Site History:	The subject site (Site) is on two parcels at 742 and 800 Grayson Street in Berkeley. A rail spur is located on the site s south side. There are two areas of concern (AOC). AOC 1 is delineated as the 742 parcel that excludes the rail spur. The rest of the site is designated AOC 2 and includes the 800 parcel and the rail spur. Analytical results of soil vapor samples from one probe destroyed during excavation historically contained benzene at concentrations up to 12,000 micrograms per cubic meter (ug/m3). The destroyed probe was not replaced as part of site restoration activities and no post-excavation soil vapor samples were collected. Henkel maintains ownership and operation of AOC 2. RedCo has purchased AOC 1 and intends to redevelop the property. In order to better track risk management/remediation activities on AOC 1 during and post development, a new and separate GeoTracker site has been created (Global ID T10000017464).

The deadline to comply with HMBP violation has been extended to allow staff and consulting support to upload chemical inventory information from a spreadsheet. There has not been a functioning spreadsheet, but staff are working with the vendor to correct this. Additional time may be needed to convert the existing inventory of chemicals into the new spreadsheet. Henkel has hired a consultant to support this effort. On 11/16/15, contacted Henkel to request progress report after being forwarded CERS upload template for chemical inventory. Previously, at an adjacent location, Henkel manufactured solvent-based adhesives; this location is no longer operable. Operator took photographs to be sent to TMD later. Most hazardous materials on-site only posed a low-level health risk per the HMIS labels and were in the general storage area of the warehouse; base/corrosives were stored in separate area with secondary containment and Department of Defense(DOD)-regulated materials were stored in locked cage (liquids were secondarily contained). Oven is heated using natural gas line. Employee training records were provided. Waste oil has not been generated in the last 5 years, generated by servicing machinery. Non-hazardous waste glue from bleeding off tanks is generated and collected in totes - waste is hauled off to Altamont Landfill. Employees receive DOT training. Universal waste is properly managed and kept in appropriate containers. Emergency eye wash/ showers are available and regularly tested. Fire extinguishers are up to date and serviced. New EPA ID number is required prior to shipment of waste oil. Spills are cleaned up with absorbent and disposed of as solid waste, absorbent material should be disposed of along with the non-haz adhesive generated from tank cleaning.

Site History:	The Cutter Laboratory began operations at its present west Berkeley site in 1917. In 1974, Cutter Laboratories was purchased by Bayer AG of Germany and in 1983, was merged into Miles, Inc. In 1992, Miles, Inc. purchased the 5.6 acre parcel then occupied by the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. The Miles facility became a nearly 30-acre site located in the industrially zoned flatlands area west of San Pablo Avenue. The project site contains various one-to three-story research laboratories, process/manufacturing facilities, storage/warehouse buildings and administrative/office buildings.The facility has historically used numerous underground storage tanks (USTs) for storage of hazardous materials, all of which have been removed;

the site in 1910. This same company overhauled and rebuilt large marine engines at the site during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Airco purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Temescal Business Center, a multi-tenant industrial complex, currently occupies the 2850 7th Street site. This site is a part of the Heinz/Grayson Plume (EnviroStor ID 60000399).

Site History:	6,000-gal underground single walled tank was removed in October 1990. The UST consisted of two compartments: one contained ethyl alcohol, the other propanol. Soil samples contained small amounts of DCA and TCA; no petroleum hydrocarbons detected. A groundwater sample collected rom the excavation contained up to 19 ug/l of TCE, 5,000 ug/l of TCA, and other VOCs. The groundwater was pumped out prior to backfilling the excavation. A soil and GW investigation conducted in June 1992 included installation of 3 monitoring wells. Only one soil sample contained 160,000 ug/l acetone. The source of the acetone was unknown. GW samples from the MWs revealed chlorinated solvent contamination and some TPH contamination in all wells. Two additional MWs installed in 1993 (one off-site); four soil borings advanced as well. TCE was reported in the grab water sample from B-4 up to 2,800 ug/l. The review of the environmental data for the neighboring properties may suggest that there are other additional off-site sources of the VOCs not associated w/the former Emerald Packaging onsite operations. Site Closure Summary dated July 17, 1999 approved by the Berkeley TMD and NFA letter from the Water Board dated October 19, 2000.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
Registry ID: 110055792986

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) was on-site to conduct routine Hazardous Materials Business Plan (HMBP), Stormwater (SW), and Hazardous Waste Generator (HWG) inspections. EPA ID#CAR000091231 was active at time of inspection. TMD observed first aid kits, spill kit, shower/eyewash station. Fire extinguishers were serviced the day after inspection, on September 1st, and documentation was submitted to TMD. TMD confirmed the waste disposal records, manifest management and universal waste management were compliant. Emergency response posting was posted. TMD observed waste neutralization unit in waste area. Per operator, initial pH is almost never under 2 or over 12.5, and their operating procedure would be to neutralize that before sending it down the pipes. TMD warned this would be illegal treatment of hazardous waste. If facility ever produces waste outside of these pH thresholds, facility should drum the hazardous waste and ship it off-site for treatment.

Site History:	The Site is situate within a mix of commercial and residential zoning, on the southeastern corner of San Pablo Ave and Derby Street in Berkeley, California. A single structure (Cooper Hawkins) sits in the western part of the parcel, while the fully asphalt-paved yard comprises the balance of the Site. In May, 1992 a 550-gal underground storage tank (UST) was removed. The soil was screened for TPH-g (total petroleum hydrocarbons as gasoline) and benzene, a petroleum contaminant. No groundwater was tested. Subsequent soil testing found no TPH-g or related compounds above regulatory limits in on Site soil samples.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-24-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) was on-site to conduct routine Hazardous Materials Business Plan (HMBP) and Stormwater (SW) inspections. TMD observed 3 years' worth of employee training records. Per operator, hazardous waste (pump oil) is routinely generated and disposed of through the Alameda County Household Hazardous Waste - Small Business Program; operator must change Business Activities to include Hazardous Waste Generation in CERS. TMD observed eyewash station and fire extinguisher current as of February 2021. TMD observed hazardous materials to accurately reflect CERS submittal, except the chained cylinders of unknown gas in the back yard; these should be added to the inventory or removed. TMD recommends seismically bracing other compressed gas cylinders with chains or straps

Violation Description:	Failure to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan.
Violation Notes:	Returned to compliance on 12/18/2018. TMD observed 1,310 gallons of petroleum storage in containers or tanks with storage capacities of 55 gallons or greater. Eval Notes: Met Lori on-site to conduct the routine HMBP inspection. Reviewed CERS documents, all were current. The facility is set to stop business in December 2023 because the site is going to be redeveloped. All materials will be moved off-site by the end of 2024. At the time of inspection, the only hazardous material on-site was a 5 gallon bucket of used ne 10 gallon cylinder of propane, and fluids in machines. TMD recommends that you go into CERS and change the inventory to report what is actually on-site. TMD has included information on closure plan submittal with this inspection report. This closure application needs to be received 30 days prior to closure activities commencing on-site. No training is required since the only employees are owners. Fire extinguishers, spill equipment, and safety equipment were observed on-site properly maintained.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Site History:	The National Starch & Chem site was divided into two Areas of Concern (AOCs) for purposes of remedial investigation and planning. These AOCs are defined as follows: 742 Grayson Street property is referred to as AOC 1; and the 800 Grayson Street property, including the rail spur running along the southern side of 742 Grayson Street is referred to as AOC 2. Henkel maintains ownership and operation of AOC 2. RedCo has purchased AOC 1 and intends to redevelop the property. In order to better track risk management/remediation activities on AOC 1 during and post development, a new and separate GeoTracker site has been created (Global ID T10000017464). Historical data and information can be found at the National Starch & Chem GeoTracker site (Global ID SLT2O03440).

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	The Business Center is situated in the large, historic industrial building bounded by San Pablo Ave to the east, 9th to the west, Heinz Ave on the north, and Ashby Ave to the south. Originally built by H.W. Heinz in 1927-28 as a cannery for his now-famous ketchup and relish products. The facility had two (2) underground storage tanks (USTs) for refueling their trucks (15,000-gal each, diesel fuel). The USTs were located on the western / northern side of the parcel (see basic site map in SAMPLING RESULTS FROM TANK REMOVAL documents dated 12/11/1987, page 4 of 22). Location of former USTs has been paved over with asphalt for driveway and parking. The previous owner had converted the function of the building to a retail office center and has been used as such by the current owner since the change in ownership in 1984 when the Heinz company moved operations to Tracy, California. Tanks were removed in 1987, with soil excavation and off-site removal. In Sept 1993 TCE (Trichloroethene) was reported above (2,200 ug/L in MW-3) regulatory limits for drinking water (5 ug/L) and is suspect of an off-site source. With monitoring wells and analytical testing, request for case closure came in Jan 1995 based on non-detect levels of petroleum hydrocarbon compounds. Case Closure by the City of Berkeley, Toxics Management Division (TMD) in June of 2013 transferred the case to the Regional Water Board (SF Bay Region 2). There is a likely orphaned TCE groundwater plume at the Site whose source has not been defined as of 9/1/16. The nature and extent of this orphaned groundwater has not been defined to date. This TCE detection in the sole onsite monitoring well exceeds the drinking water MCL. The Berkeley Business Center waste oil tank is not known to be the source of this TCE contamination at the Site.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-16-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) connected with Jake Keller (operator), lab manager of Wild Earth, Inc., virtually via a combination of video and audio streaming to conduct this inspection. Per operator, Wild Earth closed most Research and Development projects in February, though the office area of this facility remains a headquarters for the company. The laboratory space is being leased out to a number of incubator spaces performing laboratory research and Wild Earth's leasing entity is doing-business-as Cell Valley Labs. The building is owned by Wareham, who maintain the Fire Extinguishers. Some rooms in the building remain empty and are used as general storage for machines or other non-hazardous materials. Some hazardous materials in the common area, including corrosives, bases, flammables, and gases, remain in possession of Wild Earth, thus they remain in the HMBP program. Per correspondence with Environmental Consultant Rene Ricks dated March 31st, 2020, Wild Earth [Truncated]

Eval Type: Routine done by local agency
Eval Notes: Arrived on site to conduct a routine inspection of Wild Earth, Inc. to evaluate the facility's compliance with the Hazardous Materials Business Plan (HMBP) program. Met with Cory Wheat, Lab Manager. Per Wheat, Wild Earth no longer conducts chemistry at this address and rather serves as an incubation facility for various labs. A lab pack was conducted in April 2023 and the inventory was reduced significantly. Most of the tenants own their own hazardous materials and have their own business plans on file with TMD. The business plan that is currently submitted to CERS is out of date. Wheat will take

CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-05-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Toxics Management Division (TMD) connected virtually with Pavel Aronov and Juanyel Sheridan of Climax Foods via a combination of audio and video streaming to conduct this first routine inspection. TMD observed spill kits, fire extinguisher current as of March 2021, and employee training records. EPA ID#CAL000456910 was active at time of inspection. Site is a small scale R&D laboratory with two waste streams. Ion chromatography waste stream contains sodium hydroxide and potassium hydroxide in small concentrations; operator reports pH is around 9, making this waste non-hazardous for corrosive. Operator still manages this as a HW with labeling and logging of elementary neutralization of the pH before disposal to sanitary sewer, pursuant to H&SC 25201.15 and 25201.5(d).(3). This waste stream has an accumulation start date of 3/30/2021 in a 5 gallon container. TMD also observed flammable waste stream of acetone, methanol, and hexane, with accumulation start date of 11/25/2020. [Truncated]

Hazardous Materials Business Plan (HMBP) and Storm Water (SW) inspections. Facility reports that they do not generate hazardous waste. TMD observed eyewash station and first aid kit; fire extinguishers current as of February 2023. Hazardous materials records were readily available for inspector; HMBP was printed and stored on-site. Facility produced one hazardous waste manifest for 165 lbs of waste dated 12/13/2022; facility reports this as a one time disposal of old materials. Two EPA ID numbers are associated with facility: CAL000345076 and CAL000460696. Operators report rinsing patina brushes etc. into bin of water, then letting water evaporate. Patina chemicals include feric nitrate, cupric nitrate, ammonium sulfide, and potassium sulfide, among other chemicals. While this is likely diluted enough to not constitute hazardous waste, the bin itself probably has remnants of hazardous waste inside of it. [Truncated]

Site History:	Prior to 1978, this site was operated by Airco Inc, now referred to as Temescal Business Center. The portion of the site referred to as the Berkeley Industrial Complex was historically utilized as a storage area for old equipment, spent dolomite, and neutralized chemical etching waste before disposal. Prior to Airco's ownership of the site, Hall Scott Marine Engine Foundry occupied the site before and during World War II. They produced engines for naval ships during World War II; however, the exact scope of their activities is unknown. The site currently supports three buildings and a nursery on an approximately 1.5-acre parcel. Berkeley Industrial Complex is presently a multi-tenant industrial complex. The main tenants include Magic Garden Nursery, Goldberg Cabinets, and Artworks Foundry. Seventy-five percent of the property is utilized to grow, store and sell plants, shrubs, and trees. The site is bounded by Temescal Business Center to the east, and National Starch and Chemical to the north. A Southern Pacific rail spur forms the northwest boundary. Since 1978 there has been no chemical storage or heavy industrial practices that would lend to the potential for soil and/or groundwater impaction. The site is currently being investigated for

Site History:	The Site has operated as a bus maintenance facility for the Berkeley Unified School District (BUSD) from 1971 to 1994, when the property was sold to Miles in 1992. Prior to 1971 it was used by a storage tank and rail car manufacturer. The current Site is a portion of the Miles facility with two (2) buildings, one a vehicle maintenance structure, and the other an office. Four (4) underground fuel storage tanks (UFSTs) and one (1) underground storage tank (UST) and one (1) oil-water separator were removed from the Site in 1993. Approx. 1,850 cubic yards of soil were also removed, along with 2,700 gallons of groundwater in order to help in the excavation process.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)
Site History: The site is an active service station dispensing 76 -branded gasoline located on the northeast corner of the intersection of Ashby Avenue and 7th Street in Berkeley, Alameda County, California. The Alameda County Assessor 's Parcel Number is 53 -1641 -9 5. The site is located on 0.18 -acre lot approximately 3,000 feet west of the San Francisco Bay. The service station is located at an elevation of approximately 30 feet above mean sea level. The site is located in a mixed commercial and industrial area and is bounded on the south by Ashby Avenue (State Highway 13), to the north by Potter Street, to the east by a commercial facility (tub makers), and to the west by 7th Street (beyond which is the former Whole Earth Access/West Marine facility). The station facilities include four 12,000 -gallon underground storage tanks (USTs) containing regular unleaded, mid]grade unleaded, premium unleaded, and diesel fuels; three fuel dispenser islands; and a small cashier fs kiosk located in the central portion of the site. Other site features include a treatment system compound containing an air -sparging/dual-phase extraction system. A service station reportedly has occupied the site for at least 50 years. Southland Corporation (Southland) reportedly acquired the property in 1982, and installed the existing four 12,000 -gallon, single]walled, fiberglass USTs at the site in 1983 for storage of regular, unleaded, premium unleaded, and diesel fuel and operated a Super 7 Service Station at the site. It is not known if USTs were present on]site during previous service station operations. In 1986, ownership of the property was transferred to Mr. Keet Neerhan, who subsequently sold the property to Mr. Marvin Goodwyn in 1987. Mr. Goodwyn then leased the property to Union Oil Company of California (Unocal) in 1987. Unocal operated a service station at the site until 1997. Tosco Marketing Company (now ConocoPhillips) assumed the existing site lease in 1997, and currently operates the 76 service station. In 2003, the property was sold to Mr. Ronald Siegel. Mark Bare will provide summarizing our current knowledge of the nature, extent, potential source of this orphaned groundwater and likely soil vapor plume.

Background Info:	The site is located between Channing Way to the north and Bancroft Way to the south on San Pablo Avenue. Julius Chase purchased the property in 1939 from Joe Long and operated an auto wrecking yard on site to approximately 1980. The property originally extended from San Pablo to 10th Street and consisted of a storage lot and a brick building used to support auto wrecking activities. The western half of the lot was sold and residential homes were built on 10th Street. In 1967 or 1968, most of the site was paved except, two small areas located west along the fence separating residential homes and this site. Soil contamination is located in an unpaved section of approximately ten (10) feet by forty (40) feet, along the property's western boundary adjacent to residential homes' backyards. An A&W Rootbeer restaurant was built on the eastern portion of the lot and operated until 1980. In 1980, the restaurant closed, and the eastern parcel was divided into two lots, Ali Baba restaurant and Greg's Auto Repair (in the brick building) which occupied

In 1983, the shop was rented to Mr. Peter Mitchell. The shop operated from 1983 to 1988 under various names such as Mitchell's Auto Repair, Peter's Automotive Service, Peter Mitchell Imports and Berkeley Auto Repair. Droubi Nahla bought the property in April 1999. The site is fenced off. Currently, there are no business activities at the site.

NAVAL INDUSTRIAL RESERVE PLANT BERKELEY (Continued) **1008196518**

Description: The 2.94-acre site is located at 735 Ashby Avenue in the City of Berkeley, Alameda County, CA. In 1965, Mr. Phelps Dodge of Airco, Inc. installed a high temperature furnace and several transformers on the property. In the 1960s, three underground storage tanks (USTs) were removed and three aboveground storage tanks (ASTs) were removed between 1977 and 1988. In removing the ASTs, the property owner discovered contaminated soil, which he believes was contaminated from adjacent inactive pipelines as the ASTs were not leaking. The property owner stockpiled the contaminated soil for Department of Defense (DoD) removal. There have been allegations of illegal dumping of Polychlorinatedbiphenyls (PCBs) from transformers at the site by Barker Machinery. Two 2,000-gallon USTs were installed in 1985, one for motor oil and one for waste oil. The current owners are Timothy and Susan Southwick, who purchased the site in May 1987 for use as a car dealership.

- Violation Description: Failure to meet the following conditions of satellite accumulation regulations: Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. The generator complies with section 66265.171, 66265.172, and 66265.173(a). The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words Hazardous Waste including specified information Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a 90 day accumulation area 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
- Violation Notes: Returned to compliance on 06/21/2019. Satellite waste containers throughout service dept were not properly labeled in that all the information written on the yellow labels smeared off. Corrective action: relabel all containers.

Violation Notes:	Returned to compliance on 10/30/2014. The City of Berkeley's Toxics Management Division (TMD) has reviewed your submittal through the electronic reporting system, http://cers.calepa.ca.gov/, and has determined there are corrections required. TMD declined your submission on July 29, 2014. In accordance with California Health and Safety Code (HSC) section 25508, you are required to submit a corrected Hazardous Materials Business Plan within 30 days from the date of the notice. TMD has not received a corrected submission. Please log in to http://cers.calepa.ca.gov/ and comply with the regulator comments by October 10, 2014. This re-submittal does not preclude you from complying with the March 1 deadline for next year. Failure to electronically submit your corrected HMBP may result in formal enforcement against you, including the imposition of civil and criminal penalties as specified in HSC Chapter 6.95.

Violation Notes: Returned to compliance on 09/06/2016. The SPCC includes an Appendix 1, the Facility SPCC Cross Reference with 40 CFR 112, as the Plan does not follow the sequence specified in 112.7. The cross reference is not accurate in that for 112.7(a)(3)(ii) & (iii), additional procedures for routine handling (loading/offloading) are included in B.5; for 112.7(j) it indicates it is found in section A.8, but that is the Spill/Release Response Plan, and not discussion of conformance. In addition, a number of the sections do not appear applicable, but are listed as part of the SPCC. Corrective action: Following correction of the procedures and information in the SPCC, update the cross reference showing the location of requirements listed in Part 112 and the equivalent requirements in this SPCC Plan. 6/3/16 - TMD received extension request and approved an extension for correction from the 6/11/16 deadline to 7/11/16. 6/27/16 - Jair indicates the tank assessment was completed, and are waiting on all documentation. Violation Notes: Returned to compliance on 07/25/2016. Facility could not provide confirmation whether copies of manifests were being sent to the DTSC as Jair indicates he does not send them and is unsure if KPA does that for them. TMD did not find generator manifests on the DTSC Hazardous Waste tracking system. California requires generators to submit copies of manifests to DTSC. DTSC uses the submitted generator and designated facility copies for cradle-to-grave tracking of waste. Corrective action: Make a legible photocopy of the manifest, or the "Generator Retains" copy, if the TSDF-signed copy has been returned within 30 days, and submit to DTSC. Ancillary equipment, such as piping, should be included. Following initial assessment, it must be conducted every 5 years. Alternatively, the facility may request an exemption, not to exceed three years, from the engineering assessment for the used oil and used antifreeze tanks only. Corrective action: Make arrangements to have the tank systems for used oil and used antifreeze assessed by an appropriate PE who is knowledgeable of hazardous waste tank system requirements, and submit a copy of the final report to TMD, or request an exemption. 6/3/16 - TMD received extension request and approved [Truncated]

The used oil and used antifreeze are transferred from a pumping station on the other side of the wall to the tanks. All tanks have an overfill alarm which alarms at the transfer/pump station. The Parts Manager, Don Valdez, indicates he receives notification which provides the level of the tanks. Based on the storage at the facility, facility qualifies for Tier 1 requirements, as the facility has had no single discharge as described in section 112.1(b) exceeding 1,000 gallons or no two discharges as described in section 112.1(b) each exceeding 42 gallons within any 12 month period, and has aggregate aboveground oil storage capacity of 5,000 gallons or less. Site History:	The former Veriflo facility operated as a metals-finishing plant from 1968 to 1994. The metals finishing process included five sumps which stored acidic solutions. Volatile organic compounds (VOCs) were also

used at the Site and were stored in aboveground storage tanks (ASTs). After Veriflo discontinued operations in 1994, soil and groundwater investigations revealed chemical impacts to soil and groundwater beneath the Site.Results of the investigations indicated elevated concentrations of zinc, nickel, and chrome in shallow soils beneath the former chrome plating room. Elevated levels of VOCs, mostly TCE, were also detected in soil and groundwater sampled near the drain pipes, Sump F located in the pre-treatment room, and the sanitary sewer. In October and November 1996, soils were excavated to remove the heavy metals- and VOC-impacted soils outside the building. The plant building was demolished in 1999 as part of the purchase and sale agreement. Additional site investigation followed - 13 groundwater MWs were installed at and offsite. Onsite MWs decommissioned due to construction of a new building. There are four remaining offsite wells. Groundwater remediation 2000-2004: injections of potassium permanganate and later implementation of EISB to stimulate degradation of VOCs. Site redeveloped w/new building in 2005. The new building foundation is equipped with a vapor barrier. A passive vent system beneath the slab-on-grade foundation of the new building was installed as an additional mitigation measure to protect on-site occupants from potential intrusion by VOCs vapor. In July 2015 groundwater sampling event of the existing four offiste wells: MW-7, MW-8, MW-10, and MW-11. In general, concentrations of TCE and VC have decreased significantly.

Comments: CEQA Notice of Preparation (NOP) for Marchant Corporation. DTSC determined that the proposed project would not conflict with the remedial design and previous indoor air investigations. The remedy is in the basement boiler room and would not be affected by the proposed project, which consists of converting previous office spaces to Medical Practitioner use on portions of the first and second floors, plus all of the third and fourth floors (delineated in the Project Plans on the City of Berkeley website: http://www.ci.berkeley.ca.us/uploadedFiles/Planning_and_Development/Level_3_-_ZAB/2017-02-09_ZAB_ATT2_3100%20San%20Pablo_Project%20Plans.pdf). The NOP anticipates that the project will not have significant impacts related to Hazards and Hazardous Materials and, therefore, analysis of Hazards and Hazardous Materials will be included in the IS checklist as an appendix, but not studied and analyzed at length in the DEIR. However, the NOP anticipates that Air Quality will be analyzed in the DEIR. According to the State Clearinghouse memo, DTSC must respond to the Lead Agency if review of the Notice of Preparation (NOP) indicates that DTSC has discretionary approval power over the project as a Responsible Agency . Based on review, DTSC does not need to act as a Responsible Agency and provide discretionary review/approval of the DEIR, so DTSC response to the NOP (due by 2/24/207) is not required.

Comments: CEQA Notice of Preparation (NOP) for Marchant Corporation. DTSC determined that the proposed project would not conflict with the remedial design and previous indoor air investigations. The remedy is in the basement boiler room and would not be affected by the proposed project, which consists of converting previous office spaces to Medical Practitioner use on portions of the first and second floors, plus all of the third and fourth floors (delineated in the Project Plans on the City of Berkeley website: http://www.ci.berkeley.ca.us/uploadedFiles/Planning_and_Development/Level_3_-_ZAB/2017-02-09_ZAB_ATT2_3100%20San%20Pablo_Project%20Plans.pdf). The NOP anticipates that the project will not have significant impacts related to Hazards and Hazardous Materials and, therefore, analysis of Hazards and Hazardous Materials will be included in the IS checklist as an appendix, but not studied and analyzed at length in the DEIR. However, the NOP anticipates that Air Quality will be analyzed in the DEIR. According to the State Clearinghouse memo, DTSC must respond to the Lead Agency if review of the Notice of Preparation (NOP) indicates that DTSC has discretionary approval power over the project as a Responsible Agency . Based on review, DTSC does not need to act as a Responsible Agency and provide discretionary review/approval of the DEIR, so DTSC response to the NOP (due by 2/24/207) is not required.

Background Info:	A succession of pesticide companies including, Able Termite Control Company, Able Termite Control, Inc., Terminix Norcal, and its successor Terminix International occupied this property. These companies mixed pesticides with thinners. Peerless Electric Company bought the property from Terminix in 1981. Soil investigation conducted in 1983 identified aldrin, heptachlor, and chlordane at hazardous levels and the underlying groundwater detected chlordane and heptachlor. In 1984, the contaminated soil was removed and the surface was sealed.

Comments: The Report presents the results of sampling of two groundwater monitoring wells performed in June 2008. Vinyl chloride and cis-1,2-dichloroethylene still exceed the groundwater cleanup goals in one monitoring well and the detected concentrations were 29 and 180 micrograms per liter, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/01/2013
Comments: The groundwater monitoring is conducted on a biennial schedule (one sampling event every 2 years). There is only 1 monitoring well that is sampled and tested; a low concentration of vinyl chloride was detected. The vinyl chloride is a biodegradation breakdown product of the former chlorinated solvent plume in groundwater at the Site.

The samples were tested for chlorinated solvents and only vinyl chloride exceeded the drinking water Maximum Contaminant Level (MCL) of 0.5 micrograms per liter (ug/L). In response the those comments the report included information related to boring logs, monitoring well construction details, and groundwater elevation data and gradient evaluations; the responses that were provided were adequate. The results of the groundwater monitoring program were consistent with previous results which showed low levels of chlorinated volatile organic compounds (VOCs) in

shallow groundwater; the groundwater data also showed that natural biodegradation of those chlorinated VOCs is occurring since breakdown compounds are present.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/29/2008
Comments: The Report presents the results of sampling of two groundwater monitoring wells performed in June 2008. Vinyl chloride and cis-1,2-dichloroethylene still exceed the groundwater cleanup goals in one monitoring well and the detected concentrations were 29 and 180 micrograms per liter, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/01/2013
Comments: The groundwater monitoring is conducted on a biennial schedule (one sampling event every 2 years). There is only 1 monitoring well that is sampled and tested; a low concentration of vinyl chloride was detected. The vinyl chloride is a biodegradation breakdown product of the former chlorinated solvent plume in groundwater at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/28/2015
Comments: A groundwater sample from the single site well continues to exceed the drinking water standard for vinyl chloride. For that reason, the request for site closure which was included in the groundwater monitoring report could not be approved.

Comments: The schedule for collection of groundwater samples has been reduced to bi-annual (once every other year). Two groundwater monitoring wells were sampled this period however DTSC recently approved decommissioning of one well (MW-10) so only one well will continue to be monitored. The samples were tested for chlorinated solvents and only vinyl chloride exceeded the drinking water Maximum Contaminant Level (MCL) of 0.5 micrograms per liter (ug/L). The next sampling event is scheduled to occur by January 31, 2013.

Comments: The monitoring results are consistent with historical results. DTSC's Geological Services Unit requested that copies of the monitoring wells borehole logs should be submitted and a compilation of all groundwater gradient evaluations should be completed. DTSC requested that information to be submitted in the next monitoring report.

Comments: The report included responses to DTSC's comment letter dated June 23, 2011. In response the those comments the report included information related to boring logs, monitoring well construction details, and groundwater elevation data and gradient evaluations; the responses that were provided were adequate. The results of the groundwater monitoring program were consistent with previous results which showed low levels of chlorinated volatile organic compounds (VOCs) in shallow groundwater; the groundwater data also showed that natural biodegradation of those chlorinated VOCs is occurring since breakdown compounds are present.

Comments: Approval of the Removal Action Completion and Third Quarter 2010 Groundwater Monitoring Report for the site located at 1171 Ocean Avenue in Oakland, California. The report documents the implementation of the Removal Action Workplan, which was approved by the Department of Toxic Substance Control in June 2010. The remedy entailed the injection of the in-situ Regenesis compounds RegenOx and HRC . These compounds were advanced into separate areas of the trichloroethylene-dominated plume underlying the site. Following a year of quarterly post injection monitoring a workplan will be developed to propose the additional injections along with additional

Comments: Report with results of sampling to supplement Phase III and IV Investigations- greatest detections of TCE found in southeast corner of site near warehouse roll-up door: greatest groundwater detection of 10,000 micrograms per liter TCE at 36 feet below ground surface, and soil-gas detection of 860 micrograms per cubic meter (only soil gas detection onsite.) Five off-site soil and groundwater samples taken- no detections of same magnitude as onsite detections, indicating onsite TCE is not from an upgradient, off-site source.

Completed Date: 10/26/2011
Comments: Approval of the Removal Action Completion and Third Quarter 2010 Groundwater Monitoring Report for the site located at 1171 Ocean Avenue in Oakland, California. The report documents the implementation of the Removal Action Workplan, which was approved by the Department of Toxic Substance Control in June 2010. The remedy entailed the injection of the in-situ Regenesis compounds RegenOx and HRC . These compounds were advanced into separate areas of the trichloroethylene-dominated plume underlying the site. Following a year of quarterly post injection monitoring a workplan will be developed to propose the additional injections along with additional wells and monitoring analytes indicated by the data reviewed.

Comments: Indoor air sampling performed without formal approval from DTSC. Per letter dated 10/06/2009, data from sampling incorporated into draft RAW. Results indicate concentrations of VOCs were not detected if HVAC system was operated on a normal schedule. A follow up indoor air survey was performed subsequently to show results from worst case scenario under HVAC operation (run HVAC Friday, turn off end of Friday and leave off for duration of weekend, and samples taken on Monday.)

Site History:	The Site is a former dry cleaner facility that operated for more than 40 years until 2009. The current structures consist of a vacant space and nail salon on the ground floor, and eight apartments on the second floor. Based on past assessments, the dry cleaning solvent perchloroethylene (PCE) and associated breakdown products (TCE, and vinyl chloride) are present in soil, soil gas, indoor air and groundwater. The chemical concentrations found in the interior samples are currently being mitigated by the use of air filtration systems. San Francisco Regional Water Quality Control Board as lead agency has approved a 2019 Remedial Action Plan and a 2021 Data Gap Investigation Work Plan. Fact Sheets and other technical reports are available on GeoTracker.

Comments: The remedial plan consisted of excavation and off-site disposal of soil containing constituents of concern exceeding the remedial goals. Several pre-remediation activities were conducted prior to soil excavation, including demolition of site buildings and other infrastructure, additional soil sampling to further refine the areas and depths of soil to be excavated, permitting, and locating utilities. A total of approximately 1,800 cubic yards of soil classified as Class I non-RCRA hazardous waste were transported to and disposed at WMI s Kettleman Hills Facility located in Kettleman City, California. Approximately 3,400 cubic yards of soil designated as Class II waste was transported to and disposed at the West Contra Costa Sanitary Landfill in Richmond, California. A total of 225 confirmation samples were collected to verify that cleanup goals were met. Confirmation soil sample results and locations are presented in Tables 8 and 14 and on Figures 4 through 7 of the Completion Report, respectively. Concentrations of constituents of concern were below cleanup goals in all of the final confirmation samples collected on the Site.

Comments: The remedial plan consisted of excavation and off-site disposal of soil containing constituents of concern exceeding the remedial goals. Several pre-remediation activities were conducted prior to soil excavation, including demolition of site buildings and other infrastructure, additional soil sampling to further refine the areas and depths of soil to be excavated, permitting, and locating utilities. A total of approximately 1,800 cubic yards of soil classified as Class I non-RCRA hazardous waste were transported to and disposed at WMI s Kettleman Hills Facility located in Kettleman City, California. Approximately 3,400 cubic yards of soil designated as Class II waste was transported to and disposed at the West Contra Costa Sanitary Landfill in Richmond, California. A total of 225 confirmation samples were collected to verify that cleanup goals were met. Confirmation soil sample results and locations are presented in Tables 8 and 14 and on Figures 4 through 7 of the Completion Report, respectively. Concentrations of constituents of concern were below cleanup goals in all of the final confirmation samples collected on the Site.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

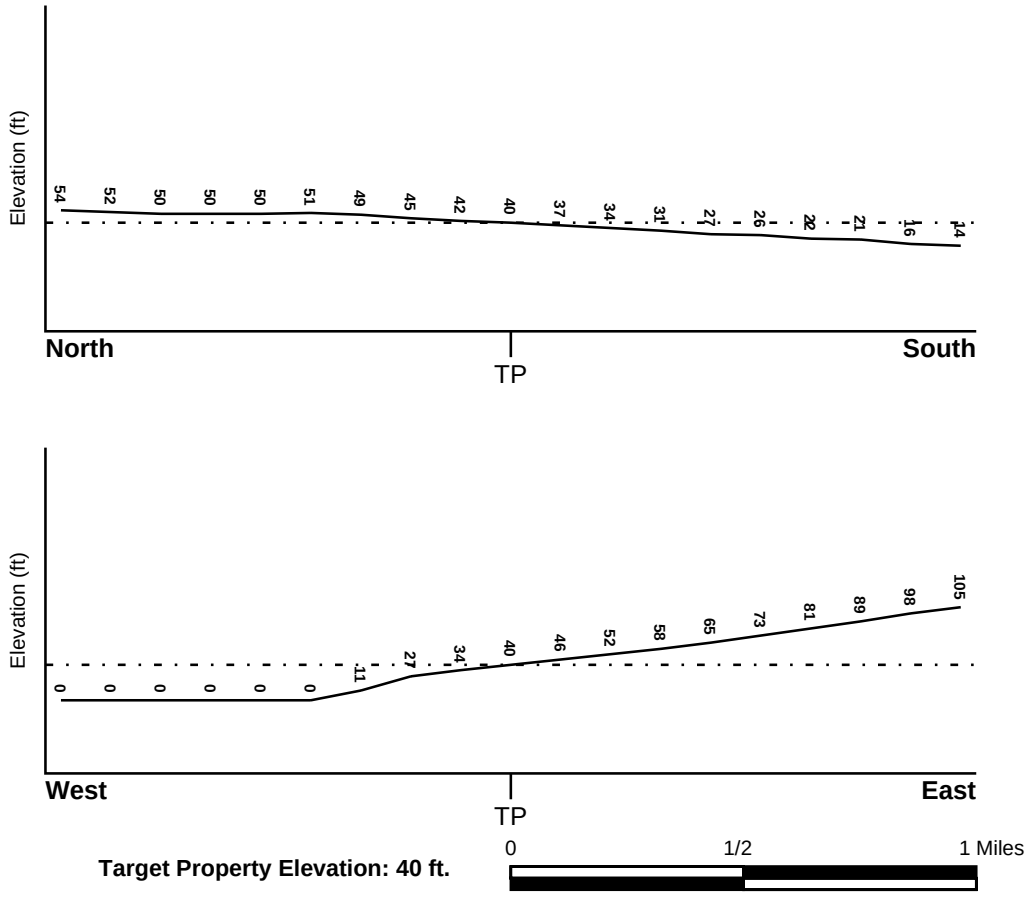
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 153 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

III. ANALYTICAL RESULTS

A. Soil

A total of 8 soil samples were submitted to NET Pacific laboratory for EPA Method 8015 modified/8020 analysis to determine the presence/absence of TPHg and BTEX. The analytical results are included as Appendix E. The sample depths are indicated in Table 2.

TPHg analyses detected contamination samples ranging in concentration from 1.5 to 28 mg/kg. According to the laboratory chemist, the chromatographic response indicated a heavier hydrocarbon from the three samples in which no BTEX constituents were detected. The highest concentration of contamination was detected in sample S-2-02, collected at 10' from boring MW-2.

@10'

BTEX constituents were detected in 2 samples (S-2-03 and S-3-03) collected at a depth of 15' near the apparent water table. These samples were collected from the borings located adjacent to the upgradient boundary. The maximum concentrations of BTEX constituents in order are: 91 ug/kg; 15 ug/kg; 13 ug/kg; and 30 ug/kg.

B. Groundwater

Groundwater samples were collected from the four BVWST installed wells and MW-1 which was installed by BEI during a previous investigation. TPHg was detected in all samples, the highest concentration of 10 mg/l was detected in MW-3.

BTEX constituents were detected in all wells except MW-5. The concentrations of TPHg and BTEX detected in the groundwater samples are presented in Table 3. Contaminant isoconcentration maps have been prepared and are included as Figure 6.

IV. SUMMARY

Spectrum conducted a geophysical survey of the site on August 15, 1991. No underground storage tanks were indicated by the magnetic and ground penetrating radar surveys.

BVWST conducted investigations and installed and sampled monitoring wells at the SITE to determine the presence/absence of subsurface contamination. Total petroleum hydrocarbon and benzene, toluene, ethylbenzene, and xylene contamination has been detected in the soil and groundwater beneath the SITE. TPHg analyses detected contamination in five of eight soils samples ranging in concentration from 1.5 to 28 mg/kg. BTEX constituents collected close to the apparent water table in borings located adjacent to the upgradient boundary contained the maximum concentrations, in order: 91 ug/kg, 15 ug/kg, 13 ug/kg, and 30 ug/kg. Table 2 details the groundwater analytical results reflecting a maximum concentration of TPHg of 16 mg/l and maximum BTEX constituent concentrations in the groundwater, in order: 430 ug/l, 590 ug/l, 100 ug/l and 1,500 ug/l. The contaminant concentrations from the BVWST sampling were up to 3 orders of magnitude lower than the previous BEI investigation indicated.

Surveying of the ground surface and casing elevations of the five monitoring wells and water level measurements determined that the verified groundwater gradient is southwest (approximately South 40° West). The Groundwater Contaminant Concentration Maps, Figure 6, indicate primary contamination is present beneath the eastern boundary of the SITE.

V. CONCLUSIONS

BVWST concludes no further action is necessary at the SITE for the following reasons:

- Subsurface investigations did not indicate an on-site source of TPHg or BTEX contamination.
- Gasoline and heavier hydrocarbon contamination have migrated onto the SITE from the verified upgradient direction.
- Contamination as determined by the BVWST investigation is below cleanup levels at other local sites.
- The soil and groundwater contaminant levels at the SITE are consistent with the TPHg and BTEX concentrations found during the Berkeley Humane Society UST removals.
- The Humane Society USTs were located in the verified upgradient direction from the SITE contaminant plume.

VI. RECOMMENDATION

- The CLIENT should request a document from the CITY stating that "No Further Action" at the SITE is required.

Standard Operating Procedures and Subslab Gas Sampling Schematic

Standard Operating Procedure Installation and Extraction of the Vapor Pin™

Updated February 27, 2015

Scope:

This standard operating procedure describes the installation and extraction of the Vapor Pin™ for use in sub-slab soil-gas sampling.

Purpose:

The purpose of this procedure is to assure good quality control in field operations and uniformity between field personnel in the use of the Vapor Pin™ for the collection of sub-slab soil-gas samples or pressure readings.

Equipment Needed:

- Assembled Vapor Pin™ [Vapor Pin™ and silicone sleeve(Figure 1)]; Because of sharp edges, gloves are recommended for sleeve installation;
- Hammer drill;
- 5/8-inch (16mm) diameter hammer bit (Hilti™ TE-YX 5/8" x 22" (400 mm) #00206514 or equivalent);
- 1½-inch (38mm) diameter hammer bit (Hilti™ TE-YX 1½" x 23" #00293032 or equivalent) for flush mount applications;
- ¾-inch (19mm) diameter bottle brush;
- Wet/Dry vacuum with HEPA filter (optional);
- Vapor Pin™ installation/extraction tool;
- Dead blow hammer;
- Vapor Pin™ flush mount cover, if desired;
- Vapor Pin™ drilling guide, if desired;
- Vapor Pin™ protective cap; and
- VOC-free hole patching material (hydraulic cement) and putty knife or trowel for repairing the hole following the extraction of the Vapor Pin™.

Figure 1. Assembled Vapor Pin™

Installation Procedure:

1) Check for buried obstacles (pipes, electrical lines, etc.) prior to proceeding.

2) Set up wet/dry vacuum to collect drill cuttings.

3) If a flush mount installation is required, drill a 1½-inch (38mm) diameter hole at least 1¾-inches (45mm) into the slab. Use of a Vapor Pin™ drilling guide is recommended.

4) Drill a 5/8-inch (16mm) diameter hole through the slab and approximately 1-inch (25mm) into the underlying soil to form a void.

5) Remove the drill bit, brush the hole with the bottle brush, and remove the loose cuttings with the vacuum.

Vapor Pin™ protected under US Patent # 8,220,347 B2

6) Place the lower end of Vapor Pin™ assembly into the drilled hole. Place the small hole located in the handle of the installation/extraction tool over the Vapor Pin™ to protect the barb fitting, and tap the Vapor Pin™ into place using a dead blow hammer (Figure 2). Make sure the installation/extraction tool is aligned parallel to the Vapor Pin™ to avoid damaging the barb fitting.

Figure 2. Installing the Vapor Pin™.

During installation, the silicone sleeve will form a slight bulge between the slab and the Vapor Pin™ shoulder. Place the protective cap on Vapor Pin™ to prevent vapor loss prior to sampling (Figure 3).

Figure 3. Installed Vapor Pin™

7) For flush mount installations, cover the Vapor Pin™ with a flush mount cover, using either the plastic cover or the optional stainless-steel Secure Cover (Figure 4).

Figure 4. Secure Cover Installed

8) Allow 20 minutes or more (consult applicable guidance for your situation) for the sub-slab soil-gas conditions to re-equilibrate prior to sampling.

9) Remove protective cap and connect sample tubing to the barb fitting of the Vapor Pin™. This connection can be made using a short piece of Tygon™ tubing to join the Vapor Pin™ with the Nylaflow tubing (Figure 5). Put the Nylaflow tubing as close to the Vapor Pin as possible to minimize contact between soil gas and Tygon™ tubing.

Figure 5. Vapor Pin™ sample connection.

10) Conduct leak tests in accordance with applicable guidance. If the method of leak testing is not specified, an alternative can be the use of a water dam and vacuum pump, as described in SOP Leak Testing the Vapor Pin™ via Mechanical Means (Figure 6). For flush-mount installations, distilled water can be poured directly into the 1 1/2 inch (38mm) hole.

Figure 6. Water dam used for leak detection

11) Collect sub-slab soil gas sample or pressure reading. When finished, replace the protective cap and flush mount cover until the next event. If the sampling is complete, extract the Vapor Pin™.

Extraction Procedure:

1) Remove the protective cap, and thread the installation/extraction tool onto the barrel of the Vapor Pin™ (Figure 7). Continue turning the tool clockwise to pull the Vapor Pin™ from the hole into the installation/extraction tool.

2) Fill the void with hydraulic cement and smooth with a trowel or putty knife.

Figure 7. Removing the Vapor Pin™.

3) Prior to reuse, remove the silicone sleeve and protective cap and discard. Decontaminate the Vapor Pin™ in a hot water and Alconox® wash, then heat in an oven to a temperature of 265° F (130° C) for 15 to 30 minutes.

The Vapor Pin™ to designed be used repeatedly, however, replacement parts and supplies will be required periodically. These parts are available on-line at VaporPin.CoxColvin.com.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.

Notes

AR **As Required:** Design Elements that are required to be incorporated into the design as necessary to address site specific conditions.

C **Contingency Primary Controls:** Controls that are required to be implemented if the primary controls fail to achieve performance objectives and cannot be repaired.

IC **Interim Controls:** Controls that must be implemented during construction that may potentially damage the VIMMEC primary controls. Interim Controls must also be implemented within weeks to address catastrophic failures of the VIMMEC primary controls (e.g., if a potential vapor intrusion risk is realized) while primary controls are being repaired or contingency controls are being implemented. Interim controls are not suitable as long-term (*e.g.* , > 1 year) engineering controls.

O **Optional:** Design element that can enhance or improve the performance of the design.

P **Permissible (P):** Permissible as a primary control if, based on the results of a pilot test or engineering calculations, the element is shown to be operationally viable and adequately protective. If during performance verification the control is shown to be ineffective or non-viable, then a contingency primary control must be implemented.

R **Required Element:** Design elements that are required.

Not permissible: Not permissible as a primary control, contingency primary control, or design element.

☐ Aesthetics	☐ Agriculture Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology /Soils
☐ Hazards & Hazardous Materials	☐ Hydrology / Water Quality	☐ Land Use / Planning
☐ Mineral Resources	☐ Noise	☐ Population / Housing
☐ Public Services	☐ Recreation	☐ Transportation/Traffic
☐ Utilities / Service Systems	☐ Mandatory Findings of Significance	

DETERMINATION

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	☐
I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.	☑
I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	☐
I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	☐
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.	☐

Mitigation Measures that have been incorporated into this project:

VIII. HYDROLOGY AND WATER QUALITY --

- The proposed project will not substantially alter the existing drainage pattern of the site. However, the project will be subject to the following mitigation measures to reduce the potential runoff impacts:

1. The project plans shall include storm water pollution prevention and control measures for the operation and maintenance of the project during and after construction for the review and approval of the City Engineer. The project plan shall identify Best Management Practices (BMPs) appropriate to the uses conducted onsite to limit to the maximum extent practicable the entry of pollutants into storm water runoff.
2. The project plan shall also include erosion control measures to prevent soil, dirt and debris from entering the storm drain system, in accordance with the practices outlined in the ABAG Erosion and Sediment Control Handbook, California Storm Water Best Management Practice Handbooks and Regional Water Quality Control Board's Erosion and Sediment Control Field Manual.
3. The applicant is responsible for ensuring that all contractors and sub-contractors are aware of and implement all storm water quality control measures. Failure to comply with the approved construction BMPs shall result in the issuance of correction notices, citations or a project stop order.
4. Trash enclosures and/or recycling area(s) shall be covered; no other area shall drain onto this area. Drains in any wash or process area shall not discharge to the storm drain system; these drains should connect to the sanitary sewer. The applicant shall contact the local permitting authority and sanitary district with jurisdiction for specific connection and discharge requirements.
5. All paved outdoor storage areas must be designed to reduce/limit the potential for runoff to contact pollutants, such as, bulk materials stored outdoors may need to be covered as deemed appropriate by the City Engineer.
6. Landscaping shall be designed with efficient irrigation to reduce runoff and promote surface infiltration and minimize the use of fertilizers and pesticides that can contribute to storm water pollution. Where feasible landscaping should be designed and operated to treat storm water runoff. When and where possible, xeriscape and drought tolerant plants shall be incorporated into new development plans.
7. Sidewalks and parking lots shall be swept regularly to prevent the accumulation of litter and debris. If pressure washed, debris must be trapped and collected to prevent entry to the storm drain system. If any cleaning agent or degreaser is used, wash water shall not discharge to the storm drains; wash waters should be collected and discharged to the sanitary sewer. Discharges to the sanitary sewer are subject to the review, approval and conditions of the sanitary district with jurisdiction for receiving the discharge.
8. All on-site storm drains must be cleaned at least once a year immediately prior to the rainy season. Additional cleaning may be required by the City Engineer.
9. The design, location, maintenance requirements and maintenance schedule for any storm water quality treatment structural controls shall be submitted to the City Engineer for review and approval prior to the issuance of a building permit.

XI. NOISE --

- This project should not create a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project. However, during construction, this site will be the source of temporary noises relating to the operation of various equipment. The following measures mitigate the potential noise levels to less than significant:

1. Operation of trucks and construction equipment shall be restricted to between the hours of 8:00 a.m. and 6:00 p.m. Monday through Friday and between 9:00 a.m. and noon Saturday. No construction related activities shall be allowed on Sunday. Prior to the start of construction the applicant or his agents shall provide the Current Planning Division with the name and telephone number of an individual who is empowered by the applicant to take corrective measures to address noise complaints. The name and telephone number of the individual shall be posted at the property for the duration of the construction activities in a location where it can be easily read by the public, indicating the individual's responsibility and availability to receive noise complaints. The individual shall provide weekly reports to the Current Planning Division of all noise complaints received and all actions taken to prevent any reoccurrence.

XV. TRANSPORTATION/TRAFFIC --

- To reduce the potential parking impacts related to this project, the applicant has agreed to the following:

1. Through purchase agreement/lease notification, the applicant shall promote the use of public transit, bicycles and/or motorcycles by notifying all potential owners/tenants of the transit options in the area and of the availability of bicycle and/or motorcycle parking spaces.
2. To attract users of public transit, bicycles and/or motorcycles to the proposed live/work and commercial units, the applicant shall include in all promotional materials information on the transit options in the area and of the bicycle and/or motorcycle parking spaces.

Landscaping shall be designed with efficient irrigation to reduce runoff and promote surface infiltration and minimize the use of fertilizers and pesticides that can contribute to storm water pollution. Where feasible landscaping should be designed and operated to treat storm water runoff. When and where possible, xeriscape and drought tolerant plants shall be incorporated into new development plans. 7. Sidewalks and parking lots shall be swept regularly to prevent the accumulation of litter and debris. If pressure washed, debris must be trapped and collected to prevent entry to the storm drain system. If any cleaning agent or degreaser is used, wash water shall not discharge to the storm drains; wash waters should be collected and discharged to the sanitary sewer. Discharges to the sanitary sewer are subject to the review, approval and conditions of the sanitary district with jurisdiction for receiving the discharge. 8. f) Result in inadequate parking capacity?	1-4, 7				
• The City of Berkeley has determined, through the implementation of the Zoning Ordinance, that this project is required to provide the following number of parking spaces: -Non-residential Space - 11 Spaces (5,500 Sq. Ft. @ 2 spaces/1,000 Sq. Ft of Gross floor area) -Live/work - 4 Units - 4 Spaces (4 units @ I space/unit); -Work area within the Live/work units - 4 Spaces (4,000 Sq. Ft) This project originally proposed 19 spaces. Through the Design Review process, the number was reduced to 17 to improve onsite vehicle circulation. The Zoning Ordinance allows for a 10% reduction in the required vehicle parking spaces with a Use Permit, provided that the project include additional bicycle and motorcycle parking. The applicant has proposed 12 bicycle spaces, seven more than is required by the Zoning Ordinance.		☐	☑	☐	☐

PROPOSED MITIGATED NEGATIVE DECLARATION

2700 8th Street

March 23, 2000

This mitigated negative declaration was prepared pursuant to the California Environmental Quality Act and Guidelines (Public Resources Code, Division 13 and California Code of Regulations, Title 14, Chapter 3) for the project, which is described in the attached initial study and briefly described as follows:

PROJECT DESCRIPTION

Existing Conditions: This parcel is currently a parking lot that is leased on a month-to-month basis as overflow parking for Bayer. These parking spaces are not required parking for Bayer and are not associated with any Use Permit or Development Agreement. In addition, Bayer employees are prohibited from parking on the streets in the vicinity by the Development Agreement and is enforced by company policy. In conversations with representatives of Bayer, the automobiles currently using this lot will be relocated to the former Colgate property as part of the Bayer South development proposal.

Neighborhood setting: This project is located within a mixed-use area that includes a variety of light manufacturing, warehouse, workspaces and live/work units. The predominate building pattern in the vicinity is one to two story buildings with 100% lot coverage. Within a three-block radius there are five AC Transit bus lines that serve the project area.

Project Description: The proposed project consists of the conversion of the existing parking lot to a mixed-use project that includes a two-story, 5,410 square feet general office building and a two-story 7,264 square foot four unit live/work building. The project also includes 4 covered parking spaces, 13 uncovered parking spaces, 12 bicycle spaces, one loading space and approximately 1,300 square feet of landscaping. The total building area, excluding the covered parking area is 12,674 square feet. The buildings are located along the eastern property line, with vehicle access to the parking area along the western property line from Carleton Street. The live/work units are located along the southern property line and are separated from the MU-LI district north of Carleton Street by the two-story office portion of the project. The buildings are separated by an internal courtyard that includes outdoor area for the project.

The applicant has proposed a written notice that is intended to inform all occupants of the proposed live/work units, through purchase agreement and deed restrictions, of the mixed-use nature of the area and specifically of the business operations of Consolidated Printers to the North. The proposed written notice includes information regarding the potential noise, dust, odor, vibration, truck and loading impacts relating to the lawful operation of Consolidated Printers. In addition, the written notice requires that all potential occupants visit the site at various times of the day to fully understand the nature of the area and that Consolidated Printers is entitled to operate 24-hours a day, seven days a week.

The proposed project consists of the conversion of the existing parking lot to a mixed-use project that includes a two-story, 5,410 square feet general commercial building and a two-story 3,994 square foot live/work building. The project also includes 4 covered parking spaces, 13 uncovered parking spaces and approximately 1,300 square feet of landscaping. The total building area, excluding the covered parking area is 9,404 square feet. The buildings are located eastern property line, with vehicle access from Carleton Street. The live/work units are located along the southern property line and are separated from the MU-LI district north of Carleton Street by the two-story commercial portion of the project. The project includes 17 vehicle parking spaces, 12 bicycle spaces and area for one loading dock. The buildings are separated by an internal courtyard that includes outdoor area for the project.

PROJECT SPONSOR

Jim Hart, 1337 Josephine Street, Berkeley CA 94703

MANDATORY FINDING OF SIGNIFICANCE

The project sponsor made or agreed to revisions in the project plans or proposals before this mitigated negative declaration and initial study were released for public review. These revisions avoid significant environmental effects or mitigate the effects to a point where clearly no significant effects would occur. These revisions are described below.

Therefore, there is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment.

MITIGATION MEASURES

The following Mitigation Measures have been incorporated into this project:

VIII. HYDROLOGY AND WATER QUALITY --

- The proposed project will not substantially alter the existing drainage pattern of the site. However, the project will be subject to the following mitigation measures to reduce the potential runoff impacts:

1. The project plans shall include storm water pollution prevention and control measures for the operation and maintenance of the project during and after construction for the review and approval of the City Engineer. The project plan shall identify Best Management Practices (BMPs) appropriate to the uses conducted onsite to limit to the maximum extent practicable the entry of pollutants into storm water runoff.
2. The project plan shall also include erosion control measures to prevent soil, dirt and debris from entering the storm drain system, in accordance with the practices outlined in the ABAG Erosion and Sediment Control Handbook, California Storm Water Best Management Practice Handbooks and Regional Water Quality Control Board's Erosion and Sediment Control Field Manual.
3. The applicant is responsible for ensuring that all contractors and sub-contractors are aware of and implement all storm water quality control measures. Failure to comply with the approved construction BMPs shall result in the issuance of correction notices, citations or a project stop order.
4. Trash enclosures and/or recycling area(s) shall be covered; no other area shall drain onto this area. Drains in any wash or process area shall not discharge to the storm drain system; these drains should connect to the sanitary sewer. The applicant shall contact the local permitting authority and sanitary district with jurisdiction for specific connection and discharge requirements.
5. All paved outdoor storage areas must be designed to reduce/limit the potential for runoff to contact pollutants, such as, bulk materials stored outdoors may need to be covered as deemed appropriate by the City Engineer.

6. Landscaping shall be designed with efficient irrigation to reduce runoff and promote surface infiltration and minimize the use of fertilizers and pesticides that can contribute to storm water pollution. Where feasible landscaping should be designed and operated to treat storm water runoff. When and where possible, xeriscape and drought tolerant plants shall be incorporated into new development plans.
7. Sidewalks and parking lots shall be swept regularly to prevent the accumulation of litter and debris. If pressure washed, debris must be trapped and collected to prevent entry to the storm drain system. If any cleaning agent or degreaser is used, wash water shall not discharge to the storm drains; wash waters should be collected and discharged to the sanitary sewer. Discharges to the sanitary sewer are subject to the review, approval and conditions of the sanitary district with jurisdiction for receiving the discharge.
8. All on-site storm drains must be cleaned at least once a year immediately prior to the rainy season. Additional cleaning may be required by the City Engineer.
9. The design, location, maintenance requirements and maintenance schedule for any storm water quality treatment structural controls shall be submitted to the City Engineer for review and approval prior to the issuance of a building permit.

XI. NOISE --

- This project should not create a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project. However, during construction, this site will be the source of temporary noises relating to the operation of various equipment. The following measures mitigate the potential noise levels to less than significant:

1. Operation of trucks and construction equipment shall be restricted to between the hours of 8:00 a.m. and 6:00 p.m. Monday through Friday and between 9:00 a.m. and noon Saturday. No construction related activities shall be allowed on Sunday. Prior to the start of construction the applicant or his agents shall provide the Current Planning Division with the name and telephone number of an individual who is empowered by the applicant to take corrective measures to address noise complaints. The name and telephone number of the individual shall be posted at the property for the duration of the construction activities in a location where it can be easily read by the public, indicating the individual's responsibility and availability to receive noise complaints. The individual shall provide weekly reports to the Current Planning Division of all noise complaints received and all actions taken to prevent any reoccurrence.

XV. TRANSPORTATION/TRAFFIC --

- To reduce the potential parking impacts related to this project, the applicant has agreed to the following:

1. Through purchase agreement/lease notification, the applicant shall promote the use of public transit, bicycles and/or motorcycles by notifying all potential owners/tenants of the transit options in the area and of the availability of bicycle and/or motorcycle parking spaces.
2. To attract users of public transit, bicycles and/or motorcycles to the proposed live/work and commercial units, the applicant shall include in all promotional materials information on the transit options in the area and of the additional bicycle and/or motorcycle parking spaces.

CITY OF BERKELEY ZONING ORDINANCE
Berkeley Municipal Code Title 23

USE PERMIT #99-10000090

Property Address: **2700 EIGHTH STREET**

Permittee Name: **JIM HART**

Use and/or Construction Permitted:

Use Permit under Section 23E.84.030 of the Zoning Ordinance to construct four live/work units.

Use Permit under Section 23E.84.030 of the Zoning Ordinance to construct approximately 5,500 square feet of office space.

Use Permit under Section 23E.20.040.A of the Zoning Ordinance to allow employee and/or customer visit to each live/work unit.

Use Permit under Section 23E.28.080.B of the Zoning Ordinance to allow parking within 20 feet of the public right-of-way (Carleton Street)

Further, on April 27, 2000 clarified their decision that the proposed 19 parking space layout did not include the requirement for any off-street loading spaces.

GENERAL NON-DETRIMENT FINDINGS

1. Pursuant to and in compliance with BMC Section 23B.32.040, the Zoning Adjustments Board finds that the creation of the live/work and offices units, based on the plan set submitted on April 13, 2000, under the circumstances of this particular case, existing at the time at which the application is granted, will not be detrimental to the health, safety, peace, morals, comfort or general welfare of persons residing or working in the area or neighborhood of such proposed use, or be detrimental or injurious to property and improvements of the adjacent properties, the surrounding area or neighborhood or to the general welfare of the City, for the following reasons:

- This project complies with the applicable **Policies of the 1977 Berkeley Master Plan Transportation Element Plan** by:

  1. Reducing the dependence on the private automobile as the dominant mode of transportation by encouraging the use of alternative means of local and regional transportation.

  2. Permitting the construction of a commercial and live/work project in an area served by existing regional transit.

  3. Conserves energy by initiating incentives to: a) reduce the number of vehicle trips; b) increase walking, transit and bicycle use; and c) develop energy efficient methods for moving people and goods.

  4. Reducing the automobile traffic demand by providing live/work units that diminish the potential trip generation by providing adequate live and work space.

  5. Providing educational and promotional programs to increase community awareness and use of public transportation.

- This project complies with the applicable **Policies of the 1993 West Berkeley Plan** by:

  1. Providing development that continues the evolution of a unique mix of residential, light industrial and arts and crafts uses.

  2. Including live/work development that has become an increasingly important element of the West Berkeley environment.

  3. Proposing live/work development that has been found to generate life in neighborhood and increase activity and safety.

  4. Providing on-site work space does not need to be commuted to.

  5. Providing live/work units that supplies badly needed housing both in Berkeley and in the region.

  6. Providing live/work units that represent West Berkeley's unique contribution to housing Berkeley's population.

- That the proposed project conforms to the applicable **Purposes contained in Chapter 23E.20, Live/Work Provisions,** by:

  1. Providing for the appropriate development of units that incorporate adequate living and working spaces.

  2. Providing opportunities for people to live in the mixed-use industrial area that is

compatible with existing uses.

3. Protecting existing and potential industrial uses from conflicts which neighboring; and nearby residential uses can cause by not including residential uses and by buffering potential residential uses to the south with commercial offices and live/work units; industrial uses operate 24 hours per day, seven days a week; large delivery trucks frequently arrive late at night and early in the morning on surrounding streets with back-up beepers making noise; forklifts travel outside the building and in the loading docks; exhaust fumes unavoidably blow onto neighboring properties.

4. Permitting live/work units that function predominantly as workspaces and secondarily as residences by locating the living space on each mezzanine.

5. Constructing a building that includes industrial design elements to the satisfaction of the Design Review Committee that are compatible with the exterior design of adjacent industrial buildings in the vicinity.

- That the proposed project conforms to the applicable **Purposes in the MU-R District** by:

1. Supporting the continued development of a mixed use district by providing offices and live/work units.

2. Protecting to the extent feasible, the lawful operation of existing or future light industrial uses, from unreasonable intrusions by buffering the potential noise and land use impacts by providing live/work units that are separated from the industrial areas to the north by the proposed two story office building and more than 120 feet, a suitable transition between the light industrial uses to the north.

3. Including development that does not increase the zoning regulations on any expansion of a manufacturing or wholesale trade use, including a light industrial uses.

4. Notifying all future occupants of the live/work units, through lease/deed notification, that each live/work unit is located in the MU-R District, which is primarily a mixed use area that includes manufacturing and other light industrial uses, that each occupant shall not seek to impede their lawful operation and that each live/work unit is not a residential unit.

- That the proposed project conforms to the applicable **Development Standards in the MU-R District** by conforming to the average height limit, number of stories, minimum lot area for four live/work units, minimum front, rear, street side and side yard setbacks, useable open space and exceeds the minimum required bicycle and motorcycle parking spaces.

- The proposed project conforms with the required **Findings in Section 23E.84.090** by:

1. Including design mitigations that prevent the potential land use impacts of the proposed live/work units and the manufacturers and other industrial users in the area by locating the two story commercial portion of the project along the northern property line and by placing the live/work units 120 feet from the printing business, creating a noise buffer.

2. Notifying all future occupants of the live/work units, through lease/deed notification, that each live/work unit is located in the MU-R District, which is primarily a mixed use area that includes manufacturers and other light industrial uses, that each occupant shall not seek to impede their lawful operation and that each live/work unit is not a residential unit.

- The proposed project will not cause **Detriment** because the proposed project:

1. Complies with relevant Master Plan and West Berkeley Plan Goals and Policies and that the project conforms to the Purposes and Development Standards for live/work and office projects in the MU-R District.

- That the **Environmental Initial Study and Mitigated Negative Declaration** are adequate and necessary to protect the environment because:

1. The project does not have the potential to degrade the quality of the environment, reduce the habitat of a fish or wildlife species, eliminate a plant or animal community, impact the range or reduce the number of an endangered plant or animal species or impact major periods of California history or pre-history.

2. The project does not have impacts that are cumulatively considerable.

3. The project does not have environmental effects that will cause substantial effects on humans.

STANDARD CONDITIONS

The following conditions apply to this Permit:

1. Uses Approved Deemed to Exclude Other Uses (Section 23B.56.010)

A. This Permit authorizes only those uses and activities actually proposed in the application and exclude other uses and activities.

B. Except as expressly specified herein, this Permit terminates all other uses at the location subject to it.

2. Modification of Permits (Section 23B.56.020)

No change in the use for which this Permit is approved is permitted unless the Permit is modified by the Zoning Officer or Zoning Adjustments Board, in conformance with Section 23B.56.020.A.

Changes in the plans for the construction of a building or structure, may be modified prior to the completion of construction, in accordance with Section 23B.56.030.D. The Zoning Officer may also approve a maximum two-foot variation to Board approved plans, provided, that such variation does not increase a structure's height, reduce the minimum distance to any property line, and/or does not conflict with any special objective sought by the Board. In the case of modifications to Use Permits for construction of, or additions of changes to single family homes which required Board review, the Zoning Officer shall follow Board policy adopted March 13, 1997, as follows:

A. Upon applications for modifications to a home where a Use Permit has been granted, Staff shall review the Use Permit to determine if any explicit conditions were placed on the Use Permit that would be affected by the proposed modification.

B. If, prior to acting on a Building Permit, Staff becomes aware of controversy over an earlier application, Staff may choose to conduct a more detailed review of the record to determine if conditions were implied by the Board or offered by the applicant (but not included in the Use Permit conditions) that would be affected by the proposed modification (this does not imply that Staff will review the whole Use Permit record for all applications).

C. If there are explicit conditions (#A) or implied conditions (#B) affected by the proposed modification, the project shall be brought back to the Board as a Use Permit Modification.

D. If there are no explicit conditions that would be affected by the proposed modification, and if Staff is not otherwise aware of implied conditions, and the project would otherwise meet the requirements of the Zoning Ordinance, Staff will approve the Building Permit without Board or public review.

3. Plans and Representations Become Conditions (Section 23B.56.030)

Except as expressly specified herein, the site plan, floor plans, building elevations and any additional information or representations submitted by the applicant during the Staff review and public hearing process leading to the approval of this Permit, whether oral or written, which indicated the proposed structure or manner of operation are deemed conditions of approval**.**

6. Exercise and Lapse of Permits (Section 23B.56.100)

A. A permit for the use of a building or a property is exercised when, if required, a valid City business license has been issued, and the permitted use has commenced on the property.

B. A permit for the construction of a building or structure is deemed exercised when a valid City building permit, if required, is issued, and construction has lawfully commenced.

C. A permit may be declared lapsed and of no further force and effect if it is not exercised within one year of its issuance, except that permits for construction or alteration of structures or buildings may not be declared lapsed if the permittee has (1) applied for a building permit or (2) made substantial good faith efforts to obtain a building permit and begin construction, even if a building permit has not been issued and/or construction has not begun.

7. Business License Requires (Section 23E.20.030)

At least one resident in each live/work unit shall maintain at all times a valid City Business License and any applicable Zoning Certificate or Use Permit for a business on the premises.
