces. The project would include roof planters, flow through planters, rainwater harvesting, and pervious pavement, and would direct runoff onto vegetated areas. Overall impervious surfaces would be reduced by approximately 3,432 square feet compared to existing conditions. The project would not substantially increase runoff from the project site. This addition of pervious space would increase absorption of stormwater runoff and the potential for groundwater recharge compared to existing conditions. Therefore, the proposed project would not result in a net deficit in aquifer volume or a lowering of the groundwater table. Impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

c.(i) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would result in substantial erosion or siltation on- or off-site?

c.(ii) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

c.(iii) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

c.(iv) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?

The project site is currently developed, and construction of the proposed project would not alter the course of a creek, stream or river (no other surface water features are identified in the project area).

As discussed under impact *b*, existing impervious surfaces cover most of the site. The project would replace existing roof and ground impervious surfaces and create new impervious roof surfaces The project would include roof planters, flow through planters, rainwater harvesting, and pervious pavement. Overall impervious surfaces would be reduced by approximately 3,432 square feet compared to existing conditions. The project would not substantially increase runoff from the project site such that new or increased erosion, siltation, or flooding would occur on- or off-site. Stormwater leaving the project site would enter the City's existing stormwater conveyance system, as it does under existing conditions, and would not directly affect a stream or river. The proposed project would not substantially alter the existing drainage pattern of the site or area or create or contribute runoff that would exceed the capacity of the existing stormwater conveyance infrastructure, add new sources of polluted runoff, or otherwise result in flooding on or near the project site. Therefore, a less-than-significant impact would occur.

LESS-THAN-SIGNIFICANT IMPACT

d. In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

The project site is located in Flood Zone X (Federal Emergency Management Agency [FEMA] 2018), Zone X includes areas of 0.2 percent annual chance flood; areas of 1 percent annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from one-percent annual chance flood. Therefore, the project is not located within a Special Flood Hazard Area and would not place housing in a flood zone. In addition, the project would not impede or redirect flood flows in a 100-year flood hazard area. The project site is located on relatively flat topography, and there is little likelihood of a mudflow occurring as a result of project construction and operation. In addition, the Department of Conservation's tsunami inundation map shows that the project site is not located in a tsunami inundation zone (DOC 2023). The project site is not adjacent to a large body of water that could create a seiche. No impacts related to seiche, tsunami, or mudflow would occur.

NO IMPACT

e. Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Groundwater

The project site overlies the East Bay Plain Subbasin (EBMUD 2022). The East Bay Plain Subbasin extends from Richmond to the north to Hayward in the south covering 61,000 acres that EBMUD manages.

The East Bay Plain subbasin is considered a medium prioritization basin under the SGMA (Department of Water Resources [DWR] 2023). Under SGMA, the Local GSA must prepare a GSP or an alternative for any medium or high-priority basin. EBMUD and the City of Hayward are the GSAs for the East Bay Plain Subbasin. EBMUD is the GSA for the area of the subbasin that underlies the project site. EBMUD and the City of Hayward submitted the Groundwater Management Plan for the East Bay Plains Subbasin in January 2022. The proposed project would not use considerable water resources, and as discussed in impact a., the East Bay Plain Subbasin is considered stable and sustainable by EBMUD. Therefore, the project would not conflict with a GSP.

Water Quality

The San Francisco Bay RWQCB has designated water quality objectives in the county in the *Water Quality Control Plan for the San Francisco Bay Region* (Basin Plan) (San Francisco Bay RWQCB 2017). As discussed under impacts a. and b. the project would be required to comply with NPDES requirements and the City's Standard COAs. As discussed under impacts a. and b. above, the project would not use substantial groundwater, violate water quality standards, or degrade water quality during construction or operation.

The proposed project would not interfere with water quality control plans or sustainable groundwater management plans. Impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

This page intentionally left blank.

11 Land Use and Planning

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Physically divide an established community?	☐	☐	☐	■
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	■	☐

Setting

The project site is located in the West Berkeley area, which is comprised of industrial, commercial, residential, and institutional uses. Industrial light-manufacturing building uses are located north of 2817 Tenth Street and to the south of 2821 Tenth Street. Across Tenth Street to the west, uses include commercial, residential, and institutional. Across San Pablo Avenue to the east, uses include commercial and residential. The City of Berkeley Bicycle Boulevard on Ninth Street is located one block away from the project site. Nearby public transportation includes AC Transit bus stops along San Pablo Avenue (lines 72, 72M, 72R, 802), Ashby Avenue (line J), and Seventh Street (line 36), and the Ashby Bay Area Rapid Transit (BART) station located approximately one mile east.

Regulatory Setting

Berkeley General Plan

The General Plan provides a guide for future land use decisions in the city. Key policies related to land use and applicable to the proposed project include:

- **Policy LU-1 Community Character:** Maintain the character of Berkeley as a special, diverse, unique place to live and work.
- **Policy LU-3 Infill Development:** Encourage infill development that is architecturally and environmentally sensitive, embodies principles of sustainable planning and construction, and is compatible with neighboring land uses and architectural design and scale.
- **Policy LU-11 Pedestrian- and Bicycle-Friendly Neighborhoods:** Ensure that neighborhoods are pedestrian- and bicycle-friendly with well-maintained streets, street trees, sidewalks, and pathways.
- **Policy LU-27 Avenue Commercial Areas:** Maintain and improve Avenue Commercial areas, such as University, San Pablo, Telegraph, and South Shattuck, as pedestrian-friendly, visually attractive areas of pedestrian scale and ensure that Avenue areas fully serve neighborhood needs as well as a broader spectrum of needs.

- **Policy LU-33 West Berkeley Plan:** Implement the West Berkeley Plan and take actions that will achieve the three purposes of the Plan:
  1. Maintain the full range of land uses and economic activities including residences, manufacturing, services, retailing, and other activities in West Berkeley.
  2. Maintain the ethnic and economic diversity of West Berkeley's resident population.
  3. Maintain and improve the quality of urban life, environmental quality, public and private service availability, transit and transportation, and aesthetic and physical qualities for West Berkeley residents and workers.
- **Policy LU-34 Industrial Protections:** Protect industrial uses in West Berkeley.

As described in the introductory sections to this Initial Study under *General Plan Land Use Designation*, the General Plan land use designations for the project site are Avenue Commercial for the 2820 San Pablo parcel and Manufacturing Mixed Use for the 2817-2821 Tenth Street parcel. Surrounding parcels to the north, west and south along Tenth Street are also designated Manufacturing Mixed Use, and surrounding parcels to the north, east and south along San Pablo Avenue are also zoned Avenue Commercial.

West Berkeley Plan

The proposed project is located in the West Berkeley Plan area. The West Berkeley Plan encourages a dynamic mix of industrial, office, arts and crafts, residential, retail and institutional activities. The West Berkeley Plan designates the Tenth Street portion of the site as Mixed Use/Residential and the San Pablo Avenue portion of the site as General Commercial (City of Berkeley 1993). Mixed Use/Residential uses include residential, warehouses, some retail, parking lots and some light manufacturing and industrial uses. General Commercial uses include live-work, offices, parking lots, and some light manufacturing and industrial uses (City of Berkeley 2011).

Berkley Municipal Code

As described in the introductory sections to this Initial Study under *Zoning*, the parcel located at 2820 San Pablo Avenue is within the West Berkeley Commercial (C-W) District. The parcel located at 2817-2821 Tenth Street is in the Mixed-Use Residential (MU-R) District. Surrounding parcels to the north, west and south along Tenth Street are also zoned MU-R, and surrounding parcels to the north, east and south along San Pablo Avenue are also zoned C-W.

Impact Analysis

a. Would the project physically divide an established community?

The project would involve the construction of a mixed-use building on existing contiguous parcels in an urbanized area of Berkeley. The project would not separate connected neighborhoods or land uses from each other. No new roads, linear infrastructure, or other development features are proposed that would divide an established community or limit movement, travel, or social interaction between established land uses. No impact would occur.

NO IMPACT

b. Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Consistency with the General Plan

Project consistency with applicable land use policies is discussed in Table 10.

Table 10 General Plan Consistency

General Plan Goal or Policy	Proposed Project Consistency
LU-1 Community Character: Maintain the character of Berkeley as a special, diverse, unique place to live and work**.**	**Consistent.** The proposed project would be a mixed-use project that is consistent with the site's general plan and land use designations.
Policy LU-3 Infill Development: Encourage infill development that is architecturally and environmentally sensitive, embodies principles of sustainable planning and construction, and is compatible with neighboring land uses and architectural design and scale.	**Consistent.** The proposed project would be an infill development that would replace a vacant lot and commercial property with a mixed-use building compliant with 2022 CALGreen. The development would be consistent with the recent development pattern in the neighborhood.
Policy LU-11 Pedestrian- and Bicycle-Friendly Neighborhoods: Ensure that neighborhoods are pedestrian- and bicycle-friendly with well-maintained streets, street trees, sidewalks, and pathways.	**Consistent.** The project would be located in a Transit Priority Area. The project would include 14 bicycle parking spaces and a shower and locker storage for bicycle commuters. The project would not require removal of trees, nor would it change or obstruct the sidewalks in the area.
Policy LU-27 Avenue Commercial Areas: Maintain and improve Avenue Commercial areas, such as University, San Pablo, Telegraph, and South Shattuck, as pedestrian-friendly, visually attractive areas of pedestrian scale and ensure that Avenue areas fully serve neighborhood needs as well as a broader spectrum of needs.	**Consistent.** The proposed project would include the construction of new mixed-use space along San Pablo Avenue, within an Avenue Commercial area. The project would include a ground floor pedestrian entrance and windowed facade on San Pablo Avenue.
Policy LU-33 West Berkeley Plan: Implement the West Berkeley Plan and take actions that will achieve the three purposes of the Plan: 1. Maintain the full range of land uses and economic activities including residences, manufacturing, services, retailing, and other activities in West Berkeley. 2. Maintain the ethnic and economic diversity of West Berkeley's resident population. 3. Maintain and improve the quality of urban life, environmental quality, public and private service availability, transit and transportation, and aesthetic and physical qualities for West Berkeley residents and workers.	**Consistent.** The proposed project would include commercial, light manufacturing, and residential uses, which would maintain a range of land uses and economic activities, as well as support economic diversity. The project would be located in a Transit Priority Area, and would include automobile parking, bicycle parking, and facilities for bicycle commuters. The development would be consistent with the recent development pattern in the neighborhood. The proposed project would include 17,488 square feet of light manufacturing space and would maintain 75 percent of the existing light manufacturing space, consistent with the West Berkeley plan.
Policy LU-34 Industrial Protections: Protect industrial uses in West Berkeley.	**Consistent.** The proposed project would include 17,488 square feet of light manufacturing space and would maintain 75 percent of the existing light manufacturing space, consistent with the West Berkeley plan.

The proposed project would be consistent with the General Plan policies listed above as well as the site's General Plan land use designation. Impacts related to General Plan consistency would be less than significant.

Consistency with the West Berkeley Plan

The proposed project is consistent with the Plan's General Commercial and Mixed Use/Residential designations and would maintain the 75 percent on-site light manufacturing use by square footage as required in the Plan area. The West Berkeley Plan also contains several policies applicable to the project; these are primarily related to economic goals and compatibility. As noted in the table above, the project would include commercial, light manufacturing, and residential uses, which would maintain a range of land uses and economic activities and support economic diversity, consistent with the West Berkeley Plan. The project would include a ground floor pedestrian entrance and windowed facade on San Pablo Avenue and would be similar in scale to buildings in the vicinity, which range from one to five stories in height.

Consistency with the Zoning Ordinance

The project site is within the MU-R and C-W zoning districts. The project would require approval of several Use Permits. However, no additional discretionary approvals by the City of Berkeley would be required.

In order to approve such permits, the ZAB must make specific findings, including that the project is consistent with applicable zoning and General Plan regulations. The ZAB would also be required to find that the project would "not be detrimental to the health, safety, peace, morals, comfort or general welfare of persons residing or working in the area or neighborhood of such proposed use or be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood or to the general welfare of the City" (BMC Section 23B.32,040.B).

With approval of the above use permits, the proposed project would be consistent with applicable zoning regulations in the BMC. Therefore, the project would not conflict with the City's zoning ordinance.

Other Land Use Conflicts

The project would generally be within the range of development intensity of the surrounding area, which includes residential, commercial, and light industrial/manufacturing development. The project would be located in a TPA, and would include automobile parking, bicycle parking, and facilities for bicycle commuters. The development would be consistent with the recent development pattern in the neighborhood. The proposed project would maintain 75 percent of the existing light manufacturing space, consistent with the West Berkeley plan. Therefore, the change in intensity on the site would not alter the land use and development patterns in the area; the land use pattern would be generally maintained. The project site is located in the West Berkeley area, which is comprised of industrial, commercial, residential, and institutional uses. As shown in Figure 2, the project site is bordered by Tenth Street to the west, San Pablo Avenue to the east, a wellness center to the north of 2820 San Pablo Avenue, and commercial mixed-use buildings to the south. Industrial light-manufacturing building uses are located north of 2817 Tenth Street and to the south of 2821 Tenth Street. Across Tenth Street to the west, uses include commercial, residential, and institutional. Across San Pablo Avenue to the east, uses include commercial and residential. The proposed mixed use is similar to the uses of other properties near the project site and consistent with the site's land use designation. Therefore, it would be generally compatible in use. The project would not conflict with surrounding land uses, and this impact would be less than significant.

As described in Section 2, *Agriculture and Forestry Resources*, the project site is classified as Urban and Built-Up Land. There are no natural communities or habitats located on the project site, and no habitat/natural community conservation plans are applicable to the site (CDFW 2019). Therefore, the project would not conflict with a habitat/natural community conservation plan.

LESS-THAN-SIGNIFICANT IMPACT

This page intentionally left blank.

12 Mineral Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	■
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	■

Setting

The project site is within an urbanized area with no current oil or gas extraction. According to the Environmental Management Element of the City's General Plan, Berkeley does not contain mineral deposits of regional significance (City of Berkeley 2002a).

Impact Analysis

a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No mineral resource activities would be altered or displaced by the proposed project, and further analysis of this issue in an EIR is not warranted.

NO IMPACT

This page intentionally left blank.

13 Noise

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	■	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	■	☐	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	■

Setting

According to the City of Berkeley General Plan Environmental Management Element, the most prevalent noise sources in Berkeley are from cars, trucks, buses, trains, industrial plant equipment noise, and activities associated with neighborhoods and schools such as lawn mowing and leaf blowing and children playing. Noise sources related to heavy manufacturing, located mainly in industrialized areas located in West Berkeley, were once a more dominant contributor to the noise environment. However, the West Berkeley Plan, adopted in 1993, has developed more stringent environmental review and regulation, including the mitigation of noise through both industrial and residential measures (City of Berkeley 2002).

Noise

Sound is a vibratory disturbance created by a moving or vibrating source, which is capable of being detected by the hearing organs. Noise is defined as sound that is loud, unpleasant, unexpected, or undesired and may therefore be classified as a more specific group of sounds. The effects of noise on people can include general annoyance, interference with speech communication, sleep disturbance, and, in the extreme, hearing impairment (California Department of Transportation [Caltrans] 2013).

Human Perception of Sound

Noise levels are commonly measured in decibels (dB) using the A-weighted sound pressure level (dBA). The A-weighting scale is an adjustment to the actual sound pressure levels so that they are consistent with the human hearing response. Decibels are measured on a logarithmic scale that quantifies sound intensity in a manner similar to the Richter scale used to measure earthquake magnitudes. A doubling of the energy of a noise source, such as doubling of traffic volume, would increase the noise level by 3 dB; dividing the energy in half would result in a 3 dB decrease (Caltrans 2013).

Human perception of noise has no simple correlation with sound energy: the perception of sound is not linear in terms of dBA or in terms of sound energy. Two sources do not "sound twice as loud" as one source. It is widely accepted that the average healthy ear can barely perceive changes of 3 dBA, increase or decrease (i.e., twice the sound energy); that a change of 5 dBA is readily perceptible; and that an increase (or decrease) of 10 dBA sounds twice (half) as loud (Caltrans 2013).

Sound Propagation and Shielding

Sound changes in both level and frequency spectrum as it travels from the source to the receiver. The most obvious change is the decrease in the noise level as the distance from the source increases. The manner by which noise reduces with distance depends on factors such as the type of sources (e.g., point or line), the path the sound will travel, site conditions, and obstructions.

Sound levels are described as either a "sound power level" or a "sound pressure level," which are two distinct characteristics of sound. Both share the same unit of measurement, the dB. However, sound power (expressed as L_{pw}) is the energy converted into sound by the source. As sound energy travels through the air, it creates a sound wave that exerts pressure on receivers, such as an eardrum or microphone, which is the sound pressure level. Sound measurement instruments only measure sound pressure, and noise level limits are typically expressed as sound pressure levels.

Noise levels from a point source (e.g., construction, industrial machinery, air conditioning units) typically attenuate, or drop off, at a rate of 6 dBA per doubling of distance. Noise from a line source (e.g., roadway, pipeline, railroad) typically attenuates at about 3 dBA per doubling of distance (Caltrans 2013). Noise levels may also be reduced by intervening structures; the amount of attenuation provided by this "shielding" depends on the size of the object and the frequencies of the noise levels. Natural terrain features, such as hills and dense woods, and man-made features, such as buildings and walls, can significantly alter noise levels. Generally, any large structure blocking the line of sight will provide at least a 5-dBA reduction in source noise levels at the receiver (Federal Highway Administration [FHWA] 2011). Structures can substantially reduce exposure to noise as well. The FHWA's guidance indicates that modern building construction generally provides an exterior-to-interior noise level reduction of 10 dBA with open windows and an exterior-to-interior noise level reduction of 20 to 35 dBA with closed windows (FHWA 2011).

Descriptors

The impact of noise is not a function of loudness alone. The time of day when noise occurs and the duration of the noise are also important factors of project noise impact. Most noise that lasts for more than a few seconds is variable in its intensity. Consequently, a variety of noise descriptors have been developed. The noise descriptors used for this study are the equivalent noise level (L_{eq}), Day-Night Average Level (DNL; may also be symbolized as L_{dn}), and the community noise equivalent level (CNEL; may also be symbolized as L_{den}).

L_{eq} is one of the most frequently used noise metrics; it considers both duration and sound power level. The L_{eq} is defined as the single steady-state A-weighted sound level equal to the average sound energy over a time period. When no time period is specified, a 1-hour period is assumed. The L_{max} is the highest noise level within the sampling period, and the L_{min} is the lowest noise level within the measuring period. Normal conversational levels are in the 60 to 65-dBA L_{eq} range; ambient noise levels greater than 65 dBA L_{eq} can interrupt conversations (Federal Transit Administration [FTA] 2018).

Noise that occurs at night tends to be more disturbing than that occurring during the day. Community noise is usually measured using Day-Night Average Level (DNL or L_{DN}), which is the 24-hour average noise level with a +10 dBA penalty for noise occurring during nighttime hours (10:00 p.m. to 7:00 a.m.). Community noise can also be measured using Community Noise Equivalent Level (CNEL or L_{DEN}), which is the 24-hour average noise level with a +5 dBA penalty for noise occurring from 7:00 p.m. to 10:00 p.m. and a +10 dBA penalty for noise occurring from 10:00 p.m. to 7:00 a.m. (Caltrans 2013).[3] The relationship between the peak-hour L_{eq} value and the L_{DN}/CNEL depends on the distribution of noise during the day, evening, and night; however noise levels described by L_{DN} and CNEL usually differ by 1 dBA or less. Quiet suburban areas typically have CNEL noise levels in the range of 40 to 50 CNEL, while areas near arterial streets are in the 50 to 60+ CNEL range (FTA 2018).

Groundborne Vibration

Groundborne vibration of concern in environmental analysis consists of the oscillatory waves that move from a source through the ground to adjacent buildings or structures and vibration energy may propagate through the buildings or structures. Vibration may be felt, may manifest as an audible low-frequency rumbling noise (referred to as groundborne noise), and may cause windows, items on shelves, and pictures on walls to rattle. Although groundborne vibration is sometimes noticeable in outdoor environments, it is almost never annoying to people who are outdoors. The primary concern from vibration is that it can be intrusive and annoying to building occupants at vibration-sensitive land uses and may cause structural damage.

Typically, ground-borne vibration generated by manmade activities attenuates rapidly as distance from the source of the vibration increases. Vibration amplitudes are usually expressed in peak particle velocity (PPV), or root mean squared (RMS) vibration velocity. The PPV and RMS velocity are normally described in inches per second (in/sec). PPV is defined as the maximum instantaneous positive or negative peak of a vibration signal. PPV is often used as it corresponds to the stresses that are experienced by buildings (Caltrans 2020).

High levels of groundborne vibration may cause damage to nearby buildings or structures; at lower levels, groundborne vibration may cause minor cosmetic (i.e., non-structural damage) such as cracks. These vibration levels are nearly exclusively associated with high-impact activities such as blasting, pile-driving, vibratory compaction, demolition, drilling, or excavation. Table 11 summarizes the vibration damage criteria recommended by the FTA for evaluating the potential for architectural damage to buildings.

[3] Because DNL and CNEL are typically used to assess human exposure to noise, the use of A-weighted sound pressure level (dBA) is implicit. Therefore, when expressing noise levels in terms of DNL or CNEL, the dBA unit is not included.

Table 11 Criteria for Vibration Damage Potential

Building Category		PPV (in/sec)
I.	Reinforced concrete, steel, or timber (no plaster)	0.5
II.	Engineered concrete and masonry (no plaster)	0.3
III.	Nonengineered timber and masonry buildings	0.2
IV.	Buildings extremely susceptible to vibration damage	0.12

in/sec = inches per second; PPV = peak particle velocity

Source: Federal Transit Administration 2018

Regulatory Setting

Berkeley Municipal Code

BMC Section 13.40, Community Noise sets the City's standards for on-site operational noise and construction noise. As shown in Table 12, BMC Section 13.40.050, Exterior Noise Standards, provides the exterior noise limits not to be exceeded for more than 30 minutes in any hour in various zoning districts. If the measured ambient noise level exceeds these limits, the allowable noise exposure standard would be the ambient noise level.

Table 12 City of Berkeley Exterior Noise Limits

Zone	Time Period	L_{50}[1] Noise Level, dBA
R-1, R-2	7:00 a.m. – 10:00 p.m.	55
	10:00 p.m. – 7:00 a.m.	45
R-3 and above	7:00 a.m. – 10:00 p.m.	60
	10:00p.m. – 7:00 a.m.	55
Commercial	7:00 a.m. – 10:00 p.m.	65
	10:00 p.m. – 7:00 a.m.	60
Industry	Anytime	70

[1] L_{50} is the noise level that cannot be exceeded for more than 30 minutes in any hour.

Source: Berkeley, Municipal Code Section 13.40.050

Section 13.40.070 of the BMC sets standards for construction noise. This section prohibits construction activity between the hours of 7:00 p.m. and 7:00 a.m. on weekdays, 8:00 p.m. to 9:00 a.m. on weekends and holidays such that the resulting noise creates a noise disturbance across a residential or commercial property line.

Section 13.40.070 of the BMC also prohibits loading, unloading, opening, closing or other handling of boxes, crates, containers, building materials, or similar objects between the hours of 10:00 p.m. and 7:00 a.m., such that the noise across a residential property line exceeds the standards shown in Table 12.

For Use Permits in non-residential zones, the City's standard COA for construction hours is limited to between the hours of 7:00 a.m. and 6:00 p.m. on Monday through Friday, and between 9:00 a.m. and 4:00 p.m. on Saturday. No construction-related activity shall occur on Sunday or any Federal Holiday.

Impact Analysis

a. Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

The proposed project would generate temporary noise increases during construction and long-term increases during operation.

Construction

Construction activity would result in temporary noise in the project site vicinity, exposing nearby receivers to increased noise levels. Project construction noise would be generated by heavy-duty diesel construction equipment used for demolition of existing structures, earthworks, loading, unloading, and placing materials and paving. Typical heavy construction equipment during project grading could include dozers, loaders, graders, and dump trucks. It is assumed that diesel engines would power all construction equipment. Each phase of construction has a specific equipment mix, depending on the work to be accomplished during that phase. Each phase also has its own noise characteristics; some would have higher continuous noise levels than others, and some have high-impact noise levels. Construction noise would typically be higher during the more equipment-intensive phases of initial construction (i.e., site preparation and grading) and would be lower during the later construction phases (i.e., building construction and paving).

The nearest sensitive noise receivers in the project vicinity are the residences west across Tenth Street from the project site. Construction equipment such as bulldozers, graders, loaders, and excavators would operate as close as 60 feet to the nearest residences; however, over the course of a typical construction day, the equipment would move around the project site. For example, during a typical construction day, the equipment may operate at an average distance of 200 feet east of the residences. A likely construction scenario includes simultaneous operation of a backhoe and excavator during demolition to remove debris from the project site.

As described above in the *Regulatory Setting* section, the City's COA limits the hours of construction to the less sensitive hours of the day (7:00 a.m. – 6:00 p.m. weekdays, 9:00 a.m. – 4:00 p.m. on Saturdays, no construction on Sundays or federal holidays). Therefore, construction would not occur during typical sleeping hours for residents, which are the most sensitive time for exposure to noise. This section also states that during the construction period, where technically and economically feasible, construction activities must be conducted in such a manner that the maximum sound levels from stationary, long-term equipment at affected properties will not exceed 65 dBA L_{max} on weekdays and 55 dBA L_{max} on weekends and holidays in a multi-family/mixed-use zoning district, and 70 dBA L_{max} on weekdays and 60 dBA L_{max} on weekends and holidays in commercial districts. It is anticipated that noise from construction of the proposed project at a distance of 60 feet would exceed these limits without implementation of noise reduction measures.

Implementation of Berkeley Standard COAs listed below¸ including *Construction Noise Reduction Program, Construction Noise Management - Public Notice Required, Construction Phases,* and *Project Construction Website* would apply to construction activities. These would reduce construction noise to below the City's construction noise standards, as a qualified acoustical consultant would develop a site-specific noise reduction program to reduce construction noise impacts to the extent feasible, which the applicant would be required to implement.

Standard COA: Construction Hours

Construction activity shall be limited to between the hours of 7:00 a.m. and 6:00 p.m. on Monday through Friday, and between 9:00 a.m. and 4:00 p.m. on Saturday. No construction-related activity shall occur on Sunday or any Federal Holiday.

Standard COA: Construction Noise Reduction Program

The applicant shall develop a site-specific noise reduction program prepared by a qualified acoustical consultant to reduce construction noise impacts to the maximum extent feasible, subject to review and approval of the Zoning Officer. The noise reduction program shall include the time limits for construction listed above, as measures needed to ensure that construction complies with BMC Section 13.40.070. The noise reduction program should include, but shall not be limited to, the following available controls to reduce construction noise levels as low as practical:

- Construction equipment should be well maintained and used judiciously to be as quiet as practical.
- Equip all internal combustion engine-driven equipment with mufflers, which are in good condition and appropriate for the equipment.
- Use "quiet" models of air compressors and other stationary noise sources where technology exists. Select hydraulically or electrically powered equipment and avoid pneumatically powered equipment where feasible.
- Locate stationary noise-generating equipment as far as possible from sensitive receptors when adjoining construction sites. Construct temporary noise barriers or partial enclosures to acoustically shield such equipment where feasible.
- Prohibit unnecessary idling of internal combustion engines.
- If impact pile driving is required, pre-drill foundation pile holes to minimize the number of impacts required to seat the pile.
- Construct solid plywood fences around construction sites adjacent to operational business, residences or other noise-sensitive land uses, where the noise control plan analysis determines that a barrier would be effective at reducing noise.
- Erect temporary noise control blanket barriers, if necessary, along building facades facing construction sites. This mitigation would only be necessary if conflicts occurred which were irresolvable by proper scheduling. Noise control blanket barriers can be rented and quickly erected.
- Route construction related traffic along major roadways and away from sensitive receptors where feasible.

Standard COA: Damage Due to Construction Vibration

The project applicant shall submit screening level analysis prior to, or concurrent with demolition building permit. If a screening level analysis shows that the project has the potential to result in damage to structures, a structural engineer or other appropriate professional shall be retained to prepare a vibration impact assessment (assessment). The assessment shall take into account project specific information such as the composition of the structures, location of the various types of equipment used during each phase of the project, as well as the soil characteristics in the project area, in order to determine whether project construction may

cause damage to any of the structures identified as potentially impacted in the screening level analysis. If the assessment finds that the project may cause damage to nearby structures, the structural engineer or other appropriate professional shall recommend design means and methods of construction that to avoid the potential damage, if feasible. The assessment and its recommendations shall be reviewed and approved by the Building and Safety Division and the Zoning Officer. If there are no feasible design means or methods to eliminate the potential for damage, the structural engineer or other appropriate professional shall undertake an existing conditions study (study) of any structures (or, in case of large buildings, of the portions of the structures) that may experience damage. This study shall

- Establish the baseline condition of these structures, including, but not limited to, the location and extent of any visible cracks or spalls; and
- Include written descriptions and photographs.

The study shall be reviewed and approved by the Building and Safety Division and the Zoning Officer prior to issuance of a grading permit. Upon completion of the project, the structures (or, in case of large buildings, of the portions of the structures) previously inspected will be resurveyed, and any new cracks or other changes shall be compared to pre-construction conditions and a determination shall be made as to whether the proposed project caused the damage. The findings shall be submitted to the Building and Safety Division and the Zoning Officer for review. If it is determined that project construction has resulted in damage to the structure, the damage shall be repaired to the pre-existing condition by the project sponsor, provided that the property owner approves of the repair.

Standard COA: Construction Noise Management - Public Notice Required

At least two weeks prior to initiating any construction activities at the site, the applicant shall provide notice to businesses and residents within 500 feet of the project site. This notice shall at a minimum provide the following: (1) project description, (2) description of construction activities, (3) daily construction schedule (i.e., time of day) and expected duration (number of months), (4) the name and phone number of the Project Liaison for the project that is responsible for responding to any local complaints, (5) commitment to notify neighbors at least four days in advance of authorized extended work hours and the reason for extended hours, and (6) that construction work is about to commence. The liaison would determine the cause of all construction-related complaints (e.g., starting too early, bad muffler, worker parking, etc.) and institute reasonable measures to correct the problem. A copy of such notice and methodology for distributing the notice shall be provided in advance to the City for review and approval.

Standard COA: Interior Noise Levels

Prior to issuance of a building permit, the applicant shall submit a report to the Building and Safety Division and the Zoning Officer by a qualified acoustic engineer certifying that the interior residential portions of the project will achieve interior noise levels of no more than 45 LDN (Average Day-Night Levels). If the adopted Building Code imposes a more restrictive standard for interior noise levels, the report shall certify compliance with this standard.

Standard COA: Construction Phases

The applicant shall provide the Zoning Officer with a schedule of major construction phases with start dates and expected duration, a description of the activities and anticipated noise levels of each phase, and the name(s) and phone number(s) of the individual(s) directly supervising each phase. The Zoning Officer or his/her designee shall have the authority to require an on-site meeting with these individuals as necessary to ensure compliance with these conditions. The applicant shall notify the Zoning Officer of any changes to this schedule as soon as possible.

Standard COA: Project Construction Website

The applicant shall establish a project construction website with the following information clearly accessible and updated monthly or more frequently as changes warrant:

- Contact information (i.e., "hotline" phone number, and email address) for the project construction manager.
- Calendar and schedule of daily/weekly/monthly construction activities.
- The final COA, Mitigation Monitoring and Reporting Program, TCP, Construction Noise Reduction Program, and any other reports or programs related to construction noise, air quality, and traffic.

Adherence to the above COAs would ensure that construction noise would be reduced to the extent feasible, as required by BMC Section 13.40.070. In addition, construction activities associated with the project would be temporary and consistent with typical construction projects in an urban area such as the project site; no unusually loud demolition or construction equipment, such as pile drivers, would be used. Therefore, the project would have a less-than-significant impact from temporary construction noise.

LESS-THAN-SIGNIFICANT IMPACT

Operation

The project would have operational noise associated with truck-loading-bay operations, such as truck movements, idling, and loading/unloading. Reference noise levels from a survey of truck-loading-dock operational noise were used to evaluate the impact. The sampling accounted for the major noise sources associated with one truck, such as airbrake discharge, king-pin coupling, back-up warning "beep" tone, and drive-off.

Truck-loading activity associated with the project was modeled assuming one additional truck loading dock operating simultaneously with the existing two loading docks that are on the west side of the proposed building located closest to the nearby sensitive receivers. Project loading would occur during the hours of 6:00 a.m. to 10:00 p.m. Noise levels from one truck at the loading dock area is approximately 40 dBA L_{50} at 50 feet and for three trucks operating simultaneously would be approximately 45 dBA L_{50} at 50 feet (Placeworks 2012). The closest sensitive receivers are single family residences located approximately 75 feet west from the nearest proposed loading dock. With the assumption of three trucks operating simultaneously, loading dock noise levels are expected to be up to 41 dBA L_{50} at the nearest residences to the west, which would be below the City's nighttime noise level standard of 55 dBA L_{50} for R-3 and above during the hours of 10:00 p.m. to 7:00 a.m.

Noise levels from HVAC equipment would be comparable to noise levels of HVAC equipment associated with the existing urban environment. Specifications for the future HVAC systems are not available at this stage of project design; however, based on manufacturer's specifications, a Carrier 38HDR060 split-system with a sound power level of 72 dBA would generate a noise level of approximately 37 dBA at a distance of 75 feet, the approximate distance to the closest residential uses to a possible HVAC location on the southern edge of the project site, accounting for the rear setback. This would be below the City noise level standard for stationary equipment of 60 dBA during the day and 55 dBA at night.

In order to create a distinctly perceptible increase in noise (3 dBA) traffic would need to be doubled, which requires an increase in existing traffic beyond 40 percent. The project would not generate the number of trips it would take to double traffic on Tenth Street or San Pablo Avenue. The project would not result in a distinctly perceptible increase in traffic noise. Traffic noise would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

The proposed project would not include the addition of new substantial vibration sources associated with operation, such as railroads or subways. Therefore, construction activities have the greatest potential to generate ground-borne vibration affecting nearby receivers. Project construction would intermittently generate vibration on and adjacent to the project site. Vibration-generating equipment may include bulldozers and loaded trucks to move materials and debris, and vibratory rollers for paving. It is assumed that pile drivers, which generate strong ground borne vibration, would not be used during construction. Vibration-generating equipment on the project site would be used as close as approximately 5 feet from the nearest sensitive receivers to the south..

Unlike construction noise, vibration levels are not averaged over time to determine their impact. The most important factors are the maximum vibration level and the frequency of vibratory activity. Therefore, it is appropriate to estimate vibration levels at the nearest distance to sensitive receptors that equipment could be used, even though this equipment would typically be located farther from receptors. This analysis assumes that vibration-generating equipment could be located as close as 60 feet from the residential sensitive receptors to the west, 15 feet from the wood-frame Manzanita Wellness Center to the north, and immediately adjacent to commercial uses to the north, south, and east from construction at the project site. Table 13 estimates vibration levels from equipment at these distances.

Table 13 Construction Equipment Vibration Levels

Equipment	Approximate Vibration Level (in/sec PPV)			
	Reference Level 25 Feet from Source	Single-Family Residential	Manzanita Wellness Center	Commercial
Distance (feet)	**25**	**60**	**15**	**<10**
Large Bulldozer	0.089	0.024	0.191	0.352
Loaded Truck	0.076	0.020	0.164	0.300
Small Bulldozer	0.003	0.001	0.006	0.012

Equipment	Approximate Vibration Level (in/sec PPV)			
	Reference Level 25 Feet from Source	Single-Family Residential	Manzanita Wellness Center	Commercial
Distance (feet)	**25**	**70**	**200**	**150**
Vibratory Roller	0.210	0.045	0.014	0.009
FTA Threshold		0.2[1]	0.2	0.3[2]
Threshold Exceeded?		No	No	Yes

Notes: [1] Federal Transit Administration (FTA) threshold 0.2 PPV in/sec for Nonengineered timber and masonry buildings.

[2] Federal Transit Administration threshold 0.3 PPV in/sec for Engineered concrete and masonry (no plaster)

Source: Federal Transit Administration 2018.

As shown in Table 13, Construction activity could generate vibration levels exceeding the vibration threshold of 0.3 in/sec PPV if large bulldozers or other large earthmoving equipment are used within 12 feet of the commercial buildings to the north, south, and east. Vibration levels during construction would not exceed the significance thresholds of 0.2 in/sec PPV for residences to the west and other wood-frame structures to the north such as the Manzanita Wellness Center. Mitigation Measure NOI-1 would be required to reduce vibration impacts to the adjacent commercial buildings to a less-than-significant level.

Mitigation Measure

NOI-1 Construction Vibration Reduction Measures

Prior to any project-related excavation, demolition or construction activity, the project applicant shall prepare a construction vibration reduction plan. The plan shall be submitted to and approved by the Building and Safety Division and the Zoning Officer prior to construction activities. The plan shall include the following measure at a minimum:

- Grading and earthwork activities within 12 feet of adjacent commercial structures shall be conducted with off-road equipment that is limited to 100 horsepower or less.

With implementation of Mitigation Measure NOI-1, construction vibration impacts would be reduced to a less than significant level.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

As discussed in Section 8, *Hazards and Hazardous Materials*, the nearest airport to the project site is the Oakland International Airport, located approximately 9 miles south of the site. The project site is located entirely outside the noise contours associated with the airport (County of Alameda 2010). The proposed project would not subject people at the site to excessive noise and there would be no impact.

NO IMPACT

14 Population and Housing

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	☐	☐	■	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	■	☐

Setting

According to the most recent (2023) estimates from the California Department of Finance (DOF), the current population of Berkeley is approximately 123,562. In addition, the city has approximately 53,734 housing units and the average persons per household is approximately 2.13 (DOF 2023).

Regulatory Setting

Regional Housing Needs Assessment (RHNA)

ABAG prepares the RHNA mandated by State law so that local jurisdictions can use this information during their periodic updates of the General Plan Housing Element. The RHNA identifies the housing needs for very low income, low income, moderate income, and above moderate-income groups, and allocates these targets among the local jurisdictions that comprise ABAG. The RHNA addresses existing and future housing needs based on the most recent U.S. Census, data on forecasted household growth, historical growth patterns, job creation, household formation rates, and other factors. The need for new housing is distributed among the four income groups so that each community moves closer to the regional average income distribution, referred to as a "social equity adjustment." The most recent RHNA allocation, the 6th Cycle Final RHNA Plan, was adopted by ABAG's Executive Board on December 16, 2021. The City of Berkeley was assigned a RHNA of 8,934 units for the 2023 to 2031 planning period. Local jurisdictions are required by State law to update their General Plan Housing Elements based on the most recently adopted RHNA allocation.

City of Berkeley Housing Element 2023-2031

The 2023-2031 Housing Element amends the City's General Plan as needed for consistency and HEU implementation to meet the RHNA. On February 28, 2023, the California Department of Housing and Community Development (HCD) found the City of Berkeley's revised Adopted 2023-2031 Housing Element (version 7) to be in substantial compliance with State Housing Element Law (Article

10.6 of the Gov. Code). Planned growth under the 2023-2031 Housing Element accounts for 17,438 new residents by 2040[4] and 8,934 new residential units by 2031 (City of Berkeley, 2023).

Impact Analysis

a. Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

The proposed project would involve the construction of one new residential unit. This analysis assumes that the unit would be occupied by 2.13 people, the average household size in the City according to the DOF, and that the project would therefore accommodate approximately 3 new residents. This increase would not result in an increase in population outside of the planned growth under the 2023-2031 Housing Element, which is 17,438 residents (City of Berkeley, 2023). Furthermore, it is reasonable to assume that residents of the project would be relocating locally or from elsewhere within the ABAG region. Additionally, while the project would require construction workers on site, this would be temporary, and it is likely that these individuals would be employed primarily from the local workforce and the project would not require new workers to move to the area permanently. No new roads or infrastructure are proposed under the project. While the proposed project includes new commercial and light industrial space, employees would likely be primarily from the local workforce and not necessitate relocation. The project would not induce substantial population growth outside of growth anticipated by the City under the 2023-2031 Housing Element. Impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

The project site currently contains a one-story commercial building at 2821 Tenth Street, a one-story commercial building at 2817 Tenth Street, and a vacant lot at 2820 San Pablo Avenue. There are no existing housing units on the project site or people residing on the project site in temporary housing. Therefore, the project would not displace existing housing units or people.

LESS-THAN-SIGNIFICANT IMPACT

[4] ABAG projections estimate a population of 141,000 by 2040. The 17,438 new residents planned under Berkeley's Housing Element was calculated by subtracting Berkeley's 2023 population from ABAG's 2040 growth projections cited in Berkeley's Housing Element.

15 Public Services

		Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
a.	Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
	1 Fire protection?	☐	☐	■	☐
	2 Police protection?	☐	☐	■	☐
	3 Schools?	☐	☐	■	☐
	4 Parks?	☐	☐	■	☐
	5 Other public facilities?	☐	☐	■	☐

Setting

Fire Protection

The Berkeley Fire Department (BFD) provides fire protection and emergency medical services to the project site, as well as for the entire city. BFD provides fire suppression, paramedic ambulance service, search and rescue, fire prevention inspections/permits, public fire education programs, emergency preparedness planning and other services based on community needs. BFD also reviews development projects and building permit applications for compliance with CBC Requirements and other regulations intended to prevent or reduce fire hazards. The proposed project would be required to adhere to the Standard COAs set forth by the BFD, based on their review of the project plans. The fire station closest to the project site is at 2442 Eighth Street, Berkeley, California 94710, approximately 0.5 mile northwest of the project site.

Police Protection

The Berkeley Police Department (BPD) provides police protection services to the project site. The police station closest to the project site is at 2100 Martin Luther King Jr. Way, approximately 1.3 miles northeast of the project site.

Public Schools

The Berkeley Unified School District (BUSD) operates three preschools, 11 elementary schools (grades K-5), three middle schools (grades 6-8), one large comprehensive high school (grades 9-12), a continuation high school (grades 9-12), and an adult school (BUSD 2023). Enrollment for the 2022-2023 school year on census day was 9,073 students (Ed-Data.org 2023).

Regulatory Setting

Senate Bill 50

SB 50 was signed into law in 1998 imposing limitations on the power of cities and counties to require mitigation of school facilities' impacts as a condition of approving new development. It also authorizes school districts to levy statutory developer fees at a higher rate for residential development than previously allowed. Section 65995(h) declares that the payment of the development fees authorized by Education Code Section 17620 is "full and complete mitigation of the impacts of any legislative or adjudicative act . . . on the provision of adequate school facilities."

Berkeley Unified School District – School Facilities Fee

Pursuant to SB 50 (described above), the Berkeley Board of Education adopted a School Facility Fee for new housing and commercial development in order to help the Berkeley Unified School District (BUSD) meet the costs of expanding their facilities to accommodate increased enrollment caused by new development. These fees are directed towards maintaining adequate service levels, which would ensure that impact to schools that could result from development projects in the project sites would be offset by development fees and, in accordance with State law, reduce potential impacts to a less-than-significant level.

Berkeley Municipal Code

BMC Chapter 19.48 details Berkeley's adoption of an amended version of the California Fire Code.

Impact Analysis

a.1. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, or the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?

The project site is within the existing service area of the BFD. The project would not create excessive demand for emergency services or introduce development to areas outside of normal service range that would necessitate new fire protection facilities, as the existing commercial buildings on the project site are already served by BFD. As discussed above in *Population and Housing*, Berkeley currently has a population of 123,562 residents (DOF 2023). The 2023-2031 Housing Element Update for the City projects that the population will grow by approximately 47,443 residents compared to the existing population by 2031. While the project would increase the population served by BFD by approximately three residents, and new commercial and light industrial space would facilitate new employees, new tenants and employees would likely be at least partially from the local workforce, which is already served by the BFD. Additionally, there are already employees utilizing the existing buildings on the project site. The net increase from the proposed project would

not exceed the planned 2023-2031 Housing Element population predictions upon which fire facilities are planned.

On-site construction of the proposed project would be required to comply with applicable California Fire Code requirements, adopted by reference in BMC Chapter 19.48, including the requirement to include sprinkler systems, fire alarm systems, and carbon monoxide detection systems in new building construction. The proposed project would also be required to adhere to the requirements set forth by the BFD based on its review of the project plans. With the continued implementation of existing practices, including compliance with the California Fire Code, the proposed project would not significantly affect community fire protection services and would not result in the need for construction of fire protection facilities. Impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

a.2. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered police protection facilities, or the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?

The project would increase BPD's service population by approximately three new residents, but would not create excessive demand for police services, or introduce development to areas outside of normal service range that would necessitate new police protection facilities, considering that the existing commercial buildings are already served by the BFD, and the added population would not exceed the planned 2030 General Plan population predictions upon which police facilities are planned. While the project would increase the population served by BFD by approximately three residents, and new commercial and light industrial space would facilitate new employees, new tenants and employees would likely be from the local workforce and there are already employees utilizing the existing buildings on the project site. The net increase from the proposed project would not create the need for new or expanded police protection facilities and impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

a.3. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered schools, or the need for new or physically altered schools, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?

The BUSD has not established student generation rates to estimate the number of students anticipated with new development. Additionally, pursuant to SB 50 (Section 65995(h)), payment of mandatory fees to the affected school district would reduce potential school impacts to less than significant level under CEQA. If approved, this project would be subject to the BUSD School Impact Fees, which are assessed based on proposed land use and floor area. Therefore, the project would not have a significant impact with respect to schools.

LESS-THAN-SIGNIFICANT IMPACT

a.4. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered parks, public facilities, or the need for new or physically altered parks, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives?

Refer to Section 16, *Recreation*.

LESS-THAN-SIGNIFICANT IMPACT

a.5. Would the project result in substantial adverse physical impacts associated with the provision of other new or physically altered public facilities, or the need for new or physically altered public facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives?

The proposed project would conservatively add three residents that would use the library and other public facilities, but it is likely that some residents already reside within the city or surrounding region. As discussed in Section 9, *Hydrology and Water Quality*, impacts related to stormwater facilities would be less than significant. As discussed in Section 18, *Utilities and Service Systems*, impacts related to water and wastewater water facilities would be less than significant. Construction of new library facilities would not be required. Impacts would be less than significant. No significant impacts to other public services are anticipated.

LESS-THAN-SIGNIFICANT IMPACT

16 Recreation

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	■	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	■	☐

Setting

According to the General Plan, there are 230 acres of parkland within city limits, which is a ratio of approximately 2 park acres per 1,000 residents. In addition to the public open space managed by the City's Parks Divisions, the city contains parts of the Bay Trail and the 1,854-acre McLaughlin Eastshore State Park, and residents are adjacent to the East Bay Regional Park District's 2,079-acre Tilden Regional Park and 208-acre Claremont Canyon Regional Preserve. Including these additional parklands, Berkeley's park acres-to-persons ratio increases to approximately 12 acres per 1,000 residents (City of Berkeley 2001d).

The 13-acre San Pablo Park is within walking distance, located approximately 0.3 miles east of the project site. Other nearby parks and recreational facilities include the Golden Gate Recreation Center, located approximately 0.8 miles southeast of the project site, and the McLaughlin Eastshore State Seashore located approximately 1 mile northwest of the project site. The Aquatic Park Path and San Francisco Bay Trail are located approximately 0.4 and 0.6 miles west of the project site, respectively.

There are several hiking trails in the regional parks east of Berkeley, and the University of California, Berkeley is located approximately 2.5 miles northeast of the project site. In addition to the local parks serving the site, several recreational facilities within the University campus may also serve as parks and recreational uses for residents.

Regulatory Setting

Berkeley Municipal Code

BMC Chapter 6.42.020 requires that wherever public parks and open space currently exist in Berkeley, such use shall continue and be funded at least to allow the maintenance of the present condition and services.

Impact Analysis

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

The proposed project would not involve the development of new recreational facilities; as described in the *Project Description*, the proposed project would include 7,041 square feet of usable open space. The proposed 2820 San Pablo Avenue building would include a 478-square-foot deck with 36 square feet of landscaped area on the fourth floor for use by the residential tenant. The proposed 2821 Tenth Street building would include a 5,428-square-foot mezzanine-level roof deck above the second floor, and a 1,135-square-foot deck on the second floor for use by commercial and office tenants. As described in Section 13, *Population and Housing*, the proposed project would increase city population by approximately three residents compared to existing conditions, which would increase demand for parks and recreational facilities, but it is likely that residents already reside within the city or surrounding region.

The Open Space and Recreation Element of the Berkeley General Plan cites a goal in the City's 1977 Master Plan of providing 2 acres of parkland per 1,000 people (City of Berkeley 2001d). As described in the *Recreation Setting* section above, the General Plan found that the city includes approximately 12 acres per 1,000 residents, including local, regional, and state parks, which substantially exceeds the City's goal. The project's estimated three new residents and some new employees would likely already reside within the city or surrounding region and would not substantially reduce the ratio of parkland per 1,000 residents. The proposed project would therefore not require the construction or expansion of park or recreational facilities which may have an adverse physical effect on the environment. Furthermore, as described above in *Regulatory Setting*, BMC Chapter 6.42.020 requires that existing public parks and open space be funded to allow the maintenance of the present condition and services. Impacts related to parks and recreational spaces would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

17 Transportation

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	■	☐
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	■	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?	☐	☐	■	☐
d. Result in inadequate emergency access?	☐	☐	■	☐

Transportation Report

A trip generation analysis, VMT analysis, and on-street parking surveys were conducted for the project site in a report by Abrams and Associates in July 2022 (Appendix D).

Setting

Regional access to Berkeley is provided through several freeways and state highways, including Interstate 80/580 (I-80/580), SR 24, SR 13 (Ashby Avenue), and SR 123 (San Pablo Avenue).

There are a number of major streets providing vehicle access around the city, such as San Pablo Avenue, Ashby Avenue, Adeline Street, Shattuck Avenue, Martin Luther King Jr. Way, Dwight Way, Sacramento Street, and University Avenue. One of the two buildings included in the proposed project is located on San Pablo Avenue.

Berkeley is also served by public transportation primarily through AC transit and BART. The closest BART station to the project site is the Ashby BART Station which is approximately 1 mile east of the project site.

Pedestrian facilities include crosswalks, sidewalks, pedestrian signals, and off-street paths, which provide safe and convenient routes for pedestrians to access destinations such as institutions, businesses, public transportation, and recreation facilities. A continuous sidewalk network is provided in Berkeley connecting to nearby residential, commercial, and retail facilities. Crosswalks and pedestrian signals are provided at major intersections.

Based on the City of Berkeley Bicycle Plan (City of Berkeley 2017b), bicycle facilities are classified into several types, including:

- Class 1 Multi-Use Paths – provide a completely separated, exclusive right-of-way for bicycling, walking, and other non-motorized uses.
- Class 2 Bicycle Lanes – are striped, preferential lanes for one-way bicycle travel on roadways. Some Class 2 bicycle lanes include striped buffers that add a few feet of separation between the bicycle lane and traffic lane or parking aisle.
- Class 3 Bicycle Routes – are signed bicycle routes where riders share a travel lane with motorists. Bicycle boulevards (Class 3E) are a special type of Class 3 bicycle route where the shared travel way has low motor vehicle volumes and low speed that prioritize convenient and safe bicycle travel through traffic calming strategies, wayfinding signage, and traffic control adjustments.
- Class 4 Cycletrack – is an on-street bicycle lane that is physically separated from motor vehicle traffic by a vertical element or barrier, such as a curb, bollards, or parking aisle.

According to the City of Berkeley Bicycle Plan, Berkeley has the fourth highest bicycle commute mode share (8.5 percent) of any city in the United States. In total, there are an estimated 51 miles of bikeways throughout Berkeley (City of Berkeley 2017b). The City of Berkeley Bicycle Boulevard on Ninth Street is located one block away from the project site.

Regulatory Setting

Senate Bill 743 and Vehicle Miles Traveled

SB 743 was signed into law by Governor Brown in 2013 and tasked the State Office of Planning and Research (OPR) with establishing new criteria for determining the significance of transportation impacts under CEQA. SB 743 requires the new criteria to "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." It also states that alternative measures of transportation impacts may include "vehicle miles traveled, VMT per capita, automobile trip generation rates, or automobile trips generated."

On September 27, 2013, California Governor Jerry Brown signed SB 743 into law and started a process that changes transportation impact analysis as part of CEQA compliance. SB 743 requires the Governor's OPR to identify new metrics for identifying and mitigating transportation impacts within CEQA. In January 2018, OPR transmitted its proposed *CEQA Guidelines* implementing SB 743 to the California Natural Resources Agency for adoption, and in January 2019 the Natural Resources Agency finalized updates to the *CEQA Guidelines*, which incorporated SB 743 modifications, and are now in effect. SB 743 changed the way that public agencies evaluate the transportation impacts of projects under CEQA, recognizing that roadway congestion, while an inconvenience to drivers, is not itself an environmental impact (Public Resource Code Section 21099 (b)(2)). In addition to new exemptions for projects consistent with specific plans, the *CEQA Guidelines* replaced congestion-based metrics, such as auto delay and level of service, with VMT as the basis for determining significant impacts, unless the *CEQA Guidelines* provide specific exceptions.

OPR recommends that residential development that would generate vehicle travel that is 15 or more percent below the existing residential VMT per capita, measured against the region or city, may indicate a less-than-significant transportation impact (OPR 2018).

City of Berkeley Screening Criteria

CEQA Guidelines Section 15064.3(b) indicates that land use projects would have a significant impact if the project resulted in VMT exceeding an applicable threshold of significance. In June 2020, the

City of Berkeley developed VMT Criteria and Thresholds for VMT analysis, according to the guidance from OPR:

- A residential project's VMT impact is considered less than significant if its household VMT per capita is at least 15 percent below the regional average Household VMT per capita.
- An employment-generating project's VMT impact is considered less than significant if its home-work VMT per worker is at least 15 percent below the regional average home-work VMT per worker.

In addition, the City of Berkeley has developed screening criteria to provide project applicants with a conservative indication of whether a project could result in potentially significant VMT impacts. If the screening criteria are met by a project, the applicant would not need to perform a detailed VMT assessment for their project. The City's screening criteria include the following:

- Projects within TPAs that meet characteristics outlined below under Impact b
- Low-income housing projects
- Small Projects: Projects defined as generating 836 daily VMT or less
- Locally Serving Public Facility: Projects that generally encompass government, civic, cultural, health, and infrastructure uses, which contribute to and support community needs and mostly generate trips within the local area
- Projects in Low VMT Areas: Projects that are located in low-VMT areas and that have characteristics similar to other uses already located in those areas can be presumed to generate VMT at similar rates. The low-VMT areas in Berkeley are defined based on the results of the Alameda CTC model, and maps of these areas are attached to this report.
- Residential projects will be screened out if located in an area that has household VMT per capita that is 15 percent lower than the baseline regional average.
- Office and industrial projects will be screened out if located in an area that has homework VMT per worker that is 15 percent lower than the baseline regional average.

As described in Section 1, *Aesthetics,* Section 6, *Energy,* and Section 7, *Greenhouse Gas Emissions*, the project site is in a TPA.

Impact Analysis

e. *Would the project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

Roadway Facilities

The proposed project includes 23 on-site automobile parking spaces, and 14 bicycle parking spaces. The project includes commercial, light manufacturing, and residential space. The project site is within 0.5 miles of transit, groceries, parks, schools, services, and employment opportunities; therefore, the project would not generate a significant number of vehicle trips that would affect operations of roadways or intersections near the project site.

Pedestrian and Bicycle Facilities

The project would introduce one residential unit, 17,488 square feet of light manufacturing, and 20,548 square feet of commercial space to the project site. The City of Berkeley Bicycle Boulevard

on Ninth Street is located one block away from the project site, and the site is served by sidewalks. While the project may increase pedestrian and bicycle activity near the project site, the existing building is already used for commercial uses, and many of the new residential tenants and employees would likely already reside within the city or surrounding region. Therefore, it is not anticipated that the project would add a significant amount of pedestrian or bicycle traffic to the area such that effects on pedestrian or bicycle facilities would be substantially adverse. Impacts would be less than significant.

Transit Facilities

Nearby public transportation includes AC Transit bus stops within 0.5 miles of the project site along San Pablo Avenue (lines 72, 72M, 802), Ashby Avenue (line J), and Seventh Street (line 36), and the Ashby BART station located approximately 1 mile east. The proposed project would not interfere with existing bus routes and would not remove or relocate existing bus stops. The project would include 23 automobile parking spaces and 14 bicycle parking spaces, and would not include features that would conflict with transit plans or goals of the City of Berkeley. Based on its size, the project is not anticipated to generate a significant number of transit trips such that service or overall capacity would be adversely affected. Impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

b. Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

The City of Berkeley Bicycle Boulevard on Ninth Street is located one block away from the project site. Nearby public transportation includes AC Transit bus stops along San Pablo Avenue (lines 72, 72M, 802), Ashby Avenue (line J), and Seventh Street (line 36), and the Ashby BART station located approximately one mile east. The proposed project would not include changes to the roadways and sidewalks that serve the project site. Additionally, the project would be required to comply with the City of Berkeley Bicycle Plan, General Plan policies as described above, and the City's Emergency Operation Plan (EOP). As discussed in the *Setting* section above, the City has developed screening criteria to determine whether a project could result in potentially significant VMT impacts. If the screening criteria are met by a project, the applicant would not need to perform a detailed VMT assessment for their project. The proposed project meets the first screening criteria because it is within a TPA, as discussed in Section 1, *Aesthetics* and Section 6, *Energy*.

According to the analysis by Abrams and Associates, the proposed project is located in an area with an average VMT per resident and worker that is at least 15 percent below the respective Bay Area averages (Appendix E). OPR's 2018 Technical Advisory also states the following: "Presumption of Less Than Significant Impact Near Transit Stations – Proposed *CEQA Guidelines* Section 15064.3, subdivision (b)(1), states that lead agencies generally should presume that certain projects (including residential, retail, and office projects, as well as projects that are a mix of these uses) proposed within 0.5 mile of an existing major transit stop or an existing stop along a high quality transit corridor will have a less-than-significant impact on VMT." However, the City of Berkeley VMT analysis guidelines specify that the presumption of a less-than-significant VMT impact might not be appropriate if the project:

- Has a FAR of less than 0.75;
- Includes more than 200,000 square feet of office or commercial space;
- Includes more parking supply than the project's estimated demand;

- Is inconsistent with the City's General Plan, an applicable Specific Plan, or an applicable Sustainable Communities Strategy (as determined by the City, with input from the MTC);
- Replaces affordable residential units with market-rate residential units; or
- Has project-specific or location-specific information that indicates that the project will generate significant levels of VMT.

The analysis included in Appendix E concluded that none of the above factors would apply to the proposed project, and the project would have a less-than-significant impact on VMT.

LESS-THAN-SIGNIFICANT IMPACT

c. *Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible use (e.g., farm equipment)?*

Tenants of 2821 Tenth Street would access the building via the lobby on Tenth Street, and tenants and residents of 2820 San Pablo Avenue would access the building lobby via San Pablo Avenue through the exterior entrance court on the southern side of the building. Automobile parking would be available in a garage on the ground floor and would be accessed by vehicles from a driveway on Tenth Street. The project proposes a six-foot set back from the property line to provide an adequate sight triangle, and low, at-grade planting strips to discourage pedestrians from walking in areas that could have limited views of existing vehicles. The project would not include sharp curves or dangerous intersections. The sidewalks around the property would serve pedestrians. The City's Traffic Engineering department has reviewed and approved the proposed vehicular access plans (Davis 2024). Impacts related to hazards from geometric design feature or incompatible use would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

f. *Would the project result in inadequate emergency access?*

The project would maintain adequate emergency access, as it has frontage on both San Pablo Avenue and Tenth Street and would not include features that would impede access to or around the property. Emergency vehicles would access the project site directly from Tenth Street and San Pablo Avenue. Adherence to existing state and federal regulations and City of Berkeley requirements would further ensure adequate access. During construction, the project would be required to comply with the City's Standard COA, TCP, as detailed below:

Standard COA: Transportation Construction Plan

The applicant and all persons associated with the project are hereby notified that a TCP is required for all phases of construction, particularly for the following activities:

- Alterations, closures, or blockages to sidewalks, pedestrian paths, or vehicle travel lanes (including bicycle lanes)
- Storage of building materials, dumpsters, debris anywhere in the public ROW
- Provision of exclusive contractor parking on-street
- Significant truck activity

The applicant shall secure the City Traffic Engineer's approval of a TCP. Please contact the Office of Transportation at 981-7010, or 1947 Center Street, and ask to speak to a traffic engineer. In

addition to other requirements of the Traffic Engineer, this plan shall include the locations of material and equipment storage, trailers, worker parking, a schedule of site operations that may block traffic, and provisions for traffic control. The TCP shall be consistent with any other requirements of the construction phase.

Contact the Permit Service Center at 1947 Center Street or 981-7500 for details on obtaining Construction/No Parking Permits (and associated signs and accompanying dashboard permits). Please note that the Zoning Officer and/or Traffic Engineer may limit off-site parking of construction-related vehicles if necessary to protect the health, safety or convenience of the surrounding neighborhood. A current copy of this Plan shall be available at all times at the construction site for review by City staff.

The proposed project would be required to adhere to the aforementioned Standard COA and current and future requirements by the City of Berkeley's EOP once operational. Accordingly, impacts related to interference with an adopted emergency response plan or emergency evacuation plan during operations would be less than significant.

With compliance with the City's Standard COA and state and federal regulations, impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

18 Tribal Cultural Resources

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in a Public Resources Code Section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	☐	■	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	■	☐	☐

Setting

The proposed project lies in the San Francisco Bay Area archaeological region (Milliken et al. 2007, Moratto 1984). There are twelve Native American contacts provided by the NAHC for the tribes that are determined to be traditionally and culturally affiliated with the geographic location of the project site. These tribes include the Amah Mutsun Tribal Band of Mission San Juan Bautista, The Confederated Villages of Lisjan, Costanoan Rumsen Carmel Tribe, Guidiville Indian Rancheria, Indian Canyon Mutsun Band of Costanoan, Muwekma Ohlone Indian Tribe of the SF Bay Area, North Valley Yokuts Tribe, The Ohlone Indian Tribe, Wuksache Indian Tribe/Eshom Valley Band, and Wilton Rancheria.

Regulatory Setting

As of July 1, 2015, California AB 52 was enacted and expands CEQA by defining a new resource category, "tribal cultural resources." AB 52 establishes that "A project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment" (PRC Section 21084.2). It further states that the lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a tribal cultural resource, when feasible (PRC Section 21084.3).

PRC Section 21074 (a)(1)(A) and (B) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" and is:

1. Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying these criteria, the lead agency shall consider the significance of the resource to a California Native American tribe.

AB 52 also establishes a formal consultation process for California Tribes regarding those resources. The consultation process must be completed before a CEQA document can be certified. Under AB 52, lead agencies are required to "begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project." Native American tribes to be included in the process are those that have requested notice of projects proposed within the jurisdiction of the lead agency.

Impact Analysis

a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074 that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

b. Would the project cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074 that is a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1?

Pursuant to AB 52, the City mailed letters to 12 contacts that are traditionally and culturally affiliated with the geographic area of the project site on February 10, 2023. Under AB 52, Tribes have 30 days to respond and request consultation. The 30-day window for requesting consultation on the project elapsed in mid-March. The Confederated Villages of Lisjan requested information via email on February 15, 2023, and the City of Berkeley responded via email on March 7, 2023. The Indian Canyon Band of Costanoan Ohlone People responded via email on February 21, 2023, and a meeting was conducted on March 28, 2023. No further correspondence has been received.

The City requested a Sacred Lands File search from the NAHC. A response from the NAHC dated February 20, 2023, stated the results were positive, indicating a recorded Sacred Land is present in the vicinity of the project site.

During consultation on March 28, 2023, the Indian Canyon Band of Costanoan Ohlone People identified the site as sensitive and requested a copy of the *Tribal Cultural Resources* section of the Initial Study once available. The Indian Canyon Band of Costanoan Ohlone People also requested that landscape plans include native plants, a mitigation measure requiring cultural sensitivity training, and conditions of approval requiring that work is halted if a resource is found. Mitigation Measure TCR-1 would require cultural sensitivity training for all construction personnel, as requested by the Indian Canyon Band of Costanoan Ohlone People. Should project construction activities encounter and damage or destroy a tribal cultural resource or resources, impacts would be potentially significant. Mitigation Measure TCR-2 would ensure that potential tribal cultural resources are preserved in the event they are uncovered during construction and would reduce impacts regarding disturbing tribal cultural resources to a less-than-significant level. The project is also subject to the City's Standard COA, presented below.

TCR-1 Cultural Resources Sensitivity Training

A qualified archaeologist shall be retained to conduct a Cultural Resources Sensitivity Training for archaeological sensitivity for all construction personnel prior to the commencement of any ground-disturbing activities. Archaeological sensitivity training shall include a description of the types of cultural material that may be encountered, cultural sensitivity issues, regulatory issues, the proper protocol for treatment of the materials in the event of a find, and an outline of the penalties for the willful and intentional damage of cultural resources.

TCR-2 Native American Monitoring

Prior to project initiation, a Native American monitor from a locally affiliated tribal member(s) shall be retained. Native American monitor(s) will have the authority to halt and redirect work should any archaeological or tribal cultural resources be identified during monitoring. If archaeological or tribal cultural resources are encountered during ground-disturbing activities, work within 50 feet of the find shall halt and the find evaluated for listing in the CRHR and NRHP. Native American monitoring may be reduced or halted at the discretion of the monitors, in consultation with the lead agency, as warranted by conditions such as encountering bedrock, sediments being excavated are fill, or negative findings during the first 50 percent of ground-disturbance. If monitoring is reduced to spot-checking, spot-checking shall occur when ground-disturbance moves to a new location within the project site and when ground disturbance will extend to depths not previously reached (unless those depths are within bedrock). Furthermore, monitoring may be terminated in the event that it is determined that the soils within the project site do not have the potential to contain cultural resources. The Native American monitors shall be required to keep daily monitoring logs and provide a summary of findings to the lead agency at the completion of monitoring.

Standard COA Halt Work/Unanticipated Discovery of Tribal Cultural Resources

In the event that cultural resources of Native American origin are identified during construction, all work within 50 feet of the discovery shall be redirected. The project applicant and project construction contractor shall notify the City Planning Department within 24 hours. The City will contact any tribes who have requested consultation under AB 52, as well as contact a qualified archaeologist, to evaluate the resources and situation and provide recommendations. If it is determined that the resource is a tribal cultural resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with state guidelines and in consultation with Native American groups. If the resource cannot be avoided, additional

measures to avoid or reduce impacts to the resource and to address tribal concerns may be required.

With implementation of Mitigation Measures TCR-1 and TCR-2 and the above Standard COA, impacts would be less than significant.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

19 Utilities and Service Systems

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the project:				
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	■	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple Dry years?	☐	☐	■	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	■	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	■	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	■	☐

Setting

Water Service

Water supply to the project site and surrounding area is provided by EBMUD. Approximately 90 percent of the water used by EBMUD comes from the Mokelumne River watershed, and EBMUD transports it through pipe aqueducts to temporary storage reservoirs in the East Bay hills. EBMUD has water rights that allow for delivery of up to a maximum of 325 million gallons per day (MGD) from this source, subject to the availability of runoff and to the senior water rights of other users, downstream fishery flow requirements, and other Mokelumne River water uses (EBMUD 2020). EBMUD is obligated to meet multiple operating objectives, including providing municipal water

supply benefits, stream flow regulation, fishery/public trust interests, flood control, temperature management and obligations to downstream diverters. Among these factors, EBMUD's Mokelumne River flow commitments are generally tied to the variability in the Mokelumne River watershed rainfall and runoff patterns which govern the release requirements for the year.

Northern California's water resources, including EBMUD's supplies, have been stressed by periodic drought cycles. Historical multi-year droughts have significantly diminished the supplies of water available to EBMUD's customers. During the early stages of a drought and throughout a drought period, EBMUD imposes drought management programs to reduce customer demands, thereby saving water for the following year in case drought conditions continue. EBMUD has established a goal of reducing water use by 20 percent district-wide.

EBMUD completed development of a revised Water Supply Management Program (WSMP) 2040 in April of 2012, which is the District's plan for providing water to its customers through 2040. According to the WSMP, EBMUD's water supplies are estimated to be sufficient during the planning period (2010-2040) in normal and single dry years. The WSMP 2040 emphasizes maximum conservation and recycling, with a total of 50 MGD of future supply to be provided from those two strategies. However, looking toward 2040, EBMUD's current supply is insufficient to meet customer needs during multi-year droughts despite EBMUD's aggressive water conservation and recycled water programs. Supplemental supply will also be needed to reduce the degree of rationing and to meet the need for water in drought years.

The Urban Water Management Planning Act of 1983 amended California Water Code to require all urban water suppliers in California to prepare and adopt an Urban Water Management Plan (UWMP) and update it every five years. This requirement applies to all suppliers providing water to more than 3,000 customers or supplying more than 3,000 acre-feet per year of water. EBMUD adopted its first UWMP in 1985 and has been updating the plan every five years since then, adjusting for current and projected water usage, water supply programs, and conservation and recycling programs. Water demand projections described in the UWMP account for anticipated future water demands within the EBMUD service territory and changes in land uses, including but not limited to, densification and associated increases in water usage. EBMUD's 2020 UWMP estimated the average daily water demand in its service area to be approximately 150 million gpd (EBMUD 2020).

Wastewater

EBMUD also provides wastewater treatment services to the project site and the rest of the City of Berkeley. EBMUD operates the large diameter interceptor sewer generally running along the shoreline of the San Francisco Bay, and the Main Wastewater Treatment Plant (MWWTP) in Oakland. Each property owner in the City is responsible for delivering their sewage to the City's wastewater collection system. The City's wastewater collection system includes the lower lateral and the sewer mainlines in the street or in easements on private property. The City has approximately 254 miles of sanitary sewer mains, seven sewage pump stations, and approximately 31,600 service laterals (City of Berkeley 2019). The City operates and maintains its sewage collection system in accordance with the NPDES Permit No. CA0038466 issued by the San Francisco Bay RWQCB that expires on March 31, 2025.

Wastewater from the project site enters the City's wastewater collection system which is then conveyed to EBMUD's WWTP. The WWTP provides primary treatment for up to 320 MGD and secondary treatment for up to 168 MGD, and storage basins provide plant capacity for a short-term

hydraulic peak of 415 MGD. On average, about 63 million gallons of wastewater is treated every day at the WWTP (EBMUD n.d.).

Solid Waste, Recycling, and Compost

Berkeley is one of the few cities in Northern California to operate its own Transfer Station and provide curbside refuse, dual stream recycling, and compost collection. The City also supports a material recovery/drop-off and buy back facility operated by Community Conservation Centers. The City and its contracted hauler provide curbside dual-stream recycling, compost, and refuse collection services. Refuse, compost, and recyclable materials collected by the City, and its contracted companies are transported to the Berkeley Zero Waste Transfer Station and/or the Recycling Center, located at 1201 Second Street and 669 Gilman Street, respectively, for sorting or transfer. The Berkeley Transfer Station currently has a permitted capacity of 560 tons per day (Riemer 2024). One permitted landfill in Alameda County has the capacity to accommodate solid waste generated in Berkeley, the Altamont Landfill. The remaining capacity for solid waste at this landfill is approximately 65.4 million cubic yards (City of Berkeley 2016). Currently, the City sends all solid waste for disposal to the Altamont Landfill, which is located near the Altamont Pass, northeast of the City of Livermore. Recyclables are sorted and baled at Community Conservation Centers (Berkeley Recycling), and compostable/organic materials are currently processed at Recology Blossom Valley Organics in Vernalis, California.

Regulatory Setting

California Public Utilities Commission

The California Public Utilities Commission (CPUC) regulates privately owned telecommunication, electric, natural gas, water, railroad, rail transit, and passenger transportation companies. General Order 121-d gives the CPUC permitting authority over construction of new and expanded power plants, electric transmission lines, and substations. Pursuant to CEQA, an environmental analysis must be conducted before issuance of construction permits by CPUC. CPUC Decision 95-08-038 contains the rules for the planning and construction of new transmission facilities, distribution facilities, and substations.

Urban Water Management Planning Act

In 1983, the California Legislature enacted the Urban Water Management Planning Act (Water Code Section 10610–10656). The Act states that every urban water supplier that provides water to 3,000 or more customers, or that provides over 3,000 acre-feet annually, should make every effort to ensure the appropriate level of reliability in its water service to meet the needs of its various categories of customers during normal, dry, and multiple dry years. The Act requires that urban water suppliers adopt an UWMP at least once every 5 years and submit it to the DWR. Noncompliant urban water suppliers are ineligible to receive funding pursuant to Division 24 or Division 26 of the California Water Code, or receive drought assistance from the state, until the UWMP is submitted and deemed complete pursuant to the Urban Water Management Planning Act.

Assembly Bill 939 and Senate Bill 1016

The California Integrated Waste Management Act of 1989, or AB 939, established the Integrated Waste Management Board, required the implementation of integrated waste management plans, and mandated that local jurisdictions divert at least 50 percent of all solid waste generated (from

1990 levels), beginning January 1, 2000, and divert at least 75 percent by 2010. In 2006, SB 1016 updated the requirements. The new per capita disposal and goal measurement system moves the emphasis from an estimated diversion measurement number to using an actual disposal measurement number as a factor, along with evaluating program implementation efforts. These two factors will help determine each jurisdiction's progress toward achieving its AB 939 diversion goals. The 50 percent diversion requirement is measured now in terms of per-capita disposal expressed as pounds per person per day.

Impact Analysis

a. *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

b. *Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

c. *Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

Water

The project site would be serviced by EBMUD, as discussed above. The existing buildings on the project site are currently served by existing water infrastructure and would therefore not require relocation or construction of expanded water facilities.

Table 14 illustrates the project's estimated net water demand increase compared to existing conditions. The proposed project would increase water demand by approximately 0.0064 MGD as shown in Table 14.

Table 14 Estimated Water Demand

Land Use	Size	Total (gpy)	Total (MGD)
Residential (Low-Rise Apartment)	2,834 sf	35,511	0.0001
Commercial	20,560 sf	3,654,206	0.0100
Manufacturing	-5,830[1] sf	-1,343,188	-0.0037

[1] The proposed project would reduce the total light manufacturing area compared to the existing buildings on the project site.
Notes:
sf = square feet; gpy = gallons per year; MGD = million gallons per day
Numbers in table are rounded.
Source: Appendix B

EBMUD's 2020 UWMP projected that the City would be able to meet current and future water needs during normal years, single dry, and second dry years through 2050 but would experience supply shortfalls in third dry years under base conditions starting in 2040. In high demand scenarios, the City would experience supply shortfalls in third dry years as early as 2030, and in extreme drought scenarios as early as 2035. These shortfalls would remain even with mandatory 15 percent rationing (EBMUD 2020). As indicated by the City's Water Supply Management Program,

supplemental supply will also be needed to reduce the degree of rationing and to meet the need for water in drought years.

The proposed project would have an estimated net water demand of 0.0064 MGD which would be approximately 0.002 percent of projected water demand and projected water supply for 2030 according to the EBMUD's UWMP. As the project would make up a small amount of future water demand, the City would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years. Therefore, the additional project demand would not result in a significant impact to the City's ability to meet total system demand.

Wastewater

As discussed in the wastewater setting, wastewater from the project site enters the City's wastewater collection system which is then conveyed to EBMUD's WWTP. The WWTP provides primary treatment for up to 320 MGD and secondary treatment for up to 168 MGD, and storage basins provide plant capacity for a short-term hydraulic peak of 415 MGD. On average, about 63 million gallons of wastewater is treated every day at the WWTP (EBMUD n.d.).

The existing buildings on the project site are currently served by existing wastewater infrastructure and would therefore not require relocation or construction of expanded wastewater facilities. Table 15 illustrates the project's estimated net wastewater generation increase compared to existing conditions. The project's estimated net wastewater generation would be approximately 1,339 gallons per day or 0.0013 MGD as shown in Table 15.

Table 15 Estimated Wastewater Generation

Land Use	Size	Sewer Flow (gpd)	Total (MGD)
Residential (Low-Rise Apartment)	1 unit	160	0.0002
Commercial	20,560 sf	1,645	0.0016
Manufacturing	-5,830[1] sf	-466	-0.0005
Total			**0.0013**

[1] The proposed project would reduce the total light manufacturing area compared to the existing buildings on the project site.

Sewer Flow Factor Source: City of Los Angeles 2006

As shown in Table 15, the project would generate a net increase of approximately 0.0013 MGD of wastewater per day compared to existing conditions which is 0.002 percent of the current daily average. The project would not exceed the City's wastewater capacity, and no new wastewater treatment facilities would need to be built or expanded. Impacts would be less than significant.

Stormwater

The project would reduce the amount of impervious surface area on the project site (see Section 10, *Hydrology and Water Quality*). The drainage pattern on the project site would not be significantly changed. The project would not necessitate the construction or expansion of stormwater drainage infrastructure as proposed features and existing infrastructure would be sufficient.

Electricity and Natural Gas

The project would be all electric. Additionally, the project would be required to implement green building features as required by 2022 CBC Title 24 standards to conserve energy. The project site is

currently served by PG&E and new electrical infrastructure is anticipated to serve the project. A new in-ground transformer from Tenth Street is currently proposed.

Other Utilities

Telecommunication services in Berkeley are provided by private companies, including AT&T, Comcast Cable, and Sonic which provides internet, phone, and are available throughout the city. Connections for new telecommunications services are implemented on an as needed basis, and the service provider used is generally at the discretion of the customer. There are no anticipated limitations to the availability of telecommunications service. Therefore, impacts would be less than significant.

LESS-THAN-SIGNIFICANT IMPACT

d. Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

e. Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

The City's refuse is brought to the Altamont Landfill which has a total estimated remaining capacity of 65.4 million cubic yards and a remaining estimated capacity of approximately 16.2 million cubic yards. The landfill has a maximum disposal threshold of 11,150 tons of garbage per day (CalRecycle 2016).

The existing buildings on the project site are currently served by existing solid waste services and would therefore not require relocation or construction of expanded solid waste services. The project would produce approximately 0.033 net tons per day, or approximately 0.0003 percent of the Altamont Landfill's maximum daily disposal amount as shown below in Table 16. The Zero Waste transfer station facility is not allowed to take in more than 560 tons per day and typically accepts around 3-10 tons per day.

Table 16 Estimated Net Solid Waste Generation

Land Use	Size	Estimated Solid Waste Generated per Day (tons)	Landfill Daily Capacity (tons)
Residential (Low-Rise Apartment)	1 unit	0.002	11,150
Commercial	20,560 sf	0.05	11,150
Manufacturing	-5,830[1] sf	-0.02	11,150

[1] The proposed project would reduce the total light manufacturing area compared to the existing buildings on the project site.

Source: Appendix B

In accordance with California's Integrated Waste Management Act of 1989, cities and counties are required to divert 50 percent of all solid wastes from landfills. The City of Berkeley has achieved a diversion rate of 69 percent, which substantially exceeds this State requirement (City of Berkeley 2022). Assuming that this diversion rate continues to apply to new development on the project sites, implementation of the project would generate an additional .023 tons per day of solid waste for disposal at landfills.

Therefore, as the project would not generate an increase in waste which would lead to the exceedance of the Zero Waste transfer station or Altamont Landfill's daily capacity and would be

required to comply with relevant solid waste statutes and regulations, the project would have less-than-significant impacts.

LESS-THAN-SIGNIFICANT IMPACT

This page intentionally left blank.

20 Wildfire

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	■
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	■
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	■
d. Expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	■

Setting

The California Department of Fire and Forestry (CAL FIRE) maps significant fire hazard areas, known as Fire Hazard Severity Zones (FHSZ), to assist with wildfire preparedness and determine applicable risk reduction standards. The City of Berkeley is not located within a state responsibility area or lands classified as very high FHSZ (CAL FIRE 2023). There is not a standardized definition for what is considered "near." To determine whether a project is located near enough to one of these designations to potentially be affected, this analysis considers the site's wildfire conditions including vegetation, slope, elevation, and proximity to water sources and fire services. The project site is relatively flat and located within an urbanized area of the City and is surrounded by existing commercial and industrial development. The project site is served by existing water utility services and the BFD. The nearest Very High FHSZ is located approximately 3.9 miles east of the project site, outside of the City (CAL FIRE 2023). In this context, the project site is not considered to be near a Very High FHSZ.

CAL FIRE develops initial boundaries for VHFHSZs throughout California, but the final boundaries of a Very High FHSZ are adopted by each jurisdiction. Currently, the Berkeley Fire Department has divided the city into Fire Zones 1, 2, and 3, designated in order of ascending fire risk. The nearest Hillside Fire Zone designated by the City as Zone 2 is approximately 2.2 miles east of the project site, and the project site is located in an area designated as "outside of Hillside Fire Zone" (Berkeley 2021).

Regulatory Setting

California Fire and Building Codes (2019)

The California Fire Code is Chapter 9 of CCR Title 24. It establishes the minimum requirements consistent with nationally recognized good practices to safeguard public health, safety, and general welfare from the hazards of fire, explosion, or dangerous conditions in new and existing buildings, structure, and premises, and to provide safety and assistance to firefighters and emergency responders during emergency operations. The provisions of this Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure or any appurtenances connected or attached to such building structures throughout California. More specifically, the Fire Code is included in CCR Title 24. Title 24, part 9, Chapter 7 addresses fire resistances-rated construction; CBC (Part 2), Chapter 7A addresses materials and construction methods for exterior wildfire exposure; Fire Code Chapter 8 addresses fire related Interior finishes; Fire Code Chapter 9 addresses fire protection systems; and Fire Code Chapter 10 addresses fire related means of egress, including fire apparatus access road width requirements. Fire Code Section 4906 also contains existing regulations for vegetation and fuel management to maintain clearances around structures. These requirements establish minimum standards to protect buildings located in FHSZs within SRAs and WUI Fire Areas. This code includes provisions for ignition-resistant construction standards for new buildings.

Berkeley Municipal Code

Berkeley Fire Code BMC Chapter 19.48 adopts the California Fire Code and also includes additional provisions known as the Berkeley Fire Code. Berkeley requires that buildings in Fire Zones 2 and 3, which include the hillside areas, utilize ignition resistive construction materials, employ preventative construction methods, and create defensible space in order to make them resistant to wildfire. Specific projects must file a Fire Protection Plan, or Vegetation Management Plan, which is a document prepared for a Wildland-Urban Interface Fire Area. It describes ways to minimize and mitigate potential for loss from wildfire exposure. The Fire Protection Plan shall be prepared in accordance with the latest standards of the Berkeley Fire Department.

Impact Analysis

a. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?*

b. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project due to slope, prevailing winds, and other factors, exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

c. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

The project site is not in or near a CAL FIRE or City of Berkeley designated Very High Fire Hazard Severity Zone (CAL FIRE 2023, Berkeley 2021). Implementation of the proposed project would not impair an adopted emergency response plan or emergency evacuation plan; exacerbate wildfire risks; require the installation or maintenance of associated infrastructure that may exacerbate fire risk; or expose people or structures to significant risks, including downslopes or downstream flooding or landslides, as a result of runoff, post fire slope instability, or drainage changes in or near state responsibility areas or lands classified as very high fire hazard severity zones. While the project would include the installation of one or more in-ground transformer(s), the project would be constructed in accordance with local and state regulations pertaining to power lines and other related infrastructure and fire suppression requirements. No impact would occur.

NO IMPACT

This page intentionally left blank.

21 Mandatory Findings of Significance

	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Does the project:				
a. Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☐	■
b. Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future Projects)?	☐	☐	■	☐
c. Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	■	☐	☐

Impact Analysis

a. *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

As discussed in Section 4, *Biological Resources*, the project would not substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife species population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal.

As discussed in Section 5, *Cultural Resources*; Section 7, *Geology and Soils;* and Section 18, *Tribal Cultural Resources*, no historical, archaeological, or paleontological resources were identified on site. The project is on a previously developed site and construction would be done with minimal cuts and fills, and the project would be required to implement the Standard COAs in sections 5 and 18 for unanticipated resources. Because the proposed project would not eliminate known important examples of the major periods of California history or prehistory, this impact would be less than significant.

LESS THAN SIGNIFICANT IMPACT

b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Cumulative impacts could occur if the construction of other projects occurs at the same time as the proposed project and in the same geographic scope, such that the effects of similar impacts of multiple projects combine to create greater levels of impact than would occur at the project-level. For example, if the construction of other projects in the area occurs at the same time as project activities, combined air quality and noise impacts may be greater than at the project level. Table 17 includes a list of nearby development projects relevant to the analysis of potentially cumulatively considerable impacts.

Table 17 Cumulative Development Projects

No.	Project Location	Project Components	Status	Distance to Project Site
1	2733 San Pablo Avenue	Demolition of existing non-landmarked structures. Construction of a new 8-story mixed-use residential development with 152 dwelling units, and commercial space.	Under Review	0.1 miles
2	2601 San Pablo Avenue	Eight-story mixed-use building with 223 dwelling units over a 1,940 square-foot commercial space.	Under Review	0.4 miles
3	2136-2154 San Pablo Avenue	Six-story mixed-use building with 122 dwelling units and three live/work units and a ground-floor parking garage.	Recently entitled	1 mile
4	1835 San Pablo Avenue	6-story, mixed-use development with 99 dwellings (including 7 dwellings available to very low-income households) and 2 live/work units.	Recently entitled	1.3 miles
5	2147 San Pablo Avenue	58,000 square-foot six-story mixed-use building with approximately 1,873 square feet of commercial area and 128 Group Living Accommodation (GLA) units (12 Very Low-Income units), ground-floor parking spaces.	Recently entitled	1 mile
6	700/742 Grayson Street	2.5-acre industrial site with a research and development and manufacturing building.	Recently entitled	0.6 miles
7	1740 San Pablo Avenue	5-story mixed-use building with 48 dwelling units, 3 live/work units, a restaurant, and parking spaces at the ground floor.	Building permit under review	1.8 miles

No.	Project Location	Project Components	Status	Distance to Project Site
8	600 Addison Street	8.4-acre industrial site with a research and development campus containing two buildings totaling and two parking structures.	Under construction	1.5 miles
9	2527 San Pablo Avenue	6-story, mixed use building with 63 dwelling units, commercial space, and ground level parking.	Under construction	0.5 miles

Source: City of Berkeley 2024

As determined in the analysis throughout this Initial Study, no impacts would occur with regard to the following topics and, as such, do not need to be discussed in terms of cumulative impacts since they cannot combine with other cumulative projects to result in cumulative impacts: agriculture/forestry resources, mineral resources, and wildfire. Other issues (e.g., cultural resources, geology and soils, hazards and hazardous materials, land use, tribal cultural resources) are site-specific by nature, and impacts at one location do not add to impacts at other locations or create additive impacts. Thus, the potential for the project to contribute to cumulative impacts would be limited the following issue areas:

- **Aesthetics**. Cumulative projects could result in changes to scenic vistas, visual character, and light and glare. As described in Section 1, *Aesthetics*, Senate Bill 743 (California Public Resources Code Section 21099) passed in 2013, made changes to the CEQA for projects located in transit-oriented development areas. Among these changes are that a project's aesthetic impacts are no longer considered significant impacts on the environment if the project is a residential, mixed-use residential, or employment center project and if the project is located on an infill site within a transit priority area (TPA). Therefore, aesthetic impacts related to the project are not considered significant. Cumulative projects would also be subject to the City's design standards and BMC regulations regarding light and glare (e.g. BMC Section 23.304 which requires buildings in and adjacent to residential zones to shield and direct downward exterior lighting). Therefore, the project's contribution to cumulative aesthetic impacts would not be considerable.
- **Air Quality.** Because the BAAQMD is in non-attainment for the state and federal ozone standards, the state and federal $PM_{2.5}$ (particulate matter up to 2.5 microns in size) standards and the state PM_{10} (particulate matter up to 10 microns in size) standards, cumulative air quality impacts currently exist for these pollutants, and BAAQMD is required to prepare a plan for improvement. As discussed in Section 3, *Air Quality,* project construction and operation would not generate emissions of these air pollutants in excess of BAAQMD regional or localized significance thresholds, which are intended to assess whether a project's contribution to existing cumulative air quality impacts is considerable. Therefore, the project's contribution to existing cumulative air quality impacts would not be considerable.
- **Biological Resources.** Most cumulative impacts related to biological resources occur when a disproportionate number of cumulative projects occur at once and regionally impact a local population of a special-status species, riparian habitat, sensitive natural communities, wetlands, or other locally protected biological resources. In this case, the cumulative projects would occur in previously developed areas. Several of the development projects near the project site would be required to undergo CEQA review, which would identify the extent of biological resource impacts and require appropriate mitigation of those impacts. Projects exempt from CEQA would be subject to existing BMC requirements and standard conditions of approval to reduce

potential impacts to biological resources to a less-than-significant level such that project-level impacts would not result in a cumulatively considerable contribution to this cumulative impact.

- **Energy.** Cumulative projects would be required to comply with applicable state and local regulations and standards that require efficient energy use. Development projects in the City would also be reviewed for consistency with the General Plan and CAP. Cumulative development from projects listed in Table 17 would not exceed growth planned by the City. Therefore, cumulative energy impacts are less than significant, and the project would not result in a considerable contribution to this impact.
- **Greenhouse Gas Emissions.** GHG impacts are assessed in a cumulative context since generally no single project can cause a discernible change to the climate. Therefore, cumulative significance is based on the same thresholds as the proposed project. In the absence of an adopted numeric threshold by the BAAQMD or the City of Berkeley, the significance of the project's GHG emissions is evaluated on the consistency with applicable plans, policies, regulations, and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. As discussed in Section 8, *Greenhouse Gas Emissions*, the project would be consistent with Berkeley's CAP and other climate goals the city has in place and would therefore not result in a cumulatively considerable contribution to this cumulative impact.
- **Hydrology and Water Quality**. Cumulative projects would be required to comply with applicable state and local regulations and standards that would address hydrology and water quality impacts, including water quality standards, sustainable groundwater management, erosion and siltation, and contributions to flooding; therefore, they would not result in a cumulatively considerable contribution to hydrology and water quality impacts. The analysis included in Section 10, *Hydrology and Water Quality,* is cumulative in nature due to the scope of the analysis including the entire water basin serving the city. As discussed therein, the project would have less-than-significant impacts related to groundwater, flooding, and stormwater management and would therefore not result in a cumulatively considerable contribution to this cumulative impact.
- **Noise.** Overlapping construction activities associated with cumulative development projects in conjunction with proposed project activities could result in cumulative noise impacts related to a temporary increase in ambient noise levels at the same noise-sensitive receivers located throughout the area, especially during construction activities. However, the proposed project would be subject to the City's standard condition of approval for Use Permits in non-residential zones, and cumulative development projects would be subject to compliance with the noise level limits established in the BMC Section 13.40.070 or the City's standard conditions of approval. Given the discussion in Section 13 *Noise*, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact with Mitigation Measure NOI-1 incorporated.
- **Population and Housing.** As described in Section 14, *Population and Housing*, the project would result in three new residents, and the proposed office space would result in new employees; however, the growth would not be substantial since existing uses already accommodate employment and the project would not exceed development planned by the City. Cumulative projects near the project site could result in up to approximately 840 new dwelling units, development from these cumulative projects would not exceed the 8,934 units planned by the City.

- **Public Services and Recreation.** As described in Section 15, *Public Services*, the project would not require new public facilities or services since the project site is already served by existing services and would not exceed planned growth. Several of the cumulative development projects would be required to undergo their own CEQA review, which would identify the extent of public service and recreation impacts and provide suitable mitigation, if warranted. Projects exempt from CEQA would be subject to existing BMC requirements and standard conditions of approval to reduce potential impacts. Similar to the proposed project, cumulative projects would be subject to applicable school fees and park fees.
- **Transportation.** Overlapping construction schedules associated with other cumulative projects in conjunction with project activities could result in cumulative transportation impacts, such as impacts related to VMT and emergency access during construction. Cumulative projects would be subject to the City's Standard COAs including creating a construction transportation plan, would be required to be evaluated with the City's VMT thresholds to be screened out from a VMT analysis or be required to complete a VMT analysis to determine the project's potential impacts. Projects would also be subject to State requirements to achieve a reduction in project-generated VMT. As discussed in Section 17, *Transportation*, the project's vehicular access plan has been reviewed and approved by the City's Traffic Engineering department and was not determined to have any dangerous features. The project is located near public transportation, and based on its size, the project is not anticipated to generate a significant number of transit trips such that service or overall capacity of public transportation would be adversely affected. Impacts would be less than significant. Therefore, cumulative construction-related and operational transportation impacts would be less than significant, and the project would not result in a considerable contribution to this impact.
- **Utilities and Service Systems**. The analysis included in Section 19, *Utilities and Service Systems*, is cumulative in nature due to the fact that it analyzes the utility infrastructure available throughout the city and the remaining capacity of the utility systems accounting for all current development in the city and projected growth within the city. As discussed in Section 19, *Utilities and Service Systems*, the project would not result in demand for water, wastewater, electricity, or stormwater infrastructure that would exceed the remaining capacity of these systems in the City. Additionally, the project would not result in solid waste in excess of the remaining capacity of the Altamont Landfill. The project would not exceed development planned by the City, which has already undergone environmental review under the City's General Plan and 2023-2031 Housing Element, and would not result in a considerable contribution to this impact.
- **Wildfire**. Wildfire-related impacts could be significant if development is in or near a VHFHSZ. As discussed in Section 20, *Wildfire*, the project site is not located in or near a VHFHSZ, is located within an urbanized area of the City, and is surrounded by existing commercial and industrial development. Compliance with existing State and local fire safety measures would substantially reduce the risk of wildfire, and the project would not result in a considerable contribution to this impact.

Given the above discussion, the proposed project would not result in a cumulatively considerable contribution to a significant cumulative impact with mitigation incorporated.

LESS-THAN-SIGNIFICANT IMPACT

c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

In general, impacts to human beings are associated with air quality, hazards and hazardous materials, noise and wildfire impacts.

As discussed in Section 3, *Air Quality,* the project would not obstruct or be in conflict with BAAQMD's 2017 Plan and would not expose human beings to substantial air pollutants in excess of BAAQMD's regional and localized significance thresholds. As discussed in Section 9, *Hazards and Hazardous Materials*, compliance with federal, state, and local regulations regarding the transport of hazardous materials would prevent the accidental release of hazardous materials during construction. Implementation of mitigation measures HAZ-1 through HAZ-5, which would reduce hazardous material soil and groundwater impacts, and potential vapor impacts on the project site to a less-than-significant level. Therefore, implementation of the project would not have a substantial adverse effect on human beings. As discussed in Section 13, *Noise*, the project would not generate significant impacts related to ambient noise or ground-borne vibration with implementation of Mitigation Measure NOI-1 and the City's Standard COAs. As discussed in Section 9, *Hazards and Hazardous Materials*, and Section 20, *Wildfire*, the project is not in a Very High Fire Hazard Severity Zone and would not expose people or structures to a significant risk involving wildland fires. Therefore, the project would not cause substantial adverse effects on human beings.

LESS THAN SIGNIFICANT WITH MITIGATION INCORPORATED

5586 Bacon Road
Oakland, CA. 94619

Dear Mr. Kelley,

Left Coast Architectural History has completed historical evaluation of the two properties at 2820 San Pablo Avenue and 2817-2821 Tenth Street, Berkeley. The attached California Department of Parks & Recreation (DPR) 523 series forms present physical descriptions of the properties, a record of their history, and evaluation according to California Register of Historical Resources significance and integrity criteria, and City of Berkeley Landmark and Structure of Merit criteria.

The study of 2820 San Pablo Avenue found that the house dates to 1901 and was owned and occupied by numerous parties throughout its history, including both owner-occupants and renters. It is a High-Peaked Colonial Revival style design by prolific local architect A.W. Smith. Although this is interesting to note, the property is one of numerous examples of the style and of work by Smith in Berkeley and does not appear to stand out as significant within that context. It also does not appear to have any significant associations with West Berkeley residential history or important historical figures.

The study of 2817-2821 Tenth Street found that one portion of the light-industrial building dates to 1950 with large additions made in 1966 and 1970. It was owned and occupied by companies that undertook a variety of manufacturing activities throughout its history. The building is utilitarian and has only subtle Midcentury Modern styling in some sections. It is not a prime example of any architectural style. No architects were associated with its design and although an engineering firm and a construction company have been identified, respectively, for the original building and the 1970 addition, neither appear to rank as historically significant designers or builders. The property does not appear to have any significant associations with West Berkeley industrial history or important historical figures.

The evaluation concludes that neither property is historically significant at the local or State levels and, therefore, neither qualifies as a historic resource for the purposes of the California Environmental Quality Act.

Please don't hesitate to contact Left Coast Architectural History should you have questions or need additional assistance.

Sincerely,

Caitlin Paige Hibma

Caitlin Hibma

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The house at 2820 San Pablo Avenue sits on a rectangular parcel located on the west side of San Pablo Avenue, between Grayson Street and Heinz Avenue. Terrain in the area is flat and the building sits near the front of the lot. A driveway runs along the south side of the house to a paved rear yard, where a couple of outbuildings are situated at the rear of the property. The lot does not feature any formal landscaping. The lot is enclosed by a chain-link fence and a sidewalk and street tree are located between the building and the street. There are margins of space on either side of the building, separating it from neighboring properties.

The house is two-and-a-half stories and has a rectangular plan. It is topped by a steeply-pitched front-gable roof clad with wood shingle covered with composition shingle; both layers heavily deteriorated. Exterior siding consists of asbestos shingle that is damaged in some areas, showing that it is installed over original wood bevel siding on the lower level and likely wood shingle on the upper level. The house at 2820 San Pablo Avenue was built in 1901 by architect A.W. Smith and contractor J.R. McGregor for owner Lewis C. Snyder. (Edwards Abstracts, BAHA) The house was located on property that was part of the Snyder Homestead Tract (later, Snyder Tract), which had been established in August 1897 by Anne M. Snyder, Lewis C. Snyder's mother. (Tract maps, BAHA) His father, Andrew J. Snyder, had been known as "Oakland's first real estate dealer." From 1867 to 1896, Andrew J. Snyder maintained an active real estate agency that also appears to have employed his four sons. Their activities included building commercial blocks, establishing and subdividing land for sale, and developing residential properties on a speculative basis. (Oakland Wiki, "A.J. Snyder," https://localwiki.org/oakland/A._J._Snyder) In addition to the Snyder sons continuing their father's business, it appears that Ann Snyder was also savvy in the industry, establishing the Snyder Tract in Berkeley a year after her husband's death. Her son Lewis took three lots in the tract for himself and commissioned the design and construction of a grouping of three nearly-identical houses at 2818, 2820, and 2822 San Pablo Avenue. The middle house, which is the subject property, became Lewis and wife Lizzie's residence. Early occupants (ca. 1906) of the other two houses were Carl Hansen and Gus Peterson, although city directories indicate that both had fairly short tenures at their respective addresses, suggesting that Snyder may have been renting out the two other houses he had built.

From at least 1903 to 1916, Lewis C. Snyder is listed in city directories as a real estate broker living at the subject address. In 1906, the Snyders obtained a permit to build a "dwg. & shed." (Property card, City of Berkeley Planning Department microfiche records) "Dwg." is assumed to mean "dwelling," but while the 1911 Sanborn map shows a small building at the rear of the property that is addressed 2820 ½ San Pablo Avenue, it is indicated to be an outbuilding and not an occupied structure. On 19 March 1906, the property was mentioned in the *Berkeley Reporter* and *San Francisco Call* in regard to an unusual triple burglary in which the three houses were broken into and contents thrown on the lawn, though nothing was taken.

(This space reserved for official comments.)

P3a. Description: (continued)

There is some evidence of decorative imbrication; a series of very small pointed wood shingles or layered trim at the base of the gable end. Windows and doors are mostly boarded up, although one aluminum sliding sash window is visible on the south facade. Windows were probably wood sash originally and the majority are known to have been replaced in 1967, likely with aluminum sliders.

Primary (East) Facade
The primary facade faces west onto San Pablo Avenue and consists of a full first story and two upper stories that are contained within the profile of the roof. The first story features a shallow angled bay window on the left side and a porch on the right. The bay window is housed under the overhang of the gable end, while the porch projects and has a shallowly-pitched gable roof with a pronounced up-turn at the peak. The porch gable is eaveless, clad with asbestos shingle, and supported by wood Tuscan columns. The porch railing is solid and, like the exterior walls, clad with asbestos shingle over wood bevel siding. The entry door is boarded up, but is located toward the left side of the porch, with a small square window opening located on the upper wall to its right.

The upper stories, housed within the gable end, overhang the first story. A plain frieze runs across the top of the first story, separated from the siding below by molded trim, and decorative scroll brackets adorn the outer corners and middle of the overhanging lower edge of the gable end. The second story features a bank of three window openings at the center, while the attic level features a single window opening near the gable peak. The gable end is eaveless and features a pronounced up-turn at the peak.

South Facade
The south facade faces a driveway and neighboring property beyond. The first story features a secondary entrance at the far left, a shallow bay window to the left of center, and a single window on the right. A plain frieze runs along the top of the first story, separated from the siding below by molded trim, and is overhung by the eaves of the gable roof. At the center of the roof plane is a large dormer fenestrated with three individual window openings. A shallow pent roof spans the face of the dormer above the windows and the dormer is topped by an eaveless double-gable roof.

North Facade
The north facade faces a neighboring property. The first story features a small two-facet oriel window on the far left. This oriel window has heavy wood molding at its base and is supported by a flat shaped bracket, while its top is tucked under the overhanging eaves of the roof. To the right are two individual window openings of varying sizes. A plain frieze runs along the top of the first story, separated from the siding below by molded trim, and is overhung by the eaves of the gable roof. At the center of the roof plane is a large shed dormer fenestrated with a large window, set low on the wall, at its center and a smaller window to the upper right. The dormer's shed roof has broad overhanging boxed eaves on all sides.

Rear (West) Facade
The rear facade faces the property's backyard and consists of a full first story and two upper stories contained within the profile of the roof. The first story is spanned by a projecting enclosed porch that is topped by a hip roof. There is a door on the left and three windows of varying sizes situated along the facade to the right. The upper stories are housed within the gable end of the roof. Only the second story level is fenestrated with a single window opening located on the right side and set low on the wall. The gable end is eaveless and a brick chimney protrudes from the peak.

(See following sheets for current images)

B10. Significance: (continued)

In 1907, the *Berkeley Daily Gazette* noted that Mr. & Mrs. Louis C. Snyder were making an extended trip to the East Coast. The articled noted that they lived at "2820 San Pablo Avenue, where their home for many years has been a landmark in that part of the city." (*BDG,* 12 Aug 1907) Snyder appears again in the 8 November 1908 edition of the *San Francisco* Call, with identification of his address as 2820 San Pablo Avenue along with a report that a couple of other vacant properties he owned in Berkeley had been vandalized (article identifies S.C. Snyder, but is presumed to mean L.C. Snyder, as there were no other Synders with the initials S.C.). By 1914, city directories listed Lewis Snyder's occupation as real estate and insurance and, in 1915, he was listed simply as a salesman. By the time of the 1920 census, Lewis and Lizzie Snyder had moved to a farm in Concord and he had left real estate to become an orchardist.

The Snyders may have retained ownership of the property at 2820 San Pablo Avenue, or else sold it to an absentee owner; possibly Abbie D. Roffle (see following). By 1920, the house was rented by Joseph and Anna Oliver and their adult daughter, Evelyn. Joseph Oliver was a Portuguese immigrant and worked as a packer in a soap factory, while Evelyn was employed as a bill clerk in a dry goods store. The 10 May 1924 *Berkeley Daily Gazette* links the Oliver family to the subject address and notes that Anna Oliver was a prominent lodge worker. By 1925, city directories show that the Olivers lived elsewhere.

The next known owner, who may have owned the property as early as the Snyders' departure, was Abbie D. Roffle. Abbie Roffle was an African American woman born in California around 1869. She was the widow of Samuel Roffle, who died prior to 1920, and may have worked as a dressmaker. As early as 1920, census records show her residing at the neighboring property, 2820 San Pablo Avenue, with her sister's family, the Haskells. In 1923, city directories list her at the subject property, suggesting that she may have owned the house as early as that, and possibly explaining why her name was associated with the property during the period when the Olivers were known to still be renting the house. However, during most of the 1920s, Abbie Roffle appears to have lived in San Jose. An announcement in the 18 February 1928 *The Western Outlook*, an African American newspaper, reports that "Mrs. Abbie Roffle, sister of Mrs. Bessie Ward and Mrs. Louise Harris of San Jose, has removed from Oakland to her own home on San Pablo Avenue." While the reference to Oakland is not in keeping with her known residences, a 1928 city directory does place her back at 2818 San Pablo Avenue with her sister's family, before listing her at the subject property by 1930, which is corroborated by the census of that year (the 1929 city directory was not available). In 1930, Abbie Roffle applied for a permit to build a "garage for owner and resident Mrs. Abbie D. Roffle, widow of Samuel." (Permit #35120, BAHA)

The 19 September 1933 *Berkley Daily Gazette* and 17 September 1933 *Oakland Tribune* contain a marriage announcement for Lulu Mae Hills and Robert Wysinger which notes that the bride lived at 2028 San Pablo Avenue. According to the 1930 census, Lulu was an African American woman born in Texas in 1905. No other records were found that connect her to the subject address. It is unknown if she was a renter or Abbie Roffle's lodger. Abbie Roffle does not appear in city directories in 1933, so her place of residence at that time is unknown.

By 1935, the house was being rented by Florence Clinton and Juanita Quan, mother and daughter. Florence Clinton was an African American woman born in Georgia in 1866 and Juanita, who was married or possibly divorced, but living with her mother, was born in Texas in 1898. Florence was a widow and not employed, but had previously worked as a cook in a private home, while Juanita worked as a maid in a private house or hotel. (Federal Census, 1940) Voter Registers show Florence Clinton and Juanita Quan at the subject address as late as 1942.

Real estate transaction notes in BAHA's Ormsby Donough files indicate that in 1942 the property changed hands from the estate of A.D.R. Slater to Moses A. Slater, and again in 1948 from H.S. Wallace to Charlie T. and Fannie M. Holliday. Neither of the Slater names, nor that of H.S. Wallace were found in vital records, Berkeley city directories, or Berkeley newspapers; therefore nothing is known about these possible owners. It would seem very likely they were absentee landlords, particularly as Florence Clinton and Juanita Quan appear to have been living in the house during A.D.R. Slater's period of ownership. Sometime between 1947 and 1950, the house at 2822 San Pablo Avenue – part of the original grouping of three built by L.C. Snyder – was demolished, leaving the two matching houses that stand currently (date range based on a 1947 newspaper article mentioning a resident of 2822 San Pablo Avenue and the 1950 Sanborn map, which shows a light industrial building on the property).

Other archival records confirm the Holliday's ownership and occupancy, though little biographical information was found about the couple, who purchased the property in June 1948. They appear to have occupied the house themselves, however; and Fannie Holliday ran a business from the house. A building permit (#63575) dating to just one month after their purchase of the property shows that Mrs. Holliday applied to build a beauty shop on the back porch. It was specified as a 12' x 5' room on the first floor that included a restroom with a toilet, two windows, one door, and 3-tread steps. Oakland city directories show that Fannie M. Hollliday was still the owner and occupant of the house in 1954 and 1955, but some time between 1955 and 1957, she appears to have moved away while retaining ownership of the property.

On 4 April 1957, a Zoning Investigator's Report noted that the house was occupied by Robert H. Lewis, who lived and operated a nursery on the property, for which he was asked to apply for a use permit. He did so, and on 2 October 1957, he was granted a permit (UP #3983) to operate a plant nursery called Pacific Gardens, which bought and sold nursery stock. Fannie Holliday was

B10. Significance: (continued)

named as the property owner and a two-story house and garage were described as the features on the lot. (City of Berkeley Planning Department, microfiche files)

By 1967 (the next available city directory), Robert Lewis no longer rented the subject house, although the Hollidays still owned it and building permits list Fannie Holliday's address as 2820 San Pablo, suggesting that she had moved back to the property. On 23 July 1959, Fannie applied for a building permit to re-side the house with asbestos shingle, re-roof with JM Thickbutt composition shingles, repair the front and rear steps, restore gutters and vents, vent the kitchen sink, and excavate around the base of the house to prevent wood-soil contact. A month later, she applied for another permit (#882022) to stucco the garage, which had formerly had a concrete block exterior, and install a new overhead door. On 10 May 1962, the Department of Public Health issued a letter to C.T. and F.M. Holliday regarding code compliance improvements that needed to be made at the property. The response is unknown, but the letter addressed to the Hollidays at the subject address indicates that they still owned and possibly occupied the house. (City of Berkeley Planning Department, microfiche files)

In May 1964, Fannie M. Holliday obtained a use permit to construct a 7-unit apartment building on the property. This project was obviously never carried out, but is the first indication that the Hollidays may have had other intentions for the property than to continue occupying it themselves. In 1967, under permit #108269, the garage was demolished and 15 windows were installed in existing openings on the house, which accounts for a majority of the windows being replaced. Later the same year, a gas water heater was installed. This all suggests that the house was occupied and being maintained. (The Hollidays do not appear in the 1967 city directory.)

In January 1975, a real estate record notes that the house was occupied by the owner, Fannie M. Holliday. It was noted as an "Older home in good condition on large commercial lot. Ideal for home and business." The property was on the market for $26,500. Two years later on, 1 July 1977, it was sold to James P. Kelley. (Donough files, BAHA)

A 13 June 1988 building permit for a new foundation (#07188815949) lists the owner of the property as Emerald Packaging, which was a business, co-owned by James Kelley, located on the property adjacent to the rear of 2820 San Pablo Avenue (addressed 2817-2821 Tenth Street). An 11 October 1994 permit (NPO #536) confirms James Kelley as the owner and was for the demolition of a vacant house in disrepair. Obviously, this project was also not undertaken, as the house continues to stand today and is still owned by the Kelley family.

Architect

The house at 2820 San Pablo Avenue was designed by architect A.W. Smith. Alfred William Smith (1864-1933) was born in Louisiana, but spent the majority of his childhood in Oakland. He attended Oakland High School, then started his career in the building trades working as a carpenter alongside his father. He does not to appear to have had any formal training in architecture, but is described as an architect on building contracts as early as 1892. He lived in Oakland until sometime between 1905 and 1910, then relocated to Berkeley. (Oakland Wiki, "A.W. Smith," https://localwiki.org/oakland/A._W._Smith; Alameda Architectural Preservation Society newsletter, "A.W. Smith... Architect Extraordinaire," January 2006.)

Smith's career spans over 40 years and he is known to have designed hundreds of buildings; 400 in Oakland, alone, although he also worked in San Francisco, Berkeley, Alameda, Palo Alto, Piedmont, Albany, and other Bay Area cities. He designed primarily single-family houses, but is also known to have designed multi-family residential, commercial, industrial, religious, and institutional buildings, as well as a number of sorority and fraternity houses associated with U.C. Berkeley. (Oakland Wiki, "A.W. Smith," https://localwiki.org/oakland/A._W._Smith; Alameda Architectural Preservation Society newsletter, "A.W. Smith... Architect Extraordinaire," January 2006. Pacific Coast Architecture Database, Alfred W. Smith. *Architect & Engineer,* February 1933.)

Smith designed in a variety of architectural styles that reflected the popular aesthetics of whatever period he was working in throughout his long career. He is credited with introducing – or at least proliferating – the High-Peaked Colonial Revival style, seen at the subject property, to the Bay Area in the late 1890s and early 1900s. Accounts indicate that his first High-Peaked Colonial Revival house was located at 36th and Grove streets in Oakland (no longer extant). On 12 June 1899, the *Oakland Enquirer* reported that "One of the most distinctive features of recent local building operations is the wonderful popularity suddenly achieved by the style of house known as the Dutch Colonial, whose principal characteristic is a high-peaked roof. The idea in this city originated with J. H. Simpson, who since he first began building such structures, has put up 10. However, the style has been adapted and enlarged upon by architect A. W. Smith who since the 10th of January of last year [1898] has put up no less than 27 houses, all on this peculiar line of architecture... Mr. Smith ascribes the popularity to the growth of the artistic in the building public, which has caused a departure from the strict rules of architecture and given rise to the development of the picturesque style." (Daniella Thompson, "East Bay:Then and Now High-Peaked Colonial Revival: A Bay Area Phenomenon," *Berkeley Daily Planet,* 24 March 2006)

B10. Significance: (continued)

Select examples of A.W. Smith's work, in a variety of styles and types, include:

- Enterprise Hall, 645 West Grand Ave., Oakland (1892)
- Postel House, 1260 Broadway, Alameda (1894)
- Seneca Gale House, 2446 Dana Street, Berkeley (ca. 1895)
- Bartlett Residence, 3040 Fulton St., Oakland (1899)
- Mr. J.H. Simpson Residence (1899)
- McPike-Lutz-Hiller Building, Broadway & 10th Ave., Oakland (1899)
- L.C. Snyder houses (3) at 2818, 2820, 2822 San Pablo Ave. (1901) [includes subject property]
- High-Peaked Colonial Revival houses (3) at 3020, 3026, 3028 Martin Luther King Jr. Way (ca.190)
- High-Peaked Colonial Revival houses (2) at 1810 and 1831 Prince Street (ca. 1901)
- Residence at 1346 El Centro Ave., Oakland (1902)
- India Block, 3250 Adeline Street, Berkley (1903) Berkeley Landmark.
- Barker Block, 2486 Shattuck Ave., Berkeley (1904-1905) Berkeley Landmark.
- Theophilus and Ida Land Allen House, Professorville, Palo Alto (1905, in partnership with architect Gustav Laumeister)
- Joseph S. Meyers House, 1494 Alice St., Oakland (ca. 1905)
- Ebell Society Club House, 1440 Harrison Street, Oakland (1907, no longer extant)
- Mauerhan House, 619 Santa Ray Avenue, Oakland (ca. 1908)
- San Francisco Korean Methodist Church (1930)

(Oakland Wiki, "A.W. Smith," https://localwiki.org/oakland/A._W._Smith; Alameda Architectural Preservation Society newsletter, "A.W. Smith... Architect Extraordinaire," January 2006. Pacific Coast Architecture Database, Alfred W. Smith. *Architect & Engineer,* February 1933. Mark A. Wilson; *A Living Legacy: Historic Architecture of the East Bay;* Lexicos, 1987.)

Architectural Style

The house at 2820 San Pablo Avenue is designed in a style referred to locally as the High-Peaked Colonial Revival style. This style, most strongly characterized by its steeply-pitched gable roof and use of wood shingle siding is said to have originated as an amalgam of the Queen Anne style and the East Coast Shingle style. Indeed, it bears the strongest resemblance to the regional First Bay Tradition style, which had the same influences. However, while buildings of the First Bay Tradition style could take a variety of sizes and forms, with possibly greater decorative embellishment, the High-Peaked Colonial Revival style seems to have been restricted to a relatively small, simple rectangular building masses, topped by the signature high-peaked front-gable roof, and characterized by more restrained detailing. Additionally, although the First Bay Tradition style is found, as its name suggests, throughout the Bay Area, the High-Peaked Colonial Revival style is fairly specific to the East Bay, especially Oakland and Berkeley.

The book *A Living Legacy: Historic Architecture of the East Bay* by Mark A. Wilson (Lexicos, 1987) notes that the style was popular from around 1895 to 1915 and describes it as a "transitional form of the Colonial Revival house," with "a steeply pitched main gable; slanting [shed] dormers on the sides; small corner porticos [porches]; balustraded or Palladian windows in the gable; and shingling on the upper surfaces and clapboarding on the lower ones." Further study by Daneilla Thompson of BAHA, indicates that numerous variations on the style occur, however; including those that reference the Italianate, Queen Anne, Classical, Tudor, and Arts & Crafts in their ornament; having a wide range of more or less ornament; having varying pitches of roof peak; gable dormers, sometimes repetitive, or even full cross-gables; bay windows; and projecting versus recessed and full-width versus corner porches. The single unifying factor appears to be the main high-peaked, front gable roof form and, often, the use of shingle siding.

A house at 1535 Saint Charles Street in Alameda, designed by Edgar A. Mathews in 1894, is cited as the earliest known building to exhibit the style, while another at 2354 East 23rd Street, Oakland, built a year later by Hugo W. Storch, is the earliest example supported by written documentation (Edwards' Transcripts of Records). After that, the style rapidly gained popularity and was used by many local architects and builders, including well-known architects like Julia Morgan, Albert Dodge Coplin, and Thomas D. Newsom. Often High-Peaked Colonial Revival houses, likely due to their modest and compact size, were built in groupings for speculative development purposes. As was common in speculative building practices, the porches, ornamentation, and other fine details might be varied to create a sense of uniqueness, house to house, while the repetitive row of peaked gable ends was a visually dramatic unifying factor.

The subject house at 2820 San Pablo Avenue is one of an extant pair of (originally a group of three) High-Peaked Colonial Revival houses, although it differs from its neighbor in some respects, primarily in the character of the porch. Meanwhile, a grouping of three houses at 3020-3028 Martin Luther King Jr. Way and two individual houses on Prince Street, 1810 and 1831, appear to be identical to the two on San Pablo Avenue, indicating that patterns were used both within groupings and among geographically widespread groupings. (Daniella Thompson, "High Peaked Colonial Revival," parts 1-6, Berkeley Architectural

Alterations

The following building permits and other records are on file with the City of Berkeley Department of Planning & Development and Berkeley Architectural Heritage Association. They provide documentation of exterior alterations that the property has undergone throughout it's history [clarifying comments by author in brackets]:

Date	Permit #	Description of Work
1901		House constructed.
1906		Dwelling and garage.
1930	35120	Garage for owner and resident Mrs. Abbie D. Roffle, widow of Samuel.
1948	63575	Build beauty shop on back porch on first floor, 12x5, and rest room, 4.5 x 6. Just toilet and ceiling in [illegible] with [illegible] with two windows, 3x4, and one door, 2.8 x 6.8, and 3 tread step. Owner: Mrs. Holliday
1953	87717	Re-side house with asbestos. Re-roof roof with J.M. Thickbutt. Repair front and rear stairs as required, restore gutters and vents, vent kitchen sink as per code, dig around house so no wood will contact soil. Owner: Fannie M. Holliday
1967	108269	Demolish garage, install 15 windows in existing openings. Owner: Holliday
1967	6362	Install gas water heater. Owner: Holliday
1988	7188815949	New foundation. Owner: Emerald Packaging
1994	NPO #536	Demolish a disrepair [sic] vacant house. Owner: James Kelley, Jr.

Although not documented in building permit records, Sanborn maps from 1911 and 1950 illustrate a reversal of the porch and bay window on the primary facade of the house; porch on the south side, bay window on the north side. Today, the porch is on the north and the bay window on the south. No other historic images clarify whether this was an error in map illustration or if alterations were actually made to relocate the porch and bay window at some point after 1950.

California Register Evaluation

The California Register of Historical Resources (California Register) is an inventory of significant architectural, archaeological, and historical resources in the State of California. In order for a property to be eligible for listing in the California Register, it must be found significant under one or more criteria relating to historically significant events, people, architects or architectural merit, or information potential. The following provides an evaluation of the historic significance of 2820 San Pablo Avenue:

Criterion 1 (Event): *Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.*

No specific events of historical importance are known to have occurred at the property. The property was probably one of the earlier lots to be developed in the immediate area, considering that it was originally owned by a member of the Snyder family, who established the tract in which it is located. However, organic growth patterns saw West Berkeley develop as an industrial and residential district as early as the 1870s, while in more immediate proximity to the subject property a residential neighborhood had developed even within the first decade of the 20th century; a context to which the subject property contributes, but does not particularly stand out within.

The property does not appear to be eligible for listing in the California Register under Criterion 1.

Criterion 2 (Persons): Associated with the lives of persons important to local, California or national history.

The property has had a number of owners and renters throughout its history. The original owner was Lewis C. Snyder, the son of a prominent Oakland real estate dealer and the woman who established the Snyder Tract in which the house is located. Snyder appears to have worked in the family real estate business, but does not claim any significant accomplishments in his own right. Later owners and occupants were primarily working-class people employed in local industry. A couple of the residents also ran their own businesses at the property. None appear to have been influential or qualify as significant historical figures, however.

The property does not appear to be eligible for listing in the California Register under Criterion 2.

B10. Significance: (continued)

Criterion 3 (Architecture): *Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.*

The house at 2820 San Pablo Avenue is an example of the High-Peaked Colonial Revival style of architecture, which is specific to East Bay, especially Berkeley and Oakland. The building exhibits many character defining features of the style, including a compact rectangular plan topped by a steeply-pitched front-gable roof, a gable-roofed corner porch, shed and gable dormers, and more specific features like a bay window to one side of the porch, Classical porch columns, a three-part window in the gable end, a diamond-pane attic window, and an emphasized upturn of the gable peaks. Although it is a good example of the style, the subject house lacks integrity (see analysis below), is in poor condition, and is one of two extant houses in a three-house grouping (a common arrangement), one of at least seven houses built to the identical pattern, and one of hundreds of High-Peaked Colonial Revival houses of any design in Berkeley (Berkeley Architectural Heritage Association provides a count of around 200 examples in the city.) (Daniella Thompson, "East Bay:Then and Now High-Peaked Colonial Revival: A Bay Area Phenomenon," *Berkeley Daily Planet,* 24 March 2006) Within the context of High-Peaked Colonial Revival houses in Berkeley or the East Bay, the subject house does not stand out as an exceptional example.

The building was designed by Alfred W. Smith, who was a prolific self-taught architect in the Bay Area from the 1890s to the 1930s. He worked in many cities, including Berkeley and Oakland, where he is noted for his High-Peaked Colonial Revival houses. Numerous other designers also created High-Peaked Colonial Revival houses, however; and A.W. Smith designed other buildings of various types and styles aside from High-Peaked Colonial Revival houses. While Smith has a notable name within Berkeley's architectural history, primarily due to his prolificness, the house at 2820 San Pablo Avenue is a common design by Smith and not exceptional within his portfolio of work.

The property does not appear to be eligible for listing in the California Register under Criterion 3.

Criterion 4 (Information Potential): *Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.*

Criterion 4 is typically concerned with archaeological investigation. Where buildings or architectural elements are concerned, Criterion 4 typically relates to rare construction types, of which 2820 San Pablo Avenue is not an example.

The property does not appear to be eligible for individual listing in the California Register under Criterion 4.

Berkeley Landmark Evaluation

Berkeley Landmarks are designated historical resources within the City of Berkeley. Resources may be designated as Landmarks if they meet one or more of five criteria similar to those used for the California Register, but which elaborate on areas of significance. The following provides an evaluation of the historic significance of 2820 San Pablo Avenue according to local significance criteria:

1. Architectural Merit:
a-c. Property that is the first, last, only or most significant architectural property of its type in the region; Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.

The house at 2820 San Pablo Avenue is designed in the High-Peaked Colonial Revival style. This style was popular from 1895 to 1915 and is particular to the East Bay. This house is not the first, last, only, or most significant High-Peaked Colonial Revival house and is, in fact, one of two (originally three) in a grouping, one of at least seven in the city that use an identical pattern, and one of around 200 houses that exhibit the style in Berkeley. It is an altered and common example of the style that does not stand out as exceptional for its architectural merit. It is also one of hundreds of surviving buildings, including many other High-Peaked Colonial Revival houses, designed by A.W. Smith. It is not particularly notable within his portfolio of work. It is also not particularly representational of neighborhood fabric, as the neighborhood around it has changed over time and does not represent an important grouping of buildings. Although it is one of a matched pair of High-Peaked Colonial Revival houses, many other such groupings of two or more exist throughout Berkeley. Thus, the property does not appear to have the high architectural merit or association with a master architect or builder that would qualify it as a Berkeley Landmark under this criterion.

2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City

Neither the construction of the house at 2820 San Pablo Avenue, nor its subsequent ownership, occupancy, and use history, were influenced by religious, cultural, governmental, social, or economic events or developments in the area. Most owners and

B10. Significance: (continued)

occupants of the property appear to have had working-class backgrounds and held common occupations for their time and demographic, with none standing out as influential in relation to the property or surrounding neighborhood. Use of the property as a residence by average Berkeley citizens was typical and common. The property does not appear to have the high cultural value that would qualify it as a Berkeley Landmark under this criterion.

3. Educational value: Structures worth preserving for their usefulness as an educational force

The property at 2820 San Pablo Avenue does not appear to have any use as an educational tool. It is a common example of an early twentieth century residential property, of which many others exist, are in better condition, and possess stronger integrity in their architecture. The property does not have any potential to convey lessons on history, as it is not associated with important events or people, and is not noteworthy, outstanding, or intact as an example of residential life in the early twentieth century. It therefore does not appear to have the high educational value that would qualify it as a Berkeley Landmark under this criterion.

4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military.

The property at 2820 San Pablo Avenue reflects the organic residential growth of Berkeley. It does not have any strong associations outside of general development patterns in the area. Neither the construction of the house, nor its later history, was influenced by social, cultural, economic, political, religious, or military events or developments in the area. It owners and occupants do not appear to have been historically significant or have any noteworthy accomplishments to their names and no specific events of significance occurred at the property. It therefore does not appear to have the high historic value that would qualify it as a Berkeley Landmark under this criterion.

5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

The property at 2820 San Pablo Avenue is not listed in the National Register of Historic Places and therefore does not qualify as a Berkeley Landmark under this criterion.

Berkeley Structure of Merit

Berkeley Structures of Merit are designated historical resources within the City of Berkeley. Resources may be designated as Structures of Merit if they meet general and/or specific criteria. An evaluation follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.

As assessed under Berkeley Landmark criteria, 2820 San Pablo Avenue is not of great architectural merit or cultural, educational, or historic value. It is a common element of Berkeley's residential development and has lost integrity to the extent that it is no longer a good or illustrative example. Visual observation of buildings around the property does not indicate any cohesive or thematically representative grouping within which 2820 San Pablo Avenue would play a meaningful role, aside from the house next door (2818 San Pablo Avenue), which was built by the same architect in the same style. However, the grouping originally had three houses and its integrity has been diminished by the removal of one. The city also has numerous such groupings of identical or near-identical High-Peaked Colonial Revival houses and many buildings designed by A.W. Smith, such that the remaining pair on San Pablo Avenue are not exceptional or solely representative of a type, style, or development pattern. Therefore, the property does not appear to qualify as a Structure of Merit under the General Criteria.

Specific Criteria

a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street frontage, or group of buildings.

Within a one-block radius of the the subject property there is one designated Berkeley Landmark; the H.S. Heinz Co. Factory at 2900 San Pablo Avenue (1927-1928). The Heinz Factory was built 26-27 years after the subject house and is a massive industrial factory in the Mediterranean Revival style. The factory and subject house share no traits that would unite them under a common historical theme. The property at 2820 San Pablo Avenue is also not associated with any major event or historic period specific to Berkeley's history and is not representative of the early or significant development of the West Berkeley neighborhood, which took place over decades preceding construction of the subject house.

B10. Significance: (continued)

b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.

As noted, one designated Landmark is located in close proximity to 2820 San Pablo Avenue. The H.S. Heinz Co. Factory is much larger (covering the equivalent of two city blocks), designed in an ornate iteration of the Mediterranean Revival style, and has a steel frame and masonry curtain wall structure. The factory and subject house have no physical characteristics in common.

c. The structure is a good example of architectural design.

The house at 2820 San Pablo Avenue is designed in the High-Peaked Colonial Revival style. This style was popular from 1895 to 1915 and is particular to the East Bay. This house is not the first, last, only, or most significant High-Peaked Colonial Revival house and is, in fact, one of two (originally three) in a grouping, one of at least seven in the city that use an identical pattern, and one of around 200 houses that exhibit the style in Berkeley. It is an altered and common example of the style that does not stand out as a good example of architectural design, especially in light of many others of very similar character being located throughout Berkeley.

d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings.

The house demonstrates no particular historical significance within the context of Berkeley's history or that of the neighborhood that surrounds it. It is an early twentieth century element of West Berkeley residential development, but not one of the earliest properties developed in the neighborhood, which experienced waves of growth as early as the 1870s.

Integrity

In order to qualify for historic designation, a property must possess significance under the aforementioned criteria *and* have historic integrity. The house at 2820 San Pablo Avenue does not appear to possess the historic significance necessary to qualify for designation; therefore, an analysis of its integrity is not required. However, it should be noted that the house has undergone significant alterations and deterioration that diminish its integrity in the areas of design, materials, and workmanship. Primarily, loss of original exterior siding and windows has created physical change that dilutes the property's integrity and its ability to convey its history. Additionally, the house was originally one of a grouping of three near-identical houses, which has also lost integrity by experiencing the loss of one house in the late 1940s. Therefore, the grouping of which 2820 San Pablo Avenue is a part also does not retain strong integrity; further diminishing historic associations.

Conclusion

Based on the above analysis, the property at 2820 San Pablo Avenue does not appear to be eligible for listing the California Register of Historical Resources or as a City of Berkeley Landmark or Structure of Merit. Therefore, it does not qualify as a Historic Resource under the California Environmental Quality Act (CEQA).

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The building at 2817-2821 Tenth Street sits on a large rectangular parcel located on the east side of Tenth Street, between Grayson Street and Heinz Avenue. Terrain in the area is flat and the building fills the lot with a small setback at the front. Paved driveways and walkways access loading docks and entry doors that are located on recessed bays at either end of the primary facade. Small planted areas are located at certain points along the front facade, but the lot is not otherwise landscaped. The side facades (north and south) abut neighboring buildings, while the rear (east) facade is only readily visible from the backyards of adjacent properties to the east.

The building is one-story and has a roughly rectangular plan. It is topped by bow-truss and flat roofs clad with rolled roofing material. Exterior siding consists of brick and concrete. Windows are primarily steel and aluminum sash in multi-lite industrial sash, sliding, or fixed configurations. (Continued, page 3)

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

Prior to the current building at 2817-2821 Tenth Street, the site it occupies included a few single-family dwellings, a number of outbuildings, and some as-yet-undeveloped land. In August 1950, a building permit was granted for the construction of a 45' x 135' warehouse. The building was originally addressed 2821 Tenth Street, but comprised the southern half of the northern portion of the building, which is currently addressed 2817 Tenth Street. (permit #67960, 2 August 1950; City of Berkeley Planning Department, microfiche files) The warehouse was owned by Robinson & Davis. It cost $18,000 to build and was designed by engineers H.M. O'Neil Company. No information was found in directories, newspapers, or other sources about Robinson & Davis or the business they conducted at the property.

A 1956 permit for the installation of interior partitions in the building noted that it had an industrial assembly use. By then, the owner was the Shand & Jurs Company, however. (permit #79488, 1956; City of Berkeley Planning Department, microfiche files) Shand & Jurs Co. were listed in city directories (1941) as engineers and manufacturers of equipment for the oil industry, fire protection, and plumbing. The company was established in 1922 and appears to have been based in Berkeley, although it now operates as a sub-division of a company in Illinois. (https://www.ljtechnologies.com/sj/) Shand & Jurs are known to have manufactured fire hydrants "from the late 1920s until World War II. They finished off their hydrants with a distinctive mushroom head, many of which can still be seen in Berkeley and the East Bay." (http://www.firehydrant.org/pictures/shand.html)

In 1966, an addition was made to the existing warehouse that comprised the current northern half of the northern portion of the building, completing the portion now addressed 2817 Tenth Street. The cost was $39,000. (Permit #107090, 8 Sept. 1966; City of Berkeley Planning Department, microfiche files) (Continued, page 3)

P3a. Description: (continued)

Primary (West) Facade

The primary facade faces west onto Tenth Street and can be understood as four articulated bays built in three stages. Left to right, there is the recessed 1966 addition, the projecting original 1950 section, and the 1970 addition, which projects on the left and is recessed on the right.

The 1966 addition features a further recessed and elevated loading dock on the left. The walls in the loading dock area are clad with stucco and there is a service entrance with a metal roll up door and a flush metal entry door under an overhanging box canopy. To the right the wall is clad with brick and is featureless except for a louvered vent at the center and a wide fascia board at the flat roofline.

The original 1950 portion of the building projects forward and features a structural brick exterior wall surface. A large, steel, industrial sash window is located on the north-facing wall. The west-facing wall features a large service entrance with a roll-up metal door on the left. On the right is an entrance assembly consisting of a fully-glazed aluminum-frame entry door and a horizontally oriented multi-lite aluminum sash industrial window. The roofline of this portion of the building is flat and adorned only with a wide flat fascia board.

The right half of the facade represents the 1970 addition. The wall surfaces are scored concrete. On the projecting left side of this portion of the building, there is a recessed entrance on the left that is enclosed by a metal security gate. A flush wood or metal door flanked by a series of vertical plate glass windows, separated by thick wood mullions, is located within the vestibule. Above the vestibule is a shallowly projecting box marquee made of narrow vertical wood boards or vertically grooved plywood. To the right of the entrance there are three symmetrically placed windows covered by metal security grilles. The leftmost window has a three-part, sliding, aluminum or vinyls sash, while the other two have single-lite fixed sashes. A wood board runs across the upper facade above the windows, serving as an intermediate cornice element. The top of the facade is otherwise unadorned and the roofline is flat.

A small single-lite fixed window is located on the south-facing wall of the projecting left side of the 1970 portion of the building. The recessed right side of the 1970 addition features a flush metal door accessed by a concrete stoop on the left and a loading dock on the right, featuring two elevated service entrances with roll-up metal doors. All three doors are sheltered by a corrugated canopy that is located at the same level as the intermediate cornice and is suspended by tie rods from the upper facade. The top of the facade is otherwise unadorned and the roofline is flat.

North & South Facades

The north and south facades abut adjacent buildings and are not readily visible. No portion of the north facade appears visible. Small sections of the south facade that are visible are unfenestrated and unadorned. The rooflines of both facades are flat.

Rear (East) Facade

The rear facade faces the backyards of adjacent properties to the east. The left side, consisting of the 1970 tilt-up concrete portion of the building, has a blank concrete wall surface with a narrow open shaft running up the center. There are no windows on this portion of the building, which terminates in a flat unadorned roofline. To the right, the 1950 portion of the building has a brick wall surface and features two symmetrically placed windows on either side of the facade. The windows are large, steel, industrial sashes. This portion of the facade terminates in a flat unadorned roofline. The far right side of the rear facade, consisting of the 1966 addition, abuts an adjacent building and is not visible.

(See following sheets for current images)

B10. Significance: (continued)

No owner name was provided on records for the addition project and Shand & Jurs. Co. is not listed in the next available city directory, published in 1967. It may be that Emerald Packaging, the next known owner/tenant, which was established in 1963, was already occupying the building by this time.

In May 1970, contractors Oliver & Komes were hired to construct a new tilt-up concrete warehouse that housed offices at the front. This building comprised the entire southern portion of the current building, now addressed 2821 Tenth Street. The project cost $100,000 and was commissioned by Emerald Packaging. (permit #001, 10 April 1970; City of Berkeley Planning Department, microfiche files)

Emerald Packaging was established in Berkeley in 1963, possibly at the subject property, by James P. Kelley and three business partners. Kelley eventually bought these partners out and was joined in business by his three children. The company specialized in manufacturing produce packaging and it is noted that it began packaging carrots in 1972 and in 1978 developed packaging to keep lettuce fresh. In addition to developing and manufacturing packaging, the company was also equally active

B10. Significance: (continued)

in printing the packaging. They pioneered the use of environmentally friendly inks in the late 1980s. (Emerald Packaging, https://www.empack.com/timeline/)

In 1971, Planning Department records relating to an improperly draining sump pump and fire safety violations, note that William M. Temple was the president of Emerald Packaging at the time. (City of Berkeley Planning Department, microfiche files) In 1975, a permit was filed for repair to a fire-damaged bow truss roof, which indicates the business suffered a fire, although no mention of the event was found in newspapers or other sources. (3 March 1975, no #; City of Berkeley Planning Department, microfiche files) The same year that fire repairs were made, and perhaps in reaction, a fire-resistant ink storage room with block walls, a metal deck, and a concrete roof was added, presumably within the larger building. (27 June 1975; City of Berkeley Planning Department, microfiche files) Later in 1981, a steel rolling fire door was installed in a brick wall that was cut to accommodate the opening. This fire door appears to have been installed on the interior, between sections of the building. (1981, #0527817237; City of Berkeley Planning Department, microfiche files) It is noted that in 1983, the company's factory size was more than doubled, though no significant building additions were made to the property. (Emerald Packaging, https://www.empack.com/timeline/) In 1990, hazardous materials concerns were addressed with the removal of an underground tank and the permit for the work indicates that Emerald Packaging was still the tenant business; however, by 1993, the company had relocated to Union City.

James P. Kelley and Emerald Packaging retained ownership of the subject property and in 1994 began leasing the northern portion of the building, 2817 Tenth Street, to Brandle D. Freedman and his company Meyer Sound Labs, which manufactured loudspeakers and audio equipment for the sound recording industry. Meanwhile the southern portion of the building, 2821 Tenth Street, was leased to James Valley and his company Wheelskins, Inc., which dealt in the light manufacturing and distribution of leather steering wheel covers. (Leasing notice and permits 10 Feb 1994, ZP #Z0584, 6/10/94 – ZP #Z0946, City of Berkeley Planning Department, microfiche files. Emerald Packaging, https://www.empack.com/timeline/) The year that these two companies began occupying the property, the building was formally re-addressed; the entire building known as 2821 Tenth Street became 2817 and 2821 Tenth Street to better identify the two businesses located there. (City of Berkeley Planning Department, microfiche files)

More recent work on the property includes seismic upgrades in 1995 and tenant improvements for Meyer Sound Labs, which included adding an office mezzanine, skylights, and restrooms at 2817 Tenth Street in 2000. (Permit ZP #Z1729, 27 March 1995; permit ZC #00-0841, 23 Aug. 2000; City of Berkeley Planning Department, microfiche files) The Kelley family continues to own the property today and both Meyer Sound Labs and Wheelskins, Inc. continue to occupy their respective portions of the building.

Engineers/Builders

There were no architects involved with the design of any portion of the subject building. The H.M. O'Neil Company was the engineering firm responsible for designing the first section of the building (right half of 2817 Tenth Street) in 1950. Hugh M. O'Neil was born in North Dakota in 1911 and began his engineering practice in 1944, although he is listed as a civil engineer in earlier city directories, likely employed by someone else. Other examples of O'Neil's work are unknown. The company continues today as Owen O'Neil Associates, presumably operated by Hugh O'Neil's son. (http://owenoneil.com/)

The architect, engineer, or builder for the 1966 addition (left half of 2817 Tenth Street) is not named on records for the project, and is therefore unknown.

The concrete tilt-up southern portion of the building, 2821 Tenth Street, was built 1970 by contractors Oliver & Komes, who are not listed in the available 1969 city directory. No other information was found about the company.

Architectural Style

The northern portion of the building, built in 1950 and enlarged in 1966, is a utilitarian light-industrial building, but has subtle Mid-Century Modern aesthetics. The tilt-up concrete southern portion of the building, built in 1970, is purely utilitarian with no distinguishable architectural style.

As its name implies, the Midcentury Modern style was prevalent in the mid-20th century, particularly in the decades following World War II. It was influenced most strongly by the International and Streamline Modern styles, seen in its clean-lined geometry and horizontal emphasis, but adopted a more casual and approachable demeanor and was applied to a variety of property types. They style is characterized by cantilevered overhangs, projecting eaves, canted windows, projecting boxes that en-frame the upper stories, stucco siding, the use of bright or contrasting colors, spandrel glass, large expanses of windows, flat or shed roof forms, stacked brick veneer, asymmetrical facades, and occasionally vertical wood siding.

Built in 1950, the portion of the building at 2817 Tenth Street that exhibits subtle reference to the Midcentury Modern style, was built at the height of the style's popularity. As a light-industrial building – a property type not prone to expressive architectural styling – the simple Modernistic lines of the style are in keeping. The building exhibits the style in its boxy forms, asymmetrical

B10. Significance: (continued)

facade, flat roof, the box canopy overhanging the loading dock, and the visual horizontal emphasis created by the flat fascia boards at the roofline, although these may be a later addition. In the brick construction and exterior wall material, multi-lite and multi-operation metal-sash windows, service entrances with roll-up doors, loading dock, and lack of ornamentation otherwise, the building is purely utilitarian, embracing function over architectural aesthetics. Similarly, the concrete wall surfaces, small aluminum sash windows, service entrances and loading docks, corrugated metal canopy, and lack of overt ornamentation on the 1970 tilt-up southern portion of the building is also meant for functionality and is without distinct style.

Alterations

The following building permits and other records are on file with the City of Berkeley Department of Planning & Development. They provide documentation of exterior alterations that the property has undergone throughout it's history [clarifying comments by author in brackets]:

Date	Permit #	Description of Work
08/02/50	67970	Warehouse built, 45' x 135' building area. $18,000. Engineer: H.M. O'Neil Co. Owner: Robinson & Davis [originally addressed 2821 Tenth Street, but comprises current right side of portion of building addressed 2817 Tenth Street]
04/10/56	79488	Install interior partitions in existing building. 2821 10th, industrial assembly use. Owner: Shand & Jurs Co.
09/08/66	107090	Addition to warehouse, $39,000 [left side of portion of building currently addressed 2817 Tenth Street]
04/10/70	?	Construction of new tilt-up concrete warehouse with office at front of building. $100,000. For Emerald Packaging by Oliver & Komes, contractors. [Building currently addressed 2821 Tenth St.]
03/03/75	?	Repair fire damaged wood bow string truss roof. Owner: Emerald Packaging
06/27/75	?	Ink storage room addition, block walls, metal deck, concrete roof. Owner: Emerald Packaging [Addition of interior room]
1981	527817237	Install 8'x8' steel rolling fire door on brick wall, cut wall for door. [At 2821 Tenth Street. May have been for opening between buildings 2817 and 2821.]
04/06/90	?	Hazardous materials leak in baffled underground tank at 2821Tenth Street; underground tank removed. Owner/tenant: Emerald Packaging
03/27/95	ZP #Z1729	Seismic upgrade to workshop at 2821 Tenth Street. Owner: Jim Kelley
08/23/00	ZC #00-0841	Tenant Improvements at 2817 Tenth Street for Meyer Sound; add mezzanine for offices, skylights, restrooms. Owner: James P. & Rosaleen Kelley
1999/2000	?	Demolish a well on “former Emerald Packaging facility” property.

Alterations observed from a circa 1970 photo (Emerald Packaging, https://www.empack.com/timeline/) and older Google Street View images, but which are not documented in building permit records, include:

- Removal of flat, individual letter, “Emerald Packaging” signage that filled much of the wall area at the center of the 2817 Tenth Street facade.
- Possible removal of a flat canopy over the door and window on the right side of 2817 Tenth Street facade.
- Possible addition of wide fascia board at roofline of 2817 Tenth Street portion of building.
- Large vertical wood slat screens over windows and surrounding wall area (spanning from low wall to intermediate cornice) on west facade of 2821 Tenth Street removed in early 2016 and replaced with smaller metal security grilles.

California Register Evaluation

The California Register of Historical Resources (California Register) is an inventory of significant architectural, archaeological, and historical resources in the State of California. In order for a property to be eligible for listing in the California Register, it must be found significant under one or more criteria relating to historically significant events, people, architects or architectural merit, or information potential. The following provides an evaluation of the historic significance of 2817-2821 Tenth Street:

Criterion 1 (Event): *Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.*

B10. Significance: (continued)

No specific events of historical importance are known to have occurred at the property. The property was developed with the current light-industrial structures late in the history of the neighborhood and had been previously developed with small residences that fit an earlier pattern of development in the area. The mid and late-20th century saw increasing commercial and light industrial redevelopment happening in the immediate neighborhood, but considering the distinct industrial character of much of West Berkeley that began as early as the 1870s, this later redevelopment is not a noteworthy occurrence. The businesses housed at the property included a manufacturer of fire, plumbing, and oil industry equipment; a produce packaging manufacturer; a sound system equipment manufacturer; and the maker of steering wheel covers. None of these industries are particularly significant to Berkeley's industrial or economic history and none of the companies claim any significant achievements in their fields that would be considered historic events or developments.

The property does not appear to be eligible for listing in the California Register under Criterion 1.

Criterion 2 (Persons): *Associated with the lives of persons important to local, California or national history.*

The property has been owned and occupied by commercial entities rather than individuals for most of its history, although the heads of those companies are known in some cases. None of the known individuals appear to rank as significant historical figures. Their work as local business proprietors appears typical and undistinguished within Berkeley's commercial and industrial context.

The property does not appear to be eligible for listing in the California Register under Criterion 2.

Criterion 3 (Architecture): *Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.*

The property at 2817-2821 Tenth Street is utilitarian with no strong expression of architectural style other than some reference to Midcentury Modern aesthetics on the earlier northern portion of the building. These Midcentury Modern characteristics are few and very basic and the building does not stand out as an exceptional example of the style. There are countless other examples of utilitarian light-industrial buildings locally and regionally that provide comparable and better examples.

No architects were involved with the design of the building. The initial portion of building to be constructed was designed by engineering firm H.M. O'Neil Company, about which little is known. The company likely did other work in the area, but examples of projects are unknown, and H.M. O'Neil does not appear to qualify as a master engineer. A later section of the building was constructed by contractors Oliver & Komes, but nothing is known about this company and they do not appear to qualify as masters. The simplicity and utilitarianism of the building itself is indication that the focus was on construction for function, rather than expression of any high-style design.

The property does not appear to be eligible for listing in the California Register under Criterion 3.

Criterion 4 (Information Potential): *Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.*

Criterion 4 is typically concerned with archaeological investigation. Where buildings or architectural elements are concerned, Criterion 4 typically relates to rare construction types, of which 2817-2821 Tenth Street is not an example.

The property does not appear to be eligible for individual listing in the California Register under Criterion 4.

Berkeley Landmark Evaluation

Berkeley Landmarks are designated historical resources within the City of Berkeley. Resources may be designated as Landmarks if they meet one or more of five criteria similar to those used for the California Register, but which elaborate on areas of significance. The following provides an evaluation of the historic significance of 600-630 Bancroft Way according to local significance criteria:

1. Architectural Merit:
a-c. Property that is the first, last, only or most significant architectural property of its type in the region; Properties that are prototypes of or outstanding examples of periods, styles, architectural movements or construction, or examples of the more notable works of the best surviving work in a region of an architect, designer or master builder; Architectural examples worth preserving for the exceptional values they add as part of the neighborhood fabric.

The property at 2817-2821 Tenth Street is not the first, last, only, or most significant mid-century light industrial building in the

B10. Significance: (continued)

area. It is utilitarian with no strong expression of architectural style other than some reference to Midcentury Modern aesthetics on the earlier northern portion of the building. The simplicity and utilitarianism of the building itself is indication that the focus was on construction for function, rather than expression of any high-style design. Its designer/builders are little known and do not appear to qualify as masters in their fields. There are countless other examples of utilitarian light-industrial buildings in the neighborhood that provide comparable and better examples. Subsequently, 2817-2821 Tenth Street does not qualify as a Berkeley Landmark under this criterion.

2. Cultural value: Structures, sites and areas associated with the movement or evolution of religious, cultural, governmental, social and economic developments of the City

The property has served as a light-industrial facility from the time it was built to the present and has housed four known manufacturing companies. As a light-industrial property, economic developments would be the applicable category of cultural value to assign the property. However, the property is one of many light-industrial facilities located in the immediate neighborhood, and West Berkeley is known for having had a very early industrial history. Any number of other nearby light-industrial properties could likely serve as earlier and better examples of industrial-related economic development in Berkeley than the subject property. The property does not appear to have the high cultural value that would qualify it as a Berkeley Landmark under this criterion.

3. Educational value: Structures worth preserving for their usefulness as an educational force

The property at 2817-2821 Tenth Street does not appear to have any use as an educational tool. It is a common and late example of a light-industrial property in West Berkeley, of which many others exist. The manufacturing activities conducted in the building throughout its history have been common and not especially influential to Berkeley's economy. The property does not have any potential to convey lessons on history, as it is not associated with important events or people. It therefore does not appear to have the high educational value that would qualify it as a Berkeley Landmark under this criterion.

4. Historic value: Preservation and enhancement of structures, sites and areas that embody and express the history of Berkeley/Alameda County/California/United States. History may be social, cultural, economic, political, religious or military.

The property at 2817-2821 Tenth Street reflects the general organic growth of West Berkeley, which included both residential and industrial uses, and often, residential properties redeveloped as industrial. It does not have any strong associations outside of these development patterns in the area. Neither the construction of the building, nor its later history, were specifically influenced by social, cultural, economic, political, religious, or military events or developments in the area. It owners and occupying businesses do not appear to have been historically significant or have any noteworthy accomplishments to their names and no specific events of significance occurred at the property. It therefore does not appear to have the high historic value that would qualify it as a Berkeley Landmark under this criterion.

5. Any property which is listed on the National Register described in Section 470A of Title 16 of the United States Code.

The property at 2817-2821 Tenth Street is not listed in the National Register of Historic Places and therefore it does not qualify as a Berkeley Landmark under this criterion.

Berkeley Structure of Merit

Berkeley Structures of Merit are designated historical resources within the City of Berkeley. Resources may be designated as Structures of Merit if they meet general and/or specific criteria. An evaluation follows:

1. General criteria shall be architectural merit and/or cultural, educational, or historic interest or value. If upon assessment of a structure, the commission finds that the structure does not currently meet the criteria as set out for a landmark, but it is worthy of preservation as part of a neighborhood, a block or a street frontage, or as part of a group of buildings which includes landmarks, that structure may be designated a structure of merit.

As assessed under Berkeley Landmark criteria, 2817-2821 Tenth Street is not of great architectural merit or cultural, educational, or historic value. It is a common and unremarkable element of West Berkeley's industrial development. Visual observation of buildings around the property does not indicate any cohesive or thematically representative grouping within which it would play a meaningful role. Therefore, the property does not appear to qualify as a Structure of Merit under the General Criteria.

Specific Criteria

a. The age of the structure is contemporary with (1) a designated landmark within its neighborhood, block, street frontage, or group of buildings, or (2) an historic period or event of significance to the City, or to the structure's neighborhood, block, street

B10. Significance: (continued)
frontage, or group of buildings.

Within a one-block radius of the the subject property there is one designated Berkeley Landmark; the H.S. Heinz Co. Factory at 2900 San Pablo Avenue (1927-1928). The Heinz Factory was built more than 20 years before the subject building and is a massive industrial factory in the Mediterranean Revival style. The large factory and relatively small light-industrial building share no traits other than general manufacturing activities. The property at 2817-2821 Tenth Avenue is also not associated with any major event or historic period specific to Berkeley's history and is not representative of the early or significant development of the West Berkeley neighborhood, which took place 80 to 100 years before construction of the subject building.

b. The structure is compatible in size, scale, style, materials or design with a designated landmark structure within its neighborhood, block, street frontage, or group of buildings.

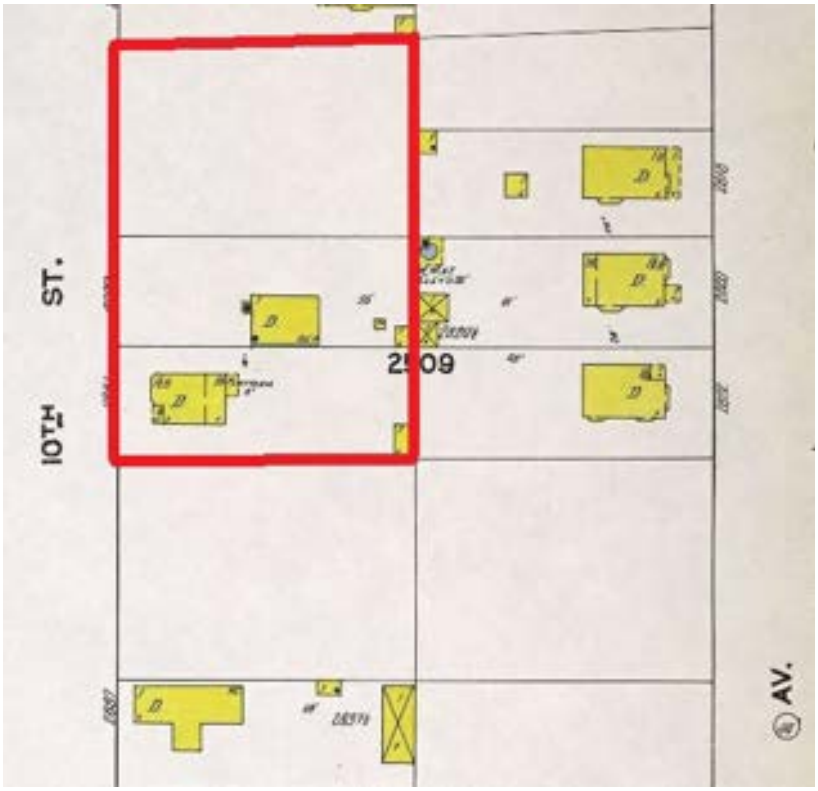
As noted, one designated Landmark is located in close proximity to 2817-2821 Tenth Street. The H.S. Heinz Co. Factory is much larger (covering the equivalent of two city blocks), designed in an ornate iteration of the Mediterranean Revival style, and has a steel frame and masonry curtain wall structure. The factory and subject light-industrial building have few to no physical characteristics in common.

c. The structure is a good example of architectural design.

The property at 2817-2821 Tenth Street is utilitarian with no strong expression of architectural style other than some reference to Midcentury Modern aesthetics on the earlier northern portion of the building. These Midcentury Modern characteristics are few and very basic and the building does not stand out as an exceptional example of the style.

d. The structure has historical significance to the City and/or to the structure's neighborhood, block, street frontage, or group of buildings.

The property at 2817-2821 Tenth Street demonstrates no particular historical significance within the context of Berkeley's history or that of the neighborhood that surrounds it. It is a late element of West Berkeley industrial development and buildings around the property do not indicate any cohesive or thematically representative grouping within which the subject property would play a meaningful role.



Integrity
In order to qualify for historic designation, a property must possess significance under the aforementioned criteria *and* have historic integrity. The property at 2817-2821 Tenth Street does not appear to possess the historic significance necessary to qualify for designation; therefore, an analysis of its integrity is not required. However, it should be noted that the building has undergone alteration over time, evolving from a single small warehouse to a building that essentially quadruples the size of the original building and was constructed in parts, sometimes with little relation to one another, over the course of 20 years.

Conclusion
Based on the above analysis, the property at 2817-2821 Tenth Street does not appear to be eligible for listing the California Register of Historical Resources or as a City of Berkeley Landmark or Structure of Merit. Therefore, it does not qualify as a Historic Resource under the California Environmental Quality Act (CEQA).

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	2820 San Pablo Avenue - Existing
Operational Year	2023
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.90
Precipitation (days)	17.0
Location	2821 Tenth St, Berkeley, CA 94702, USA
County	Alameda
City	Berkeley
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1500
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.20

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Manufacturing	23.3	1000sqft	0.54	23,318	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	7.10	annual days of extreme heat
Extreme Precipitation	7.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	3.12

AQ-PM	40.0
AQ-DPM	94.4
Drinking Water	4.21
Lead Risk Housing	54.8
Pesticides	0.00
Toxic Releases	60.1
Traffic	94.2
Effect Indicators	—
CleanUp Sites	97.7
Groundwater	99.6
Haz Waste Facilities/Generators	99.6
Impaired Water Bodies	90.1
Solid Waste	76.4
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	66.0
Healthy Places Index Score for Project Location (b)	76.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Consistent with Trip Generation Analysis by Abrams
Operations: Architectural Coatings	Pursuant to BAAQMD Regulation 8 Rule 3
Operations: Water and Waste Water	WTP 100% aerobic

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	2820 San Pablo Avenue - Proposed Project
Construction Start Date	2/1/2024
Operational Year	2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.90
Precipitation (days)	17.0
Location	2820 San Pablo Ave, Berkeley, CA 94702, USA
County	Alameda
City	Berkeley
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1500
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.20

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Manufacturing	17.5	1000sqft	0.40	17,488	2,381	0.00	—	—
General Office Building	20.6	1000sqft	0.47	20,560	0.00	0.00	—	—
Apartments Low Rise	1.00	Dwelling Unit	0.06	2,834	0.00	0.00	3.00	—
Enclosed Parking Structure	14.6	1000sqft	0.33	14,561	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	7.10	annual days of extreme heat

Extreme Precipitation	7.50	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	3.12
AQ-PM	40.0
AQ-DPM	94.4
Drinking Water	4.21
Lead Risk Housing	54.8
Pesticides	0.00

Toxic Releases	60.1
Traffic	94.2
Effect Indicators	—
CleanUp Sites	97.7
Groundwater	99.6
Haz Waste Facilities/Generators	99.6
Impaired Water Bodies	90.1
Solid Waste	76.4
Sensitive Population	—
Asthma	72.8
Cardio-vascular	34.2
Low Birth Weights	43.1
Socioeconomic Factor Indicators	—
Education	28.4
Housing	49.7
Linguistic	13.3
Poverty	43.5
Unemployment	63.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	38.14962146
Employed	54.83125882
Median HI	49.50596689
Education	—

Bachelor's or higher	87.48877197
High school enrollment	100
Preschool enrollment	89.32375209
Transportation	—
Auto Access	21.89144104
Active commuting	95.983575

Outdoor Workers	83.2
Climate Change Adaptive Capacity	—

Impervious Surface Cover	9.5
Traffic Density	94.5
Traffic Access	68.4
Other Indices	—
Hardship	61.1
Other Decision Support	—
2016 Voting	47.8

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	66.0
Healthy Places Index Score for Project Location (b)	76.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Construction: Off-Road Equipment	assumed pursuant to the City's COA
Operations: Hearths	no fireplaces
Operations: Vehicle Data	Consistent with Trip Generation from Abrams
Construction: Architectural Coatings	Pursuant to BAAQMD Regulation 8 Rule 3
Operations: Architectural Coatings	Pursuant to BAAQMD Regulation 8 Rule 3
Operations: Energy Use	All-electric development pursuant to BMC Chapter 12.80, natural gas converted to electricity
Operations: Water and Waste Water	WTP 100% aerobic
Construction: Construction Phases	Assumes architectural coating occurs simultaneously as building construction
Land Use	applicant provided

Geotechnical Investigation Report, Berkeley Mixed Use Project
2821 Tenth Street and 2820 San Pablo Avenue, Berkeley, California

January 28, 2022

Dear Ms. Jaeb,

Fugro is pleased to submit this geotechnical investigation report for the proposed Mixed-Use Project at 2821 Tenth Street and 2820 San Pablo Avenue in Berkeley, California. Our work was performed in accordance with Fugro's proposal and Agreement between Cork-Mayo Investments, LLC and Fugro dated November 12, 2021, and the subsequent emailed authorization for additional scope of work dated December 9, 2021.

This report was prepared to identify the key geologic and geotechnical aspects of the site and to summarize results of our site data review, field exploration, laboratory testing, and geologic and liquefaction hazard evaluations for the project site. This report also provides geotechnical recommendations for the design and construction of the project. We appreciate this opportunity to be of service to Cork-Mayo Investments, LLC. Should you have any questions or require additional information, please contact us.

Sincerely,

Marlene Watson, PE, GE
Principal Geotechnical Engineer

Ronald L. Bajuniemi, PE, GE
Principal Consultant

1. Introduction

This report presents the results of the geotechnical investigation conducted by Fugro for the proposed mixed-use development located at 2821 Tenth Street and 2820 San Pablo Avenue in Berkeley, California, as shown on the Site Vicinity Map (**Plate 1**). The coordinates for the proposed commercial development are provided below.

Table 1.1: Site Coordinates

Latitude	Longitude
37.8553°N	-122.2882°W

1.1 Project Description

The proposed project includes the demolition of existing structures at 2821 Tenth Street and 2820 San Pablo Avenue. Following demolition, the proposed development includes two integrally connected buildings which will be treated as one single development.

The Tenth Street parcel is currently occupied by a warehouse that encompasses most of the parcel. The portion of the new structure on the Tenth Street parcel is proposed to be a three-story commercial structure with a mezzanine/roof deck above and parking for the whole development at ground level in a 14,551-square-foot building. The building occupancy will be a mix of light industrial and office uses.

The San Pablo Avenue parcel is currently occupied by an abandoned single-family residence with a sizeable rear yard, and the portion of the new structure is proposed to be a 15,196-square-foot, four-story structure with offices on floors one through three and a residence on the fourth floor.

We understand the proposed development will be constructed at-grade with minimal cuts or fills.

1.2 Scope of Services

The purpose of our geotechnical investigation was to identify key geotechnical considerations, liquefaction hazards, and seismology aspects of the site that could impact the project and provide geotechnical recommendations for design and construction of the project. The scope of our services performed included the following:

- Review geotechnical and geologic site conditions based on the subsurface data contained in our files and provided by others, generally available geologic maps and hazard zonation maps, and other related literature.

- Perform a site reconnaissance to observe the existing site conditions from a geotechnical and geologic viewpoint.
- Conduct a field exploration program at the site, including drilling one (1) exploratory boring and performing three (3) CPTs.
- Perform geotechnical laboratory testing on select soil samples for classification, index, strength, and corrosivity testing.
- Identify the geotechnical and geologic conditions that could impact the project.
- Perform geotechnical engineering analyses.
- Prepare this report to summarize the results of our geotechnical and geologic data review, field exploration, laboratory testing, geologic hazards evaluations, and engineering analyses, and to provide geotechnical conclusions and recommendations for design and construction of the project.

The data obtained, and the analyses performed were for the primary purpose of providing geotechnical recommendations for design and construction of the project. Chemical analytical assessment of onsite materials for soil or groundwater hazardous contaminants was beyond our scope of work.

2. Data Review and Exploration

2.1 Review of Existing Data

As part of our study, Fugro reviewed relevant geotechnical, geologic, and seismic data. Literature that was reviewed is summarized in **Section 8, References**. The conclusions from our review of the existing data are presented in subsequent sections of this report.

2.2 Site Reconnaissance

We perform a site reconnaissance on November 29 and December 01, 2021, to observe surface conditions, coordinate access for field exploration with our Cone Penetration subcontractor (Conetec), as well as mark proposed exploration locations for notification of Underground Service Alert (USA 811 North).

2.3 Field Explorations

Fugro performed a geotechnical field exploration program consisting of drilling one (1) exploratory boring (B-01) to a maximum depth of about 51-1/2 feet on December 10, 2021, and pushing three (3) Cone Penetration Tests (CPT-01 through CPT-03) to a maximum depth of about 88 feet on December 6 and 20, 2021. The approximate locations of the boring and CPTs are shown on the Site Plan (**Plate 2**). These locations were determined by tape measuring from field landmark references and should be considered accurate only to the degree implied by the method used.

Underground Service Alert (USA) was notified to clear all locations prior to explorations. A private utility locater was also used to provide further clarity with regards to the existing underground utilities at proposed exploration locations. In addition, a drilling permit was attained from the City of Berkeley Toxics Management Division for the explorations.

A description of the field exploration procedures, logs of borings and logs of CPTs are provided in **Appendix A**.

2.4 Geotechnical Laboratory Testing

Our geotechnical laboratory testing program was directed toward a quantitative and qualitative evaluation of the physical and mechanical properties of the soils underlying the site. This program included:

- Moisture content per ASTM D2937;
- Dry unit weight determinations per ASTM D2937;
- Percent passing #200 sieve analyses per ASTM D422 and D1140;
- Plastic and liquid limits per ASTM D4318;

- Unconfined compressive strength tests per ASTM D2166;
- Unconsolidated undrained triaxial shear strength test (TXUU) per ASTM D2850;
- Corrosivity tests.

The geotechnical laboratory tests were performed by Cooper Testing Laboratory in Palo Alto, California. The laboratory testing results are included in **Appendix B**. Some of the test results are also presented on the boring logs at the appropriate sample depths.

Corrosivity tests that include redox, pH, chlorides, sulfates, and resistivity were performed by Cooper Testing Laboratory in Palo Alto, California, on one representative onsite soil sample (from Boring B-1 at depths of about 5-feet deep). The test results regarding the onsite near-surface soil corrosivity are included in **Appendix B**.

3. Site Conditions

3.1 Regional and Site Geology

The project site is located along the western shoreline at the east side of the San Francisco Bay in the Coast Ranges geomorphic province. Northwest-southeast-trending valleys and ridges characterize this province. These are controlled by folds and faults that resulted from the collision of the Pacific and North American plates, Pacific plate subduction beneath the North American plate, and subsequent strike-slip faulting along the San Andreas fault zone system. Bedrock underlying the region is primarily of the Franciscan Complex, characterized by a diverse assemblage of sandstone, shale, chert, greenstone and mélange.

Geologic formations in the San Francisco Bay Region range in age from Jurassic (190 to 135 million years ago) to recent Holocene (less than 11 thousand years ago). The Franciscan Complex is the oldest and underlies younger surficial deposits throughout the San Francisco Bay Region. The Franciscan Complex consists mainly of marine-deposited sedimentary and volcanic rocks in close association with bodies of serpentine, possible old oceanic crest (Hyndman, 1972). Following deposition, the Franciscan rocks were regionally uplifted and, in the process, extensively faulted and folded.

The Bay Area has experienced several episodes of uplift and faulting during late Tertiary time (about 25 to 2 million years ago). This produced a series of northwest-trending valleys and mountain ranges, including the East Bay Hills, the San Francisco Peninsula and the intervening San Francisco Bay. Uplifted areas were eroded, and as a result, Pleistocene and recent marine sediments were deposited in San Francisco Bay, and sediments were deposited in low-lying stream and marshland areas adjacent to the Bay.

Structurally, the project site is in an area dominated by the San Andreas Fault system that has created a northwest-trending structural grain of ridges and valleys. The San Andreas Fault system also is the boundary between the Pacific and North American global tectonic plates. Strike-slip motion along this plate boundary replaced subduction several million years ago (Atwater, 1970). The subduction-style faulting and deformation responsible for intercalating the various older rock types in this area are no longer active in the region.

According to Witter et al. (2006), the site (below surficial fills) is underlain by Holocene alluvial fan deposits (Qhf). The alluvial deposits (Qhf) consist of sand, gravel, silt, and clay, and are moderately to poorly sorted, and moderately to poorly bedded. According to Helley and Graymer (1997), the site is underlain by Holocene alluvial fan and fluvial deposits (Qhaf) that consist of brown or tan, medium dense to dense, gravelly sands or sandy gravels that generally grade upward to sandy or silty clays.

3.2 Regional and Site Seismicity

The project site is located in the San Francisco Bay area that is considered as one of the most seismically active regions in the United States. Significant earthquakes have occurred in the area in the past and are associated with crustal movements along a system of sub-parallel fault zones that generally trend in a north-westerly direction. The approximate distances from the site to several closest known mapped major active and potentially active faults within 60 miles are summarized in **Table 3.1**.

Table 3.1: Regional Faults and Seismicity

Fault	Estimated Maximum Earthquake Moment Magnitude (M_w)	Approximate Closest Distance Between Site and Fault (miles)	Direction from Site to Fault
Hayward – Rogers Creek	7.3	2.3	NW
Mount Diablo Thrust	6.7	13.7	E
San Andreas	8.1	15.7	SW
Calaveras	7.0	15.4	SE
Green Valley	6.8	15.9	NE
San Gregorio	7.5	19.0	SW
West Napa	6.7	21.4	N
Greenville	7.0	24.9	SE
Great Valley	6.7	26.6	NE
Monte Vista – Shannon	6.5	28.9	S
Point Reyes	6.9	30.5	NW
Hunting Creek – Berryessa	7.1	41.5	N
Maacama – Garberville	7.4	54.4	NW
Zayante – Vergeles	7.0	55.6	SE

According to the Alquist-Priolo (AP) Earthquake Fault Zones Map of the Oakland West Quadrangle (1982), the site is not located within a fault zone as designated by the State of California.

USGS Fact Sheet (2016) indicates there is a 72 percent chance of at least one magnitude 6.7 or greater earthquake striking the San Francisco Bay region between 2014 and 2043. Earthquake intensities will vary throughout the San Francisco Bay Area depending upon the magnitude of the earthquake, the distance of the site from the causative fault, the type of materials underlying the site, and other factors.

3.3 Surface Conditions

As shown on the attached Site Plan (**Plate 2**) and at the time of our exploration, the site is bounded by Tenth Street and San Pablo Avenue to the west and east, respectively, and by commercial buildings to the immediate north and south.

The site is generally level with existing ground elevations of about 45 to 48 feet relative to the City of Berkeley datum. The Tenth Street parcel is currently occupied by a warehouse that encompasses most of the parcel. The San Pablo Avenue parcel is currently occupied by an abandoned single-family residence with a sizeable rear yard, and at the time of our exploration, demolition contractors were in the process of tearing down the existing abandoned house.

3.4 Subsurface Conditions

The subsurface conditions encountered during our field explorations are consistent with geologic mapping. The subsurface soils encountered in our boring and CPTs at the site and vicinity generally consist of about 3 feet of clayey or sandy fill materials.

Below the surficial fill, stiff to hard native clays with interbedded layers of medium dense sand and gravel lenses were encountered to the maximum depth explored of about 88 feet.

Based on the results of in-situ soil shear wave velocity measurements taken at the locations of CPT-01, and P-S logging test conducted therein, the average shear wave velocity of soils within a depth of 100 feet (30 meter) at the site is estimated to be about 1129 feet per second (ft/sec) or 344 meters per second (m/sec).

The near-surface clayey fills generally have a medium plasticity and moderate expansion potential. The underlying native fat clays have a moderate to high plasticity and high expansion potential. Atterberg Limits testing of the alluvial soils indicates a plasticity index of 9 suggestive of low plasticity. Our boring and CPT logs are presented in **Appendix A**. Our laboratory testing results of pertinent soil samples are included in **Appendix B**.

3.5 Groundwater

Groundwater was encountered in our Boring 2021-B-01 at depth of about 23½ feet below the ground surface during drilling. It should be noted that our boring might not have been left open for a sufficient period of time to establish equilibrium ground water conditions. The results of our CPT porewater pressure dissipation tests at the site indicate the groundwater levels were at about 5 to 10 feet below ground surface at the time of testing.

Fluctuations in the groundwater level could occur due to change in seasons, variations in rainfall, tidal effects, and other factors. It should be noted, local water seepage conditions (possibly due to unknown leaking pipelines) at much shallower depths can also occur.

Detailed site flood risk evaluations are beyond our scope of work.

3.6 Soil Corrosion Potential

Corrosivity tests, that include redox, pH, chlorides, sulfates, and resistivity were performed on one onsite soil samples (from Boring B-01 at about 5 feet). The test results were provided by Cooper Testing Laboratories, out of Palo Alto, CA, and the complete results are included in **Appendix B**. **Table 3.1** below summarizes the corrosivity tests results on the soil samples from the site.

Table 3.1: Summary of Corrosion Test Results for Buried Concrete and Ferrous Metals

Test No.	Boring	Depth (ft)	Sulfate (mg/kg)	Chloride (mg/kg)	pH	Resistivity (ohm-cm)	Redox Potential (mV)
446-321	LT1A	5	828	25	7.5	1,139	-

ND = Not Detected

We recommend these test results be forwarded to your underground and foundation contractors, pipeline designers, and foundation designers so that they can design and install corrosion protection measures for buried concrete and ferrous metal improvements. We also recommend additional testing be performed if the test results in **Appendix B** are deemed insufficient by the designers of the corrosion protection.

3.7 Soil Liquefaction, Dynamic Densification, and Lateral Spreading

The Seismic Hazard Zones Map of the Oakland West Quadrangle indicates the site is located in a liquefaction seismic hazard zone as designated by the State of California. According to Witter et al. (2006) and Association of Bay Area Governments (ABAG) Resilience Program Liquefaction Susceptibility Map, the site is located in an area that has been characterized as having a moderate liquefaction susceptibility.

Soil liquefaction is a phenomenon primarily associated with saturated cohesionless soil layers. These soils can dramatically lose strength due to increased pore water pressure during cyclic loading, such as imposed by earthquakes. During the loss of strength, the soils acquire mobility sufficient to permit both horizontal and vertical movements. Soils that are most susceptible to liquefaction are clean, loose, uniformly graded, saturated sands that lie close to the ground surface; although, liquefaction can also occur in fine-grained soils, such as low-plasticity silts. Densification can occur where the loose soils are unsaturated. Lateral spreading occurs when soils liquefy during an earthquake event and the liquefied soils with the overlying soils move laterally to unconfined surfaces, which causes significant horizontal ground displacements.

3.7.1 Historical Liquefaction in Site Region

According to the State of California Seismic Hazard Zone Report of Oakland West Quadrangle

(2003), no observed liquefaction-induced ground failures (ground settlement, lateral spread, sand boil, cracks in streets or ground, pipeline break, and other miscellaneous effects) have been documented at the site and the immediate surrounding areas. Following the 1989 Loma Prieta earthquake (a recorded peak ground acceleration of 0.26g seismic event in the site region), Tinsley et al. (1998) reported minor lateral spreading and settlements along Interstate Highway 80 and West Frontage Road, south of University Avenue to Emeryville (Site 33). This historical liquefaction area is located at least 2,400 feet west of the project site.

3.7.2 Liquefaction Evaluation Methodology

We performed a CPT-based seismic soil liquefaction analyses for the site and vicinity in general accordance with the recommended procedures by Southern California Earthquake Center (SCEC, 1999). Our liquefaction triggering analyses used the Boulanger and Idriss (BI, 2014) and NCEER (2001) methods and a peak ground acceleration from a Maximum Considered Earthquake (MCE) event. Post-liquefaction deformations were calculated for all liquefiable layers by using EERI Monograph 12 procedures (Idriss & Boulanger, 2008) for the BI 2014 method and Ishihara and Yoshimine (1992) procedures for NCEER method. We have included corrections for fines and plasticity in our liquefaction evaluation.

Per the 2019 CBC/ASCE 7-16, a site-specific geometric mean MCE peak ground acceleration adjusted for site effects (PGA_M) of 0.886g (adjusted for Site Class D soil condition) with a mean earthquake magnitude of 7.1 was used in our analyses. A design high groundwater level of 5 feet deep was used in our analyses to assess its impacts on liquefaction and liquefaction induced ground surface damage potential.

3.7.3 Results and Conclusions

The site is located in a seismically active region of California. Significant earthquakes in San Francisco Bay Area have been associated with movements within the fault zones. Earthquakes occurring along faults in the area have the potential to produce moderate to strong ground shaking at the site. Practically all structures within San Francisco Bay Area will experience ground shaking effects during a moderate to strong earthquake.

The results of our analyses indicate that some of the saturated medium-dense sand and gravel lenses encountered in our borings and CPTs at the site have a moderate to high potential for liquefying where they are subjected to an MCE earthquake event. These randomly distributed, potentially liquefiable sand and gravel lenses vary from about 3 to 18 feet thick and are generally located within 40 feet below the existing ground surface.

We estimate the MCE earthquake induced liquefaction in these clayey lenses could result in volumetric strains varying from about 5 to 7 percent and may cause total ground surface settlements up to about 7 inches at the site and vicinity. The actual ground surface damage or

manifestation depends on characteristics of the triggering earthquakes and thicknesses of overlying non-liquefiable soils and underlying liquefiable soils as indicated by the empirical criteria developed by Ishihara (1985). We judge, the risk for liquefaction-induced densification occurring at the site is high.

The majority of the densification settlement occurs within the upper 25 to 35 feet. Therefore, the top 35 feet of pile foundation embedment should be ignored in the seismic vertical load resistance designs, and the potential downdrag loads should be considered in the foundation designs. In addition, consideration should be given to using flexible pipe connections where they enter/exit the deep foundation supported structure.

Considering that the soils above the groundwater are cohesive, we judge the likelihood for dynamic densification of dry soils occurring at the site is low.

We also judge there is low potential for lateral spreading, given the relatively low topographic relief of the site and its surroundings.

4. Discussions and Conclusions

It is our opinion that the project is feasible from a geotechnical and geological engineering standpoint, provided that the conclusions and recommendations presented in this report are incorporated into the project design and specifications. The principal geotechnical considerations are near-surface soil expansion potential, undocumented fills, high groundwater, liquefaction, and construction considerations.

4.1 Expansion Potential

Expansive soils tend to shrink and swell with variations in moisture content. This shrink/swell movement can result in differential vertical movement of at-grade supported improvements.

We judge that the surficial fills have a moderate expansion potential, and the underlying native soils have a moderate to high expansion potential. At the time of this report, we anticipate that the expansive fills may have implications to exterior slabs-on-grade. However, the expansive native soils encountered at a depth of about 3 feet are at a depth where moisture fluctuations and associated shrink/swell movements are less likely to occur.

We provide earthwork recommendations to reduce the risk of expansive soils movement to slabs. Deep foundations reduce the risks associated with expansive soil movements.

4.2 Undocumented Fills

In the exploratory boring, we encountered about 3 feet of undocumented fill materials. Existing fills that have been improperly placed and compacted can cause settlement and differential movement to improvements supported at-grade. Deep foundations reduce the risks associated with undocumented fills.

4.3 High Groundwater

As described previously in **Section 3.5**, groundwater was encountered by our boring and CPTs at depths of about 5 to 10 feet below ground surface at the time of our explorations. Fluctuations in the groundwater level could occur due to change in seasons, variations in rainfall, tidal effects, and other factors.

We recommend a design groundwater table at 5 feet below ground surface be used for the project, which is at an Elevation of about 40 feet per the City of Berkeley datum. Subgrade stabilization and dewatering during construction may be required if the high groundwater condition is encountered. Any planned structures located below the design groundwater level, should be designed to resist hydrostatic forces on the below grade walls (undrained case) and uplift forces on the below grade slab due to the high groundwater condition.

4.4 Liquefaction

The results of our subsurface exploration, laboratory testing, and liquefaction evaluation indicate a high risk for liquefaction and associated densification settlement. We judge that structures supported on shallow foundations would experience excessive total and differential settlement. Therefore, we conclude that the structures should be supported on deep foundations. In addition, the resulting liquefaction settlement will cause a downdrag load on the deep foundation and after a major seismic event, the building and downdrag loads must be carried in skin friction below a depth of 35 feet.

Note that ground improvement techniques may also be considered to mitigate soil liquefaction hazards. The development of recommendations for ground improvement is not included in our current scope of work, but can be provided at your request.

4.5 Construction Considerations

Due to the relatively shallow groundwater, the contractor should be prepared to provide dewatering during construction for installation of below-grade improvements such as underground utilities, grade beams, drilled piers, etc.

The moisture content of clayey surficial soils can result in difficulty achieving compaction.

While reworking of the existing fills is not required for geotechnical considerations, the existing fills may need to be reworked to provide adequate support for construction equipment. We would like to point out that existing fills do not provide reliable lateral resistance; therefore, passive resistance for foundation elements is not considered for existing fills. If fills are reworked, passive resistance can be applied. Fugro should be contacted during design or construction to provide additional consultation should reworking of existing fills be needed.

There is the possibility that rubble may be present within existing fills. Consideration should be given to pre-drilling through existing fill prior to installing deep foundations.

5. Recommendations

5.1 Earthwork

5.1.1 Clearing and Site Preparation

The site should be cleared of all obstructions, including existing structures and their entire foundation systems, concrete slabs-on grade, asphalt concrete pavements, existing utilities and their associated backfill, as well as landscaping, and debris. If deep foundations are encountered during demolition, Fugro should be contacted to provide input regarding their removal or demolition.

Concrete/asphalt concrete, baserock, and trench backfill materials can be reused as new fills provided debris is removed and concrete/asphalt concrete are broken up to meet the engineered fill size requirements presented in this report.

Holes resulting from the removal of underground obstructions extending below the proposed finish grade should be cleared and backfilled with engineered fills and compacted to the requirements presented in this report. We recommend backfilling operations for any excavations to remove underground obstructions be performed under observations and testing of the project Geotechnical Engineer. After clearing, areas containing heavy surface vegetation should be stripped to an appropriate depth to remove these materials. We estimate the stripping depth to be about 6 to 12 inches. The amount of actual stripping should be determined in the field at the time of construction. Stripped materials should be removed from the site or stockpiled for later use in landscaping, if desired.

5.1.2 Subgrade Preparation

Following the site clearing and preparation, soil subgrades exposed in areas to receive improvements (such as engineered fills, slabs-on-grade, exterior flatwork, and pavements) should be scarified to a depth of about 12 inches, moisture conditioned to approximately 3 percent above optimum water content, and compacted to the requirements for engineered fills. Locally weak soils, if encountered, should also be excavated and replaced, or otherwise stabilized as recommended by the project Geotechnical Engineer at the time of earthwork operations.

The prepared subgrade surface should be firm, unyielding, and kept moist during construction. The subgrades should be protected from damage caused by weather and construction traffic. If the subgrades are left exposed to weather for extended periods of time or are disturbed by construction traffic, the project Geotechnical Engineer should be consulted on the need for

subgrade moisture reconditioning and/or scarifying and recompacting to eliminate shrinkage cracks and disturbances.

5.1.3 Engineered Fill Materials

New fills placed at the site should consist of compacted engineered fills, except for landscaping materials which are placed on level ground. Engineered fills should have an organic content of less than 3 percent by volume and should not contain rocks or lumps larger than 4 inches in greatest dimension with not more than 15 percent larger than 2.5 inches. Onsite soils and fills can be used as new fills in general fill areas. Imported fills used as general fill (e.g., where expansive fills are acceptable) should have a liquid limit less than 40 percent and a plasticity index not exceeding 20. Imported non-expansive fills should be predominantly granular, have a plasticity index not exceeding 12, and have a significant fine content. Imported fills should not contain environmental contaminants or debris and should be non-corrosive.

5.1.4 Fill Placement and Compaction

Within the upper 5 feet of the finished ground surface, we recommend engineered fills be compacted to at least 90 percent relative compaction, as determined by ASTM D1557. Engineered fills below a depth of 5 feet should be compacted to at least 95 percent relative compaction. The upper 6 inches of subgrade soils beneath pavements should be compacted to at least 95 percent relative compaction. Fill material should be spread and compacted in lifts not exceeding approximately eight inches in uncompacted thickness.

We recommend engineered fills be moisture conditioned to approximately 3 percent above optimum water content. In order to achieve satisfactory compaction of fill materials, it may be necessary to adjust the water content at the time of earthwork operations. This may require that water be added to soils that are too dry, or that aeration be performed in any soils that are too wet. In order to achieve satisfactory compaction of onsite excavated soils from near or below the existing groundwater level will require drying at the time of construction.

5.1.5 Trench Backfill and Pipe Bedding

Utility trenches should be backfilled with engineered fills placed in lifts of approximately 8 inches in uncompacted thickness. Thicker lifts can be used provided the method of compaction is approved by the project Geotechnical Engineer and the required minimum degree of compaction is achieved. Backfill should be placed by mechanical means only; jetting is not permitted. Onsite soils when used for trench backfill should be compacted to at least 90 percent relative compaction. Imported sands and aggregate bases when used for trench backfill should be compacted to at least 95 percent relative compaction, and sufficient water should be added during backfilling operations to prevent the soil from "bulking" during compaction. The upper 3

feet of trench backfill in foundation, slab, and pavement areas should be entirely compacted to at least 95 percent relative compaction.

Sand or gravel backfilled trench laterals that extend from irrigated landscaped areas, such as lawns or planting strips, toward pavements, exterior slabs, and building foundations, should be plugged with onsite or imported clayey soils, low strength concrete, or sand-cement slurry mixture below the edges of pavements and exterior slabs, and under perimeters of the foundations. The plugs for the trench laterals should be at least 24 inches thick, extend at least 24 inches beyond the trench walls, and extend from the bottom of the trench to the top of the sand or gravel backfills.

5

5.1.6 Exterior Slabs and Walkways

We recommend that exterior concrete slabs, such as sidewalks and aprons, be placed directly on the properly prepared subgrades in accordance with the recommendations presented in this report. Eliminating aggregate base, gravel, or crushed rock base beneath exterior slabs will reduce the potential for landscape irrigation water to seep through the granular materials and cause the underlying soil subgrades to saturate or pipe. Prior to placing concrete, subgrade soils should be moisture conditioned to increase their moisture content to approximately 3 percent above laboratory optimum moisture (ASTM D-1557).

Exterior slabs should be structurally independent from the perimeter grade beams and be free floating. Score cuts or construction joints should be provided at a maximum spacing of 10 feet in both directions. The slabs should be appropriately reinforced according to structural requirements; concentrated loads may require additional reinforcing. Partition walls or doorway trim boards should not be supported directly on the concrete slab.

The expansive clayey soils and fills at the site could be subjected to volume changes during fluctuations in moisture content. As a result of these volume changes, some vertical movement of exterior slabs should be anticipated. This movement could result in damage to the exterior slabs and might require periodic maintenance or replacement. Adequate clearance should be provided between the exterior slabs and building elements that overhang these slabs, such as doors that open outward. We recommend reinforcing exterior slabs with steel bars in lieu of wire mesh. To reduce potential crack formation, considerations should be given to installing of #4 bars spaced at approximately 18 inches on center in both directions. Both score joints and expansion joints can be used to control cracking and allow for expansion and contraction of the concrete slabs.

We recommend appropriate flexible, relatively impermeable fillers be used at all expansion and cold joints. The installation of dowels at all expansion and cold joints will reduce differential slab movements; if used, the dowels should be at least 30 inches long and should be spaced at a

maximum lateral spacing of 18 inches. Although exterior slabs that are adequately reinforced will still crack, trip hazards requiring replacement of the slabs will be reduced.

5.1.7 Surface Drainage and Landscaping

We recommend positive surface gradients of at least 2 percent be provided adjacent to structure foundations to direct surface water away from the foundations and toward suitable discharge facilities.

Roof downspouts and landscaping drainage inlets should be connected to solid pipes that discharge into appropriate facilities. Ponding of surface water must not be allowed adjacent to structure foundations and exterior slabs, adjacent to pavements.

In order to reduce moisture changes in the soils below and adjacent to structure foundations and exterior slabs, landscaping and irrigation systems should be designed and installed in a uniform and systematic manner as equally as possible on all sides of the foundations and adjacent to exterior slabs. If landscaping plans include trees, they should be planted a minimum distance of one-half the anticipated mature height of the trees from improvements to reduce the adverse effects from the tree roots. We recommend that drought resistant plants and low flow/drip irrigation watering systems be used. All irrigation systems should be regularly maintained and inspected for leakage. Over-watering must be avoided.

5.2 Foundations

The proposed development should be supported on a deep foundations (e.g. Drilled Displacement Piles, Auger cast-in-place piers, or pre-cast driven piles). Small lightly-loaded structures located at-grade, that are not settlement sensitive, can be supported on a mat foundation that is not structurally connected to the primary structure.

Foundations should be designed in accordance with the recommendations provided below. Deep foundations for the proposed development may consist of different types of foundations, and Fugro should review the foundation recommendations provided herein once a foundation type has been selected.

5.2.1 Deep Foundation

Deep foundations (e.g. Drilled Displacement Piles, Auger cast-in-place piers, or pre-cast driven piles) should be used to support the proposed structures. Building floors should be entirely supported by the deep foundation system.

Piles or piers should be spaced no closer than 3 times the shaft diameter center-to-center, and should be designed to develop capacity through skin friction from the surrounding soils. For evaluation of static vertical downward capacity, we recommend using an ultimate skin friction of 1,500 pounds per square foot (psf) in the upper 25 feet and 2,000 psf at depths greater than 25

feet. We can provide more detailed evaluation of vertical capacity, if needed. The upper 5 feet of pier embedment should be neglected in static design due to the undocumented fills and the expansion potential of onsite surface soils.

The top 35 feet of pile foundation embedment should be ignored in the seismic vertical load resistance design, and downdrag loads should be considered in foundation design. The non-liquefied soils above the liquefied layer will induce downdrag load on the deep foundation shortly after an earthquake event. Therefore, the downdrag load will not be present during a seismic event. With pore water dissipation, negative skin friction due to downdrag load will develop over a short period of time after the earthquake.

The allowable axial capacity should be calculated by dividing the ultimate axial capacity by the factors of safety provided in **Table 5.1** below. Eighty percent (80%) of the skin friction value can be used to resist uplift.

Table 5.1: Factors of Safety for Axial Loading of Pier Foundation

Load Condition	Factor of Safety
Dead Load	3
Dead plus Live Loads	2
Total Loads (including wind or seismic)	1.5

Any portion of the pile or pier shaft located within a 1.5:1 (horizontal to vertical) plane projected upward from the base of adjacent below-grade utility trenches should be ignored in the design of the pier. Static total and differential settlements of the pile/pier supported structure are estimated to be on the order of ½ inch or less.

A soil passive resistance equal to an equivalent fluid weighing 250 pcf (pounds per cubic foot) above groundwater and 145 pcf below groundwater can be used for pile/pier foundations. The soil passive resistance acts against the vertical face of the pile cap and twice the projected diameter of a shaft located within 10 feet below the bottom of pile cap. The upper 12 inches of soils should be neglected in passive resistance design unless they are confined by a pavement. This passive resistance should be considered as an ultimate value (a factor of safety of 1.0) and assumes a deflection of approximately 0.5 inch in order to fully mobilize the passive resistance.

For closely spaced piles/piers, the shear planes in the soil overlap and the lateral resistance for a pier within the group is less than that of a single pier. We note that the leading piers are generally less impacted by group effects and tend to draw higher loads. To account for the reduction of soil resistance because of group effects, we recommend multiplying the lateral loads by the reduction factors provided in **Table 5.2** below. Reduction factors, or p-multipliers, are a function of center-to-center spacing where D is the pier diameter. P-multipliers should be applied to trailing piers in the direction of loading.

As an example, a 1 by 6 pier row with a center-to-center spacing of 6 diameters and loaded in the direction parallel to the pier row would use a p-multiplier of 1.0 for the lead pier and 0.7 for all trailing piers. The same group loaded perpendicular to the pier row would use a p-multiplier of 1.0 for all piers. Linear interpolation may be used for other pier spacing.

Table 5.2: Reduction Factors for Pile Lateral Load Capacity

Center-to-Center Spacing	p-multiplier
8D	1.0
6D	0.7
4D	0.4
3D	0.3

Once the foundation type and dimensions are determined, we can provide additional L-Pile analyses and group reduction factors, if needed. Also, more detailed analyses of axial pile capacity can be provided. Alternatively, a specialty design contractor can provide pile design as a submittal to the design team for review.

Considering the presence of shallow groundwater and granular subsurface materials, there is a high probability that piers would need to be cased to prevent the risk of cave-in and loss of ground.

5.2.2 Mat Slab Foundations

When used, the structural mat slabs foundations should be supported on properly prepared subgrade that is proof-rolled to provide a smooth, unyielding surface for slab support. Where the slab will be located at surface grade, we recommend at least 18 inches of imported, predominantly granular, "non-expansive" engineered fills that meet the requirements presented in this report be provided below the slab. The non-expansive engineered fill should extend at least 3 feet beyond the mat slab footprints at surface.

The mat foundation can be designed for an allowable bearing pressure of 1,000 pounds per square foot (psf) for mats constructed on undocumented fill and 2,000 psf for mats supported on reworked subgrade. This allowable bearing applies to dead loads plus long-term live loads, and can be increased by one-third for all loads including wind or seismic. The allowable bearing pressure is a net value; therefore, the weight of the slab can be neglected for design purposes.

We recommend a modulus of subgrade reaction (k_1, 1 foot by 1 foot) of 65 pounds per cubic inch (pci) for mats constructed on undocumented fill and 125 pci for mats supported on reworked subgrade for the design of the structural mat foundation. This value can be modified to k as 65/B pci (undocumented fill) or 125/B pci (reworked subgrade), where B is the equivalent

foundation width measured in feet. We recommend the mat slab be designed in accordance with WRI/CRSI Design of Slab-on-Ground Foundations per 2019 CBC requirements. An Effective Plasticity Index of 15 can be used for the slab designs when at least 18 inches thick of properly compacted non-expansive engineered fills will be provided below the slab. The thickness and reinforcing of the slabs should be designed by the project Structural Engineer based upon the actual use and loading of the slabs. Resistance to lateral loads can be provided by friction along the base of the foundations. An allowable friction coefficient of 0.35 times the dead load (a factor of safety of 1.5) may be used between the slab bottom and supporting subgrade soils.

If migration of water vapor through the slab-on-grade is undesirable, a slab underlayment that includes a vapor retarder and 4-inch layer of ¾-inch, clean, crushed, uniformly graded gravel/drain rock can be used. An allowable friction coefficient of 0.25 times the dead load (a factor of safety of 1.5) can be used between the slab bottom and the vapor retarder.

A representative of our firm should observe the condition of the subgrade prior to the installation of the mat foundation. Loose or soft soils exposed within the foundation excavations should be overexcavated and recompacted in accordance with the recommendations provided in **Section 5.1, Earthwork**. Alternatively, the overexcavated sections can be backfilled with slurry cement.

5.3 Seismic Design Criteria

This section presents the seismic design parameters for the proposed development in Berkeley, California.

We recommend the proposed development be designed to resist the lateral forces generated by earthquake shaking in accordance with Chapter 16 of the 2019 California Building Code (CBC). This section presents seismic design criteria for use with the 2019 CBC and its companion document, ASCE 7-16, *Minimum Design Loads for Buildings and Other Structures*.

Based on the subsurface soil conditions encountered at each site, we judge that all the sites can be characterized as Site Class D, described as a “stiff soil” profile. Our analyses using the U.S. Seismic Design Maps (https://earthquake.usgs.gov/ws/designmaps/) indicate the site seismic design parameters provided in **Table 5.3** are appropriate.

Table 5.3: Seismic Design Parameters

Latitude: 37.962972 Longitude: -122.257450	ASCE 7-16 Tables/Figure	Factor/Coefficient	Value

Design Spectral Acceleration Parameters	Equation 11.4-3	S_{DS}	1.278
	Equation 11.4-4	S_{D1}	--
Geometric Mean MCE Peak Ground Acceleration adjusted for Site Effects	Figure 22-9 and Equation 11.8-1	PGA_M	0.886g

***Note:** ASCE 7-16 allows the use of the F_v, S_{M1}, and S_{D1} values listed in this table **only if** Cs is determined by Eq. (12.8-2) for values of $T \leq 1.5T_s$, and taken as equal to 1.5 times the value computed in accordance with either Eq. (12.8-3) for $T_L \geq T > 1.5T_s$ or Eq. (12.8-4) for $T > T_L$. Alternatively, ASCE 7-16 requires a ground motion hazard analysis at this site.

5.4 Below-Grade Retaining Walls

We anticipate that retaining walls may be needed for elevator shaft or other below-grade components of the at-grade structure.

Retaining walls should be designed to resist both ultimate lateral earth pressures and any additional lateral loads caused by surcharge loads on the adjoining ground surface. We recommend that any undrained unrestrained walls, which are free to deflect or rotate, be designed to resist an equivalent fluid pressure of 85 pounds per cubic foot (pcf). Undrained restrained walls should be designed to resist an equivalent fluid pressure of 100 pcf. This assumes walls with level backfills. Walls subjected to surcharge loads should be designed for an additional uniform lateral pressure equal to one-third the anticipated surcharge load for unrestrained walls, and one-half the anticipated surcharge load for restrained walls. If back-drainage is provided behind the walls, we recommend that drained unrestrained walls be designed to resist an equivalent fluid pressure of 50 pounds per cubic foot (pcf). Drained restrained walls should be designed to resist an equivalent fluid pressure of 75 pcf.

These recommended drained lateral pressures assume walls are fully-back drained to prevent the build-up of hydrostatic pressures. This can be accomplished by using ½ to ¾ inch crushed, uniformly graded gravel entirely wrapped in filter fabric, such as Mirafi 140N or equal (an overlap of at least 12 inches should be provided at all fabric joints). The gravel and fabric should be at

least 8 inches wide and extend from the base of the wall to within 12 inches of the finished grade at the top (Caltrans Class 2 permeable material (Section 68) may be used in lieu of gravel and filter fabric). A 4-inch diameter, perforated pipe should be installed at the base and centered within the gravel. The perforated pipe should be connected to a solid collector pipe that transmits the water directly to suitable discharge facilities. As an alternative to using gravel, pre-fabricated drainage panels (such as AWD SITEDRAIN Sheet 94 for walls or equal) may be used behind the walls in conjunction with perforated pipe (connected to solid collector pipe) or strip drains (such as SITEDRAIN Strip 6000 or equal).

We recommend waterproofing be applied to any proposed retaining walls where applicable. The specification of the type of waterproofing and the observation of its installation should be performed by the architect and/or structural engineer.

All structural backfill placed behind retaining walls should be compacted in accordance with the requirements provided in **Section 5.1, Earthwork**. Special care (such as the use of lightweight equipment) should be taken during wall backfill compaction operations to minimize overstressing of the wall.

Retaining walls should be supported on pier/pile foundations designed in accordance with **Section 5.2.1**.

5.5 Construction Considerations

Excavations will be required to install below grade structures and underground pipelines. All excavations that are deeper than 5 feet and will be entered by workers should be shored or sloped for safety in accordance with Occupational Safety and Health Administration (OSHA) standards.

Shoring and dewatering should be designed and installed by specialty subcontractors who are familiar with working in the site subsurface conditions. Temporary shoring such as internally braced, interlocking steel sheet piles could be used, which also act as a cut-off wall that reduces the amount of water seepage into the excavation. In addition, the shoring system should be sufficiently rigid to reduce deflection of the sides of the excavation to prevent damage to the adjacent grounds and existing structures.

If earthwork is performed during the dry season, moisture conditioning will be required to raise the onsite soil moisture contents to the engineered fill placement and compaction recommendation presented in this report. If earthwork is performed during or shortly after wet weather conditions, the moisture content of the soils could be appreciably above optimum. Consequently, subgrade preparation and fill placement may be difficult. Additional recommendations for wet weather construction can be provided at the time of construction, if required.

5.6 Additional Geotechnical Services

We recommend that Fugro be retained to provide geotechnical services during earthwork operations (including excavations) and foundation installation to observe compliance with the design concepts, specifications, and recommendations presented in this report. Our presence will also allow us to modify design if unanticipated subsurface conditions are encountered.

6. Limitations

The opinions, conclusions, and recommendations presented in this report are based on our reviews of available geologic and geotechnical data, maps, reports, our site subsurface exploration and laboratory testing results, our engineering analysis results, and information provided by others. Our opinions, conclusions, and recommendations are solely professional opinions and were made in accordance with generally accepted local and current geotechnical engineering principles and practices. We make no warranty, either express or implied.

Site exploration and testing characterizes subsurface conditions only at the locations where the explorations or tests are performed and at the time when services were conducted; actual subsurface conditions between explorations or tests may be different than those described in this report. Variations of subsurface conditions from those analysed or characterized in this report are not uncommon and may become evident during construction. In addition, changes in the condition of the site can occur over time as a result of either natural processes (such as earthquakes, flooding, or changes in groundwater levels) or human activity (such as construction adjacent to the site, dumping of fill, or excavating). If changes to the site's surface or subsurface conditions occur since the performance of the field work described in this report, or if differing subsurface conditions are encountered, we should be contacted immediately to evaluate the differing conditions to assess if the opinions, conclusions, and recommendations provided in this report are still applicable or should be amended.

This report has been prepared for the exclusive use of Cork-Mayo Investments, LLC, and their consultants for specific application to the proposed Project located in Berkeley, California as described herein. In the event that there are any changes in the nature, design or location of the Project, as described in this report, or if any future additions are planned, the conclusions and recommendations contained in this report shall not be considered valid unless the project changes are reviewed by us, and the conclusions and recommendations presented in this report are modified or verified in writing.

Reliance on this report by others must be at their risk unless we are consulted on the use or limitations. We cannot be responsible for the impacts of any changes in geotechnical standards, practices, or regulations subsequent to performance of services without our further consultation. We can neither vouch for the accuracy of information supplied by others, nor accept consequences for unconsulted use of segregated portions of this report.

Appendix A

Field Explorations

A.1 Exploratory Borings

One (1) boring were performed by a State of California C-57 licensed driller, Exploration Geoservices, Inc. (EGI) of San Jose, California, using a truck-mounted Mobile CME-55 drill rig equipped with 8-inch diameter hollow stem augers and mud rotary drilling methods, as well as a 140-pound automatic trip hammer or a 140-pound downhole wireline safety hammer.

Representative soil samples were obtained from the borings using a Modified California split-barrel drive sampler (outside diameter of 3.0 inches, inside diameter of 2.5 inches). Soil samples were transmitted to laboratories for evaluation and appropriate testing. The sampler types are indicated in the "Sampler" column of the boring log as designated in **Plate A-1**.

Resistance blow counts were obtained with the drive samplers by dropping a 140-pound automatic trip hammer through a 30-inch free fall in general accordance with ASTM D1586. The sampler was driven 18 inches, and the number of blows were recorded for each 6 inches of penetration. The blows per foot recorded on the boring logs represent the accumulated number of blows that were required to drive the last 12 inches. Due to the large diameter of the Modified California sampler, the blow counts recorded for this sampler are not standard penetration resistance values. These values were multiplied by a conversion factor of 0.63 for the Modified California Sampler and the calculated approximate equivalent N values are presented on our logs within parenthesis. No hammer energy correction had been applied on the N values presented on the logs. Hammer calibration test results provided by EGI dated February 2018 indicate the automatic trip hammer has an average Energy Transfer Ratio of 96.0.

Our field engineer continuously logged soils sampled from the borings in the field. The soils were classified in general accordance with the Unified Soil Classification System (ASTM D2487 and D2488). The logs of the borings as well as a key for the classification of the soils are included in **Appendix A**.

A.2 Cone Penetrometer Tests

CPTs were performed by Conetec of San Leandro, California, in general accordance with ASTM D5778 using a 30-ton truck-mounted rig and a 20-ton track-mounted rig with an electronic piezocone penetrometer that has a tip area of 15 cm^2 and a tip end area ratio of 0.8. The cones were advanced at a standard rate of 2 cm/sec into the ground to measure tip resistance, sleeve friction, and excess pore pressure. The CPTs were advanced to depths ranging from approximately 50 to 89 feet below grade.

Pore water pressure dissipation tests were performed at selected depths at every CPT. In addition, in-situ soil shear wave velocity measurements were performed at an approximate 5-foot interval at CPT-01. The CPT logs and interpretations are presented in **Appendix A**.

A.3 General

Upon completion of our field explorations, the boring and CPTs were backfilled with neat cement grout. Drilling derived soil cutting from Boring B-1 were off-hauled by our drilling subcontractor (EGI) on December 10, 2021.

The attached logs of boring and CPTs and related information depict location-specific subsurface conditions encountered during our field explorations. The approximate locations of the boring and CPTs were determined by using landmark references and hand-held GPS device. Locations should be considered accurate only to the degree implied by the methods used. The passage of time could result in changes in the subsurface conditions due to either natural processes or human activities.

Project No. 04.00203238

CLASSIFICATION AND MATERIAL SYMBOLS

MAJOR DIVISIONS PER ASTM D2488-06			MAJOR GROUP NAMES AND MATERIAL SYMBOLS		
COARSE-GRAINED SOILS More than 50% retained on the No. 200 sieve	GRAVELS MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	Clean gravels less than 5% fines	GW		Well-Graded GRAVEL
			GP		Poorly Graded GRAVEL
		Gravels with more than 12% fines	GM		SILTY GRAVEL
			GC		CLAYEY GRAVEL
	SANDS MORE THAN 50% OF COARSE FRACTION PASSING NO. 4 SIEVE	Clean sand less than 5% fines	SW		Well-Graded SAND
			SP		Poorly Graded SAND
		Sands with more than 12% fines	SM		SILTY SAND
			SC		CLAYEY SAND
FINE-GRAINED SOILS 50% or more passes the No. 200 sieve	SILTS AND CLAYS Liquid Limit Less than 50%		ML		SILT
			CL		Lean CLAY
			OL		ORGANIC SILT
	SILTS AND CLAYS Liquid Limit Greater than 50%		MH		Elastic SILT
			CH		Fat CLAY
			OH		ORGANIC CLAY
HIGHLY ORGANIC SOILS			PT		Peat or Highly Organic Soils

Notes:
Classification of soils on the boring logs is in general accordance with ASTM D2488, or D2487 if appropriate laboratory data are available.
The geologic formation is noted in bold font at the top of interpreted interval on the boring logs.

OTHER MATERIAL SYMBOLS

- Debris or Mixed Fill
- Pavement with Aggregate Base

SAMPLER TYPE

- SPT (Driven) 1-3/8" ID 2" OD
- Modified California (Driven) 2-3/8" ID 3" OD
- Modified California (Driven) 1-7/8" ID 2-1/2" OD
- Shelby Tube (Pushed) 2-7/8" ID 3" OD
- Pitcher Barrel (Rotary-cut) 2-7/8" ID
- Osterberg (Piston) 2-7/8" ID
- 101 Geobarrel (Rotary-cut) 2-7/8" ID
- Rock Core (Rotary-cut) See log for size
- Vibracore (Vibrated) See log for size
- Push-core (Pushed) See log for size
- Collected from Auger
- Other See log for details

Note: Refer to text of report for additional details or other sampler types.

BLOW COUNT

Number of blows required to drive sampler each of three 6-in. intervals, as measured in the field (uncorrected). An SPT hammer (140 lb., falling 30-in.) was used unless otherwise noted on the boring log. For example:

Blow Count	Description
5 7 8	5, 7, and 8 blows for first, second, and third interval, respectively.
35 50/3"	35 blows for the first interval. 50 blows for the first 3 inches of the second interval. Lack of third value implies that driving was stopped 3 inches into the second interval.
WOH WOH 5	"WOH" indicates that the weight of the hammer was sufficient to advance the sampler over the first two intervals. 5 blows were required to advance the sampler over the third interval.

N-VALUE

The N-Value represents the blowcount for the last 12 inches of the sample drive if three 6-inch intervals were driven. N-value presented is independant of impact energy. If 50 hammer blows were insufficient to drive through either the second or the third interval, the total number of blows and total length driven are reported (excluding the first interval). "ref" (refusal) indicates that 50 blows were insufficient to drive through the first 6-inch interval.

Parenthesis indicate that an approximate correction has been applied for non-SPT drive samplers. For example, a factor of 0.63 is commonly used to adjust blow counts obtained using a 3-inch outside diameter modified California sampler to correspond to Standard Peneteration Test.

UNDRAINED SHEAR STRENGTH

A value of undrained shear strength is reported. The value is followed by a letter code indicating the type of test that was performed, as follows:

U - Unconfined Compression
Q - Unconsolidated Undrained Triaxial
T - Torvane
P - Pocket Penetrometer
M - Miniature Vane
F - Field Vane
R - R-value

OTHER TESTS

Field or laboratory tests without a dedicated column on the boring log are reported in the Other Tests column. A letter code is used to indicate the type of test. For certain tests, a value representing the test result is also provided. Typical letter codes are as follows. Additional codes may be used. Refer to the report text and the laboratory testing results for additional information.

k - Permeability (cm/s)
Consol - Consolidation
Gs - Specific Gravity
MA - Particle Size Analysis
EI - Expansion Index
OVM - Organic Vapor Meter

WATER LEVEL SYMBOLS

- Initial water level
- Final water level
- Seepage encountered

ABOUT THIS REPORT

The enclosed report presents the results of the site investigation program conducted by ConeTec, Inc. The program consisted of Seismic Piezocone Penetration Testing and Pore Pressure Dissipation Testing. Please note that this report, which also includes all accompanying data, are subject to the 3rd Party Disclaimer and Client Disclaimer that follow in the 'Limitations' section of this report.

Project Information	
Client	Fugro
Project	2821 Tenth St, Berkeley, CA
ConeTec Project Number	21-56-23417
Rig Description	30-ton Truck CPT Rig (C17)

Coordinates	
Collection Method	Consumer Grade GPS
EPSG Number	32610 (WGS 84 / UTM 10S)

Cone Penetration Test (CPTu)	
Depth Reference	Existing ground surface at the time of the investigation
Sleeve data offset	0.1 Meters

Calculated Geotechnical Parameters Tables	
Additional Information	The Normalized Soil Behaviour Type Chart based on Q_{tn} (SBT Q_{tn}) (Robertson, 2009) was used to classify the soil for this project. A detailed set of calculated CPTu parameters have been generated and are provided in Excel format files in the release folder. The CPTu parameter calculations are based on values of corrected tip resistance (q_t) sleeve friction (f_s) and pore pressure (u_2). Effective stresses are calculated based on unit weights that have been assigned to the individual soil behaviour type zones and the assumed equilibrium pore pressure profile. Soils were classified as either drained or undrained based on the Q_{tn} Normalized Soil Behaviour Type Chart (Robertson, 2009). Calculations for both drained and undrained parameters were included for materials that classified as silt mixtures (zone 4).

Please refer to the list of attached documents following the text of this report. A test summary, location map, and plots are included. Thank you for the opportunity to work on this project.

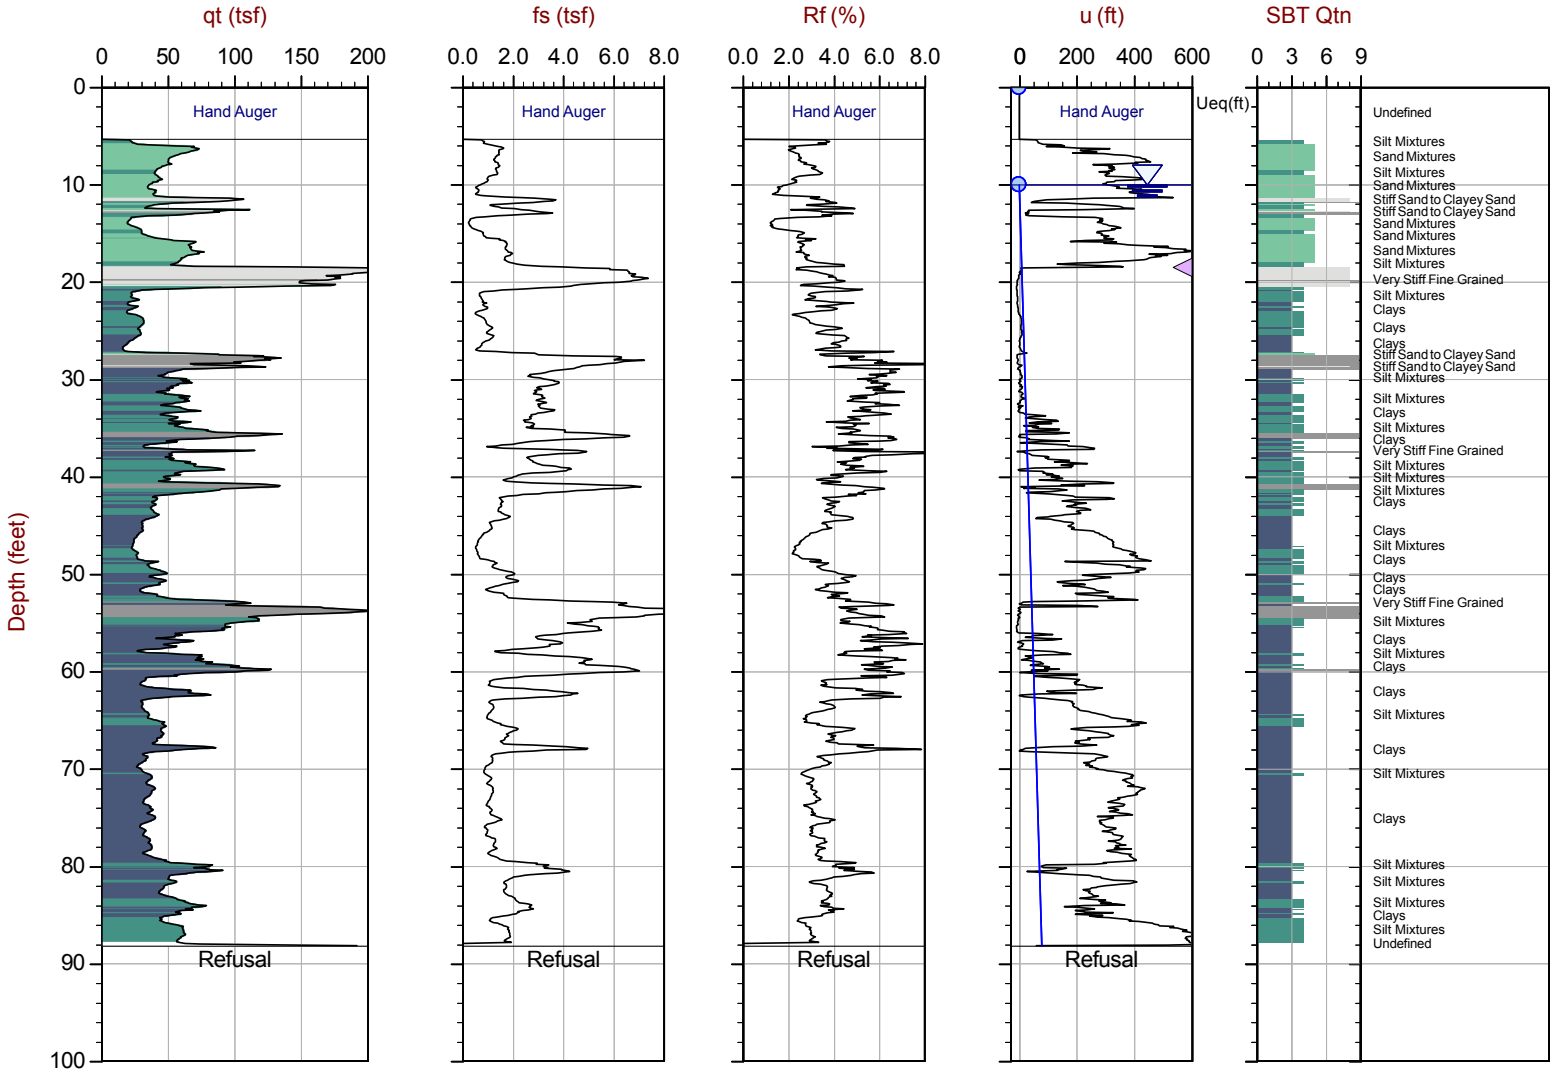
CONE PENETRATION TEST SUMMARY

Sounding ID	File Name	Date	Cone	Cone Area (cm^2)	Assumed Phreatic Surface[1] (ft)	Final Depth (ft)	Northing[2]	Easting[2]	Elevation[3] (ft)	Refer to Notation Number
CPT-01	21-56-23417_SP-01	06-Dec-2021	EC814:T1500F15U35	15	10.0	88.17	4189999	562614	48	
CPT-03	21-56-23417_CP-03	06-Dec-2021	EC817:T1500F15U35	15	10.0	50.36	4189999	562633	47	



1. Since no pore pressure dissipation tests reached equilibrium the assumed phreatic surface is based on pore pressure dissipation test to not reach equilibrium, dynamic pore pressure, and prior knowledge of the area. The phreatic surface is only an assumption and should not be used for design purposes.
2. The coordinates were collected using consumer grade GPS equipment. EPSG number: 32610 (WGS84 / UTM Zone 10S).
3. Elevations are referenced to the ground surface and were acquired from the Google Earth Elevation for the recorded coordinates.

Methodology Statements and Data File Formats

CONETEC

Cone penetration tests (CPTu) are conducted using an integrated electronic piezocone penetrometer and data acquisition system manufactured by Adara Systems Ltd., a subsidiary of ConeTec.

ConeTec's piezocone penetrometers are compression type designs in which the tip and friction sleeve load cells are independent and have separate load capacities. The piezocones use strain gauged load cells for tip and sleeve friction and a strain gauged diaphragm type transducer for recording pore pressure. The piezocones also have a platinum resistive temperature device (RTD) for monitoring the temperature of the sensors, an accelerometer type dual axis inclinometer and two geophone sensors for recording seismic signals. All signals are amplified and measured with minimum sixteen-bit resolution down hole within the cone body, and the signals are sent to the surface using a high bandwidth, error corrected digital interface through a shielded cable.

ConeTec penetrometers are manufactured with various tip, friction and pore pressure capacities in both 10 cm^2 and 15 cm^2 tip base area configurations in order to maximize signal resolution for various soil conditions. The specific piezocone used for each test is described in the CPT summary table presented in the first appendix. The 15 cm^2 penetrometers do not require friction reducers as they have a diameter larger than the deployment rods. The 10 cm^2 piezocones use a friction reducer consisting of a rod adapter extension behind the main cone body with an enlarged cross sectional area (typically 44 millimeters diameter over a length of 32 millimeters with tapered leading and trailing edges) located at a distance of 585 millimeters above the cone tip.

The penetrometers are designed with equal end area friction sleeves, a net end area ratio of 0.8 and cone tips with a 60 degree apex angle.

All ConeTec piezocones can record pore pressure at various locations. Unless otherwise noted, the pore pressure filter is located directly behind the cone tip in the "u_2" position (ASTM Type 2). The filter is six millimeters thick, made of porous plastic (polyethylene) having an average pore size of 125 microns (90-160 microns). The function of the filter is to allow rapid movements of extremely small volumes of water needed to activate the pressure transducer while preventing soil ingress or blockage.

The piezocone penetrometers are manufactured with dimensions, tolerances and sensor characteristics that are in general accordance with the current ASTM D5778 standard. ConeTec's calibration criteria also meets or exceeds those of the current ASTM D5778 standard. An illustration of the piezocone penetrometer is presented in Figure CPTu.

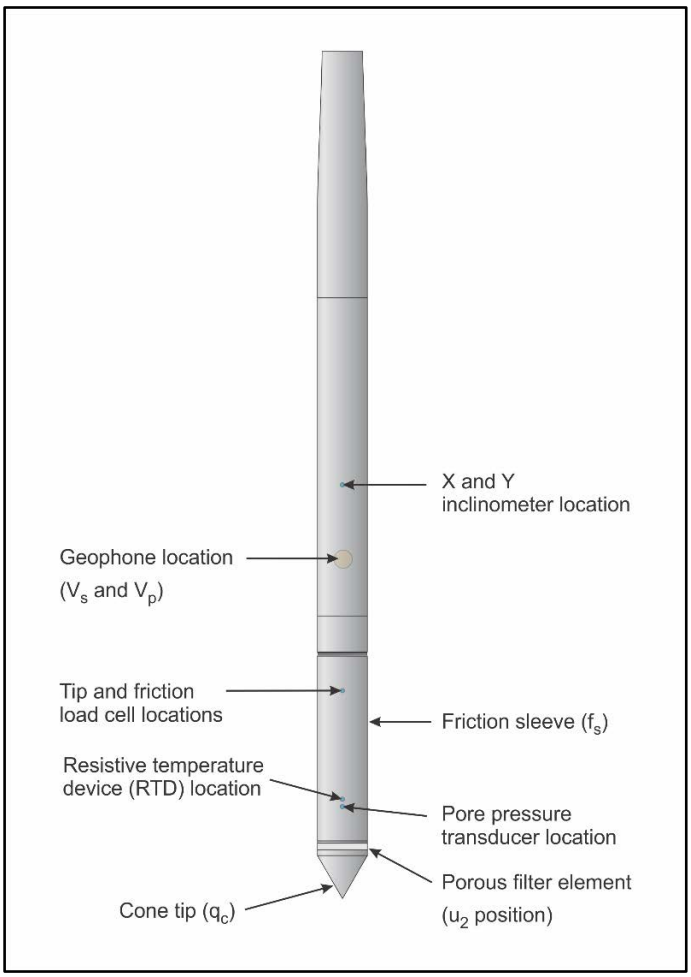

Figure CPTu. Piezocone Penetrometer (15 cm^2)

The ConeTec data acquisition systems consist of a Windows based computer and a signal interface box and power supply. The signal interface combines depth increment signals, seismic trigger signals and the downhole digital data. This combined data is then sent to the Windows based computer for collection and presentation. The data is recorded at fixed depth increments using a depth wheel attached to the push cylinders or by using a spring loaded rubber depth wheel that is held against the cone rods. The typical recording interval is 2.5 centimeters; custom recording intervals are possible.

The system displays the CPTu data in real time and records the following parameters to a storage media during penetration:

- Depth
- Uncorrected tip resistance (q_c)
- Sleeve friction (f_s)
- Dynamic pore pressure (u)
- Additional sensors such as resistivity, passive gamma, ultra violet induced fluorescence, if applicable

All testing is performed in accordance to ConeTec's CPTu operating procedures which are in general accordance with the current ASTM D5778 standard.

Prior to the start of a CPTu sounding a suitable cone is selected, the cone and data acquisition system are powered on, the pore pressure system is saturated with silicone oil and the baseline readings are recorded with the cone hanging freely in a vertical position.

The CPTu is conducted at a steady rate of two centimeters per second, within acceptable tolerances. Typically one meter length rods with an outer diameter of 1.5 inches (38.1 millimeters) are added to advance the cone to the sounding termination depth. After cone retraction final baselines are recorded.

Additional information pertaining to ConeTec's cone penetration testing procedures:

- Each filter is saturated in silicone oil under vacuum pressure prior to use
- Baseline readings are compared to previous readings
- Soundings are terminated at the client's target depth or at a depth where an obstruction is encountered, excessive rod flex occurs, excessive inclination occurs, equipment damage is likely to take place, or a dangerous working environment arises
- Differences between initial and final baselines are calculated to ensure zero load offsets have not occurred and to ensure compliance with ASTM standards

The interpretation of piezocone data for this report is based on the corrected tip resistance (q_t), sleeve friction (f_s) and pore water pressure (u). The interpretation of soil type is based on the correlations developed by Robertson et al. (1986) and Robertson (1990, 2009). It should be noted that it is not always possible to accurately identify a soil behavior type based on these parameters. In these situations, experience, judgment and an assessment of other parameters may be used to infer soil behavior type.

The recorded tip resistance (q_c) is the total force acting on the piezocone tip divided by its base area. The tip resistance is corrected for pore pressure effects and termed corrected tip resistance (q_t) according to the following expression presented in Robertson et al. (1986):

$$q_t = q_c + (1\text{-}a) \bullet u_2$$

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the piezocone (0.8 for ConeTec probes)

The sleeve friction (f_s) is the frictional force on the sleeve divided by its surface area. As all ConeTec piezocones have equal end area friction sleeves, pore pressure corrections to the sleeve data are not required.

The dynamic pore pressure (u) is a measure of the pore pressures generated during cone penetration. To record equilibrium pore pressure, the penetration must be stopped to allow the dynamic pore pressures to stabilize. The rate at which this occurs is predominantly a function of the permeability of the soil and the diameter of the cone.

The friction ratio (R_f) is a calculated parameter. It is defined as the ratio of sleeve friction to the tip resistance expressed as a percentage. Generally, saturated cohesive soils have low tip resistance, high friction ratios and generate large excess pore water pressures. Cohesionless soils have higher tip resistances, lower friction ratios and do not generate significant excess pore water pressure.

A summary of the CPTu soundings along with test details and individual plots are provided in the appendices. A set of files with calculated geotechnical parameters were generated for each sounding based on published correlations and are provided in Excel format in the data release folder. Information regarding the methods used is also included in the data release folder.

For additional information on CPTu interpretations and calculated geotechnical parameters, refer to Robertson et al. (1986), Lunne et al. (1997), Robertson (2009), Mayne (2013, 2014) and Mayne and Peuchen (2012).

Shear wave velocity (Vs) testing is performed in conjunction with the piezocone penetration test (SCPTu) in order to collect interval velocities. For some projects seismic compression wave velocity (Vp) testing is also performed.

ConeTec's piezocone penetrometers are manufactured with one horizontally active geophone (28 hertz) and one vertically active geophone (28 hertz). Both geophones are rigidly mounted in the body of the cone penetrometer, 0.2 meters behind the cone tip. The vertically mounted geophone is more sensitive to compression waves.

Shear waves are typically generated by using an impact hammer horizontally striking a beam that is held in place by a normal load. In some instances, an auger source or an imbedded impulsive source may be used for both shear waves and compression waves. The hammer and beam act as a contact trigger that initiates the recording of the seismic wave traces. For impulsive devices an accelerometer trigger may be used. The traces are recorded in the memory of the cone using a fast analog to digital converter. The seismic trace is then transmitted digitally uphole to a Windows based computer through a signal interface box for recording and analysis. An illustration of the shear wave testing configuration is presented in Figure SCPTu-1.

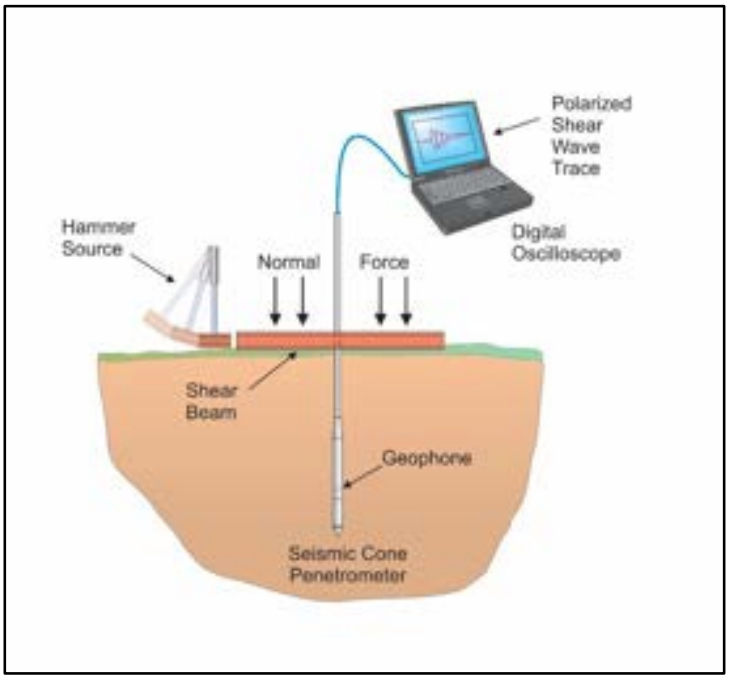

Figure SCPTu-1. Illustration of the SCPTu system

All testing is performed in accordance to ConeTec's SCPTu operating procedures which are in general accordance with the current ASTM D5778 and ASTM D7400 standards.

Prior to the start of a SCPTu sounding, the procedures described in the Cone Penetration Test section are followed. In addition, the active axis of the geophone is aligned parallel to the beam (or source) and the horizontal offset between the cone and the source is measured and recorded.

Prior to recording seismic waves at each test depth, cone penetration is stopped and the rods are decoupled from the rig to avoid transmission of rig energy down the rods. Typically, five wave traces for

each orientation are recorded for quality control and uncertainty analysis purposes. After reviewing wave traces for consistency the cone is pushed to the next test depth (typically one meter intervals or as requested by the client). Figure SCPTu-2 presents an illustration of a SCPTu test.

For additional information on seismic cone penetration testing refer to Robertson et al. (1986).

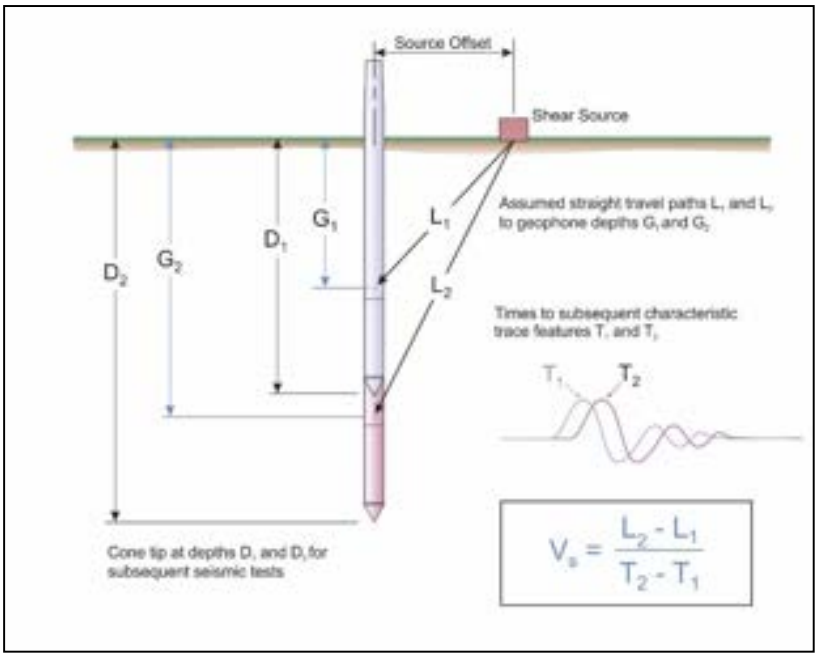

Figure SCPTu-2. Illustration of a seismic cone penetration test

Calculation of the interval velocities are performed by visually picking a common feature (e.g. the first characteristic peak, trough, or crossover) on all of the recorded wave sets and taking the difference in ray path divided by the time difference between subsequent features. Ray path is defined as the straight line distance from the seismic source to the geophone, accounting for beam offset, source depth and geophone offset from the cone tip.

For all SCPTu soundings that have achieved a depth of at least 100 feet (30 meters), the average shear wave velocity to a depth of 100 feet ($\bar{v}_s$) has been calculated and provided for all applicable soundings using the following equation presented in ASCE (2010).

$$\bar{v}_s = \frac{\sum_{i=1}^{n} d_i}{\sum_{i=1}^{n} \frac{d_i}{v_{si}}}$$

where: $\bar{v}_s$ = average shear wave velocity ft/s (m/s)
d_i = the thickness of any layer between 0 and 100 ft (30 m)
v_{si} = the shear wave velocity in ft/s (m/s)
$\sum_{i=1}^{n} d_i$ = the total thickness of all layers between 0 and 100 ft (30 m)

Average shear wave velocity, $\bar{v}_s$ is also referenced to V_{s100} or V_{s30}.

The layer travel times refers to the travel times propagating in the vertical direction, not the measured travel times from an offset source.

Tabular results and SCPTu plots are presented in the relevant appendix.

The cone penetration test is halted at specific depths to carry out pore pressure dissipation (PPD) tests, shown in Figure PPD-1. For each dissipation test the cone and rods are decoupled from the rig and the data acquisition system measures and records the variation of the pore pressure (u) with time (t).

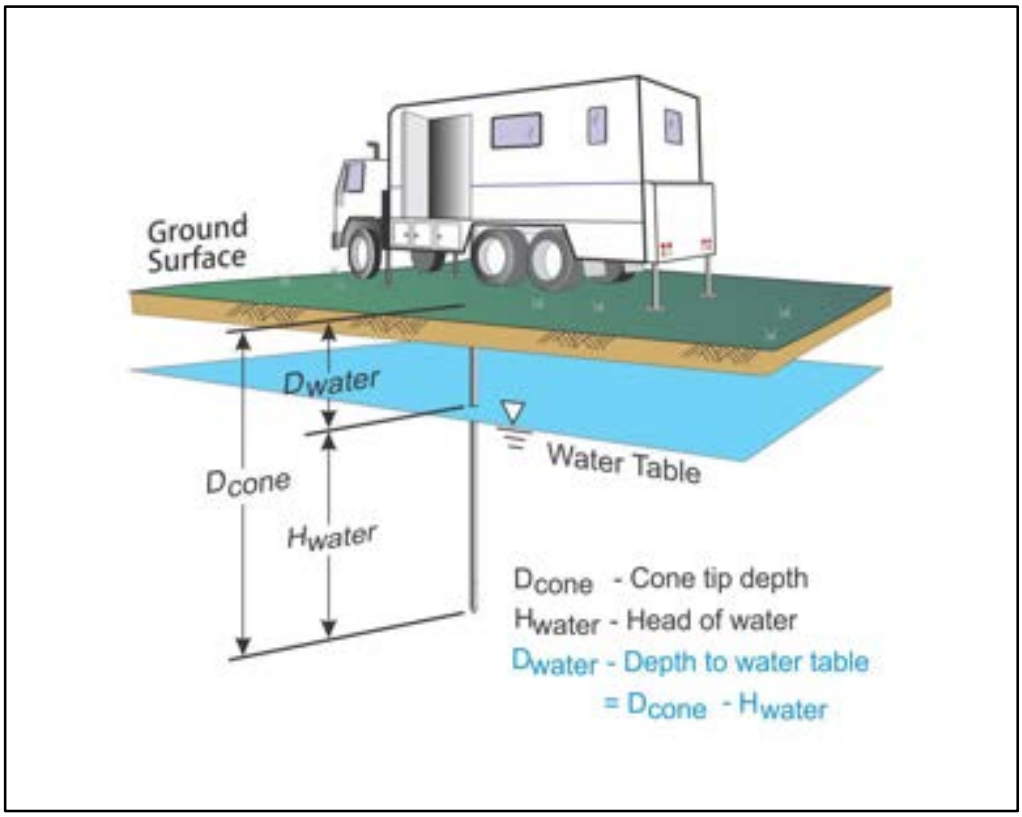

Figure PPD-1. Pore pressure dissipation test setup

Pore pressure dissipation data can be interpreted to provide estimates of ground water conditions, permeability, consolidation characteristics and soil behavior.

The typical shapes of dissipation curves shown in Figure PPD-2 are very useful in assessing soil type, drainage, in situ pore pressure and soil properties. A flat curve that stabilizes quickly is typical of a freely draining sand. Undrained soils such as clays will typically show positive excess pore pressure and have long dissipation times. Dilative soils will often exhibit dynamic pore pressures below equilibrium that then rise over time. Overconsolidated fine-grained soils will often exhibit an initial dilatory response where there is an initial rise in pore pressure before reaching a peak and dissipating.

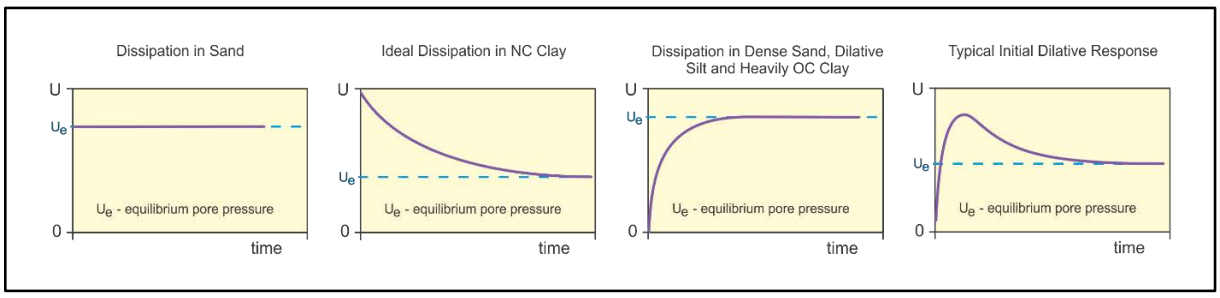

Figure PPD-2. Pore pressure dissipation curve examples

In order to interpret the equilibrium pore pressure (u_{eq}) and the apparent phreatic surface, the pore pressure should be monitored until such time as there is no variation in pore pressure with time as shown for each curve in Figure PPD-2.

In fine grained deposits the point at which 100% of the excess pore pressure has dissipated is known as t_{100}. In some cases this can take an excessive amount of time and it may be impractical to take the dissipation to t_{100}. A theoretical analysis of pore pressure dissipations by Teh and Houlsby (1991) showed that a single curve relating degree of dissipation versus theoretical time factor (T*) may be used to calculate the coefficient of consolidation (c_h) at various degrees of dissipation resulting in the expression for c_h shown below.

$$c_h = \frac{T^* \cdot a^2 \cdot \sqrt{I_r}}{t}$$

Where:
T* is the dimensionless time factor (Table Time Factor)
a is the radius of the cone
I_r is the rigidity index
t is the time at the degree of consolidation

Table Time Factor. T* versus degree of dissipation (Teh and Houlsby (1991))

Degree of Dissipation (%)	20	30	40	50	60	70	80
T* (u_2)	0.038	0.078	0.142	0.245	0.439	0.804	1.60

The coefficient of consolidation is typically analyzed using the time (t_{50}) corresponding to a degree of dissipation of 50% (u_{50}). In order to determine t_{50}, dissipation tests must be taken to a pressure less than u_{50}. The u_{50} value is half way between the initial maximum pore pressure and the equilibrium pore pressure value, known as u_{100}. To estimate u_{50}, both the initial maximum pore pressure and u_{100} must be known or estimated. Other degrees of dissipations may be considered, particularly for extremely long dissipations.

At any specific degree of dissipation the equilibrium pore pressure (u at t_{100}) must be estimated at the depth of interest. The equilibrium value may be determined from one or more sources such as measuring the value directly (u_{100}), estimating it from other dissipations in the same profile, estimating the phreatic surface and assuming hydrostatic conditions, from nearby soundings, from client provided information, from site observations and/or past experience, or from other site instrumentation.

For calculations of c_h (Teh and Houlsby (1991)), t_{50} values are estimated from the corresponding pore pressure dissipation curve and a rigidity index (I_r) is assumed. For curves having an initial dilatory response in which an initial rise in pore pressure occurs before reaching a peak, the relative time from the peak value is used in determining t_{50}. In cases where the time to peak is excessive, t_{50} values are not calculated.

Due to possible inherent uncertainties in estimating I_r, the equilibrium pore pressure and the effect of an initial dilatory response on calculating t_{50}, other methods should be applied to confirm the results for c_h.

Additional published methods for estimating the coefficient of consolidation from a piezocone test are described in Burns and Mayne (1998, 2002), Jones and Van Zyl (1981), Robertson et al. (1992) and Sully et al. (1999).

A summary of the pore pressure dissipation tests and dissipation plots are presented in the relevant appendix.

CONE PENETRATION DIGITAL FILE FORMATS - eSeries

CPT Data Files (COR Extension)

ConeTec CPT data files are stored in ASCII text files that are readable by almost any text editor. ConeTec file names start with the job number (which includes the two digit year number) an underscore as a separating character, followed by two letters based on the type of test and the sounding ID. The last character position is reserved for an identifier letter (such as b, c, d etc) used to uniquely distinguish multiple soundings at the same location. The CPT sounding file has the extension COR. As an example, for job number 21-02-00001 the first CPT sounding will have file name 21-02-00001_CP01.COR

The sounding (COR) file consists of the following components:

1. Two lines of header information
2. Data records
3. End of data marker
4. Units information

Header Lines

Line 1: Columns 1-6 may be blank or may indicate the version number of the recording software
Columns 7-21 contain the sounding Date and Time (Date is MM:DD:YY)
Columns 23-38 contain the sounding Operator
Columns 51-100 contain extended Job Location information

Line 2: Columns 1-16 contain the Job Location
Columns 17-32 contain the Cone ID
Columns 33-47 contain the sounding number
Columns 51-100 may contain extended sounding ID information

Data Records

The data records contain 4 or more columns of data in floating point format. A comma and spaces separate each data item:

Column 1: Sounding Depth (meters)
Column 2: Tip (q_c), recorded in units selected by the operator
Column 3: Sleeve (f_s), recorded in units selected by the operator
Column 4: Dynamic pore pressure (u), recorded in units selected by the operator
Column 5: Empty or may contain other requested data such as Gamma, Resistivity or UVIF data

End of Data Marker

After the last line of data there is a line containing an ASCII 26 (CTL-Z) character (small rectangular shaped character) followed by a newline (carriage return / line feed). This is used to mark the end of data.

Units Information

The last section of the file contains information about the units that were selected for the sounding. A separator bar makes up the first line. The second line contains the type of units used for depth, q_c, f_s and u. The third line contains the conversion values required for ConeTec's software to convert the recorded data to an internal set of base units (bar for q_c, bar for f_s and meters for u). Additional lines intended for internal ConeTec use may appear following the conversion values.

CPT Data Files (XLS Extension)

Excel format files of ConeTec CPT data are also generated from corresponding COR files. The XLS files have the same base file name as the COR file with a -BSC suffix. The information in the file is presented in table format and contains additional information about the sounding such as coordinate information, and tip net area ratio.

The BSCI suffix is given to XLS files which are enhanced versions of the BSC files and include the same data records in addition to inclination data collected for each sounding.

CPT Dissipation Files (XLS Extension)

Pore pressure dissipation files are provided in Excel format and contain each dissipation trace that exceeds a minimum duration (selected during post-processing) formatted column wise within the spreadsheet. The first column (Column A) contains the time in seconds and the second column (Column B) contains the time in minutes. Subsequent columns contain the dissipation trace data. The columns extend to the longest trace of the data set.

Detailed header information is provided at the top of the worksheet. The test depth in meters and feet, the number of points in the trace and the particular units are all presented at the top of each trace column.

CPT Dissipation files have the same naming convention as the CPT sounding files with a "–PPD" suffix.

Data Records

Each file will contain dissipation traces that exceed a minimum duration (selected during post-processing) in a particular column. The dissipation pore pressure values are typically recorded at varying time intervals throughout the trace; rapidly to start and increasing as the duration of the test lengthens. The test depth in meters and feet, the number of points in the trace and the trace number are identified at the top of each trace column.

Cone Type Designations

Cone ID	Cone Description	Tip Cross Sect. Area (cm^2)	Tip Capacity (bar)	Sleeve Area (cm^2)**	Sleeve Capacity (bar)	Pore Pressure Capacity (bar)
EC###	A15T1500F15U35	15	1500	225	15	35

Description of Methods for Calculated CPT Geotechnical Parameters

CALCULATED CPT GEOTECHNICAL PARAMETERS

A Detailed Description of the Methods Used in ConeTec's CPT Geotechnical Parameter Calculation and Plotting Software

Revision SZW-Rev 14

Revised November 26, 2019
Prepared by Jim Greig, M.A.Sc, P.Eng (BC)

CONETEC

Limitations

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates. For this project, ConeTec has provided site investigation services, prepared factual data reporting and produced geotechnical parameter calculations consistent with current best practices. No other warranty, expressed or implied, is made.

To understand the calculations that have been performed and to be able to reproduce the calculated parameters the user is directed to the basic descriptions for the methods in this document and the detailed descriptions and their associated limitations and appropriateness in the technical references cited for each parameter.

ConeTec's Calculated CPT Geotechnical Parameters as of November 26, 2019

ConeTec's CPT parameter calculation and plotting routine provides a tabular output of geotechnical parameters based on current published CPT correlations and is subject to change to reflect the current state of practice. Due to drainage conditions and the basic assumptions and limitations of the correlations, not all geotechnical parameters provided are considered applicable for all soil types. The results are presented only as a guide for geotechnical use and should be carefully examined for consideration in any geotechnical design. Reference to current literature is strongly recommended. ConeTec does not warranty the correctness or the applicability of any of the geotechnical parameters calculated by the program and does not assume liability for any use of the results in any design or review. For verification purposes we recommend that representative hand calculations be done for any parameter that is critical for design purposes. The end user of the parameter output should also be fully aware of the techniques and the limitations of any method used by the program. The purpose of this document is to inform the user as to which methods were used and to direct the end user to the appropriate technical papers and/or publications for further reference.

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates.

The CPT calculations are based on values of tip resistance, sleeve friction and pore pressures considered at each data point or averaged over a user specified layer thickness (e.g. 0.20 m). Note that q_t is the tip resistance corrected for pore pressure effects and q_c is the recorded tip resistance. The corrected tip resistance (corrected using u_2 pore pressure values) is used for all of the calculations. Since all ConeTec cones have equal end area friction sleeves pore pressure corrections to sleeve friction, f_s, are not required.

The tip correction is: $q_t = q_c + (1-a) \bullet u_2$ (consistent units are implied)

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the cone (typically 0.80 for ConeTec cones)

The total stress calculations are based on soil unit weight values that have been assigned to the Soil Behavior Type (SBT) zones, from a user defined unit weight profile, by using a single uniform value throughout the profile, through unit weight estimation techniques described in various technical papers or from a combination of these methods. The parameter output files indicate the method(s) used.

Effective vertical overburden stresses are calculated based on a hydrostatic distribution of equilibrium pore pressures below the water table or from a user defined equilibrium pore pressure profile (typically obtained from CPT dissipation tests) or a combination of the two. For over water projects the stress effects of the column of water above the mudline have been taken into account as has the appropriate unit weight of water. How this is done depends on where the instruments were zeroed (i.e. on deck or at the mudline). The parameter output files indicate the method(s) used.

A majority of parameter calculations are derived or driven by results based on material types as determined by the various soil behavior type charts depicted in Figures 1 through 5. The parameter output files indicate the method(s) used.

The Soil Behavior Type classification chart shown in Figure 1 is the classic non-normalized SBT Chart developed at the University of British Columbia and reported in Robertson, Campanella, Gillespie and Greig (1986). Figure 2 shows the original normalized (linear method) SBT chart developed by Robertson (1990). The Bq classification charts shown in Figures 3a and 3b incorporate pore pressures into the SBT classification and are based on the methods described in Robertson (1990). Many of these charts have been summarized in Lunne, Robertson and Powell (1997). The

Jefferies and Davies SBT chart shown in Figure 3c is based on the techniques discussed in Jefferies and Davies (1993) which introduced the concept of the Soil Behavior Type Index parameter, I_c. Please note that the I_c parameter developed by Robertson and Fear (1995) and Robertson and Wride (1998) is similar in concept but uses a slightly different calculation method than that used by Jefferies and Davies (1993) as the latter incorporates pore pressure in their technique through the use of the Bq parameter. The normalized Qtn SBT chart shown in Figure 4 is based on the work by Robertson (2009) utilizing a variable stress ratio exponent, n, for normalization based on a slightly modified redefinition and iterative approach for I_c. The boundary curves drawn on the chart are based on the work described in Robertson (2010).

Figure 5 shows a revised behavior based chart by Robertson (2016) depicting contractive-dilative zones. As the zones represent material behavior rather than soil gradation ConeTec has chosen a set of zone colors that are less likely to be confused with material type colors from previous SBT charts. These colors differ from those used by Dr. Robertson.

Figure 3. Alternate Soil Behavior Type Charts

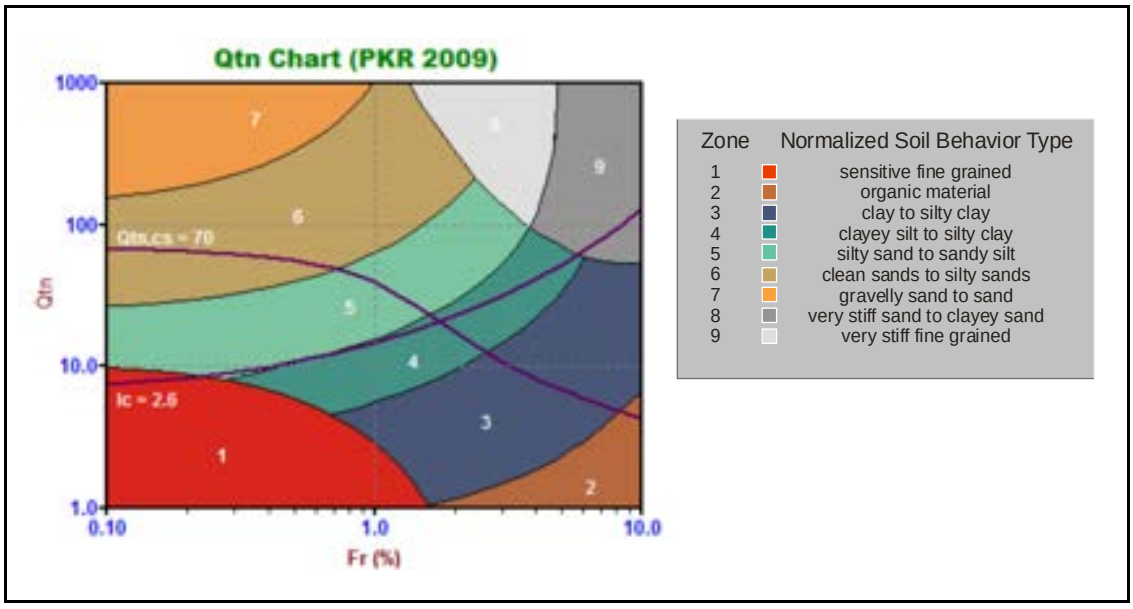

Figure 4. Normalized Soil Behavior Type Chart using Q_{tn} (SBT Qtn)

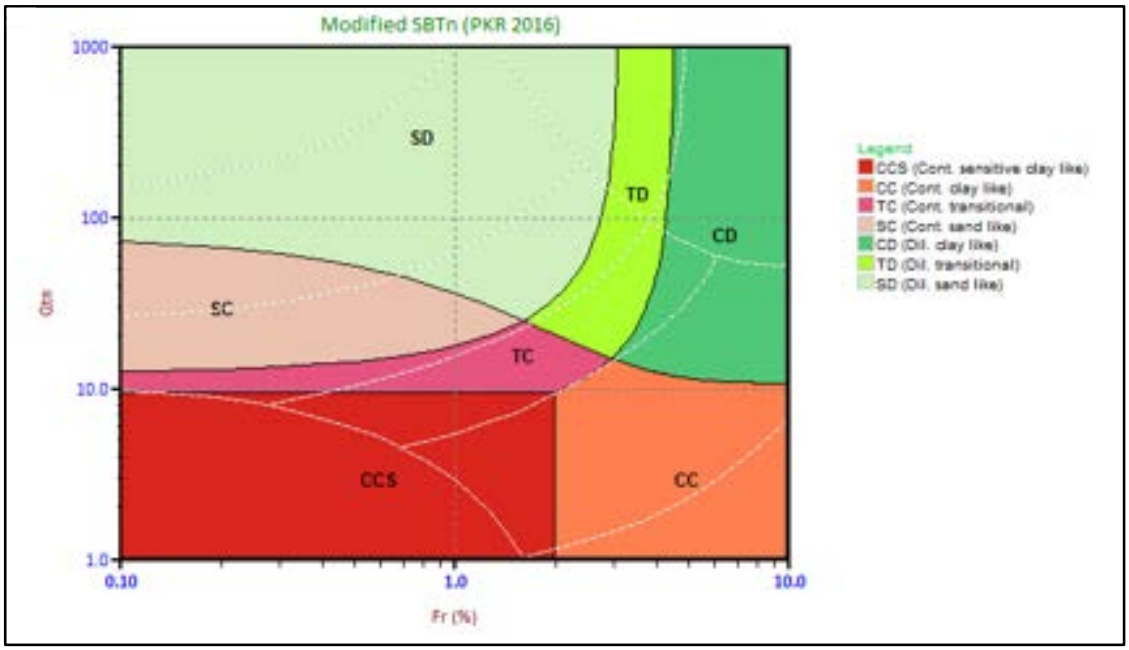

Figure 5. Modified SBTn Behavior Based Chart

Details regarding the geotechnical parameter calculations are provided in Tables 1a and 1b. The appropriate references cited are listed in Table 2. Non-liquefaction specific parameters are detailed in Table 1a and liquefaction specific parameters are detailed in Table 1b.

Where methods are based on charts or techniques that are too complex to describe in this summary the user should refer to the cited material. Specific limitations for each method are described in the cited material.

Where the results of a calculation/correlation are deemed *'invalid'* the value will be represented by the text strings "-9999", "-9999.0", the value 0.0 (Zero) or an empty cell. Invalid results will occur because of (and not limited to) one or a combination of:

1. Invalid or undefined CPT data (e.g. drilled out section or data gap).
2. Where the calculation method is inappropriate, for example, drained parameters in a material behaving as an undrained material (and vice versa).
3. Where input values are beyond the range of the referenced charts or specified limitations of the correlation method.
4. Where pre-requisite or intermediate parameter calculations are invalid.

The parameters selected for output from the program are often specific to a particular project. As such, not all of the calculated parameters listed in Table 1 may be included in the output files delivered with this report.

The output files are typically provided in Microsoft Excel XLS or XLSX format. The ConeTec software has several options for output depending on the number or types of calculated parameters desired or requested by the client. Each output file is named using the original COR file base name followed by a three or four letter indicator of the output set selected (e.g. BSC, TBL, NLI, NL2, IFI, IFI2) and possibly followed by an operator selected suffix identifying the characteristics of the particular calculation run.

Table 1a. CPT Parameter Calculation Methods – Non liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
Depth	Mid Layer Depth *(where calculations are done at each point then Mid Layer Depth = Recorded Depth)*	*[Depth (Layer Top) + Depth (Layer Bottom)]/ 2.0*	CK*
Elevation	Elevation of Mid Layer based on sounding collar elevation supplied by client or through site survey	Elevation = Collar Elevation - Depth	CK*
Avg qc	Averaged recorded tip value (q_c)	$Avgqc \quad \frac{1}{n} \sum_{i\ 1}^{n} q_c$ *n=1 when calculations are done at each point*	CK*
Avg qt	Averaged corrected tip (q_t) where: $q_t \quad q_c \quad (1 \quad a) \bullet u_2$	$Avgqt \quad \frac{1}{n} \sum_{i\ 1}^{n} q_t$ *n=1 when calculations are done at each point*	1
Avg fs	Averaged sleeve friction (f_s)	$Avgfs \quad \frac{1}{n} \sum_{i\ 1}^{n} fs$ *n=1 when calculations are done at each point*	CK*
Avg Rf	Averaged friction ratio (R_f) where friction ratio is defined as: $Rf \quad 100\% \bullet \frac{fs}{q_t}$	$AvgRf \quad 100\% \quad \frac{Avgfs}{Avgqt}$ *n=1 when calculations are done at each point*	CK*
Avg u	Averaged dynamic pore pressure *(u)*	$Avgu \quad \frac{1}{n} \sum_{i\ 1}^{n} u_i$ *n=1 when calculations are done at each point*	CK*

Calculated Parameter	Description	Equation	Ref
Avg Res	Averaged Resistivity (this data is not always available since it is a specialized test requiring an additional module)	$AvgRes \quad \frac{1}{n}\sum_{i=1}^{n} Resistivity_i$ *n=1 when calculations are done at each point*	CK*
Avg UVIF	Averaged UVIF ultra-violet induced fluorescence (this data is not always available since it is a specialized test requiring an additional module)	$AvgUVIF \quad \frac{1}{n}\sum_{i=1}^{n} UVIF_i$ *n=1 when calculations are done at each point*	CK*
Avg Temp	Averaged Temperature (this data is not always available since it requires specialized calibrations)	$AvgTemp \quad \frac{1}{n}\sum_{i=1}^{n} Temperature_i$ *n=1 when calculations are done at each point*	CK*
Avg Gamma	Averaged Gamma Counts (this data is not always available since it is a specialized test requiring an additional module)	$AvgGamma \quad \frac{1}{n}\sum_{i=1}^{n} Gamma_i$ *n=1 when calculations are done at each point*	CK*
SBT	Soil Behavior Type as defined by Robertson et al 1986 (often referred to as Robertson and Campanella, 1986)	See Figure 1	1, 5
SBTn	Normalized Soil Behavior Type as defined by Robertson 1990 (linear normalization)	See Figure 2	2, 5
SBT-Bq	Non-normalized Soil Behavior type based on the Bq parameter	See Figure 3	1, 2, 5
SBT-Bqn	Normalized Soil Behavior based on the Bq parameter	See Figure 3	2, 5
SBT-JandD	Soil Behavior Type as defined by Jeffries and Davies	See Figure 3	7
SBT Qtn	Soil Behavior Type as defined by Robertson (2009) using a variable stress ratio exponent for normalization based on I_c	See Figure 4	15
Modified SBTn (contractive /dilative)	Modified SBTn chart as defined by Robertson (2016) indicating zones of contractive/dilative behavior.	See Figure 5	30
Unit Wt.	Unit Weight of soil determined from one of the following user selectable options: 1) uniform value 2) value assigned to each SBT zone 3) value assigned to each SBTn zone 4) value assigned to SBTn zone as determined from Robertson and Wride (1998) based on q_{c1n} 5) values assigned to SBT Qtn zones 6) Mayne fs (sleeve friction) method 7) Robertson 2010 method 8) user supplied unit weight profile The last option may co-exist with any of the other options	See references	3, 5, 15, 21, 24, 29

Calculated Parameter	Description	Equation	Ref
TStress σ_v	Total vertical overburden stress at Mid Layer Depth *A layer is defined as the averaging interval specified by the user where depths are reported at their respective mid-layer depth.* *For data calculated at each point layers are defined using the recorded depth as the mid-point of the layer. Thus, a layer starts half-way between the previous depth and the current depth unless this is the first point in which case the layer start is at zero depth. The layer bottom is half-way from the current depth to the next depth unless it is the last data point.* *Defining layers affects how stresses are calculated since the unit weight attributed to a data point is used throughout the entire layer. This means that to calculate the stresses the total stress at the top and bottom of a layer are required. The stress at mid layer is determined by adding the incremental stress from the layer top to the mid-layer depth. The stress at the layer bottom becomes the stress at the top of the subsequent layer. Stresses are NOT calculated from mid-point to mid-point.* *For over-water work the total stress due to the column of water above the mid line is taken into account where appropriate.*	$TStress \sum_{i=1}^{n} \gamma_i h_i$ *where* γ_i is layer unit weight h_i is layer thickness	CK*
EStress σ_v'	Effective vertical overburden stress at mid-layer depth	$\sigma_v' = \sigma_v - u_{eq}$	CK*
Equil u u_{eq} or u_0	Equilibrium pore pressure determined from one of the following user selectable options: 1) hydrostatic below water table 2) user supplied profile 3) combination of those above When a user supplied profile is used/provided a linear interpolation is performed between equilibrium pore pressures defined at specific depths. If the profile values start below the water table then a linear transition from zero pressure at the water table to the first defined pointed is used. Equilibrium pore pressures may come from dissipation tests, adjacent piezometers or other sources. Occasionally, an extra equilibrium point ("assumed value") will be provided in the profile that does not come from a recorded value to smooth out any abrupt changes or to deal with material interfaces. These "assumed" values will be indicated on our plots and in tabular summaries.	For hydrostatic option: $u_{eq} \quad \gamma_w \quad D \quad D_{wt}$ where u_{eq} is equilibrium pore pressure γ_w is unit weight of water D is the current depth D_{wt} is the depth to the water table	CK*
K_0	Coefficient of earth pressure at rest, K_0	$K_O = (1 - \sin\Phi') OCR^{\sin\Phi'}$	17
C_n	Overburden stress correction factor used for $(N_1)_{60}$ and older CPT parameters	$C_n = (P_a/\sigma_v')^{0.5}$ where $0.0 < C_n < 2.0$ *(user adjustable, typically 1.7)* P_a *is atmospheric pressure (100 kPa)*	12
C_q	Overburden stress normalizing factor	$C_q = 1.8 / (0.8 + (\sigma_v'/P_a))$ where $0.0 < C_q < 2.0$ *(user adjustable)* P_a *is atmospheric pressure (100 kPa)*	3, 12

Calculated Parameter	Description	Equation	Ref
N_{60}	SPT N value at 60% energy calculated from q_t/N ratios assigned to each SBT zone. This method has abrupt N value changes at zone boundaries.	*See Figure 1*	5
(N1)60	SPT N_{60} value corrected for overburden pressure	$(N_1)_{60} = C_n \bullet N_{60}$	4
N60Ic	SPT N_{60} values based on the I_c parameter [as defined by Roberston and Wride 1998 (5), or by Robertson 2009 (15)].	$(q_t/P_a)/ N_{60} = 8.5 (1 – I_c/4.6)$ $(q_t/P_a)/ N_{60} = 10^{(1.1268 – 0.2817Ic)}$ Pa being atmospheric pressure	5 15, 31
(N1)60Ic	SPT N_{60} value corrected for overburden pressure (using N_{60} I_c). User has 3 options.	1) $(N_1)_{60}Ic = C_n \bullet (N_{60} I_c)$ 2) $q_{c1n}/ (N_1)_{60}I_c = 8.5 (1 – I_c/4.6)$ 3) $(Q_{tn})/ (N_1)_{60}I_c = 10^{(1.1268 – 0.2817Ic)}$	4 5 15, 31
Su or Su (Nkt)	Undrained shear strength based on q_t S_u factor N_{kt} is user selectable	$Su \quad \frac{qt \quad \sigma_v}{N_{kt}}$	1, 5
Su or Su (Ndu)	Undrained shear strength based on pore pressure S_u factor $N_{\Delta u}$ is user selectable	$Su \quad \frac{u_2 \quad u_{eq}}{N_{\ u}}$	1, 5
Dr	Relative Density determined from one of the following user selectable options: a) Ticino Sand b) Hokksund Sand c) Schmertmann (1978) d) Jamiolkowski (1985) - All Sands e) Jamiolkowski et al (2003) (various compressibilities, K_o)	See reference (methods a through d) Jamiolkowski et al (2003) reference	5 14
PHI ϕ	Friction Angle determined from one of the following user selectable options (methods a through d are for sands and method e is for silts and clays): a) Campanella and Robertson b) Durgunoglu and Mitchel c) Janbu d) Kulhawy and Mayne e) NTH method (clays and silts)	See appropriate reference	5 5 5 11 23
Delta U/qt	Differential pore pressure ratio (older parameter used before B_q was established)	$\frac{u}{qt}$ *where:* $u \quad u \quad u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	CK*
Bq	Pore pressure parameter	$Bq \quad \frac{u}{qt \quad \sigma_v}$ where : $u \quad u \quad u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	1, 2, 5
Net qt or qtNet	Net tip resistance (used in many subsequent correlations)	$qt \quad \sigma_v$	CK*
qe	Effective tip resistance (using the dynamic pore pressure u_2 and not equilibrium pore pressure)	$qt \quad u_2$	CK*

Calculated Parameter	Description	Equation	Ref
qeNorm	Normalized effective tip resistance	$\frac{qt \quad u_2}{\sigma_v}$	CK*
Q_t or Norm: Qt	Normalized q_t for Soil Behavior Type classification as defined by Robertson (1990) using a linear stress normalization. Note this is different from Q_{tn}.	$Qt \quad \frac{qt \quad \sigma_v}{\sigma_v}$	2, 5
F_r or Norm: Fr	Normalized Friction Ratio for Soil Behavior Type classification as defined by Robertson (1990)	$Fr \quad 100\% \quad \frac{fs}{qt \quad \sigma_v}$	2, 5
Q(1-Bq)	Q(1-Bq) grouping as suggested by Jefferies and Davies for their classification chart and the establishment of their I_c parameter	$Q \quad (1 \quad Bq)$ *where Bq is defined as above and Q is the same as the normalized tip resistance, Q_t, defined above*	6, 7
qc1	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method has stress units)	$q_{c1} = q_t \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	21
qc1 (0.5)	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method is unit-less)	$q_{c1}(0.5) = (q_t/P_a) \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	5
qc1 (Cn)	Normalized tip resistance, q_{c1}, based on C_n (this method has stress units)	$q_{c1}(Cn) = C_n * q_t$	5, 12
qc1 (Cq)	Normalized tip resistance, q_{c1}, based on C_q (this method has stress units)	$q_{c1}(Cq) = C_q * q_t$ (some papers use q_c)	5, 12
qc1n	normalized tip resistance, q_{c1n}, using a variable stress ratio exponent, n (where n=0.0, 0.70, 1.0) (this method is unit-less)	$q_{c1n} = (q_t / P_a)(P_a/\sigma_v')^n$ where: P_a = atm. Pressure and n varies as described below	3, 5
I_c or Ic (RW1998)	Soil Behavior Type Index as defined by Robertson and Fear (1995) and Robertson and Wride (1998) for estimating grain size characteristics and providing smooth gradational changes across the SBTn chart	$I_c = [(3.47 - \log_{10}Q)^2 + (\log_{10} Fr + 1.22)^2]^{0.5}$ *Where:* $Q \quad \frac{qt \quad \sigma_v}{P_a} \quad \frac{P_a}{\sigma_v'}^n$ *Or* $Q \quad q_{c1n} \quad \frac{qt}{P_a} \quad \frac{P_a}{\sigma_v'}^n$ *depending on the iteration in determining I_c* *And* *Fr is in percent* *P_a = atmospheric pressure* *n varies between 0.5, 0.70 and 1.0 and is selected in an iterative manner based on the resulting I_c*	3, 5, 21
Ic (PKR 2009)	Soil Behavior Type Index, I_c (PKR 2009) based on a variable stress ratio exponent n, which itself is based on I_c (PKR 2009). An iterative calculation is required to determine Ic (PKR 2009) and its corresponding n (PKR 2009).	I_c (PKR 2009) = $[(3.47 - \log_{10}Q_{tn})^2 + (1.22 + \log_{10}F_r)^2]^{0.5}$	15

Calculated Parameter	Description	Equation	Ref
n (PKR 2009)	Stress ratio exponent n, based on I_c (PKR 2009). An iterative calculation is required to determine n (PKR 2009) and its corresponding Ic (PKR 2009).	*n (PKR 2009) = 0.381 (I_c) + 0.05 (σ_v'/P_a) – 0.15*	15
Qtn (PKR 2009)	Normalized tip resistance using a variable stress ratio exponent based on I_c (PKR 2009) and n (PKR 2009). An iterative calculation is required to determine Qtn (PKR 2009).	$Q_{tn} = [(qt - \sigma_v)/P_a](P_a/\sigma_v')^n$ *where P_a = atmospheric pressure (100 kPa)* *n = stress ratio exponent described above*	15
FC	Apparent fines content (%)	*FC=1.75($Ic^{3.25}$) - 3.7* *FC=100 for $I_c > 3.5$* *FC=0 for $I_c < 1.26$* *FC = 5% if 1.64 < I_c < 2.6 AND F_r<0.5*	3
I_c Zone	This parameter is the Soil Behavior Type zone based on the I_c parameter (valid for zones 2 through 7 on SBTn or SBT Qtn charts)	$I_c < 1.31$ Zone = 7 $1.31 < I_c < 2.05$ Zone = 6 $2.05 < I_c < 2.60$ Zone = 5 $2.60 < I_c < 2.95$ Zone = 4 $2.95 < I_c < 3.60$ Zone = 3 $I_c > 3.60$ Zone = 2	3
State Param or State Parameter or ψ	The state parameter index, ψ, is defined as the difference between the current void ratio, e, and the critical void ratio, e_c. Positive ψ - contractive soil Negative ψ - dilative soil This is based on the work by Been and Jefferies (1985) and Plewes, Davies and Jefferies (1992) - vertical effective stress is used rather than a mean normal stress	See reference	6, 8
Yield Stress σ_p'	Yield stress is calculated using the following methods a) General method b) 1st order approximation using q_tNet (clays) c) 1st order approximation using Δu_2 (clays) d) 1st order approximation using q_e (clays)	All stresses in kPa a) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)^{m'} (\sigma_{atm}/100)^{1-m'}$ where $m' = 1 - \frac{0.28}{(I_c/2.65)^{25}}$ b) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)$ c) $\sigma_p' = 0.54 \cdot (\Delta u_2)$ $\Delta u_2 = u_2 - u_0$ d) $\sigma_p' = 0.60 \cdot (q_t - u_2)$	19 20 20 20
OCR OCR(JS1978) OCR(Mayne2014) OCR (qtNet) OCR (deltaU) OCR (qe) OCR (Vs) OCR (PKR2015)	Over Consolidation Ratio based on a) Schmertmann (1978) method involving a plot plot of $S_u/\sigma_v'/(S_u/\sigma_v')_{NC}$ and OCR b) based on Yield stresses described above c) approximate version based on qtNet d) approximate version based on Δu e) approximate version based on effective tip, q_e f) approximate version based on shear wave velocity, V_s g) based on Qt	 a) requires a user defined value for NC Su/P_c' ratio b through f) *based on yield stresses* g) $OCR = 0.25 \cdot (Qt)^{1.25}$	 9 19 20 20 20 18 32

Calculated Parameter	Description	Equation	Ref
Es/qt	Intermediate parameter for calculating Young's Modulus, E, in sands. It is the Y axis of the reference chart.	Based on Figure 5.59 in the reference	5
Es Young's Modulus E	Young's Modulus based on the work done in Italy. There are three types of sands considered in this technique. The user selects the appropriate type for the site from: a) OC Sands b) Aged NC Sands c) Recent NC Sands Each sand type has a family of curves that depend on mean normal stress. The program calculates mean normal stress and linearly interpolates between the two extremes provided in the E_s/q_t chart. Es is evaluated for an axial strain of 0.1%.	Mean normal stress is evaluated from: $\sigma'_m \quad \frac{1}{3}\sigma'_v \quad \sigma'_h \quad \sigma'^{3}_h$ where σ_v'= vertical effective stress σ_h'= horizontal effective stress *and* $\sigma_h = K_o \bullet \sigma_v'$ with K_o assumed to be 0.5	5
Delta U/TStress	Differential pore pressure ratio with respect to total stress	$\frac{u}{\sigma_v}$ *where:* $u \quad u \quad u_{eq}$	CK*
Delta U/Estress, P Value, Excess Pore Pressure Ratio	Differential pore pressure ratio with respect to effective stress. Key parameter (P, Normalized Pore Pressure Parameter, Excess Pore Pressure Ratio) in the Winckler et. al. static liquefaction method.	$\frac{u}{\sigma'_v}$ *where:* $u \quad u \quad u_{eq}$	25, 25a, CK*
Su/EStress	Undrained shear strength ratio with respect to vertical effective overburden stress using the S_u (N_{kt}) method	$= Su\ (N_{kt}) / \sigma_v'$	CK*
Gmax	G_{max} determined from SCPT shear wave velocities (not estimated values)	$G_{max} = \rho V_s^2$ where ρ is the mass density of the soil determined from the estimated unit weights at each test depth	27
qtNet/Gmax	Net tip resistance ratio with respect to the small strain modulus G_{max} determined from SCPT shear wave velocities (not estimated values)	$= (qt - \sigma_v) / G_{max}$ where $G_{max} = \rho V_s^2$ and ρ is the mass density of the soil determined from the estimated unit weights at each test depth	15, 28, 30

*CK – common knowledge

Table 1b. CPT Parameter Calculation Methods – Liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
K_{SPT}	Equivalent clean sand factor for $(N_1)60$	$K_{SPT} = 1 + ((0.75/30) \bullet (FC - 5))$	10
K_{CPT} or K_C (RW1998)	Equivalent clean sand correction for q_{c1N}	$K_{cpt} = 1.0$ for $I_c \leq 1.64$ $K_{cpt} = f(I_c)$ for $I_c > 1.64$ (see reference) $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$	3, 10
Kc (PKR 2010)	Clean sand equivalent factor to be applied to Q_{tn}	$K_c = 1.0$ for $I_c \leq 1.64$ $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$ for $I_c > 1.64$	16
$(N_1)_{60cs}Ic$	Clean sand equivalent SPT $(N_1)_{60}I_c$. User has 3 options.	1) $(N_1)_{60cs}Ic = \alpha + \beta((N_1)_{60}I_c)$ 2) $(N_1)_{60cs}Ic = K_{SPT} * ((N_1)_{60}I_c)$ 3) $(q_{c1ncs})/(N_1)_{60cs}I_c = 8.5\ (1 - I_c/4.6)$ FC ≤ 5%: $\alpha = 0,\ \beta = 1.0$ FC ≥ 35% $\alpha = 5.0,\ \beta = 1.2$ 5% < FC < 35% $\alpha = exp[1.76 - (190/FC^2)]$ $\beta = [0.99 + (FC^{1.5}/1000)]$	10 10 5
q_{c1ncs}	Clean sand equivalent q_{c1n}	$q_{c1ncs} = q_{c1n} \bullet K_{cpt}$	3
Qtn,cs (PKR 2010)	Clean sand equivalent for Q_{tn} described above - Q_{tn} being the normalized tip resistance based on a variable stress exponent as defined by Robertson (2009)	$Q_{tn,cs} = Q_{tn} \cdot K_c$ (PKR 2016)	16
Su(Liq)/ESv	Liquefied shear strength ratio as defined by Olson and Stark	$\frac{Su(Liq)}{\sigma_v'} = 0.03 + 0.0143(q_{c1})$ Note: σ_v' and s_v' are synonymous	13
Su(Liq)/ESv (PKR 2010)	Liquefied shear strength ratio as defined by Robertson (2010)	$\frac{Su(Liq)}{\sigma_v'}$ Based on a function involving $Q_{tn,cs}$	16
Su (Liq) (PKR 2010)	Liquefied shear strength derived from the liquefied shear strength ratio and effective overburden stress		16
Cont/Dilat Tip	Contractive / Dilative qc1 Boundary based on $(N_1)_{60}$	$(\sigma_v')_{boundary} = 9.58 \times 10^{-4}\ [(N_1)_{60}]^{4.79}$ $qc1$ is calculated from specified qt(MPa)/N ratio	13
CRR	Cyclic Resistance Ratio (for Magnitude 7.5)	$q_{c1ncs} < 50$: $CRR_{7.5} = 0.833\ [q_{c1ncs}/1000] + 0.05$ $50 \leq q_{c1ncs} < 160$: $CRR_{7.5} = 93\ [q_{c1ncs}/1000]^3 + 0.08$	10
Kg	Small strain Stiffness Ratio Factor, Kg	[Gmax/qt]/[qc1n^{-m}] m = empirical exponent, typically 0.75	26

Calculated Parameter	Description	Equation	Ref
SP Distance	State Parameter Distance, Winckler static liquefaction method	Perpendicular distance on Qtn chart from plotted point to state parameter Ψ = -0.05 curve	25
URS NP Fr	Normalized friction ratio point on Ψ = -0.05 curve used in SP Distance calculation		25
URS NP Qtn	Normalized tip resistance (Qtn) point on Ψ = -0.05 curve used in SP Distance calculation		25

ABOUT THIS REPORT

The enclosed report presents the results of the site investigation program conducted by ConeTec, Inc. The program consisted of Piezocone Penetration Testing and Pore Pressure Dissipation Testing. Please note that this report, which also includes all accompanying data, are subject to the 3rd Party Disclaimer and Client Disclaimer that follow in the 'Limitations' section of this report.

Project Information	
Client	Fugro
Project	2821 Tenth St, Berkeley, CA
ConeTec Project Number	21-52-23417
Rig Description	20-ton Track CPT Rig (GPT2)

Coordinates	
Collection Method	Consumer Grade GPS
EPSG Number	32610 (WGS 84 / UTM 10S)

Cone Penetration Test (CPTu)	
Depth Reference	Existing ground surface at the time of the investigation
Sleeve data offset	0.1 Meters

Calculated Geotechnical Parameters Tables	
Additional Information	The Normalized Soil Behaviour Type Chart based on Q_{tn} (SBT Q_{tn}) (Robertson, 2009) was used to classify the soil for this project. A detailed set of calculated CPTu parameters have been generated and are provided in Excel format files in the release folder. The CPTu parameter calculations are based on values of corrected tip resistance (q_t) sleeve friction (f_s) and pore pressure (u_2). Effective stresses are calculated based on unit weights that have been assigned to the individual soil behaviour type zones and the assumed equilibrium pore pressure profile. Soils were classified as either drained or undrained based on the Q_{tn} Normalized Soil Behaviour Type Chart (Robertson, 2009). Calculations for both drained and undrained parameters were included for materials that classified as silt mixtures (zone 4).

Please refer to the list of attached documents following the text of this report. A test summary, location map, and plots are included. Thank you for the opportunity to work on this project.

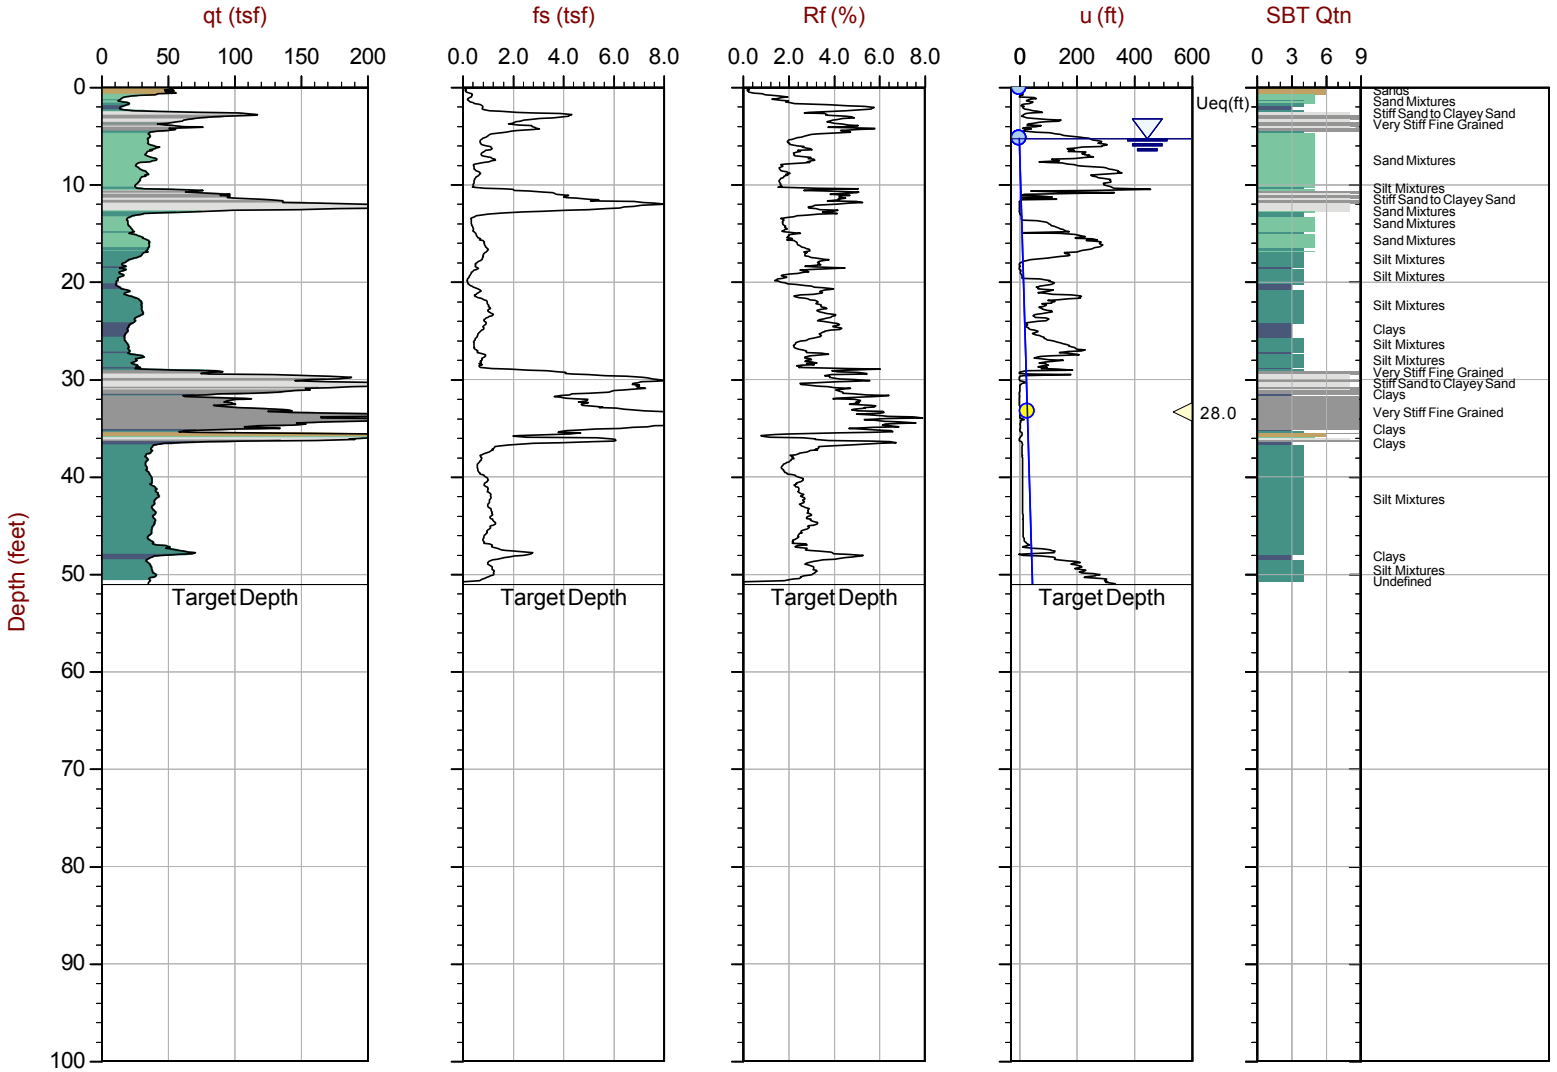
CONE PENETRATION TEST SUMMARY

Sounding ID	File Name	Date	Cone	Cone Area (cm^2)	Assumed Phreatic Surface[1] (ft)	Final Depth (ft)	Northing[2]	Easting[2]	Elevation[3] (ft)	Refer to Notation Number
CPT-02	21-56-23417_CP02	20-Dec-2021	EC813:T1500F15U35	15	5.2	51.02	4189970	562567	45	



1. The assumed phreatic surface is based on the pore pressure dissipation test performed within the sounding. Hydrostatic conditions are assumed for the calculated parameters.
2. The coordinates were collected using consumer grade GPS equipment. EPSG number: 32610 (WGS84 / UTM Zone 10S).
3. Elevations are referenced to the ground surface and were acquired from the Google Earth Elevation for the recorded coordinates.

CONETEC

Cone penetration tests (CPTu) are conducted using an integrated electronic piezocone penetrometer and data acquisition system manufactured by Adara Systems Ltd., a subsidiary of ConeTec.

ConeTec's piezocone penetrometers are compression type designs in which the tip and friction sleeve load cells are independent and have separate load capacities. The piezocones use strain gauged load cells for tip and sleeve friction and a strain gauged diaphragm type transducer for recording pore pressure. The piezocones also have a platinum resistive temperature device (RTD) for monitoring the temperature of the sensors, an accelerometer type dual axis inclinometer and two geophone sensors for recording seismic signals. All signals are amplified and measured with minimum sixteen-bit resolution down hole within the cone body, and the signals are sent to the surface using a high bandwidth, error corrected digital interface through a shielded cable.

ConeTec penetrometers are manufactured with various tip, friction and pore pressure capacities in both 10 cm^2 and 15 cm^2 tip base area configurations in order to maximize signal resolution for various soil conditions. The specific piezocone used for each test is described in the CPT summary table presented in the first appendix. The 15 cm^2 penetrometers do not require friction reducers as they have a diameter larger than the deployment rods. The 10 cm^2 piezocones use a friction reducer consisting of a rod adapter extension behind the main cone body with an enlarged cross sectional area (typically 44 millimeters diameter over a length of 32 millimeters with tapered leading and trailing edges) located at a distance of 585 millimeters above the cone tip.

The penetrometers are designed with equal end area friction sleeves, a net end area ratio of 0.8 and cone tips with a 60 degree apex angle.

All ConeTec piezocones can record pore pressure at various locations. Unless otherwise noted, the pore pressure filter is located directly behind the cone tip in the "u_2" position (ASTM Type 2). The filter is six millimeters thick, made of porous plastic (polyethylene) having an average pore size of 125 microns (90-160 microns). The function of the filter is to allow rapid movements of extremely small volumes of water needed to activate the pressure transducer while preventing soil ingress or blockage.

The piezocone penetrometers are manufactured with dimensions, tolerances and sensor characteristics that are in general accordance with the current ASTM D5778 standard. ConeTec's calibration criteria also meets or exceeds those of the current ASTM D5778 standard. An illustration of the piezocone penetrometer is presented in Figure CPTu.

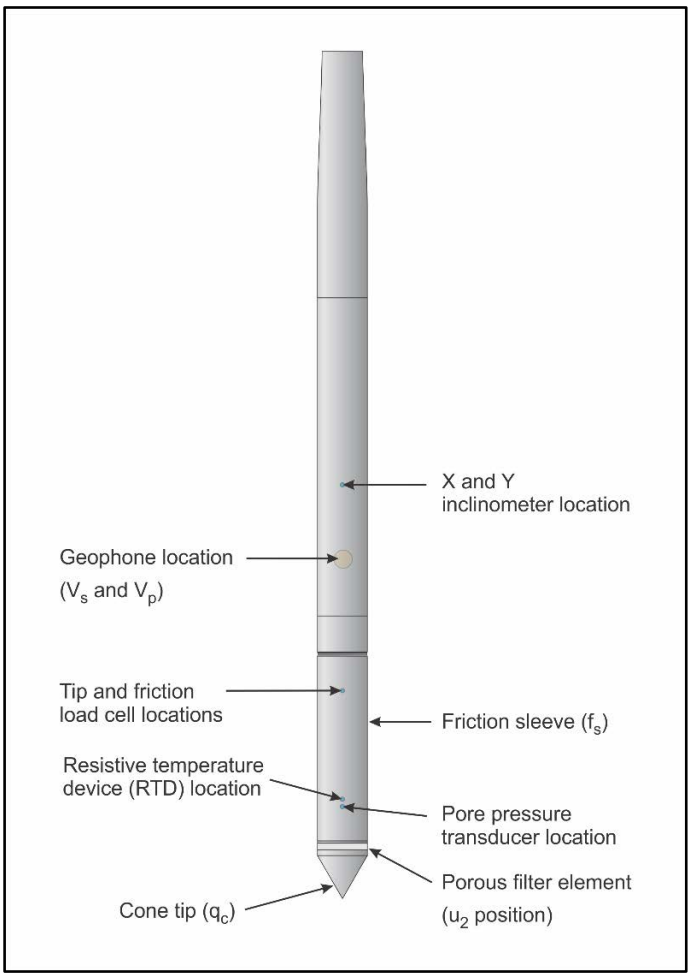

Figure CPTu. Piezocone Penetrometer (15 cm^2)

The ConeTec data acquisition systems consist of a Windows based computer and a signal interface box and power supply. The signal interface combines depth increment signals, seismic trigger signals and the downhole digital data. This combined data is then sent to the Windows based computer for collection and presentation. The data is recorded at fixed depth increments using a depth wheel attached to the push cylinders or by using a spring loaded rubber depth wheel that is held against the cone rods. The typical recording interval is 2.5 centimeters; custom recording intervals are possible.

The system displays the CPTu data in real time and records the following parameters to a storage media during penetration:

- Depth
- Uncorrected tip resistance (q_c)
- Sleeve friction (f_s)
- Dynamic pore pressure (u)
- Additional sensors such as resistivity, passive gamma, ultra violet induced fluorescence, if applicable

All testing is performed in accordance to ConeTec's CPTu operating procedures which are in general accordance with the current ASTM D5778 standard.

Prior to the start of a CPTu sounding a suitable cone is selected, the cone and data acquisition system are powered on, the pore pressure system is saturated with silicone oil and the baseline readings are recorded with the cone hanging freely in a vertical position.

The CPTu is conducted at a steady rate of two centimeters per second, within acceptable tolerances. Typically one meter length rods with an outer diameter of 1.5 inches (38.1 millimeters) are added to advance the cone to the sounding termination depth. After cone retraction final baselines are recorded.

Additional information pertaining to ConeTec's cone penetration testing procedures:

- Each filter is saturated in silicone oil under vacuum pressure prior to use
- Baseline readings are compared to previous readings
- Soundings are terminated at the client's target depth or at a depth where an obstruction is encountered, excessive rod flex occurs, excessive inclination occurs, equipment damage is likely to take place, or a dangerous working environment arises
- Differences between initial and final baselines are calculated to ensure zero load offsets have not occurred and to ensure compliance with ASTM standards

The interpretation of piezocone data for this report is based on the corrected tip resistance (q_t), sleeve friction (f_s) and pore water pressure (u). The interpretation of soil type is based on the correlations developed by Robertson et al. (1986) and Robertson (1990, 2009). It should be noted that it is not always possible to accurately identify a soil behavior type based on these parameters. In these situations, experience, judgment and an assessment of other parameters may be used to infer soil behavior type.

The recorded tip resistance (q_c) is the total force acting on the piezocone tip divided by its base area. The tip resistance is corrected for pore pressure effects and termed corrected tip resistance (q_t) according to the following expression presented in Robertson et al. (1986):

$$q_t = q_c + (1\text{-}a) \bullet u_2$$

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the piezocone (0.8 for ConeTec probes)

The sleeve friction (f_s) is the frictional force on the sleeve divided by its surface area. As all ConeTec piezocones have equal end area friction sleeves, pore pressure corrections to the sleeve data are not required.

The dynamic pore pressure (u) is a measure of the pore pressures generated during cone penetration. To record equilibrium pore pressure, the penetration must be stopped to allow the dynamic pore pressures to stabilize. The rate at which this occurs is predominantly a function of the permeability of the soil and the diameter of the cone.

The friction ratio (R_f) is a calculated parameter. It is defined as the ratio of sleeve friction to the tip resistance expressed as a percentage. Generally, saturated cohesive soils have low tip resistance, high friction ratios and generate large excess pore water pressures. Cohesionless soils have higher tip resistances, lower friction ratios and do not generate significant excess pore water pressure.

A summary of the CPTu soundings along with test details and individual plots are provided in the appendices. A set of files with calculated geotechnical parameters were generated for each sounding based on published correlations and are provided in Excel format in the data release folder. Information regarding the methods used is also included in the data release folder.

For additional information on CPTu interpretations and calculated geotechnical parameters, refer to Robertson et al. (1986), Lunne et al. (1997), Robertson (2009), Mayne (2013, 2014) and Mayne and Peuchen (2012).

Shear wave velocity (Vs) testing is performed in conjunction with the piezocone penetration test (SCPTu) in order to collect interval velocities. For some projects seismic compression wave velocity (Vp) testing is also performed.

ConeTec's piezocone penetrometers are manufactured with one horizontally active geophone (28 hertz) and one vertically active geophone (28 hertz). Both geophones are rigidly mounted in the body of the cone penetrometer, 0.2 meters behind the cone tip. The vertically mounted geophone is more sensitive to compression waves.

Shear waves are typically generated by using an impact hammer horizontally striking a beam that is held in place by a normal load. In some instances, an auger source or an imbedded impulsive source may be used for both shear waves and compression waves. The hammer and beam act as a contact trigger that initiates the recording of the seismic wave traces. For impulsive devices an accelerometer trigger may be used. The traces are recorded in the memory of the cone using a fast analog to digital converter. The seismic trace is then transmitted digitally uphole to a Windows based computer through a signal interface box for recording and analysis. An illustration of the shear wave testing configuration is presented in Figure SCPTu-1.

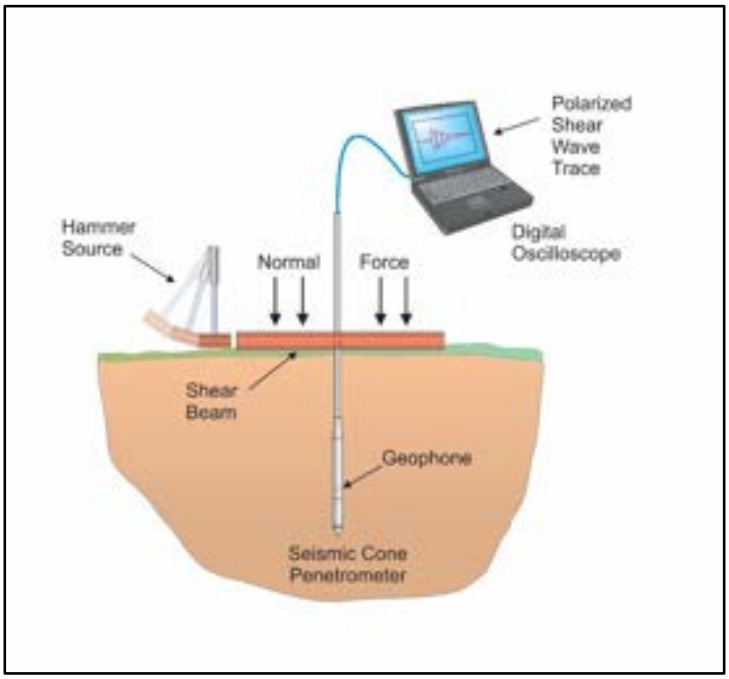

Figure SCPTu-1. Illustration of the SCPTu system

All testing is performed in accordance to ConeTec's SCPTu operating procedures which are in general accordance with the current ASTM D5778 and ASTM D7400 standards.

Prior to the start of a SCPTu sounding, the procedures described in the Cone Penetration Test section are followed. In addition, the active axis of the geophone is aligned parallel to the beam (or source) and the horizontal offset between the cone and the source is measured and recorded.

Prior to recording seismic waves at each test depth, cone penetration is stopped and the rods are decoupled from the rig to avoid transmission of rig energy down the rods. Typically, five wave traces for

each orientation are recorded for quality control and uncertainty analysis purposes. After reviewing wave traces for consistency the cone is pushed to the next test depth (typically one meter intervals or as requested by the client). Figure SCPTu-2 presents an illustration of a SCPTu test.

For additional information on seismic cone penetration testing refer to Robertson et al. (1986).

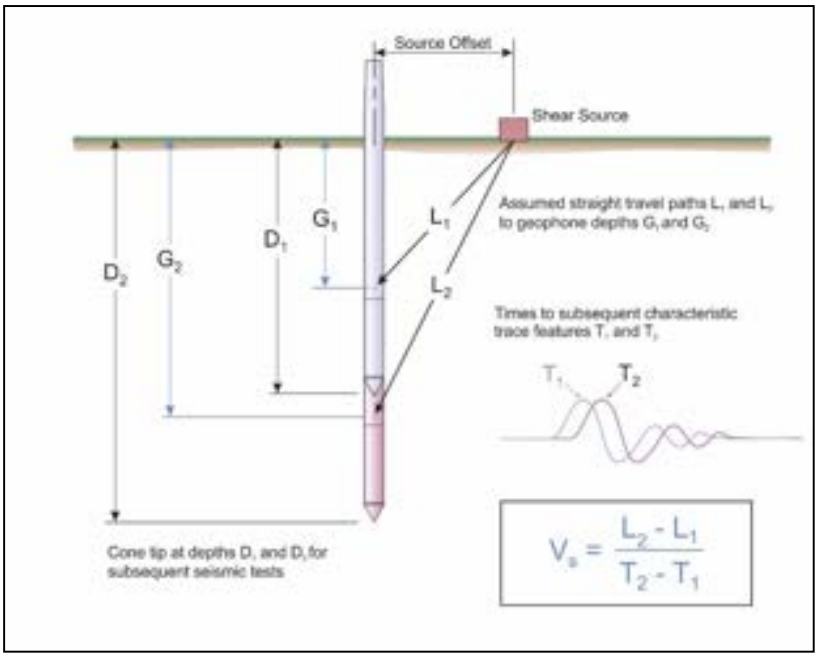

Figure SCPTu-2. Illustration of a seismic cone penetration test

Calculation of the interval velocities are performed by visually picking a common feature (e.g. the first characteristic peak, trough, or crossover) on all of the recorded wave sets and taking the difference in ray path divided by the time difference between subsequent features. Ray path is defined as the straight line distance from the seismic source to the geophone, accounting for beam offset, source depth and geophone offset from the cone tip.

For all SCPTu soundings that have achieved a depth of at least 100 feet (30 meters), the average shear wave velocity to a depth of 100 feet ($\bar{v}_s$) has been calculated and provided for all applicable soundings using the following equation presented in ASCE (2010).

$$\bar{v}_s = \frac{\sum_{i=1}^{n} d_i}{\sum_{i=1}^{n} \frac{d_i}{v_{si}}}$$

where: $\bar{v}_s$ = average shear wave velocity ft/s (m/s)
d_i = the thickness of any layer between 0 and 100 ft (30 m)
v_{si} = the shear wave velocity in ft/s (m/s)
$\sum_{i=1}^{n} d_i$ = the total thickness of all layers between 0 and 100 ft (30 m)

Average shear wave velocity, $\bar{v}_s$ is also referenced to V_{s100} or V_{s30}.

The layer travel times refers to the travel times propagating in the vertical direction, not the measured travel times from an offset source.

Tabular results and SCPTu plots are presented in the relevant appendix.

The cone penetration test is halted at specific depths to carry out pore pressure dissipation (PPD) tests, shown in Figure PPD-1. For each dissipation test the cone and rods are decoupled from the rig and the data acquisition system measures and records the variation of the pore pressure (u) with time (t).

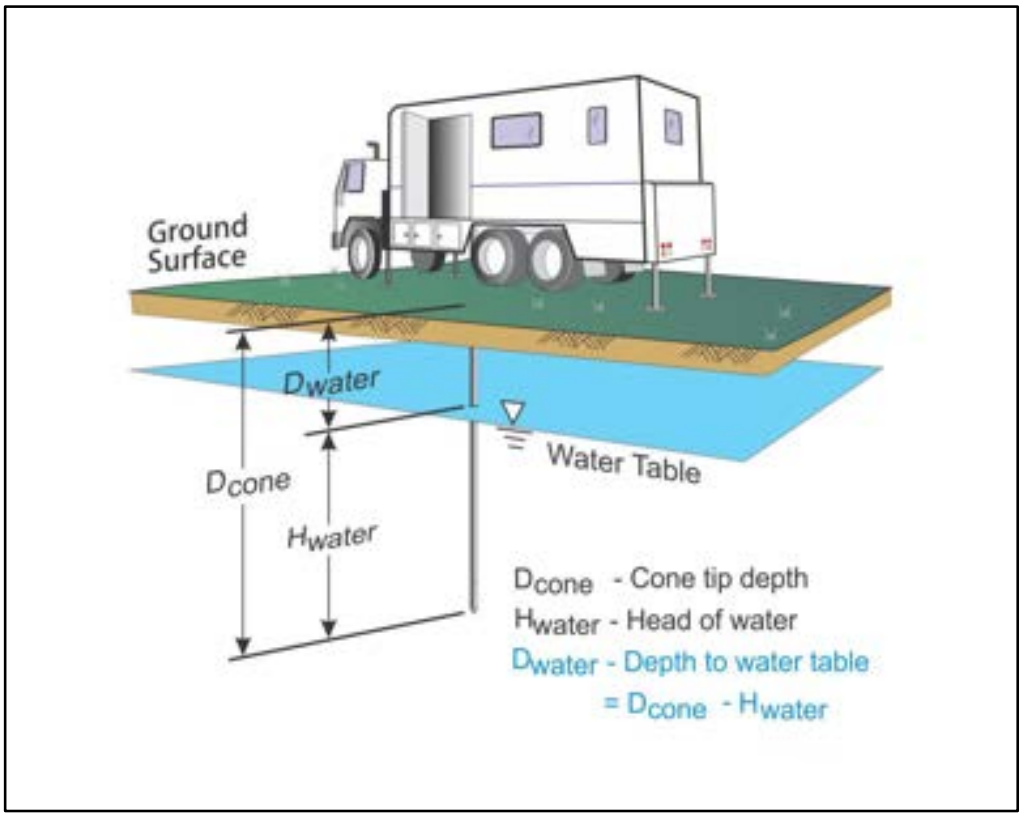

Figure PPD-1. Pore pressure dissipation test setup

Pore pressure dissipation data can be interpreted to provide estimates of ground water conditions, permeability, consolidation characteristics and soil behavior.

The typical shapes of dissipation curves shown in Figure PPD-2 are very useful in assessing soil type, drainage, in situ pore pressure and soil properties. A flat curve that stabilizes quickly is typical of a freely draining sand. Undrained soils such as clays will typically show positive excess pore pressure and have long dissipation times. Dilative soils will often exhibit dynamic pore pressures below equilibrium that then rise over time. Overconsolidated fine-grained soils will often exhibit an initial dilatory response where there is an initial rise in pore pressure before reaching a peak and dissipating.

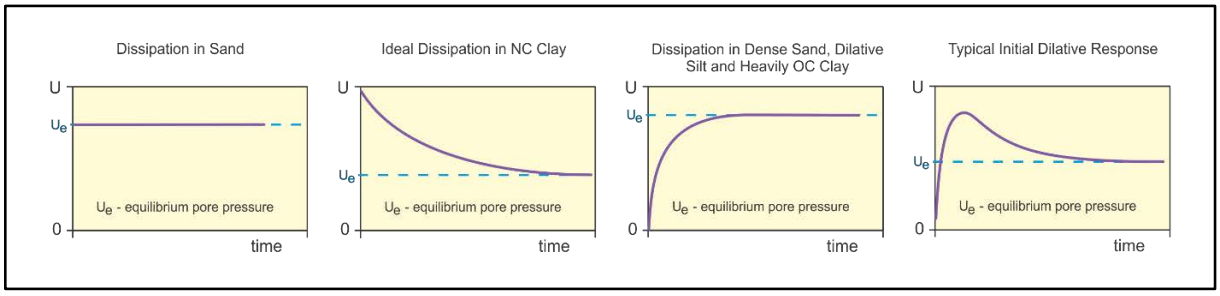

Figure PPD-2. Pore pressure dissipation curve examples

In order to interpret the equilibrium pore pressure (u_{eq}) and the apparent phreatic surface, the pore pressure should be monitored until such time as there is no variation in pore pressure with time as shown for each curve in Figure PPD-2.

In fine grained deposits the point at which 100% of the excess pore pressure has dissipated is known as t_{100}. In some cases this can take an excessive amount of time and it may be impractical to take the dissipation to t_{100}. A theoretical analysis of pore pressure dissipations by Teh and Houlsby (1991) showed that a single curve relating degree of dissipation versus theoretical time factor (T*) may be used to calculate the coefficient of consolidation (c_h) at various degrees of dissipation resulting in the expression for c_h shown below.

$$c_h = \frac{T^* \cdot a^2 \cdot \sqrt{I_r}}{t}$$

Where:
T* is the dimensionless time factor (Table Time Factor)
a is the radius of the cone
I_r is the rigidity index
t is the time at the degree of consolidation

Table Time Factor. T* versus degree of dissipation (Teh and Houlsby (1991))

Degree of Dissipation (%)	20	30	40	50	60	70	80
T* (u_2)	0.038	0.078	0.142	0.245	0.439	0.804	1.60

The coefficient of consolidation is typically analyzed using the time (t_{50}) corresponding to a degree of dissipation of 50% (u_{50}). In order to determine t_{50}, dissipation tests must be taken to a pressure less than u_{50}. The u_{50} value is half way between the initial maximum pore pressure and the equilibrium pore pressure value, known as u_{100}. To estimate u_{50}, both the initial maximum pore pressure and u_{100} must be known or estimated. Other degrees of dissipations may be considered, particularly for extremely long dissipations.

At any specific degree of dissipation the equilibrium pore pressure (u at t_{100}) must be estimated at the depth of interest. The equilibrium value may be determined from one or more sources such as measuring the value directly (u_{100}), estimating it from other dissipations in the same profile, estimating the phreatic surface and assuming hydrostatic conditions, from nearby soundings, from client provided information, from site observations and/or past experience, or from other site instrumentation.

For calculations of c_h (Teh and Houlsby (1991)), t_{50} values are estimated from the corresponding pore pressure dissipation curve and a rigidity index (I_r) is assumed. For curves having an initial dilatory response in which an initial rise in pore pressure occurs before reaching a peak, the relative time from the peak value is used in determining t_{50}. In cases where the time to peak is excessive, t_{50} values are not calculated.

Due to possible inherent uncertainties in estimating I_r, the equilibrium pore pressure and the effect of an initial dilatory response on calculating t_{50}, other methods should be applied to confirm the results for c_h.

Additional published methods for estimating the coefficient of consolidation from a piezocone test are described in Burns and Mayne (1998, 2002), Jones and Van Zyl (1981), Robertson et al. (1992) and Sully et al. (1999).

A summary of the pore pressure dissipation tests and dissipation plots are presented in the relevant appendix.

CONE PENETRATION DIGITAL FILE FORMATS - eSeries

CPT Data Files (COR Extension)

ConeTec CPT data files are stored in ASCII text files that are readable by almost any text editor. ConeTec file names start with the job number (which includes the two digit year number) an underscore as a separating character, followed by two letters based on the type of test and the sounding ID. The last character position is reserved for an identifier letter (such as b, c, d etc) used to uniquely distinguish multiple soundings at the same location. The CPT sounding file has the extension COR. As an example, for job number 21-02-00001 the first CPT sounding will have file name 21-02-00001_CP01.COR

The sounding (COR) file consists of the following components:

1. Two lines of header information
2. Data records
3. End of data marker
4. Units information

Header Lines

Line 1: Columns 1-6 may be blank or may indicate the version number of the recording software
Columns 7-21 contain the sounding Date and Time (Date is MM:DD:YY)
Columns 23-38 contain the sounding Operator
Columns 51-100 contain extended Job Location information

Line 2: Columns 1-16 contain the Job Location
Columns 17-32 contain the Cone ID
Columns 33-47 contain the sounding number
Columns 51-100 may contain extended sounding ID information

Data Records

The data records contain 4 or more columns of data in floating point format. A comma and spaces separate each data item:

Column 1: Sounding Depth (meters)
Column 2: Tip (q_c), recorded in units selected by the operator
Column 3: Sleeve (f_s), recorded in units selected by the operator
Column 4: Dynamic pore pressure (u), recorded in units selected by the operator
Column 5: Empty or may contain other requested data such as Gamma, Resistivity or UVIF data

End of Data Marker

After the last line of data there is a line containing an ASCII 26 (CTL-Z) character (small rectangular shaped character) followed by a newline (carriage return / line feed). This is used to mark the end of data.

Units Information

The last section of the file contains information about the units that were selected for the sounding. A separator bar makes up the first line. The second line contains the type of units used for depth, q_c, f_s and u. The third line contains the conversion values required for ConeTec's software to convert the recorded data to an internal set of base units (bar for q_c, bar for f_s and meters for u). Additional lines intended for internal ConeTec use may appear following the conversion values.

CPT Data Files (XLS Extension)

Excel format files of ConeTec CPT data are also generated from corresponding COR files. The XLS files have the same base file name as the COR file with a -BSC suffix. The information in the file is presented in table format and contains additional information about the sounding such as coordinate information, and tip net area ratio.

The BSCI suffix is given to XLS files which are enhanced versions of the BSC files and include the same data records in addition to inclination data collected for each sounding.

CPT Dissipation Files (XLS Extension)

Pore pressure dissipation files are provided in Excel format and contain each dissipation trace that exceeds a minimum duration (selected during post-processing) formatted column wise within the spreadsheet. The first column (Column A) contains the time in seconds and the second column (Column B) contains the time in minutes. Subsequent columns contain the dissipation trace data. The columns extend to the longest trace of the data set.

Detailed header information is provided at the top of the worksheet. The test depth in meters and feet, the number of points in the trace and the particular units are all presented at the top of each trace column.

CPT Dissipation files have the same naming convention as the CPT sounding files with a "–PPD" suffix.

Data Records

Each file will contain dissipation traces that exceed a minimum duration (selected during post-processing) in a particular column. The dissipation pore pressure values are typically recorded at varying time intervals throughout the trace; rapidly to start and increasing as the duration of the test lengthens. The test depth in meters and feet, the number of points in the trace and the trace number are identified at the top of each trace column.

Cone Type Designations

Cone ID	Cone Description	Tip Cross Sect. Area (cm^2)	Tip Capacity (bar)	Sleeve Area (cm^2)**	Sleeve Capacity (bar)	Pore Pressure Capacity (bar)
EC###	A15T1500F15U35	15	1500	225	15	35

Description of Methods for Calculated CPT Geotechnical Parameters

CALCULATED CPT GEOTECHNICAL PARAMETERS

A Detailed Description of the Methods Used in ConeTec's CPT Geotechnical Parameter Calculation and Plotting Software

Revision SZW-Rev 14

Revised November 26, 2019
Prepared by Jim Greig, M.A.Sc, P.Eng (BC)

CONETEC

Limitations

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates. For this project, ConeTec has provided site investigation services, prepared factual data reporting and produced geotechnical parameter calculations consistent with current best practices. No other warranty, expressed or implied, is made.

To understand the calculations that have been performed and to be able to reproduce the calculated parameters the user is directed to the basic descriptions for the methods in this document and the detailed descriptions and their associated limitations and appropriateness in the technical references cited for each parameter.

ConeTec's Calculated CPT Geotechnical Parameters as of November 26, 2019

ConeTec's CPT parameter calculation and plotting routine provides a tabular output of geotechnical parameters based on current published CPT correlations and is subject to change to reflect the current state of practice. Due to drainage conditions and the basic assumptions and limitations of the correlations, not all geotechnical parameters provided are considered applicable for all soil types. The results are presented only as a guide for geotechnical use and should be carefully examined for consideration in any geotechnical design. Reference to current literature is strongly recommended. ConeTec does not warranty the correctness or the applicability of any of the geotechnical parameters calculated by the program and does not assume liability for any use of the results in any design or review. For verification purposes we recommend that representative hand calculations be done for any parameter that is critical for design purposes. The end user of the parameter output should also be fully aware of the techniques and the limitations of any method used by the program. The purpose of this document is to inform the user as to which methods were used and to direct the end user to the appropriate technical papers and/or publications for further reference.

The geotechnical parameter output was prepared specifically for the site and project named in the accompanying report subject to objectives, site conditions and criteria provided to ConeTec by the client. The output may not be relied upon by any other party or for any other site without the express written permission of ConeTec Group (ConeTec) or any of its affiliates.

The CPT calculations are based on values of tip resistance, sleeve friction and pore pressures considered at each data point or averaged over a user specified layer thickness (e.g. 0.20 m). Note that q_t is the tip resistance corrected for pore pressure effects and q_c is the recorded tip resistance. The corrected tip resistance (corrected using u_2 pore pressure values) is used for all of the calculations. Since all ConeTec cones have equal end area friction sleeves pore pressure corrections to sleeve friction, f_s, are not required.

The tip correction is: $q_t = q_c + (1\text{-}a) \bullet u_2$ (consistent units are implied)

where: q_t is the corrected tip resistance
q_c is the recorded tip resistance
u_2 is the recorded dynamic pore pressure behind the tip (u_2 position)
a is the Net Area Ratio for the cone (typically 0.80 for ConeTec cones)

The total stress calculations are based on soil unit weight values that have been assigned to the Soil Behavior Type (SBT) zones, from a user defined unit weight profile, by using a single uniform value throughout the profile, through unit weight estimation techniques described in various technical papers or from a combination of these methods. The parameter output files indicate the method(s) used.

Effective vertical overburden stresses are calculated based on a hydrostatic distribution of equilibrium pore pressures below the water table or from a user defined equilibrium pore pressure profile (typically obtained from CPT dissipation tests) or a combination of the two. For over water projects the stress effects of the column of water above the mudline have been taken into account as has the appropriate unit weight of water. How this is done depends on where the instruments were zeroed (i.e. on deck or at the mudline). The parameter output files indicate the method(s) used.

A majority of parameter calculations are derived or driven by results based on material types as determined by the various soil behavior type charts depicted in Figures 1 through 5. The parameter output files indicate the method(s) used.

The Soil Behavior Type classification chart shown in Figure 1 is the classic non-normalized SBT Chart developed at the University of British Columbia and reported in Robertson, Campanella, Gillespie and Greig (1986). Figure 2 shows the original normalized (linear method) SBT chart developed by Robertson (1990). The Bq classification charts shown in Figures 3a and 3b incorporate pore pressures into the SBT classification and are based on the methods described in Robertson (1990). Many of these charts have been summarized in Lunne, Robertson and Powell (1997). The

Jefferies and Davies SBT chart shown in Figure 3c is based on the techniques discussed in Jefferies and Davies (1993) which introduced the concept of the Soil Behavior Type Index parameter, I_c. Please note that the I_c parameter developed by Robertson and Fear (1995) and Robertson and Wride (1998) is similar in concept but uses a slightly different calculation method than that used by Jefferies and Davies (1993) as the latter incorporates pore pressure in their technique through the use of the Bq parameter. The normalized Qtn SBT chart shown in Figure 4 is based on the work by Robertson (2009) utilizing a variable stress ratio exponent, n, for normalization based on a slightly modified redefinition and iterative approach for I_c. The boundary curves drawn on the chart are based on the work described in Robertson (2010).

Figure 5 shows a revised behavior based chart by Robertson (2016) depicting contractive-dilative zones. As the zones represent material behavior rather than soil gradation ConeTec has chosen a set of zone colors that are less likely to be confused with material type colors from previous SBT charts. These colors differ from those used by Dr. Robertson.

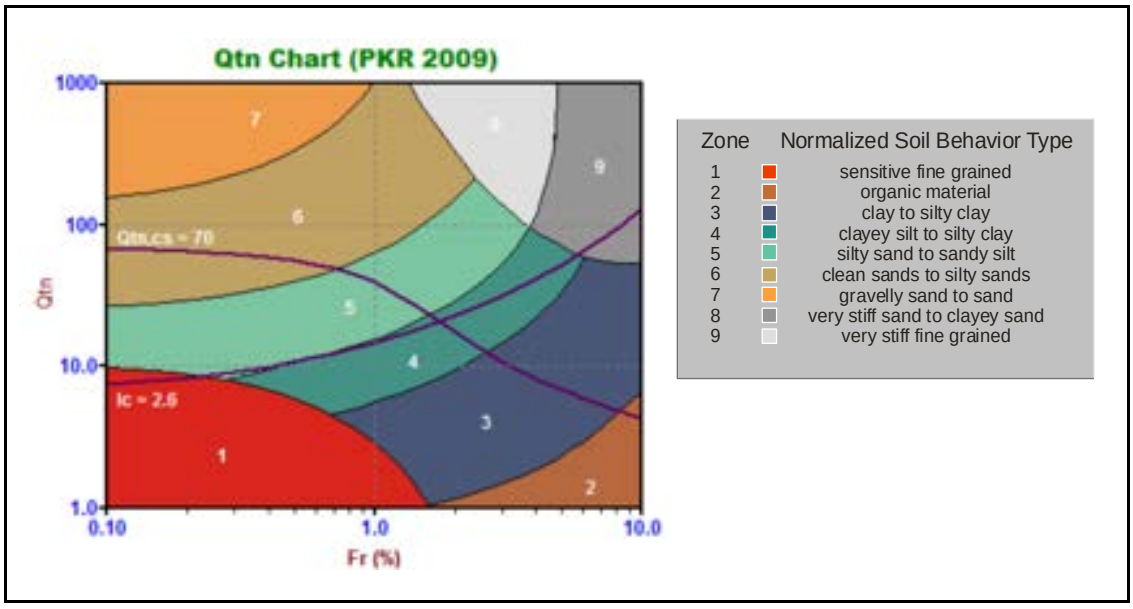

Figure 4. Normalized Soil Behavior Type Chart using Q_{tn} (SBT Qtn)

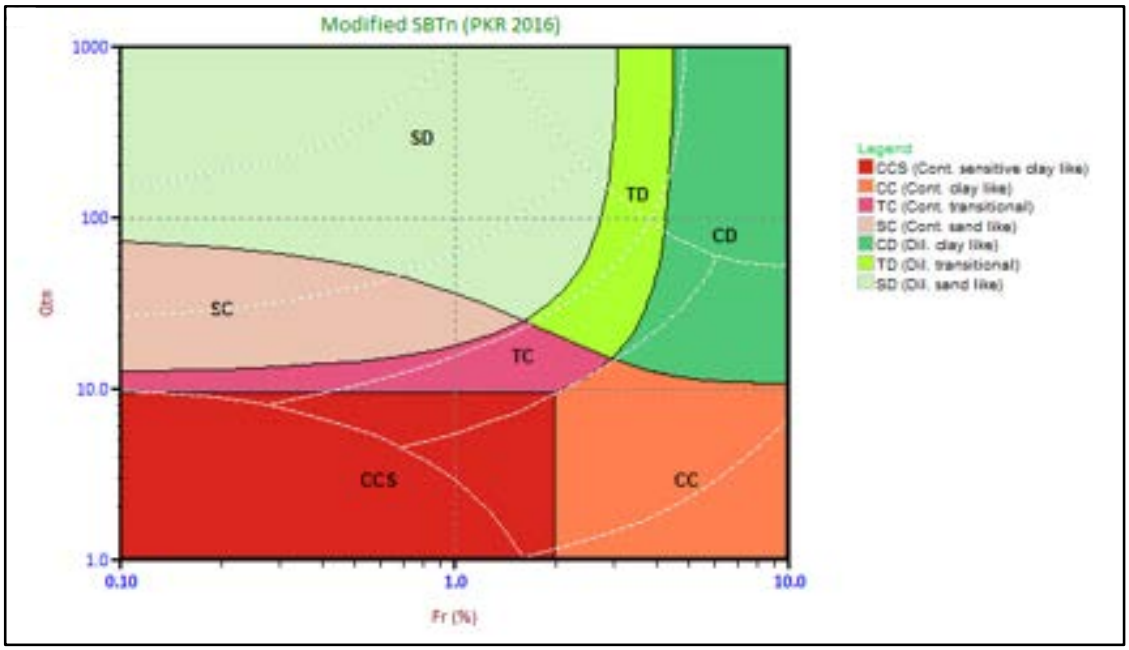

Figure 5. Modified SBTn Behavior Based Chart

Details regarding the geotechnical parameter calculations are provided in Tables 1a and 1b. The appropriate references cited are listed in Table 2. Non-liquefaction specific parameters are detailed in Table 1a and liquefaction specific parameters are detailed in Table 1b.

Where methods are based on charts or techniques that are too complex to describe in this summary the user should refer to the cited material. Specific limitations for each method are described in the cited material.

Where the results of a calculation/correlation are deemed *'invalid'* the value will be represented by the text strings "-9999", "-9999.0", the value 0.0 (Zero) or an empty cell. Invalid results will occur because of (and not limited to) one or a combination of:

1. Invalid or undefined CPT data (e.g. drilled out section or data gap).
2. Where the calculation method is inappropriate, for example, drained parameters in a material behaving as an undrained material (and vice versa).
3. Where input values are beyond the range of the referenced charts or specified limitations of the correlation method.
4. Where pre-requisite or intermediate parameter calculations are invalid.

The parameters selected for output from the program are often specific to a particular project. As such, not all of the calculated parameters listed in Table 1 may be included in the output files delivered with this report.

The output files are typically provided in Microsoft Excel XLS or XLSX format. The ConeTec software has several options for output depending on the number or types of calculated parameters desired or requested by the client. Each output file is named using the original COR file base name followed by a three or four letter indicator of the output set selected (e.g. BSC, TBL, NLI, NL2, IFI, IFI2) and possibly followed by an operator selected suffix identifying the characteristics of the particular calculation run.

Table 1a. CPT Parameter Calculation Methods – Non liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
Depth	Mid Layer Depth *(where calculations are done at each point then Mid Layer Depth = Recorded Depth)*	*[Depth (Layer Top) + Depth (Layer Bottom)]/ 2.0*	CK*

Avg u	Averaged dynamic pore pressure *(u)*	$Avgu \quad \frac{1}{n}\sum_{i\ 1}^{n} u_i$ *n=1 when calculations are done at each point*	CK*

Calculated Parameter	Description	Equation	Ref
Avg Res	Averaged Resistivity (this data is not always available since it is a specialized test requiring an additional module)	$AvgRes \quad \frac{1}{n}\sum_{i=1}^{n} Resistivity_i$ *n=1 when calculations are done at each point*	CK*
Avg UVIF	Averaged UVIF ultra-violet induced fluorescence (this data is not always available since it is a specialized test requiring an additional module)	$AvgUVIF \quad \frac{1}{n}\sum_{i=1}^{n} UVIF_i$ *n=1 when calculations are done at each point*	CK*
Avg Temp	Averaged Temperature (this data is not always available since it requires specialized calibrations)	$AvgTemp \quad \frac{1}{n}\sum_{i=1}^{n} Temperature_i$ *n=1 when calculations are done at each point*	CK*
Avg Gamma	Averaged Gamma Counts (this data is not always available since it is a specialized test requiring an additional module)	$AvgGamma \quad \frac{1}{n}\sum_{i=1}^{n} Gamma_i$ *n=1 when calculations are done at each point*	CK*
SBT	Soil Behavior Type as defined by Robertson et al 1986 (often referred to as Robertson and Campanella, 1986)	See Figure 1	1, 5
SBTn	Normalized Soil Behavior Type as defined by Robertson 1990 (linear normalization)	See Figure 2	2, 5
SBT-Bq	Non-normalized Soil Behavior type based on the Bq parameter	See Figure 3	1, 2, 5
SBT-Bqn	Normalized Soil Behavior based on the Bq parameter	See Figure 3	2, 5
SBT-JandD	Soil Behavior Type as defined by Jeffries and Davies	See Figure 3	7
SBT Qtn	Soil Behavior Type as defined by Robertson (2009) using a variable stress ratio exponent for normalization based on I_c	See Figure 4	15
Modified SBTn (contractive /dilative)	Modified SBTn chart as defined by Robertson (2016) indicating zones of contractive/dilative behavior.	See Figure 5	30
Unit Wt.	Unit Weight of soil determined from one of the following user selectable options: 1) uniform value 2) value assigned to each SBT zone 3) value assigned to each SBTn zone 4) value assigned to SBTn zone as determined from Robertson and Wride (1998) based on q_{c1n} 5) values assigned to SBT Qtn zones 6) Mayne fs (sleeve friction) method 7) Robertson 2010 method 8) user supplied unit weight profile The last option may co-exist with any of the other options	See references	3, 5, 15, 21, 24, 29

Calculated Parameter	Description	Equation	Ref
TStress σ_v	Total vertical overburden stress at Mid Layer Depth *A layer is defined as the averaging interval specified by the user where depths are reported at their respective mid-layer depth.* *For data calculated at each point layers are defined using the recorded depth as the mid-point of the layer. Thus, a layer starts half-way between the previous depth and the current depth unless this is the first point in which case the layer start is at zero depth. The layer bottom is half-way from the current depth to the next depth unless it is the last data point.* *Defining layers affects how stresses are calculated since the unit weight attributed to a data point is used throughout the entire layer. This means that to calculate the stresses the total stress at the top and bottom of a layer are required. The stress at mid layer is determined by adding the incremental stress from the layer top to the mid-layer depth. The stress at the layer bottom becomes the stress at the top of the subsequent layer. Stresses are NOT calculated from mid-point to mid-point.* *For over-water work the total stress due to the column of water above the mid line is taken into account where appropriate.*	$TStress \quad \sum_{i=1}^{n} \gamma_i h_i$ *where* γ_i is layer unit weight h_i is layer thickness	CK*
EStress σ_v'	Effective vertical overburden stress at mid-layer depth	$\sigma_v' = \sigma_v - u_{eq}$	CK*
Equil u u_{eq} or u_0	Equilibrium pore pressure determined from one of the following user selectable options: 1) hydrostatic below water table 2) user supplied profile 3) combination of those above When a user supplied profile is used/provided a linear interpolation is performed between equilibrium pore pressures defined at specific depths. If the profile values start below the water table then a linear transition from zero pressure at the water table to the first defined pointed is used. Equilibrium pore pressures may come from dissipation tests, adjacent piezometers or other sources. Occasionally, an extra equilibrium point ("assumed value") will be provided in the profile that does not come from a recorded value to smooth out any abrupt changes or to deal with material interfaces. These "assumed" values will be indicated on our plots and in tabular summaries.	For hydrostatic option: $u_{eq} \quad \gamma_w \quad D \quad D_{wt}$ where u_{eq} is equilibrium pore pressure γ_w is unit weight of water D is the current depth D_{wt} is the depth to the water table	CK*
K_0	Coefficient of earth pressure at rest, K_0	$K_O = (1 - \sin\Phi') OCR^{\sin\Phi'}$	17
C_n	Overburden stress correction factor used for $(N_1)_{60}$ and older CPT parameters	$C_n = (P_a/\sigma_v')^{0.5}$ where $0.0 < C_n < 2.0$ *(user adjustable, typically 1.7)* P_a *is atmospheric pressure (100 kPa)*	12
C_q	Overburden stress normalizing factor	$C_q = 1.8 / (0.8 + (\sigma_v'/P_a))$ where $0.0 < C_q < 2.0$ *(user adjustable)* P_a *is atmospheric pressure (100 kPa)*	3, 12

Calculated Parameter	Description	Equation	Ref
N_{60}	SPT N value at 60% energy calculated from q_t/N ratios assigned to each SBT zone. This method has abrupt N value changes at zone boundaries.	*See Figure 1*	5
(N1)60	SPT N_{60} value corrected for overburden pressure	$(N_1)_{60} = C_n \bullet N_{60}$	4
N60Ic	SPT N_{60} values based on the I_c parameter [as defined by Roberston and Wride 1998 (5), or by Robertson 2009 (15)].	$(q_t/P_a)/ N_{60} = 8.5\ (1 - I_c/4.6)$ $(q_t/P_a)/ N_{60} = 10^{(1.1268 - 0.2817Ic)}$ Pa being atmospheric pressure	5 15, 31
(N1)60Ic	SPT N_{60} value corrected for overburden pressure (using N_{60} I_c). User has 3 options.	1) $(N_1)_{60}Ic = C_n \bullet (N_{60}\ I_c)$ 2) $q_{c1n}/ (N_1)_{60}I_c = 8.5\ (1 - I_c/4.6)$ 3) $(Q_{tn})/ (N_1)_{60}I_c = 10^{(1.1268 - 0.2817Ic)}$	4 5 15, 31
Su or Su (Nkt)	Undrained shear strength based on q_t S_u factor N_{kt} is user selectable	$Su \quad \frac{qt \quad \sigma_v}{N_{kt}}$	1, 5
Su or Su (Ndu)	Undrained shear strength based on pore pressure S_u factor $N_{\Delta u}$ is user selectable	$Su \quad \frac{u_2 \quad u_{eq}}{N_{\ u}}$	1, 5
Dr	Relative Density determined from one of the following user selectable options: a) Ticino Sand b) Hokksund Sand c) Schmertmann (1978) d) Jamiolkowski (1985) - All Sands e) Jamiolkowski et al (2003) (various compressibilities, K_o)	See reference (methods a through d) Jamiolkowski et al (2003) reference	5 14
PHI ϕ	Friction Angle determined from one of the following user selectable options (methods a through d are for sands and method e is for silts and clays): a) Campanella and Robertson b) Durgunoglu and Mitchel c) Janbu d) Kulhawy and Mayne e) NTH method (clays and silts)	See appropriate reference	5 5 5 11 23
Delta U/qt	Differential pore pressure ratio (older parameter used before B_q was established)	$\frac{u}{qt}$ *where:* $u \quad u \quad u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	CK*
Bq	Pore pressure parameter	$Bq \quad \frac{u}{qt \quad \sigma_v}$ where : $u \quad u \quad u_{eq}$ *and* u = *dynamic pore pressure* u_{eq} = *equilibrium pore pressure*	1, 2, 5
Net qt or qtNet	Net tip resistance (used in many subsequent correlations)	$qt \quad \sigma_v$	CK*
qe	Effective tip resistance (using the dynamic pore pressure u_2 and not equilibrium pore pressure)	$qt \quad u_2$	CK*

Calculated Parameter	Description	Equation	Ref
qeNorm	Normalized effective tip resistance	$\frac{qt \quad u_2}{\sigma_v}$	CK*
Q_t or Norm: Qt	Normalized q_t for Soil Behavior Type classification as defined by Robertson (1990) using a linear stress normalization. Note this is different from Q_{tn}.	$Qt \quad \frac{qt \quad \sigma_v}{\sigma_v}$	2, 5
F_r or Norm: Fr	Normalized Friction Ratio for Soil Behavior Type classification as defined by Robertson (1990)	$Fr \quad 100\% \quad \frac{fs}{qt \quad \sigma_v}$	2, 5
Q(1-Bq)	Q(1-Bq) grouping as suggested by Jefferies and Davies for their classification chart and the establishment of their I_c parameter	$Q \quad (1 \quad Bq)$ *where Bq is defined as above and Q is the same as the normalized tip resistance, Q_t, defined above*	6, 7
qc1	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method has stress units)	$q_{c1} = q_t \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	21
qc1 (0.5)	Normalized tip resistance, q_{c1}, using a fixed stress ratio exponent, n (this method is unit-less)	$q_{c1}(0.5) = (q_t/P_a) \cdot (Pa/\sigma_v')^{0.5}$ where: Pa = atmospheric pressure	5
qc1 (Cn)	Normalized tip resistance, q_{c1}, based on C_n (this method has stress units)	$q_{c1}(Cn) = C_n * q_t$	5, 12
qc1 (Cq)	Normalized tip resistance, q_{c1}, based on C_q (this method has stress units)	$q_{c1}(Cq) = C_q * q_t$ (some papers use q_c)	5, 12
qc1n	normalized tip resistance, q_{c1n}, using a variable stress ratio exponent, n (where n=0.0, 0.70, 1.0) (this method is unit-less)	$q_{c1n} = (q_t / P_a)(P_a/\sigma_v')^n$ where: P_a = atm. Pressure and n varies as described below	3, 5
I_c or Ic (RW1998)	Soil Behavior Type Index as defined by Robertson and Fear (1995) and Robertson and Wride (1998) for estimating grain size characteristics and providing smooth gradational changes across the SBTn chart	$I_c = [(3.47 - \log_{10}Q)^2 + (\log_{10} Fr + 1.22)^2]^{0.5}$ *Where:* $Q \quad \frac{qt \quad \sigma_v}{P_a} \quad \frac{P_a}{\sigma_v'}^n$ *Or* $Q \quad q_{c1n} \quad \frac{qt}{P_a} \quad \frac{P_a}{\sigma_v'}^n$ *depending on the iteration in determining I_c* *And* *Fr is in percent* *P_a = atmospheric pressure* *n varies between 0.5, 0.70 and 1.0 and is selected in an iterative manner based on the resulting I_c*	3, 5, 21
Ic (PKR 2009)	Soil Behavior Type Index, I_c (PKR 2009) based on a variable stress ratio exponent n, which itself is based on I_c (PKR 2009). An iterative calculation is required to determine Ic (PKR 2009) and its corresponding n (PKR 2009).	I_c (PKR 2009) = $[(3.47 - \log_{10}Q_{tn})^2 + (1.22 + \log_{10}F_r)^2]^{0.5}$	15

Calculated Parameter	Description	Equation	Ref
n (PKR 2009)	Stress ratio exponent n, based on I_c (PKR 2009). An iterative calculation is required to determine n (PKR 2009) and its corresponding Ic (PKR 2009).	*n (PKR 2009) = 0.381 (I_c) + 0.05 (σ_v'/P_a) – 0.15*	15
Qtn (PKR 2009)	Normalized tip resistance using a variable stress ratio exponent based on I_c (PKR 2009) and n (PKR 2009). An iterative calculation is required to determine Qtn (PKR 2009).	$Q_{tn} = [(qt - \sigma_v)/P_a](P_a/\sigma_v')^n$ *where P_a = atmospheric pressure (100 kPa)* *n = stress ratio exponent described above*	15
FC	Apparent fines content (%)	*FC=1.75($Ic^{3.25}$) - 3.7* *FC=100 for $I_c > 3.5$* *FC=0 for $I_c < 1.26$* *FC = 5% if 1.64 < I_c < 2.6 AND F_r<0.5*	3
I_c Zone	This parameter is the Soil Behavior Type zone based on the I_c parameter (valid for zones 2 through 7 on SBTn or SBT Qtn charts)	$I_c < 1.31$ Zone = 7 $1.31 < I_c < 2.05$ Zone = 6 $2.05 < I_c < 2.60$ Zone = 5 $2.60 < I_c < 2.95$ Zone = 4 $2.95 < I_c < 3.60$ Zone = 3 $I_c > 3.60$ Zone = 2	3
State Param or State Parameter or ψ	The state parameter index, ψ, is defined as the difference between the current void ratio, e, and the critical void ratio, e_c. Positive ψ - contractive soil Negative ψ - dilative soil This is based on the work by Been and Jefferies (1985) and Plewes, Davies and Jefferies (1992) - vertical effective stress is used rather than a mean normal stress	See reference	6, 8
Yield Stress σ_p'	Yield stress is calculated using the following methods a) General method b) 1st order approximation using q_tNet (clays) c) 1st order approximation using Δu_2 (clays) d) 1st order approximation using q_e (clays)	All stresses in kPa a) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)^{m'} (\sigma_{atm}/100)^{1-m'}$ where $m' = 1 - \frac{0.28}{(I_c/2.65)^{25}}$ b) $\sigma_p' = 0.33 \cdot (q_t - \sigma_v)$ c) $\sigma_p' = 0.54 \cdot (\Delta u_2)$ $\Delta u_2 = u_2 - u_0$ d) $\sigma_p' = 0.60 \cdot (q_t - u_2)$	19 20 20 20
OCR OCR(JS1978) OCR(Mayne2014) OCR (qtNet) OCR (deltaU) OCR (qe) OCR (Vs) OCR (PKR2015)	Over Consolidation Ratio based on a) Schmertmann (1978) method involving a plot plot of $S_u/\sigma_v'/(S_u/\sigma_v')_{NC}$ and OCR b) based on Yield stresses described above c) approximate version based on qtNet d) approximate version based on Δu e) approximate version based on effective tip, q_e f) approximate version based on shear wave velocity, V_s g) based on Qt	a) requires a user defined value for NC Su/P_c' ratio b through f) *based on yield stresses* g) $OCR = 0.25 \cdot (Qt)^{1.25}$	9 19 20 20 20 18 32

Calculated Parameter	Description	Equation	Ref
Es/qt	Intermediate parameter for calculating Young's Modulus, E, in sands. It is the Y axis of the reference chart.	Based on Figure 5.59 in the reference	5
Es Young's Modulus E	Young's Modulus based on the work done in Italy. There are three types of sands considered in this technique. The user selects the appropriate type for the site from: a) OC Sands b) Aged NC Sands c) Recent NC Sands Each sand type has a family of curves that depend on mean normal stress. The program calculates mean normal stress and linearly interpolates between the two extremes provided in the E_s/q_t chart. Es is evaluated for an axial strain of 0.1%.	Mean normal stress is evaluated from: $\sigma'_m \quad \frac{1}{3}\sigma'_v \quad \sigma'_h \quad \sigma'^{3}_h$ where σ_v'= vertical effective stress σ_h'= horizontal effective stress *and* $\sigma_h = K_o \bullet \sigma_v'$ with K_o assumed to be 0.5	5
Delta U/TStress	Differential pore pressure ratio with respect to total stress	$\frac{u}{\sigma_v}$ *where:* $u \quad u \quad u_{eq}$	CK*
Delta U/Estress, P Value, Excess Pore Pressure Ratio	Differential pore pressure ratio with respect to effective stress. Key parameter (P, Normalized Pore Pressure Parameter, Excess Pore Pressure Ratio) in the Winckler et. al. static liquefaction method.	$\frac{u}{\sigma'_v}$ *where:* $u \quad u \quad u_{eq}$	25, 25a, CK*
Su/EStress	Undrained shear strength ratio with respect to vertical effective overburden stress using the S_u (N_{kt}) method	$= Su\ (N_{kt}) / \sigma_v'$	CK*
Gmax	G_{max} determined from SCPT shear wave velocities (not estimated values)	$G_{max} = \rho V_s^2$ where ρ is the mass density of the soil determined from the estimated unit weights at each test depth	27
qtNet/Gmax	Net tip resistance ratio with respect to the small strain modulus G_{max} determined from SCPT shear wave velocities (not estimated values)	$= (qt - \sigma_v) / G_{max}$ where $G_{max} = \rho V_s^2$ and ρ is the mass density of the soil determined from the estimated unit weights at each test depth	15, 28, 30

*CK – common knowledge

Table 1b. CPT Parameter Calculation Methods – Liquefaction Parameters

Calculated Parameter	Description	Equation	Ref
K_{SPT}	Equivalent clean sand factor for $(N_1)60$	$K_{SPT} = 1 + ((0.75/30) \bullet (FC - 5))$	10
K_{CPT} or K_C (RW1998)	Equivalent clean sand correction for q_{c1N}	$K_{cpt} = 1.0$ for $I_c \leq 1.64$ $K_{cpt} = f(I_c)$ for $I_c > 1.64$ (see reference) $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$	3, 10
Kc (PKR 2010)	Clean sand equivalent factor to be applied to Q_{tn}	$K_c = 1.0$ for $I_c \leq 1.64$ $K_c = -0.403\ I_c^4 + 5.581\ I_c^3 - 21.63 I_c^2 + 33.75\ I_c - 17.88$ for $I_c > 1.64$	16
$(N_1)_{60cs}Ic$	Clean sand equivalent SPT $(N_1)_{60}I_c$. User has 3 options.	1) $(N_1)_{60cs}Ic = \alpha + \beta((N_1)_{60}I_c)$ 2) $(N_1)_{60cs}Ic = K_{SPT} * ((N_1)_{60}I_c)$ 3) $(q_{c1ncs})/(N_1)_{60cs}I_c = 8.5\ (1 - I_c/4.6)$ FC ≤ 5%: $\alpha = 0,\ \beta = 1.0$ FC ≥ 35% $\alpha = 5.0,\ \beta = 1.2$ 5% < FC < 35% $\alpha = exp[1.76 - (190/FC^2)]$ $\beta = [0.99 + (FC^{1.5}/1000)]$	10 10 5
q_{c1ncs}	Clean sand equivalent q_{c1n}	$q_{c1ncs} = q_{c1n} \bullet K_{cpt}$	3
Qtn,cs (PKR 2010)	Clean sand equivalent for Q_{tn} described above - Q_{tn} being the normalized tip resistance based on a variable stress exponent as defined by Robertson (2009)	$Q_{tn,cs} = Q_{tn} \cdot K_c$ (PKR 2016)	16
Su(Liq)/ESv	Liquefied shear strength ratio as defined by Olson and Stark	$\frac{Su(Liq)}{\sigma_v'} = 0.03 + 0.0143(q_{c1})$ Note: σ_v' and s_v' are synonymous	13
Su(Liq)/ESv (PKR 2010)	Liquefied shear strength ratio as defined by Robertson (2010)	$\frac{Su(Liq)}{\sigma_v'}$ Based on a function involving $Q_{tn,cs}$	16
Su (Liq) (PKR 2010)	Liquefied shear strength derived from the liquefied shear strength ratio and effective overburden stress		16
Cont/Dilat Tip	Contractive / Dilative qc1 Boundary based on $(N_1)_{60}$	$(\sigma_v')_{boundary} = 9.58 \times 10^{-4}\ [(N_1)_{60}]^{4.79}$ $qc1$ is calculated from specified qt(MPa)/N ratio	13
CRR	Cyclic Resistance Ratio (for Magnitude 7.5)	$q_{c1ncs} < 50$: $CRR_{7.5} = 0.833\ [q_{c1ncs}/1000] + 0.05$ $50 \leq q_{c1ncs} < 160$: $CRR_{7.5} = 93\ [q_{c1ncs}/1000]^3 + 0.08$	10
Kg	Small strain Stiffness Ratio Factor, Kg	[Gmax/qt]/[qc1n^{-m}] m = empirical exponent, typically 0.75	26

Calculated Parameter	Description	Equation	Ref
SP Distance	State Parameter Distance, Winckler static liquefaction method	Perpendicular distance on Qtn chart from plotted point to state parameter Ψ = -0.05 curve	25
URS NP Fr	Normalized friction ratio point on Ψ = -0.05 curve used in SP Distance calculation		25
URS NP Qtn	Normalized tip resistance (Qtn) point on Ψ = -0.05 curve used in SP Distance calculation		25

1810 6th Street
Berkeley, CA 94710

Re: Trip Generation Analysis, VMT Analysis, and Parking Surveys for the Proposed Mixed-Use Project at 2817 - 2821 10th Street & 2820 San Pablo Avenue in the City of Berkeley

This report summarizes the results of a trip generation analysis, VMT Analysis, and on-street parking occupancy surveys for the proposed development to be located at 2817 - 2821 10th Street & 2820 San Pablo Avenue in the City of Berkeley. The proposed project involves an office / light manufacturing mixed use project with a single large residential unit on the 4th floor. The project would include approximately 20,500 square feet of office space, 6,300 square feet of light industrial space, and one apartment unit, along with a ground floor parking. The project proposes development of two parcels and includes demolition of two structures, with the building at 2817 10th Street to remain as part of the project. As a result, 12,193 square feet of light manufacturing space and 2,080 square feet of residential space would be demolished. All vehicle access to the proposed project would be via a driveway to the 37 space parking garage on Tenth Street. **Figure 1** shows the location of the project and the surrounding roadway network. **Figure 2** shows the ground floor site plan for the project**.** Based on the trip generation forecasts the project would generate about 23 vehicle trips during the AM peak hour and about 34 trips during the PM peak hour. Subject to City approval, the project would have a less than significant impact on vehicle miles traveled in the area, according to the City's adopted standards.[1]

Project Trip Generation

The vehicle trip generation for the project is shown in **Table 1**. The trip generation rates are based on the ITE rates for a single family home (Land Use 210), light industrial uses (Land Use 110), and small office building (Land Use 712) taken from the 11th Edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual. The residential trip rates for a single family home were used for the one large apartment/condominium unit to be conservative. Based on the trip generation forecasts the project would generate about 23 trips during the AM peak hour and 34 trips during the PM peak hour. The trips generated by this project are estimated for the peak commute hours which represent the peak of adjacent street traffic.

Vehicle Miles Traveled

The vehicle miles traveled (VMT) in an area is one performance measure that can be used to quantify potential changes in travel from a project. This letter presents the extent of the VMT-related transportation impacts forecast to be caused by the Project. VMT is a particularly useful metric for evaluating the impacts of growth on greenhouse gas (GHG) emissions because it can be used to estimate fuel consumption by motor vehicles. Increases in VMT cause proportional increases in greenhouse gas emissions and air pollution. The Office of Planning and Research (OPR) released their final guidelines in a Technical Advisory on Evaluating Transportation

Impacts in CEQA, dated December 2018. This analysis is based on the City of Berkeley's adopted guidelines as set forth in a staff report to the planning commission on September 2, 2020.[2]

VMT is typically estimated using an area-wide travel demand model from a regional transportation agency that calculates VMT based on the number of vehicles multiplied by the typical distance traveled by each vehicle originating from or driving to a certain area. The volume of traffic and distance traveled depends on land use types, density, and location as well as the existing and planned future supporting transportation system, including availability of public transportation. A travel demand model attempts to represent this relationship when forecasting vehicle trips and VMT.

This analysis uses the Alameda County Transportation Commission (ACTC) Travel Demand Model data on VMT per capita for various areas within the City of Berkeley. The Travel Demand Model divides areas within ACTC's jurisdiction into transportation analysis zones, or TAZs. TAZs are used in transportation planning models for transportation analysis and other planning purposes. The apartments and commercial space proposed to be built by the Project would be expected to have similar VMT as other developments in the same TAZ. The VMT per resident and per employee estimated by the ACTC Travel Model for the Project's TAZ would therefore be assumed represent the approximate VMT that would be generated by the Project as well.

As per Attachment 1 of the September 2, 2020 Planning Commission staff report, the proposed project at 2817 - 2821 10th Street & 2820 San Pablo Avenue is located in a an area with an average VMT per resident and per resident and worker that is at least 15% below the respective Bay Area averages. OPR's 2018 Technical Advisory also states the following: "*Presumption of Less Than Significant Impact Near Transit Stations - Proposed CEQA Guideline Section 15064.3, subdivision (b)(1), states that lead agencies generally should presume that certain projects (including residential, retail, and office projects, as well as projects that are a mix of these uses) proposed within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor will have a less-than-significant impact on VMT*." However, the City of Berkeley VMT analysis guidelines specify that the presumption of a less-than-significant VMT impact might not be appropriate if the project:

- Has a floor area ratio (FAR) of less than 0.75.
- Includes more than 200,000 square feet of office or commercial space.
- Includes more parking supply than the project's estimated demand
- Is inconsistent with the City's General Plan, an applicable Specific Plan, or an applicable Sustainable Communities Strategy (as determined by the City, with input from the MTC).

[2] *General Plan Amendment: Vehicle Miles Traveled (VMT) for Transportation Impact Analysis under the California Environmental Quality Act (CEQA)*, Planning Commission Staff Report, Planning and Development Department, City of Berkeley, September 2, 2020.

- Replaces affordable residential units with market-rate residential units.
- Has project-specific or location-specific information that indicates that the project will generate significant levels of VMT.

In this case none of the above factors would apply to the proposed project. The project is located less than 1/2 mile from high quality transit corridor and is located near bus stops for numerous bus lines at the intersection of San Pablo Avenue and Oregon Street. The project also meets the other screening criteria described above and therefore, subject to City approval, this project would be assumed to have a less than significant impact on VMT in the area.

On-Street Parking Surveys - In order to evaluate the local parking situation, on-street parking occupancy surveys were conducted based on the standard guidelines specified by the City of Berkeley. This survey included a detailed inventory of all on-street and public off-street parking within about 600 feet of the project site. The study involved a block-by-block survey of the number and types of spaces and the current parking occupancy conditions on a weekday afternoon.

The surveys were conducted on Thursday June 16, 2022. The surveys indicated there are approximately 325 on-street parking spaces located within about 600 feet of the project site. The surveys found the highest occupancy levels during the early afternoon between 2:00 and 3:00 PM. At this time there were about 273 spaces (84%) that were occupied, and about 52 spaces available. During the early evening between 5:00 and 6:00 PM, about 190 of the 325 on-street parking spaces were occupied, which is an occupancy rate of 58%, with about 135 available on-street spaces. During the late evening between 9:00 PM to 10:00, about 174 of the 325 on-street parking spaces were occupied, which is an occupancy rate of 54%, with about 151 available on-street spaces. The detailed survey results are attached to this report.

Please don't hesitate to contact me if you have any questions or need addional information.

Sincerely,

Signature of Environmental Professional

This report is intended to meet the requirements of ASTM International (ASTM) E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, and has been prepared by the undersigned environmental professional. The environmental assessment described herein was conducted by the undersigned employee of Terraphase Engineering Inc.

The assessment consisted solely of the activities described in the Introduction of this report, and was performed in accordance with ASTM E1527-13 guidelines, as applicable, for Phase I Environmental Site Assessments and the Terms and Conditions of the Standard Consulting Services Agreement signed prior to initiation of the assessment, as applicable. The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, professional geologists, and environmental scientists.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in §312.10 of 40 Code of Federal Regulations Part 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 Code of Federal Regulations Part 312.

Ryan Thompson
Associate Scientist

Date

Executive Summary

Terraphase Engineering Inc. (Terraphase) has performed a Phase I Environmental Site Assessment (ESA) of the property located at 2817-2821 (odd) Tenth Street and 2820 San Pablo Avenue, Berkeley, Alameda County, California (Subject Property; Figure 1), on behalf of Studio KDA, in accordance with Terraphase's proposal, dated October 25, 2021.

The approximately 0.74-acre Subject Property is identified as Alameda County Assessor's[1] Parcel Number 53-1661-27-1, a 0.59-acre parcel developed with a multi-tenant warehouse building at address 2817-2821 Tenth Street, and parcel number 53-1661-11, an approximately 0.15-acre parcel developed with an unoccupied single-family residence, at address 2820 San Pablo Avenue (Figure 2).

Based on a review of historical documents, the Subject Property and vicinity have been used for industrial and manufacturing purposes and developed with commercial and residential structures since at least 1911. The portion of the Subject Property on the San Pablo frontage has been developed and used for single-family residential purposes since circa 1910. The portion of the Subject Property on the Tenth Street frontage was used for residential purposes from 1911 through 1950. From 1950 through 1968, the Subject Property was developed with the existing commercial and industrial buildings and was initially occupied in at least 1962 by Eldorado Electronics, which used the property for unspecified electronic manufacturing purposes. Plastic bag manufacturer Emerald Packaging occupied the Subject Property from 1963 through 1994. Emerald Packaging used a 6,000-gallon underground storage tank (UST) at the Subject Property as part of their operations. The UST contained chlorinated solvents and various alcohols which were used in manufacturing operations and was removed in 1990. From 1994 through present, Wheelskins, a manufacturer of automotive steering wheel covers, and Meyer Sound Laboratories, Inc. (Meyers Sound), an acoustic products manufacture, have occupied the Subject Property.

The Phase I ESA was performed in general conformance with the scope and limitations of ASTM International (ASTM) E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Any exceptions to, or deletions from, ASTM E1527-13 are described in Section 1 of this report.

[1] http://gis.acgov.org/

Recognized Environmental Conditions

Terraphase identified the following recognized environmental condition(s) (RECs)[2] during this Phase I ESA:

- **Former industrial and manufacturing use of the Subject Property.** Based on the historical industrial and manufacturing use of the Subject Property from at least 1950 through 1994, including printing, plastic bag manufacturing (Emerald Packaging), and electronics manufacturing (Eldorado Electronics), hazardous materials were confirmed to have been used and stored at the Subject Property. The manufacturing and industrial uses of the Subject Property prior to 1962 was not identified in historical materials and the hazardous materials used by Eldorado Electronics was not identified; however, electronics manufacturing in the 1960s may have included the use of chlorinated solvents. Emerald Packaging used and stored 1,1,1-trichloroethane, n-butyl alcohol, and various volatile solvents, and utilized a parts washer as part of its operations which used unspecified solvents. As the former use and storage of hazardous materials have the potential to have been released to the subsurface at the Subject Property via sumps, cracks in floors, drains, or from drainage piping, the former use of the Subject Property for industrial and manufacturing uses is considered a REC.
- **Emerald Packaging, 2821 Tenth Street.** A 6,000-gallon UST tank was removed in October 1990 (On-Site Technologies 1990). The original 6,000-gallon UST consisted of two tanks welded together; prior to 1983 the east compartment contained ethyl alcohol and the west compartment held n-propanol. After 1983, the east compartment contained 1,1,1-trichloroethane (TCA) and n-butyl alcohol, and the west compartment contained water. Following a failed leak test in the UST in April 1990, a subsurface investigation was ordered by the City of Berkeley (City of Berkeley 1990).

  Following the UST removal in 1990, soil and groundwater samples were collected from the excavation area; soil samples collected from both ends of the tank pit contained detections of 1,1-dichloroethane and 1,1,1-trochloroethane, and excavation floor water grab samples contained detections of 1,1,1-trichloroethane, methylene chloride, chloroform, 1,2-dichloroethylene, 1,2-dichloroethene, trichloroethylene, gasoline-range petroleum hydrocarbons, benzene, toluene, ethylbenzene, and xylenes (Compliance and Closure, Inc. 1999). A total of six groundwater monitoring wells were installed between 1990 and 1992 following the UST excavation and soil sampling event. Groundwater samples collected in 1992 through 1996 from the monitoring wells at the Subject Property, and in adjoining areas to the west of the Subject Property in downgradient positions, contained detections of 1,1,1-trichloroethane, 1,2-dichloroethene, chloroethane, acetone, 1,1-dichloroethene, tetrachloroethene, trichloroethene, 1,2-dichloroethane, methyl ethyl ketone, methylene chloride, chloroform, total petroleum hydrocarbons in the gasoline range, benzene, toluene, ethylbenzene, and xylenes. A 1999 site closure for the UST case was approved by Berkeley Toxics Management Division and a No Further Action (NFA) letter was reported in 2000 from the

[2] According to ASTM E1527-13, a REC is defined as "the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (*1*) due to release to the environment; (*2*) under conditions indicative of a *release* to the environment; or (*3*) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*."

San Francisco Bay Regional Water Quality Control Board. The 1999 City of Berkeley site closure and 2000 NFA letter asserts that data from the downgradient sampling locations located to the west of the Subject Property suggest unknown off-site sources of volatile organic compounds (VOCs) not associated with Emerald Packaging impacting subsurface conditions at the Subject Property. However, due to high concentrations of acetone in the monitoring wells located at the Subject Property, reporting limits for VOCs were elevated and non-detect results are not necessarily indicative of the lack of these compounds at the Subject Property during monitoring events. The presence of VOC and petroleum hydrocarbon contamination in soil and groundwater beneath and in downgradient positions relative to the Subject Property is considered both a REC and a vapor encroachment condition.

Terraphase identified the following historical REC during this Phase I ESA:

- **Former Emerald Packaging 6,000-gallon UST.** A 6,000-gallon UST tank removed from the Subject Property in October 1990 was used by former Subject Property tenant Emerald Packaging to store TCA and n-butyl alcohol. Following the removal of the UST, soil samples were collected from the UST excavation which contained detections of TCA and 1,1-dichloroethane, and grab water samples collected from excavation groundwater infiltration water contained detections of 1,2-dichloroethene, 1,1-dichloroethane, methylene chloride, chloroform, 1,1,1-trichloroethane, trichloroethane, total petroleum hydrocarbons (City of Berkeley 1990). In 1999, site closure was requested by the owners of the Subject Property and was approved by the City of Berkeley Toxics Management Division. An NFA letter was granted on October 19, 2000, by the San Francisco Bay Regional Water Quality Control Board. As the UST was removed in 1990, and following discovery of contamination and monitoring of groundwater the LUST case was closed and NFA was deemed necessary by local and state agencies in 1999 and 2000, the former Emerald Packaging 6,000-gallon UST is considered a historical REC.

Terraphase identified no controlled RECs during this Phase I ESA.

De Minimis Conditions

Terraphase identified no de minimis conditions during this Phase I ESA.

Significant Data Gaps

Terraphase identified the following data gap during this Phase I ESA.

- During the Subject Property reconnaissance, the portion of the Subject Property occupied by Meyer Sound could not be accessed. Due to the manufacturing and industrial use history of the Subject Property, the lack of access to the Meyer Sound leased portion of the Subject Property is considered a significant data gap.

1 Introduction

At the request of Studio KDA (Client), Terraphase Engineering Inc. (Terraphase) has completed a Phase I Environmental Site Assessment (ESA) of the property located at 2817-2821 (odd) Tenth Street and 2820 San Pablo Avenue, Berkeley, Alameda County, California (Subject Property; Figure 1).

This Phase I ESA includes information gathered from federal, state, and local agencies; review of historical documents; a reconnaissance visit; and interviews. A significant amount of the regulatory and historical database information was provided by Environmental Data Resources Inc. (EDR), a third-party vendor that specializes in providing regulatory and historical records for Phase I ESAs. The qualifications of the environmental professional who prepared this report are included in Section 9.

1.1 Purpose

The purpose of a Phase I ESA is to evaluate the potential for environmental contamination on the Subject Property and evaluate if contamination could potentially occur in the future because of activities or conditions on or near the Subject Property. The Phase I ESA was conducted in general accordance with the process described in ASTM International (ASTM) E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (2013), and ASTM E2600-15, *Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions* (2015).

This Phase I ESA assesses for recognized environmental conditions (RECs) at the Subject Property. As defined by ASTM E1527-13, a REC is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or the material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. Possible vapor migration into the vadose zone of the Subject Property, whether from an on- or off-site source, constitutes a vapor encroachment condition (VEC) under ASTM E2600-15 and potentially a REC under ASTM E1527-13.

A controlled REC (CREC) has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (i.e., land use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls). A historical REC (HREC) is a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, and which is not subject to the implementation of land use controls or restrictions.

The term includes hazardous substances or petroleum products even under conditions in compliance with local, state, and federal laws (e.g., permitted discharges). The term is not intended to include “de minimis” conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies.

1.2 Scope of Services

The Client engaged Terraphase to perform this Phase I ESA to identify RECs (as defined in ASTM E1527-13) to help identify potential environmental liabilities associated with the Subject Property prior to a potential transaction.

The following services were included in this Phase I ESA:

- Interviews with past and present owners, operators, and occupants familiar with the Subject Property;
- Review of historical sources of information, such as aerial photographs, Sanborn fire insurance maps, and land use records;
- Review of previously conducted environmental studies;
- Review of government records, including regulatory reports for both the Subject Property and adjoining properties;
- Review of an environmental database search;
- Review of local regulatory agency files, including the local fire department and other local government entities that have jurisdiction over hazardous waste management, permitting, and site investigations;
- Reconnaissance level visual inspection of the Subject Property, including observations of adjoining properties and general land uses, to look for evidence of the release(s) of hazardous materials and petroleum products and assess the potential for on-site releases of hazardous materials and petroleum products resulting from current and historical land use activities and nearby operations;
- Subject Property photographs to document current conditions; and
- Preparation of a report that documents our research, observations, and the results of the environmental inquiry, which specifically identifies any properties that will require invasive site investigation, including a summary of conclusions.

Non-scope considerations as defined in ASTM E1527-13 (e.g., asbestos, biological agents, cultural and historical resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, industrial hygiene, testing of building materials for presence of lead-based paint or polychlorinated biphenyls, lead in drinking water, mold, radon, regulatory compliance, wetlands, compliance with AULs, etc.) are considered beyond the scope of standard practice.

1.3 Significant Assumptions

This Phase I ESA provides appropriate inquiry into the previous ownership and use of the Subject Property consistent with good commercial and customary practice to minimize liability. Terraphase also assumes that the information provided by the Client, regulatory database provider, and regulatory agencies, is true and reliable.

1.4 Limitations and Exceptions

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by Terraphase and the Client. This report was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry as practiced in California. To the extent that Terraphase relied upon any information prepared by other parties not under contract to Terraphase, no representation as to the accuracy or completeness of such information is made.

This information can only be utilized for a period not to exceed 180 days in accordance with ASTM E1527-13 and/or the Title 40 Code of Federal Regulations Part 312 – *Innocent Landowners, Standards for Conducting All Appropriate Inquiries* (AAI) rule, dated November 1, 2005, and amended December 30, 2013. After 180 days, the report must be updated in accordance with ASTM E1527-13 and federal regulations.

The findings presented in this report apply solely to conditions existing at the time of the assessment. It must be recognized; however, that a Phase I ESA is intended for the purpose of evaluating the potential for contamination through limited research and investigative activities, and in no way represents a conclusive or complete characterization. Conditions in other parts of the Subject Property may vary from those at the locations where data were collected.

Terraphase's interpretation of investigation results is related to the availability of the data and the extent of the investigation activities; 100 percent confidence in Phase I ESA conclusions cannot reasonably be achieved. Therefore, Terraphase does not provide any guarantees, certifications, or warranties (express or implied) that a property is free from environmental contamination. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and all applicable laws, codes, regulations, or standards.

1.5 User Reliance

This document was prepared for the use of the Client. No other party should rely on the information contained herein without the prior written consent of Terraphase and the Client.

2 Site Description

The Subject Property's current conditions and historical use, as well as the surrounding area and physical setting, are discussed in this section.

2.1 Site and Vicinity General Description

The Subject Property is located at 2817-2821 (odd) Tenth Street and 2820 San Pablo Avenue, Berkeley, Alameda County, California (Figure 1), and is identified as Alameda County Assessor's[3] Parcel numbers (APNs) 53-1661-27-1 and 53-1661-11.

The approximately 0.74-acre Subject Property is developed with a multi-tenant warehouse developed on a 0.59-acre parcel at address 2817-2821 Tenth Street, and an unoccupied single-family residence developed on an approximately 0.15-acre parcel at address 2820 San Pablo Avenue (Figure 2).

The Subject Property is in a generally mixed industrial, commercial, and residential area. The Subject Property is bounded to the north by a service center for Meyer Sound Laboratories, Inc. (Meyer Sound; the Subject Property occupant and manufacturer of acoustic equipment), a clinic (Manzanita Wellness Clinic), and a single-family residence; to the south by a physical therapy clinic (Berkeley Deep Sports Massage) and an auto body shop (Panel Craft); to the east by San Pablo Avenue, also identified as California State Route 123, across which are located an auto repair shop (Berkeley Auto Service), and an unoccupied mixed commercial/residential structure; and to the west by Tenth Street across which are several single-family residences. (Figure 2).

2.2 Current and Historical Site Operations

Currently, the multi-tenant warehouse located at 2817-2821 Tenth Street is occupied by two manufacturing tenants—Meyer Sound and Wheelskins. The warehouse at 2821 Tenth Street was originally constructed in 1950, and the warehouse located at 2817 and 2819 Tenth Street was built in 1968. Meyer Sound has been located at 2817 and 2819 Tenth Street since 1994. Operations at Meyer Sound include research and development for acoustic electronic systems and related products. Wheelskins has been located at 2821 Tenth Street since 1994. Operations at Wheelskins include the fabrication of leather automotive steering wheel covers. Thermoplastic glue pellets are used to glue the leather steering wheel covers together; no solvent-based glues are used. The glue pellets are placed within a stamping machine and melted to 300 degrees Fahrenheit, turning them into a pasty glue more suited for leather materials. Chemical usage at the Subject Property is limited to household-sized cleaners, including paints, anti-bacterial products, anti-microbial products, and general surface sprays.

An unoccupied single-family residence located at 2820 San Pablo Avenue was originally constructed in 1906.

[3] http://gis.acgov.org/Html5Viewer/index.html?viewer=parcel_viewer

Based on a review of historical documents provided by EDR, the Subject Property was developed prior to 1911 with residential structures, with the manufacturing structures located on the western half of the Subject Property built between 1950 and 1968.

Emerald Packaging, a business that printed and shipped plastic bags utilizing a variety of solvents and inks, operated at the Subject Property from 1963 through 1994. According to the Subject Property owner and tenant interviews and inspection records from the Berkeley Fire Department, a 6,000-gallon underground storage tank (UST; partitioned into two 3,000-gallon compartments) formerly used for the storage of 1,1,1-trichloroethane (TCA), n-propanol, ethyl alcohol, n-butyl alcohol, and water was located at the northwestern corner of the Subject Property in an exterior parking area. The UST was removed in October 1990. Various inks used in the printing process were stored indoors in the flammable liquid storage room of Emerald Packaging.

2.3 Site Physical Setting

The following subsections briefly describe the regional geology and hydrogeology of the Subject Property and the surrounding area.

2.3.1 Topography and Hydrology

Based on field observations, review of the United States Geographical Survey (USGS) 7.5-minute topographic maps provided by EDR, and the EDR Radius Map™ Report (EDR report) with GeoCheck® (2021; Appendix A), the Subject Property is situated approximately 46 feet above mean sea level. The local topography is generally flat, with a gradual slope downward to the southwest.

The nearest surface water to the Subject Property is the Berkeley Aquatic Park lagoon, a man-made lagoon separated from the larger San Francisco Bay by an earthen causeway and connected to the bay via culverts, located approximately 0.5 miles west of the Subject Property.

2.3.2 Geology and Hydrogeology

According to soil data accessed on the U.S. Department of Agriculture Natural Resources Conservation Service website and the EDR report, the Subject Property primarily consists of Urban Land-Clear Lake complex soils, which are generally poorly drained. Based on information accessed via the USGS website[4], the majority of the Subject Property is underlain by the Pleistocene to Holocene quaternary alluvium and marine deposits, which consists of alluvium, lake playa, and terrace deposits, both unconsolidated and semi-consolidated. This geology is identified as nonmarine but can include marine deposits near the coast.

The Subject Property overlies the California Coastal Basin Aquifers (USGS 2006).

[4] https://mrdata.usgs.gov/geology/state/sgmc2-unit.php?unit=CAQ;0

According to the EDR report, no federal USGS wells were identified within 1 mile of the Subject Property. No drinking water or other municipal supply wells were identified within 1 mile of the Subject Property. There are 113 state wells located within 1 mile of the Subject Property; all these wells were identified as monitoring wells.

3 Client/User Provided Information

This section describes information provided to Terraphase by the Client (i.e., the "User" of this Phase I ESA).

3.1 Title Record

The User did not provide a title records report for the Subject Property; however, according to the Alameda County Clerk-Recorder database and the EDR Environmental Lien and AUL Report, the current owner, Cork Mayo Investments LLC, acquired the Subject Property from Rosaleen C and Kevin J Kelly Trustees in October 2020 (Appendix B).

3.2 Environmental Liens and AULs

The User was unaware of environmental liens associated with the Subject Property.

Environmental liens and AULs were not identified in the Environmental Lien and AUL Search Report provided by EDR (Appendix B).

3.3 Specialized Knowledge

The User has specialized knowledge (as defined in the AAI rule) regarding the Subject Property, which was provided by representatives of the User in the relevant portions Sections 4.3.2, 6.1, and 7.2.2.

3.4 Commonly Known or Reasonable Ascertainable Information

The User has no commonly known or reasonably ascertainable information (as defined in the AAI rule) regarding the Subject Property, other than the Subject Property is located in a mixed industrial, commercial, and residential portion of Berkeley which is currently used for manufacturing purposes.

3.5 Valuation Reduction for Environmental Liens

The User did not indicate the valuation of the Subject Property has been reduced or otherwise impacted by environmental issues (as defined in the AAI rule) at the Subject Property.

3.6 Owner, Property Manager, and Occupant Information

Ms. Erin Jaeb, the owner of the Subject Property, and Mr. Darshan Amrit, a senior designer for the architecture firm Studio KDA, were the Client-designated Subject Property contacts. Information provided by Mr. Amrit and Ms. Jaeb is included in applicable sections of this Phase I ESA report.

3.7 Reasons for Performing Phase I ESA

Terraphase has been engaged by the Client to perform this Phase I ESA for the Subject Property (as defined in ASTM E1527-13) to help identify potential environmental liabilities prior to a potential transaction.

4 Agency Records Review

Terraphase reviewed applicable and reasonably ascertainable federal, state, and local environmental-related databases as part of this Phase I ESA, discussed below.

4.1 Standard Environmental Record Sources

EDR provided the regulatory agency database report discussed in this section. Terraphase reviewed the EDR report for information regarding reported releases of hazardous substances and petroleum products on or near the property. Specific records and search distances (measured from the approximate property boundary of the Subject Property) for the environmental databases were reported by EDR to be consistent with ASTM E1527-13 and are discussed in the EDR report, dated November 23, 2021. The EDR report presented as Appendix A.

4.1.1 Subject Property Listings

The Subject Property's address(es), 2817- 2821 (odd) Tenth Street, were associated with the following listings in the EDR report:

- **Meyer Sound, 2817 Tenth Street.** The Subject Property was identified in the California Environmental Protection Agency (CalEPA) Facility and Manifest Data (HAZNET), Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS), Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG) (the facility was identified as a non-generator in 2019), CalEPA Regulated Site Portal (CERS HAZ Waste), California Environmental Reporting System (CERS), United States Environmental Protection Agency (USEPA) Facility Index System (FINDS), and USEPA Enforcement and Compliance History Online (ECHO) databases related to operations by the Subject Property tenant Meyer Sound. Meyer Sound is listed in the HAZNET and HWTS databases for the storage, bulking, and transfer of between 0.0025 and 4.55 tons of laboratory waste chemicals including detergent and soap; off-specification, aged or surplus organics; other organic solids; empty containers; and waste and mixed oil, with listings between 2010 and 2019. The RCRA-SQG, CERS HAZ Waste, CERS, and FINDS database listings are associated with the generation of spent nonhalogenated solvents including xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol at the Subject Property by Meyer Sound. The ECHO listing identified no violations pertaining to the Subject Property since 2019.

  Additionally, Terraphase reviewed information available on the DTSC's Hazardous Waste Tracking System[5] for the Subject Property. Meyer Sound generated state-regulated (i.e., alkaline solution, inorganics, waste and mixed oil, latex waste, other organic solids, empty containers, laboratory waste chemicals) and federally-regulated (i.e., ignitable and corrosive waste, butanone, nonhalogenated solvents) hazardous waste. Terraphase identified no record of a release of the petroleum product and hazardous waste products to on-site soil or groundwater. No violations or

[5] https://hwts.dtsc.ca.gov/report_search.cfm?id=5

records of release were associated with the Subject Property. Given the Meyer Sound listing is not associated with compliance violations or records of releases, the Meyer Sound listing is not considered a REC.

- **Emerald Packaging, 2821 Tenth Street.** The Subject Property was identified in the California Regional Water Quality Control Board Leaking Underground Storage Tanks (LUST), State Water Resources Control Board Cleanup Program Sites-Spills, Leaks, Investigations, and Cleanups (CPS-SLIC), California Facility Inventory Database Underground Storage Tank (CA FID UST), CalEPA Hazardous Waste and Substances Sites (Cortese) List, HIST Cortese, CERS, California Emissions Inventory Data (EMI), Statewide Environmental Evaluation and Planning System (SWEEPS) UST, FINDS, ECHO, Recovered Governmental Archive (RGA) LUST, USEPA's Potentially Responsible Parties (PRP), HAZNET, HWTS, and State Water Resources Control Board Proposition 65 Records (Notify 65) databases related to the former operations of Emerald Packaging. The LUST, CPS-SLIC, CA FID UST, Cortese, HIST Cortese, CERS, SWEEPS UST, RGA LUST, HAZNET, HWTS, and Notify 65 database listings are related to the removal of a 6,000-gallon UST tank removed in October 1990 (On-Site Technologies 1990). The original 6,000-gallon UST consisted of two tanks welded together; prior to 1983 the east compartment contained ethyl alcohol and the west held n-propanol. After 1983, the east compartment contained TCA and n-butyl alcohol, and the west compartment contained water. Communication between the City of Berkeley and Emerald Packaging in April 1990 stated a failed leak test in one of the sections of the baffled tank; therefore, a subsurface investigation was necessary (City of Berkeley 1990).

  Following the removal of the UST in 1990, soil and groundwater samples were collected; soil samples collected from both ends of the tank pit contained detections of 1,1-dichloroethane (DCA; 8 parts per billion) and TCA (41 micrograms per kilogram [µg/kg]), and water samples collected from the floor of the excavation contained TCA (5,600 µg/kg), methylene chloride (640 µg/kg), chloroform (66 parts per billion), 1,2-dichloroethylene (63 µg/kg), DCA (150 µg/kg), trichloroethylene (TCE; 19 µg/kg), total petroleum hydrocarbons (TPH) in the gasoline range (TPH-g; 90 µg/kg), and unspecified concentrations of benzene, toluene, ethylbenzene, and xylenes (BTEX; Compliance and Closure, Inc. 1999). Groundwater at the Subject Property, and in adjoining areas to the west of the Subject Property, contained elevated levels of TCA, methylene chloride, chloroform, TPH-g, and BTEX. Additional subsurface investigation was conducted in 1992 through 1996; although the 1992 report was not available on GeoTracker, it was documented in the *Site Closure Summary* (Compliance and Closure Inc. 1999). A total of six groundwater wells were installed at and to the west of the Subject Property in downgradient relative positions to the former UST (Compliance and Closure Inc. 1999). Groundwater samples collected from 1992 through 1996 from monitoring wells at the Subject Property, and in adjoining areas to the west of the Subject Property in downgradient positions, contained detections of 1,1,1-trichloroethane, 1,2-dichloroethene, chloroethane, acetone, 1,1-dichloroethene, tetrachloroethene, trichloroethene, 1,2-dichloroethane, methyl ethyl ketone, methylene chloride, chloroform, TPH-g, and BTEX. An additional subsurface soil investigation was conducted in 1992; the 1992 report was not available on GeoTracker, but results were referenced in the *Site Closure Summary* (Compliance and Closure Inc. 1999).The *Site Closure Summary* also documented that the source of the acetone was unknown, despite the fact that TCA was used at the Subject Property and present in soil and groundwater in the vicinity of the former UST and various

additional contaminants detected in groundwater are associated with the former activities of Emerald Packaging.

A 1999 site closure was approved by the City of Berkeley Toxics Management Division (TMD) and a No Further Action letter (NFA) was granted in 2000 from the San Francisco Bay Regional Quality Control Board (SFBRWQCB; 2000). The site closure report and NFA states that data from the off-site sampling locations suggest sources of volatile organic compounds (VOCs), not associated with Emerald Packaging or the Subject Property, impacting subsurface conditions. However, due to high concentrations of acetone in the monitoring wells located at the Subject Property, reporting limits for VOCs were elevated and non-detect results are not necessarily representative of the lack of these compounds at the Subject Property during monitoring events. The presence of VOC and TPH contamination in soil and groundwater beneath the Subject Property, and in down-gradient positions relative to the Subject Property, is considered a REC.

Given the NFA issued by the SFBRWQCB, and site closure issued by Berkeley TMD in 2000 and 1999, respectively, the former 6,000-gallon UST used by Emerald Packaging and removed in 1990 is considered an HREC.

The EMI listing is associated with a 1990 report indicating the Emerald Packaging facility emitted a quantity of total organic hydrocarbon gases, reactive organic gasses, and oxides of nitrogen. Reporting of the facility to the FINDS and ECHO databases ends in 1990; no violations are listed.

Although the PRP listing is associated with the Subject Property address, available information on the National Priorities list indicates the Superfund site is located in Pinedale, Fresno County, California. Based on the location of Pinedale in relation to the Subject Property, the PRP listing is not considered a REC.

4.1.2 Nearby Listed Properties

There were a number of listings in the EDR report that appeared within applicable approximate minimum search distances. Per ASTM E1527-13, due to the urban setting, density, and large number of properties reported within the search area, the entirety of the information within the minimum search distance cannot be feasibly reviewed for its potential impact on the Subject Property. Therefore, in accordance with Section 8.1.2.1 of ASTM E1527-13, the minimum search distances have been adjusted, and an assessment of impact has been limited to discuss the properties which, based on their location and classification, appear to have a potential to impact the Subject Property via groundwater or soil-vapor migration (i.e., the listing is indicative of a release, located within approximately 1/2 mile of the Subject Property, located hydraulically upgradient of the Subject Property, and have a non-case-closed status). Specific information about each listing is listed in the database in Appendix A.

The following properties were listed in the EDR report within adjusted applicable search distances.

- **Meyer Sound and Meyer Sound Laboratories Inc., 2832 San Pablo Avenue (0.03 miles south of Subject Property).** In addition to the Subject Property, Meyer Sound is listed under the 2832 San Pablo Avenue address in the LUST database. Information available on GeoTracker indicates this listing is related to a closed case as of June 25, 1999, related to a spill of paint thinner impacting soil. In 1981, two 550-gallon USTs were installed on the northwestern corner of the property at 2832 San Pablo Avenue (Robert J. Miller Co 1987) which contained paint thinner and isopropanol (Trace

Analysis Laboratory, Inc. 1987). The USTs were removed in 1987 and soil samples were collected from both the tank-fill and -vent ends; detections of paint thinner were identified on both ends of the former paint thinner UST at 210 and 120 milligrams per kilogram, respectively. Due to the soil detections, a subsurface investigation was requested by the City of Berkeley; no investigation was initiated by the property owners or Meyer Sound and a Notice of Violation was issued in 1994 (City of Berkeley 1994). Contaminated soils were excavated during the tank removal process (ACC Environmental Consultants 1994). Given the cross-gradient position relative to the Subject Property, and the lack of groundwater impacts associated with the leaking USTs at the Meyer Sound site, and the fact that contaminated soil was removed during the UST excavation process, the Meyer Sound site at 2832 San Pablo Avenue is not considered a REC.

- **Meyer Sound and Meyer Sound Laboratories Inc., 2835 San Pablo Avenue (0.08 miles southeast of Subject Property).** This Meyer Sound site is listed on the CPS-SLIC and CERS databases. Information available on GeoTracker indicate these listings are related to an open case determined to be inactive as of June 5, 2009, related to soil contaminated with Stoddard solvents, mineral spirits, and distillates. No additional site information was provided on GeoTracker. Given the case status and the hydraulically cross-gradient position relative to the Subject Property, and the lack of groundwater impacts reported, the Meyer Sound site at 2835 San Pablo Avenue is not considered a REC.
- **Meyer Sound and Meyer Sound Laboratories Inc., 1035-1043 Heinz Avenue (0.05 miles southeast of Subject Property).** This Meyer Sound is listed on the CPS-SLIC database. Information available on GeoTracker indicate this listing is related to an open case undergoing site assessment as of April 2020. A Phase I ESA dated October 10, 2007, determined that due to the close proximity of identified contaminated sites, additional subsurface sampling of soil and groundwater was recommended (Aqua Science Engineers 2007). A Phase II investigation was conducted in 2019; soil and grab groundwater samples indicated detections above environmental screening levels (ESLs) of TPH-g, benzene, toluene, ethylbenzene, xylenes, and naphthalene. Sub-slab soil gas samples collected from within two buildings located at this Meyer Sound site contained concentrations of chloroform above ESLs (Basics Environmental 2019). The groundwater flow direction was inferred to be towards the west. The Phase II ESA report indicated that off-site operations may have contributed to contamination at this Meyer Sound site; however, these potential sources were not identified. Due to the cross-gradient position relative to the Subject Property, the Meyer Sound site at 1035-1043 Heinz Avenue is not considered a REC.
- **Proen Products Company, 2777 9th Street (0.076 miles northwest of the Subject Property).** The Proen Products Company (PPC) site is listed in the LUST, CPS-SLIC, and CORTESE databases due to the release of VOCs from former on-site manufacturing activities, which included a UST that contained chlorinated solvents. PPC manufactured fertilizer tablets, lawn sprinklers, and lawn edgers from approximately 1952 to June 1990 (Seward 2020). Solvents used at the PPC site included carbon tetrachloride, TCA, PCE, and TCE (Seward 2020; PPC 1989). Chemicals used in manufacturing processes at the PPC site included isopropanol, petroleum naphtha, dipping enamels, copper sulfate, ethylenediaminetetraacetic acid, manganese sulfate, zinc sulfate, and ethylene glycol[6] (PPC 1989). Soil and groundwater sampling conducted in 1990 and 1991 confirmed that solvents were

[6] https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SLT2O02430

released at the PPC site and had contaminated groundwater, primarily with TCE and its breakdown products. The source area of VOCs was substantially remediated by excavation (Farallon Consulting 2020). Sampling of groundwater monitoring wells at various frequencies to monitor natural attenuation of the TCE and related breakdown products groundwater plume continued until 2019. The SFBRWQCB determined that the PPC site does not pose an unacceptable risk to its occupants and/or the public and issued an NFA in March 2021 (Montgomery 2021). According to the most recent groundwater monitoring reports of the PPC site, the groundwater plume of TCE is inferred to exist beneath Grayson Street at a closest distance of 170 feet northwest of, and cross-gradient position relative to, the Subject Property (Stellar Environmental Solutions, Inc. 2019). As the PPC site was granted an NFA by the SFBRWQCB in 2021, the groundwater plume was determined to have not impacted the Subject Property, and its cross-gradient location relative to the Subject Property, the PPC site is not considered a REC.

- **Marchant Corporation Site, 6701 San Pablo Avenue (0.36 miles south of the Subject Property).** The Marchant Corporation property is listed on the EnviroStor, Voluntary Cleanup Program (VCP), ENF, and National Pollutant Discharge Elimination System databases. The listings are associated with a 7.3-acre active VCP site consisting of three multi-parcel properties located at the nexus of Emeryville, Oakland, and Berkeley. Information available on EnviroStor indicates the site was formerly operated by the Marchant Corporation which manufactured calculating machines and operated storage and drayage businesses, fabrication operations, a neon sign factory, and a storage yard for painting contractors (DTSC 2007). The manufacturing operations resulted in TPH-g and VOC contamination of groundwater and soil vapor. Based on the distance and cross-gradient position relative to the Subject Property, the Merchant Corporation site is not considered a REC.

4.1.3 Orphan Listings

Terraphase also reviewed the “unmappable” (also referred to as “orphan”) listings within the database report, cross-referencing available address information and facility names. Unmappable properties are listings that could not be plotted with confidence but are potentially in the general area of the Subject Property based on the partial street address, city, or zip code. EDR identified 10 orphan listings. Based on the available information, none of the orphan listings warrant further review as they fall outside the applicable search distances.

4.2 Vapor Encroachment Screening

ASTM E2600-15 was used as guidance for conducting a vapor encroachment screening for the Subject Property. The purpose of the screening is to determine whether a VEC exists from chemicals of concern that may migrate as vapors onto a property because of contaminated soil and groundwater on or near the Subject Property.

Soil vapor is one of the pathways of contamination to the Subject Property, along with groundwater and soil. ASTM E1527-13 requires that vapor migration be treated no differently than contaminated groundwater. The soil-vapor contaminant pathway needs to be considered in evaluation of RECs or other environmental concerns.

In accordance with ASTM E2600-15 (Tier 1), Terraphase evaluated potential petroleum hydrocarbon source(s) (e.g., active LUST cases) within 1/10 mile of the Subject Property for vapor intrusion or VOC source(s) (e.g., active SLIC cases) within 1/3 mile of the Subject Property.

Based on soil and groundwater sampling reports produced for the Emerald Packaging site at the Subject Property, groundwater beneath the Subject Property in the vicinity of the former 6,000-gallon UST is contaminated with VOCs that include methylene chloride, chloroform, DCA, 1,2-dichloroethylene, TCA, TCE, benzene, toluene, ethylbenzene, xylenes, and methyl ethyl ketone. Groundwater was encountered at the Subject Property at depths less than 10 feet below ground surface. To date, vapor intrusion and sub-slab soil vapor sampling have not been conducted at the Subject Property. As such, the presence of VOCs, including chlorinated VOCs in soil and groundwater at the Subject Property, is considered a VEC. The following document are not considered VECs:

- **The PPC site located approximately 240 feet at its nearest to the Subject Property, in a cross-gradient position.** Groundwater at the PPC site and the adjoining Grayson Street right of way (ROW) is impacted with chlorinated VOCs above ESLs. The closest edge of the groundwater VOC plume relative to the nearest boundary of the Subject Property is approximately 170 feet to the northwest of the Subject Property in a cross-gradient position. As such, the PPC site is not considered a VEC due to the distance from the Subject Property to critical distance more than 100 feet from the nearest edge of a VOC plume to the Subject Property.
- **The active SLIC case associated with Meyer Sound located at 1035 to 1043 Heinz Avenue, 0.04 miles south of the Subject Property.** This case has reported impacts of petroleum hydrocarbons in groundwater approximately 150 feet south of the Subject Property. Sub-slab soil gas detections of chloroform at the Meyer Sound site approximately 215 feet south of the Subject Property are within ranges consistent with drinking water releases, and as such are not considered to be indicative of a VEC. As such, the Meyer Sound site located at 1035 to 1043 Heinz Avenue is not considered a VEC due to the distance from the Subject Property to the Tier 2 Critical Distance more than 30 feet from the nearest edge of a suspected petroleum hydrocarbon plume relative to the Subject Property, and more than 100 feet from the nearest edge of a VOC plume.
- **The Berkeley Business Center located approximately 400 feet or 0.075 miles to the southwest of the Subject Property.** The business center is located in a cross- to down-gradient position relative to the Subject Property. Groundwater at the Berkeley Business Center is impacted with TCE and PCE at concentrations exceeding ESLs. The distance from the nearest edge of the TCE and PCE plume to the Subject Property is approximately 420 feet; as such, the Berkeley Business Center is not considered a VEC based on the Tier 2 criteria of nearest plume distance more than 100 feet from the Subject Property.

4.3 Additional Environmental Record Sources

In addition to EDR review, Terraphase contacted local, county, state, and federal environmental record sources, as described in the following subsections.

4.3.1 Property Tax Files

Based on tax information available on the Alameda County Assessor website[7], the Subject Property is identified APNs 53-1661-27-1 and 53-1661-11. The parcel identified as APN 53-1661-27-1 is described as industrial light/manufacturing. The parcel identified as APN 53-1661-11 is described as a single-family residence. Information included in the EDR report indicates both properties are currently owned by Cork Mayo Investments LLC. No environmental liens or activity and use limitation are associated with the parcels.

4.3.2 Local Regulatory Records

Applicable municipal records reviewed in preparation of this Phase I ESA report are discussed below.

4.3.2.1 City of Berkeley Building Permit Records

On November 24, 2021, Terraphase submitted a request to the City of Berkeley for relevant records regarding the Subject Property. On December 6, 2021, the City of Berkeley responded to the request by stating "The City is extending the response period by fourteen additional calendar days to December 20, 2021, based on the need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records, and the need for consultation with two or more City departments or offices with substantial subject matter interest in the request. (Cal. Gov. Code § 6253I)."

On December 20, 2021, a response was received and the following city-provided records related to the single-family residence located at 2820 San Pablo Avenue were reviewed:

- A City of Berkeley Office of the City Manager Notice of Violation Blight, dated April 14, 2019, stating the conditions of the building are considered unsafe and against code. Within 30 days of the notice, the roof needed to be replaced and the rest of building must be within Building Code.

Additionally, the User provided records acquired from the City of Berkeley pertaining to building permits and building plans and records (Appendix C). These records included the following information, organized by address:

- **2821 Tenth Street**
  - A reinforced one-story concrete tilt-up warehouse was built on August 2, 1950.
  - Building blueprints from 1970 depict office spaces on the western edge of the building, manufacturing, and warehousing on the eastern side, and a truck dock at the southwestern corner.
  - A hazardous materials report indicating a leak was detected in the baffled underground tank on April 16, 1990.
  - A letter from the City of Berkeley to Emerald Packaging dated April 17, 1990, pertaining to a leak in the baffled underground tank. A leak test was performed and water was found in a section of the tank previously sealed off.

[7] http://gis.acgov.org/Html5Viewer/index.html?viewer=parcel_viewer

- A City of Berkeley Permit for monitoring well demolition on December 21, 2000.
- A Request for Service dated January 21, 1971, reported by Mercurio Printing at 2830 San Pablo, stating that a sump pump is pumping water to the east of the building and across the sidewalk at San Pablo Avenue.
- A City of Berkeley miscellaneous permit for soil borings, conducted by Compliance and Closure, Inc., from May 3 to May 7, 1999.

- **2817 Tenth Street**
  - A Certificate of Compliance for Meyer Sound, dated August 22, 2000, located at 2817 Tenth Street, for mechanical systems. Three heating equipment systems (two gas and one infra-red) were listed as located on site.
  - A building permit application from August 23, 2000, for 2817 Tenth Street for tenant improvement, including mezzanine and several office room remodels.
  - City of Berkeley Permit dated September 19, 2000, for commercial tenant improvements at 2817 Tenth Street.
  - Heating, ventilation, and air conditioning blueprints of 2817 Tenth Street from 2000 indicating a chemical storage area exists in the center of the building.
- **2820 San Pablo Avenue**
  - City of Berkeley Residential Property information stating that a single-family, reinforced concrete foundation residence was built at 2820 San Pablo Avenue in 1906.
  - A City of Berkeley Use Permit, dated October 2, 1957, to request the operation of a nursery (named Pacific Gardens) at 2820 San Pablo Avenue.
  - A permit was granted on May 13, 1964, to Fannie M. Holliday to construct a 7-unit apartment building (which was not constructed).
  - A permit was granted on October 11, 1994, to James Kelly, Jr. to demolish a disrepair vacant house (which was not acted upon).
  - A City of Berkeley Building Permit, granted on July 23, 1948, for the additions of restrooms and doors for a dwelling and beauty shop at 2820 San Pablo Avenue.
  - A City of Berkeley Development Permit, dated June 13, 1988, for 2820 San Pablo Avenue for proposed foundation work only.

4.3.2.2 City of Berkeley Fire Department

On December 1, 2021, Terraphase contacted the City of Berkeley Fire Department to request relevant records related to the installation or removal of on-site USTs and/or aboveground storage tanks (ASTs). A response was received on December 14, 2021, and the following city-provided records, related to the Subject Property, were reviewed:

- Berkeley Fire Department Division of Fire Protection inspection, conditions, and remarks forms for 2821 Tenth Street from various years 1971 through 1990:

  - July 15, 1971 – Inspection items addressed, including dirty rags kept in metal containers, flammable liquid supply on premise shall not exceed one day supply, and parts washing tank will have approved self-closing cover.
  - January 13, 1975 – Portable fire extinguishers installed.
  - March 11, 1975 – Sprinkler pans approved, copies stamped and returned to Allied Fire Protection. Plans for flammable storage room not finalized yet.
  - March 27, 1975 – Berkeley Fire Department spoke with architect to request list of all flammable liquids.
  - April 4, 1975 – Plans for installation of flammable liquids storage room approved. Sprinkler system partially completed.
  - April 7, 1975 – Inspector noted chemical storage room not to written requirements. Will contact architect to meet requirements and draw new plans.
  - May 15, 1975 – Underground flush test ok. Sprinkler system completed, and metal locker will protect valves and gages in front of building.
  - May 16, 1975 – Recheck exterior building only, metal locker properly installed.
  - October 3, 1975 – Recheck flammable storage room, Berkeley Fire Department requirements met.
  - June 3, 1983 – Inspected flammable dispensing operation.
  - April 3, 1989 – Granted a permit to test 3,000-gallon alcohol tank.
  - October 3, 1990 – Witnessed one 6,000-gallon tank being removed (one tank was compartmentalized into two 3,000-gallon tanks).
- A memorandum from Emerald Packaging to the City of Berkeley Fire Department from December 10, 1974, stating that their operations at 2821 Tenth Street will be storing approximately 4,000 gallons of ink-flammable type “Red Label.”
- A memorandum from Sun Chemical Corporation dated March 28, 1975, detailing the breakdown of ingredients in the ink utilized by Emerald Packaging:
  - 50 percent Anhydrous Ethyl Ammonia
  - 20 percent Normal Propyl Alcohol
  - 10 percent Heptane
  - 20 percent Normal Propyl Acetate
- A Test and Flush Certificate dated May 15, 1975, from Allied Fire Protection.
- A City of Berkeley Fire Department memorandum dated June 2, 1983, detailing the contents of the approved flammable liquid storage room at 2821 Tenth Street, including nineteen 55-gallon drums of printer ink (with alcohol as the main ingredient).
- A City of Berkeley Fire Department memorandum dated June 9, 1983, regarding acceptable containers and pumping mechanisms for flammable liquids and liquids too viscous to pump, along with repairs needed for the grounding procedures of 55-gallon drums of ink on the premises.

- A System (Tank) Tightness Check from April 1989 for a 3,000-gallon solvent UST. No leaks were detected.
- A memorandum from April 16, 1990, regarding a leak detected in a baffled underground tank.
- An October 1, 1990, City of Berkeley memorandum regarding illegal discharge of hazardous waste from USTs at 2821 Tenth Street. Analysis of water samples from monitoring wells surrounding the tank detected concentrations of acetone, isopropanol, and trichloroethane. The tank had previously been tested and was found not to be leaking. A permit was granted to remove the tank in October 1990. Inspection of the tank and surrounding soil will occur as needed. Additional information can be found in Section 4.1.1.
- A 2019 annual fire inspection report for 2817 Tenth Street; no violations found.

4.3.2.3 City of Berkeley TMD

On December 1, 2021, Terraphase contacted the City of Berkeley TMD to request relevant records related hazardous waste or materials, UST/AST installation, abandonment, or removal, hazardous waste generation and handling records, hazardous releases, and remediation programs for the Subject Property. On December 7, 2021, a response was received stating records existed for the Subject Property addresses.

The following are TMD-provided records related to the Subject Property, organized by address:

- **2817 Tenth Street:**
  - Hazardous Materials Inspection and Violation Report dated April 16, 2015, stating no hazardous materials, hazardous waste, or stormwater violations were observed.
  - Inspection Reports from the TMD from 2018 and 2021, stating that hazardous materials onsite consistent with inventory, all hazardous waste handlers properly trained, and emergency equipment properly maintained.
  - Hazardous Materials Building Plan documentation and inspections from 2014, 2017, and 2018.
- **2821 Tenth Street**
  - City of Berkeley Toxics Management Request for Site Closure Additional Information memorandum dated October 22, 1998, regarding the former Emerald Packaging facility, requesting submittal of a work plan to determine if VOCs in downgradient monitoring wells are from the site or an off-site source.
  - A City of Berkeley memorandum regarding the Site Closure Summary of Former Emerald Packaging dated March 9, 2000, detailing that no further investigation or remedial action is required.
  - A No Further Action Request for LUST Case – Emerald Packaging, Inc., from the City of Berkeley to the SFBRWQCB dated October 15, 2008.

4.3.3 County Regulatory Records

Applicable Alameda County records reviewed in preparation of this Phase I ESA report are discussed below.

4.3.3.1 Alameda County Department of Environmental Health

On December 1, 2021, Terraphase submitted a public records request to the Alameda County Department of Environmental Health to request relevant records regarding any fires, complaints, permits, and violations involving hazardous waste or materials, UST/AST installation, abandonment, or removal, hazardous waste generation and handling records, hazardous releases, and remediation programs for the Subject Property. On December 1, 2021, a response was received indicating the City of Berkeley has a separate Environmental Health Department from Alameda County and the city would have jurisdiction of the Subject Property.

4.3.3.2 Alameda County Local Oversight Program

On December 1, 2021, Terraphase submitted a public records request to the Alameda County Local Oversight Program, as well as searched the online records database, to request relevant records regarding hazardous waste or materials, UST/AST installation, abandonment, or removal, hazardous waste generation and handling records, hazardous releases, and remediation programs for the Subject Property. No files were found on the online database repository for the Subject Property address, and no response to the records request has been received as of the date of this report.

4.3.4 State Regulatory Records

Terraphase reviewed the following online databases for relevant records related to the Subject Property and/or adjoining properties.

4.3.4.1 Department of Toxic Substances Control

Terraphase reviewed the DTSC's EnviroStor database, which houses information on permits and corrective action at hazardous waste facilities, as well as site cleanup projects, for relevant records related to the Subject Property and/or adjoining properties. The Subject Property was not identified in the database search results. The Merchant Corporation site located 0.36 miles south of the Subject Property was listed as a voluntary cleanup site (discussed previously in Section 4.1.2).

4.3.4.2 State Water Resources Control Board

Terraphase reviewed the State Water Resources Control Board data management system, GeoTracker, for properties that impact groundwater or have the potential to impact groundwater at the Subject Property. Several listings were associated with the Subject Property and surrounding properties, discussed previously in Section 4.1.1 and 4.1.2.

4.3.5 Federal Regulatory Records

Federal regulatory records reviewed in preparation of this Phase I ESA report are discussed below.

4.3.5.1 National Pipeline Mapping System

Terraphase reviewed the National Pipeline Mapping System public viewer website for gas transmission pipelines and hazardous liquid trunk lines on or close to the Subject Property. According to the online information, no gas transmission or hazardous liquid pipelines are located on the Subject Property. However, an active natural gas pipeline operated by Pacific Gas & Electric (PG&E) is located 0.02 miles south of the Subject Property. Due to the distance from the Subject Property, and no records related to accidents or incidents identified, this pipeline is not considered a REC.

4.3.5.2 United States Coast Guard National Response Center

Terraphase searched the National Response Center (NRC) online databases for the years 1990 through 2021 for relevant records. The NRC, staffed by the United States Coast Guard, is part of the federally established National Response System and is the designated federal point of contact for reporting oil, chemical, radiological, biological, and etiological discharges to the environment within the United States and its territories.

Terraphase did not find records related to the Subject Property in the available NRC records. Terraphase notes, however, that due to the inconsistent reporting manner of the incidents, an in-depth review of the NRC online databases was not practical (under ASTM E1527-13, Section 3.2.69).

4.3.5.3 United States Environmental Protection Agency

The Subject Property was identified on the USEPA Envirofacts website. Emerald Packaging and Meyer Sound (2817 Tenth Street) were identified. Information relevant to these listings, as well as adjoining properties, are discussed in Sections 4.1.1 and 4.1.2.

No other records of a release or violations at the adjoining properties were identified in the Envirofacts search results.

These sources of information, as well as interviews conducted, historical sources, and Subject Property observations, were found to be sufficient in evaluating the existence of RECs, HRECs, CRECs, and/or de minimis conditions as part of this Phase I ESA. Therefore, an in-person review of the county or state records by Terraphase was found to be unwarranted (as defined in ASTM E1527-13, Section 8.2.2).

5 Historical Review

A variety of sources were reviewed to develop the history of the Subject Property and adjacent properties to assess for environmental concerns. These resources included the following:

- Aerial photographs provided by EDR for years 1939, 1946, 1958, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2021, and 2016;
- Sanborn® fire insurance maps (Sanborn® maps) provided by EDR dated 1911, 1950, and 1980;
- City directories for the Subject Property and adjoining properties provided by EDR for the years between 1943 and 2017 in approximately 5-year increments; and
- Topographic maps provided by EDR of the Oakland West, Richmond, and San Francisco quadrangles, dated 1895, 1899, 1915, 1948, 1949, 1959, 1968, 1973, 1980, 1996, 2021, 2015, and 2018.

Historically and/or environmentally significant findings from reviewed maps and photographs are summarized below. Copies of historical aerial photographs, Sanborn® maps, city directories, and topographic maps from EDR are provided in Appendices D, E, F, and G, respectively.

5.1 Aerial Photographs

On the 1939 and 1946 aerial photographs, the Subject Property consists of several small buildings, consistent with residences, and sparse vegetative cover. The adjoining properties are improved with small rectangular buildings consistent with commercial structures; the San Pablo Avenue ROW is depicted as developed in its current configuration.

On the 1958 through 1963 aerial photographs, the Subject Property is depicted as developed with several small buildings consistent with residences and a larger rectangular building located at the present location of 2821 Tenth Street. Minimal vegetative cover is observed throughout the Subject Property and the vicinity.

On the 1968 aerial photograph, the Subject Property consists of a large, conjoined rectangular building on the Tenth Street frontage. The eastern portion of the Subject Property remains a single-family dwelling consistent with previous aerial photographs. Features depicted on the Subject Property in the 1974 through 2016 aerial photographs are consistent with features depicted in 1968.

5.2 Sanborn® Maps

No improvements are depicted on the northern portion of the Subject Property or south-adjoining properties in the 1911 Sanborn® map. The Subject Property addresses on the 1911 Sanborn® map are 2831 and 2829 Tenth Street and 2820 San Pablo Avenue. The addresses identified as 2829 and 2831 Tenth Street are each improved with one residential structure, and the property at the address identified as 2820 San Pablo Avenue is depicted as improved with a one residential structure. On the 1911 Sanborn® map, the north-adjoining properties are depicted as developed with two residential structures, the south-adjoining property on the Tenth Street frontage is depicted as undeveloped, and

the south-adjoining property on the San Pablo Avenue frontage is depicted as developed with a residence.

On the 1950 Sanborn® map, a portion of the Subject Property on the Tenth Street frontage is depicted as improved with three residential structures and associated private garages, and the residence located on the San Pablo Avenue frontage is depicted as unchanged as compared to the 1911 Sanborn® Map. Adjoining properties to the north and south of the Subject Property on the Tenth Street frontage are depicted as residences. The properties to the northeast of the Subject Property on the San Pablo Avenue frontage are depicted as developed with a residence, a one-story office building, and a warehouse structure with an attached storage structure at address 2814 San Pablo Avenue, and a lumber and building materials warehouse and woodworking facility located at 2810 San Pablo Avenue. The properties to the southeast of the Subject Property on the San Pablo frontage include a residence and an auto repair facility listed at address 2828 San Pablo Avenue.

On the 1980 Sanborn® map, the buildings and associated improvements on the Subject Property are depicted as consistent with current conditions, with the entire portion of the Subject Property located on the Tenth Street frontage listed at address 2821 Tenth Street. The manufacturing buildings located on the Tenth Avenue frontage are denoted as occupied by a Plastic Bag manufacturing facility consistent with Emerald Packaging; the manufacturing facility and office are identified as fireproof buildings. The residence depicted on the eastern portion of the Subject Property is depicted as unchanged compared to the 1950 Sanborn® Map. The 1980 Sanborn® Map depicts the north-adjoining property on the Tenth Avenue frontage as developed with a one-story reinforced cement brick warehouse with a hardwood and glass supply tenant.

5.3 City Directories

Business directories including city, cross-reference, and telephone directories were reviewed, if available, at approximately 5-year intervals for the years spanning 1943 through 2017. The Subject Property's current and historical addresses (based on the Sanborn® maps) were identified in the directories as follows:

- **2811 Tenth Street:**
  1955–1962: Listings spanning these years are individual names suggesting residential occupancy.
- **2817 Tenth Street:** (no listings)
- **2819 Tenth Street:**
  1996: Information Farm Inc.
  2000: Donordigital.com
  2004: Heller Consulting Inc, San Francisco Main Office, Occupant Unknown
  2006: Consultants Inc., Heller
- **2821 Tenth Street:**
  1955: Honeylite Co. Louyres
  1962: Eldorado Electronics
  1970–1994: Emerald Packaging
  1996–2017: Wheelskins

- **2829 Tenth Street:**
  1925–1945: Listings spanning these years are individual names suggesting residential occupancy.
- **2820 San Pablo Avenue:**
  1943–1986: Listings spanning these years are individual names suggesting residential occupancy.
  1999–2014: Occupant Unknown

City directory listings for the adjoining properties are summarized below:

- **2807 Tenth Street (north adjoining property to 2817 Tenth Street):**
  1970: Anti-Corrosive Metal Products Inc Berkeley, Harper HM Co.
  1975: Now Waterbeds
  1986: Spectra Painting
  1996 to 2009: Kavanaugh Coffee, American Hot Coffee Service, Amer Hot Coffee
- **2809 Tenth Street (north adjoining property to 2817 Tenth Street):**
  1920–1999: Listings spanning these years are individual names suggesting residential occupancy.
- **2818 Tenth Street (north adjoining property to 2820 San Pablo Avenue):**
  1943–2014: Listings spanning these years are individual names suggesting residential occupancy.
- **2822 Tenth Street (south adjoining property to 2820 San Pablo Avenue):**
  1943–2017: Listings spanning these years include individual names suggesting residential occupancy, various names for hair salons, and financial services (1986 and 1991 only).
- **2831 Tenth Street:**
  1920–1962: Listings spanning these years are individual names suggesting residential occupancy.
  1962: Richard D Hopkins Co (factory)
  1996 to 2017: TWP Wire Cloth Inc/ Trans World Pacific Inc/TWPW 1 Recloth/TWP Wire Co

The former use of the Subject Property for industrial manufacturing purposes by Eldorado Electronics (1962) and Emerald Packaging (ca. 1964–1994), is considered a REC.

5.4 USGS Topographic Maps

The 1895 through 1899 topographic maps depict the Subject Property and vicinity as an undeveloped area located to the south of the City of Berkeley, without any ROWs in the vicinity of the Subject Property. The Subject Property is located on a gently sloping hill sloping downward to the west, with a seasonal creek located to the south that enters the San Francisco Bay to the west. The 1915 topographic map depicts the Tenth Street, Grayson Street, and San Pablo Avenue ROWs as developed in the vicinity of the Subject Property, with two structures depicted as developed on the Subject Property. The 1948 through 1996 topographic maps do not provide details of the Subject Property; the area is shaded red or gray indicating dense urban development. The 2012 through 2018 topographic maps do not provide details depicting structures or property uses; surrounding streets are shown, but no site-specific details of buildings on the Subject Property or adjacent properties are provided.

5.5 Prior Reports

Terraphase was not provided prior reports for the Subject Property.

6 Interviews

Owner and regulatory agency interviews conducted by Terraphase are presented in this section.

6.1 Interview with Current Owner Representatives

During the reconnaissance visit, Terraphase conducted an interview with Ms. Erin Jaeb, the Subject Property owner, and Mr. Jim Valley, owner of Wheelskins and tenant at 2821 Tenth Street. A separate telephone interview was conducted with Mr. Kevin Kelly, trustee of the Subject Property, regarding historical operations of the Subject Property.

Additional information otherwise provided by Ms. Jaeb and Messrs. Valley and Kelly during the reconnaissance is discussed in in applicable sections of this report.

According to Ms. Jaeb and Mr. Kelly, the residential portion of the Subject Property was purchased by the current owners in 1963 and has been unoccupied since 1978. The Subject Property occupants and tenant history between 1963 and 1978 is considered unknown. According to Ms. Jaeb and Mr. Kelly, both Wheelskins and Meyer Sound have been tenants in the building since 1994, when the previous occupant, Emerald Packaging, vacated the Subject Property. Emerald Packaging occupied the Subject Property beginning in 1963, at which time the portions of the Subject Property on the Tenth Street frontage was a contiguous building with no sectioned-off tenant spaces. According to Mr. Kelly, Emerald Packaging printed and shipped plastic bags using a variety of solvents and inks, and a UST (removed in 1990) was present at the Subject Property containing an unknown solvent and inks were stored inside the building in 55-gallon drums.

6.2 Interview with Former Owner Representative

Former owners were not contacted/interviewed as part of this Phase I ESA.

6.3 Interviews with Regulatory Agency Representatives

Terraphase contacted local, county, and state agencies via telephone, electronic mail, letter, or in person or accessed available records online to inquire as to whether they possessed relevant records regarding the Subject Property, as discussed in Section 4.3.

7 Site Reconnaissance

Terraphase's site reconnaissance observations, methodology, and applicable limiting conditions are discussed in this section.

7.1 Methodology and Limiting Conditions

On November 29, 2021, Hallie Douglas, Project Scientist of Terraphase, conducted reconnaissance of the Subject Property to assess current land-use activities and environmental conditions. The Subject Property reconnaissance was documented with notes and photographs. Observations made during the reconnaissance are discussed below, and a photographic log is provided as Appendix H. The focus of a reconnaissance is to identify conditions that have the potential to cause adverse environmental impacts.

During the Subject Property reconnaissance, Terraphase was accompanied by Ms. Jaeb and Messrs. Amrit and Valley. Terraphase accessed Subject Property building interiors and exterior areas of the Subject Property.

As part of the reconnaissance, Terraphase searched for evidence of the presence, use, or storage of hazardous substances, including, but not limited to areas of disturbed or discolored soil; suspect equipment and/or building materials which may contain hazardous substances; areas of distressed vegetation; wastewater discharge areas; evidence of storage tanks/septic systems; waste management/disposal areas; lagoons, pits, or sumps; surface water management areas; and stained surfaces, etc.

7.2 Observations

General observations regarding the current use, interior/exterior conditions, and adjoining properties of the Subject Property are discussed in the following subsections.

7.2.1 Current Use and General Observations

The Subject Property consists of a large, multi-tenant warehouse building, approximately 0.59 acres in size, located at 2817-2821 Tenth Street (odd), and an unoccupied single-family residence, approximately 0.15 acres in size, located at 2820 San Pablo Avenue.

The residence at 2820 San Pablo Avenue was observed to be in a state of disrepair during the site reconnaissance. No hazardous materials usage or waste, nor any staining or additional signs of hazardous usage, were observed during the site reconnaissance. During the time of the site reconnaissance, an asbestos abatement contractor was present, removing asbestos containing materials from inside the building and placing them in a bin for removal.

The large, multi-tenant warehouse building, located at 2817-2821 Tenth Street (odd), APN 53-1661-27-1, has two tenants, Wheelskins and Meyer Sound. Wheelskins, the tenant in 2821 Tenth Street, occupies the larger warehouse building, whereas Meyer Sound, the tenant in 2817 Tenth Street, occupies a smaller space within the northern adjoining building of the same parcel.

The current operations at Wheelskins include the fabrication of leather steering wheel covers. Leather arrives at the facility already treated and is cut, stamped, glued, and finished on site, whereupon the coverings are packaged and shipped as consumer products. Thermoplastic glue is used to glue the leather steering wheel covers together; thermoplastic pellets are placed within a stamping machine and melted to 300 degrees Fahrenheit which turns them into a pasty glue more suited for leather materials. Solvents are not used in the gluing process. Bulk leather storage was observed in the central portion of the warehouse, with materials stacked on sawhorses. Chemical usage is limited to household-sized cleaners, paints, anti-bacterial products, anti-microbial products, and general surface sprays. Chemicals were observed to be stored on open shelving along the eastern side of the building, and within a secured chemical storage cabinet on the western side of the building during the Subject Property reconnaissance. Two battery-operated forklifts were observed in the warehouse. Mr. Valley, the owner of Wheelskins, mentioned that one of the forklifts has been out of service and unused for several months. A forklift charging station was observed located adjacent to the northern wall of the warehouse. No staining was observed on the warehouse floor. Hazardous materials were not observed used or stored in the portion of the Subject Property occupied by Wheelskins.

The warehouse building at 2821 Tenth Street was reported to periodically flood. The grade of the warehouse building is lower than the surrounding grade of the Subject Property, with a warehouse roll-up door along the eastern wall. The roll-up door opens to a ramp leading to the surrounding eastern areas. The ramp is dammed at its top with wooden boards to prevent water flow into the warehouse. According to the Subject Property reconnaissance contact, since Wheelskins has been in operation at this location, the building has flooded on three separate occasions. Three sump pumps were installed to mitigate flooding within the building. One pump was placed on the western exterior side of the building in the loading dock in a low point, and two sump pump systems were placed on the eastern exterior of the building leading the drainage to both San Pablo Avenue and Tenth Street.

Several trench drains were observed inside the warehouse, along the eastern side going from north to south, and an additional trench drain oriented east to west within the central portion of the building. According to Mr. Valley, the trench drains were initially installed to allow water to flow to the loading dock on the western side of the building; however, the grates were installed incorrectly, and forklifts were unable to travel over it without causing damage so the unused trench drains inside of the warehouse were observed to be filled with concrete.

Utility service providers at the Subject Property include the following:

Utility	Service Provider
Electricity	PG&E
Natural gas	PG&E
Water provider	East Bay Municipal Utility District (EBMUD)
Sewer provider	EBMUD
Solid (non-hazardous) waste disposal	City of Berkeley

7.2.2 Interior and Exterior Observations

Terraphase observed the exterior and accessible interior areas of the Subject Property for elements indicative of current and historical usage of hazardous substances.

Specific observations for elements indicative of current and historical usage of hazardous substances are provided below.

Element	Observation
Current or former USTs	Terraphase observed no evidence of current or former USTs (e.g., vent pipes, fill ports, patches, etc.) at the Subject Property. A UST reportedly used to store solvents for operations at Emerald Packaging was removed in 1990.
Current or former ASTs and silos	No current or former ASTs were identified at the Subject Property. Ink was formerly stored in 55-gallon drums inside of the warehouse portion of the Subject Property formerly occupied by Emerald Packaging.
Polychlorinated biphenyl-containing equipment	No transformers, capacitors, or mounted hydraulic equipment (e.g., elevators, bailers, compactors, levelers, etc.) were observed at the-Subject Property. .
Current and Former Hazardous Materials and/or petroleum product use/storage	Commercial consumer-sized (less than 5 gallons in size) products including household cleansers and paints were observed at the Subject Property.
Hazardous waste	Terraphase did not observe hazardous waste generation, transport, or storage at the Subject Property.
Drums or other containers	Terraphase did not observe drums or other containers at the Subject Property. Mr. Kelly noted that ink was formerly stored inside of the warehouse portion of the Subject Property in 55-gallon drums when Emerald Packaging occupied the building. No evidence of past or present spills or releases on Subject Property surfaces was observed.
Non-hazardous solid waste	Waste generated at the Subject Property is limited to municipal waste, collected by the City of Berkeley. Terraphase observed trash cans with municipal waste inside the warehouse at 2821 Tenth Street.
Wastewater	Sanitary wastewater is discharged from the Subject Property to the EBMUD sanitary sewer system.
Floor drains, sumps, and drywells	Several long, concrete-filled trench drains were observed inside the warehouse. No staining or corrosion in the concrete floors indicative of past releases to the floor drains was observed. Three sumps installed with pumps were observed within the warehouse portion of the Subject Property, with three sumps and associated pumps observed along the exterior. These were installed to mitigate flooding that has historically occurred at the Subject Property.
Odors	None detected.
Stains, pitting, or corrosion interior areas	None observed.
Stained or corroded exterior areas	None observed.
Pools of liquid	None observed.

Element	Observation
Pits, ponds, or lagoons	None observed.
Stressed vegetation	None observed.
Stormwater	Stormwater from the Subject Property flows to the surrounding streets from sups installed both on the interior and exterior of the Subject Property warehouse. See floor drains above.
On-site wells	None observed.
Septic systems	None observed.
Other petroleum product transmission/storage	None observed.

7.2.3 Adjoining Property Observations

During the Subject Property reconnaissance, Terraphase observed the adjoining properties from public roadways and the Subject Property. The purpose of these observations was to identify obvious uses or conditions at the adjoining properties likely indicative of a REC or environmental concern for the Subject Property. There was no evidence of hazardous materials, spills, releases, or other potential issues of environmental concern observed on the adjoining properties. Petroleum hydrocarbons were observed in use at the east-adjacent auto repair facility.

The north-adjoining property is developed with a single-story commercial building occupied by Meyer Sound and used as a Service Center at 2809 Tenth Street. The north-adjoining facility included two bay doors with driveways connected to Tenth Street and a central office area.

The north-adjoining property located on the San Pablo frontage was observed to be developed with a two-story former residential structure used as a clinic (Manzanita Wellness Clinic).

Across San Pablo Avenue to the east of the single-family residence, a one-story commercial auto repair facility (Berkeley Auto Service) was observed. The auto repair facility consisted of a bay door which opened to an auto repair area where numerous cars were in the process of repair. A one-story single-family residence was observed to the south of Berkeley Auto Service.

The south-adjoining property on the San Pablo frontage is developed with a two-story apartment building with street-grade commercial space occupied by a massage therapy clinic (Berkeley Deep Sports Massage), which includes a concrete-paved driveway on the northern portion of the property connected to a parking lot on the western portion of the property.

The south-adjoining property on the Tenth Street frontage is developed with a one-story commercial warehouse structure occupied by a metals supplier (TWP Inc.). The structure includes a bay door with driveway connected to Tenth Street.

The west-adjacent residences across Tenth Street were observed to be in good condition and used as single-family residences.

8 Findings and Conclusions

Terraphase performed a Phase I ESA of the 2817-2821 (odd) Tenth Street and 2820 San Pablo Avenue property located at Berkeley, Alameda County, California, in general accordance with the scope and limitations of ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 1 of this report.

8.1 RECs

Terraphase identified the following REC(s) during this Phase I ESA:

- **Former industrial and manufacturing use of the Subject Property.** Based on the historical industrial and manufacturing use of the Subject Property from at least 1950 through 1994, including printing, plastic bag manufacturing (Emerald Packaging), and electronics manufacturing (Eldorado Electronics), hazardous materials were confirmed to have been used and stored at the Subject Property. The manufacturing and industrial uses of the Subject Property prior to 1962 was not identified in historical materials and the hazardous materials used by Eldorado Electronics was not identified; however, electronics manufacturing in the 1960s may have included the use of chlorinated solvents. Emerald Packaging used and stored 1,1,1-trichloroethane, n-butyl alcohol, and various volatile solvents, and utilized a parts washer as part of its operations which used unspecified solvents. As the former use and storage of hazardous materials have the potential to have been released to the subsurface at the Subject Property via sumps, cracks in floors, drains, or from drainage piping, the former use of the Subject Property for industrial and manufacturing uses is considered a REC.
- **Emerald Packaging, 2821 Tenth Street.** A 6,000-gallon UST tank was removed in October 1990 (On-Site Technologies 1990). The original 6,000-gallon UST consisted of two tanks welded together; prior to 1983 the east compartment contained ethyl alcohol and the west compartment held n-propanol. After 1983, the east compartment contained TCA and n-butyl alcohol, and the west compartment contained water. Following a failed leak test in the UST in April 1990, a subsurface investigation was ordered by the City of Berkeley (City of Berkeley 1990).

  Following the UST removal in 1990, soil and groundwater samples were collected from the excavation area; soil samples collected from both ends of the tank pit contained detections of 1,1-dichloroethane and 1,1,1-trochloroethane, and excavation floor water grab samples contained detections of 1,1,1-trichloroethane, methylene chloride, chloroform, 1,2-dichloroethylene, 1,2-dichloroethene, trichloroethylene, gasoline-range petroleum hydrocarbons, and BTEX (Compliance and Closure, Inc. 1999). A total of six groundwater monitoring wells were installed between 1990 and 1992 following the UST excavation and soil sampling event. Groundwater samples collected in 1992 through 1996 from the monitoring wells at the Subject Property, and in adjoining areas to the west of the Subject Property in downgradient positions, contained detections of 1,1,1-trichloroethane, 1,2-dichloroethene, chloroethane, acetone, 1,1-dichloroethene, tetrachloroethene, trichloroethene, 1,2-dichloroethane, methyl ethyl ketone, methylene chloride, chloroform, TPH-g, and BTEX. A 1999 site closure for the UST case was approved by Berkeley TMD and a NFA letter was reported in 2000 from the SFBRWQCB. The 1999 City of Berkeley site closure and 2000 NFA letter

asserts that data from the downgradient sampling locations located to the west of the Subject Property suggest unknown off-site sources of VOCs not associated with Emerald Packaging impacting subsurface conditions at the Subject Property. However, due to high concentrations of acetone in the monitoring wells located at the Subject Property, reporting limits for VOCs were elevated and non-detect results are not necessarily indicative of the lack of these compounds at the Subject Property during monitoring events. The presence of VOC and TPH contamination in soil and groundwater beneath and in downgradient positions relative to the Subject Property is considered both a REC and a VEC.

Terraphase identified the following HREC during this Phase I ESA:

- **Former Emerald Packaging 6,000-gallon UST.** A 6,000-gallon UST tank removed from the Subject Property in October 1990 was used by former Subject Property tenant Emerald Packaging to store TCA and n-butyl alcohol. Following the removal of the UST, soil samples were collected from the UST excavation which contained detections of TCA and 1,1-dichloroethane, and grab water samples collected from excavation groundwater infiltration water contained detections of 1,2-dichloroethene, 1,1-dichloroethane, methylene chloride, chloroform, 1,1,1-trichloroethane, trichloroethane, total petroleum hydrocarbons (City of Berkeley 1990). In 1999, site closure was requested by the owners of the Subject Property and was approved by the City of Berkeley TMD. An NFA letter was granted on October 19, 2000, by the San Francisco Bay Regional Water Quality Control Board. As the UST was removed in 1990, and following discovery of contamination and monitoring of groundwater the LUST case was closed and NFA was deemed necessary by local and state agencies in 1999 and 2000, the former Emerald Packaging 6,000-gallon UST is considered an HREC.

Terraphase identified no CRECs during this Phase I ESA.

8.2 De Minimis Conditions

Terraphase identified no de minimis conditions during this Phase I ESA.

8.3 Data Gaps

A data gap is a lack or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice. The following data gaps were identified:

- Under ASTM E1527-13, Section 8.3.2., “all obvious uses of the property shall be identified from the present, back to the property’s first developed use, or back to 1940, whichever is earlier.” The earliest detailed historical source identified by Terraphase was an aerial photograph dated 1939, which depicted the Subject Property developed with residential and commercial structures. Documentation prior to this development was not uncovered during this Phase I ESA. Based on the reviewed sources of historical information, this data gap is not considered to be significant (i.e., does not affect the ability of Terraphase to identify RECs).

- Former owners and occupants were not contacted as contact information was not provided. Based on the reviewed sources of historical information, this data gap is not considered to be significant.
- During the Subject Property reconnaissance, the portion of the Subject Property occupied by Meyer Sound could not be accessed. Due to the manufacturing and industrial use history of the Subject Property, the lack of access to the Meyer Sound leased portion of the Subject Property is considered a significant data gap.

8.4 Deviations and Non-Scope Services

In performance of this Phase I ESA, Terraphase has identified no exceptions or deviations from ASTM E1527-131.

9 Qualifications of Staff

Ryan Thompson. Mr. Thompson is an Associate Scientist with Terraphase and has more than 10 years of experience in environmental due diligence site assessments, subsurface investigations, and regulatory compliance assessments at various industrial, commercial, and residential properties located throughout the United States. Mr. Thompson has coordinated and performed more than 150 Phase I ESAs per ASTM E1527-13 and per financial, developer, and owner-specific guidelines. Assessed sites include pharmaceutical research and development facilities, pharmaceutical manufacturing plants, a former airplane manufacturing plant, paper lamination and vulcanization sites, metal coating sites, food and beverage production sites, former machines shops, circuit board manufacturers, lumber treatment facilities, residential properties, warehouses and distribution centers, former gasification works, former United States defense sites, and various commercial properties including a number of dry cleaners, gasoline filling stations, and automobile repair and paint shops. Mr. Thompson holds a Bachelor of Science degree in Chemistry and a Bachelor of Arts in Environmental Studies from the University of Washington.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-VSQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 10 RESPONSE sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are

EXECUTIVE SUMMARY

36 ENVIROSTOR sites within approximately 1 mile of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 28 CPS-SLIC sites within approximately 0.5 miles of the target property.

Status: Pollution Characterization

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Lists of state and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 07/22/2021 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there are 5 HIST Cal-Sites sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 11 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 77 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 08/10/2021 has revealed that there are 3 FUDS sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CAMP ASHBY		SW 1/4 - 1/2 (0.277 mi.)	AC214	1030
NAVAL INDUSTRIAL RES		SW 1/4 - 1/2 (0.459 mi.)	AO257	1248
EMERYVILLE ORDNANCE		S 1/2 - 1 (0.878 mi.)	AZ293	1478

CA BOND EXP. PLAN: Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

A review of the CA BOND EXP. PLAN list, as provided by EDR, and dated 01/01/1989 has revealed that there are 2 CA BOND EXP. PLAN sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Notify 65: Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

A review of the Notify 65 list, as provided by EDR, and dated 03/12/2021 has revealed that there are 3 Notify 65 sites within approximately 1 mile of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 07/15/2021 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Local Case Number:	01-0557
Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Acetone, Other Solvent or Non-Petroleum Hydrocarbon
Site History:	6,000-gal underground single walled tank was removed in October 1990. The UST consisted of two compartments: one contained ethyl alcohol, the other propanol. Soil samples contained small amounts of DCA and TCA; no petroleum hydrocarbons detected. A groundwater sample collected rom the excavation contained up to 19 ug/l of TCE, 5,000 ug/l of TCA, and other VOCs. The groundwater was pumped out prior to backfilling the excavation. A soil and GW investigation conducted in June 1992 included installation of 3 monitoring wells. Only one soil sample contained 160,000 ug/l acetone. The source of the acetone was unknown. GW samples from the MWs revealed chlorinated solvent contamination and some TPH contamination in all wells. Two additional MWs installed in 1993 (one off-site); four soil borings advanced as well. TCE was reported in the grab water sample from B-4 up to 2,800 ug/l. The review of the environmental data for the neighboring properties may suggest that there are other additional off-site sources of the VOCs not associated w/the former Emerald Packaging onsite operations. Site Closure Summary dated July 17, 1999 approved by the Berkeley TMD and NFA letter from the Water Board dated October 19, 2000.

CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-18-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Meyer Sound Lab has multiple facilities. 2809 10th, 2817 10th, and 2832 10th are reported under 2817 10th st, CERS ID 10602589. EPA ID Number for 2817 10th, CAL000356050, is currently active. Walk through of 2817: hazardous materials and waste onsite is consistent with inventory. Emergency information and equipment was available and properly maintained. Hazardous waste is properly maintained and labeled. 2809 10th and 2832 10th do not store hazardous materials or waste. Record Review: All hazardous waste handlers are properly trained. Hazardous waste manifests were available for review and compliant.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-16-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Training, manifest records, and waste management labeling and records are complete. ER equipment per ER/contingency plan. No violations observed.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status:	Open - Site Assessment
Status Date:	08/01/2017
Case Worker:	BAC
RB Case Number:	01-0187
Local Agency:	Not reported
File Location:	Regional Board
Local Case Number:	TT01-0187
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Waste Oil / Motor / Hydraulic / Lubricating
Site History:	The Business Center is situated in the large, historic industrial building bounded by San Pablo Ave to the east, 9th to the west, Heinz Ave on the north, and Ashby Ave to the south. Originally built by H.W. Heinz in 1927-28 as a cannery for his now-famous ketchup and relish products. The facility had two (2) underground storage tanks (USTs) for refueling their trucks (15,000-gal each, diesel fuel). The USTs were located on the western / northern side of the parcel (see basic site map in SAMPLING RESULTS FROM TANK REMOVAL documents dated 12/11/1987, page 4 of 22). Location of former USTs has been paved over with asphalt for driveway and parking. The previous owner had converted the function of the building to a retail office center and has been used as such by the current owner since the change in

BERKELEY BUSINESS CENTER (Continued) **S104233648**

ownership in 1984 when the Heinz company moved operations to Tracy, California. Tanks were removed in 1987, with soil excavation and off-site removal. In Sept 1993 TCE (Trichloroethene) was reported above (2,200 ug/L in MW-3) regulatory limits for drinking water (5 ug/L) and is suspect of an off-site source. With monitoring wells and analytical testing, request for case closure came in Jan 1995 based on non-detect levels of petroleum hydrocarbon compounds. Case Closure by the City of Berkeley, Toxics Management Division (TMD) in June of 2013 transferred the case to the Regional Water Board (SF Bay Region 2). There is a likely orphaned TCE groundwater plume at the Site whose source has not been defined as of 9/1/16. The nature and extent of this orphaned groundwater has not been defined to date. This TCE detection in the sole onsite monitoring well exceeds the drinking water MCL. The Berkeley Business Center waste oil tank is not known to be the source of this TCE contamination at the Site.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-13-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Business recycles solvents in Becca solvent recycling unit. Electronic waste consisting of LED and halogen lights and wires are recycled every 6 months. Bondo waste that was generated and disposed of in the past has no waste disposal records. CAL EPA ID Number, CAL 000 040 931, is active. Waste is collected as Solids Lead Chromium and Waste Paint related - these waste streams have not been picked up since contract with new hauler began. Hazardous waste is properly labeled. Both waste streams began on 2/8/18 and are not included in inventory. A flammable rags bin is kept outside under the storm resistant shelter, rags are picked up weekly. Hazardous materials containers that are empty by definition can be discarded in solid waste. Emergency equipment and information are properly maintained.

Hazardous Materials Descriptions and Map pages, if required. Documentation must be resubmitted (for facilities which exceed EPCRA thresholds) or re-certified (for facilities which do not exceed EPCRA thresholds) by March 1.

Violation Notes: Returned to compliance on 04/10/2014. Non-inspection related violation - Notification for annual submittal sent to facility contact on or about 2/5/14 and reminder notice sent on or about 2/27/14. NOV sent 3/18/14. Business initially submitted 3/23/14, and an accepted plan was submitted on 4/10/14 (KB)
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP
Violation Source: CERS

Site ID: 41060
Site Name: KALA ART INSTITUTE
Violation Date: 12-19-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/08/2019. The corrosive hazardous waste solution container is not labeled properly. Corrective action: Label the container with the words "Hazardous Waste", name and address of the generator, and physical and chemical characteristics of the Hazardous Waste.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Site ID: 41060
Site Name: KALA ART INSTITUTE
Violation Date: 04-14-2016
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes: Returned to compliance on 04/26/2016.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 03-18-2014
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Non inspection related violation: Failure to complete annual certification of the HMBP, which is due March 1 annually in Berkeley.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-16-2015

CERS HAZ WASTE:
Name: BOB MCGEE'S MACHINING CO., INC
Address: 2735 SAN PABLO AVE
City,State,Zip: BERKELEY, CA 94702
Site ID: 388063
CERS ID: 10195936
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 388063
Site Name: BOB MCGEE'S MACHINING CO., INC
Violation Date: 06-01-2016
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes: Returned to compliance on 06/02/2016.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP
Violation Source: CERS

Site ID: 388063
Site Name: BOB MCGEE'S MACHINING CO., INC
Violation Date: 02-17-2017
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter

6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 03/20/2017.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-17-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine Hazardous Materials Business Plan and Storm water facility compliance inspection. The 2017 CERS submittal was done on 2.1.2017. The business owner also owns the property. Fire extinguishers service was up to date. Recommendation to separate Flammable gas and O2 compressed gas cylinders. Many cylinders appear to be unused. Annual Haz com training not completed and a violation was noted. Recent downsizing of business.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-16-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: No violations noted. HMBP revised and submitted via portal
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-06-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility has an active EPA ID number, CAL000171620.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection

BOB MCGEE'S MACHINING (Continued) **S124815143**

Eval Notes:	Non-Inspection related violation: Failed to submit annual Hazardous Materials Business Plan for FY17 (PM)
Eval Division:	Berkeley City Toxics Management Division
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	03-06-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	In January 2018, the California Environmental Protection Agency (CalEPA) adopted 24 New Federal Hazard Categories for use in chemical inventory reporting as part of the annual hazardous materials inventory reporting of the Hazardous Materials Business Plan (HMBP) submittal in CERS. The 2/22/2018, 2/28/2019, and 2/10/2020 submittals did not identify these updated categories. The inventory has been updated with the new categories and the facility shall re-submit.

Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	* Chlorinated Solvents - TCE
Site History:	The Proen Products Company facility operated from approximately 1952 to June 1990. Proen manufactured fertilizer tablets, lawn sprinklers, and lawn edgers at the Site. the fertilizer tablet manufacturing operation was separate from the metal parts manufacturing operation. The fertilizer process consisted of combining fertilizer ingredients (e.g., urea) in a mixer and baking the combined ingredients in an oven.Metal sprinkler parts were manufactured from zinc alloy in the die casting operation and the metal parts cut in the punch press were cut from brass, aluminum, or steel sheets of metal. Solvents used for degreasing metal parts included 1,1,1-trichloroethane (1,1,1-TCA, reportedly used from 1982 to 1990) and trichloroethene (TCE, reportedly used before 1982). Carbon tetrachloride was reportedly used for degreasing during the earlier years of the facility's operation. Additional chemicals used at the facility reportedly included isopropanol, petroleum naphtha, dipping enamels, copper sulfate, Hampene 200 (EDTA), manganese sulfate, zinc sulfate, and Houghto-Safe 620 (ethylene glycol). Wastes removed and disposed off site by licensed contractors included paint thinner, waste paints, and waste 1,1,1-TCA. Soil and groundwater investigations conducted in 1990 and 1991 revealed that elevated concentrations of VOCs were present in collected soil samples. The highest concentrations of VOCs and TPH-g and BTEX were detected in the hand augered boring SB -1 near the sump:TCE up to 2.2 mg/kg in soil and up to 230 mg/l in GW sample. Five MWs installed along the site perimeter (corner of 9th and Grayson St) in August 1990 to monitor the VOCs plume; additional eight wells installed in 1992. The highest concentrations of TCE was detected in MW-2 located downgradientfrom the Site. 1.4 mg/l of TCE (April 1991). Add site investigation and removal of the sump, soil excavation and removal of approx.. 1,130 tons in May 1992; TCE was detected in soil up to 17 mg/kg and in water up to 230 mg/l. After the cleanup TCE concentrations were reduced to 0.68 mg/kg and 0.068 mg/l. Annual monitoring until 2009. Groundwater monitoring continued thru 2020. Additional soil vapor sampling was completed in 2020 to address the potential for Vapor Intrusion of VOCs identified in groundwater. Sampling results showed that the site no longer poses an unacceptable risk to occupants; and no further remedial action is needed. The residual groundwater VOC plume will be addressed via natural attenuation. The Site is located within the City of Berkeley (COB) Environmental Management Area (EMA), and the potential for future exposures to offsite impacted groundwater will be managed by the COB. The case was closed on 3/3/21 and an NFA letter was issued. Groundwater monitoring wells will be decommissioned by July 31, 2021.

Violations:

Site ID:	11846
Site Name:	BERKELEY RADIATOR WORKS DBA BERKELEY RADIATOR INC.
Violation Date:	10-07-2014
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 10/20/2014. Felipe indicates he is no longer adding heat to the test tanks and was waiting on follow-up on issue by Debbie Andersen, but had discontinued process following the inspection. Felipe indicates the liquid currnetly in the south tank is hazardous. This requires compliance with labeling, closed container and/or tank management standards, and accumulation time limits. Corrective action: Arrange for the removal of the hazardous waste and supply a copy of the waste disposal record to TMD. If the tank is used in the future, notify TMD to review applicable standards.

Violation Date:	10-07-2014
Citation:	HSC 6.5 Multiple Sections - California Health and Safety Code, Chapter 6.5, Section(s) Multiple Sections
Violation Description:	Haz Waste Generator Program - Operations/Maintenance - General
Violation Notes:	Returned to compliance on 10/18/2014. Felipe indicates he generates about 55 gallons of the hazardous waste per year. The label indicates the last pickup was 10/28/13, and the drum is full and open. Corrective action: Arrange for the removal of the hazardous waste in the 55 gallon drum.
Violation Division:	Berkeley City Toxics Management Division

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 06/15/2018. Business must include the parts washer and used oil filters in the inventory. Corrective Action: Update inventory on CERS.calepa.ca.gov and submit for agency review.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-14-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: routine inspection. Haz waste manifest were available for review, training records violation, and aerosol waste labeling violation.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-14-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: routine inspection overall the facility conditions were good. minor

labeling and training record violations noted.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-23-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: EPA ID Number, CAL 000 000 100, is currently active. Business utilizes Safety-Kleen for hazardous waste disposal services. Eye wash station is regularly tested, tested at time of inspection, compliant. Fire Extinguishers are checked and serviced annually. Annual hazardous waste handling training is provided to employees - compliant.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-23-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Site map and hazardous materials reported on CERS is consistent with what is located on site. However hazardous waste stream must be updated. Employee Training consists of initial employee training and an Annual Hazardous MAterial and Safety training that provides site specific practices. Training should also include a review of Safety Data Sheets.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

quantities.

Violation Notes: Returned to compliance on 03/03/2017. The facility failed to establish required hazardous materials business plan. The facility exceed the specified thresholds of hazardous materials (>= 55 gallon for liquids) required to submit a hazardous materials business plan (HMBP) in accordance with BMC 15.12.050. Therefore the facility meet the requirement to report Hazardous Materials and submit a HMBP. Corrective Action: Please establish Hazardous Materials Business Plan (HMBP), go to cers.calepa.ca.gov and create an account. Report a complete list of Hazardous Materials and Hazardous Waste inventory, site map, emergency response plan and employee training plan.

Site ID: 419283
Site Name: Flying Moose Manufacturing LLC
Violation Date: 09-01-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 10/02/2020. Observation: Waste Coolant accumulation start date is October of 2019, and operator states October 2019 is the only time they have shipped off in 3 years. Corrective Action: Ship off (or drop off) waste within 30 days and submit proof to TMD. Continue to label accumulation start dates and send off hazardous waste within accumulation time limits. Maintain records on-site for 3 years.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-01-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) conducted this routine inspection in conjunction with routine stormwater (SW) and Hazardous Waste Generator (HWG) inspections; this inspection was conducted virtually via a combination of audio and video streaming. Operator produced 3 years' worth of employee training records and emergency response plan prior to inspection. Emergency response equipment (fire extinguishers, spill

FLYING MOOSE MANUFACTURING LLC (Continued) **S121780227**

control kit, eyewash station) were observed on-site. Waste is stored in 55 gallon drum, hazardous products are stored in Flammable Liquids locker, and compressed gas cylinders were seismically braced. Some machines are powered by a permitted air compressor. TMD observed - 3x argon/CO2 blend (unknown quantity) - 2x 281 CF argon - lead acid battery in forklift (unknown quantity) - 6x 5 gallon containers in flammable liquids locker (water soluble oil concentrate, cutting fluid, and compressor lubricant)

Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-11-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Confirmed the information in the Hazardous Materials Business Plan and submitted confirmation this date.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-01-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) conducted this routine inspection virtually, via a combination of video and audio streaming. Flying Moose is a Research and Development machining shop, which produces metal parts; thus, most machines and materials on-site are oriented toward metal machining. Machining produces aluminum scraps, all of which observed meet the definition of "scrap metal." Scrap aluminum is given to metal recyclers. Scrap steel cut-outs (steel sheets with pieces cut out) are donated to Oakland's The Crucible. TMD observed an empty oily rag container; these must be disposed of as Hazardous Waste if unable to launder them if/when they accumulate. Three machines on-site produce waste coolant when serviced: 2 CNC mills and 1 CNC lathe. These machines are serviced on an as-needed basis. They also contain closed-loop oil systems which would be serviced by a third party contractor if needed. Flying Moose's EPA ID#CAL000413938 which was inactive at time of [Truncated]
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 01-09-2017
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Toxics Management Division (Jewel Mauricio) conducted a permit screening for Hazardous Materials and Hazardous Waste. If the facility store or handle Hazardous Materials or Hazardous Waste in combined (Aggregate) quantities in amount >= 55 gallons for liquids, >=500 lbs for solids, and 200 cubic ft for compressed gas must submit a Hazardous Materials Business Plan (HMBP). Walk-Through: -Flying moose provide custom metal fabrication with a low profile and low volume production. -Observed one horizontal saw machine, contains 5 gallons

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 04/28/2021. Observation: No employee training records provided at time of inspection. Corrective Action: TMD to provide employee training template; conduct training and retain record on-site for 3 years.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 08-03-2017
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: EPA ID#, CAL 000 287 950. Waste generated is water, methanol, HPLC. Have not shipped since 2013. Takes waste to HHW alameda county. Must report HW activity on CERS.calepa.ca.gov. Acetonitrile, methanol and water mixture for machine. 4L container of each. Acetic acid 2.5L Nitric acid. 5L total is about 10 of haz mat. No outside activity.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-29-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Submitted hazardous waste generator packet online. Labeling - Need more labels. Accumulation start dates available. Emergency response number are posted. No violations
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-31-2021
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) connected virtually with Arantzazu Eiguren-Hernandez, Senior Research Chemist of Aerosol Dynamics, via a combination of audio and video streaming to conduct this virtual inspection. Aerosol Dynamics builds instruments for measuring air

pollution, and this location is primarily research and development-focused, using mostly water with some methanol and isopropyl alcohol (IPA). TMD observed a pneumatic compressor, 33CF hydrogen, and 88 CF nitrogen, seismically braced. Hazardous materials are below Hazardous Materials Business Plan (HMBP) reporting thresholds. Fire extinguisher last serviced in May 2018. Facility operator provided receipt of 2019 disposal to Alameda County HHW small business program, and photo of Emergency Response posting. TMD observed - 1x 5gal of water/IPA/methanol waste, dated 12/10/19 - 1x 1.06gal of waste solvents, no accumulation start date

Site ID: 99424
Site Name: BOB'S VOLVO TOYOTA SPECIALISTS
Violation Date: 08-13-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 10/08/2015. The hazardous materials inventory includes materials stored/handled onsite. Some material information is incomplete or inaccurate. The waste antifreeze does not include an annual waste amount, the lead acid batteries and used lead acid batteries are reported in pounds and do not meet H&SC requirements, used oil filters are reported as hazardous waste, but are sent for reclamation and do not need to be disclosed. Corrective action: Add the annual waste amount for waste antifreeze, modify the battery and used battery disclosures to meet H&SC (TMD to provide guidance), used oil filters may be removed from the inventory if reclaimed offsite.

Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Gasoline
Site History:	The Site is situate within a mix of commercial and residential zoning, on the southeastern corner of San Pablo Ave and Derby Street in Berkeley, California. A single structure (Cooper Hawkins) sits in the western part of the parcel, while the fully asphalt-paved yard comprises the balance of the Site. In May, 1992 a 550-gal underground storage tank (UST) was removed. The soil was screened for TPH-g (total petroleum hydrocarbons as gasoline) and benzene, a petroleum contaminant. No groundwater was tested. Subsequent soil testing found no TPH-g or related compounds above regulatory limits in on Site soil samples.

CERS HAZ WASTE:
Name: FIRE CAUSE ANALYSIS
Address: 935 PARDEE ST
City,State,Zip: BERKELEY, CA 94710
Site ID: 419281
CERS ID: 10602787
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 419281
Site Name: Fire Cause Analysis
Violation Date: 04-30-2014
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes: Returned to compliance on 06/02/2014. Fire debris waste observed in and around facility, impacted stormdrain inlet on-site, no significant residue at face of curb where discharge exits site (appears clogged).
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Site ID: 419281
Site Name: Fire Cause Analysis
Violation Date: 02-15-2019
Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.
Violation Notes: Returned to compliance on 02/28/2019. The facility is using a temporary EPA ID number, CAC002839482, on the hazardous waste manifests for the shipment of hazardous waste in 2016, 2017 and 2018. The temporary EPA ID numbers are only for businesses who do not normally handle hazardous waste. This facility is routinely generating hazardous waste. Corrective action: Submit a manifest correction letter to DTSC for each of the manifests that list the incorrect EPA ID number. All future shipments of hazardous waste must be made using the permanent EPA ID number.

FIRE CAUSE ANALYSIS (Continued) **S120987280**

Violation Date:	04-21-2014
Citation:	HSC 6.95 25503.5(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25503.5(a)
Violation Description:	Owner/Operator failed to establish and implement a Hazardous Materials Business Plan when storing hazardous materials at or above the thresholds quantities of 55 gallons/500 lbs/200 cubic feet.
Violation Notes:	Returned to compliance on 04/30/2014. Observed oxy/acetylene in quantities subject to municipal code reporting thresholds.
Violation Division:	Berkeley City Toxics Management Division
Violation Program:	HMRRP
Violation Source:	CERS
Site ID:	419281
Site Name:	Fire Cause Analysis
Violation Date:	02-26-2016
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 03/30/2016.
Violation Division:	Berkeley City Toxics Management Division
Violation Program:	HW
Violation Source:	CERS
Site ID:	419281
Site Name:	Fire Cause Analysis
Violation Date:	02-15-2019
Citation:	22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description:	Failure to meet the following conditions of satellite accumulation regulations: G Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. G The generator complies with section 66265.171, 66265.172, and 66265.173(a). G The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words G Hazardous WasteG including specified information G Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a G 90 dayG accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
Violation Notes:	Returned to compliance on 02/28/2019. The 55 gallon drum of waste fire debris is labeled as hazardous waste, but is not labeled with the name and address of the generator, contents, physical state, hazard properties and accumulation start date. Corrective action: Label the hazardous waste drum with the name and address of the generator, contents, physical state, hazard properties and accumulation start date.
Violation Division:	Berkeley City Toxics Management Division
Violation Program:	HW

FIRE CAUSE ANALYSIS (Continued) **S120987280**

Violation Source: CERS

Site ID: 419281
Site Name: Fire Cause Analysis
Violation Date: 02-15-2019
Citation: HSC 6.5 25123.3(h) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)
Violation Description: Failure to determine the status of any hazardous waste if a signed copy of the manifest isnG t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isnG t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes: Returned to compliance on 02/28/2019. The designated facility to generator copy of manifest 018138978JJK is not onsite. Corrective action: Contact the transporter of the designated facility to obtain a copy of the manifest.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Site ID: 419281
Site Name: Fire Cause Analysis
Violation Date: 02-15-2019
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 02/28/2019. TMD observed 3, 20 lb cylinders of propane onsite. These cylinders contain approximately 160 cubic feet of propane each. Businesses are required to establish and implement a Hazardous Materials Business Plan when storing/handling hazardous materials, including hazardous waste, at or above aggregate quantities of 500 pounds or more of all solid hazardous materials and waste; 55 gallons or more of all liquid hazardous materials and wastes; or 200 cubic feet or more at standard temperature and pressure of all gaseous hazardous materials. The HMBP must be submitted, electronically, in the California Environmental Reporting System (CERS), at the time the business begins operations, or at the time it first begins to handle a hazardous material or waste that must be disclosed. Corrective action: Facility may decrease storage to below registration thresholds and provide confirmation to TMD, or you shall create an account in the CERS Business Portal, [Truncated]

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 04-30-2014
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Waste analysis pending. Facility is containing materials and developing a sampling and analysis plan to make a waste determination.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-05-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: First inspection for hazardous waste program. Fire debris from yard identified as HW for lead. Obtained Yard Debris Management Protocol and HW/UW reporting form. Staff trained on waste/yard debris handling. EPA ID no pending. Will forward ID # when rec'd. Fire Cause has returned to compliance for previous failure to provide waste analysis. Analysis provided separately. Storm pollution practices implemented to prevent non-sw discharges. Structural control(plugs) installed in on-site stormdrain. protoclos implemented to maintain yard free of debris. No observed violations - hazardous waste or stormwater.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW

Violation Program: HMRRP
Violation Source: CERS

Site ID: 53457
Site Name: OCEANWORKS, INC.
Violation Date: 01-12-2015
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly.
Violation Notes: Returned to compliance on 02/25/2015. Facility could not demonstrate that hazardous waste container and storage areas were being inspected weekly. Observed liquid in the secondary containment, open containers, and improper labeling. Corrective action: Develop and implement a plan that ensures all storage and transfer areas are inspected weekly. Submit a copy of the plan to TMD.

Violation Source: CERS

Site ID: 53457
Site Name: OCEANWORKS, INC.
Violation Date: 10-12-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/19/2017. Business failed to properly label temporary used oil collection containers, used oil filter container, 55-gal drums of used oil and used coolant, and safety kleen parts washers. Corrective Action: Properly label all containers with yellow hazardous waste labels and indicate if they are emptied daily or clearly reference the corresponding clipboard with pick-up dates and start dates. THe 55-gallon drums may be marked with "Hazardous Waste" and the name of the waste if there is a hazardous waste label and clip board posted near by.

Violation Date: 01-12-2015
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 02/25/2015. Observed used oil drum and used antifreeze drum with drain funnels with no closing mechanism and staff were not adding or removing waste. 16 gallon used oil drums weren't closed. Corrective action: Close all hazardous waste containers and ensure that containers remain closed except when adding or removing waste. If a funnel is used, it must either be removed and container closed each time, or be equipped with a valve or cover to prevent leakage if drum should be tipped over.

Eval Date:	10-12-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	Oil filters throughout the facility were kept on racks and drained for 24 hours. One 5-gal bucket of oil filters in working area 1. No label on bucket. Oil filters are transfered daily next door to Oceanworks 2. 55-gallon drums containing oil filters not properly labeled in that the start date was missing. Observed 2 55-gal drums in individual (in work area 1) secondary containers. Both drums need to be properly labeled. Oily rag containers throughout facility. Rags are picked up once a week. Universal waste (batteries) container is properly maintained. 30-gal container used to collect used oil from filters has illegible label. One container (work area 2) collecting oil has no hazardous waste label. 55-gal waste coolant drum had illegible label and no clip board to note pick-up and start dates. 55-gal of used oil in work area 2 was not labeled as hazardous waste - corresponding clip board with start dates was not clear. lead-acid batteries properly stored and handled; [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-12-2015
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite for routine inspection to confirm management of hazardous waste. Reviewed waste disposal records for used oil, Safety Kleen Parts washer, used batteries, CAL000057369. the used coolant is collected onsite and Lara indicates they contract with Coolant Exchange for mobile recycling of their coolant or disposal. The receipts indicate it is recycled onsite. TMD to review further to confirm compliance requirements. Walkthrough -Working Area 2 Used oil is collected in portable used oil drains in this area. One is labeled as waste oil and the other is not labeled. the used oil is transferred to a 55 gallon drum, which has a hazardous waste label with "oil" written on it. The drum is in metal secondary containment which has about an inch of liquid in the bottom. the used antifreeze and new antifreeze drums are also stored in this secondary containment. The used antifreeze drum has a hazardous waste label, but the information is not completed on the label. The facility [Truncated]

Violations:
Site ID: 53456
Site Name: OCEANWORKS II
Violation Date: 02-27-2020
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: The hazardous waste is being consolidated with the hazardous waste from Oceanworks at 2703 10th Street and shipped under one EPA ID number. The facilities are not contiguous and must be managed as separate hazardous waste generator facilities. Corrective action: Obtain an EPA ID number for 1030 Carleton Street. Use this EPA ID number on all future shipments from this facility. 3/27/2020 - Email from Brian Reintges requesting extension due to Covid-19 situation. Extension approved to 4/27.

AB AUTOMOTIVE DBA OCEANWORKS (Continued) **S121787609**

Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: G Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. G The generator complies with section 66265.171, 66265.172, and 66265.173(a). G The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words G Hazardous WasteG including specified information G Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a G 90 dayG accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
Violation Notes: During walkthrough, observed portable used oil containers that were not closed and were not labeled properly. Corrective action: Provide lids for the portable used oil containers and mark the containers with the name and address of the generator, composition and physical state, hazard properties, and accumulation start date (which can be emptied daily). 3/27/2020 - Email from Brian Reintges requesting extension due to Covid-19 situation. Extension approved to 4/27.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) connected virtually with Pavel Aronov and Juanyel Sheridan of Climax Foods via a combination of audio and video streaming to conduct this first routine inspection. TMD observed spill kits, fire extinguisher current as of March 2021, and employee training records. No observed violations. TMD observed - 1x nitrogen 200 CF - 1x helium 300 CF - flammable liquids cabinet, approx. 4gallons - corrosives cabinet, approx. 4 gallons - GCMS corrosive liquid waste, approx. 5gallons - flammable corrosive waste, approx. 1 gallon
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) connected virtually with Pavel Aronov and Juanyel Sheridan of Climax Foods via a combination of audio and video streaming to conduct this first routine inspection. TMD observed spill kits, fire extinguisher current as of March 2021, and employee training records. EPA ID#CAL000456910 was active at time of inspection. Site is a small scale R&D laboratory with two waste streams. Ion chromatography waste stream contains sodium hydroxide and potassium hydroxide in small concentrations; operator reports pH is around 9, making this waste non-hazardous for corrosive. Operator still manages this as a HW with labeling and logging of elementary neutralization of the pH before disposal to sanitary sewer, pursuant to H&SC 25201.15 and 25201.5(d).(3). This waste stream has an accumulation start date of 3/30/2021 in a 5 gallon container. TMD also observed flammable waste stream of acetone, methanol, and hexane, with accumulation start date of 11/25/2020. [Truncated]

Violation Program: HMRRP
Violation Source: CERS

Site ID: 172485
Site Name: Agenus West Pilot Plant
Violation Date: 09-01-2020
Citation: HSC 6.5 25200.3.1(b) - California Health and Safety Code, Chapter 6.5, Section(s) 25200.3.1(b)
Violation Description: Failure of the owner or operator managing laboratory hazardous waste in a laboratory accumulation area to comply with the quantity limitations, management, training, or documentation requirements.
Violation Notes: Returned to compliance on 10/02/2020. The red hazardous waste container with pipette tips w/ trace sulfuric acid in in the photo 901 Lab 206 (1).jpg, has an accumulation start day of 2/12/2029. This exceeds the accumulation time limit of one year from the initial date of accumulation. Corrective action: The facility shall immediately arrange for the removal of the waste, and shall supply a copy of the manifest or bill of lading demonstrating removal to the CUPA within 30 days.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Site ID: 172485
Site Name: Agenus West Pilot Plant
Violation Date: 12-14-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 01/29/2016. The hazardous materials inventory does not include oxygen or carbon dioxide as was observed onsite. In addition, glycine is marked as a radioactive material and is not, and the fire code hazard class and federal hazard categories are not listed for all applicable hazardous materials. Corrective action: Update the inventory to reflect storage at the facility and add fire code hazard class and federal hazard categories for all applicable hazardous materials.
Violation Division: Berkeley City Toxics Management Division
Violation Program: HMRRP

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D038
Waste Description: PYRIDINE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P030
Waste Description: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

Waste Code: P105
Waste Description: SODIUM AZIDE

Waste Code: U236
Waste Description: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID:	12292
Site Name:	BIG O TIRES #5259
Violation Date:	09-11-2018
Citation:	HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22
Violation Description:	Failure to properly manage used oil and/or fuel filters in accordance with the requirements.
Violation Notes:	Returned to compliance on 12/18/2018. Observed the used oil filters sitting in open, unlabeled buckets in front of the used oil tank. Williams indicates these are waiting to be crushed before placing in the used oil filter drum. The used oil and gasoline filter drum did not have a lid in place and filters were not being added or removed. Corrective action: Ensure that drained used oil/fuel filter containers are closed and meet container standards of CCR 66266.130(c)(3). 10/15/18 - changed status to not accepted. Called environmental contact, Stefany Harley, to reiterate the CERS errors and documentation of correction has not been submitted. She indicates Billy Fairfield was working on the submittal and was out till next week. Emailed a copy of the report to Stefany. 10/29/2018 - second NOV mailed 10/30/2018 G received photo showing weekly used oil tank inspections, label on used oil tank, and label on used antifreeze. 10/31/2018 G emailed Billy requiring documentation and pictures confirming compliance [Truncated]

Site ID:	12292
Site Name:	BIG O TIRES #5259
Violation Date:	09-11-2018
Citation:	22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52
Violation Description:	Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities,- evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate hazardous waste management provisions.)
Violation Notes:	Returned to compliance on 09/12/2018. The emergency response/contingency plan does not list the emergency coordinators. Corrective action: Update the contingency plan to include the emergency coordinator information. You may use the updated template, https://calepa.ca.gov/wp-content/uploads/sites/6/2017/05/CUPA-Documents-eTemplates-Contingency.pdf, or develop your own plan that includes all required elements. Submit the updated plan in CERS.

Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	Returned to compliance on 11/15/2018. The facility did not have a record of hazardous waste handlers that lists 1) the job title for each position at the facility related to hazardous waste management, and the name of the employee filing each job; 2) a written job description for each position listed (description must be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but shall include the requisite skill, education, or other qualifications, and duties of facility personnel assigned to each position; 3) a written description of the type and amount of both introductory and continuing training that will be given to each person filling one of these positions. Corrective action: Prepare and submit a complete, correct training plan in CERS. 10/15/18 - changed status to not accepted. Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: G Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. G The generator complies with section 66265.171, 66265.172, and 66265.173(a). G The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words G Hazardous WasteG including specified information G Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a G 90 dayG accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
Violation Notes: Returned to compliance on 12/18/2018. The portable used oil containers are labeled as used oil, but are not labeled with all required elements. Corrective action: Label the portal used oil containers with the words "hazardous waste", name and address of generator, physical and chemical characteristics of hazardous waste and the accumulation starting date. 10/15/18 - changed status to not accepted. Called environmental contact, Stefany Harley, to reiterate the CERS errors and documentation of correction has not been submitted. She indicates Billy Fairfield was working on the submittal and was out till next week. Emailed a copy of the report to Stefany. 10/29/2018 - second NOV mailed 10/30/2018 G received photo showing weekly used oil tank inspections, label on used oil tank, and label on used antifreeze. 10/31/2018 G emailed Billy requiring documentation and pictures confirming compliance with all specific violations and corrective actions by November 13, 2018. 11/5/2018 G notified Billy that I still [Truncated]

BIG O TIRES #5259 (Continued) **S121741187**

	6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 11/05/2018. The hazardous materials inventory submitted 2/22/2018 is not accurate in that it does not include all hazardous materials observed onsite, the quantities are not listed accurately for all hazardous materials, and the waste code is not accurate for waste coolant. Observed 130 gallon totes each of ATF, antifreeze, 5W-40, 0W-20, 5W-20, and 5W-30, 2 55-gallon drums of used antifreeze, 220 gallon tank of used oil, 3 110-gallon tanks of new oil, approximately 30 cans of 13 oz. brake and parts cleaner, 55 gallon drum of hazardous waste oil filters, 55 gallon drum of mop water in the main shop area near Bay 1, 2 and 3. New batteries and used batteries in the loading area, an AquaKlean parts washer, gas in a bucket, 55 gallon drum of motor oil and 55 gallon drum of used coolant in the back shop area near Bay 4, 5, 6 and 7. Corrective action: Disclose the handling of all hazardous materials onsite with a separate entry on the hazardous materials inventory, and correct the [Truncated]

Citation:	22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.
Violation Notes:	Returned to compliance on 12/18/2018. The used oil tank does not have a hazardous waste tank assessment. Tanks holding hazardous waste at large quantity generators must have a current written hazardous waste tank system assessment certified by a Professional Engineer. The assessment must be conducted every five years. Assessments should address tank construction, design, seismic anchoring, thickness of shell, estimated life remaining, compatibility with contents, and condition and construction of containment area. Corrective action: The facility shall prepare and maintain a hazardous waste tank assessment or request an exemption by submitting an AST Certification & Engineering Assessment Exemption Notification to TMD with all required supplemental documentation. 10/15/18 - changed status to not accepted. Called environmental contact, Stefany Harley, to reiterate the CERS errors and documentation of correction has not been submitted. Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan.
Violation Notes:	Returned to compliance on 12/18/2018. TMD observed 1,310 gallons of petroleum storage in containers or tanks with storage capacities of 55 gallons or greater. In addition to the new product containers and hazardous waste drums/tanks, TMD observed petroleum in the secondary containment basins below the 130 gallon totes. The secondary containment basins appear to have a storage capacity of at least 55 gallons. Williams indicates these basins are cleaned out about every 2 weeks. The storage of greater than 1,320 gallons of petroleum in containers or tanks with storage capacities of 55 gallons or greater requires your facility to prepare and implement a Spill Prevention Control and Countermeasure Plan (SPCC) and comply with the APSA program. Corrective action: Either develop a plan for ensuring the secondary containment is maintained empty and clean, or prepare and implement an SPCC plan and update the Business Activities page in CERS. 10/15/18 - changed status to not accepted. Called environmental contact, [Truncated]

Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-11-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Facility is a large quantity generator in that the facility generates more than 270 gallons of hazardous waste in a calendar month. Hazardous waste must be disposed of within 90 days of the accumulation start date. Rags are sent for laundering, scrap metal is sent for recycling.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 11-15-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: 3030057: The portable used oil container in bay 6 is only labeled as used oil, and is not labeled with the words 'hazardous waste', name and address of generator, physical and chemical characteristics of hazardous waste and accumulation start date. The other containers were labeled. 3030029: Facility provided a picture of a waste oil inspection log which was being completed weekly. Williams indites he has not started conducting daily inspections. The inspection must show that the inspection includes looking for leaks, cracks or corrosion, and containment is in good condition and dry. 3010023: Updated emergency plan was submitted. 3030007: Confirmed that the used oil tank, hazardous waste filters and used antifreeze drums are labeled properly. The mop water drum has been disposed of. 3030004: Used oil filters still sitting in open, unlabeled buckets in front of the used oil tank. 3030018: The used antifreeze drum and hazardous waste filters drum were not [Truncated]

violations noted. RP mentioned that building plans have been submitted to the COB for approval, some upgrades to the facility are planned in the near future. HW EPA number requires updating, RP using previous owners number.

Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 11-15-2018
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: 4010001: Williams indicates that they clean out the secondary containment below the totes. Please note that full synthetic or 100% synthetic oils are excluded from the APSA program, but are regulated under the Federal SPCC regulations. TMD noted that 4 of the 130 gallon totes appear to be full synthetic. Please provide confirmation and ensure that you are complying with all applicable regulations.

Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-11-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Onsite to confirm the information in the 2/22/2018 Hazardous Materials Business Plan submitted in the California Environmental Reporting System and confirm proper management of hazardous waste. The environmental contact, Raffi Zadoian, and the store manager, Herbert Eulalia, no longer work here. Update the Business Owner Operator form in CERS within 30 days. Also note that the Emergency Response/Contingency Plan is uploaded twice in CERS. Williams indicates that he was not provided a training when he first started at the facility about 4 months ago, but they do have safety meetings every 6 months. The meeting records were not available at the time of the inspection. Provide TMD with a copy of the safety meetings for the past 3 years and a list of topics to confirm that hazardous materials,

CERS:

Name:	WALGREENS #2609
Address:	2995 SAN PABLO AVE
City,State,Zip:	BERKELEY, CA 94702
Site ID:	84192
CERS ID:	10196413
CERS Description:	Chemical Storage Facilities

Violations:

Site ID:	84192
Site Name:	WALGREENS #2609
Violation Date:	02-20-2018
Citation:	40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)
Violation Description:	Failure to post the following information next to the telephone: (A) The name and telephone number of the emergency coordinator; (B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and (C) The telephone number of the fire department, unless the facility has a direct alarm.
Violation Notes:	Returned to compliance on 04/10/2018. Business failed to post

WALGREENS #2609 (Continued) **S113174266**

emergency information. Corrective Action: Complete template provided by TMD and post
Violation Division: Berkeley City Toxics Management Division
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-29-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Hazardous waste containers labeled and closed. Training records and waste disposal (manifests) maintained and matched. ER equipment and spil resopnse as indicated on HMBP. ER posting in office. No violations observed.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-20-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Business conducts annual training for all employees for Hazard Communication and emergency procedures. Store Managers receive annual hazardous waste training. Hazardous materials, helium, are consistent with inventory reported on CERS. Helium is kept in locked area and chained to the wall.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-29-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Hazardous materials amounts and locations are consistent with 2015 HMBP reporting. Training records maintained and current.
Eval Division: Berkeley City Toxics Management Division
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-20-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Store hazardous waste is located on the second floor. Waste is properly separated and kept in 10 gallon containers. All containers are kept closed and properly labeled. Pharmacy waste is kept in pharmacy area. Waste is properly separated and labeled. Pharmacy waste is picked up one a month by Stericycle. Store waste is picked up every 3-5 months by Stericycle per manifest review. Manifests and bills of lading were available for all wastes. Hazardous waste reported on CERS is consistent with waste present at facility. Fire Extinguishers were last serviced 2/2017, they must be serviced this month. Emergency phone number posting was not available.

Completed Info:
Completed Area Name: Berkeley Industrial Court
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 09/26/1981
Comments: Facility identified from EPA Superfund list.

Completed Area Name: Berkeley Industrial Court
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/15/2005
Comments: Site screening determined that PCBs, lead, nickel, and petroleum hydrocarbons had previously been detected in soil samples collected from the Berkeley Industrial Court site. The City of Berkeley has overseen sampling at the site in an effort to characterize chlorinated solvent occurrence in area groundwater.

Completed Area Name: National Starch and Chemical Company
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/12/2004
Comments: Site screening concluded that chlorinated solvents were present in groundwater beneath the National Starch site. The City of Berkeley has overseen sampling at the site in an effort to characterize the occurrence of chlorinated solvents in area groundwater.

Completed Area Name: Berkeley Industrial Court
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 04/01/1986
Comments: Confirmed DHS Preliminary Assessment information. Nine samples taken.

Completed Area Name: Temescal Business Center
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/15/2005
Comments: Site screening determined that historic site uses had included automobile manufacturing, rebuilding of marine engines, and storage of chemical metal etching waste. The City of Berkeley has overseen sampling at the site in an effort to characterize the occurrence of chlorinated solvents in area groundwater.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
