EDR Historical Topo Map Report

05/06/22

Site Name:

2115 Kittredge Street
2115 Kittredge Street
Berkeley, CA 94704
EDR Inquiry # 6970160.4

Client Name:

Terraphase Engineering Inc.
1300 Clay Street Suite 1000
Oakland, CA 94612
Contact: Andrea Radtke

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Terraphase Engineering Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# TBD
Project: Rhoades Planning Group

Coordinates:

Latitude:	37.868863 37° 52' 8" North

ROCKRIDGE GEOTECHNICAL

August 5, 2022
Project No. 22-2227

Mr. Christian Cerria
Development Director
Gilbane Development Company
7 Jackson Walkway
Providence, Rhode Island 02903

Subject: Final Geotechnical Investigation Report
Proposed Mixed-Use Building
2115 Kittredge Street
Berkeley, California

Dear Mr. Cerria,

We are pleased to present our final geotechnical investigation report for the proposed mixed-use building to be constructed at 2115 Kittredge Street in Berkeley, California. Our services were performed in accordance with our proposal, dated April 6, 2022. We previously prepared a preliminary report dated June 24, 2022.

The site consists of a relatively level, rectangular-shaped, 13,500 square-foot lot bordered to the north and west by commercial buildings and to the east by an at-grade parking lot. The site is currently occupied by an existing movie theater structure build in the early 1900's, which is no longer in use. There is a partial below-grade basement at the rear of the parcel that does not extend beneath the theater structure, however, there is a 2- to 3-foot-deep crawl space beneath the entire theater.

Plans are to construct a fifteen-story building with two below-grade levels. Each basement level will be approximately 10 to 15 feet high, therefore, we anticipate the excavation for the below-grade levels, including the foundation, will extend up to 30 feet below the existing ground surface (bgs). Plans for the bottom level of the basement include maintenance rooms as well as dressing rooms and a below-stage area. The top basement level includes a theater at the rear (north) half of the building and a residential multi-purpose amenity room at the front (south) part of the building. The ground floor will consist of the theater balcony and lobby as well as residential lobby. The remaining floors will consist of residential units with the 15th floor including hot tubs and a stadium seating lounge.

ROCKRIDGE GEOTECHNICAL

On the basis of our investigation, we conclude the proposed building may be constructed as planned, provided the recommendations presented in the attached report are incorporated into the project plans and specification. The primary geotechnical concerns at the site are: 1) shallow groundwater depth relative to the proposed building foundation and excavation depth, 2) providing suitable lateral support and dewatering for the proposed excavation while minimizing the impact on the surrounding improvements, and 3) providing adequate vertical support for the proposed structure. We conclude the proposed building may be supported on a mat foundation designed to resist hydrostatic uplift pressures.

Our geotechnical investigation consisted of a limited subsurface exploration program. Prior to final design, a final geotechnical investigation should be performed to fill in data gaps of subsurface conditions and provide final conclusions and recommendations regarding the geotechnical aspects of the project.

We appreciate the opportunity to provide our services to you on this project. If you have any questions, please call.

Sincerely yours,
ROCKRIDGE GEOTECHNICAL, INC.

ROCKRIDGE GEOTECHNICAL

FINAL GEOTECHNICAL INVESTIGATION
PROPOSED MIXED-USE BUILDING
2115 KITTREDGE STREET
Berkeley, California

1.0 INTRODUCTION

This report presents the results of the final geotechnical investigation performed by Rockridge Geotechnical, Inc. for the proposed mixed-use building to be constructed at 2115 Kittredge Street in Berkeley, California. The subject property is located on the northern side of Kittredge Street between Shattuck Avenue and Oxford Street, as shown on the Site Location Map, Figure 1.

The site consists of a relatively level, rectangular-shaped, 13,500 square-foot lot bordered to the north and west by commercial buildings and to the east by an at-grade parking lot. The site is currently occupied by an existing movie theater structure built in the early 1900's, which is no longer in use. There is a partial below-grade basement at the rear of the parcel that does not extend beneath the theater structure, however, there is a 2- to 3-foot-deep crawl space beneath the entire theater.

Plans are to construct a fifteen-story building with two below-grade levels. Each basement level will be approximately 10 to 15 feet high, therefore, we anticipate the excavation for the below-grade levels, including the foundation, will extend up to 30 feet below the existing ground surface (bgs). Plans for the bottom level of the basement include maintenance rooms as well as dressing rooms and a below-stage area. The top basement level includes a theater at the rear (north) half of the building and a residential multi-purpose amenity room at the front (south) part of the building. The ground floor will consist of the theater balcony and lobby as well as residential lobby. The remaining floors will consist of residential units with the 15th floor including hot tubs and a stadium seating lounge.

2.0 SCOPE OF SERVICES

We prepared a proposal for our geotechnical investigation dated April 6, 2022 and a Budget Increase Request for an additional cone penetration test (CPT) dated June 20, 2022. Our scope of

services consisted of exploring subsurface conditions at the site by performing three cone penetration tests (CPTs), drilling four test borings, performing laboratory tests on selected soil samples, and performing engineering analyses to develop conclusions and recommendations regarding:

- site seismicity and seismic hazards, including the potential for liquefaction and liquefaction-induced ground failure
- design groundwater table
- the most appropriate foundation type(s) for the proposed structure
- design criteria for the recommended foundation type(s), including vertical and lateral capacities
- estimates of static and seismically induced foundation settlement
- lateral earth pressures for permanent below-grade walls
- underpinning
- temporary cut slopes and excavation shoring
- excavation dewatering
- subgrade preparation for slab-on-grade floors and exterior flatwork
- site grading and excavation, including criteria for fill quality and compaction
- corrosivity of the near-surface soil and the potential effects on buried concrete and metal structures and foundations
- 2019 California Building Code (CBC) site class and design spectral response acceleration parameters
- construction considerations.

3.0 FIELD INVESTIGATION AND LABORATORY TESTING

Subsurface conditions at the site were investigated by performing three CPTs, drilling four test borings, and performing laboratory testing on selected soil samples. Prior to advancing the CPTs and borings, we obtained a drilling permit from the City of Berkeley, Toxics Management Division, (TMD). We also contacted Underground Service Alert (USA) to notify them of our work, as required by law, and retained C. Cruz Sub-Surface Locators of Milpitas, California, a

private utility locator, to reduce the potential for encountering buried utilities at the boring and CPT locations. Details of the field investigation and laboratory testing are described below.

3.1 Cone Penetration Tests

Two CPTs, designated as CPT-1 and CPT-2, were performed on May 23, 2022, by Benevent Building of Concord, California to provide in-situ soil data at the approximate locations shown on Figure 2. CPT-1 and CPT-2 were advanced to a depth of 51.2 and 17.4 feet, respectively, below the existing ground surface (bgs), which corresponds to the bottom of the crawl space. One CPT, designated as CPT-3, was performed on July 6, 2022 by Middle Earth GeoTesting, Inc., to a depth of 57 feet bgs. The CPTs were performed by hydraulically pushing a 1.7-inch-diameter, cone-tipped probe with a projected area of 15 square centimeters into the ground. CPT-1 and CPT-2 were performed using a limited access CPT rig inside of the existing theater and CPT-3 was performed using a 25-ton truck-mounted rig within the parking lane in front of the building. The cone-tipped probe measured tip resistance and the friction sleeve behind the cone tip measured frictional resistance. A special cone was also used to measure the in-situ soil shear wave velocities in approximately five-foot intervals in CPT-3. Electrical strain gauges within the cone continuously measured soil parameters for the entire depth advanced. Soil data, including tip resistance and frictional resistance, were recorded by computer to provide engineering information such as the types and approximate strength characteristics of the soil encountered.

The CPT logs showing tip resistance, friction ratio, and pore water pressure by depth, as well as interpreted soil behavior type are presented in Appendix A on Figures A-1 through A-3a. Upon completion, the CPT holes were backfilled with neat cement grout in accordance with TMD's grouting guidelines.

3.2 Test Borings

The borings, designated as B-1 through B-4, were drilled on May 31, 2022 and June 1, 2022 by Benevent Building of Concord, California at the approximate locations shown on Figure 2. The borings were drilled to depths ranging from 30 to 41-1/2 feet bgs using a limited access drill rig equipped with four-inch-diameter solid-stem flight augers. During drilling, our field geologist

logged the soil encountered and obtained representative samples for visual classification and laboratory testing. The logs of the borings are presented on Figures A-4 through A-7 in Appendix A. The soil encountered in the borings was classified in accordance with the classification chart shown on Figure A-8.

Soil samples were obtained using the following samplers:

- Modified California (MC) split-barrel sampler with a 3.0-inch outside diameter and 2.5-inch inside diameter, lined with 2.43-inch inside diameter tubes.
- Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside and 1.5-inch inside diameter; the sampler was designed to accommodate liners, but liners were not used.

The samplers were driven with a 140-pound downhole safety hammer falling 30 inches per drop. The samplers were driven up to 18 inches and the hammer blows required to drive the samplers were recorded every six inches and are presented on the boring logs. A "blow count" is defined as the number of hammer blows per six inches of penetration or 50 blows for six inches or less of penetration. The blow counts required to drive the MC and SPT samplers were converted to approximate SPT N-values using factors of 0.7 and 1.2, respectively, to account for sampler type and approximate hammer energy. The blow counts used for this conversion were the last two blow counts if the sampler was driven more than 12 inches. The converted SPT N-values are presented on the boring logs.

The borings were backfilled with neat cement grout in accordance with TMD's grouting guidelines. The soil cuttings generated by the borings were placed in five-gallon buckets and left on site.

3.3 Laboratory Testing

We re-examined the soil samples obtained from the borings to confirm the field classifications and selected representative samples for laboratory testing. Soil samples were tested by B. Hillebrandt Soils Testing, Inc. of Alamo, California to measure moisture content, dry density, Atterberg limits, and particle size distribution. Soil samples were tested by Project X Corrosion

Engineering of Murrieta, California to measure corrosivity. The results of the laboratory tests are presented on the boring logs and in Appendix B.

4.0 SUBSURFACE CONDITIONS

The conditions at the site are described in the following sections based on the results of our subsurface investigations as well as review of published geologic data. Site-specific descriptions of surface, subsurface, and groundwater conditions are presented in this section.

4.1 Site Conditions

Our investigation locations encountered a 2-1/2- to 3-1/2-thick concrete building slab except for CPT-1, which encountered a 15-inch-thick concrete slab. The concrete slab was underlain by a 1/2- to 1-inch-thick wood floor. A 20- to 25-inch-deep crawl space was encountered beneath the wood floor. The bottom of the crawl space had a 1- to 2-inch-thick rat slab. The total depth from the top of the concrete slab to the bottom of the rat slab ranged from 26 to 38 inches.

4.2 Subsurface Conditions

A regional geologic map prepared by Graymer, et al. (2006), a portion of which is presented on Figure 3, indicates the site is underlain by Holocene-age alluvial fan and fluvial deposits (Qhaf). The results of our field investigation indicate the site is blanketed by 5 to 10 feet of undocumented fill. The fill is primarily composed of clayey gravel with sand, sand with gravel and clay, and sandy clay with gravel and brick fragments. Medium dense to dense clayey sand with gravel and sand with clay and gravel underlie the fill to depths of about 20 to 25 feet. Below the sand and gravel layers is predominately very stiff to hard clay and silty clay with varying sand content. CPT-3 encountered refusal at 57 feet bgs due to the CPT rod flexing, indicating bedrock was encountered at this depth.

4.3 Groundwater

Groundwater was measured in CPT-1 and CPT-3 at depths of 15 and 8 feet bgs, respectively and was measured in the borings at depths ranging from approximately 11 to 20 feet bgs. Considering these measurements were taken soon after completion of the drilling/CPTs, they

may not represent stabilized groundwater levels. The report prepared by the California Geological Survey titled *Seismic Hazard Zone Report for the Oakland West 7.5-Minute Quadrangle, Alameda County, California*, dated February 13, 2003, indicates the historic high groundwater level at the site is about eight feet bgs.

The groundwater level is expected to fluctuate several feet seasonally, depending on rainfall amounts. Based on the available groundwater level data discussed above, we conclude a design high groundwater table of eight feet bgs should be used for the project.

5.0 SEISMIC CONSIDERATIONS

5.1 Regional Seismicity

The site is located in the Coast Ranges Geomorphic Province of California that is characterized by northwest-trending valleys and ridges. These topographic features are controlled by folds and faults that resulted from the collision of the Farallon North American plates and subsequent strike-slip faulting along the San Andreas Fault system. The San Andreas Fault is more than 600 miles long from Point Arena in the north to the Gulf of California in the south. The Coast Ranges Geomorphic Province is bounded on the east by the Great Valley and on the west by the Pacific Ocean.

The major active faults in the area are the Hayward, Mount Diablo, and Calaveras faults. These and other faults in the region are shown on Figure 4. Numerous damaging earthquakes have occurred along these faults in recorded time. For these and other active faults within a 50-kilometer radius of the site, the distance from the site and estimated characteristic moment magnitude[1] [Petersen et al. (2014) & Thompson et al. (2016)] are summarized in Table 1. These references are based on the Third Uniform California Earthquake Rupture Forecast (UCERF3), prepared by Field et al. (2013).

[1] Moment magnitude (M_w) is an energy-based scale and provides a physically meaningful measure of the size of a faulting event. Moment magnitude is directly related to average slip and fault rupture area.

TABLE 1
Regional Faults and Seismicity

Fault Segment	Approximate Distance from Site (km)	Direction	Characteristic Moment Magnitude
Total Hayward + Rodgers Creek (RC+HN+HS+HE)	1.5	East	7.58
Hayward (North, HN)	1.5	East	6.90
Hayward (South, HS)	12	Southeast	7.00
Mount Diablo Thrust North CFM	19	East	6.72
Total Calaveras (CN+CC+CS+CE)	20	East	7.43
Calaveras (North, CN)	20	East	6.86
Mount Diablo Thrust	20	East	6.67
Concord	23	East	6.45
Green Valley	25	Northeast	6.30
Total North San Andreas (SAO+SAN+SAP+SAS)	29	West	8.04
North San Andreas (Peninsula, SAP)	29	West	7.38
Clayton	29	East	6.57
San Gregorio (North)	33	West	7.44
West Napa	33	North	6.97
Mount Diablo Thrust South	34	East	6.50
Greenville (North)	34	East	6.86
North San Andreas (North Coast, SAN)	35	West	7.52
Rodgers Creek – Healdsburg	36	Northwest	7.19
Great Valley 05 (Pittsburg - Kirby Hills alt1)	37	East	6.60
Great Valley 05 (Pittsburg - Kirby Hills alt2)	41	East	6.66
Monte Vista - Shannon	44	South	7.14
Las Positas	49	Southeast	6.50

Since 1800, four major earthquakes have been recorded on the North San Andreas Fault. In 1836, an earthquake with an estimated maximum intensity of VII on the Modified Mercalli (MM) scale occurred east of Monterey Bay on the San Andreas Fault (Toppozada and Borchardt 1998). The estimated moment magnitude (M_w) for this earthquake is about 6.25. In 1838, an earthquake occurred with an estimated intensity of about VIII-IX (MM), corresponding to an M_w

of about 7.5. The San Francisco Earthquake of 1906 caused the most significant damage in the history of the Bay Area in terms of loss of lives and property damage. This earthquake created a surface rupture along the San Andreas Fault from Shelter Cove to San Juan Bautista approximately 470 kilometers in length. It had a maximum intensity of XI (MM), an M_w of about 7.9, and was felt 560 kilometers away in Oregon, Nevada, and Los Angeles. The Loma Prieta Earthquake of October 17, 1989 had an M_w of 6.9 and occurred about 99 kilometers south of the site.

In 1868, an earthquake with an estimated maximum intensity of X on the MM scale occurred on the southern segment (between San Leandro and Fremont) of the Hayward Fault. The estimated M_w for the earthquake is 7.0. In 1861, an earthquake of unknown magnitude (estimated M_w of about 6.5) was reported on the Calaveras Fault. The most recent significant earthquake on this fault was the 1984 Morgan Hill earthquake, which corresponds to an M_w of 6.2.

As a part of the UCERF3 project, researchers estimated that the probability of at least one M_w greater than or equal to a 6.7 earthquake occurring in the greater San Francisco Bay Area during a 30-year period (starting in 2014) is 72 percent. The highest probabilities are assigned to sections of the Hayward (South), Calaveras (Central), and the North San Andreas (Santa Cruz Mountains) faults. The respective probabilities are approximately 25, 21, and 17 percent.

5.2 Geologic Hazards

Because the project site is in a seismically active region, we evaluated the potential for earthquake-induced geologic hazards including ground shaking, ground surface rupture, liquefaction,[2] lateral spreading,[3] and cyclic densification[4]. We used the results of the CPTs and borings to evaluate the potential of these phenomena occurring at the project site.

5.2.1 Ground Shaking

The seismicity of the site is governed by the activity of the Hayward Fault, although ground shaking from future earthquakes on other faults will also be felt at the site. The intensity of earthquake ground motion at the site will depend upon the characteristics of the generating fault, distance to the earthquake epicenter, and magnitude and duration of the earthquake. We judge that strong to very strong ground shaking could occur at the site during a large earthquake on one of the nearby faults.

5.2.2 Fault Rupture

Historically, ground surface displacements closely follow the trace of geologically young faults. The site is not within an Earthquake Fault Zone, as defined by the Alquist-Priolo Earthquake Fault Zoning Act, and no known active or potentially active faults exist on the site. Therefore, we conclude there is no risk of fault offset at the site from a known active fault. In a seismically active area, the remote possibility exists for future faulting in areas where no faults previously existed; however, we conclude the risk of surface faulting, and consequently secondary ground failure, from previously unknown faults is very low.

---

[2] Liquefaction is a phenomenon where loose, saturated, cohesionless soil experiences temporary reduction in strength during cyclic loading such as that produced by earthquakes.

[3] Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. Upon reaching mobilization, the surficial blocks are transported downslope or in the direction of a free face by earthquake and gravitational forces.

[4] Cyclic densification is a phenomenon in which non-saturated, cohesionless soil is compacted by earthquake vibrations, causing ground-surface settlement.

5.2.3 Liquefaction and Liquefaction-Induced Settlement

When a saturated, cohesionless soil liquefies, it experiences a temporary loss of shear strength created by a transient rise in excess pore pressure generated by strong ground motion. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits. Flow failure, lateral spreading, differential settlement, loss of bearing strength, ground fissures and sand boils are evidence of excess pore pressure generation and liquefaction.

The site is mapped on the edge of a liquefaction hazard zone associated with a former creek channel, as shown on Figure 5 from the map titled *Earthquake Zones of Required Investigation, Oakland West Quadrangle, California Geological Survey*, dated February 13, 2003. Liquefaction susceptibility was assessed using the software Cliq v3.4.1 (GeoLogismiki, 2022). Cliq uses measured CPT data and assesses liquefaction susceptibility and post-earthquake vertical settlement given a user-defined earthquake magnitude and peak ground acceleration (PGA). We performed the liquefaction triggering analysis using the methodology proposed by Idriss and Boulanger (2014). We also used the relationship proposed by Zhang, Robertson, and Brachman (2002) to estimate post-liquefaction volumetric strains and corresponding ground surface settlement; this relationship is an extension of the work by Ishihara and Yoshimine (1992). Our analyses were performed using in-situ groundwater depths as measured at the termination of each CPT and a "during earthquake" groundwater depth of eight feet bgs. In accordance with the 2019 CBC, we used a peak ground acceleration of 1.00 times gravity (g) in our liquefaction evaluation; this peak ground acceleration is consistent with the Maximum Considered Earthquake Geometric Mean (MCE_G) peak ground acceleration adjusted for site effects (PGA_M). We also used a moment magnitude 7.58 earthquake, which is consistent with the mean characteristic moment magnitude for the Hayward Fault, as presented in Table 1.

The results of our liquefaction analyses indicate there are thin (i.e., less than two feet thick) layers of potentially liquefiable soil between depths of 8 and 23 feet bgs. The potentially liquefiable layers are generally interpreted as "silty sand" and "sandy silt". We estimate total liquefaction-induced ground settlement of at the site following a Maximum Considered

Earthquake (MCE) event with PGA_M of 1.00g will be less than one inch and differential settlement will be less than about 1/2 inch across a horizontal distance of 30 feet. Considering the foundation level for the proposed building will be below these potentially liquefiable layers, they will not impact the selection or design of the foundation system.

Ishihara (1985) presented an empirical relationship that provides criteria used to evaluate whether liquefaction-induced ground failure, such as sand boils, would be expected to occur under a given level of shaking for a liquefiable layer of given thickness overlain by a resistant, or protective, surficial layer. Our analysis indicates the non-liquefiable soil overlying the potentially liquefiable soil layers at the site is sufficiently thick and the potentially liquefiable layers are sufficiently thin such that the potential for surface manifestations from liquefaction, such as sand boils and loss of bearing capacity for shallow foundations, is nil.

Considering the discontinuous nature, depth and thickness of the potentially liquefiable layers, we conclude the risk of lateral spreading is nil.

5.2.4 Cyclic Densification

Cyclic densification (also referred to as differential compaction) of non-saturated sand (sand above groundwater table) can occur during an earthquake, resulting in settlement of the ground surface and overlying improvements. The results of our field investigation indicate the soil above the groundwater at the site is not susceptible to cyclic densification because of its relative density or cohesion. Therefore, we conclude the potential for ground surface settlement resulting from cyclic densification at the site is very low.

6.0 DISCUSSIONS AND CONCLUSIONS

From a geotechnical standpoint, we conclude the site can be developed as planned, provided the recommendations presented in this report are incorporated into the project plans and specifications and implemented during construction. The primary geotechnical concerns for the project are: 1) shallow groundwater depth relative to the proposed building foundation and excavation depth, 2) providing suitable lateral support and dewatering for the proposed excavation while minimizing the impact on the surrounding improvements, and 3) providing

adequate foundation support for the proposed structure. These and other geotechnical issues as they pertain to the proposed development are discussed below.

6.1 Groundwater

Based on the available groundwater data discussed in Section 4.3., we estimate the historic high groundwater table to be about eight feet bgs. We understand the proposed building will include two below-grade levels. Current drawings indicate the depth to the finish floor will be about 25 feet below the sidewalk grade along Kittredge Street. We estimate the construction of the proposed building will require an excavation bottomed as deep as about 30 feet, assuming a mat foundation thickness of about four feet, and one or two mud slabs to protect the waterproofing system, which is discussed in more detail later in this report. Assuming a basement finished floor 25 feet below sidewalk grade, the bottom-of-foundation may be up to about 25 feet below the design high groundwater level. As a result, the proposed building foundation and below-grade walls will need to be designed to resist hydrostatic pressures and include waterproofing.

Considering the proposed excavation will extend below the groundwater, the excavation will need to be temporarily dewatered, and the excavation shoring system will need to be designed for effects of groundwater. A more detailed discussion regarding temporary excavation shoring and dewatering is presented in Section 6.4 and Section 6.5.

6.2 Foundations and Settlement

The soil encountered in our boring and CPTs at the foundation level is capable of supporting new building loads without excessive static settlement. Considering the proposed bottom-of-foundation will be up to 25 feet below the design high groundwater level, it will need to be designed to resist hydrostatic uplift pressures and be underlain by waterproofing. Although the stiff/dense native soil beneath the site is capable of supporting the building loads on conventional spread footings, a mat foundation system generally simplifies construction dewatering (discussed below) and the detailing of the waterproofing system. In addition, the weight of a mat foundation will provide greater resistance to the relatively high hydrostatic uplift pressures. Therefore, we conclude the proposed building should be supported on a mat foundation designed to resist

hydrostatic uplift pressure. If the mat foundation does not have sufficient uplift capacity, soil anchors (i.e., tiedowns) can be installed to resist uplift forces.

We estimate total settlement of the proposed building supported on a mat foundation bottomed on stiff/dense native soil and designed using the allowable bearing pressures presented in Section 7.2 will not exceed one inch. We anticipate most of the settlement will occur during construction. The amount of differential settlement between columns will be a function of the mat stiffness and hence its ability to spread the loads between columns; however, we expect the mat can be designed to limit differential settlements to less than 1/2 inch in 30 feet.

6.3 Underpinning

The site is bordered to the north and west by existing structures. The structure to the east is offset by a drive aisle. The basement walls will extend to the north, east and west property lines and therefore, it will be necessary to underpin the buildings to the north and west, assuming the buildings do not have basements that extend as deep as the proposed excavation. If as-built plans cannot be obtained from the structures surrounding the site, test pits should be excavated prior to construction to determine the foundation type and depth to complete the design of an appropriate underpinning system. The actual underpinning requirements, as well as the design surcharge pressures, should be evaluated when the elevation and load on the adjacent foundations are known.

Underpinning will extend beneath the neighboring properties, which will require an encroachment agreement with neighboring property owners. If the adjacent buildings will not be underpinned, the back of the basement wall for the proposed building should be offset from the property line by 12 to 18 inches to provide space for the shoring and the shoring should be designed to resist the surcharge pressure imposed by the neighboring foundation in addition to at-rest soil pressures.

We judge conventional hand-excavated end-bearing piers or slant piles would be appropriate underpinning systems for this project. Hand-excavated, end-bearing piers are generally installed by excavating three-foot by five-foot rectangular shafts down to a bearing layer. The shafts are

constructed with reinforcing steel and backfilled with structural concrete. The shafts are constructed in phases to maintain support for the existing foundations. Each shaft is shored with timber as it is excavated. Where underpinning will extend relatively deep, it may be more economical to use slant piles to underpin buildings in lieu of hand-excavated piers.

6.4 Excavation Support

We estimate construction of two below-grade levels will require an excavation bottomed roughly 30 feet below grade, including the foundation thickness. There is insufficient property line setback to slope cut the excavations. Therefore, excavation shoring will be required. In addition, the shoring systems will need to be designed to protect the neighboring improvements from vertical and lateral deformations associated with the proposed excavations.

There are several key considerations in selecting a suitable shoring system. Those we consider of primary concern are:

- protection of surrounding improvements, including neighboring structures, underground utilities, pavements, and sidewalks
- the presence of relatively shallow groundwater and the desire to minimize lowering of the water table outside the limits of the excavation in areas sensitive to ground settlement
- proper construction of the shoring system to reduce potential for vertical and lateral ground movement, and
- cost.

Several methods of shoring are available; we have qualitatively evaluated the following systems:

- soldier pile-and-lagging
- secant pile wall
- soil-cement mixed (SMX) columns

Because the proposed excavation depth is greater than 15 feet, we conclude cantilevered shoring systems are not cost effective—therefore, any of the systems listed above would require tiebacks or internal bracing. Tiebacks consist of post-tensioned steel strands or bars that are grouted into predrilled holes through the excavation face. Where tiebacks will extend beneath streets,

sidewalks and adjacent properties, an encroachment permit will be required with the City of Berkeley and adjacent property owners. If permission from the City of Berkeley or adjacent property owners (as needed) cannot be obtained to install tiebacks beneath their properties, then internal bracing will be required, which is more costly than tiebacks

Soldier Pile-and-Lagging with Tiebacks

A conventional tied-back soldier pile-and-lagging system is feasible; however, because the system is pervious, an active dewatering system consisting of a series of extraction wells installed inside and/or outside the excavation, will be required to prevent caving of the soil and excessive water from seeping through the lagging boards into the excavation. Furthermore, as discussed in Section 6.5, an active dewatering system outside the excavation would likely lower the groundwater level beneath the adjacent structures and surrounding streets, which could result in ground settlement. We do not have the knowledge of the structural design and tolerance for settlement of the nearby structures, but efforts should be made to reduce the potential for excessive settlement beneath the structures. The tolerances for dewatering-induced settlement beneath the city streets should also be considered in the design of the proposed shoring and dewatering system. We can provide an estimate of dewatering-induced total and differential settlement once a dewatering plan showing the horizontal and vertical extent of the groundwater drawdown is available.

Continuous Soil-Cement Mix (SMX) Wall

Soil-cement mixing (SMX), also called deep soil mixing (DSM), is a viable option for creating a continuous soldier pile shoring wall that supports the excavation, as well as provides a hydraulic barrier when properly constructed. SMX columns are installed by injecting and blending cement and bentonite into the soil using a drill rig equipped with single or multiple augers/paddles, or a specialized proprietary cutterhead. The soil is mixed with the binder material(s) in situ, forming continuous, overlapping, soil-cement columns or a continuous wall of uniform thickness. Steel beams are placed in the soil-cement columns to provide rigidity. The SMX system, in combination with steel soldier beams and tiebacks, serves to shore the excavation as well as cut off lateral groundwater flow, thus reducing the amount of dewatering required from within the

excavation. The portion of the SMX wall embedded below the bottom of excavation also greatly reduces the upward flow of water into the excavation bottom. This approach should be used, at a minimum, at portions of the excavation that are sensitive to dewatering-induced ground settlement, as discussed above. Soil-cement walls are considered temporary and permanent building walls are built inside of the soil-cement walls following application of drainage panels (if used) and waterproofing.

SMX systems are generally installed under design-build contracts by specialty contractors. The required size, spacing, length, and strength of the SMX columns, beams, and tieback elements should be determined by the shoring designer, based on the design soil, water, and surcharge pressures; however, there are numerous factors that influence the quality, consistency, strength, and permeability of the resulting soil-cement mix, which are controlled by the materials, methods, and equipment employed by the contractor performing the soil mixing. These factors include, but are not limited to:

- Types of binder material(s) used – i.e., cement, bentonite, etc.; wet-mixed vs. dry-mixed
- Quantities and proportions of binder material(s) used – i.e., water-to-binder ratio; volume ratio of SMX
- Equipment used to perform the mixing – i.e., single-auger, multi-auger, or cutter-based equipment
- Plumbness and amount of overlap between adjacent SMX columns
- Homogeneity of soil-cement mixture – controlled by rate of mixing, number of stages, and equipment used
- Depth and diameter of predrilling, which may be required within hard clay or dense sand layers, depending on equipment selected

A contractor experienced in installing SMX systems in similar soil conditions and below the groundwater table should be responsible for selecting appropriate materials, equipment, and methods based on the soil and groundwater conditions at this site, as well as their expertise, in order to meet the performance criteria established by the shoring designer. The design and construction of an SMX system should also consider the capacity and drawdown characteristics of the dewatering system selected by the contractor.

Secant Pile Wall

A secant pile wall is similar to a conventional soldier pile-and-lagging system, in which steel H-beams and lean concrete are placed in predrilled holes extending below the bottom of the excavation; however, instead of installing wood lagging to support the soil between the reinforced soldier piles, additional shafts are drilled and filled with lean concrete between the soldier piles in an overlapping fashion, such that a continuous wall of lean concrete is created. The result is similar to the SMX wall described above, except the material is typically stronger than SMX and a greater amount of drill spoils requiring off-haul are generated.

6.5 Temporary Dewatering

A combination of active and passive approaches will likely be required to adequately manage water in the excavation during construction, depending on the final shoring configuration selected. The design and proper implementation of the excavation dewatering system should be the responsibility of the contractor. Where/if an active dewatering approach is used, the system should be capable of drawing the water level down at least three feet below the bottom of excavation during construction. Where/if a passive approach is used, to facilitate the collection of groundwater at discrete extraction well and sump locations, we recommend over-excavating at least 12 inches below the design bottom-of-mat and installing a minimum 12-inch-thick continuous layer of clean 3/4-inch drain rock. The drainage layer will help protect the soil subgrade, which will be sensitive to disturbance from construction equipment, as well as provide a means for water to flow to the extraction points, reducing the potential for hydrostatic pressure to prematurely build up beneath the mat.

The construction dewatering system must be capable of maintaining the groundwater level below the foundation subgrade until sufficient building weight is available to resist the hydrostatic uplift pressure, at which time the groundwater may be allowed to rise to its normal elevation. The project structural engineer should determine when the temporary dewatering system can be turned off, based on the recommended design groundwater level presented in Section 4.3.

In summary, we conclude the dewatering system for the project may consist of either a complete passive system with continuous cut-off wall shoring, or a combination of passive and active dewatering with a permeable soldier pile-and-lagging shoring, depending on the tolerances for ground settlement around the proposed excavation. In either case, we recommend the dewatering contractor perform detailed groundwater drawdown analyses and develop estimated contours of water drawdown outside of the site, at which point we can perform settlement analyses to estimate the potential ground settlement that may occur for the proposed shoring and dewatering system.

6.6 Construction Considerations

Because the project will involve an excavation that will impact adjacent properties, the contractor should establish survey points on the shoring and on the ground surface at critical locations behind the shoring prior to the start of excavation. Monitoring points should be established on all structures within a horizontal distance equal to twice the proposed excavation depth. These survey points should be used to monitor the vertical and horizontal movements of the shoring and any improvements behind the shoring during construction.

During excavation, the shoring system may deform laterally, which could cause the ground surface adjacent to the shoring wall to settle. The magnitudes of shoring movements and the resulting settlements are difficult to estimate because they depend on many factors, including the method of installation and the contractor's skill in the shoring installation. A monitoring program should be established to evaluate the effects of the construction on the adjacent properties.

6.7 Soil Corrosivity

Corrosivity tests were performed by Project X Corrosion Engineering of Murrieta, California on soil samples obtained from Borings B-1 and B-2 at depths of 2.5 and 5.5 feet bgs, respectively. The corrosivity test results are presented in Appendix B of this report.

Many factors can affect the corrosion potential of soil including, but not limited to, resistivity, pH, and chloride and sulfate concentrations. Based on the minimum soil resistivity measurements of 2,613 and 2,747 ohm-centimeters (ohm-cm), we conclude the soil is “highly

corrosive[5]" to buried metal. Accordingly, all buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric-coated steel or iron should be protected against corrosion depending upon the critical nature of the structure. If it is necessary to have metal in contact with soil, a corrosion engineer should be consulted to provide recommendations for corrosion protection.

The results of the pH tests (8.7 and 10.2) indicate the near-surface is "negligibly corrosive" to buried metallic and concrete structures. The chloride ion concentrations (4.9 and 11.6 mg/kg) indicate the chlorides in the near-surface soil are "negligibly corrosive" to buried metallic structures and reinforcing steel in concrete structures below ground. The results also indicate the sulfate ion concentrations (26.3 and 62.7 mg/kg) are sufficiently low such that sulfates do not to pose a threat to buried concrete.

NOTE: *Alkaline soil with pH>8.5 can cause accelerated corrosion of copper and aluminum alloys; and zinc coatings if pH>10. Aluminum as well as zinc is an amphoteric material which suffers corrosion at high and low pH. These thresholds are different for each material. (Correspondence with Project X, 2021).

7.0 RECOMMENDATIONS

Recommendations for site preparation, excavation, fill placement, excavation shoring and dewatering, foundations, basement wall design, and seismic design are presented in the following sections of the report.

7.1 Site Preparation, Excavation, and Fill Placement

Site clearing should include removal of all existing pavements, former foundation elements, and underground utilities. During excavation for the below-grade levels, the excavation will extend below the estimated historic high groundwater level. The foundation excavation subgrade will consist of saturated soil and will be sensitive to disturbance, especially under construction equipment wheel loads. If a passive dewatering system will be used, the native soil should be overexcavated to provide room for a minimum 12-inch-thick continuous layer of crushed rock. If

[5] Roberge, Pierre R. (2018). *Corrosion Basics, an Introduction, Third Edition*. NACE International, P. 189.

an active dewatering system is used, the rock layer may be omitted, provided the dewatering system can draw down the groundwater table at least three feet below the excavation bottom. To minimize disturbance of the soil subgrade, the last two feet of soil should be excavated with a track-mounted excavator with a smooth bucket or bar welded across the teeth. Even with tracked equipment, the exposed subgrade may be sensitive, especially if the excavation is not adequately dewatered. We do not recommend operating any trucks or rubber-tired equipment on the exposed mat subgrade. Any disturbed soil at or below subgrade level (i.e., bottom of overexcavation) should be removed by hand. Following approval by our engineer, the bottom of the excavation should be covered with at least 12 inches of clean 3/4-inch crushed rock (where required) and/or a three-inch-thick unreinforced concrete mud slab, to provide a firm working surface. The crushed rock should meet the gradation requirements presented below in Table 2.

TABLE 2
Gradation Recommendations for Gravel Blanket Beneath Mat

Sieve Size	Percentage Passing Sieve
1 inch	90 – 100
3/4 inch	30 – 100
1/2 inch	5 – 25
3/8 inch	0 – 6

If any engineered fill will be placed above the crushed rock, the rock should be covered with a nonwoven filter fabric (Mirafi 140NC or equivalent) prior to placement of engineered fill. A mud slab is generally required beneath most waterproofing products. If no engineered fill is to be placed above the crushed rock blanket, the mud slab may be placed directly over the rock (no filter fabric required).

For planning purposes, a maximum temporary cut slope inclination of 1:1 (horizontal:vertical) may be assumed for the native sandy clay or clayey sand above the groundwater, which corresponds to OSHA Type B soil. If granular material or seepage is observed in the cut slopes during construction, the material should be downgraded to OSHA Type C soil and a

corresponding maximum inclination of 1.5:1 should be used. All soil below the design water table should be assumed to be Type C soil.

In areas that will receive fill, the soil subgrade exposed should be scarified to a depth of at least eight inches, moisture-conditioned to above optimum moisture content, and compacted to at least 90 percent relative compaction[6]. The soil subgrade should be compacted to at least 95 percent relative compaction if the soil consists of clean sand or gravel (defined as poorly-graded soil with less than five percent fines passing the No. 200 sieve). The soil subgrade should be kept moist until it is covered by fill.

Fill should consist of on-site soil or imported soil (select fill) that is free of organic matter and debris, contains no rocks or lumps larger than four inches in greatest dimension, has a liquid limit of less than 40 and a plasticity index lower than 15, and is approved by the geotechnical engineer. Samples of proposed imported fill material should be submitted to the geotechnical engineer at least three business days prior to use at the site.

The grading contractor should also provide analytical test results or other suitable environmental documentation to the environmental consultant/engineer indicating the imported fill is free of hazardous materials at least three days before use at the site. If this data is not available, up to two weeks should be allowed to perform analytical testing on the proposed imported material.

Fill should be placed in horizontal lifts not exceeding eight inches in uncompacted thickness, moisture-conditioned to above optimum moisture content, and compacted to at least 90 percent relative compaction. Fill consisting of clean sand or gravel (defined as poorly-graded soil with less than five percent fines by weight) should be compacted to at least 95 percent relative compaction. Fill greater than five feet in thickness or placed within the upper foot of vehicular pavement soil subgrade should also be compacted to at least 95 percent relative compaction and be non-yielding.

7.1.1 Exterior Flatwork Subgrade Preparation

[6] Relative compaction refers to the in-place dry density of soil expressed as a percentage of the maximum dry density of the same material, as determined by the ASTM D1557 laboratory compaction procedure.

We recommend a minimum of four inches of Class 2 aggregate base (AB) be placed beneath exterior concrete flatwork, including sidewalks. Class 2 AB should be moisture-conditioned and compacted in accordance with the requirements provided above in Section 7.1.

In areas to receive new concrete flatwork, the upper eight inches of native soil should be scarified, moisture-conditioned, and re-compacted in accordance with the requirements presented above prior to placement of Class 2 AB. This grading should be performed under the observation of our field engineer. If zones of weak or loose soil that extend deeper than the upper 12 inches are encountered during grading, the material should be over-excavated down to firm material, as determined by our field engineer, and replaced with engineered fill.

7.1.2 Utility Trench Backfill

Excavations for utility trenches can be readily made with a backhoe. All temporary excavations used in construction should be designed, planned, constructed, and maintained by the contractor and should conform to all state and/or federal safety regulations and requirements, including those of CAL-OSHA. To provide uniform support, pipes or conduits should be bedded on a minimum of four inches of clean sand or fine gravel. After the pipes and conduits are tested, inspected (if required) and approved, they should be covered to a depth of six inches with sand or fine gravel, which should be mechanically tamped.

Backfill for utility trenches and other excavations is also considered fill, and should be placed and compacted in accordance with the recommendations previously presented. If imported clean sand or gravel (defined as poorly-graded soil with less than five percent fines by weight) is used as backfill, it should be compacted to at least 95 percent relative compaction. Jetting of trench backfill should not be permitted. Special care should be taken when backfilling utility trenches in pavement areas. Poor compaction may cause excessive settlements, resulting in damage to the pavement section.

If a trench extends below an imaginary line extending down at a 1.5:1 (horizontal:vertical) inclination from the bottom of foundations for neighboring buildings or the proposed building, the portion of the utility trench (excluding bedding) that is below the 1.5:1 line can be backfilled

with controlled low-strength material (CLSM) with a 28-day compressive strength of at least 50 pounds per square inch (psi) or Class 2 AB compacted to at least 95 percent relative compaction.

Where the above utility trench backfill recommendations are in conflict with the City of Berkeley standard details for underground utility trenches within the public right-of-way, the City Engineer or inspector should determine which material and compaction requirements should take precedence.

7.2 Foundations

We conclude the proposed building may be supported on a mat foundation that is underlain by waterproofing and designed to resist hydrostatic uplift pressures. If the building weight is not sufficient to resist the hydrostatic uplift pressures imposed by the groundwater, tiedown anchors may be required to provide the mat foundation with additional uplift resistance. The following sections present our recommendations for the design and construction of a mat foundation and tiedown anchors.

7.2.1 Mat Foundation

The native soil encountered in our borings and CPTs at the proposed foundation level can support new building loads without excessive settlement. Considering the proposed bottom-of-foundation will be up to 25 feet below the design high groundwater level, it will need to be designed to resist hydrostatic uplift pressures and be fully waterproofed. Considering the high hydrostatic pressure that will be imposed on the foundation and the heavy building loads, we conclude a mat foundation would be the most appropriate foundation type for the proposed building. A mat foundation also simplifies construction dewatering and detailing of the waterproofing system. If there are portions of the building where the mat foundation does not have sufficient uplift capacity, soil anchors (i.e., tiedowns) can be installed to resist uplift forces.

For design of a mat foundation, we recommend using allowable bearing pressures of 6,000 pounds per square foot (psf) for dead-plus-live loads and 8,000 psf for total loads. To develop adequate mat rigidity, we recommend the mat be designed for dead-plus-live load conditions using a modulus of vertical subgrade reaction of 60 pounds per cubic inch (pci). This value has

been corrected to take into account the mat width and may be increased by 50 percent for total load conditions.

The soil exposed at mat subgrade elevation will likely consist of saturated stiff to hard clay with varying amounts of sand. To protect the subgrade from disturbance during placement of the waterproofing and reinforcing steel, we recommend a three-inch-thick unreinforced mud slab be placed on the undisturbed mat subgrade. If the excavation will be performed during the rainy season and the subgrade is exposed to rain, it may be necessary to lime treat the upper one foot of the subgrade prior to placing the mud slab.

7.2.2 Tiedown Anchors

Tiedown anchors (soil anchors) may be used in conjunction with the mat foundation at the site, if needed to resist the design hydrostatic uplift forces. Tiedowns are installed by advancing a small-diameter hole (typically between 8 to 12 inches in diameter) using either hollow-stem augers or air-track equipment that advances smooth steel drill casing (e.g., a Klemm rig). A large-diameter reinforcing bar or high-capacity steel strands are inserted into the hole, and then grout is injected into the hole under pressure as the auger or steel drill casing is withdrawn. Post-grouting can be performed to achieve higher capacities.

We recommend tiedowns be spaced at least four shaft diameters or three feet apart, center-to-center, whichever is greater. Tiedowns for this project will gain support through skin friction in primarily very stiff to hard clay. Tiedown capacity depends significantly on installation procedures, and installation procedures vary. Assuming the tiedowns are installed with a Klemm rig and post-grouted, we recommend using an allowable skin friction value of 1,500 psf. This allowable skin friction value includes a factor of safety of about 2.0. If the contractor installing the tiedowns believes they can achieve a higher capacity than that assumed above, higher capacities may be used, provided the factor of safety is verified through a load testing program, as detailed below. We recommend using minimum free lengths of 5 and 10 feet for bars and strands, respectively, and a minimum bond length of 20 feet for both bars and strands. The skin

friction values used in design should be verified by a testing program. Because the tiedowns will be permanent, they should have double corrosion protection.

The required tiedown bond length should be confirmed by a proof-test program conducted under our observation. We recommend proof-testing a minimum of two tiedowns in tension to 200 percent of the design load (DL) at the start of production installation. The two anchors tested to 200 percent DL may require larger bar diameter or additional strands, so that their structural capacity is not exceeded during testing. The remaining production anchors should be proof-tested to 150 percent DL. During testing, the deflection of each tiedown should be monitored with a free-standing, tripod-mounted dial gauge accurate to at least 0.001 inches. We recommend deflection of the tiedowns be measured at load increments equal to about 25 percent of the design load. The maximum test load should be held for a minimum of 10 minutes, with readings taken at 0, 1, 3, 6, and 10 minutes. If the difference between the 1- and 10-minute readings is more than 0.04 inches, the load should be held for an additional 50 minutes, with additional readings taken at 15, 20, 30, 45 and 60 minutes. If the deflection is more than 0.08 inches between the 10- and 60-minute readings, the tiedown design load should be re-evaluated. Replacement tiedowns should be provided, as directed by the structural engineer, for tiedowns that fail the tests. Tiedowns should be locked off at a load to limit movement during stabilizing of the groundwater level to less than 1/2 inch (structural engineer should confirm).

7.3 Permanent Below-Grade Walls

Permanent below-grade walls should be designed to resist both static lateral earth pressures, and lateral pressures caused by earthquakes, vehicular surcharge pressures, and surcharges from adjacent foundations, where appropriate. We recommend retaining walls at the site be designed using the following criteria:

- At-rest equivalent fluid weight of 54 pounds per cubic foot (pcf) above the design groundwater table and 90 pcf below.
- Active pressure of 34 pcf plus a seismic increment of 49 pcf (triangular distribution) above the design groundwater level, and 80 pcf plus a seismic increment of 25 pcf (triangular distribution) below the groundwater level.

Where the wall will be within 10 feet of adjacent streets, the wall should be designed for a traffic surcharge of 50 psf (uniformed distribution) applied to the upper 10 feet of the wall. Where existing foundations are supported above a "zone-of-influence" line extending up from a permanent wall at an inclination of 1.5:1 (horizontal:vertical), the wall should be designed for a surcharge pressure.

To protect against moisture migration, below-grade walls should be waterproofed and water stops should be placed at all construction joints. The design pressures recommended for above the design water level are based on fully drained conditions. Although a portion of the basement walls will be above the groundwater level, water can accumulate behind the walls from other sources, such as rainfall, irrigation, broken water lines, etc. One acceptable method for back-draining a retaining wall is to place a prefabricated drainage panel against the back of the wall. The drainage panel should extend down to a perforated PVC collector pipe placed at the design groundwater level. The pipe should be surrounded by at least four inches of Caltrans Class 2 permeable material or 3/4-inch drain rock wrapped in filter fabric (Mirafi 140NC or equivalent). A proprietary, prefabricated collector drain system, such as Tremdrain Total Drain or Hydroduct Coil (or equivalent), designed to work in conjunction with the drainage panel may be used in lieu of the perforated pipe surrounded by gravel described above. The pipe should be connected to a suitable discharge point; a sump and pump system will be required to drain the collector pipes if the invert elevation of the discharge pipe is too low to gravity drain to the storm drain system.

7.4 Excavation Shoring

As discussed in Section 6.4, we conclude the shoring system for the proposed excavation at the site may consist of either a tied-back soldier pile-and-lagging system or a tied-back cut-off wall system, such as SMX or secant piles. The purpose of the continuous cut-off wall is to reduce the potential for groundwater seepage into the excavation and to reduce the potential for groundwater drawdown beneath areas around the site that may be sensitive to ground settlement.

The safety of workers and equipment in or near the excavation is the responsibility of the contractor. A structural engineer knowledgeable in this type of construction should design the

shoring. We should review the geotechnical aspects of the proposed shoring system to check that it meets the intent of our geotechnical recommendations. During construction, we should observe the installation and load testing of the shoring system and check the condition of the soil encountered during excavation.

7.4.1 Design Lateral Earth and Water Pressures

Our recommendations for design lateral earth pressures and tiebacks for a soldier pile-and-lagging shoring system combined with active dewatering are presented on Figure 6. Our recommendations for design lateral earth and water pressures and tiebacks for a continuous cut-off wall shoring system combined with passive dewatering are presented on Figure 7. The recommended water and earth pressure distributions presented in Figure 7 have been adjusted to account for the non-hydrostatic water pressures and corresponding effective stresses behind the wall and in front of the toe that result from the excavation dewatering from within. In our analyses we assumed the continuous cut-off wall (SMX or secant piles) will extend at least 15 feet below the bottom of excavation. If a different cut-off wall embedment depth is proposed, we may need to re-evaluate the recommended design pressures.

7.4.2 Soil-Cement Mix (SMX) Shoring

The design strength and thickness of the SMX wall should be established by the shoring designer based on the recommended design pressures presented in the previous section and the design requirements of the structural system. A contractor experienced in installing SMX systems in similar soil and groundwater conditions should be responsible for selecting appropriate materials, equipment, and methods to provide a consistent SMX product that meets the design requirements set forth by the shoring designer.

Prior to the start of SMX production, the contractor should prepare a detailed work plan, including the following items:

- Detailed descriptions of sequence of construction and all construction procedures, equipment, and ancillary equipment to be used to penetrate the ground, proportion and mix binders, and inject and mix the site soils.

- Proposed mix design(s), including binder types, additives, fillers, reagents, and their relative proportions, and the required mixing time, water-to-binder ratio of the slurry (for wet mixing), binder factor (for dry mixing and wet mixing), and volume ratio (for wet mixing) for a deep mixed element.
- Proposed injection and mixing parameters, including mixing slurry rates, slurry pumping rates, air injection pressure, volume flow rates, mixing tool rotational speeds, and penetration and withdrawal rates.
- Methods for controlling and recording the verticality and the top and bottom elevation of each SMX element.
- Drawings indicating the identification number of every SMX element, as well as a schedule of all the SMX elements and their tip elevations, mix design (if variable), element type (primary or secondary), binder factors, volume ratios, etc.
- Details of all means and methods proposed for QC/QA activities, including surveying, process monitoring, sampling, testing, and documenting.

The work plan should be submitted to the shoring designer and the geotechnical engineer of record for review prior to the start of construction and the approved document should be provided to the contractor's field personnel and our field engineer.

Detailed specifications for minimum required SMX strength for the various stages of excavation should be established by the shoring designer and followed by the shoring contractor during construction. The construction schedule should allow time for adequate curing and strength gain of the SMX material prior to proceeding with successive lifts of excavation. A clear quality control program should be established and implemented to confirm the design strengths have been achieved prior to proceeding with excavation.

7.4.3 Soldier Pile-and-Lagging Shoring System with Tiebacks or Bracing

The recommended lateral earth pressures for the design of soldier pile-and-lagging shoring with tiebacks or bracing are presented on Figure 6. Where it is not feasible to install tiebacks, internal bracing of the excavation will be required. Internal bracing should be preloaded to limit movement of the shoring. In calculating these design pressures, we assumed drained conditions with no hydrostatic pressure acting on the shoring. Where traffic loads are expected within 10 feet of the shoring walls, an additional design load of 50 psf should be applied to the upper 10

feet of the wall. Where construction equipment will be working behind the walls within a horizontal distance of 10 feet, the design should include a surcharge pressure of 250 psf acting over the upper 10 feet of the wall. Where shoring is installed in front of adjacent buildings, it should be designed to resist at-rest soil pressures and an additional surcharge from the adjacent building; this surcharge can be estimated after details regarding the adjacent foundation are known. The above pressures should be assumed to act over the entire width of the lagging installed above the excavation.

Passive resistance at the toe of the soldier pile should be computed using equivalent fluid weights of 330 pcf above the groundwater level and 170 pcf below with a maximum passive earth pressure of 2,500 psf. These passive pressure values include a factor of safety of at least 1.5. The upper foot of soil should be ignored when computing passive resistance. Passive pressure can be assumed to act over an area of three soldier pile widths or pile-to-pile spacing, whichever is less, assuming the toe of the soldier pile is filled with concrete or lean concrete that is sufficiently strong to accommodate the corresponding stresses.

Soldier piles should be placed in pre-drilled holes backfilled with concrete or installed in soil-mix columns. The subsurface soils have lenses of gravelly sand, therefore, the shoring contractor should be prepared to use casing or drilling slurry to reduce caving of holes, where necessary.

The penetration of the soldier piles must be sufficient to ensure stability and resist the downward loading of tiebacks. Vertical loads can be resisted by skin friction along the portion of the soldier piles below the excavation. We recommend using an allowable skin friction value of 1,000 psf to compute the required soldier pile embedment. End bearing should be neglected.

Design criteria for tiebacks are also presented on Figure 6. As shown, tiebacks should derive their load-bearing capacity from the soil behind an imaginary line sloping upward from a point H/5 feet away from the bottom of the excavation and sloping upwards at 60 degrees from the horizontal, where H is the wall height in feet. The minimum stressing lengths for strand and bar tendons should be 15 and 10 feet, respectively. The minimum bond length for strand and bar tendons should be 15 feet.

Allowable capacities of the tiebacks will depend upon the drilling method, hole diameter, grout pressure, and workmanship. The shoring contractor should use a smooth-cased method (i.e., a Klemm rig) to install the tiebacks beneath adjacent buildings, where applicable. Tiebacks installed beneath adjacent buildings should not be post-grouted. The shoring contractor should be responsible for determining the actual length of tiebacks required to resist the lateral earth and water pressures imposed on the temporary retaining systems. The determination should be based on the designer's familiarity with the installation method to be used.

Tieback Testing

We should observe all tieback testing. A proof test is a simple test used to measure the total movement of the tieback during one cycle of incremental loading. All production tiebacks should be confirmed by proof tests to at least 1.25 times the design load. The bar or strands selected for the system must be capable of safely holding the maximum test load such that their structural capacity is not exceeded.

The movement of each tieback should be monitored with a free-standing, tripod-mounted dial gauge during proof testing. During the test, the tieback load and axial deflection are measured at each loading increment. The maximum test load should be held for a minimum of 10 minutes, with readings taken at 0, 1, 3, 6, and 10 minutes. If the difference between the 1- and 10-minute reading is less than 0.04 inch during the loading, the test is discontinued. If the difference is more than 0.04 inch, the holding period is extended by 50 minutes to 60 minutes, and the movements should be recorded at 15, 20, 25, 30, 45, and 60 minutes.

We should evaluate the tieback test results and determine whether the tiebacks are acceptable. A proof-tested tieback with a ten-minute hold is acceptable if the tieback carries the maximum test load with less than 0.04-inch movement between one and 10 minutes, and total movement at the maximum test load exceeds 80 percent of the theoretical elastic elongation of the unbonded length. A proof-tested tieback with a 60-minute hold is acceptable if the tieback carries the maximum test load with less than 0.08-inch movement between six and 60 minutes, and total movement at the maximum test load exceeds 80 percent of the theoretical elastic elongation of

the unbonded length. Tiebacks that fail to meet the first criterion will be assigned a reduced capacity. If the total movement of the tiebacks at the maximum test load does not exceed 80 percent of the theoretical elastic elongation of the unbonded length, the contractor should replace the tiebacks.

7.5 Underpinning

Underpinning of the neighboring structures to the north and west will be needed if excavations will be adjacent to and extend below the elevation of the bottom of the foundation for the adjacent structures. To determine the need for underpinning and to provide information for design of the underpinning system, it will be necessary to determine the configuration and depth of existing foundations that bottom above an imaginary line extending up at an inclination of 1.5:1 (horizontal:vertical) from the proposed excavation. If as-built plans cannot be obtained, test pits should be excavated prior to construction to determine the foundation type and depth to complete the design of an appropriate underpinning system. We can evaluate the extent of underpinning required once the location of new foundation elements relative to existing foundations is determined.

7.5.1 Hand-Excavated Underpinning Piers

One option for underpinning the adjacent buildings consists of conventional hand-excavated, end-bearing piers. Where hand-excavated underpinning piers are used to underpin existing foundations, the piers should be designed to gain support through end bearing on firm alluvium. An allowable bearing pressure of 6,000 psf for dead-plus-live loads may be used for design of underpinning piers. The underpinning piers should extend at least 24 inches below the planned excavation for the project. The width of the underpinning piers should be determined by the structural engineer or underpinning designer based on the ability of the existing foundation to span an area of non-support. If weak soil is encountered at the bottom of the underpinning piers, the excavation should be deepened until suitable bearing soil is encountered as directed by the geotechnical engineer.

Underpinning should be designed for unbalanced horizontal loads resulting from the soil retained by the piers. The unbalanced load should be computed using an at-rest equivalent fluid weight of 54 pcf above the groundwater table and 90 pcf below the groundwater table. Underpinning piers should also be designed for surcharge loads from foundations of the existing buildings to the north and west where the foundations are bottomed above an imaginary line projected upward at an inclination of 1.5:1 (horizontal:vertical) from the bottom of the underpinning pier.

Lateral loads may be resisted by a combination of friction along the pier bottoms and passive resistance against the portion of the piers embedded below the excavation. Passive resistance provided by the embedded portion of the underpinning pier should be computed using an equivalent fluid weight of 330 pcf above the groundwater level and 170 pcf below with a maximum passive earth pressure of 2,500 psf. The upper foot of soil should be ignored unless confined by a slab. Frictional resistance should be computed using a base friction coefficient of 0.35. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without further reduction.

7.5.2 Slant Piles

Drilled slant piles may also be used to underpin the neighboring building to the north and west. The vertical capacity of slant piles should be computed using an allowable skin friction of 1,500 psf in the clay and silty clay below the bottom of the excavation. End bearing should be neglected. The spacing and width of the slant piles should be determined by the underpinning/shoring designer based on the ability of the existing foundation to span an area of non-support. Underpinning should be designed for foundation loads, unbalanced horizontal loads resulting from the retained soil, surcharge loads, and the vertical load component of tiebacks. The unbalanced load should be computed using the lateral earth pressure shown on the attached Figure 6.

Passive resistance at the toe of the slant piles should be computed using equivalent fluid weights of 330 pcf above the groundwater level and 170 pcf below with a maximum passive pressure of 2,500 psf. Passive pressure can be assumed to act over an area of three soldier pile widths, or

pile-to-pile spacing, whichever is less, assuming the toe of the soldier pile is filled with concrete or lean concrete that is sufficiently strong to accommodate the corresponding stresses. The upper foot of soil should be ignored when computing passive resistance. The passive pressure value includes a factor of safety of at least 1.5.

We estimate total settlement of properly installed slant piles designed using the allowable skin friction value presented above will not exceed 1/2 inch and differential settlement will be on the order of 1/4 inch over a 30-foot horizontal distance. After the slant piles have been installed, they should be pre-loaded prior to proceeding with excavations in front of the piles. Lagging boards used to retain the soil between installed piles should be installed as soon as the face of the excavation is exposed. If sand susceptible to caving is encountered, lagging boards should be placed in one-foot lifts to minimize the loss of soil during excavation. Any voids between the backs of the lagging boards and the soil to be retained should be filled with grout on the same day the boards are installed.

7.6 Construction Monitoring

Control of ground movement will depend as much on the timeliness of installation of lateral restraint as on the design. During excavation, the shoring system is expected to yield and deform laterally, which could cause the ground surface adjacent to the shoring wall to settle. The magnitudes of shoring movements and the resulting settlements are difficult to estimate because they depend on many factors, including the method of installation and the contractor's skill in the shoring installation. Ground movements due to a properly designed and constructed shoring system should be within ordinary accepted limits of about one inch (1/2 inch where there are existing buildings within 1.5 times the excavation height). A monitoring program should be established to evaluate the effects of the construction on the adjacent properties.

The conditions of existing buildings within 1.5 times the excavation height should be photographed and surveyed prior to the start of construction and monitored periodically during construction. In addition, prior to the start of excavation, the contractor should establish survey points on the shoring system, on the ground surface at critical locations behind the shoring, and

on adjacent buildings. These survey points should be used to monitor the vertical and horizontal movements of the shoring and the ground behind the shoring throughout construction.

The survey points should be monitored regularly, and the results should be submitted to us in a timely manner for review. For estimating purposes, assume that the instrumentation will be read as follows:

- Prior to any excavation or shoring work at the site
- After installing soldier piles
- After excavation of each lift
- After the excavation reaches its lowest elevation
- Every two weeks until the street-level floor slab is constructed.

7.7 Seismic Design

Based on the results of shear wave velocity measurements at the CPT-3 location, we estimate weighted average shear wave velocity is 1270 foot per second for the upper 100 feet of soil. Therefore, in accordance with the 2019 CBC, the site is classified as a Site Class C.

The latitude and longitude of the site are 37.8689° and -122.2672°, respectively. For design in accordance with 2019 CBC, we recommend the following:

- Site Class C – very dense soil and soft rock
- S_S = 2.179g, S_1 = 0.841g
- F_a = 1.20, F_v = 1.40
- S_{MS} = 2.615g, S_{M1} = 1.177g
- S_{DS} = 1.743g, S_{D1} = 0.785g
- Seismic Design Category E for Risk Factors I, II, and III.

8.0 ADDITIONAL GEOTECHNICAL SERVICES

Prior to construction, Rockridge Geotechnical, Inc. should review the project plans and specifications to verify that they conform to the intent of our recommendations. During construction, our field engineer should provide on-site observation and testing during installation

of temporary shoring and new foundations. These observations will allow us to compare actual with anticipated subsurface conditions and to verify that the contractor's work conforms to the geotechnical aspects of the plans and specifications.

9.0 LIMITATIONS

This geotechnical investigation has been conducted in accordance with the standard of care commonly used as state-of-practice in the profession. No other warranties are either expressed or implied. The recommendations made in this report are based on the assumption that the subsurface soil and groundwater conditions do not deviate appreciably from those disclosed in the CPTs and exploratory borings. If any variations or undesirable conditions are encountered during construction, we should be notified so that additional recommendations can be made. The foundation recommendations presented in this report are developed exclusively for the proposed development described in this report and are not valid for other locations and construction in the project vicinity.

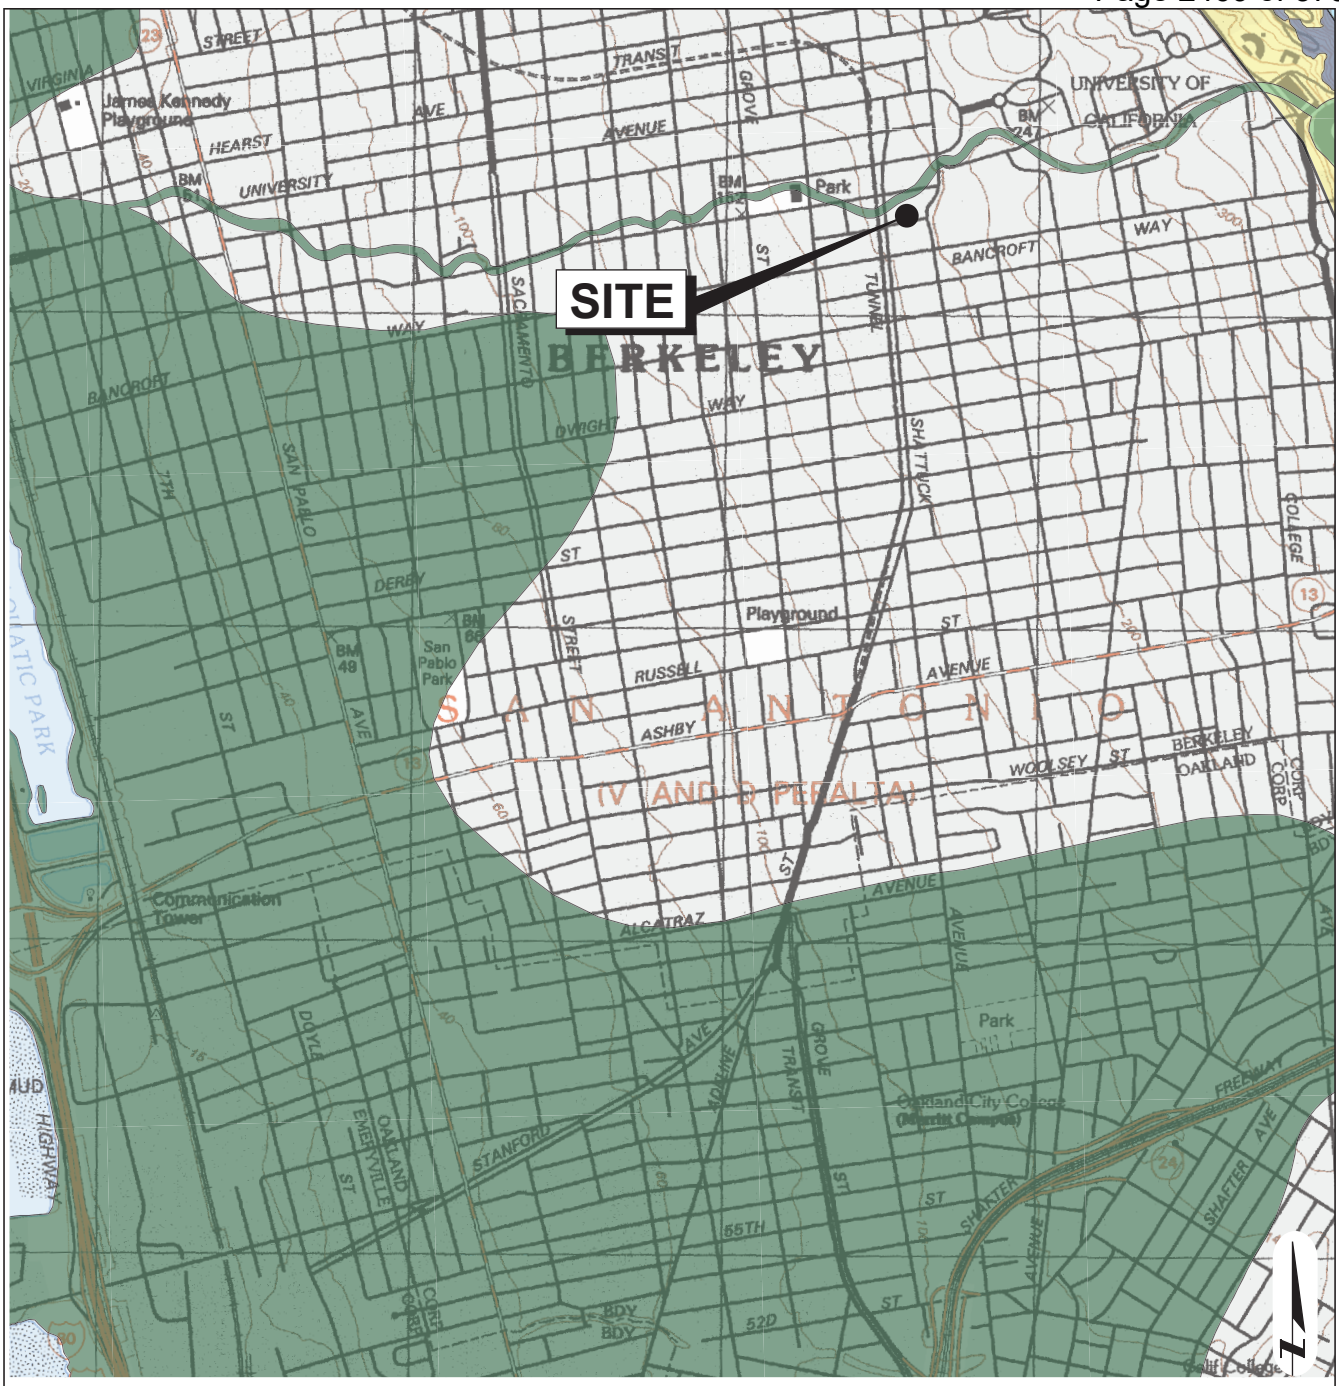
REGIONAL FAULT MAP

Date 05/27/22	Project No. 22-2227	Figure 4



Liquefaction Zones
Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Earthquake-Induced Landslide Zones
Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

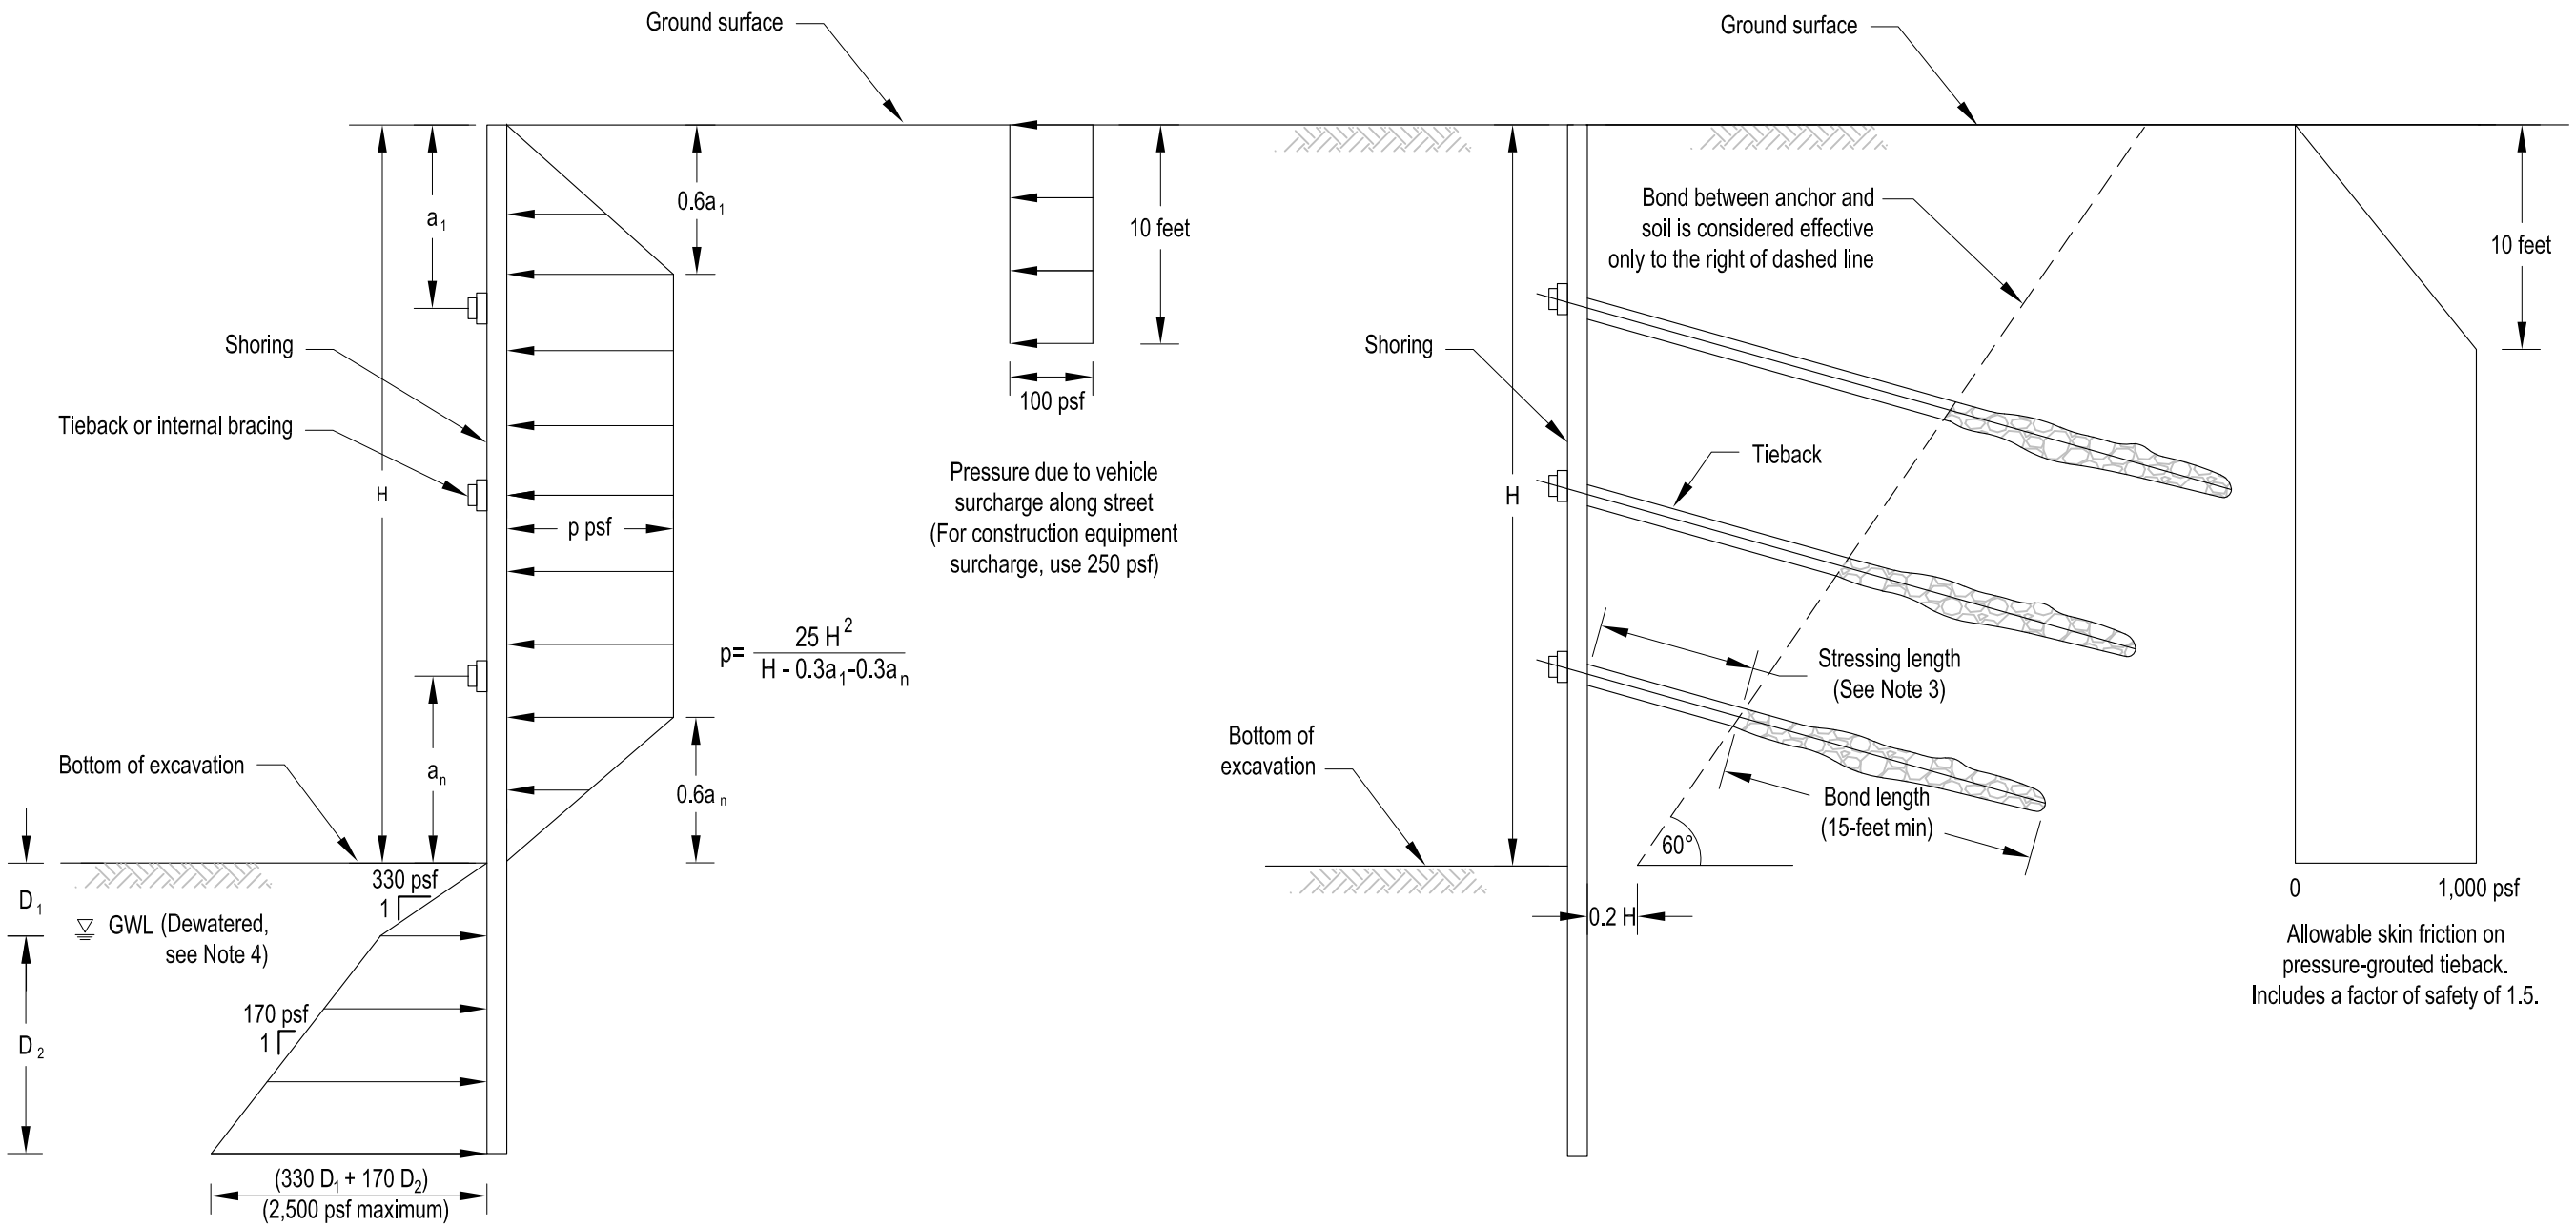
EARTHQUAKE ZONES OF REQUIRED INVESTIGATION MAP

Date	Project No.	Figure
05/27/22	22-2227	5



NOT TO SCALE

Notes:
1. Passive pressures include a factor of safety of about 1.5.
2. For soldier piles spaced at more than three times the soldier pile diameter, the passive pressure should be assumed to act over three diameters, provided the concrete or soil-cement mix is sufficiently strong to accommodate the corresponding stresses (shoring designer should confirm).
3. Stressing length: minimum 15 feet for strands, minimum 10 feet for bars.
4. Assumes site is dewatered at least three feet below bottom of excavation.
5. The recommended design pressures are for preliminary design. These pressures are dependent on the depths of excavation, we may need to revise these recommended design pressures once the depths are finalized.
6. Recommended pressures do not include potential surcharge pressures that may result from cranes, boom pumps, or neighboring building foundations.

Boring terminated at a depth of 41.5 feet below ground surface.
Boring backfilled with cement grout.
Groundwater encountered at a depth of 17.2 feet and 20 feet during drilling.

[1] SPT blow counts for the last two increments were converted to SPT N-Values using a factor of 1.2 to account for sampler type and hammer energy.

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	Gravels (More than half of coarse fraction > no. 4 sieve size)	**GW**	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	**SW**	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	Silts and Clays LL = < 50	**ML**	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	**MH**	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		**PT**	Peat and other highly organic soils

GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel coarse fine	3" to No. 4 3" to 3/4" 3/4" to No. 4	76.2 to 4.76 76.2 to 19.1 19.1 to 4.76
Sand coarse medium fine	No. 4 to No. 200 No. 4 to No. 10 No. 10 to No. 40 No. 40 to No. 200	4.76 to 0.075 4.76 to 2.00 2.00 to 0.420 0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

Unstabilized groundwater level

Stabilized groundwater level

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with California or Modified California split-barrel sampler. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample

Sampling attempted with no recovery

ATTACHMENT 5 - ADMINISTRATIVE RECORD

Stormwater Requirements Checklist

Municipal Regional Stormwater Permit (MRP 2.0)
Stormwater Controls for Development Projects

City of Berkeley
Public Works Dept.
Engineering Division

I. Applicability of C.3 and C.6 Stormwater Requirements

I.A. Enter Project Data *(For "C.3 Regulated Projects," data will be reported in the municipality's stormwater Annual Report.)*

I.A.1 Project Name: California Theater Project

I.A.2 Project Address (include cross street): 2115 Kittredge Street, Berkeley CA 94704

I.A.3 Project APN: 57-2030-9

I.A.4 Project Watershed[1]: Potter and Derby Creeks

I.A.5 Applicant Name: 2115 Kittredge Street, LLC/Christian Cerria c/o Rhoades Planning Group

I.A.6 Date Submitted: 9/19/2022

I.A.7 Applicant Address: 649 Mission Street 5th Floor, San Francisco, CA, 94105

I.A.8 Applicant Phone: (571) 212-1733

I.A.9 Applicant Email Address: ccerria@gilbaneco.com

I.A.10 Development type: (check all that apply)

- ☑ Residential ☐ Commercial ☐ Industrial ☑ Mixed-Use ☐ Streets, Roads, etc.
- ☑ 'Redevelopment' as defined by MRP: creating, adding and/or replacing exterior existing impervious surface on a site where past development has occurred[2]
- ☐ 'Special land use categories' as defined by MRP: (1) auto service facilities[3], (2) retail gasoline outlets, (3) restaurants[3], (4) uncovered parking area (stand-alone or part of a larger project)

I.A.11 Project Description[4]: (Also note any past or future phases of the project.) 15 story, 2 level basement building with apartments and a performing arts space.

I.A.12 Total Area of Site: 0.31 acres

I.A.13 Slope on Site: 1.5%-4.2% %

I.A.14 Total Area of land disturbed during construction (include clearing, grading, excavating and stockpile area: 0.31 acres.

I.B. Is the project a "C.3 Regulated Project" per MRP Provision C.3.b?

I.B.1. Enter the amount of impervious surface[4] created and/or replaced by the project (if the total amount is 5,000 sq.ft. or more):

Table of Impervious and Pervious Surfaces

Type of Impervious Surface	a Pre-Project Impervious Surface (sq.ft.)	b Existing Impervious Surface to be Replaced[7] (sq.ft.)	C New Impervious Surface to be Created[7] (sq.ft.)	d Post-project pervious surface (sq.ft.)
Roof area(s) – excluding any portion of the roof that is vegetated ("green roof")	10,685	12,559		N/A
Impervious[5] sidewalks, patios, paths, driveways	2,815	866		
Impervious[5] uncovered parking[6]	0			
Streets (public)				
Streets (private)				
Totals:	13,500	13,425		
Area of Existing Impervious Surface to remain in place	75	N/A		
Total New Impervious Surface *(sum of totals for columns b and c):*		13,425		

[1] Watershed is defined by the maps from the Alameda County Flood Control District at http://acfloodcontrol.org/resources/explore-watersheds
[2] Roadway projects that replace existing impervious surface are subject to C.3 requirements only if one or more lanes of travel are added.
[3] Standard Industrial Classification (SIC) codes are in Section 2.3 of the C.3 Technical Guidance (download at www.cleanwaterprogram.org)
[4] Project description examples: 5-story office building, industrial warehouse, residential with five 4-story buildings for 200 condominiums, etc.
[5] Per the MRP, pavement that meets the following definition of pervious pavement is NOT an impervious surface. Pervious pavement is defined as pavement that stores and infiltrates rainfall at a rate equal to immediately surrounding unpaved, landscaped areas, or that stores and infiltrates the rainfall runoff volume described in Provision C.3.d.
[6] Uncovered parking includes top level of a parking structure.
[7] "Replace" means to install new impervious surface where existing impervious surface is removed. "Create" means to install new impervious surface where there is currently no impervious surface.

I.B. Is the project a "C.3 Regulated Project" per MRP 2.0 Provision C.3.b? (continued)

		Yes	No	NA
I.B.2	In Item I.B.1, does the Total New Impervious Surface equal 10,000 sq.ft. or more? *If YES, skip to Item I.B.5 and check "Yes." If NO, continue to Item I.B.3.*	☑	☐	☐
I.B.3	Does the Item I.B.1 Total New Impervious Surface equal 5,000 sq.ft. or more, but less than 10,000 sq.ft? *If YES, continue to Item I.B.4. If NO, skip to Item I.B.5 and check "No."*	☐	☐	☐
I.B.4	Is the project a "Special Land Use Category" per Item I.A.10? For uncovered parking, check YES only if there is 5,000 sq.ft or more uncovered parking. *If NO, go to Item I.B.5 and check "No." If YES, go to Item I.B.5 and check "Yes."*	☐	☐	☐
I.B.5	Is the project a C.3 Regulated Project? *If YES, go to Item I.B.6; if NO, continue to Item I.C.*	☑	☐	☐
I.B.6	Does the total amount of Replaced impervious surface equal 50 percent or more of the Pre-Project Impervious Surface? *If YES, stormwater treatment requirements apply to the whole site; if NO, these requirements apply only to the impervious surface created and/or replaced.*	☑	☐	☐
I.B.7	Is the project installing a total of 3,000 sq.ft. or more (excluding private-use patios in single family homes, townhomes, or condominiums) of new pervious pavement systems? (Pervious pavement systems include pervious concrete, pervious asphalt, pervious pavers and grid pavers etc. and are described in the C3 Technical Guidance at www.cleanwaterprogram.org) If YES, stormwater treatment system inspection requirements (C.3.h) apply; (Municipal staff – add this site to your list of sites needing a final inspection at the end of construction and on-going O&M inspections.) If NO, inspection requirements only apply if there are other treatment systems installed on the project.	☐	☑	☐

I.C. Projects that are NOT C.3 Regulated Projects

If you answered NO to Item I.B.5, or the project creates/replaces less than 5,000 sq. ft. of impervious surface, then the project is NOT a C.3 Regulated Project, and stormwater treatment is not required, BUT the municipality may determine that source controls and site design measures are required. Skip to Section II.

I.D. Projects that ARE C.3 Regulated Projects

If you answered YES to Item I.B.5, then the project is a C.3 Regulated Project. The project must include appropriate site design measures and source controls AND hydraulically-sized stormwater treatment measures. Hydromodification management may also be required; refer to Section II to make this determination. If final discretionary approval was granted on or after **DECEMBER 1, 2011**, Low Impact Development (LID) requirements apply, except for "Special Projects." See Section II.

I.E. Identify C.6 Construction-Phase Stormwater Requirements

		Yes	No
I.E.1	Does the project disturb 1.0 acre (43,560 sq.ft.) or more of land? (See Item I.A.14). *If Yes, obtain coverage under the state's Construction General Permit at https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.jsp. Submit to the municipality a copy of your Notice of Intent and Storm Water Pollution Prevention Plan (SWPPP) before a grading or building permit is issued.*	☐	☑
I.E.2	Is the site a "High Priority Site" that disturbs less than 1.0 acre (43,560 sq.ft.) of land? (Municipal staff will make the final determination.) "High Priority Sites" are sites having any of the following criteria: ▪ that require a grading permit, ▪ are adjacent to a creek, ▪ or are otherwise high priority for stormwater protection during construction (see MRP 2.0 Provision C.6.e.ii.(2)(c))	☑	☐
I.E.3	Is the site a "Hillside Site" that disturbs 5,000 sq.ft. or more, but less than 1.0 acre (43,560 sq.ft.) of land? (Municipal staff will make the final determination.) ▪ "Hillside Sites" are located on hillsides, as indicated on a jurisdictional map of hillside development areas or as indicated by meeting jurisdictional hillside development criteria. ▪ If no map or criteria exist, then Hillside Sites are sites with a slope of 15% or more (see I.A.13 above and MRP 2.0 Provision C.6.e.ii.(2)(b)).	☐	☑

- NOTE TO APPLICANT: All projects require appropriate stormwater best management practices (BMPs) during construction. Refer to the Section II to identify appropriate construction BMPs.

- NOTE TO MUNICIPAL STAFF: If the answer is "Yes" to I.E.1, I.E.2, OR I.E.3, refer this project to construction site inspection staff to be added to their list of projects that require stormwater inspections at least monthly during the wet season (October 1 through April 30) and other times of the year as appropriate.

II. Implementation of Stormwater Requirements

II.A. Complete the appropriate sections for the project. For non-C.3 Regulated Projects, Sections II.B, II.C, and II.D apply. For C.3 Regulated Projects, all sections of Section II apply.

II.B. Select Appropriate Site Design Measures

- *Required for C.3 Regulated Projects.*
- *Starting December 1, 2012, projects that create and/or replace 2,500 - 10,000 sq.ft. of impervious surface, and stand-alone single family homes that create/replace 2,500 sq.ft. or more of impervious surface, must include one of Site Design Measures a through f.*[8]
- *All other projects are encouraged to implement site design measures, which may be required at municipality discretion.*
- *Consult with municipal staff about requirements for your project.*

II.B.1 Is the site design measure included in the project plans?

Yes	No	Plan Sheet No.	
☐	☑		a. Direct roof runoff into cisterns or rain barrels and use rainwater for irrigation or other non-potable use.
☐	☑		b. Direct roof runoff onto vegetated areas.
☐	☑		c. Direct runoff from sidewalks, walkways, and/or patios onto vegetated areas.
☐	☑		d. Direct runoff from driveways and/or uncovered parking lots onto vegetated areas.
☐	☑		e. Construct sidewalks, walkways, and/or patios with pervious surfaces. Use the specifications in the C3 Technical Guidance (Version 4.1) or for small projects see the BASMAA Pervious Paving Factsheet. For these documents and others go to www.cleanwaterprogram.org and click on "Resources."
☐	☑		f. Construct bike lanes, driveways, and/or uncovered parking lots with pervious surfaces. Use the specifications in the C3 Technical Guidance (Version 4.1) or for small projects see the BASMAA Pervious Paving Factsheet. For these documents and others go to the program website at: www.cleanwaterprogram.org and click on "Resources."
☐	☑		g. Minimize land disturbance and impervious surface (especially parking lots).
☐	☑		h. Maximize permeability by clustering development and preserving open space.
☐	☑		i. Use micro-detention, including distributed landscape-based detention.
☐	☑		j. Protect sensitive areas, including wetland and riparian areas, and minimize changes to the natural topography.
☐	☑		k. Self-treating area (see Section 4.1 of the C.3 Technical Guidance)
☐	☑		l. Self-retaining area (see Section 4.2 of the C.3 Technical Guidance)
☑	☐		m. Plant or preserve interceptor trees (Section 4.5, C.3 Technical Guidance)

[8] See MRP Provision C.3.a.i(6) for non-C.3 Regulated Projects, C.3.c.i(2)(a) for Regulated Projects, C.3.i for projects that create/replace 2,500 to 10,000 sq.ft. of impervious surface and stand-alone single family homes that create/replace 2,500 sq.ft. or more of impervious surface.

II.C. Select appropriate source controls *(Applies to C.3 Regulated Projects; encouraged for other projects. Consult municipal staff.[9])*

Are these features in project?		Features that require source control measures	Source control measures (Refer to Local Source Control List for detailed requirements)	Is source control measure included in project plans?		
Yes	No			Yes	No	Plan Sheet No.
☐	☑	Storm Drain	Mark on-site inlets with the words "No Dumping! Flows to Bay" or equivalent.	☐	☐	
☑	☐	Floor Drains	Plumb interior floor drains to sanitary sewer[10] [or prohibit].	☐	☐	
☐	☑	Parking garage	Plumb interior parking garage floor drains to sanitary sewer.[9]	☐	☐	
☐	☑	Landscaping	▪ Retain existing vegetation as practicable. ▪ Select diverse species appropriate to the site. Include plants that are pest- and/or disease-resistant, drought-tolerant, and/or attract beneficial insects. ▪ Minimize use of pesticides and quick-release fertilizers. ▪ Use efficient irrigation system; design to minimize runoff.	☐	☐	
☑	☐	Pool/Spa/Fountain	Provide connection to the sanitary sewer to facilitate draining.[9]	☐	☐	
☐	☑	Food Service Equipment (non-residential)	Provide sink or other area for equipment cleaning, which is: ▪ Connected to a grease interceptor prior to sanitary sewer discharge. [9] ▪ Large enough for the largest mat or piece of equipment to be cleaned. ▪ Indoors or in an outdoor roofed area designed to prevent stormwater run-on and run-off, and signed to require equipment washing in this area.	☐	☐	
☐	☑	Refuse Areas	▪ Provide a roofed and enclosed area for dumpsters, recycling containers, etc., designed to prevent stormwater run-on and runoff. ▪ Connect any drains in or beneath dumpsters, compactors, and tallow bin areas serving food service facilities to the sanitary sewer.[9]	☐	☐	
☐	☑	Outdoor Process Activities [11]	Perform process activities either indoors or in roofed outdoor area, designed to prevent stormwater run-on and runoff, and to drain to the sanitary sewer.[9]	☐	☐	
☐	☑	Outdoor Equipment/ Materials Storage	▪ Cover the area or design to avoid pollutant contact with stormwater runoff. ▪ Locate area only on paved and contained areas. ▪ Roof storage areas that will contain non-hazardous liquids, drain to sanitary sewer[9], and contain by berms or similar.	☐	☐	
☐	☑	Vehicle/ Equipment Cleaning	▪ Roofed, pave and berm wash area to prevent stormwater run-on and runoff, plumb to the sanitary sewer[9], and sign as a designated wash area. ▪ Commercial car wash facilities shall discharge to the sanitary sewer.[9]	☐	☐	
☐	☑	Vehicle/ Equipment Repair and Maintenance	▪ Designate repair/maintenance area indoors, or an outdoors area designed to prevent stormwater run-on and runoff and provide secondary containment. Do not install drains in the secondary containment areas. ▪ No floor drains unless pretreated prior to discharge to the sanitary sewer. [9] ▪ Connect containers or sinks used for parts cleaning to the sanitary sewer. [9]	☐	☐	
☐	☑	Fuel Dispensing Areas	▪ Fueling areas shall have impermeable surface that is a) minimally graded to prevent ponding and b) separated from the rest of the site by a grade break. ▪ Canopy shall extend at least 10 ft in each direction from each pump and drain away from fueling area.	☐	☐	
☐	☑	Loading Docks	▪ Cover and/or grade to minimize run-on to and runoff from the loading area. ▪ Position downspouts to direct stormwater away from the loading area. ▪ Drain water from loading dock areas to the sanitary sewer.[9] ▪ Install door skirts between the trailers and the building.	☐	☐	
☑	☐	Fire Sprinklers	Design for discharge of fire sprinkler test water to landscape or sanitary sewer.[9]	☐	☐	
☐	☑	Miscellaneous Drain or Wash Water	▪ Drain condensate of air conditioning units to landscaping. Large air conditioning units may connect to the sanitary sewer.[9] ▪ Roof drains shall drain to unpaved area where practicable. ▪ Drain boiler drain lines, roof top equipment, all washwater to sanitary sewer [9].	☐	☐	
☐	☑	Architectural Copper	▪ Discharge rinse water to sanitary sewer [9], or collect and dispose properly offsite. See flyer "Requirements for Architectural Copper."	☐	☐	

[9] See MRP Provision C.3.a.i(7) for non-C.3 Regulated Projects and Provision C.3.c.i(1) for C.3 Regulated Projects.
[10] Any connection to the sanitary sewer system is subject to sanitary district approval.
[11] Businesses that may have outdoor process activities/equipment include machine shops, auto repair, industries with pretreatment facilities.

II.D. Implement Construction Best Management Practices (BMPs) *(Applies to all projects – see Provision C.6 for more details.)*

Yes	No	Best Management Practice (BMP)
☑	☐	Attach the municipality's construction BMP plan sheet to project plans and require contractor to implement the applicable BMPs on the plan sheet.
☑	☐	Temporary erosion controls to stabilize all denuded areas until permanent erosion controls are established.
☑	☐	Delineate with field markers clearing limits, easements, setbacks, sensitive or critical areas, buffer zones, trees, and drainage courses.
☑	☐	Provide notes, specifications, or attachments describing the following: ▪ Construction, operation and maintenance of erosion and sediment controls, include inspection frequency; ▪ Methods and schedule for grading, excavation, filling, clearing of vegetation, and storage and disposal of excavated or cleared material; ▪ Specifications for vegetative cover & mulch, include methods and schedules for planting and fertilization; ▪ Provisions for temporary and/or permanent irrigation.
☑	☐	Perform clearing and earth moving activities only during dry weather.
☑	☐	Use sediment controls or filtration to remove sediment when dewatering and obtain all necessary permits.
☑	☐	Protect all storm drain inlets in vicinity of site using sediment controls such as berms, fiber rolls, or filters.
☑	☐	Trap sediment on-site, using BMPs such as sediment basins or traps, earthen dikes or berms, silt fences, check dams, soil blankets or mats, covers for soil stock piles, etc.
☑	☐	Divert on-site runoff around exposed areas; divert off-site runoff around the site (e.g., swales and dikes).
☑	☐	Protect adjacent properties and undisturbed areas from construction impacts using vegetative buffer strips, sediment barriers or filters, dikes, mulching, or other measures as appropriate.
☑	☐	Limit construction access routes and stabilize designated access points.
☑	☐	No cleaning, fueling, or maintaining vehicles on-site, except in a designated area where washwater is contained and treated.
☑	☐	Store, handle, and dispose of construction materials/wastes properly to prevent contact with stormwater.
☑	☐	Contractor shall train and provide instruction to all employees/subcontractors re: construction BMPs.
☑	☐	Control and prevent the discharge of all potential pollutants, including pavement cutting wastes, paints, concrete, petroleum products, chemicals, washwater or sediments, rinse water from architectural copper, and non-stormwater discharges to storm drains and watercourses.

PROJECTS THAT ARE NOT C.3 REGULATED PROJECTS STOP HERE!

II.E. Biotreatment, Infiltration and Rain Water Harvesting and Use.

MRP 2.0 no longer requires that a feasibility analysis of infiltration and rainwater harvesting be conducted. However, applicants using biotreatment are encouraged to maximize infiltration of stormwater if site conditions allow. If feasible and desired, infiltration and rainwater harvesting may be cost effective solutions depending on the project.

II.F. Stormwater Treatment Measures (Applies to C.3 Regulated Projects)

II.F.1 Check the applicable box and indicate the treatment measures to be included in the project.

Yes	No	
☑	☐	Is the project a Special Project? (See Appendix K of the C.3 Technical Guidance for criteria.) If Yes, complete the Special Projects Worksheet (go to the program website at: www.cleanwaterprogram.org and click on "Resources") and consult with municipal staff about the need to prepare a discussion of the feasibility and infeasibility of 100% LID treatment. Indicate the type of non-LID treatment to be used, the hydraulic sizing method*, and percentage of the amount of runoff specified in Provision C.3.d that is treated: Non-LID Treatment — Hydraulic sizing method* — % of C.3.d amount of runoff treated ☑ Media filter — Flow based approach (2.c) — 100% ☐ Tree well filter
☐	☑	Is the project using biotreatment to treat the C.3.d amount of runoff? For more information on infiltration and rainwater harvesting and use of stormwater, refer to the C3 Technical Guidance downloadable at the program website: www.cleanwaterprogram.org If Yes, indicate the biotreatment measures to be used, and the hydraulic sizing method: Biotreatment Measures — Hydraulic sizing method* ☐ Bioretention area ☐ Flow-through planter ☐ Other (specify):
☐	☑	Is the project using infiltration or rainwater harvesting/use? For more information on infiltration and rainwater harvesting and use of stormwater, refer to the C3 Technical Guidance downloadable at the program website: www.cleanwaterprogram.org If Yes, indicate the measures to be used, and hydraulic sizing method: LID Treatment Measure (non-biotreatment) — Hydraulic sizing method* ☐ Rainwater harvesting and use ☐ Bioinfiltration[12] ☐ Infiltration trench ☐ Other (specify):_____

***Hydraulic Sizing Method:** Indicate which of the following Provision C.3.d.i hydraulic sizing methods were used:

1. Volume based approaches – Refer to Provision C.3.d.i.(1):
   1(a) Urban Runoff Quality Management approach, or
   1(b) 80% capture approach (recommended volume-based approach).

2. Flow-based approaches – Refer to Provision C.3.d.i.(2):
   2(a) 10% of 50-year peak flow approach,
   2(b) Percentile rainfall intensity approach, or
   2(c) 0.2-Inch-per-hour intensity approach (this is recommended flow-based approach AND the basis for the 4% rule of thumb described in Section 5.1 of the C.3 Technical Guidance).

3. Combination hydraulic sizing approach -- Refer to Provision C.3.d.i.(3):
   If a combination flow and volume design basis was used, indicate which flow-based and volume-based criteria were used.

[12] See Section 6.1 of the C.3 Technical Guidance for conditions in which bioretention areas provide bioinfiltration.

II.G. Is the project a Hydromodification Management[13] (HM) Project? (Complete this section for C.3 Regulated Projects)

II.G.1 Does the project create and/or replace 1 acre (43,560 sq. ft.) or more of impervious surface? (Refer to Item I.B.1.)

- ☐ Yes. *Continue to Item II.G.2.*
- ☑ No. *The project is NOT required to incorporate HM measures. Skip to Item II.G.6 and check "No."*

II.G.2 Is the total impervious area increased over the pre-project condition? (Refer to Item I.B.1.)

- ☐ Yes. *Continue to Item II.G.3.*
- ☐ No. *The project is NOT required to incorporate HM measures. Skip to Item II.G.6 and check "No."*

II.G.3 Is the site located in a tidally influenced/depositional area, or in the extreme eastern portion of the county that is not subject to HM requirements? *(See HMP Susceptibility Map in Appendix I of the C.3 Technical Guidance.)*

- ☐ Yes. *Project is exempt from HM requirements. Attach map indicating project location. Skip to II.G.6 and check "No".*
- ☐ No. *Continue to II.G.4.*

II.G.4 Is the site located in a high slope zone or special consideration watershed, as shown on the HMP Susceptibility Map?

- ☐ Yes. *Project is subject to HM requirements. Attach map indicating project location. Skip to II.G.6 and check "Yes."*
- ☐ No. *Continue to II.G.5.*

II.G.5 For sites located in a white area on the HMP Susceptibility Map, has an engineer or qualified environmental professional determined that runoff from the project flows only through a hardened channel or enclosed pipe along its entire length before emptying into a waterway in the exempt area?

- ☐ Yes. *Project is exempt from HM requirements. Attach signed statement by qualified professional. Go to II.G.6 and check "No."*
- ☐ No. *Project is subject to HM requirements. Attach map indicating project location. Go to Item G.6 and check "Yes."*

II.G.6 Is the project a Hydromodification Management Project?

- ☐ Yes. *The project is subject to HM requirements in Provision C.3.g of the Municipal Regional Stormwater Permit.*
- ☑ No. *The project is EXEMPT from HM requirements.*
- ☐ HM requirements are impracticable. *(Attach documentation needed to comply with the impracticability provision in MRP Attachment B.)*

➢ *If the project is subject to the HM requirements, incorporate in the project flow duration stormwater control measures designed such that post-project stormwater discharge rates and durations match pre-project discharge rates and durations. The Bay Area Hydrology Model (BAHM) has been developed to size flow duration controls. See www.bayareahydrologymodel.org. Guidance is provided in Chapter 7 of the C.3 Technical Guidance.*

II.H Stormwater Treatment Measure and/HM Control Owner or Operator's Information:

Name: Christian Cerria

Address: 649 Mission Street 5th Floor, San Francisco, CA, 94105

Phone: (571) 212-1733 Email: ccerria@gilbaneco.com

➢ *Applicant must call for inspection and receive inspection within 45 days of installation of treatment measures and/or hydromodification management controls.*

Name of applicant completing the form: Christian Cerria

Signature: Date: 9/22/2022

[13] Hydromodification is the modification of a stream's hydrograph, caused in general by increases in flows and durations that result when land is developed (made more impervious). The effects of hydromodification include, but are not limited to, increased bed and bank erosion, loss of habitat, increased sediment transport and deposition, and increased flooding. Hydromodification management control measures are designed to reduce these effects.

III. For Completion By Municipal Staff

III.1 Alternative Certification: Was the treatment system sizing and design reviewed by a qualified third-party professional that is not a member of the project team or agency staff?

☐ Yes ☐ No Name of Reviewer_____

III.2. Confirm Operations and Maintenance (O&M) Submittal:

The following questions apply to C.3 Regulated Projects and Hydromodification Management Projects.

		Yes	No	N/A
III.2.a	Was maintenance plan submitted?	☐	☐	☐
III.2.b	Was maintenance plan approved?	☐	☐	☐
III.2.c	Was maintenance agreement submitted? (Date executed:_____)	☐	☐	☐

- *Attach the executed maintenance agreement as an appendix to this checklist.*

III.3 Incorporate HM Controls (if required)

Are the applicable items for HM compliance included in the plan submittal?

Yes	No	NA	Documentation for HM Compliance
☐	☐	☐	Site plans with pre- and post-project impervious surface areas, surface flow directions of entire site, locations of flow duration controls and site design measures per HM site design requirement
☐	☐	☐	Soils report or other site-specific document showing soil types at all parts of site
☐	☐	☐	If project uses the Bay Area Hydrology Model (BAHM), a list of model inputs.
☐	☐	☐	If project uses custom modeling, a summary of the modeling calculations with corresponding graph showing curve matching (existing, post-project, and post-project with HM controls curves), goodness of fit, and (allowable) low flow rate.
☐	☐	☐	If project uses the Impracticability Provision, a listing of all applicable costs and a brief description of the alternative HM project (name, location, date of start up, entity responsible for maintenance).
☐	☐	☐	If the project uses alternatives to the default BAHM approach or settings, a written description and rationale.

- *Municipal staff: Refer to the "Flow Duration Control Review Worksheet for HM Submittals" to review the documentation submitted for HM compliance.*

III.4 Annual Operations and Maintenance (O&M) Submittals:

For C.3 Regulated Projects and Hydromodification Management Projects, indicate the dates on which the Applicant submitted annual reports for project O&M: _____

III.5 Comments:

III.6 Notes:

Section I Notes:_____

Section II Notes:_____

Section III Notes:_____

III.7 Project Close-Out:

III.7.a Were final Conditions of Approval met? ☐ ☐

III.7.b	Was initial inspection of the completed treatment/HM measure(s) conducted? (Date of inspection:_____)	☐	☐	☐
III.7.c	Was maintenance plan submitted? (Date executed:_____)	☐	☐	☐
III.7.d	Was project information provided to staff responsible for O&M verification inspections? (Date provided to inspection staff:_____)	☐	☐	☐

Name of staff confirming project is closed out:_____

Signature:_____ Date:_____

Name of O&M staff receiving information:_____

Signature:_____ Date:_____

Zoning Project Application Submittal

Section 5 (B): Anti-Discrimination Housing Policies

A statement on Anti-Discrimination Housing Policies is required for projects creating five or more dwelling units. This written statement for the proposed project at 2115 Kittredge Street answers the requisite questions and provides the documentation requested by the City of Berkeley.

(1) Does the applicant or sponsor, including the applicant or sponsor's parent company, subsidiary, or any other business or entity with an ownership share of at least 30% of the applicant's company, engage in the business of developing real estate, owning properties, or leasing or selling individual dwelling units in states or jurisdictions outside of California?

Response:
Yes, the applicant's parent company does engage in the business of developing real estate, owning properties, leasing/selling units in states outside of California.

(2) If the answer to (1) is yes, which?

Response:
The applicant's parent company engages in the business of real estate in the following states/jurisdictions:

- *Rhode Island*
- *Iowa*
- *Michigan*
- *Maryland*
- *Washington DC*
- *Wisconsin*
- *New York*
- *Arizona*
- *Pennsylvania*
- *North Carolina*
- *South Carolina*
- *Oregon*
- *Illinois*
- *Connecticut*
- *Georgia*
- *Virginia*
- *Texas*
- *Colorado*
- *Ohio*
- *Washington*
- *Montana*
- *Massachusetts*
- *New Jersey*

(3) If the answer to (1) is yes, does the applicant or sponsor, as defined in (1), have policies in individual states that prohibit discrimination based on sexual orientation, gender identity, and/or gender expression in the sale, lease, or financing of any dwelling units enforced on every property in the state or states where the applicant or sponsor has an ownership or financial interest?

Response:
The applicant's parent company has policies in individual states that prohibit discrimination.

(4) If the answer to (1) is yes, does the applicant or sponsor, as defined in (1), have a national policy that prohibits discrimination based on sexual orientation and gender identity in the sale, lease, or financing of any dwelling units enforced on every property in the United States where the applicant or sponsor has an ownership or financial interest in property?

Response:
The applicant's parent company has a national policy that prohibits discrimination.

(5) If the answer to (3) or (4) is yes, please provide a copy of that policy or policies as part of this application.

Response:
A copy of the applicant's parent company's state and national policies are attached.

I certify that the information provided in this document regarding Anti-Discrimination Housing Policies is correct.

X 
Christian Cerria
Development Director
2115 Kittredge St, LLC

ASSET

110

Nondiscriminatory Practices

Purpose

Asset Living complies with Title VIII of the Civil Rights Act of 1968 (Fair Housing Act) and the Fair Housing Amendments Act of 1988, which prohibit housing discrimination based on race, color, sex (including sexual orientation and gender identity), religion, pregnancy, national origin, disability, or familial status ("protected classes").

Policy

Federal Requirements and Prohibitions

- In accordance with the requirements of the above-mentioned federal acts, associates must treat all customers and associates similarly, regardless of their membership in protected classes.
- If necessary, associates may treat individuals differently for other valid, honest, and rational business reasons, as long as the reasons are nondiscriminatory.
- Fair Housing posters must be displayed at each community, and all community advertisements must contain the Fair Housing logo.
- Asset Living associates are prohibited from the following which is a non-exhaustive list of examples:
    - Refusing to rent an apartment to a person in a protected class or telling such a person that housing is not available when in fact it is
    - Offering different rental terms or conditions to a person in a protected class, including varying rental rates or security deposits that are not offered to other persons
    - Using different qualification criteria or applications for persons in a protected class
    - Restricting or attempting to restrict the choices of a person in a protected class, which might encourage segregated housing
    - Engaging in "unlawful steering practices," which include:
        - Discouraging a person in a protected class from inspecting or renting an apartment
        - Exaggerating potential negatives or drawbacks about a particular community, apartment location, or floor plan
        - Failing to inform a person of desirable features of the apartment community
        - Limiting a person to a particular floor plan, building, or area of the community
    - Limiting information by providing false or inaccurate information regarding availability of housing to persons in a protected class
    - Delaying maintenance for apartments rented to persons in a protected class
    - Printing, publishing, creating, or distributing any notice, statement, or advertisement that indicates any preference, limitation, or discrimination against a person in a protected class, such as:
        - Using photos, illustrations, or forms implying that housing is not available to persons in a protected class
        - Expressing any preferences for or limitations on any person as a potential resident because they are in a protected class

State/Local Requirements

- Associates must be familiar with laws in their region as many states and municipalities have additional protected classes. These may include but are not limited to the following:
    - Receipt of public assistance (including Section 8), genetic information, military status, height, weight, age, student status, source of income, marital status, ancestry, HIV status, and any other personal characteristic.
- Associates must comply with any applicable state and/or local laws regarding protected classes.

Company Requirements

- Each associate must sign an acknowledgment of this standard, which is found in the Employee Handbook.
- All associates must complete and pass the applicable Grace Hill Vision Fair Housing training course prior to any prospect or resident interaction.

- Upon Community Manager approval and at Asset Living's expense, associates must complete required training (online or classroom) offered by the local apartment association to ensure knowledge of Fair Housing laws.
- Any associate who is found to have engaged in any discriminatory acts or practices prohibited by law will be subject to immediate termination, as well as possible civil liability in court brought by the person against whom the discrimination allegedly occurred.

Procedure

1. Refer to the U.S. Department of Justice's website for information on federal Fair Housing laws.
2. Consult local government resources identifying protected classes in your area.
3. Be aware of any changes in legislation in your area, as laws are often amended.
4. If uncertain about any issue related to discrimination, consult the Community Manager or Regional Manager for guidance.

VMT Screening for 2115 Kittredge Street

According to the City of Berkeley's Vehicle Miles Traveled (VMT) Criteria and Thresholds document dated June 29, 2020, the proposed project for 2115 Kittredge Street is exempt from conducting a Transportation Impact Study.

The City of Berkeley has VMT Screening criteria that exempts projects from the Transportation Impact Study requirement. The screening shows that the proposed project is expected to have a less-than-significant impact on traffic, so no study is necessary. The following excerpt from the City of Berkeley's VMT Criteria and Thresholds document contains the instructions for the VMT Screening process:

> *"In the City of Berkeley, land use projects that meet at least one of the following screening criteria are presumed to cause a less-than-significant VMT impact and would not require VMT analysis in order to address the question on the Appendix G CEQA checklist: "Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?"*
>
> - *Transit Priority Areas*
> - *Low Income Housing*
> - *Small Projects*
> - *Locally Serving Public Facility*
> - *Projects in Low VMT Areas.*
>
> *Transit Priority Areas (TPA): Projects located within a ½-mile walkshed around major transit stops (i.e., the BART stations and the Amtrak station) or within a ¼-mile walkshed around high quality transit corridors. Maps that show the TPAs within Berkeley are attached to this report. This TPA screening would not apply if the project has any of the following characteristics:*
>
> - *Has a Floor Area Ratio (FAR) of less than 0.75 for office uses; or*
> - *Includes more than 200,000 square feet of office or commercial space; or*
> - *Includes more parking supply than the project's estimated demand; or*
> - *Is inconsistent with the City's General Plan, an applicable Specific Plan, or an applicable Sustainable Communities Strategy (as determined by the City, with input from MTC); or*
> - *Replaces affordable residential units with market-rate residential units; or*
> - *Has project-specific or location-specific information that indicates that the project will generate significant levels of VMT."*

The map on the following page shows that the proposed project at 2115 Kittredge Street is in a Transit Priority Area. In addition, the proposed project site is in an area where VMTs per resident is 15% below the average Bay Area resident. We anticipate that, given the proximity to public transit, downtown Berkeley, and the Cal campus, most future residents of the building will choose alternative modes of transportation instead of vehicle travel.

Household VMT Per Capita, 2020

VMT per Resident:

at least 15% below Bay Area average

Transit Priority Areas:

½ mi from rail stations or ¼ mi from bus stops with service at least every 15min

NEW HOME RATING SYSTEM, VERSION 8.0

MULTIFAMILY CHECKLIST

The GreenPoint Rated checklist tracks green features incorporated into the home. GreenPoint Rated is administered by Build It Green, a non-profit whose mission is to promote healthy, energy and resource efficient buildings in California.

The minimum requirements of GreenPoint Rated are: verification of 50 or more points; Earn the following minimum points per category: Community (C), Energy (E), Indoor Air Quality/Health (I), Resources (R), and Water (W); and meet the prerequisites CALGreen Mandatory, ES-2, HE-1, (E-1, C1, C7).

Directions for Use: Column A is a dropdown menu with the options of "Yes", "No", or "TBD" or a range of percentages to allocate points. Select the appropriate dropdown and the appropriate points will appear in the blue "points achieved" column.

The criteria for the green building practices listed below are described in the GreenPoint Rated New Home Rating Manual.
For more information please visit **www.builditgreen.org/greenpointrated**
Build It Green is not a code enforcement agency.

A home is only GreenPoint Rated if all features are verified by a Certified GreenPoint Rater through Build It Green.

New Home Multifamily Version 8

Points Targeted: 157
Certification Level Targeted: Platinum
Compliance Pathway Targeted: All Electric High-Rise

Project Name: GDC01
Project Street: 2115 Kittredge
Project City: Berkeley
Project Zip: 94704

Measures	Points Achieved	Community	Energy	IAQ/Health	Resources	Water	Notes
		Possible Points					
CALGreen							
Yes	**CALGreen Res (REQUIRED)**	4		1	1	1	1
A. SITE							
No	**A1. Construction Footprint** (Site Preservation Plan Beyond Local Ordinance OR 40% of Site Undeveloped and Undisturbed)	0				1	
	A2. Job Site Construction Waste Diversion						
Yes	A2.1 70% C&D Waste Diversion (**including** Alternative Daily Cover)	2				2	
Yes	A2.2 Recycling Rates from Third-Party Verified Mixed-Use Waste Facility	1				1	
No	**A3. Recycled Content Base Material** (Minimum 20% Post-Consumer Content)	1				1	
No	**A4. Heat Island Effect Reduction (Non-Roof)**	1		1			
No	**A5. Construction Environmental Quality Management Plan Including Flush-Out**	1			1		
	A6. Stormwater Control: Prescriptive Path						
No	A6.1 Permeable Paving Material	0					1
Yes	A6.2 Filtration and/or Bio-Retention Features	1					1
Yes	A6.3 Non-Leaching Roofing Materials	1					1
No	A6.4 Smart Stormwater Street Design	0	1				
No	**A7. Stormwater Control: Performance Path** (Capture and Treat 85% of Annual Runoff Onsite)	0					3
B. FOUNDATION							
Yes	**B1. Fly Ash and/or Slag in Concrete** (Minimum of 30%)	1				1	
Yes	**B2. Radon-Resistant Construction**	2			2		
Yes	**B3. Foundation Drainage System**	2				2	
No	**B4. Moisture Controlled Crawlspace**	0			1		
	B5. Structural Pest Controls						
No	B5.1 Termite Shields and Separated Exterior Wood-to-Concrete Connections	0				1	
No	B5.2 Plant Trunks, Bases, or Stems at Least 36 Inches from the Foundation	0				1	
C. LANDSCAPE							
6.70%	Enter the landscape area percentage. Points capped at 3 for less than 15%.						
No	**C1. Plants Grouped by Water Needs (Hydrozoning)**	0					1
No	**C2. Three Inches of Mulch in Planting Beds**	0					1
	C3. Resource Efficient Landscapes						
Yes	C3.1 No Invasive Species Listed by Cal-IPC	1				1	
Yes	C3.2 Plants Chosen and Located to Grow to Natural Size (Limited Maintenance)	1				1	
Yes	C3.3 Drought Tolerant, California Native, Mediterranean Species, or Other Appropriate Species	1					3
	C4. Minimal Turf in Landscape						
Yes	C4.1 No Turf on Slopes Exceeding 10% and No Overhead Sprinklers Installed in Areas Less Than Eight Feet Wide	0					2
No	C4.2 Turf on a Small Percentage of Landscaped Area	0					2
No	**C5. Trees to Moderate Building Temperature** (at least 50% of West Facing Glazing and Walls Shaded)	0		1	1		1
Yes	**C6. High-Efficiency Irrigation System**	0					2
No	**C7. One Inch of Compost in the Top Six to Twelve Inches of Soil** (with Soil Testing)	0					2
No	**C8. Rainwater Harvesting System**	0					3

Project Name: GDC01
Project Street: 2115 Kittredge
Project City: Berkeley
Project Zip: 94704

		Points Achieved	Community	Energy	IAQ/Health	Resources	Water	
No	**C9. Recycled Wastewater Irrigation System**	0					1	
Yes	**C10. Submeter or Dedicated Meter for Landscape Irrigation**	0					2	
TBD	**C11. Landscape Meets Water Budget**						1	
	C12. Environmentally Preferable Materials for Site							
No	C12.1 Environmentally Preferable Materials for 70% of Non-Plant Landscape Elements and Fencing	0				1		
No	C12.2 Play Structures and Surfaces Have an Average Recycled Content ≥ 20%	0				1		
No	**C13. Reduced Light Pollution** (Exterior lighting fixtures shielded and directed downward)		1					
No	**C14. Large Stature Tree(s)**	0	1					
No	**C15. Third Party Landscape Program Certification**	0					1	
No	**C16. Maintenance Contract with Certified Professional** (Bay-Friendly Qualified Professional or Equiv.)	0					1	
No	**C17. Community Garden**	0	2					
D. STRUCTURAL FRAME AND BUILDING ENVELOPE								
	D1. Optimal Value Engineering							
No	D1.1 Joists, Rafters, and Studs at 24 Inches on Center	0		1			2	
No	D1.2 Non-Load Bearing Door and Window Headers Sized for Load	0	1				1	
No	D1.3 Advanced Framing Measures	0					2	
No	**D2. Construction Material Efficiencies** (Pre-assembled wall and roof framing for at least 80% of project)	0					1	
	D3. Engineered Lumber							
No	D3.1 Engineered Beams and Headers	0					1	
No	D3.2 Wood I-Joists or Web Trusses for Floors	0					1	
No	D3.3 Engineered Lumber for Roof Rafters	0					1	
No	D3.4 Engineered or Finger-Jointed Studs for Vertical Applications	0					1	
No	D3.5 OSB for Subfloor	0				0.5		
No	D3.6 OSB for Wall and Roof Sheathing	0				0.5		
No	**D4. Insulated Headers**	0	1					
	D5. FSC-Certified Wood							
No	D5.1 Dimensional Lumber, Studs, and Timber	0				6		
No	D5.2 Panel Products	0				3		
	D6. Solid Wall Systems							
Yes	D6.1 At Least 90% of Floors	1				1		
Yes	D6.2 At Least 90% of Exterior Walls	2		1		1		
No	D6.3 At Least 90% of Roofs	2		1		1		
No	**D7. Energy Heels on Roof Trusses**	0		1				
No	**D8. Overhangs and Gutters**	0		1		1		
	D9. Reduced Pollution Entering the Home from the Garage							
Yes	D9.1 Detached Garage	2			2			No Garage Provided
No	D9.2 Mitigation Strategies for Attached Garage	0			1			
	D10. Structural Pest and Rot Controls							
Yes	D10.1 All Wood Located At Least 12 Inches Above the Soil	1				1		
No	D10.2 Wood Framing Treating With Borates or Factory-impregnated, or Wall Materials Other Than Wood	0				1		
No	**D11. Moisture-Resistant Materials in Wet Areas (such as Kitchen, Bathrooms, Utility Rooms, and Basements)**	0			1	1		
E. EXTERIOR								
Yes	**E1. Environmentally Preferable Decking**	1				1		
No	**E2. Flashing Installation Third-Party Verified**	0				2		
Yes	**E3. Rain Screen Wall System**	2				2		
Yes	**E4. Durable and Non-Combustible Cladding Materials**	1				1		
	E5. Durable Roofing Materials							
Yes	E5.1 Durable and Fire Resistant Roofing Materials or Assembly	1				1		
Yes	E5.2 Roofing Warranty for Shingle Roofing	Y	R	R	R	R	R	
No	**E6. Vegetated Roof**	0	2	2				

Project Name: GDC01
Project Street: 2115 Kittredge
Project City: Berkeley
Project Zip: 94704

		Points Achieved	Community	Energy	IAQ/Health	Resources	Water	
F. INSULATION								
	F1. Insulation with 30% Post-Consumer or 60% Post-Industrial Recycled Content							
Yes	F1.1 Walls and Floors	0.5				0.5		
Yes	F1.2 Ceilings	0.5				0.5		
	F2. Insulation that Meets the CDPH Standard Method--Residential for Low Emissions							
Yes	F2.1 Walls and Floors	0.5			0.5			
Yes	F2.2 Ceilings	0.5			0.5			
	F3. Low GWP Insulation That Does Not Contain Fire Retardants							
Yes	F3.1 Cavity Walls and Floors	1		1				
Yes	F3.2 Ceilings	1		1				
Yes	F3.3 Interior and Exterior Insulation	1		1				
G. PLUMBING								
	G1. Efficient Distribution of Domestic Hot Water							
Yes	G1.1 Insulated Hot Water Pipes	1		1				
Yes	G1.2 WaterSense Volume Limit for Hot Water Distribution	1				1		increase insulation on pipe
No	G1.3 Increased Efficiency in Hot Water Distribution	0				2		
	G2. Install Water-Efficient Fixtures							
Yes	G2.1 WaterSense Showerheads 1.8 gpm with Matching Compensation Valve	2				2		
Yes	G2.2 WaterSense Bathroom Faucets with ≤ 1.0 gpm	1				1		
≤1.1 gpf	G2.3 WaterSense Toilets with a Maximum Performance (MaP) Threshold of No Less Than 500 Grams 1.28 gpf OR 1.1 gpf	2				2		
TBD	G2.4 Urinals with Flush Rate of ≤ 0.1 gpf					1		possible
No	**G3. Pre-Plumbing for Graywater System**	0				1		
No	**G4. Operational Graywater System**	0				3		
TBD	**G5. Thermostatic Shower Valve or Auto-Diversion Tub Spout**					1		confirm costs w/ rep
Yes	**G6. Submeter Water for Tenants**	2				2		
H. HEATING, VENTILATION, AND AIR CONDITIONING								
	H1. Sealed Combustion Units							
Yes	H1.1 Sealed Combustion Furnace	1			1			all electric - no combustion
Yes	H1.2 Sealed Combustion Water Heater	2			2			heat pump
No	**H2. High Performing Zoned Hydronic Radiant Heating System**	0		1	1			
	H3. Effective Ductwork							
Yes	H3.1 Duct Mastic on Duct Joints and Seams	1		1				
TBD	H3.2 Pressure Balance the Ductwork System			1				sealing of each unit (sealed windows & doors)
TBD	**H5. ENERGY STAR® Bathroom Fans Per HVI Standards with Air Flow Verified**				1			centralized fan @ roof
	H5. Advanced Practices for Cooling							
No	H5.1 ENERGY STAR® Ceiling Fans in Living Areas and Bedrooms	0		1				
No	H5.2 Operable Windows and Skylights Located to Induce Cross Ventilation in At Least One Room in 80% of Units	0		1				
	H6. Whole House Mechanical Ventilation Practices to Improve Indoor Air Quality							
Yes	H6.1 Meet ASHRAE Standard 62.2-2016 Ventilation Residential Standards	Y	R	R	R	R	R	
No	H6.2 Advanced Ventilation Standards	0			2			
No	H6.3 *Outdoor Air is Filtered and Tempered*	0			1			
	H7. Effective Range Design and Installation							
No	H7.1 Effective Range Hood Ducting and Design	0			1			
No	H7.2 Automatic Range Hood Control	0			1			
Yes	**H8. High Efficiency HVAC Filter (MERV 16+)**	1			1			min. merv 13
No	**H9. Advanced Refrigerants** (low global warming potential refrigerants)	0			1			
I. RENEWABLE ENERGY								
10.00%	**I1. Onsite Renewable Generation (Solar PV, Solar Thermal, and Wind)**	2		25				
	I2. Low Carbon Homes							
No	I2.1 Near Zero Energy Home (offset at least 80% of annual site energy use)	0		2				

Project Name: GDC01
Project Street: 2115 Kittredge
Project City: Berkeley
Project Zip: 94704

		Points Achieved	Community	Energy	IAQ/Health	Resources	Water	
No	I2.2 Low Carbon Home (meet the CO2e/sq ft threshold)	1		4				
No	**I3. Energy Storage**	0		1				
No	**I4. Solar Hot Water Systems to Preheat Domestic Hot Water**	0		4				
≥80% of common area	**I5. Photovoltaic System for Multifamily Projects**	0		8				
J. BUILDING PERFORMANCE AND TESTING								
Yes	**J1. Third-Party Verification of Quality of Insulation Installation**	1				1		
Yes	**J2. Supply and Return Air Flow Testing**	2		1		1		
Yes	**J3. Mechanical Ventilation Testing**	1				1		
Yes	**J4. All Electric or Combustion Appliance Safety Testing**	1				1		
All Electric High-Rise	**J5. Building Energy Performance**							**Option 1: Mixed Fuel** - High Rise Compliance margin is 10% over T24 or higher. Low Rise: Minimum Delta EDR ranges from 6-33 based on climate zone. Both high-rise and low-rise require pre-wiring requirements: Dryer - conductor rated for 40 amp, Range - conductor rated for 50 amp, PV and storage credit allowed. **Option 2: All Electric Compliance** - Meet Efficiency EDR based on climate zone (0-1). PV and Storage credit allowed. High-Rise: meet T24. **Option 3: Annual Energy Use** - Minimum 20% compliance based on annual energy use, PV credit not allowed.
3								Climate Zone Input
9	J5.1 Home Meets or Exceeds Energy Compliance Pathway	45		25+				
0.00%	J5.2 Non-Residential Spaces Outperform Title 24	0		15				
Yes	**J6. Title 24 Prepared and Signed by a CABEC Certified Energy Analyst**	1		1				
TBD	**J7. Participation in Utility Program with Third-Party Plan Review**	1				1		savings by design
No	**J8. ENERGY STAR® for Homes**	0		1				
No	**J9. EPA Indoor airPlus Certification**	0				2		
No	**J10. Blower Door Testing**	0				3		
No	**J11. Compartmentalization of Units** (Minimize uncontrolled pathways for indoor air pollutants between units)	0		1	1			
K. FINISHES								
	K1. Entryways Designed to Reduce Tracked-in Contaminants							
No	K1.1 Entryways to Individual Units (Sidewalk hard surface at entrances and permanent assembly for shoe storage)	0			1			
No	K1.2 Entryways to Buildings (Sidewalk hard surface at entrances and built-in, permanent walk-off mat or grill)	0			1			
Yes	**K2. Zero-VOC Interior Wall and Ceiling Paints**	2			2			
Yes	**K3. Low-VOC Caulks and Adhesives**	1			1			
	K4. Environmentally Preferable Materials for Interior Finish							
TBD	K4.1 Cabinets					2		
TBD	K4.2 Interior Trim					2		
TBD	K4.3 Shelving					2		
TBD	K4.4 Doors					2		
Yes	K4.5 Countertops	1				1		
	K5. Formaldehyde Emissions in Interior Finish Exceed CARB							
No	K5.1 Doors	0			1			
No	K5.2 Cabinets and Countertops	0			2			
No	K5.3 Interior Trim and Shelving	0			2			
No	**K6. Products That Comply With the Health Product Declaration Open Standard**	0			2			
No	**K7. Indoor Air Formaldehyde Level Less Than 27 Parts Per Billion**	0			2			
No	**K8. Comprehensive Inclusion of Low Emitting Finishes**	0			1			
Yes	**K9. Durable Cabinets** (Plywood for casework and doors, ball bearing drawer slides, dovetail joints, two directional metal hinges)	2				2		
No	**K10. At Least 25% of Interior Furniture Has Environmentally Preferable Attributes**	0				1		
L. FLOORING								
≥75%	**L1. Environmentally Preferable Flooring**	3					3

SURVEY NOTES

1. EXISTING TOPOGRAPHIC SURVEY INFORMATION SHOWN HEREON IS BASED UPON TOPOGRAPHIC SURVEYS COMPLETED BY SANDIS, UNDER THE DIRECTION OF LAURA CABRAL, PLS 7756.
2. UTILITIES SHOWN ON THIS SURVEY ARE BASED ON SURFACE OBSERVATIONS. NO WARRANTIES ARE EXPRESSED OR IMPLIED CONCERNING THE EXISTENCE, SIZE, DEPTH, CONDITION, CAPACITY, OR LOCATION OR ANY UTILITY EXISTING ON THE SITE, WHETHER PRIVATE, MUNICIPAL, OR PUBLIC OWNED.
3. CONTRACTOR SHALL VERIFY ALL UTILITIES PRIOR TO CONSTRUCTION AND REPORT BACK TO CIVIL ENGINEER ANY DISCREPANCIES WITH PLAN PRIOR TO COMMENCEMENT OF WORK.
4. TREE LOCATIONS SHOWN HEREON ARE SHOWN SYMBOLICALLY WITH SYMBOL SIZES BASED UPON TRUNK DIAMETER AT CHEST HEIGHT, AT THE LOCATION WHERE THE TREE ENTERS THE GROUND SURFACE. LOCATIONS AND SIZES OF TREE TRUNKS CAN ONLY BE CONSIDERED APPROXIMATE UNLESS OTHERWISE STATED ON THE MAP.
5. ALL DISTANCES AND DIMENSIONS ARE SHOWN IN FEET AND DECIMALS THEREOF.
6. DATES OF FIELD SURVEY: 04/13/2022, 04/15/2022, AND 04/22/2022.

BASIS OF BEARINGS

THE BEARING OF NORTH 80°33'00" EAST ALONG THE MONUMENT LINE OF DURANT AVENUE AS SHOWN UPON THAT CERTAIN MAP ENTITLED PARCEL MAP 9108 RECORDED IN BOOK 296, MAPS, PAGES 60-65, ALAMEDA COUNTY RECORDS, WAS TAKEN AS THE BASIS OF BEARINGS SHOWN UPON THIS SURVEY.

BENCHMARK

THE ELEVATION REFERENCE FOR THIS SURVEY IS A CITY OF BERKELEY BENCHMARK B3560, DESCRIBED AS 1½" BRASS DISK IN CONCRETE AT THE NORTH NOSE OF THE MEDIAN ISLAND ON SHATTUCK AVENUE AT THE SOUTH SIDE OF KITTREDGE STREET

ELEV=178.28 FEET (CITY OF BERKELEY DATUM)

UNDERGROUND UTILITY NOTE

THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THIS TOPOGRAPHIC SURVEY ARE APPROXIMATE AND WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES. HOWEVER, THE ENGINEER CAN ASSUME NO RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF ITS DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT WHICH ARE NOT SHOWN ON THIS SURVEY.

BOUNDARY NOTE

THE PARCEL LINES SHOWN HEREON ARE THE RESULT OF A BOUNDARY SURVEY MADE IN CONFORMANCE WITH THE REQUIREMENTS OF THE PROFESSIONAL LAND SURVEYOR'S ACT.

UTILITY NOTES

1. ALL AREA DRAINS AND CATCH BASINS GRATES WITHIN PEDESTRIAN ACCESSIBLE AREAS SHALL MEET ADA REQUIREMENTS.
2. ALL UTILITY TRENCHES SHALL BE BACK FILLED PER THE SPECIFICATIONS WITH APPROPRIATE TESTS BY THE GEOTECHNICAL ENGINEER TO VERIFY COMPACTION VALUES.
3. POTHOLING IS STRONGLY RECOMMENDED FOR NEW GRAVITY FLOW SYSTEMS TO VERIFY THE DEPTH OF ALL EXISTING CROSSING UTILITIES. POTHOLING CAN ALSO VERIFY THE SIZE AND MATERIAL OF ANY OTHER UTILITIES THE PROJECT IS CONNECTING ONTO.
4. ALL SEWER WORK SHALL BE IN CONFORMANCE WITH THE COUNTY ENVIRONMENTAL HEALTH DEPARTMENT STANDARDS.
5. ALL SEWER LATERALS SHALL HAVE A TWO WAY CLEANOUT AT FACE OF BUILDING.
6. ALL WATER SERVICE CONNECTIONS SHALL BE INSTALLED IN ACCORDANCE WITH THE APPLICABLE EBMUD STANDARDS.
7. ALL WATER LINES SHALL BE INSTALLED WITH 36" MINIMUM COVER.
8. THRUST RESTRAINTS SHALL BE DESIGNED AND INSTALLED AT ALL TEES, CROSSES, BENDS (HORIZONTAL AND VERTICAL), AND AT SIZE CHANGES.

SITE AND GRADING NOTES

1. ALL SITE WORK SHALL BE IN CONFORMANCE WITH TITLE 24 OF THE CALIFORNIA CODE OF REGULATIONS AND WITH THE AMERICANS WITH DISABILITIES ACT.
2. PATH OF TRAVEL TO BUILDING SHALL NOT EXCEED A SLOPE OF 1:20 (5%) UNLESS RAILINGS ARE SHOWN, IN WHICH CASE THE SLOPE SHALL NOT EXCEED 1:12 (8.33%).
3. A 2% MAXIMUM SLOPE LANDING SHALL BE PROVIDED AT PRIMARY ENTRANCES TO THE BUILDING. THE LANDINGS SHALL HAVE A MINIMUM WIDTH OF 60" AND A MINIMUM DEPTH OF 60" WHEN THE DOOR OPENS INTO THE BUILDING, AND 42" PLUS THE WIDTH OF THE DOOR WHEN THE DOORS OPEN ONTO THE LANDING.
4. MAXIMUM CROSS SLOPE ALONG SIDEWALK OR PATHWAY SHALL BE 2% MAXIMUM.
5. THE SIDEWALK SHALL HAVE A 4' MINIMUM CLEAR WIDTH FOR ACCESSIBLE CONFORMANCE.

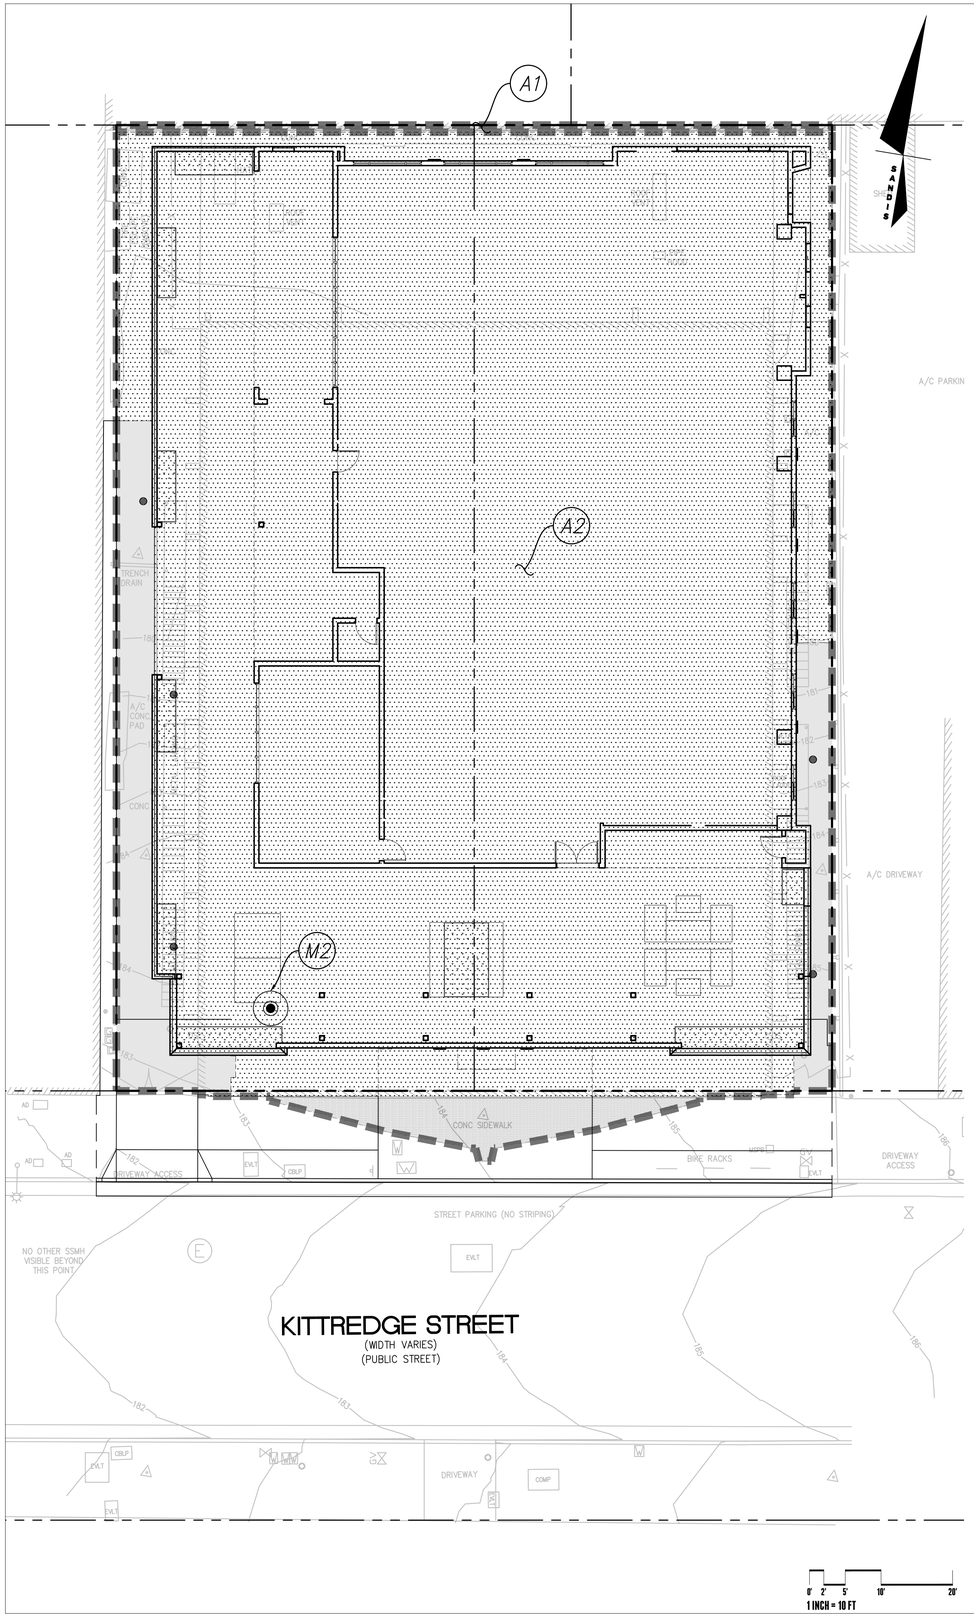
C201



LEGEND

- PROPOSED HARDSCAPE
- PROPOSED ROOF
- EXISTING ROOF
- DRAINAGE AREA BOUNDARY

STORMWATER MANAGEMENT NOTES:

THE PROPOSED PROJECT WILL INCLUDE MORE THAN 10,000 SQUARE FEET OF IMPERVIOUS SURFACE ADDITION AND REPLACEMENT. GIVEN THAT THE PROJECT SURPASSES THIS THRSHOLD, THE PROJECT IS CONSIDERED A REGULATED PROJECT PER THE REQUIREMENTS OF PROVISION C.3 OF THE MUNICIPAL REGIONAL STORMWATER PERMIT (ORDER NO. R2-2022-0018 AND R2-2015-0049). THIS PLAN PRESENTS THE METHODS AND CALCULATIONS FOR COMPLYING WITH THESE REQUIREMENTS, IN ACCORDANCE WITH THE CITY OF BERKELEY AND ALAMEDA COUNTY STORMWATER PROGRAMS. MOROVER, GIVEN THAT THIS PROJECT IS REPLACING MORE THAN 50% OF THE EXISTING IMPERVIOUS AREA, THE PROJECT MUST TREAT THE ENTIRE SITE.

THIS PROJECT IS CONSIDERED A SPECIAL PROJECT CATEGORY "A" PER THE CHARACTERISTICS LISTED IN ALAMEDA COUNTY'S SPECIAL PROJECTS WORKSHEET:

A. PROJECT IS IN A DOWNTOWN CORE AREA.
B. PROJECT CREATES/REPLACES < ½ ACRE IMPERVIOUS SURFACE.
C. PROJECT INCLUDES NO SURFACE AREA PARKING.
D. PROJECT HAS AT LEAST 85% COVERAGE BY PERMANENT STRUCTURES.

A NARRATIVE IS INCLUDED AS PART OF THE PLANNING SUBMITTAL WHICH DESCRIBES HOW LID TREATMENT IS NOT FEASIBLE ONSITE, AND WHY THE PROJECT MUST USE A MEDIA FILTER TO REGULATE THE QUALITY OF STORMWATER LEAVING THE SITE. THIS TREATMENT DEVICE IS DESCRIBED BELOW:

A. MEDIA FILTER – RUNOFF FROM THE CONTRIBUTING IMPERVIOUS SURFACE FLOWS THROUGH A MEDIA FILTER SIZED TO TREAT THE RUNOFF BASED ON A 0.2 IN/HR INTENSITY (TREATMENT STORM EVENT). THIS IS A NON-LID TREATMENT MEASURE WHICH REMOVES POLLUTANTS FROM RUNOFF THROUGH SCREENING AND FILTER CARTRIDGES MADE UP OF MANUFACTURED MEDIA. THIS TREATMENT DEVICE IS ONLY ALLOWED FOR "SPECIAL PROJECTS". THIS PROJECT QUALIFIES AS A CATEGORY A SPECIAL PROJECT.

C.3 STORMWATER TREATMENT MEASURES

AREA ID	PROPOSED IMPERVIOUS AREA (SF)	EXISTING IMPERVIOUS AREA (SF)	TOTAL AREA (SF)	BMP ID	BMP TYPE
A1	0	75	75	–	IN-LIEU CREDIT[1]
A2	13,461	270[2]	13,731	M2	MEDIA FILTER[3]

TABLE FOOTNOTES:

1. EXISTING UNTREATED IMPERVIOUS SURFACE INCLUDES NEIGHBORING BUILDING ROOF WITHIN PROJECT PROPERTY. EXISTING IMPERVIOUS AREA WITHIN DRAINAGE AREA A2 WILL BE TREATED IN LIEU OF THIS AREA.
2. THIS AREA REPRESENTS THE EXISTING FOOTPRINT OF THE EXISTING MARQUEE SIGN TO REMAIN. 75 SF OF THE OVERALL 270 SF TREATED AREA WILL BE USED AS IN-LIEU CREDIT FOR DRAINAGE AREA A1.
3. SEE EXAMPLE MEDIA FILTER PRODUCT, THIS SHEET. SIZED USING RATIONAL METHOD (Q=CiA):

   C=0.85 (ROOF/HARDSCAPE)
   i_{treat}=0.2 IN/HR (TREATMENT RAINFALL INTENSITY)
   i_{10YR}=2.05 IN/HR (10 YEAR/10 MIN RAINFALL INTENSITY PER NOAA)
   A=0.32 ACRES
   Q_{treat}=0.05 CFS
   Q_{10YR}=0.56 CFS

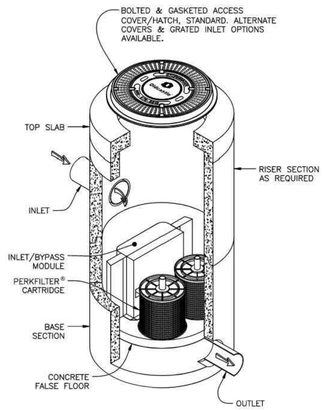
FEMA FLOOD ZONE DESIGNATION

THE PROPOSED PROJECT SITE RESIDES IN FEMA'S FLOOD INSURANCE RATE MAP (FIRM) 06001C0057G, EFFECTIVE AUGUST 3, 2009. THE ENTIRE PROJECT AREA IS LOCATED IN ZONE X, 'OTHER AREAS' (AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN).

HYDROMODIFICATION NOTE:

THE PROJECT IS EXEMPT FROM HYDROMODIFICATION REQUIREMENTS PER THE ALAMEDA COUNTY C.3 TECHNICAL GUIDANCE DOCUMENT. THE PROJECT IS EXEMPT FROM HYDROMODIFICATION DUE TO IMPERVIOUS AREA ADDED OR REPLACED BEING LESS THAN 1 ACRE.

PF-MH-48



Notes:

1. Precast concrete structure shall be manufactured in accordance with ASTM Designation C478.
2. Filter system shall be supplied with traffic rated (H20) bolted & gasketed Ø36" circular access covers with risers as required. Field poured concrete collar required, by others.
3. Inlet & outlet pipe(s) are to be Ø18" maximum. Inlet pipes must enter the structure in the inlet chamber.
4. Inlet chamber shall be supplied with drain-down device designed to remove standing water between storm events.
5. Minimum separation between invert in & invert out is outlet pipe diameter plus 4.00".
6. For depths less than specified minimums contact Oldcastle Infrastructure for engineering assistance.

SPECIAL PROJECTS WORKSHEET

MRP 2.0 Special Projects Worksheet

Complete this worksheet for projects that appear to meet the definition of "Special Project", per Provision C.3.e.ii of the Municipal Regional Stormwater Permit (MRP 2.0). The form assists in determining whether a project meets Special Project criteria, and the percentage of low impact development (LID) treatment reduction credit. Special Projects that implement less than 100% LID treatment must provide a narrative discussion of the feasibility or infeasibility of 100% LID treatment. See Appendix J of the C.3 Technical Guidance (excerpt attached, download at www.cleanwaterprogram.com) for more information.

Project Name: California Theater Project

Project Address: 2115 Kittredge

Applicant/Developer Name: 2115 Kittredge Street, LLC/Christian Cerria c/o Rhoades Planning Group

1. "Special Project" Determination *(Check the boxes to determine if the project meets any of the following categories.)*

Special Project Category "A"

Does the project have ALL of the following characteristics?

- ☑ Located in a municipality's designated central business district, downtown core area or downtown core zoning district, neighborhood business district or comparable pedestrian-oriented commercial district, or historic preservation site and/or district[1];
- ☑ Creates and/or replaces 0.5 acres or less of impervious surface;
- ☑ Includes no surface parking, except for incidental parking for emergency vehicle access, ADA access, and passenger or freight loading zones;
- ☑ Has at least 85% coverage of the entire site by permanent structures. The remaining 15% portion of the site may be used for accessory uses[2].

☐ No (continue) ☑ Yes – complete Section 2 of the Special Project Worksheet

Special Project Category "B"

Does the project have ALL of the following characteristics?

- ☐ Located in a municipality's designated central business district, downtown core area or downtown core zoning district, neighborhood business district or comparable pedestrian-oriented commercial district, or historic preservation site and/or district[1];
- ☐ Creates and/or replaces more than 0.5 acres of impervious area and less than 2.0 acres;
- ☐ Includes no surface parking, except for incidental parking for emergency access, ADA access, and passenger or freight loading zones;
- ☐ Has at least 85% coverage of the entire site by permanent structures. The remaining 15% portion of the site may be used for accessory[2] uses;
- ☐ Minimum Gross Density[3] (GD) of either 50 dwelling units (DU) per acre (for residential projects) or a Floor Area Ratio[4] (FAR) of 2:1 (for commercial). Either criterion can be used for mixed use projects.

☐ No (continue) ☐ Yes – complete Section 2 of the Special Project Worksheet

Special Project Category "C"

Does the project have ALL of the following characteristics?

- ☐ At least 50% of the project area is within 1/2 mile of an existing or planned transit hub[5] or 100% within a planned Priority Development Area[6];
- ☐ The project is characterized as a non-auto-related use[7]; and
- ☐ Minimum GD of 25 DU per acre (residential) or a FAR of 2:1 (commercial). Either criterion for mixed use.

☐ No ☐ Yes – complete Section 2 of the Special Project Worksheet

[1] And built as part of a municipality's stated objective to preserve/enhance a pedestrian-oriented type of urban design.
[2] Accessory Uses: safety access, parking structure entrances, trash and recycling service, utility access, pedestrian connections, public uses, landscaping and stormwater treatment.
[3] Gross Density (GD) – The total number of residential units divided by the acreage of the entire site area, including land occupied by public right-of-ways, recreational, civic, commercial and other non-residential uses.
[4] Floor Area Ratio (FAR) – The Ratio of the total floor area on all floors of all buildings at a project site (except structures, floors, or floor areas dedicated to parking) to the total project site area.
[5] "Transit hub" is defined as a rail, light rail, or commuter rail station, ferry terminal, or bus transfer station served by three or more bus routes. (A bus stop with no supporting services does not qualify.)
[6] A "planned Priority Development Area" (PDA) is an infill development area formally designated by the Association of Bay Area Government's / Metropolitan Transportation Commission's FOCUS regional planning program.
[7] Category C specifically excludes stand-alone surface parking lots; car dealerships; auto and truck rental facilities with onsite surface storage; fast-food restaurants, banks or pharmacies with drive-through lanes; gas stations; car washes; auto repair and service facilities; or other auto-related project unrelated to the concept of transit oriented development.

Special Projects Worksheet (continued)

2. LID Treatment Reduction Credit Calculation *(If more than one category applies, choose only one of the applicable categories and fill out the table for that category.)*

Category	Impervious Area Created/Replaced (sq. ft.)	Site Coverage (%)	Project Density or FAR	Density/Criteria	Allowable Credit (%)	Applied Credit (%)
A			N.A.	N.A.	100%	100%
B				Res ≥ 50 DU/ac or FAR ≥ 2:1	50%	
				Res ≥ 75 DU/ac or FAR ≥ 3:1	75%	
				Res ≥ 100 DU/ac or FAR ≥ 4:1	100%	
C				**Location credit (select one)[8]:**		
				Within ¼ mile of transit hub	50%	
				Within ½ mile of transit hub	25%	
				Within a planned PDA	25%	
				Density credit (select one):		
				Res ≥ 30 DU/ac or FAR ≥ 2:1	10%	
				Res ≥ 60 DU/ac or FAR ≥ 4:1	20%	
				Res ≥ 100 DU/ac or FAR ≥ 6:1	30%	
				Parking credit (select one):		
				≤ 10% at-grade surface parking[9]	10%	
				No surface parking	20%	
				TOTAL TOD CREDIT =		100%

3. Narrative Discussion of the Feasibility/Infeasibility of 100% LID Treatment:

If project will implement less than 100% LID, prepare a discussion of the feasibility or infeasibility of 100% LID treatment, as described in Appendix J of the C.3 Technical Guidance (excerpt attached), discussing both technical and economic feasibility/infeasibility. The infeasibility of 100% LID treatment must be established prior to approval of any non-LID treatment.

4. Select Certified Non-LID Treatment Measures:

If the project will include non-LID treatment measures, select a treatment measure certified by a government agency, such as the "Basic" General Use Level Designation (GULD) by the Washington State Department of Ecology's Technical Assessment Protocol – Ecology (TAPE). Guidance is provided in Section Appendix J of the C.3 Technical Guidance (download at www.cleanwaterprogram.com – excerpt attached).[10] If a different certification program is used, specify the design operating rate for which the product received the relevant certification.

Special Projects Worksheet Completed by:

Nicholas Chandler — 9/19/2022
Signature — Date

Nicholas Chandler
Print or Type Name

[8] To qualify for the location credit, at least 50% of the project's site must be located within the ¼ mile or ½ mile radius of an existing or planned transit hub, as defined on page 1, footnote 2. A planned transit hub is a station on the MTC's Regional Transit Expansion Program list, per MTC's Resolution 3434 (revised April 2006), which is a regional priority funding plan for future transit stations in the San Francisco Bay Area. To qualify for the PDA location credit, 100% of the project site must be located within a PDA, as defined on page 1, footnote 3.
[9] The at-grade surface parking must be treated with LID treatment measures.
[10] TAPE certification is used in order to satisfy Special Project's reporting requirements in the MRP.

MRP 2.0 Special Projects Worksheet (continued)

Attachment 1

Excerpts from Appendix J of the C.3 Technical Guidance

J.6 LID Infeasibility Requirement for Special Projects

In order to be considered a Special Project, in addition to documenting that all applicable criteria for one of the above-described Special Project categories have been met, the applicant must provide a narrative discussion of the feasibility or infeasibility of using 100 percent LID treatment onsite, offsite, or at a Regional Project. The narrative discussion is required to address the following:

1. The infeasibility of treating 100% of the amount of runoff identified in Provision C.3.d for the Regulated Project's drainage area with LID treatment measures onsite;
2. The infeasibility of treating 100% of the amount of runoff identified in Provision C.3.d for the Regulated Project's drainage area with LID treatment measures offsite or paying in-lieu fees to treat 100% of the Provision C.3.d runoff with LID treatment measures at an offsite or Regional Project; and
3. The infeasibility of treating 100% of the amount of runoff identified in Provision C.3.d for the Regulated Project's drainage area with some combination of LID treatment measures onsite, offsite, and/or paying in-lieu fees towards at an offsite or Regional Project.

The discussion is required to contain enough technical and/or economic detail to document the basis of any infeasibility that is determined.

J.6.1 On-site LID Treatment

The narrative discussion should describe how the routing of stormwater runoff has been optimized to route as much runoff as possible to LID treatment measures. A discussion should also be provided for each area of the site for which runoff must be treated with non-LID treatment measures, and should include the following:

1. Uses of impervious surfaces that preclude the use of LID treatment; and
2. Technical constraints that preclude the use of any landscaped areas for LID treatment, such as:
   a. Inadequate size to accommodate biotreatment facilities that meet the sizing requirements for the drainage area;
   b. Slopes too steep to terrace;
   c. Proximity to an unstable bank or slope;
   d. Environmental constraints (e.g., landscaped area is within riparian corridor);
   e. High groundwater or shallow bedrock;
   f. Conflict with subsurface utilities;
   g. Cap over polluted soil or groundwater;
   h. Lack of head or routing path to move collected runoff to the landscaped area or from the landscaped area to the disposal point;
   i. Other conflicts or required uses that preclude use for stormwater treatment (explain).

Special Projects Worksheet – Attachment 1 (continued)

J.6.2 Off-site LID Treatment.

The applicant must demonstrate to the municipality performing the project review that it is infeasible to provide LID treatment of an equivalent amount of runoff offsite either by paying in-lieu fees to a regional project or on other property owned by the project proponent in the same watershed (in other words, that alternative compliance, as described in Chapter 9, is infeasible).

Check with the local municipality to determine if there are any regional projects available for alternative compliance purposes (at the time of completion of this Appendix, there were none in Alameda County). These considerations should be documented in the narrative discussion of the feasibility and infeasibility of providing 100% LID treatment.

J.6.3 Combination of On-site and Off-site LID Treatment

The applicant must also demonstrate to the municipality performing the project review that it is infeasible to provide LID treatment of 100% of the amount of runoff specified in Provision C.3.d with some combination of LID measures on-site, offsite, and or paying in-lieu fees to a regional project.

After determining the extent to which stormwater runoff can be optimized to route as much runoff as possible to LID treatment measures, if that amount is less than 100%, and if there are no options to provide LID treatment off-site on a property owned by the project proponent in the same watershed, check with the municipality to determine if there are any regional projects available for alternative compliance purposes for the remainder of the C.3.d amount of runoff. These considerations should be documented in the narrative discussion of the feasibility and infeasibility of providing 100% LID treatment.

J.7 Select Non-LID Treatment Measures Certified by a Government Agency

MRP Provision C.3.e.vi.(3)(i) requires municipalities to report to the Regional Water Board, for each non-LID treatment measure that the municipality approves, "whether the treatment system either meets minimum design criteria published by a government agency or received certification issued by a government agency, and reference the applicable criteria or certification."

For Special Projects that are allowed to use non-LID treatment measures, applicants are advised to use treatment measures that have been certified by the Washington State Department of Ecology's Technical Assessment Protocol – Ecology (TAPE), under General Use Level Designation (GULD) for Basic Treatment.[11] You can identify proprietary media filters and high flow rate tree well filters currently holding this certification at the following link: http://www.ecy.wa.gov/programs/wq/stormwater/newtech/technologies.html.

The municipality may require that any non-LID treatment measures used in a Special Project be TAPE-certified, or the municipality may allow the use of non-LID treatment measures certified by another governmental program.

If the TAPE system is used, treatment measures must be sized based on the hydraulic sizing criteria specified in MRP Provision C.3.d and the design operating rate for which the product received TAPE GULD certification for Basic Treatment. If a different certification program is used, specify the design operating rate for which the product received the relevant certification.

[11] "General Use" is distinguished from a pilot or conditional use designation. "Basic Treatment" is distinguished from treatment effectiveness for phosphorus removal. Basic treatment is intended to achieve 80 percent removal of total suspended solids (TSS) for influent concentrations from 100 mg/L to 200 mg/L TSS and achieve 20 mg/L TSS for less heavily loaded influents.

SPECIAL PROJECT NARRATIVE

RE: California Theater Project
Narrative Discussion of Low Impact Development Feasibility/Infeasibility

To Whom it May Concern,

This report provides a narrative discussion of the feasibility or infeasibility of providing 100 percent low impact development (LID) treatment for 2115 Kittredge St., which has been identified as a potential Special Project, based on Special Project criteria provided in Provision C.3.e.ii of the Municipal Regional Stormwater Permit (MRP). This report is prepared in accordance with the requirement in MRP Provision C.3.e.vi.(2), to include in Special Projects reporting a narrative discussion of the feasibility or infeasibility of 100 percent LID treatment onsite or offsite.

Feasibility/Infeasibility of Onsite LID Treatment

The project site was reviewed with regard to the feasibility and infeasibility of onsite LID treatment. The results of this review showed that it was infeasible to treat 100 percent of the C.3.d amount of runoff with LID treatment. The findings of this review are presented below.

a. **On-site Drainage Conditions.** The project site will be occupied by a 15 story high rise building with two basement levels. The entire site will be contained in one drainage management area which will outfall into one treatment device (ie. media filter). The building's roof will drain via roof drains and get internally piped through the building. Any ground level pavement (which is on-structure) will be captured and routed through the building as well. After treatment through a media filter the stormwater will get pumped up from the basement level, outfall via through-curb drain and daylight into the gutter pan along Kittredge; matching the previous outfall concept.

b. **Constraints to Providing On-site LID.** The drainage management area that is proposed to drain to a vault-based high flow rate media filter includes some areas that are not covered by buildings. However, these areas make up 1% of the property area due to basement levels which take up 99% of the property. This severely precludes the project from accommodating pervious surfaces at grade or other forms of LID treatment. Moreover, due to 2023 Energy Compliance, required usable open space, and mechanical equipment for the building, roof area is extremely limited for green roof treatment.

Feasibility/Infeasibility of Off-Site LID Treatment. The possibility of providing off-site LID treatment was found to be infeasible. The owner does not own or control land within the same watershed of the project site which can accommodate in perpetuity off-site bioretention facilities adequately sized to treat the runoff volume of the primary project. The project team is also unaware of any regional LID stormwater mitigation program available to the project for in-lieu C.3 compliance.

Regards,

SANDIS

STORMWATER REQUIREMENTS CHECKLIST

Stormwater Requirements Checklist
Municipal Regional Stormwater Permit (MRP 2.0)
Stormwater Controls for Development Projects

City of Berkeley
Public Works Dept.
Engineering Division

I. Applicability of C.3 and C.6 Stormwater Requirements

I.A. Enter Project Data *(For "C.3 Regulated Projects," data will be reported in the municipality's stormwater Annual Report.)*

I.A.1 Project Name: California Theater Project

I.A.2 Project Address (include cross street): 2115 Kittredge Street, Berkeley CA 94704

I.A.3 Project APN: 57-2030-9 — I.A.4 Project Watershed[1]: Potter and Derby Creeks

I.A.5 Applicant Name: 2115 Kittredge Street, LLC/Christian Cerria c/o Rhoades Planning Group — I.A.6 Date Submitted: 9/19/2022

I.A.7 Applicant Address: 649 Mission Street 5th Floor, San Francisco, CA, 94105

I.A.8 Applicant Phone: (571) 212-1733 — I.A.9 Applicant Email Address: ccerria@gilbaneco.com

I.A.10 Development type: (check all that apply)
☑ Residential ☐ Commercial ☐ Industrial ☑ Mixed-Use ☐ Streets, Roads, etc.
☑ 'Redevelopment' as defined by MRP: creating, adding and/or replacing exterior existing impervious surface on a site where past development has occurred[2]
☐ 'Special land use categories' as defined by MRP: (1) auto service facilities[3], (2) retail gasoline outlets, (3) restaurants[3], (4) uncovered parking area (stand-alone or part of a larger project)

I.A.11 Project Description[4]: (Also note any past or future phases of the project.) 15 story, 2 level basement building with apartments and a performing arts space.

I.A.12 Total Area of Site: 0.31 acres — I.A.13 Slope on Site: 1.5%-4.2% %

I.A.14 Total Area of land disturbed during construction (include clearing, grading, excavating and stockpile area 0.31 acres.

I.B. Is the project a "C.3 Regulated Project" per MRP Provision C.3.b?

I.B.1. Enter the amount of impervious surface[5] created and/or replaced by the project (if the total amount is 5,000 sq.ft. or more):

Table of Impervious and Pervious Surfaces

Type of Impervious Surface	a Pre-Project Impervious Surface (sq.ft.)	b Existing Impervious Surface to be Replaced[7] (sq.ft.)	C New Impervious Surface to be Created[7] (sq.ft.)	d Post-project pervious surface (sq.ft.)
Roof area(s) – excluding any portion of the roof that is vegetated ("green roof")	10,685	12,559		N/A
Impervious[5] sidewalks, patios, paths, driveways	2,815	866		
Impervious[5] uncovered parking[6]	0			
Streets (public)				
Streets (private)				
Totals:	13,500	13,425		
Area of Existing Impervious Surface to remain in place	75	N/A		
Total New Impervious Surface *(sum of totals for columns b and c)*		13,425		

[1] Watershed is defined by the maps from the Alameda County Flood Control District at http://acfloodcontrol.org/resources/explore-watersheds
[2] Roadway projects that replace existing impervious surface are subject to C.3 requirements only if one or more lanes of travel are added.
[3] Standard Industrial Classification (SIC) codes are in Section 2.3 of the C.3 Technical Guidance (download at www.cleanwaterprogram.org)
[4] Project description examples: 5-story office building, industrial warehouse, residential with five 4-story buildings for 200 condominiums, etc.
[5] Per the MRP, pavement that meets the following definition of pervious pavement is NOT an impervious surface. Pervious pavement is defined as pavement that stores and infiltrates rainfall at a rate equal to immediately surrounding unpaved, landscaped areas, or that stores and infiltrates the rainfall runoff volume described in Provision C.3.d.
[6] Uncovered parking includes top level of a parking structure.
[7] "Replace" means to install new impervious surface where existing impervious surface is removed. "Create" means to install new impervious surface where there is currently no impervious surface.

I.A.14 Total Area of land disturbed during construction (include clearing, grading, excavating and stockpile area 0.31 acres.

I.B. Is the project a "C.3 Regulated Project" per MRP Provision C.3.b?

I.B.1. Enter the amount of impervious surface[5] created and/or replaced by the project (if the total amount is 5,000 sq.ft. or more):

Table of Impervious and Pervious Surfaces

Type of Impervious Surface	a Pre-Project Impervious Surface (sq.ft.)	b Existing Impervious Surface to be Replaced[7] (sq.ft.)	C New Impervious Surface to be Created[7] (sq.ft.)	d Post-project pervious surface (sq.ft.)
Roof area(s) – excluding any portion of the roof that is vegetated ("green roof")	10,685	12,559		N/A
Impervious[5] sidewalks, patios, paths, driveways	2,815	866		
Impervious[5] uncovered parking[6]	0			
Streets (public)				
Streets (private)				
Totals:	13,500	13,425		
Area of Existing Impervious Surface to remain in place	75	N/A		
Total New Impervious Surface *(sum of totals for columns b and c)*		13,425		

[1] Watershed is defined by the maps from the Alameda County Flood Control District at http://acfloodcontrol.org/resources/explore-watersheds
[2] Roadway projects that replace existing impervious surface are subject to C.3 requirements only if one or more lanes of travel are added.
[3] Standard Industrial Classification (SIC) codes are in Section 2.3 of the C.3 Technical Guidance (download at www.cleanwaterprogram.org)
[4] Project description examples: 5-story office building, industrial warehouse, residential with five 4-story buildings for 200 condominiums, etc.
[5] Per the MRP, pavement that meets the following definition of pervious pavement is NOT an impervious surface. Pervious pavement is defined as pavement that stores and infiltrates rainfall at a rate equal to immediately surrounding unpaved, landscaped areas, or that stores and infiltrates the rainfall runoff volume described in Provision C.3.d.
[6] Uncovered parking includes top level of a parking structure.
[7] "Replace" means to install new impervious surface where existing impervious surface is removed. "Create" means to install new impervious surface where there is currently no impervious surface.

II. Implementation of Stormwater Requirements

II.A. Complete the appropriate sections for the project. For non-C.3 Regulated Projects, Sections II.B, II.C, and II.D apply. For C.3 Regulated Projects, all sections of Section II apply.

II.B. Select Appropriate Site Design Measures

- *Required for C.3 Regulated Projects.*
- *Starting December 1, 2012, projects that create and/or replace 2,500 - 10,000 sq.ft. of impervious surface, and stand-alone single family homes that create/replace 2,500 sq.ft. or more of impervious surface, must include one of Site Design Measures a through f.*[8]
- *All other projects are encouraged to implement site design measures, which may be required at municipality discretion.*
- *Consult with municipal staff about requirements for your project.*

II.B.1 Is the site design measure included in the project plans?

Yes	No		Plan Sheet No.
☐	☑	a. Direct roof runoff into cisterns or rain barrels and use rainwater for irrigation or other non-potable use.	
☐	☑	b. Direct roof runoff onto vegetated areas.	
☐	☑	c. Direct runoff from sidewalks, walkways, and/or patios onto vegetated areas.	
☐	☑	d. Direct runoff from driveways and/or uncovered parking lots onto vegetated areas.	
☐	☑	e. Construct sidewalks, walkways, and/or patios with pervious surfaces. Use the specifications in the C3 Technical Guidance (Version 4.1) or for small projects see the BASMAA Pervious Paving Factsheet. For these documents and others go to www.cleanwaterprogram.org and click on "Resources."	
☐	☑	f. Construct bike lanes, driveways, and/or uncovered parking lots with pervious surfaces. Use the specifications in the C3 Technical Guidance (Version 4.1) or for small projects see the BASMAA Pervious Paving Factsheet. For these documents and others go to the program website at: www.cleanwaterprogram.org and click on "Resources."	
☐	☑	g. Minimize land disturbance and impervious surface (especially parking lots).	
☐	☑	h. Maximize permeability by clustering development and preserving open space.	
☐	☑	i. Use micro-detention, including distributed landscape-based detention.	
☐	☑	j. Protect sensitive areas, including wetland and riparian areas, and minimize changes to the natural topography.	
☐	☑	k. Self-treating area (see Section 4.1 of the C.3 Technical Guidance)	
☐	☑	l. Self-retaining area (see Section 4.2 of the C.3 Technical Guidance)	
☑	☐	m. Plant or preserve interceptor trees (Section 4.5, C.3 Technical Guidance)	

[8] See MRP Provision C.3.a.ii(6) for non-C.3 Regulated Projects, C.3.i for projects that create/replace 2,500 to 10,000 sq.ft. of impervious surface and stand-alone single family homes that create/replace 2,500 sq.ft. or more of impervious surface.

STORMWATER SUPPLEMENTAL FORMS

C302

STORMWATER REQUIREMENTS CHECKLIST

II.C. Select appropriate source controls *(Applies to C.3 Regulated Projects; encouraged for other projects. Consult municipal staff.[8])*

Are these features in project? Yes	No	Features that require source control measures	Source control measures (Refer to Local Source Control List for detailed requirements)	Is source control measure included in project plans? Yes	No	Plan Sheet No.
☐	☑	Storm Drain	Mark on-site inlets with the words "No Dumping! Flows to Bay" or equivalent.	☐	☐	
☑	☐	Floor Drains	Plumb interior floor drains to sanitary sewer[10] [or prohibit].	☐	☐	
☐	☑	Parking garage	Plumb interior parking garage floor drains to sanitary sewer.[9]	☐	☐	
☐	☑	Landscaping	▪ Retain existing vegetation as practicable. ▪ Select diverse species appropriate to the site. Include plants that are pest- and/or disease-resistant, drought-tolerant, and/or attract beneficial insects. ▪ Minimize use of pesticides and quick-release fertilizers. ▪ Use efficient irrigation system; design to minimize runoff.	☐	☐	
☑	☐	Pool/Spa/Fountain	Provide connection to the sanitary sewer to facilitate draining.[9]	☐	☐	
☐	☑	Food Service Equipment (non-residential)	Provide sink or other area for equipment cleaning, which is: ▪ Connected to a grease interceptor prior to sanitary sewer discharge. [9] ▪ Large enough for the largest mat or piece of equipment to be cleaned. ▪ Indoors or in an outdoor roofed area designed to prevent stormwater run-on and run-off, and signed to require equipment washing in this area.	☐	☐	
☐	☑	Refuse Areas	▪ Provide a roofed and enclosed area for dumpsters, recycling containers, etc., designed to prevent stormwater run-on and runoff. ▪ Connect any drains in or beneath dumpsters, compactors, and tallow bin areas serving food service facilities to the sanitary sewer.[9]	☐	☐	
☐	☑	Outdoor Process Activities [11]	Perform process activities either indoors or in roofed outdoor area, designed to prevent stormwater run-on and runoff, and to drain to the sanitary sewer.[9]	☐	☐	
☐	☑	Outdoor Equipment/ Materials Storage	▪ Cover the area or design to avoid pollutant contact with stormwater runoff. ▪ Locate area only on paved and contained areas. ▪ Roof storage areas that will contain non-hazardous liquids, drain to sanitary sewer[9], and contain by berms or similar.	☐	☐	
☐	☑	Vehicle/ Equipment Cleaning	▪ Roofed, pave and berm wash area to prevent stormwater run-on and runoff, plumb to the sanitary sewer[9], and sign as a designated wash area. ▪ Commercial car wash facilities shall discharge to the sanitary sewer.[9]	☐	☐	
☐	☑	Vehicle/ Equipment Repair and Maintenance	▪ Designate repair/maintenance area indoors, or an outdoors area designed to prevent stormwater run-on and runoff and provide secondary containment. Do not install drains in the secondary containment areas. ▪ No floor drains unless pretreated prior to discharge to the sanitary sewer. [9] ▪ Connect containers or sinks used for parts cleaning to the sanitary sewer. [9]	☐	☐	
☐	☑	Fuel Dispensing Areas	▪ Fueling areas shall have impermeable surface that is a) minimally graded to prevent ponding and b) separated from the rest of the site by a grade break. ▪ Canopy shall extend at least 10 ft in each direction from each pump and drain away from fueling area.	☐	☐	
☐	☑	Loading Docks	▪ Cover and/or grade to minimize run-on to and runoff from the loading area. ▪ Position downspouts to direct stormwater away from the loading area. ▪ Drain water from loading dock areas to the sanitary sewer.[9] ▪ Install door skirts between the trailers and the building.	☐	☐	
☑	☐	Fire Sprinklers	Design for discharge of fire sprinkler test water to landscape or sanitary sewer.[9]	☐	☐	
☐	☑	Miscellaneous Drain or Wash Water	▪ Drain condensate of air conditioning units to landscaping. Large air conditioning units may connect to the sanitary sewer.[9] ▪ Roof drains shall drain to unpaved area where practicable. ▪ Drain boiler drain lines, roof top equipment, all washwater to sanitary sewer[9].	☐	☐	
☐	☑	Architectural Copper	▪ Discharge rinse water to sanitary sewer[9], or collect and dispose properly offsite. See flyer "Requirements for Architectural Copper."	☐	☐	

[8] See MRP Provision C.3.a.i(7) for non-C.3 Regulated Projects and Provision C.3.c.i(1) for C.3 Regulated Projects.
[10] Any connection to the sanitary sewer system is subject to sanitary district approval.
[11] Businesses that may have outdoor process activities/equipment include machine shops, auto repair, industries with pretreatment facilities.

II.D. Implement Construction Best Management Practices (BMPs) *(Applies to all projects – see Provision C.6 for more details.)*

Yes	No	Best Management Practice (BMP)
☑	☐	Attach the municipality's construction BMP plan sheet to project plans and require contractor to implement the applicable BMPs on the plan sheet.
☑	☐	Temporary erosion controls to stabilize all denuded areas until permanent erosion controls are established.
☑	☐	Delineate with field markers clearing limits, easements, setbacks, sensitive or critical areas, buffer zones, trees, and drainage courses.
☑	☐	Provide notes, specifications, or attachments describing the following: ▪ Construction, operation and maintenance of erosion and sediment controls, include inspection frequency; ▪ Methods and schedule for grading, excavation, filling, clearing of vegetation, and storage and disposal of excavated or cleared material; ▪ Specifications for vegetative cover & mulch, include methods and schedules for planting and fertilization; ▪ Provisions for temporary and/or permanent irrigation.
☑	☐	Perform clearing and earth moving activities only during dry weather.
☑	☐	Use sediment controls or filtration to remove sediment when dewatering and obtain all necessary permits.
☑	☐	Protect all storm drain inlets in vicinity of site using sediment controls such as berms, fiber rolls, or filters.
☑	☐	Trap sediment on-site, using BMPs such as sediment basins or traps, earthen dikes or berms, silt fences, check dams, soil blankets or mats, covers for soil stock piles, etc.
☑	☐	Divert on-site runoff around exposed areas; divert off-site runoff around the site (e.g., swales and dikes).
☑	☐	Protect adjacent properties and undisturbed areas from construction impacts using vegetative buffer strips, sediment barriers or fibers, dikes, mulching, or other measures as appropriate.
☑	☐	Limit construction access routes and stabilize designated access points.
☑	☐	No cleaning, fueling, or maintaining vehicles on-site, except in a designated area where washwater is contained and treated.
☑	☐	Store, handle, and dispose of construction materials/wastes properly to prevent contact with stormwater.
☑	☐	Contractor shall train and provide instruction to all employees/subcontractors re: construction BMPs.
☑	☐	Control and prevent the discharge of all potential pollutants, including pavement cutting wastes, paints, concrete, petroleum products, chemicals, washwater or sediments, rinse water from architectural copper, and non-stormwater discharges to storm drains and watercourses.

PROJECTS THAT ARE NOT C.3 REGULATED PROJECTS STOP HERE!

II.E. Biotreatment, Infiltration and Rain Water Harvesting and Use.

MRP 2.0 no longer requires that a feasibility analysis of infiltration and rainwater harvesting be conducted.
However, applicants using biotreatment are encouraged to maximize infiltration of stormwater if site conditions allow.
If feasible and desired, infiltration and rainwater harvesting may be cost effective solutions depending on the project.

II.F. Stormwater Treatment Measures (Applies to C.3 Regulated Projects)

II.F.1 Check the applicable box and indicate the treatment measures to be included in the project.

Yes	No	
☑	☐	Is the project a Special Project? (See Appendix K of the C.3 Technical Guidance for criteria.) If Yes, complete the Special Projects Worksheet (go to the program website at: www.cleanwaterprogram.org and click on "Resources") and consult with municipal staff about the need to prepare a discussion of the feasibility and infeasibility of 100% LID treatment. Indicate the type of non-LID treatment to be used, the hydraulic sizing method*, and percentage of the amount of runoff specified in Provision C.3.d that is treated: Non-LID Treatment / Hydraulic sizing method* / % of C.3.d amount of runoff treated ☑ Media filter — Flow based approach (2.c) — 100% ☐ Tree well filter
☐	☑	Is the project using biotreatment to treat the C.3.d amount of runoff? For more information on infiltration and rainwater harvesting and use of stormwater, refer to the C3 Technical Guidance downloadable at the program website: www.cleanwaterprogram.org If Yes, indicate the biotreatment measures to be used, and the hydraulic sizing method: Biotreatment Measures / Hydraulic sizing method* ☐ Bioretention area ☐ Flow-through planter ☐ Other (specify):
☐	☑	Is the project using infiltration or rainwater harvesting/use? For more information on infiltration and rainwater harvesting and use of stormwater, refer to the C3 Technical Guidance downloadable at the program website: www.cleanwaterprogram.org If Yes, indicate the measures to be used, and hydraulic sizing method: LID Treatment Measure (non-biotreatment) / Hydraulic sizing method* ☐ Rainwater harvesting and use ☐ Bioinfiltration[12] ☐ Infiltration trench ☐ Other (specify):

***Hydraulic Sizing Method:** Indicate which of the following Provision C.3.d.i hydraulic sizing methods were used:

1. Volume based approaches – Refer to Provision C.3.d.i.(1):
   1(a) Urban Runoff Quality Management approach, or
   1(b) 80% capture approach (recommended volume-based approach).
2. Flow-based approaches – Refer to Provision C.3.d.i.(2):
   2(a) 10% of 50-year peak flow approach,
   2(b) Percentile rainfall intensity approach, or
   2(c) 0.2-inch-per-hour intensity approach (this is recommended flow-based approach AND the basis for the 4% rule of thumb described in Section 5.1 of the C.3 Technical Guidance).
3. Combination hydraulic sizing approach – Refer to Provision C.3.d.i.(3):
   If a combination flow and volume design basis was used, indicate which flow-based and volume-based criteria were used.

[12] See Section 6.1 of the C.3 Technical Guidance for conditions in which bioretention areas provide bioinfiltration.

II.G. Is the project a Hydromodification Management[13] (HM) Project? (Complete this section for C.3 Regulated Projects)

II.G.1 Does the project create and/or replace 1 acre (43,560 sq. ft.) or more of impervious surface? (Refer to Item I.B.1.)
☐ Yes. *Continue to Item II.G.2.*
☑ No. *The project is NOT required to incorporate HM measures. Skip to Item II.G.6 and check "No."*

II.G.2 Is the total impervious area increased over the pre-project condition? (Refer to Item I.B.1.)
☐ Yes. *Continue to Item II.G.3.*
☐ No. *The project is NOT required to incorporate HM measures. Skip to Item II.G.6 and check "No."*

II.G.3 Is the site located in a tidally influenced/depositional area, or in the extreme eastern portion of the county that is not subject to HM requirements? *(See HMP Susceptibility Map in Appendix I of the C.3 Technical Guidance.)*
☐ Yes. *Project is exempt from HM requirements. Attach map indicating project location. Skip to II.G.6 and check "No".*
☐ No. *Continue to II.G.4.*

II.G.4 Is the site located in a high slope zone or special consideration watershed, as shown on the HMP Susceptibility Map?
☐ Yes. *Project is subject to HM requirements. Attach map indicating project location. Skip to II.G.6 and check "Yes."*
☐ No. *Continue to II.G.5.*

II.G.5 For sites located in a white area on the HMP Susceptibility Map, has an engineer or qualified environmental professional determined that runoff from the project flows only through a hardened channel or enclosed pipe along its entire length before emptying into a waterway in the exempt area?
☐ Yes. *Project is exempt from HM requirements. Attach signed statement by qualified professional. Go to II.G.6 and check "No."*
☐ No. *Project is subject to HM requirements. Attach map indicating project location. Go to Item G.6 and check "Yes."*

II.G.6 Is the project a Hydromodification Management Project?
☐ Yes. *The project is subject to HM requirements in Provision C.3.g of the Municipal Regional Stormwater Permit.*
☑ No. *The project is EXEMPT from HM requirements.*
☐ HM requirements are impracticable. *(Attach documentation needed to comply with the impracticability provision in MRP Attachment B.)*

➢ *If the project is subject to the HM requirements, incorporate in the project flow duration stormwater control measures designed such that post-project stormwater discharge rates and durations match pre-project discharge rates and durations. The Bay Area Hydrology Model (BAHM) has been developed to size flow duration controls. See www.bayareahydrologymodel.org. Guidance is provided in Chapter 7 of the C.3 Technical Guidance.*

II.H Stormwater Treatment Measure and/HM Control Owner or Operator's Information:

Name: Christian Cerria
Address: 649 Mission Street 5th Floor, San Francisco, CA, 94105
Phone: (571) 212-1733 Email: ccerria@gilbaneco.com

➢ *Applicant must call for inspection and receive inspection within 45 days of installation of treatment measures and/or hydromodification management controls.*

Name of applicant completing the form: Christian Cerria

Signature:_____ Date: 9/22/2022

[13] Hydromodification is the modification of a stream's hydrograph, caused in general by increases in flows and durations that result when land is developed (made more impervious). The effects of hydromodification include, but are not limited to, increased bed and bank erosion, loss of habitat, increased sediment transport and deposition, and increased flooding. Hydromodification management control measures are designed to reduce these effects.

III. For Completion By Municipal Staff

III.1 Alternative Certification: Was the treatment system sizing and design reviewed by a qualified third-party professional that is not a member of the project team or agency staff?
☐ Yes ☐ No Name of Reviewer_____

III.2. Confirm Operations and Maintenance (O&M) Submittal:

The following questions apply to C.3 Regulated Projects and Hydromodification Management Projects.

	Yes	No	N/A
III.2.a Was maintenance plan submitted?	☐	☐	☐
III.2.b Was maintenance plan approved?	☐	☐	☐
III.2.c Was maintenance agreement submitted? (Date executed:_____)	☐	☐	☐

➢ *Attach the executed maintenance agreement as an appendix to this checklist.*

III.3 Incorporate HM Controls (if required)

Are the applicable items for HM compliance included in the plan submittal?

Yes	No	NA	Documentation for HM Compliance
☐	☐	☐	Site plans with pre- and post-project impervious surface areas, surface flow directions of entire site, locations of flow duration controls and site design measures per HM site design requirement
☐	☐	☐	Soils report or other site-specific document showing soil types at all parts of site
☐	☐	☐	If project uses the Bay Area Hydrology Model (BAHM), a list of model inputs.
☐	☐	☐	If project uses custom modeling, a summary of the modeling calculations with corresponding graph showing curve matching (existing, post-project, and post-project with HM controls curves), goodness of fit, and (allowable) low flow rate.
☐	☐	☐	If project uses the Impracticability Provision, a listing of all applicable costs and a brief description of the alternative HM project (name, location, date of start up, entity responsible for maintenance).
☐	☐	☐	If the project uses alternatives to the default BAHM approach or settings, a written description and rationale.

➢ *Municipal staff: Refer to the "Flow Duration Control Review Worksheet for HM Submittals" to review the documentation submitted for HM compliance.*

III.4 Annual Operations and Maintenance (O&M) Submittals:

For C.3 Regulated Projects and Hydromodification Management Projects, indicate the dates on which the Applicant submitted annual reports for project O&M: _____

III.5 Comments:

III.6 Notes:
Section I Notes:_____
Section II Notes:_____
Section III Notes:_____

III.7 Project Close-Out:

III.7.a Were final Conditions of Approval met? ☐ ☐

III.7.b Was initial inspection of the completed treatment/HM measure(s) conducted? ☐ ☐ ☐
(Date of inspection:_____)
III.7.c Was maintenance plan submitted? ☐ ☐ ☐
(Date executed:_____)
III.7.d Was project information provided to staff responsible for O&M verification inspections? ☐ ☐ ☐
(Date provided to inspection staff:_____)

Name of staff confirming project is closed out:_____

Signature:_____ Date:_____

Name of O&M staff receiving information:_____

Signature:_____ Date:_____

Appendices
Appendix A: O&M Agreement
Appendix B: O&M Annual Report Form

Bay-Friendly Basics Landscape Checklist

This Bay-Friendly Basics Checklist is for all new construction and renovation of landscapes that are 2,500 square feet of irrigated area or greater and require a permit. The Bay-Friendly Basics represents the 9 required practices from the Bay-Friendly Landscape Scorecard. It is considered a minimum set of practices to improve the environmental performance of the landscape. Projects are recommended to to meet all applicable measures on the checklist. For measures that are not applicable or are not in the project's scope of work, check "N/A" and make a note of why the measure does not apply to the project (attach additional sheets if necessary). For electronic copies of this checklist, and other Bay-Friendly Landscaping resources, visit: www.BayFriendly.org

Project: 2115 Kittredge Street

Address: Berkeley, CA **Date:** 9/23/22

Earthwork & Soil Health

Yes	No	N/A	Measure & Requirement	Documentation	Notes
☑	☐	☐	**1. Mulch** **Requirement** All soil on site is protected with a minimum of 3 inches of mulch after construction. **Recomendation** Use recycled or greenwaste mulch instead of landscape fabric. Trees identified for removal are chipped and used on site as mulch, on-site storage space permitting. **Reference** *Bay-Friendly Landscape Guidelines*, Practice 4.1; *Bay-Friendly Guide to Mulch*, available at www.BayFriendly.org. Provides sources of recycled mulch and proper application of mulch and information on sheet mulching.	• Submit square footage of planting areas as well as cubic yards required to cover planting areas to a minimum three-inch (3") depth. • Submit a delivery ticket or receipt of purchased mulch and/or, • Submit receipts for sheet mulching materials and/or, • (Optional) Submit photos of trees being chipped for mulch (if applicable).	See L2.00 for SF of planting areas and CY of mulch. Remaining information to be submitted during construction.
☑	☐	☐	**2. Amend the Soil with Compost Before Planting** **Requirement** Compost is specified as the soil amendment, at the rates indicated by a soil analysis to bring the soil organic matter content to a minimum of 3.5% by dry weight or 1 inch of compost. If the imported or site soil meets the organic content of 3.5% or more, then the requirement is waived. **Recommendation** Purchase compost from a producer who participates in the U.S. Composting Council's Standard Testing Assurance(STA) program to ensure quality. **Reference** *Bay-Friendly Landscape Guidelines*, Practice 4.1; Model Bay-Friendly Soil specifications, at www.BayFriendly.org; U.S. Composting Council Standard Testing Assurance program explanation and list of participating producers can be found at: www.compostingcouncil.org	• Submit the site soil or imported topsoil analysis. No soils analysis is required if 1" of compost is used. • Submit+H35 compost details from construction documents. • Submit the receipt or delivery ticket for the compost, indicating the amount of the compost delivered/purchased. *If a waiver is requested based on soil organic matter content or the needs of plant palette,* • Submit a completed plant palette with species that need little/no soil organic matter identified, and include the source of information on their soil needs OR • Submit a soils report that indicates the soil has an organic matter content of 3.5% or greater.	Soil analysis to be submitted with building permit application.

Bay-Friendly Basics Landscape Checklist

Yes	No	N/A	Measure & Requirement	Documentation	Notes
☑	☐	☐	**3. Reduce and Recycle Landscape Construction Waste** **Requirement** Divert 50% of landscape construction and demolition waste by weight. Verify the local jurisdiction's minimum requirement and reporting procedures for construction and demolition (C&D) recycling. **Reference:** StopWaste.Org, *Builders' Guide to Reuse & Recycling: A Directory for Construction and Demolition Materials* and sample Waste Management Plan for recycling C&D materials at www.BuildGreenNow.Org.	• State the percent diversion goal in the design documents. • List specific goals and recycling and reuse requirements in plans and specifications. • Require contractors to review the waste management plan with subcontractors and to include contract language requiring subcontractors comply with the plan. • Prior to construction, complete a construction waste management plan. The City should provide a smaple template, or one can be downloaded at www.BuildGreenNow.org. • After construction, provide final waste management plan with backup documentation. If materials were sent to a C&D Recycling facility, apply a facility average diversion rate because not all materials can be recycled. Most large C&D facilities have a calculated diversion rate and can provide you with documentation stating the percentage of materials recycled at that facility (typically 50% to 90%).	Percent diversion to be included in project specifications.

Planting

Yes	No	N/A	Measure & Requirement	Documentation	Notes
☑	☐	☐	**4. Choose & Locate Plants to Grow to Natural Size** **Requirement** Species will be selected and plants spaced to allow them to grow to their natural size and shape . Pruning for structural integrity and health of plant is permitted. In addition, plants located in a row or adjacent to buildings, sidewalks or roads will be spaced between their minimum and maximum mature plant spread according to a published reference plant book and still fit into thier planting area without significant overhang. Trees must meet the spacing requirements only when adjacent to buildings, in a row or other adjacent to other vertical obstructions. Vines are not subject to spacing requirements. **Reference** *Bay-Friendly Landscape Guidelines* , Practices 2.1, Bay-Friendly Plant lists are available at www.BayFriendly.org; Bronsetin,Carol, David Fross and Bart O'Brien, *California Native Plants for the Garden;* East Bay Municipal Utility District, *Plants and Landscapes for Summer Dry Climates;* Sunset,*Western Garden Book.*	• Submit plant legend indicating plant species, spacing and mature spread of plant. Indicate the source of information on spacing and spread. • Submit a statement signed by the Landscape Architect, Designer or Contractor verifying that installed plants meet this requirement.	Signed statement to be provided upon completion of construction.

Bay-Friendly Basics Landscape Checklist

Yes	No	N/A	Measure & Requirement	Documentation	Notes
☑	☐	☐	**5. Do Not Plant Invasive Plant Species** **Requirement** None of the plant species listed by CAL-IPC's Don't Plant a Pest as invasive in the San-Francisco, Bay Area are included in the planting plan. **Definition** An invasive speices is defined as a species that is non-native (or alien) to the ecosystem under consideration and whose introduction causes or is likeley to cause economic or environmental harm or harm to human health. Federal Executive Order 1311. **Reference** Bay-Friendly Landscape Guielines, Practice 2.1d; Don't Plant A Pestbrochures for trees and plants available at www.cal-ipc.org; www.cal-ipc.org/ip/inventory/weedlist.php.	• Compare the complete list of plants in the plant palette to the Cal-IPC list of plants that are invasive to the San Francisco Bay-Area. • Submit the complete plant palette. • Submit a statement signed by the Landscape Architect, Designer or Contractor confirming that no invasive species were substituted for specified species.	Signed statement to be provided upon completion of construction.
☑	☐	☐	**6. Grow drought tolerant CA native, Mediterranean or climate adapted plants** **Requirement** A minimum of 75% of the total number of plants in non-turf areas must be species that require no or little summer watering once established. Species should be adapted to the climate in which they will be planted, as referenced by a published plant reference. If plants are given a range of water needs from "occasional to moderate" for example, the landscape designer must determine if the plant will require either occasional or moderate watering based on site, soil, and climate conditions and categorize the plant appropriately. **Recommendation** California native or Mediterranean species are strongly recommended. **Reference** *Bay-Friendly Landscape Guidelines* Practice 4.2; www.owue.water.ca.gov/docs/wucols00.pdf.	• Submit a plant legend that identifies species, number of plants, irrigation requirements (and reference source of the water requirement), total number of drought tolerant plants and total number of non-turf plants. (download a Bay-Friendly plant legend template to facilitate this process at www.BayFriendly.org) • Submit a statement signed by the Landscape Architect, Designer or Contractor verifying that installed plants meet this requirement.	Bay Friendly plant legend is included in drawing set. Signed statement to be provided upon completion of construction.

Bay-Friendly Basics Landscape Checklist

Yes	No	N/A	Measure & Requirement	Documentation	Notes
☐	☐	☑	**7. Minimize the lawn** **Requirement** A maximum of 25% of total irrigated area is specified as turf, with sports or multiple use fields exempted. **Reference** *Bay-Friendly Landscape Guidelines*, Practice 4.3; Bay-Friendly Lawn Alternatives plant list at www.BayFriendly.org; Brooklyn Botanic Garden *Publications, Easy Lawns, Low Maintenance Native Grasses for Gardeners Everywhere.*	• Submit calculations of square feet of turf, excluding sports and multiple use fields, and square feet of total irrigated area. • Submit planting plans with sports and multiple use fields identified. Include a statement about the purpose of multiple use fields. • Submit as statement signed by the Landscape Architect, Designer or Contractor that installed turf meets the requirements for this credit.	No turf included in project.

Irrigation

Yes	No	N/A	Measure & Requirement	Documentation	Notes
☑	☐	☐	**8. Specify Weather-Based Irrigation Controllers (automatic, self-adjusting)** that Includes a Moisture &/or Rain Sensor Shutoff **Requirement** Weather-based irrigation controllers, soil moisture based controllers or other self-adjusting irrigation controllers, shall be required for all irrigation systems. **Reference** *Bay-Friendly Landscape Guidelines* , Practice 4.6; EBMUD website has a list of recommended self adjusting controllers at www.ebmud.com.	• Submit the make and model and product sheet of the irrigation controller. • Provide a statement signed by the Landscape Architect, Designer or Contractor that the installed controller is a self-adjusting model and includes shut off capacity.	See sheet L3.04 Signed statement to be provided upon completion of construction.
☑	☐	☐	**9. Sprinkler & Spray Heads are Not Specified for Areas Less Than 8 Feet Wide** **Requirement** Sprinkler and spray heads are not specified in areas less than or equal to 8 feet wide to prevent overspray and runoff. Acceptable alternatives include drip, subsurface drip, bubblers or no irrigation. Bubblers shall not exceed 1.5 gallons per minute per bubbler.	• Submit statement signed by the Landscape Architect, Designer or Contractor verifying that irrigation as installed does not have sprinkler or spray heads in planted areas less than 8 feet wide.	See sheet L3.04 Signed statement to be provided upon completion of construction.

Bay-Friendly Basics: Bay-Friendly Basics represents the 9 required practices in the Bay-Friendly Landscape Scorecard. Landscapes that achieve the Bay-Friendly Basics will achieve significant environmental benefits for the project and community as well as taking the first step toward becoming a Bay-Friendly Rated Landscape. If a project is interested in seeking to qualify as a Bay-Friendly Rated Landscape, it must also earn a minimum of 60 points on the Bay-Friendly Landscape Scorecard and be evaluated by a qualified Bay-Friendly Rater. Please visit www.BayFriendlyCoalition.org to learn more about taking this next step in sustainability. The Bay-Friendly Basics is not a substitute for exercising sound judgment in particular circumstances. Rather, the Bay-Friendly Basics is designed to help local governments raise the minimum environmental requirements for landscape projects that require a permit.

This checklist works well with the Small Commercial Green Building Checklist available at www.stopwaste.org/smallcommercial.

1. FACE OF WALL OR BUILDING.
2. LEAN NURSERY STAKE AGAINST THE WALL. STAKE TO BE REMOVED AT THE END OF THE MAINTENANCE (WARRANTY) PERIOD AFTER THE VINE HAS ATTACHED TO THE WALL.
3. VINE.
4. ROOT BALL.
5. 4" X 8" WIDE ROUND - TOPPED SOIL BERM ABOVE ROOT BALL SURFACE SHALL BE CONSTRUCTED AROUND THE ROOT BALL. BERM SHALL BEGIN AT ROOT BALL PERIPHERY.
6. PRIOR TO MULCHING, LIGHTLY TAMP SOIL AROUND THE ROOT BALL IN 6" LIFTS TO BRACE SHRUB. DO NOT OVER COMPACT. WHEN THE PLANTING HOLE HAS BEEN BACKFILLED, POUR WATER AROUND THE ROOT BALL TO SETTLE THE SOIL.
7. 4" LAYER OF MULCH. NO MORE THAN 1" OF MULCH ON THE TOP OF THE ROOT BALL. (SEE SPECIFICATIONS FOR MULCH).
8. FINISHED GRADE.
9. PAVEMENT.
10. MODIFIED SOIL. DEPTH VARIES. (SEE SPECIFICATIONS FOR SOIL MODIFICATION).
11. LOOSENED SOIL DIG AND TURN THE SOIL TO REDUCE THE COMPACT TO THE AREA AND DEPTH SHOWN.
12. ROOT BALL RESTS ON EXISTING OR RECOMPACTED SOIL.
13. EXISTING SOIL.

NOTES:
1- VINES SHALL BE OF QUALITY AS PRESCRIBED IN THE ROOT OBSERVATIONS DETAIL AND SPECIFICATIONS.

2- SEE SPECIFICATIONS FOR FURTHER REQUIREMENTS RELATED TO THIS DETAIL.

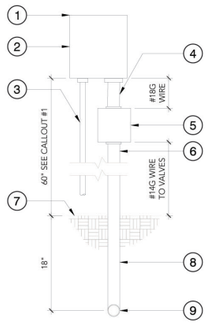
15TH FLOOR
IRRIGATION PLANS

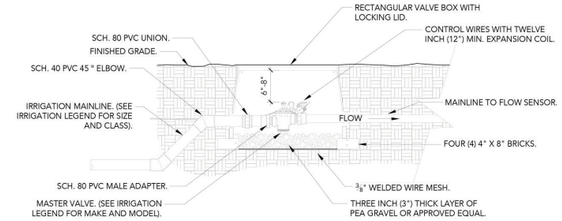
L303



1. SET CONTROLLER 60" ABOVE FINISHED GRADE UNLESS OTHERWISE NOTED
2. CONTROLLER AS SPECIFIED, SECURELY BOLTING CONTROLLER TO WALL OR AS PER MANUFACTURER SPECIFICATIONS. INSTALL BACKUP BATTERIES AS REQUIRED. GROUND AS PER MANUFACTURER SPECIFICATIONS
3. 1/2" DIAMETER RIGID STEEL CONDUIT FOR 110VAC ELECTRICAL SOURCE. INSTALL AS PER LOCAL ELECTRICAL CODES
4. 1-1/2" DIAMETER RIGID STEEL CONDUIT FOR RCV WIRES
5. 12" x 12" x 4" STEEL JUNCTION BOX. GROUP WIRE BUNDLES AND SPLICE TO 18 GA. WIRES WITH TERMINAL STRIP AS PER SPECIFICATION
6. 2" DIAMETER RIGID STEEL CONDUIT FOR RCV WIRES
7. FINISHED GRADE
8. LONG SWEEP ELL
9. USE PVC SCH. 40 BELOW GRADE

8 WALL MOUNT CONTROLLER W/ J-BOX

1" = 1'-0" FX-IR-FX-CONT-07



NOTES:
1- MASTER VALVE SHALL BE MAKE AND MODEL NUMBER AS PRESCRIBED PER THE CONTROLLER MANUFACTURER'S SPECIFICATIONS.

2- INSTALL MASTER VALVE PER MANUFACTURER'S SPECIFICATIONS AND RECOMMENDATIONS.

3- MASTER VALVE WIRE SHALL BE 14 AWG OR LARGER. COLOR: BLACK.

4- ALL WIRE RUNS SHALL BE CONTINUOUS WITHOUT ANY SPLICES. WIRE CONNECTIONS SHALL BE MADE USING DBR-Y/6 CONNECTORS OR APPROVED EQUAL.

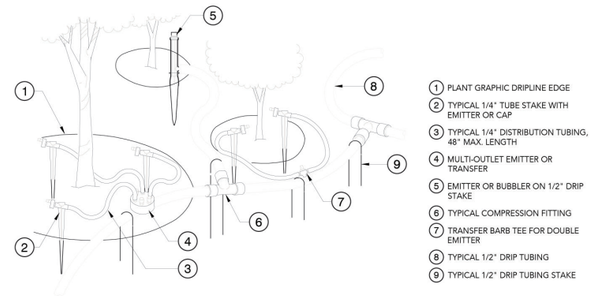
5- WRAP VALVE BOX WITH MIN. 3 MIL. THICK PLASTIC AND SECURE IT TO THE VALVE BOX USING DUCT TAPE OR ELECTRICAL TAPE.

6- SEE MASTER VALVE/ FLOW SENSOR DETAIL FOR LINEAR DIMENSIONS.

7- VALVE BOXES SHALL BE LOCATED IN PLANTING AREAS.

6 MASTER VALVE

1" = 1'-0" FX-IR-FX-MAST-02

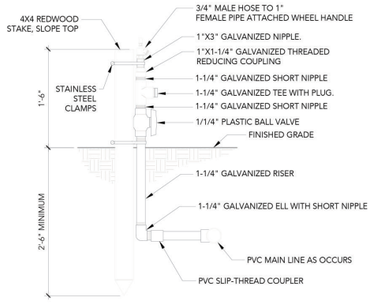


1. PLANT GRAPHIC DRIPLINE EDGE
2. TYPICAL 1/4" TUBE STAKE WITH EMITTER OR CAP
3. TYPICAL 1/4" DISTRIBUTION TUBING, 48" MAX. LENGTH
4. MULTI-OUTLET EMITTER OR TRANSFER
5. EMITTER OR BUBBLER ON 1/2" DRIP STAKE
6. TYPICAL COMPRESSION FITTING
7. TRANSFER BARB TEE FOR DOUBLE EMITTER
8. TYPICAL 1/2" DRIP TUBING
9. TYPICAL 1/2" DRIP TUBING STAKE

NOTES:
1. PLACE EMITTERS 3/4 BETWEEN THE TRUNK AND OUTER DRIPLINE.
2. EVENLY SPACE EMITTERS AROUND PLANT.
3. STAKE THE DRIP TUBING AT EACH TEE, ELL, COUPLER, AT EACH EMITTER OR TRANSFER, AND AT 6'-0" MAX O.C.

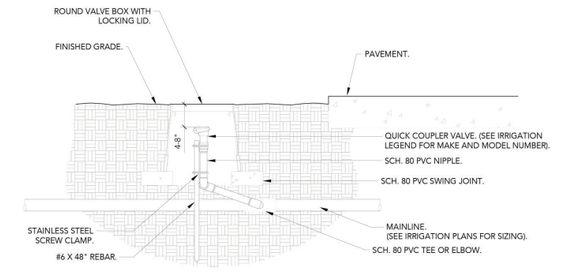
3 TYPICAL DRIP TUBING

1 1/2" = 1'-0" FX-IR-FX-DRIP-01



7 HOSE BIBB AT GARDEN

1" = 1'-0" FX-IR-FX-HSB-04



NOTES:
1- ALL THREADED CONNECTIONS SHALL BE INSTALLED USING TEFLON TAPE.

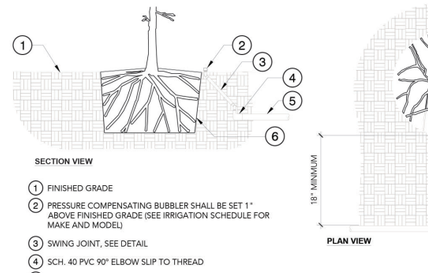
2- VALVE BOX SHALL BE WRAPPED WITH A MINIMUM 3 MIL THICK PLASTIC AND SECURED TO THE VALVE BOX USING DUCT TAPE OR ELECTRICAL TAPE.

3- ALL QUICK COUPLERS SHALL BE INSTALLED A MINIMUM OF 18" OFF OF THE MAINLINE.

4- VALVE BOXES SHALL BE LOCATED IN PLANTING AREAS.

5 QUICK COUPLER VALVE

1 1/2" = 1'-0" FX-IR-FX-QUIC-01

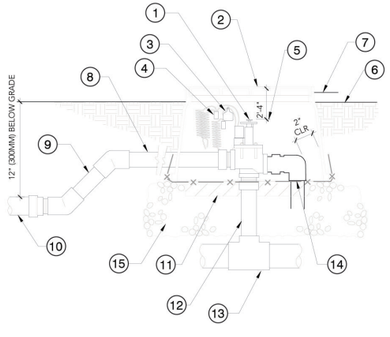


1. FINISHED GRADE
2. PRESSURE COMPENSATING BUBBLER SHALL BE SET 1" ABOVE FINISHED GRADE (SEE IRRIGATION SCHEDULE FOR MAKE AND MODEL)
3. SWING JOINT, SEE DETAIL
4. SCH. 40 PVC 90° ELBOW SLIP TO THREAD
5. LATERAL LINE IRRIGATION (SEE IRRIGATION PLANS FOR SIZING)
6. EDGE OF ROOT BALL. SETTLE BACKFILL SO IRRIGATION FLOWS THROUGH ROOT BALL
7. EDGE OF ROOT BALL
8. EXISTING OR MODIFIED SOIL (SEE SPECIFICATIONS FOR SOIL MODIFICATION)
9. SCH. 40 PVC TEE OR 90° ELBOW

NOTES:
1. ALL IRRIGATION FITTINGS SHALL BE SCH. 40 PVC UNLESS SPECIFIED OTHERWISE.
2. ALL THREADED CONNECTIONS FROM SCH. 40 TO SCH. 80 PVC SHALL BE MADE USING TEFLON TAPE.
3. CONTRACTOR SHALL SETTLE THE AREA AROUND THE BUBBLER AND EDGE OF THE ROOT BALL SO THAT ALL IRRIGATION FLOWS THROUGH THE ROOT BALL.

2 IRRIGATION BUBBLER W/ LAYOUT

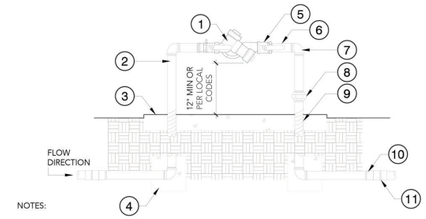
3/4" = 1'-0" FX-IR-FX-BUBB-04



1. REMOTE CONTROL VALVE AS SPECIFIED, ONE PER BOX.
2. 10X15 RECTANGULAR VALVE BOX.
3. PLASTIC I.D. TAG AT EACH VALVE.
4. WATER PROOF WIRE CONNECTORS ON 30" LOOPED WIRES.
5. 2" (50MM) MINIMUM, 4" (100MM) MAXIMUM BELOW TOP OF BOX.
6. 2" (100MM) ABOVE FINISH GRADE AT SHRUBS.
7. 3/4" (19MM) ABOVE FINISH GRADE AT LAWN.
8. OUTLET PIPE SAME SIZE AS VALVE, 24" MINIMUM (300MM) TO FIRST FITTING.
9. 45 DEGREE DOWN AS REQUIRED TO LATERAL PIPE DEPTH.
10. INCREASE LATERAL LINE SIZE AS PER IRRIGATION PLAN.
11. TWO 6X2X16 CONCRETE BLOCK CAPS, ONE EACH SIDE OF THE BOX.
12. SCHEDULE 80 RISER.
13. MAIN LINE AS OCCURS.
14. 1/2" WIRE CLOTH GOPHER SCREEN, WRAP UP SIDES.
15. 6" (150MM) THICK LAYER OF PEA GRAVEL BASE.

4 REMOTE CONTROL VALVE

1 1/2" = 1'-0" FX-IR-FX-RCV-01



1. BACKFLOW PREVENTION DEVICE (SEE IRRIGATION PLANS FOR MAKE AND MODEL). INSTALL DEVICE PER THE LOCAL WATER PURVEYOR'S STANDARDS AND SPECIFICATIONS
2. GALVANIZED NIPPLE
3. 4" THICK CONCRETE PAD, 1" ABOVE FINISHED GRADE. SEE BACKFLOW CAGE DETAIL
4. CONCRETE THRUST BLOCKS REQUIRED ON BACKFLOW DEVICES 2-1/2" AND LARGER
5. BRASS BALL VALVE
6. THREADED GALVANIZED NIPPLE
7. GALVANIZED 90° (DEGREE) ELBOW
8. GALVANIZED UNION
9. WRAP 20 MIL TAPE TWICE AROUND GALVANIZED PIPE UNDER FINISHED GRADE AND THROUGH THE CONCRETE
10. GALVANIZED COUPLING
11. SCH. 80 PVC MALE ADAPTER

NOTES:
1. ALL ASSEMBLY PARTS (THREADED NIPPLES, FITTINGS, ETC.) SHALL BE GALVANIZED OR BRASS PER LOCAL CODES AND REQUIREMENTS.
2. GALVANIZED NIPPLE SHALL EXTEND 12" PAST THE EDGE OF THE CONCRETE FOOTING.
3. SCH. 80 PVC MALE ADAPTER SHALL BE USED IN CONNECTION FROM GALVANIZE TO THE MAINLINE.
4. BACKFLOW PREVENTION DEVICE SHALL BE LOCATED AS CLOSE AS POSSIBLE TO THE LANDSCAPE METER.
5. BACKFLOW PREVENTION DEVICE SHALL BE LOCATED IN PLANTING AREA UNLESS APPROVED BY OWNER'S REPRESENTATIVE.
6. SEE DETAIL FOR BACKFLOW CAGE INSTALLATION.
7. ALL BACKFLOW PREVENTION DEVICES SHALL HAVE FREEZE BLANKET INCLUDED UPON INSTALLATION.
8. ALL GALVANIZED CONNECTIONS SHALL TO BE MADE USING PIPE THREAD SEALANT. ALL SCH. 80 PVC TO GALVANIZED CONNECTIONS TO BE MADE USING TEFLON TAPE.

1 BACKFLOW PREVENTION DEVICE

3/4" = 1'-0" FX-IR-FX-BACK-02

PRODUCT DESCRIPTION

The latest energy efficient LED technology in an appealing cylindrical profile delivers accent and wall wash lighting. Comes in various light distribution and beam angle options.

FEATURES

- Single light extended body high performance exterior rated LED wall mount
- Fixture can install upside down to alter light distribution
- Solid aluminum construction
- 5 year warranty

SPECIFICATIONS

Input: Universal voltage 120V - 277VAC, 50/60Hz
Dimming: Electronic low voltage (ELV) : 100% - 5%
0-10V: 100% - 1%
Light Source: High output 3 Step Mac Adam Ellipse COB
Rated life of 60,000 hours at L70
Finish: Electrostatically powder coated, white, black, bronze and graphite
Standards: IP65 rated, ETL & cETL wet location listed,
Energy Star® 2.2 rated Title 24 JA8-2016 Compliant
Operating Temp: -13°F to 122°F (-25°C to 50°C)

San Francisco, CA 94105

Sent via email to:
ccerria@gilbaneco.com

RE: Application for Use Permit #ZP2022-0144 for 2113-15 Kittredge Street

Dear Mr. Cerria,

Thank you for submitting the materials to support the proposal to demolish the existing commercial building (preserving the landmarked portions), and construct a 15-story, mixed-use building with 214 dwelling units and a 20,000 SF live theater facility in the C-DMU (Core) Zoning District at 2113-15 Kittredge Street (APN 057-2030-009).

Application – Based upon a preliminary review, the application appears to include the following approval requests:

1. Use Permit under BMC Section 23.204.020(A) to construct a new mixed-use development
2. Administrative Use Permit under BMC Section 23.304.050(A) to exceed building height limits with rooftop architectural elements which exceed the maximum height limit for the district
3. Density Bonus with the following requested reductions, waivers and concessions:

   Waivers

   a. Waiver of BMC Section 23.04.130(E)(1) to exceed building height limits – to be 168' to roof and 176'-4" to parapet, where 75 feet is the limit (plus 5-foot parapet, by right, with a use permit)

   b. Waiver of BMC Section 23.204.130(E)(3) to reduce the side and rear setback minimums to 3 feet, where 5 feet and 15 feet are required, at 76 to 120-foot building height, and above 120-foot building height

   c. Waiver of BMC Section 23.204.130(E)(3) to increase front setback maximum, where 5 feet maximum is required, at 0-20-foot building height

   d. Waiver of BMC Section 23.322.090(A) to provide no commercial bicycle parking, where 10 short-term is required

   Concessions [Three concessions permitted, per Government Code §65915(d)(2)]: None.

Staff has reviewed the application and has determined that the following **additional** approvals will be required for the proposed project. (See below for additional fees due):

1. Use Permit under BMC Section 23.326.070(A) to demolish a non-residential building
2. Use Permit under BMC Section 23.204.020(A) to construct dwelling units
3. Use Permit under BMC Section 23.204.020(A) to construct a theater (live)
4. Use Permit under BMC Section 23.204.030(B)(1) to create new floor area of 10,000 square feet or more
5. Use Permit under BMC Section 23.04.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right)
6. Use Permit under BMC Section 23.04.130(E)(3)(b) to modify side and rear setback requirements
7. Use Permit under BMC Sections 23.322.030(j)(2) and 23.322.050(A)(10) to reduce the commercial parking requirement to zero and pay an in-lieu fee

Incomplete Items – Staff has also determined that application is incomplete at this time. Please address the following items to continue with the application review:

1. Fees. The additional approvals listed above require a payment of fees for each. Fees for additional approvals will be due once they are finalized and an invoice will be sent to you. Please be aware that with the submittal of information requested by staff, additional approvals may be added to the permit and associated fees will be due.

2. Additional Use Permits.

    a. Will the theater need an AUP for extended hours outside of 6 a.m. to 2 a.m?

    b. Will the theater concessions require an AUP for activities outside of a building to use the outdoor space for consumption of food/beverage? Similarly, an AUP may be needed for outdoor movies and fitness uses.

    c. Will the theater concessions be serving distilled alcohol?

    d. Will the project seeking a UP to pay the residential Usable Open Space in-lieu fee, or will a waiver and concession be used for not providing the minimum UOS?

    e. Will the project be seeking a concession to not provide the minimum of 40% of landscaped UOS area? It is listed as a waiver, but it is unclear how this is a physical limitation for the project. Explain how the request qualifies as a waiver. It may be more suitable as a concession, which is a cost reduction for the project.

    f. Please remove the language referring to "Modification" from the table in G000. These are UPs that are included in the Base Project.

3. Rooftop Elements. Provide a calculation showing how a sum of the rooftop element areas do not exceed the 15% of average building floor area. Calculations should include all area underneath trellises, or other covered outdoor areas.

4. Density Bonus Diagrams/Calculations. Base Project = BP; Proposed Project = PP; AUS=Average Unit Size; QU=Qualifying Units; DBU=Density Bonus Units; RFA=Residential Floor Area.

a. The amount of commercial area, proportionate to the residential area in the BP, is not substantially similar to the respective proportion in the PP. The proportion should be similar for calculation of the density bonus. Revisions to the commercial area in the BP should follow with revised calculations for affected development standards in the BP to show compliance.

b. RFA should not include mechanical, or building operation areas. RFA should include trash rooms for residents. Trash area for the theater should be included separately in the total commercial area.

5. Zoning Application Submittal Requirements. The following required items were incomplete from the application submittal:

   a. Yellow Poster. Provide plastic sleeves on the poster at the site for display of public meeting notices.

   b. Shadow Studies.

      i. Include a north arrow on the plan views and/or label the streets on the 3d view.

      ii. Check the angles of the shadows for 6/21 and 9/22, 2 hours after sunrise and 2 hours before sunset – the time of day at sunrise/sunset should be different on each date, as should the angle of the shadows.

   c. On-site Art. Indicate the location and provide a description of the on-site art that will satisfy the Percent for Art requirement.

   d. Hazardous Materials. Submit the Phase II report that is recommended in the Phase I report.

   e. Tabulation Form. Please revise the Tabulation Form to reflect changes made in response to all other comments in this letter.

   f. Design Review. DR comments will be sent to you separately. Please respond to these comments in your next submittal, and copy Anne Burns for all submittals.

Advisory Comments

1. Level CEQA of Review. Staff will determine the level of CEQA review for the project within 30 days of the application being deemed complete.

2. Interdepartmental Roundtable Meeting. An interdepartmental review will be scheduled as an opportunity for you to receive comments on the project from City departments such as Building and Safety, Transportation, Zero Waste, Parks, Toxics and Public Works. I will coordinate with you to schedule a time when you can attend.

Revised submittal items should be uploaded to the Box.com website link previously provided to you. If possible, submit one 11x17 print set to my attention, to the Permit Service Center at 1947 Center Street, 3rd floor. Please submit responses to all requested items at once, and not incrementally. Also, please be aware that if you do not take action on the above items within 60 days, the application may be deemed withdrawn and returned to you.

Should you have questions regarding this letter or your application, please feel free to contact me.

Sincerely,

Sharon Gong

Land Use Planning

November 30, 2022

Dear Committee Members,

My name is Marisela Carvalho. I am a long-time Berkeley resident that currently resides at Oxford Plaza Apartments located at 2175 Kittredge Street. I write on behalf of myself, my 10-year-old son, and the dozens of deserving Berkeley residents living at the Oxford Plaza. It is this particular community that will be primarily affected by the project decision on the City Landmark: California Theater building (located on 2113-2115 Kittredge).

At best, the City of Berkeley and the University of California have been ignoring the special needs that apply to a population that is already under-resourced and vulnerable. Oxford Plaza Apartments is considered an affordable housing complex. Many residents do live on a fixed income. Most, however, are hard-working and taxpaying individuals. We **all** deserve better.

In recent years, the City and the UC have approved construction projects that have had severe negative impacts on the residents of Oxford Plaza. In 2019, the residents lived through the demolition of a structure located on the UC campus, on Oxford Street, right across the street from the Oxford Plaza building. This area has been turned into a parking lot.

There is current construction on Kittredge Street. Student housing is being built at 2150 Kittredge, on the same street as Oxford Plaza. Beginning with the removal of the Touchless Car Wash and Gasoline station, this project is already in its second year. It is expected to last at least another year. When it is all said and done, this new building will tower over ours, blocking the sun. Again, the long-term impact of this project will be felt only by the residents of Oxford Plaza.

I would like to highlight just some other problems that the City of Berkeley and the UC have created for the residents of Oxford Plaza:

STREETS and SIDEWALKS: The construction has made these streets more dangerous for individuals that are visually impaired and/or use mobility devices. I, myself, have brittle bones disease which requires me to use a power wheelchair. Downtown now has too many sidewalks and streets that are blocked, making it difficult for individuals with disabilities to maneuver around. There are potholes and cones to contend with. Having to find alternate (longer) routes in daily life hurt bodies that are already pushed to its limit. These are minor inconveniences, however, when compared to the actual possibility of death. Wheelchair users, children, short-statured individuals, and anyone who cannot react quick enough is in danger of being involved in a fatal accident. I fear for my safety in Downtown. It has changed for the worst in terms of being an accessible haven for the disabled.

On October 20, Mr. William Evans, a marine veteran, was crossing Bancroft street with his wheelchair, when he was struck by a truck that did not see him. [Police report is forthcoming].

DELIVERIES: Kittredge Street has become a one-way street. This has affected the delivery of essential goods, mail, and medical supplies that residents rely on. Furniture delivery is impossible on weekdays.

DUST, GAS, & WATER: Since construction at 2150 Kittredge Street, the residents of Oxford Plaza has had to deal with a gas leak, water shut-off, toxic water, and daily dust. The Oxford building does not have central air conditioning. In the summer, many do not have a choice but to leave windows open. This is physically harmful.

[See attached list of references]

NOISE POLLUTION: The noise pollution that residents experience is incessant. Monday through Saturdays, garbage and recycling trucks start as early as 3:55 a.m. Adding to that is the noise from the actual construction which does not sometimes obey the noise ordinance rules. Finally, I would like to address the newly added stress of the constant towing occurring on the parking lot owned by the UC. As mentioned earlier, this is directly across the street from the Oxford Plaza building. The towing occurs every home game, including last Friday's game against UCLA. This is a day typically reserved for resting and leftovers. That is not what Oxford residents were served. The towing went on for at least 5 hours. On weekdays, towing has started as early as 4:30 a.m. This is unacceptable.

There is extensive research concluding that noise pollution causes an increase in cardiovascular diseases; sleep disturbances; stress; type 2 diabetes; cognition problems (including memory impairment); childhood learning delays; low birth weight; and of course, hearing loss. It is also linked to a loss of productivity.

Research findings also show that individuals and households of lower socio-economic status (SES) are more susceptible to these adverse effects. A study conducted by Denham & Schell (2003) states that, **"Disproportionate pollutant exposure by socioeconomically disadvantaged groups exacerbates risk of poor health and well being"** (p. 111). Additionally, individuals who are undergoing tremendous stress are more likely to engage in risky behaviors such as tobacco use or substance abuse.

Was this information not available to one of the leading research institutes in the nation or was it simply ignored?

[See attached list of references]

Berkeley was the epicenter of the Disability Rights Movement. Leaders like Ed Roberts and Judy Heumann fought for access and independence. The first Center for Independence office was opened on Telegraph Avenue in 1972. I love that about Berkeley and it is why I moved here. I craved access and I craved community.

Over time, I have found community. It is this same community that I may be forced to leave because these are no longer sustainable living conditions. Due to the housing crisis and high cost of living, most residents are not able to move. The City should take this into consideration when making major project decisions that primarily affect this community. The City has provided this community with affordable housing but it has not provided a quality of life for its residents.

Oxford Plaza is comprised of mothers, grandmothers, educators, nursing students, Cal graduates, retired lawyers, Uber drivers, hospice caretakers, and most importantly, children.

Does the City of Berkeley care only about its Cal students and wealthy residents?

Thank you for your time and thoughtful consideration.

Sincerely,

Marisela Carvalho

To whom it may concern:

I am a ten year old living with his single mom at the Oxford apartments. I go to a bilingual school named Sylvia Mendez. One thing that I've noticed for a long time is that the city of Berkeley is being unfair to the 200 (give or take) Oxford residents. One major issue is that we live right next to construction. My mom (and all other residents who drive a car) find it very hard to make it out of the driveway. Sometimes I'm late to school because the construction is blocking our garage. There's cones everywhere and sometimes cars don't even see us crossing. Another big problem is that there's so much noise. Whenever I'm trying to do my homework, all that I can hear are cranes and hammers. Other loud beeps come from the tow trucks. I can always hear them going at it. Last time the noise went on till 9:00 p.m. They start so early that it wakes me up when it is still dark. Sometimes the water is shut off. When it comes back on it looks purplish and unsanitary. My mom says it is too unsafe to stay here anymore. I don't want to lose my friends but I also don't want to lose my mom.

-I hope you can make Berkeley a better place

Dylan Carvalho

Noise effects in children

"Children may be more prone to the adverse effects of noise because they may be more frequently exposed….and they are more susceptible to the impact of noise". (Tamburlini, 2002)

Reference:

<<READ SLIDE>>

Exposure to excessive noise and vibration during pregnancy may result in high frequency hearing loss in the newborn, may be associated with prematurity and growth retardation, although the scientific evidence remains inconclusive.

The role of the amniotic fluid is not yet defined, nor when and which noises or vibrations can damage the fetal development of the auditory system (e.g. cochlea). Concern about synergism between exposure to noise and ototoxic drugs remains incompletely defined. There are studies on fetal audition dating from 1932 that explore the reaction of the fetus to external noises but even today this remains incompletely characterized.

Children and noise

VULNERABLE GROUPS OF CHILDREN

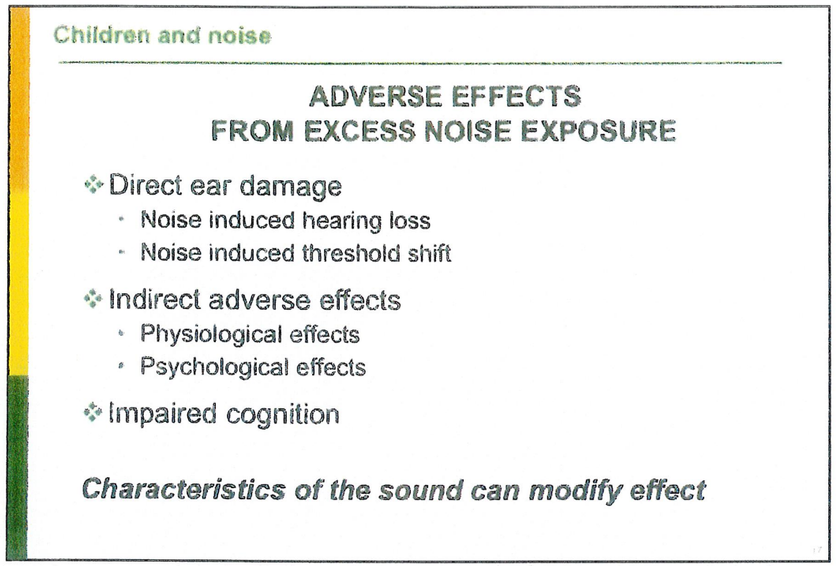
- The fetus and babies
- Preterm, low birth weight and small for gestational age babies
- Children with dyslexia and hyperactivity
- Children on ototoxic medication

It is logical to consider certain subgroups of children (since conception) to be particularly at risk for harm from excess noise exposure. These include the fetus, babies and very young infants born preterm, with low birth weight or small for gestational age. Also, children who have learning disabilities or attention difficulties may be more likely to develop early problems with mild hearing loss compared to children without these challenges, and children on ototoxic medications may have higher likelihood of developing problems from exposure to excess noise.

Reference:

•Carvalho WB, et al. Noise level in a pediatric intensive care unit. *J Pediatr* , 2005, 81:495-8.

OBJECTIVES: The purpose of this study was to verify the noise level at a PICU. METHODS: This prospective observational study was performed in a 10 bed PICU at a teaching hospital located in a densely populated district within the city of São Paulo, Brazil. Sound pressure levels (dBA) were measured 24 hours during a 6-day period. Noise recording equipment was placed in the PICU access corridor, nursing station, two open wards with three and five beds, and in isolation rooms. The resulting curves were analyzed. RESULTS: A basal noise level variation between 60 and 70 dBA was identified, with a maximum level of 120 dBA. The most significant noise levels were recorded during the day and were produced by the staff. CONCLUSION: The basal noise level identified exceeds International Noise Council recommendations. Education regarding the effects of noise on human hearing and its relation to stress is the essential basis for the development of a noise reduction program.



Adverse effects can be divided into direct damage, indirect adverse effects and impaired cognition. Many effects of noise exposure are more thoroughly studied in adults than in children.

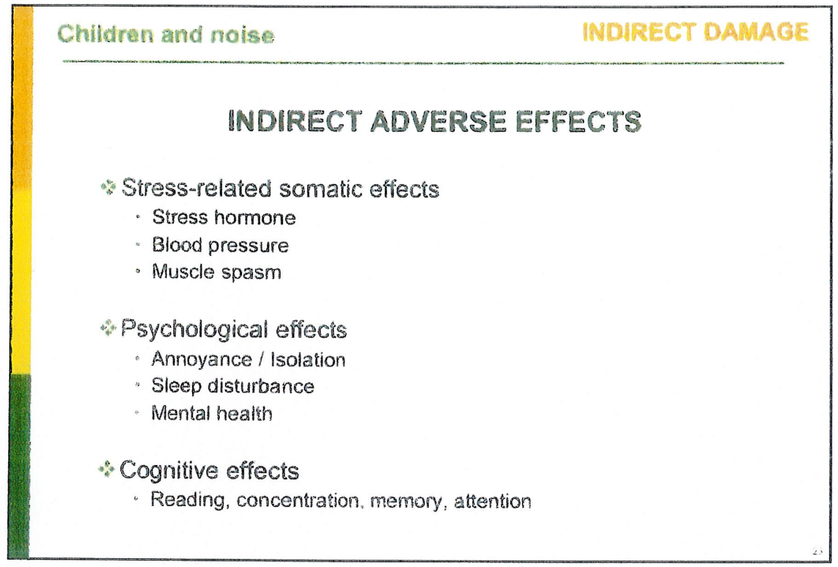
The degree of adverse effect is modified by the sound characteristics.

•**Vibration:** can be acute or chronic, audible or inaudible. Vibration can be transmitted to all the body directly through the skin or bones.

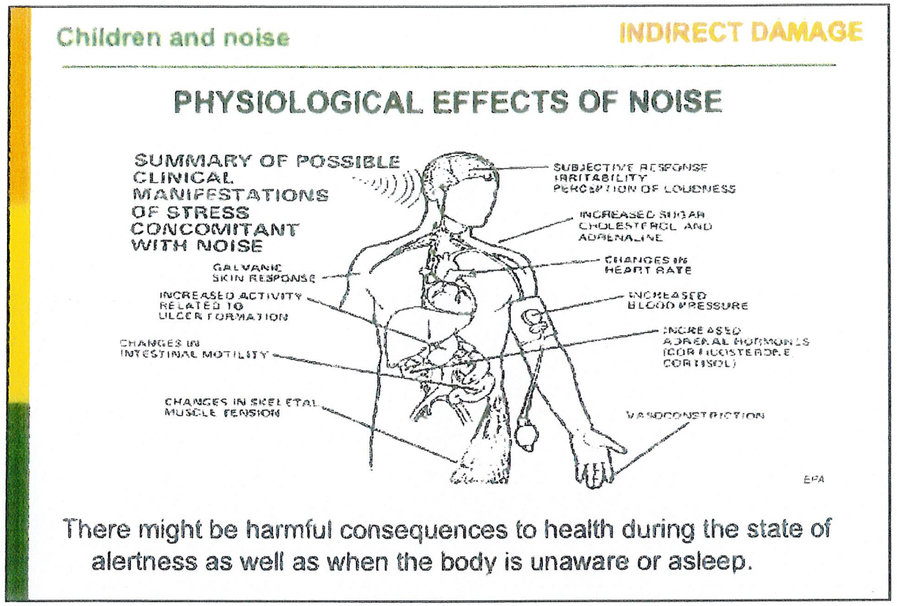
•**Frequencies:** lower and higher (ultra and infra sounds) can also damage the human hearing system, despite being imperceptible, and have important consequences for life (loss of hearing). These consequences can also be present after chronic exposure to low frequency non audible sounds (chronic back noise exposure). Incubators are an example of this exposure.

•**Intensity:** Direct blows to the ears, very loud noise (pneumatic hammer or drill, fire arms, rocket), and sudden but intense sounds can destroy the eardrum and damage the hair cells of the cochlea by bypassing the protective reflexes. Acute trauma can cause a lifelong lesion.

•**Periodicity and Duration***:* Impulse noise is more harmful than continuous because it bypass the natural protective reaction, the damping-out of the ossicles mediated by the facial nerve. Loud noise may result in temporary decrease in the sensitivity of hearing and tinnitus, but repeated exposure may cause these temporary conditions to become permanent.



The next section will review the indirect adverse effects of noise listed here.



There are a variety of physiological effects that have been documented or postulated as a result of excess noise exposure.

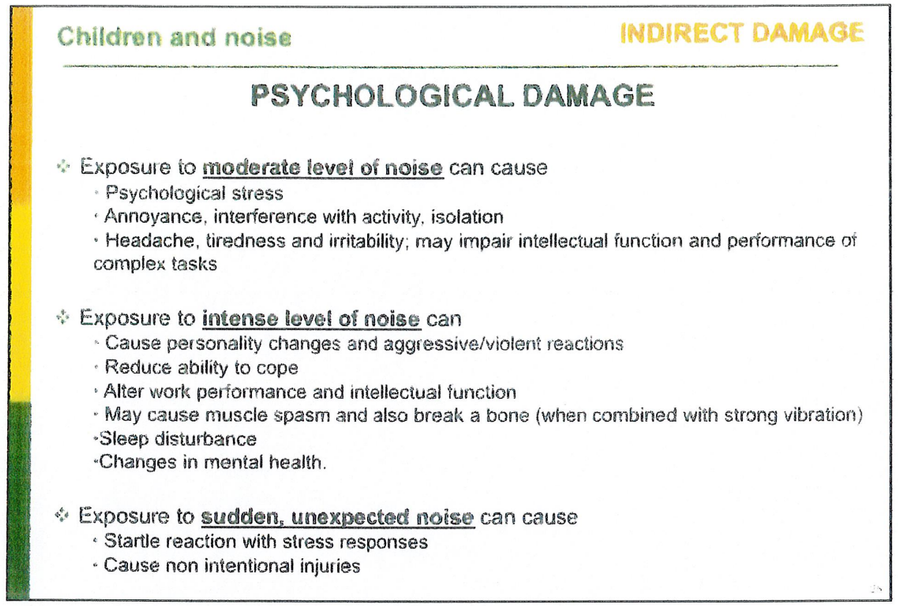
Exposure to noise levels greater than 70 dBA causes increases in vasoconstriction, heart rate and blood pressure

Picture:

•*EPA (U.S. Environmental Protection Agency)*



Psychological effects correlate with intensity (or loudness) of the noise.

Exposure to **moderate levels of noise** can cause psychological stress.

Other effects can be:

- Annoyance (fear, anger, feeling bothered, feelings of being involuntarily and unavoidably harmed, and feelings of having privacy invaded), interference with activity.
- Headache, tiredness and irritability are also common reactions to noise.
- Possible impairment of intellectual function and performance of complex tasks. Depends on the nature of sound and individual tolerance.

Exposure to **intense level of noise** can:

- Cause personality changes and provoke aggressive and violent reactions.
- Reduce ability to cope.
- Alter work performance and intellectual function.
- Cause muscle spasm and also break a bone (when combined with strong vibration).
- Cause sleep disturbance.
- Provoke changes in mental health.

Exposure to **sudden, unexpected noise** can cause:

- Startle reaction with stress responses.
- Cause non intentional injuries.

Stress response consisting in acute terror and panic was described in children upon exposure to sonic booms.

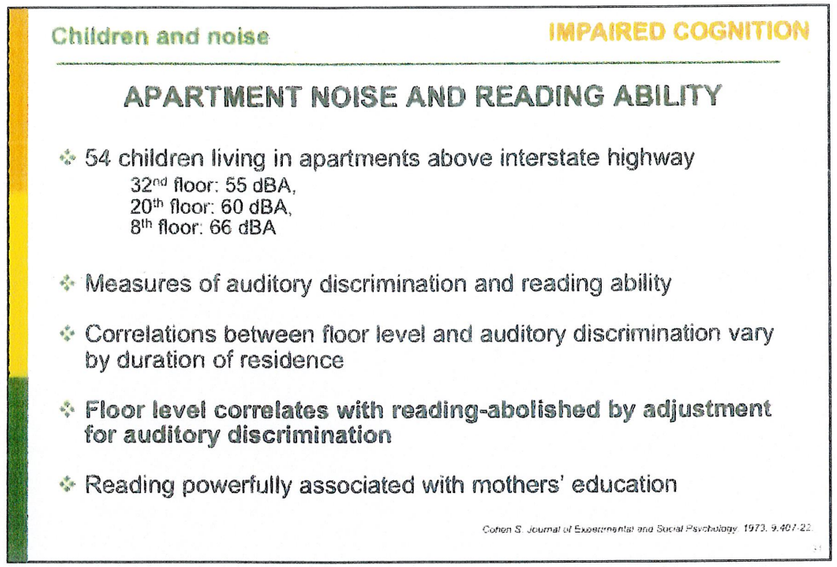
The most robust area of study on noise and effects in children comes from studies which evaluate the effect of noise on learning and cognitive function; there are possible mechanisms, including noise-related changes in attention or distraction and impaired auditory discrimination.

<<READ SLIDE>>



This study shows that street traffic noise measured on different floors of a multilevel apartment correlates inversely with auditory discrimination and reading ability. The higher floors were quieter and children scored better on reading ability and auditory discrimination. Correlations varied with duration of residence, and when reading level scores were adjusted for auditory discrimination measures, the floor level effect disappeared. Reading is also powerfully associated with mother's education.

EEG: electroencephalogram

<<READ SLIDE>>

Children raise their voices and risk developing hoarseness and vocal nodules because of noise and relative overcrowding. The number of children screaming so much and so loudly that their voices are damaged and require treatment increased in Denmark during the 1990s. Noise in schools and day care institutions results in boys' voices getting hoarse and girls' voices squeaky. Children with vocal nodules can be difficult to understand and risk losing their voices altogether. Other children become so tired of screaming or of trying to make themselves heard that they give up saying anything at all and, for example, do not raise their hands in class. If children give up speaking, their voices do not develop properly and language learning is not reinforced.

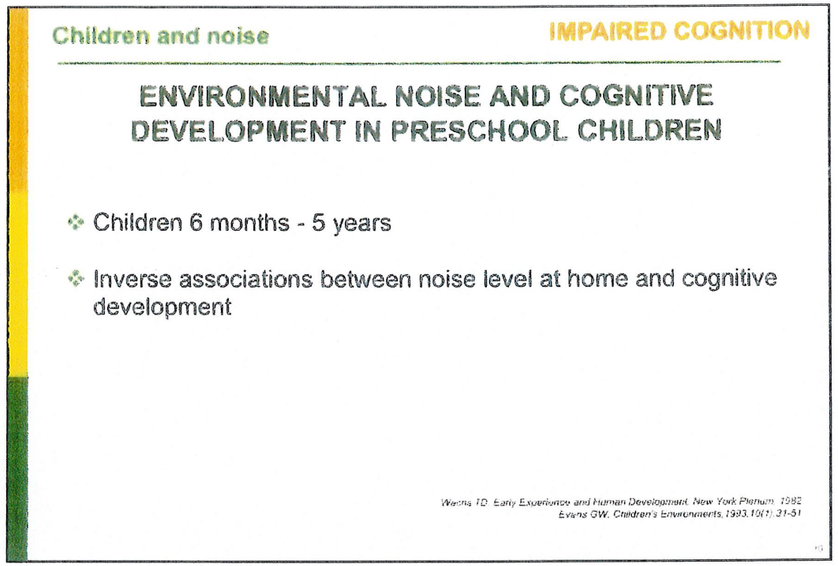
•Clark C et al. Exposure-effect relations between aircraft and road traffic noise exposure at school and reading comprehension: the RANCH project. *Am J Epidemiol.* 2006, 163:27-37.

Transport noise is an increasingly prominent feature of the urban environment, making noise pollution an important environmental public health issue. This paper reports on the 2001-2003 RANCH project, the first cross-national epidemiologic study known to examine exposure-effect relations between aircraft and road traffic noise exposure and reading comprehension. Participants were 2,010 children aged 9-10 years from 89 schools around Amsterdam Schiphol, Madrid Barajas, and London Heathrow airports. Data from The Netherlands, Spain, and the United Kingdom were pooled and analyzed using multilevel modeling. Aircraft noise exposure at school was linearly associated with impaired reading comprehension; the association was maintained after adjustment for socioeconomic variables (beta = -0.008, p = 0.012), aircraft noise annoyance, and other cognitive abilities (episodic memory, working memory, and sustained attention). Aircraft noise exposure at home was highly correlated with aircraft noise exposure at school and demonstrated a similar linear association with impaired reading comprehension. Road traffic noise exposure at school was not associated with reading comprehension in either the absence or the presence of aircraft noise (beta = 0.003, p = 0.509; beta = 0.002, p = 0.540, respectively). Findings were consistent across the three countries, which varied with respect to a range of socioeconomic and environmental variables, thus offering robust evidence of a direct exposure-effect relation between aircraft noise and reading comprehension.

•Jessen B, Ruge G. Skolebørn skriger sig syge [Schoolchildren scream until they get sick]. *Berlingske Tidende,* 2000:26.



Effects of noise on cognitive development have been documented in preschool ages as well. Higher levels of noise at home are associated with decrements in cognitive development for age.

References:

•Evans GW. Non-auditory effects of noise on children: A critical review. *Children's Environments,* 1993,10(1):31-51.

•Maxwell LE et al. The effects of noise on pre-school children's pre-reading skills. *Journal of Environmental Psychology*, 2000, 20(1):91-97.

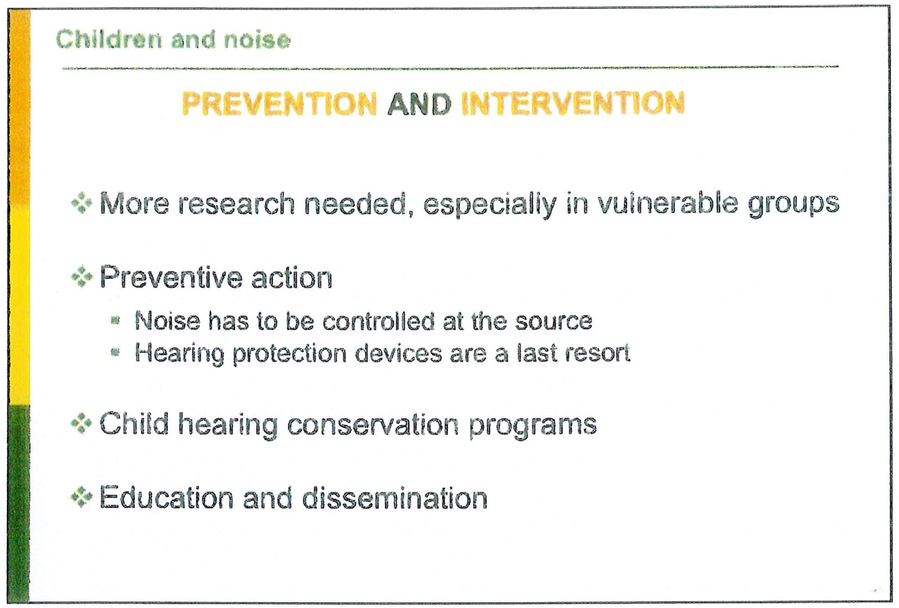
•Yang W, Bradley JS. Effects of room acoustics on the intelligibility of speech in classrooms for young children. *J Acoust Soc Am.* 2009, 125(2):922-33.



Future research:

•Effects of noise on cognitive functions.
•Effects of noise on children's sleep.
•Magnitude/significance of noise annoyance.
•Children's perception and risk perception.
•Settings: home, schools, hospital, day care centres.
•Teenagers' attention when driving and listening to loud music.
•Effect of non-audible noise.
•Identification of more vulnerable groups!
•Intervention programs/best practices for preventing harmful effects.

Preventive actions

Noise has to be controlled at the source by:
•Reducing.
•Enclosing the vibrating surfaces.
•Placing sound absorbers and other protections.
Hearing protection devices are a last resort!

Child hearing conservation program

•Noise monitoring where children live, study and play.
•Hearing protection programs diffusion for teachers and parents.
•Vibration detection and protection.
•Protection of the pregnant woman.

Education and dissemination

References:

•Folmer RL, et al. Hearing conservation education programs for children: a review. *J Sch Health.* 2002;72:51-7.

Prevalence of noise-induced hearing loss (NIHL) among children is increasing. Experts have recommended implementation of hearing conservation education programs in schools. Despite these recommendations made over the past three decades, basic hearing conservation information that could prevent countless cases of NIHL remains absent from most school curricula. This paper reviews existing hearing conservation education programs and materials designed for children or that could be adapted for classroom use. This information will be useful as a resource for educators and school administrators and should encourage further development, implementation, and dissemination of hearing conservation curricula. The overall, and admittedly ambitious, goal of this review is to facilitate implementation of hearing conservation curricula into all US schools on a continuing basis. Ultimately, implementation of such programs should reduce the prevalence of noise-induced hearing loss among children and adults.

The Effects of Noise on Health

Noise pollution is more than a nuisance. It's a health risk

Received
NOV 30 2022
Land Use Planning

BY STEPHANIE DUTCHEN 4 MIN READ

Airplanes pierce the night. Leaf blowers interrupt fall mornings. Quiet gives way to air conditioners, pounding music, construction equipment, street traffic, barking dogs, sirens.

For half a century, U.S. agencies such as the EPA have deemed noise pollution "a growing danger to the health and welfare of the Nation's population." The European Environmental Agency reports that noise ranks second only to air pollution as the environmental exposure most harmful to public health.

Yet, in sectors from government regulation to health care practice, the threats posed by noise remain "often underestimated," according to the International Commission on Biological Effects of Noise.

Researchers and clinicians are trying to change this. They've shown that noise pollution not only drives hearing loss, tinnitus, and hypersensitivity to sound, but can cause or exacerbate cardiovascular disease; type 2 diabetes; sleep disturbances; stress; mental health and cognition problems, including memory impairment and attention deficits; childhood learning delays; and low birth weight. Scientists are investigating other possible links, including to dementia.

Subscribe to *Harvard Medicine* magazine

Research also reveals how noise pollution connects with climate change. Many contributors to global warming generate noise, chief among them transportation and fossil fuel extraction and processing. Urban sprawl and deforestation destroy natural carbon absorption reservoirs while removing natural sound buffers. Technologies that help people deal with climate change, like air conditioners and generators, can be noisy. Conversely, certain climate mitigation strategies such as creating green spaces in concrete jungles offer opportunities to muffle noise.

Wanted: better models

Estimates hold that chronic noise exposure contributes to 48,000 new cases of heart disease in Europe each year and disrupts the sleep of 6.5 million people. Quantifying

noise pollution's contribution to health problems and death in the United States, however, remains a challenge because of poor measuring and monitoring, says Peter James, an HMS associate professor of population medicine in Harvard Pilgrim Health Care Institute's Department of Population Medicine. This makes it harder to determine the best policies and medical practices for care.

"The U.S. hasn't really funded noise control or noise research since the 1980s," says James. "It's a big problem. We need to prioritize this so we can really pin down how noise affects health."

"To say the onus is on the individual to fix their noise exposure is not feasible."

James helps colleagues apply existing noise modeling data to large cohort studies, such as the Nurses' Health Study, to analyze participants' noise exposures and health outcomes. The models have low resolution, however, and working with them can be frustrating: researchers can't be sure whether a negative finding means noise doesn't contribute to a particular outcome, such as something as seemingly unrelated as menopause onset, or the data weren't robust enough to reveal a connection. James hopes to augment epidemiological data with input from participants using sensors and apps, which can deliver precise location and health information.

"Given what we do know, noise is too significant an issue for us to sit around and wait to have perfect data," he says.

James led a seminal 2017 study, published in *Environmental Health Perspectives*, which shows that people in neighborhoods with low socioeconomic status and higher proportions of residents of color bear the brunt of noise pollution in this country.

"We want our patients to reduce their exposure as much as possible, such as wearing ear plugs or investing in soundproofing insulation, but that's not possible for many who live in the noisiest areas," he says. "To say the onus is on the individual to fix their noise exposure is not feasible."

Heart, felt

Another branch of inquiry focuses on how vibrations from noise can cause impairments. Part of the answer lies in the stress-response system. Researchers have found that the more people are bothered by noise, the greater the health risks they face from it. Yet, even those who tune out noise pollution, whether when awake or asleep, experience autonomic stress reactions.

Ahmed Tawakol, an HMS associate professor of medicine at Massachusetts General Hospital, and Michael Osborne, an HMS instructor in medicine at Mass General, have used advanced PET scanning to show that transportation noise is associated with heightened activity of the amygdala relative to regulatory cortical regions. Amygdalar activity can trigger stress pathways, including inflammation, that can lead to cardiovascular and metabolic diseases. Participants with a higher ratio of amygdalar to cortical activity had more risk for adverse outcomes in follow-up. The link persisted even after accounting for other disease risk factors.

In the clinic, Tawakol and Osborne say that evidence supports strategic intervention rather than trying to squeeze questions about noise into each patient encounter.

"If a patient mentions noise as a cause of stress, especially if they have or are at risk of cardiovascular disease, I'd certainly recommend personal noise mitigation strategies and stress reduction techniques," Osborne says.

As researchers reveal the mechanisms and magnitude of noise-induced illness, clinicians will become better equipped to identify at-risk patients and prescribe effective solutions.

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Good morning. I did not see the public notice in time to submit documents prior to seven days before the Commission meets. I will come by the office (located at 1947 Center Street) this afternoon to deliver 11 copies for the Commission to review. If this is not the correct address, please let me know.

Also, I will be including a letter written by my son. I will write a follow-up e-mail and include any supporting documents I may have missed.

In the meantime, I hope these e-mail copies can be delivered to the Commission before the meeting. It is a lengthy letter and I'm afraid that it will not be well received due to the short notice. This is an important issue affecting families. I insist that the information contained in my letter be given proper attention.

If there is a chance to speak at a city meeting, I would like to include my son Dylan Carvalho. He is a fifth grader. He is well spoken and is not afraid to speak out on social justice issues. I am going through this process not only to hopefully create positive changes but also to be an example for my son that change IS possible. I am teaching him to base arguments on facts and not emotions. I am teaching him how to be a leader so this new generation can carry on the GOOD work.

Thank you.
Marisela Carvalho

November 30, 2022

Dear Committee Members,

My name is Marisela Carvalho. I am a long-time Berkeley resident that currently resides at Oxford Plaza Apartments located at 2175 Kittredge Street. I write on behalf of myself, my 10-year-old son, and the dozens of deserving Berkeley residents living at the Oxford Plaza. It is this particular community that will be primarily affected by the project decision on the City Landmark: California Theater building (located on 2113-2115 Kittredge).

At best, the City of Berkeley and the University of California have been ignoring the special needs that apply to a population that is already under-resourced and vulnerable. Oxford Plaza Apartments is considered an affordable housing complex. Many residents do live on a fixed income. Most, however, are hard-working and taxpaying individuals. We **all** deserve better.

In recent years, the City and the UC have approved construction projects that have had severe negative impacts on the residents of Oxford Plaza. In 2019, the residents lived through the demolition of a structure located on the UC campus, on Oxford Street, right across the street from the Oxford Plaza building. This area has been turned into a parking lot.

There is current construction on Kittredge Street. Student housing is being built at 2150 Kittredge, on the same street as Oxford Plaza. Beginning with the removal of the Touchless Car Wash and Gasoline station, this project is already in its second year. It is expected to last at least another year. When it is all said and done, this new building will tower over ours, blocking the sun. Again, the long-term impact of this project will be felt only by the residents of Oxford Plaza.

I would like to highlight just some other problems that the City of Berkeley and the UC have created for the residents of Oxford Plaza:

STREETS and SIDEWALKS: The construction has made these streets more dangerous for individuals that are visually impaired and/or use mobility devices. I, myself, have brittle bones disease which requires me to use a power wheelchair. Downtown now has too many sidewalks and streets that are blocked, making it difficult for individuals with disabilities to maneuver around. There are potholes and cones to contend with. Having to find alternate (longer) routes in daily life hurt bodies that are already pushed to its limit. These are minor inconveniences, however, when compared to the actual possibility of death. Wheelchair users, children, short-statured individuals, and anyone who cannot react quick enough is in danger of being involved in a fatal accident. I fear for my safety in Downtown. It has changed for the worst in terms of being an accessible haven for the disabled.

On October 20, Mr. William Evans, a marine veteran, was crossing Bancroft street with his wheelchair, when he was struck by a truck that did not see him. [Police report is forthcoming].

DELIVERIES: Kittredge Street has become a one-way street. This has affected the delivery of essential goods, mail, and medical supplies that residents rely on. Furniture delivery is impossible on weekdays.

DUST, GAS, & WATER: Since construction at 2150 Kittredge Street, the residents of Oxford Plaza has had to deal with a gas leak, water shut-off, toxic water, and daily dust. The Oxford building does not have central air conditioning. In the summer, many do not have a choice but to leave windows open. This is physically harmful.

[See attached list of references]

NOISE POLLUTION: The noise pollution that residents experience is incessant. Monday through Saturdays, garbage and recycling trucks start as early as 3:55 a.m. Adding to that is the noise from the actual construction which does not sometimes obey the noise ordinance rules. Finally, I would like to address the newly added stress of the constant towing occurring on the parking lot owned by the UC. As mentioned earlier, this is directly across the street from the Oxford Plaza building. The towing occurs every home game, including last Friday's game against UCLA. This is a day typically reserved for resting and leftovers. That is not what Oxford residents were served. The towing went on for at least 5 hours. On weekdays, towing has started as early as 4:30 a.m. This is unacceptable.

There is extensive research concluding that noise pollution causes an increase in cardiovascular diseases; sleep disturbances; stress; type 2 diabetes; cognition problems (including memory impairment); childhood learning delays; low birth weight; and of course, hearing loss. It is also linked to a loss of productivity.

Research findings also show that individuals and households of lower socio-economic status (SES) are more susceptible to these adverse effects. A study conducted by Denham & Schell (2003) states that, **"Disproportionate pollutant exposure by socioeconomically disadvantaged groups exacerbates risk of poor health and well being"** (p. 111). Additionally, individuals who are undergoing tremendous stress are more likely to engage in risky behaviors such as tobacco use or substance abuse.

Was this information not available to one of the leading research institutes in the nation or was it simply ignored?

[See attached list of references]

Berkeley was the epicenter of the Disability Rights Movement. Leaders like Ed Roberts and Judy Heumann fought for access and independence. The first Center for Independence office was opened on Telegraph Avenue in 1972. I love that about Berkeley and it is why I moved here. I craved access and I craved community.

Over time, I have found community. It is this same community that I may be forced to leave because these are no longer sustainable living conditions. Due to the housing crisis and high cost of living, most residents are not able to move. The City should take this into consideration when making major project decisions that primarily affect this community. The City has provided this community with affordable housing but it has not provided a quality of life for its residents.

Oxford Plaza is comprised of mothers, grandmothers, educators, nursing students, Cal graduates, retired lawyers, Uber drivers, hospice caretakers, and most importantly, children.

Does the City of Berkeley care only about its Cal students and wealthy residents?

Thank you for your time and thoughtful consideration.

Sincerely,

Marisela Carvalho

RE: 2113 Kittredge Street project

Ms. Gong:

My name is Steven Schuyler. I live at the Oxford Plaza Apartments 2175 Kittredge Street, #318, Berkeley, CA 94704 located directly next door to the California Movie Theater.

Me and my neighbors are deeply concerned about the impact that this
project will have on our neighborhood and I wanted to go over a few
of them with you and hopefully get some answers.

As you know, this is going to be a highrise complex with 200+ units and is
intended for students.

QUESTIONS (So far):

1. Is the existing sidewalk going to be wide enough per city regulations to handle all the people who will be going in and out of the building? If not, what are you going to do about that?
2. Part of their plan is to promote and provide scooters for the students to use. Where are they intending to park all of these scooters?
3. There are 3 blind people and at least 2 people who are wheelchair bound as well as myself who has palsy and need easy access to the sidewalk without having to fight crowds of people. How will those crowds be managed so the public sidewalk can be kept clear?
4. Will a permit for the entertainment venue be able to be issued for a bannister to control crowds outside during an event and still maintain enough sidewalk space for people, scooters, people in wheelchairs, blind people and others like myself who can walk but at times it can be hard due to my palsy and we all need a clear unobstructed path on the sidewalk?
5. Not if, but when the fire alarm goes off in the building, where are the up to 2K people supposed to go while the fire department clears the building?
6. Does the Berkeley Fire Department have enough personnel, trucks and equipment to handle a 4 alarm fire on the 12th floor and is Kittredge Street wide enough for them to fit all the necessary equipment they might need to fight that fire?
7. Worst case scenario, if there was a 4 alarm fire and somehow the fire catches Razzan's Kitchen eatery (2119 Kittredge St, Berkeley, CA 94704) and then MY building, Oxford Plaza, 2175 Kittredge Street all on fire at the same time, is the fire department able to handle that? I'm asking because you now will have a tall building, a 4 alarm fire on the 12th floor, hot pieces of the building in high winds flying everywhere, being honest, anything could happen, right? After all, if there really was a 4 alarm fire on the 12th floor they would probably evacuate us too for safety, right? Why would they do that? In case our building catches fire!
8. What provisions are being made for all the additional traffic that will be added to the neighborhood? It will be impossible for the residents of my building to easily get in

and out of our parking garage because of all of the added congestion and traffic? Since there is NO parking anyway, can Kittredge Street just be blocked off except for people who live in the neighborhood?

Those are the questions I have so far. I will contact you with any others I might have. The honest truth is, me and my neighbors feel that this project will completely destroy our neighborhood and the environmental impact of people and traffic will be devastating!

I look forward to getting your answers to my concerns,

With Gratitude,
--
-Steven Schuyler

Ms. Gong:

I hope you are doing well.

Please make the following email part of the official record towards my objections to the project at
the California Movie Theater on Kittredge Street for when it comes up for further review / consideration.

I sent this email to the Rhoades Planning Group and as of today, 1-20-2023 **they have refused to answer me!**
These issues need to be addressed BEFORE this project should be approved to move forward!

Thank you for your time, effort and consideration on hearing my concerns on this subject.

Regards,

-Steven Schuyler

Subject: Followup to California Movie Theater Project ...
To: <info@rhoadesplanninggroup.com>

12-27-2022

Hi:

My name is Steven Schuyler. I live directly next door to the California Movie Theater
and was the ONLY person to show up to all of the meetings regarding this project.

I am writing to ask you some followup questions to see if they were part of your plan
and how you intend to address any problems created by the issues I raise here:

Please keep in mind, in MY building we have 3 blind people and a minimum of 2 people in wheelchairs who will need clear and easy access to the sidewalk **at ANYTIME day or night**!

1. Did you check city regulations regarding the width that the sidewalk would need to be to accommodate all the extra people you would be adding to the neighborhood? There are regulations for the City of Berkeley about this and I just wanted to know if you checked that out? What did you find out?
2. On the same subject, in order to maintain a minimum amount of space on the sidewalk for people to pass by, if you intend to promote the use of scooters, how many do you intend to have

in front of the building at any given time and where do you intend to park them? Who will be hired to ensure that they stay out of the way?

3. Scooters are not allowed on public sidewalks. Who will be responsible for managing that so that the scooters you are promoting being outside are not being used on the public sidewalks? NOTE: Just saying that the apartment complex will handle that is not a sufficient answer! - this will require 24/7/365 attendance with someone out front!) Did you consider this?
4. Where is your **written commitment from the complex owner** to provide all these staffing requirements to attend to all these needs that you are creating? Has the complex owner actually calculated out the costs of all this staff and are ready to provide them long term without any cuts to staffing at some point in the future? Has the owner actually agreed to all of this? If so, please show me!
5. If you intend to have events on the ground floor, just know that if you are going to have a banister on the sidewalk for the crowd, **the city requires you to get a permit for that each and every time you do it** to ensure that the sidewalk always has proper clearance! You can confirm this with the city planning / public works departments. So, the question is, have you measured out the sidewalk to make sure that after you block off the bannister and you have scooters on the sidewalk that there will be enough room left for people to pass by?
6. Did you check to see if the Berkeley Fire Department would be able to handle any and all emergencies at this location? (ie - a 4 alarm fire on the 12th floor and 2,000 people on the street who evacuated the building and possibly catching other buildings in the neighborhood on fire? Can they handle all of that going on?

You might not think they do, but these things needed to be part of **your** plan, otherwise it is not feasible to have this project here in the first place!

Please get back to me on these issues.

Gong, Sharon

From: Geneva Hesner <geneva@rhoadesplanninggroup.com>
Sent: Friday, January 27, 2023 4:09 PM
To: sschuyler94704@gmail.com
Cc: Mark Rhoades; Gong, Sharon
Subject: FW: Followup to California Movie Theater Project …

WARNING: This is not a City of Berkeley email. Do not click links or attachments unless you trust the sender and know the content is safe.

Hi Steven,

Thank you for attending the public meetings for the California Theater Project and for reaching out with your questions.

We have provided answers to your questions below, however, please note that most of the concerns you mention below are not project-specific concerns (scooters riding on sidewalks, parked scooters obstructing sidewalks, width of sidewalks). These are citywide issues that all of Berkeley deals with and are therefore the responsibility of the City of Berkeley to address or enforce.

1. The City sidewalk and streets are called the public "right of way" (ROW) and are publicly owned by the City. Projects are not allowed to build on the sidewalk, and projects can only build behind the property line. Because the project is proposing to keep the historic façade and entryway, the sidewalk width will remain the same as it is now. The only way the sidewalk could be widened is if it encroached into the street. Only the City of Berkeley has the authority to do this because it is the public right of way.
    1. For ADA access, every City sidewalk must have a path of travel of at least 3 feet in order to accommodate wheelchairs, which the project will comply with.
2. The project will not provide scooters. The project will provide secure parking for residents' scooters/bikes within the building. Because the project will provide the parking within the building, we do not expect the residents to park their scooters outside on the sidewalk.
3. You are correct that scooters are not allowed on public sidewalks, but as you know, people ignore this rule throughout the City. Because the sidewalk is the public right of way, the project has no ability or authority to enforce the City's rules on scooters.
4. The project will have a dedicated leasing staff onsite. While they will be able to attend to all the needs inside of the building, they will not be able to enforce any rules outside of the building because, again, the sidewalk is open to the public and only the City has the authority to enforce laws.
5. The ground floor will have a performing arts theater. It will operate in the same way as the existing movie theater, which had operated on Kittredge Street for over a century. Special event permits are only required if the event is held on the street, sidewalk, or other public area.
6. The Berkeley Fire Department reviews and approves the project plans multiple times throughout the entitlement and building processes. The project will be constructed according to the California Building Code, which includes all fire safety measures. The project will comply with all applicable fire safety measures in the law and will accommodate any other reasonable requests from BFD for additional fire & life safety measures.

Please let me know if you have any more questions.

Thank you,

Geneva

Project Number: ZP2022-0144
Address: 2115 Kittredge St., Berkeley CA
January 27, 2023

To: **Sharon Gong**
Principal Planner, City of Berkeley

From: **2115 Kittredge Project Team**

Subject: **Development Project Application Re-Submittal for 2115 Kittredge Street**

Thank you for your review of the 2115 Kittredge Street Project Application. This letter is in response to the City's incomplete letter dated November 28, 2023. Please see the matrix on the following page for the project team's response to each comment.

This application re-submittal includes the following attachments:

- Revised Application Form
- Revised Plan Set
- Revised Applicant Statement
- Revised Tabulation Form
- Revised Public Art Form
- Revised Yellow Poster Photos

Please let us know if you have any questions or need anything else.

Sincerely,

2115 Kittredge Project Team

APPLICANT RESPONSE MATRIX FOR ZONING INCOMPLETENESS LETTER

ZONING COMMENT	RESPONSE
0. Staff has reviewed the application and has determined that the following additional approvals will be required for the proposed project. (See below for additional fees due):	Noted.
1. Use Permit under BMC Section 23.326.070(A) to demolish a non-residential building	This Use Permit was previously requested in the applicant statement, page 31.
2. Use Permit under BMC Section 23.204.020(A) to construct dwelling units	This UP request has been added.
3. Use Permit under BMC Section 23.204.020(A) to construct a theater (live)	This AUP request has been added. For C-DMU, it looks like only an AUP is needed for theater use.
4. Use Permit under BMC Section 23.204.030(B)(1) to create new floor area of 10,000 square feet or more	This Use Permit was previously requested in the applicant statement, page 31.
5. Use Permit under BMC Section 23.204.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right)	This UP request has been added.
6. Use Permit under BMC Section 23.204.130(E)(3)(b) to modify side and rear setback requirements	This Use Permit was previously requested in the applicant statement, page 31.

7. Use Permit under BMC Section 23.322.030(j)(2) pay an in-lieu fee and Use Permit under BMC Section 23.322.050(A)(10) to reduce the commercial parking requirement to zero	The first UP request has been added and the second Use Permit was previously requested in the applicant statement, page 31.
1. Fees. The additional approvals listed above require a payment of fees for each. Fees for additional approvals will be due once they are finalized and an invoice will be sent to you. Please be aware that with the submittal of information requested by staff, additional approvals may be added to the permit and associated fees will be due.	Noted. The project has already paid fees for 4 of the Use Permits, identified above. The project will pay the required fees for the balance of the additional Use Permits requested with this resubmittal: • Use Permit under BMC Section 23.204.020(A) to construct dwelling units • Administrative Use Permit under BMC Section 23.204.020(A) to construct a theater (live) • Use Permit under BMC Section 23.204.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right) • Use Permit under BMC Section 23.322.050(A)(10) to reduce commercial parking requirement to zero. • Use Permit under BMC Section 23.310.030(A) to allow Alcohol Beverage Service of distilled spirits.
2. Additional Use Permits. a. Will the theater need an AUP for extended hours outside of 6 a.m. to 2 a.m? b. Will the theater concessions require an AUP for activities outside of a building to use the outdoor space for consumption of food/beverage? Similarly, an AUP may be needed for outdoor movies and fitness uses. c. Will the theater concessions be serving distilled alcohol?	a. The theater will not need an AUP for extended hours. b. The theater concessions will not need an AUP for outside activities. c. The theater concessions will be serving distilled alcohol and has requested the required UP(PH) for

	distilled alcohol service. See page 29 of Applicant Statement for UP request.
d. Will the project seeking a UP to pay the residential Usable Open Space in-lieu fee, or will a waiver and concession be used for not providing the minimum UOS?	d. The project will add a concession for the residential Open Space. Please see page 14 of the attached Applicant Statement for the concession request.
e. Will the project be seeking a concession to not provide the minimum of 40% of landscaped UOS area? It is listed as a waiver, but it is unclear how this is a physical limitation for the project. Explain how the request qualifies as a waiver. It may be more suitable as a concession, which is a cost reduction for the project.	e. The project will be seeking a concession for this requirement.
f. Please remove the language referring to "Modification" from the table in G000. These are UPs that are included in the Base Project.	f. Noted. Language referring to "modification" has been removed from the table on sheet G000.
3. Rooftop Elements. Provide a calculation showing how a sum of the rooftop element areas do not exceed the 15% of average building floor area. Calculations should include all area underneath trellises, or other covered outdoor areas.	Per BMC table 23.304.5, rooftop element areas may not exceed 15% of the average floor area of all of the building's stories if they are projecting above the height limit. All of the building's rooftop elements for this project are located within the total building height.
4. Density Bonus Diagrams/Calculations. Base Project = BP; Proposed Project = PP; AUS=Average Unit Size; QU=Qualifying Units; DBU=Density Bonus Units; RFA=Residential Floor Area.	Noted. The amount of commercial area in the BP has been revised to be proportionate to the amount of commercial area in the PP.
a. The amount of commercial area, proportionate to the residential area in the BP, is not substantially similar to the respective proportion in the PP. The	a. Please refer to sheets G002.A and G002.B for revised calculations.

proportion should be similar for calculation of the density bonus. Revisions to the commercial area in the BP should follow with revised calculations for affected development standards in the BP to show compliance. b. RFA should not include mechanical or building operation areas. RFA should include trash rooms for residents. Trash area for the theater should be included separately in the total commercial area.	b. The RFA has been revised to include the trash room and omit mechanical or other building operation areas. The trash area for the theater has been included in the total commercial area.
5. Zoning Application Submittal Requirements. The following required items were incomplete from the application submittal: a. Yellow Poster. Provide plastic sleeves on the poster at the site for display of public meeting notices. b. Shadow Studies. i. Include a north arrow on the plan views and/or label the streets on the 3d view. ii. Check the angles of the shadows for 6/21 and 9/22, 2 hours after sunrise and 2 hours before sunset – the time of day at sunrise/sunset should be different on each date, as should the angle of the shadows. c. On-site Art. Indicate the location and provide a description of the on-site art that will satisfy the Percent for Art requirement. d. Hazardous Materials. Submit the Phase II report that is recommended in the Phase I report.	a. Please see attached photo of yellow poster with plastic sleeves. b. The shadow studies have been revised to include a north arrow in plan views. Angles have been revised so that the time of day and sunrise/sunset is different for the shadows for 6/21 and 9/22. Please refer to sheet G008-G010. c. The onsite art component will be the project constructing the theater space. The theater group will construct tenant improvements in the space, but the applicant will build the 'vanilla shell' of the theater space. d. The Phase II Environmental Site Analysis is being compiled and testing is underway. The Phase II

	Report will be submitted as soon as the consultant completes it.
e. Tabulation Form. Please revise the Tabulation Form to reflect changes made in response to all other comments in this letter.	e. Revised Tabulation Form attached as part of this application packet.
f. Design Review. DR comments will be sent to you separately. Please respond to these comments in your next submittal, and copy Anne Burns for all submittals.	f. The project will respond to any DR comments we receive. To date, none have been received.

Zoning Project Application

Land Use / Zoning

Planning and Development

All new uses, structures, and modifications to structures in the City of Berkeley are required to be in conformance with the Zoning Ordinance.

Information on different types of permits can be found at the links below.

Overview of the Permitting Process
https://www.cityofberkeley.info/Planning_and_Development/Permit_Service_Center/Permitting_Process.aspx

2115 Kittredge Street Project

Applicant Statement

January 27, 2023

Overview and Project Introduction

Figure 1: Rendering of Proposed Project

The applicant team is pleased to submit this application package for a new 218-unit multifamily residential infill & adaptive reuse project at 2115 Kittredge Street in Berkeley. This applicant statement includes:

1. **Project Description**
2. **Project Background**
3. **Compliance with General Plan and Zoning Code**
4. **Project Analysis**
5. **Landmark Alteration Permit Requirements**
6. **CEQA Analysis and Legislative Context**
7. **Use Permit Required Findings**
8. **Project Team Contact Information**

1. PROJECT DESCRIPTION

The proposed project includes the construction of a 17-story mixed-use building and the adaptive reuse of the existing California Theater façade and marquee. The façade of the theater along Kittredge Street will be preserved, and the proposed project will redevelop the site to include a live performance theater and 218 units of housing, including 22 affordable units. The California Theater was built in 1914 and has screened movies and held performances for the last century. This project will preserve the historic façade and marquee, maintain a creative arts presence at this site with the new theater, while adding desperately needed transit-oriented housing to Downtown Berkeley.

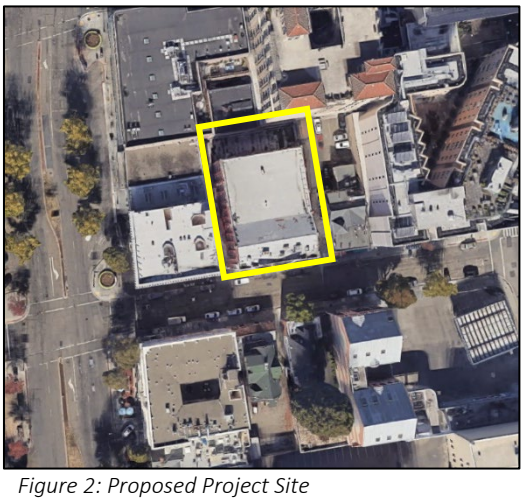

Figure 2: Proposed Project Site

The proposed housing development project includes 218 dwelling units in a 158,793 square foot mixed-use building with 23,201 square feet of non-residential space dedicated to the live performance theater. The project will provide 22 units of

affordable housing for Very Low-Income (VLI) households earning not more than 50% of the Area Median Income (AMI). The inclusion of 22 Very Low-Income units entitles the project to a 50% density bonus, unlimited waivers, and three concessions, which together allow for the project's proposed 218 dwelling units. The project is subject to the modifications and protections of State Density Bonus Law (Gov. Code § 65915) and the Housing Accountability Act (Gov. Code § 65589.5). A preliminary application was submitted pursuant to Senate Bill 330 (Gov. Code § 66300) on July 28, 2022, and the proposed development project is consistent with all the provisions of SB 330. An Affordable Housing Mitigation Fee will apply to the project and be paid to the City of Berkeley.

The project site is a 13,500 square foot lot that is zoned Downtown Mixed-Use Core (C-DMU), a designation that encourages the development of mixed commercial and high-density residential uses. The new residential development will include (145) studios and (73) 2-bedroom units. The 22 affordable units will have the following unit mix: (14) studios and (8) 2-bedrooms. Because of its downtown location one half block west of campus, this project will likely appeal to students and young professionals alike. The proposed project will add 291 bedrooms to Berkeley's housing stock, including 30 below market-rate (BMR) bedrooms, to help alleviate the housing affordability pressure near downtown and by the Cal campus.

Table 1: Unit Mix

Unit Type	Unit Count
Studio	145
1 Bedroom	0
2 Bedroom	73
Total	**218**

Ground Floor Residential

The ground floor plan is separated into a residential entry area on the eastern side of the building and non-residential space for the theater use on the western side. The ground floor residential area includes a lobby, reception desk, mail room, package room and two leasing offices. In the first basement level, the proposed project has a residential multi-purpose room and a lobby restroom for residents. On the second basement level, there is a bike room, trash/recycling room, and other back of house service areas. The ground floor lobby is connected to the first basement level and second-floor resident's lounge with a large, open staircase. This staircase will be an aesthetically pleasing focal point and design feature connecting the three residential common spaces.

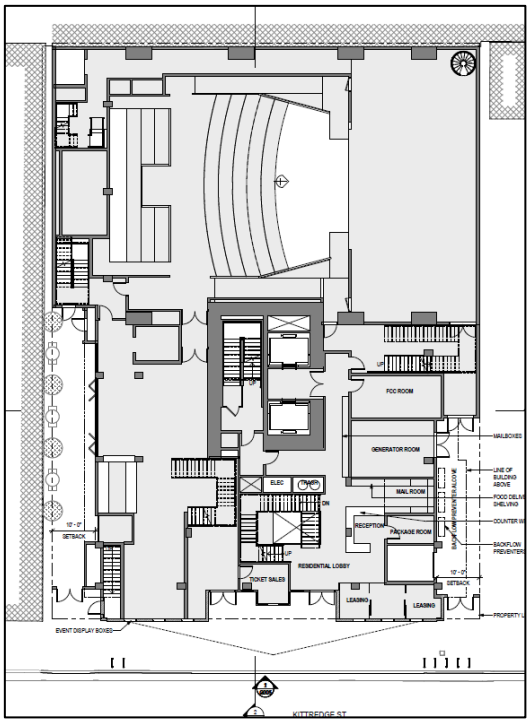

Figure 3: Ground Floor Plan

The residential lounge on the second floor leads to the residential balcony on top of the theater's marquee. The marquee balcony provides 411 SF of residential useable open space. On Levels 2 and 3, there is a Music/Podcast

Studio. There are a total of 53 study rooms in the project, distributed throughout the levels. On levels 5 through 8 and 10 through 13, there are 5 study rooms per floor, with fewer on the other floors. Some of these study rooms/work lounges are smaller for individual work, and there are larger rooms meant for collaboration.

Level 2 has one studio unit and one 2-bedroom unit. Level 3 has four studios and three 2-bedroom units. Level 4 through 14 have 11 studios and six 2-bed units. The center two units on the western façade of Levels 3, 4, 6, 8, 10, 12 and 14 have private balconies. Some corner units also have balconies, however they do not meet the City's minimum dimensions of six feet by six feet, so do not qualify as useable open space.

Level 15 has six studios and one 2-bedroom unit, along with the building's indoor/outdoor fitness space. The other amenities on the 15th floor include: a BBQ/Kitchenette area, TV Entertainment area, lawn game area, multi-sport simulator. There is 3,873 SF of useable open space on the 15th floor, where future residents can enjoy the unobstructed west-facing views from the hammocks and fire pit seating areas. The 16th floor has eight studios and one 2-bedroom unit. There is 2,625 SF of useable open space on the 16th floor with hot tubs and cabanas. There is also amphitheater seating in front of a vine wall where residents can enjoy the westerns views of sunsets and San Francisco. The top floor on Level 17 contains another 2,665 SF of useable open space with more beautiful, native landscaping for aesthetic appeal.

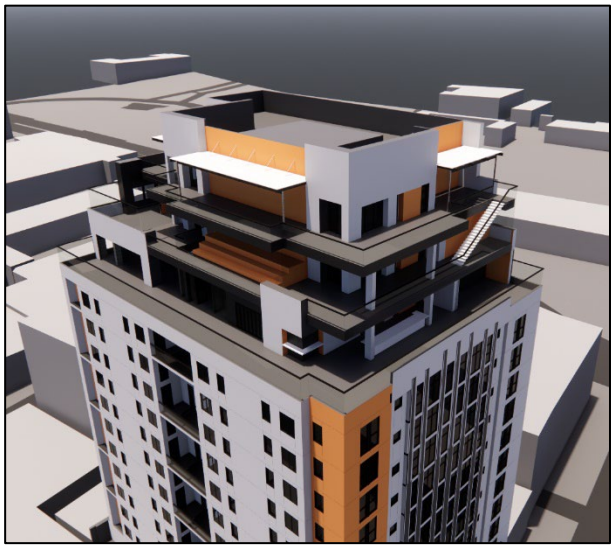

Figure 4: Aerial View of rooftop decks

Together, these three split-level rooftop decks and the second-floor marquee balcony provide 9,574 SF of open space. Private balconies make up the rest of the residential open space, and all the project's open space areas are designed to be breathtaking outdoor amenities for future residents.

Ground Floor Theater

The proposed project also includes a 357-seat theater fully equipped for live performances. The California Theater Consortium is partnering on the proposed project and envisions a performing arts hub that serves anchor tenants as well as traveling performance groups. This future theater will be able to host community events, as has happened in the past at California Theater.

The new theater is approximately 23,201 SF and spans the 3rd floor, 2nd floor, ground floor, and basement level one (B1). The first basement level holds the facilities to support the performances, including the orchestra pit, green room, dressing rooms, rehearsal space,

performer restrooms, storage space, classroom space, and office/meeting space. The ground floor includes the large performance stage, 228 orchestra level seats (plus 4 accessible seats), the audio projection room, the theater lobby and the theater guest restrooms, as well as outdoor theater terrace, ticket booth, and concessions booth. The theater terrace contains 604 SF of commercial useable open space with direct access from the street. Level 2 contains 123 seats on the balcony level (plus 2 accessible seats), and the fly area above the stage, while Level 3 holds the theater's mechanical space.

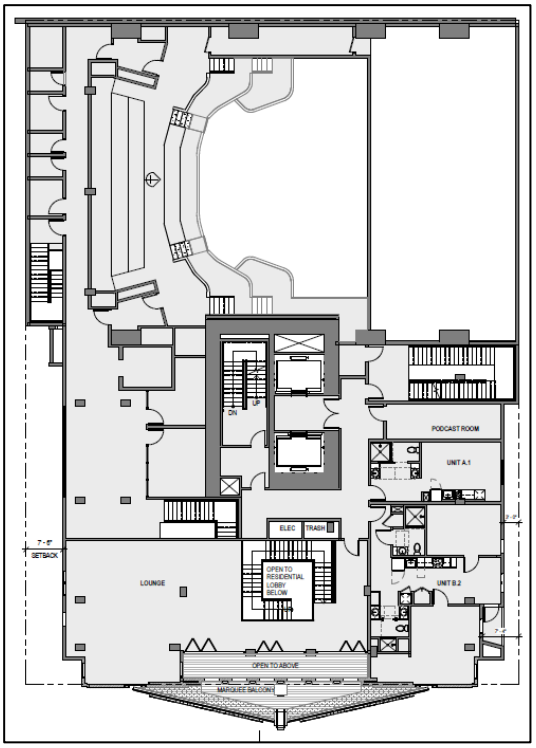

Figure 5: Level 2 – Balcony of Theater

The project site is on the north side of Kittredge Street between Shattuck Avenue and Oxford Street. The proposed site is approximately 350 feet east of the University of California's Berkeley (UCB) campus. Kittredge Street is three blocks away from campus and 1 block away from a Downtown Berkeley BART station entrance. The location of this project will provide future residents with excellent access to the UCB campus, the downtown area, and regional transit opportunities.

Figure 6: Vicinity Map of Site

The site is very accessible via public transit or active transit. It is well served by multiple bus routes and is less than 0.10 miles from a Downtown Berkeley BART station entrance. The project will not provide any vehicle parking because the site is so well served by transit, bicycle facilities, and nearby services and amenities. The project will provide ample bicycle parking with 98 long term spaces for residents and 7 short term spaces for their guests. In addition, there will be 30 spaces to store and charge personal scooters. This proposed urban infill project with 105 total bike spaces and 30 personal scooter spots is exceptionally well-suited for future residents to rely solely on sustainable modes of transportation. The building itself will be all-electric, powered sustainably, and will be LEED Gold (or equivalent) certified. Solar equipment will be housed on the roof to provide clean power to the future building at 2115 Kittredge Street.

Key elements of the project include:

- 218 total units in 17 stories, rooftop deck, amenity spaces, and study rooms/work lounges,

- 22 units affordable to Very Low-Income households @ <50% AMI,
- Live Performing Arts Theater with 357 seats, full stage and full backstage, fly area, and practice support spaces,
- 105 bicycle parking spaces, 30 scooters spaces, 0 vehicle parking spaces, and
- Payment of Mitigation and In-Lieu Fees to the City of Berkeley:
    - Affordable Housing Mitigation Fee (~$4,987,980),
    - Street and Open Space Improvement Plan (SOSIP) Fee (~$302,370),
    - Downtown Parking In-Lieu Fee (~$1,020,000),
    - Berkeley Schools Fee (~$471,860).

2. PROJECT BACKGROUND

Property Information

- APN: 057-2030-009
- Parcel Area: 13,500 SF/0.31 acres
- General Plan Designation: Downtown
- Zoning District: Downtown Mixed-Use District (C-DMU Core)

Existing Conditions

Known today as the California Theater, the theater at 2115 Kittredge has screened movies and held live performances for over a century. The move theater operated for 106 years before shutting down in early 2020 (pre-COVID-19 pandemic). This project will be able to retain the theater use by including a live performing arts theater on the 2nd floor, ground floor and the first basement level of the proposed project.

Figure 7: Existing Conditions

The existing three-story building at 2115 Kittredge Street was built in 1914. There is a decorative front façade of the theater with a neon-enhanced marquee, which will be preserved as part of the proposed project. The rest of the building is made of exposed brick, and since 2002 the structure has been surrounded with a steel bracing for seismic purposes. The bracing is painted red and has a diagonal pattern. The side and rear facades will be demolished along with the interior of the structure. The historic façade and marquee will be kept intact and delicately restored and modified, with a 17-story mixed use building constructed behind it.

Currently, there are no residential units onsite, so the project will not be eliminating any dwelling units from the City of Berkeley's housing stock. The proposed project seeks to increase

the density of housing onsite by providing 218 units on a 0.31-acre parcel that is an effective density of 703 dwelling units per acre.

History of Property[1]

This property has been held by the same family since the early 20th century when the City of Berkeley was in the midst of a development boom. The original California Theater owner was John Muldoon, who came to Berkeley after the 1906 earthquake like many others who migrated to the East Bay.

The heirs of John Muldoon still own the property. After more than a century of keeping the California Theater in the family, they are choosing to sell the property to the project applicant who will preserve the theater use while redeveloping the land to accommodate dense downtown housing for the next 100 years.

Table 2: Surrounding Uses

Direction	Uses	Zoning
Project Site	*California Theater (vacant, non-operating movie theater)*	*C-DMU Core*
North	Commercial (FedEx & Verizon) and Mixed Use (Gaia Building)	C-DMU Core
East	Restaurants (Tasty Pot, USA and Razan's Organic Kitchen) Historic Resource (A.H. Broad House and Storefronts)	C-DMU Core (& Historic Resource)
South	Office and Commercial (Berkeley Mail Room, State Farm Insurance, and Schneider Steve Consulting)	C-DMU Outer Core
West	Commercial (Luggage Center & Chipotle) Mixed Use/Historic Resource (Brooks Apartment Building with EZ Stop Deli & Kokolo Donbury Restaurant)	C-DMU Core

In 1906, John Muldoon purchased the subject property and moved his family into the Victorian house with the address of 2113 Kittredge Street, Berkeley. This home was demolished to construct the theater, which opened in 1914. John Muldoon partnered with local Berkeley businessman Frank M. Wilson to commission Albert W. Cornelius, a San Francisco architect, to design the theater and Kidder & McCullough of Berkeley to construct it. T & D Circuit was brought on as the operator of the newly constructed early motion picture theater. At the time, it was the largest theater in Alameda Country with 2,000 seats.

Figure 8: Existing Conditions

The theater was built with a large stage and equipment for full theatrical productions,

[1] The source of the historical information for this site is the Landmark Preservation Commission's Notice of Decision and the Art Deco Society's Landmark Application.

including and orchestra pit and magnificent pipe organ. Early on, T& D held live performances as well as screening silent films for the first decade or so of the theater's history. One notable stage production of T&D is said to have had a cast of thousands. The applicant team for this project and our California Theater Consortium partner are very enthusiastic about the prospect of holding live performances at 2115 Kittredge Street once again.

In 1923, T&D Circuits sold operations of the theater to West Coast Theaters. The new West Coast Theater operators got involved in the Downtown Berkeley community and hosted family events, holiday parties, Parent-Teacher Association (PTA) events, fundraisers, and other community-oriented gatherings. Similarly, the proposed project hopes to restore this legacy to the California theater by holding community-oriented activities in the proposed creative arts hub and event space.

<u>Renovations & Remodels:</u>

In 1928, the theater operations were sold yet again to Fox Studios. This purchase triggered a massive renovation and significant remodel of the California Theater, and it re-opened as the Fox California in 1930. The newly upgraded theater stayed roughly the same size, but now had the modern technology for films with sound, featured a new proscenium archway above the stage. The architect of this transformative remodel was Clifford A. Balch, who used the Art Moderne style, one that was modern at the time and is now known as Art Deco. This Art Deco style is characterized by:

- simplified overall building form,
- linear massing and appearance,
- stepped outline,
- smooth wall surface,
- stylized, often geometric, ornamentation and detailing,
- fluting details, and
- bas-relief (low-relief sculpture) decorative elements.

Figure 9: Historic Façade – 1930 remodel

The California Theater was completely transformed by Balch's remodel, who replaced the original ornate Beaux-Arts façade into a modern, imposing façade with minimalist Art Moderne decorations. The new façade had a tripartite front, a stepped parapet and roofline, and a motif of frozen fountains with decorative coins. Balch applied this popular stepped, zigzag pattern of the façade on other theaters in the area, such as the Berkeley U.A. on Shattuck Avenue, completed during the same period. This 1930 remodel featured a new marquee as well, but that was replaced yet again in the 1952 remodel. The newly installed marquee was larger and

featured a new glowing neon sign that read 'California' on both sides of the wedge-shaped Midcentury marquee.

Decline of Movie Theaters:

The first decline in the popularity of movie theaters resulted from the explosion of home televisions in the 1950's and 1960's. The 1970's brought shopping malls and megaplexes, adding more competition for smaller theater operators. In 1976 the California theater split their main auditorium into three screens to show more movies at a time to keep up with their megaplex competitors. Three screening rooms were created by enclosing the balcony area and splitting it into two smaller theaters.

In 1994, Landmark Theaters took over the operating lease and held it for over 15 years. The movie theater industry has further declined due to the advent of online streaming, as well as other factors, so the Landmark Theaters lease expired in early 2020 (pre-COVID-19 pandemic). Because of declining movie sales, the Landmark Theaters could only commit to paying a low rent, which was not a feasible arrangement for the ownership family. Facing the broader decline of the movie theater industry, the Muldoon heirs have chosen to sell their family property at 2115 Kittredge Street. With the proposed development project, we can keep the theater use alive at this historic Downtown Berkeley property.

Table 3: Timeline of Renovations and Remodels

Year	Upgrade
1914	Original Construction
1928-1930	Complete Remodel of theater & façade in Art Deco style
1952	Complete Remodel of Marquee
1976	Main Auditorium is split into 3 screening rooms
2002	Seismic Upgrade
2022	Proposed: Adpative Reuse of Façade & new 17-story tower

Landmark Preservation Commission Hearing

The Landmark Preservation Commission held a public hearing on the California Theater at 2115 Kittredge Street to determine whether the building should be a designated as a City of Berkeley Landmark. The LPC determined that the front façade of the theater should be preserved for its historic value and designated that part of the California Theater as a City of Berkeley landmark. The landmark application (LMIN2022-00) was brought to the LPC by the Art Deco Society of California and Berkeley Architectural Heritage Associate (BAHA).

Although the application was to landmark the site, building, and use, the LPC determined that the site, building, and use were not landmark or structure of merit worthy. They did determine that the Kittredge façade and marquee do rise to landmark status and those elements were approved for landmark status on May 5, 2022, the date of the public hearing, with an effective date of decision of July 27, 2022.

In the Landmark Preservation Commission's Notice of Decision, the Environmental Review Status of 2115 Kittredge is a Categorical Exemption under Section 15061 of the Public Resources Code, Guidelines for Implementation of the California Environmental Quality Act (CEQA). The LPC's Notice of Determination states the following:

> *"CEQA FINDINGS*
>
> *1. The project is found to be exempt from the provisions of the California Environmental Quality Act (CEQA, Public Resources Code §21000, et seq.) pursuant to Section 15061.b.3 of the CEQA Guidelines (activities that can be seen with certainty to have no significant effect on the environment)."*

This development application includes an independent analysis of the historic façade and marquee elements, and the proposed project. The project's historic architecture consultant, Mark Hulbert, compiled a Projects Impact Analysis (PIA) to determine the compatibility of the historic resources and the architectural design of the proposed project using Secretary of the Interior's Standards. That report was emailed to the project's City Planner on October 24, 2022. A revised Project Impact Analysis is attached as part of this resubmittal.

Environmental Conditions

The project site does not contain any hazardous materials onsite. The project does not appear on the California Environmental Protection Agency's (CalEPA) Cortese Lists. Refer to the Hazardous Waste and Substances Statement included as part of this project application packet. This application includes a Phase 1 Environmental Services Assessment. The project has entered into contract for a Phase II Report for the site, which will be submitted to the City as soon as it is completed.

The project site does not have any protected, culverted, or historic creek beds on the property. As such, the Creek Protection Documentation required as part of the City of Berkeley's Zoning Project Application is not applicable to this project.

3. COMPLIANCE WITH GENERAL PLAN AND ZONING ORDINANCE

The City of Berkeley General Plan designates this project site as Downtown Mixed-Use, a designation characterized by "high density commercial, office, arts, culture, and entertainment and residential development." (City of Berkeley General Plan) The Downtown is also intended to "encourage diverse uses and the highest building intensity in the City to promote a vibrant city-center by increasing housing, supporting retail and cultural uses, and capitalizing on exceptional access to transit." (BGP) This site is

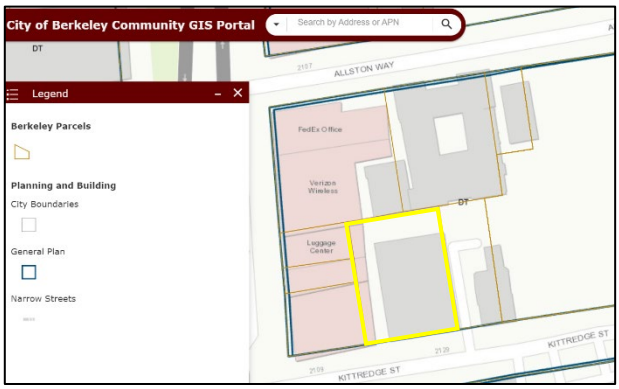

Figure 10: General Plan Map

subject to the City of Berkeley's Downtown Area Plan (DAP), approved in 2012 and incorporated into the General Plan.

The proposed project site is zoned as Downtown Mixed-Use (C-DMU) and is located in the Core of the downtown. This zoning designation is intended to implement the vision and goals of the Downtown Area Plan, which include Environmental Sustainability, Land Use, Access, Historic Preservation, Urban Design, Streets and Open Space, Housing and Community Health Services, and Economic Development.

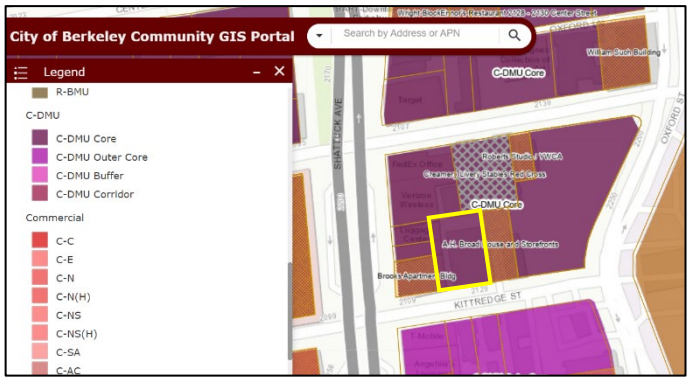

Figure 11: Zoning Map

The project will meet all the objective development standards for the C-DMU zoning district, except as modified pursuant to SDBL. Table 4 identifies the applicable development standards and how the proposed project complies with them. The C-DMU zoning district includes Use Permits that allow the reduction or waiving of setback and off-street parking requirements. The base project and proposed project both assume these two Use Permits are granted to the project. The Use Permit to modify off-street parking requirements has one objective standard for the findings for issuance, which is to pay the Downtown Parking In-Lieu Fee of approximately $1,020,000. The proposed project will also pay a Downtown Public Open Space In-Lieu Fee of approximately $302,370.

Table 4: Major Development Standards

Development Standard	**C-DMU Requirement**	**Proposed**	**Compliance**
Maximum Allowed Stories	None	17 stories	Compliant
Maximum Allowed Height	75 feet	203 feet 4 inches	Compliant with SDBL Waiver
Setbacks			
Front	0 feet	0 feet	Compliant
Sides	0 – 20 feet of Building Height = 0' 21 – 75 feet of Building Height (past 65' from lot frontage) = 0' – 5'	East/West Side: Minimum of 0 feet (varies) East/West Side: Minimum of 3 feet (varies)	The findings for issuance of this Use Permit are not objective standards, pursuant to State Law. Therefore, these standards are not included in the base project consideration. The density bonus considers these Use

			Permit as part of the project to reach the maximum allowable density. [2]
Rear	0 – 20 feet of Building Height = 0’ 21 – 75 feet of Building Height (past 65’ from lot frontage) = 0’ – 5’	Minimum of 0 feet (varies) Minimum of 3 feet (varies)	The findings for issuance of this Use Permit are not objective standards, pursuant to State Law. Therefore, these standards are not included in the base project consideration. The density bonus considers these Use Permit as part of the project to reach the maximum allowable density. [2]
Parking			
Vehicles – Residential	0 spaces	0 spaces	Compliant
Vehicles – Commercial	1.5 spaces per 1,000 SF = 34	0 spaces	Compliant with Use Permit 23.322.030(J)(2). The project meets the findings for issuance of this Use Permit. The objective standard to grant this Use Permit is the pay the Downtown Parking In-Lieu fee. The project will pay approximately $1,020,000 (@$30,000/space for 34 spaces) in-lieu of providing commercial vehicle parking.
Bicycle – Residential Long Term	1 spaces per 3 bedrooms = 96	49-98 spaces	Compliant through SDBL concession (for flexibility to provide some of the spaces for other types of micro-mobility devices).
Bicycle – Residential Short Term	2 or 1 per 40 bedrooms, whichever is greater = 7	0-7 spaces	Compliant through SDBL waiver (for flexibility on how many spaces are physically feasible).

[2] Pursuant to City of Berkeley Planning Department Memorandum issued December 2, 2021.

Bicycle – Commercial	1 space per 2,000 SF = 10	0 spaces	Compliant through SDBL waiver
Open Space			
Residential Useable Open Space	80 SF per unit = 17,440 SF	10,694 SF	Compliant through SDBL concession
Commercial Useable Open Space	1 SF/50 SF of commercial space = 456 SF	604 SF	Compliant
Privately Owned Public Open Space	1 SF of POPOS per 50 SF of commercial space = 456	0 SF	Compliant through payment of SOSIP In-Lieu Fee of approx. $302,370 (@$2.23/SF for 135,592 SF of residential)
Landscaped Open Space	Minimum of 40%	14.5%	Compliant through SDBL concession

4. PROJECT ANALYSIS

In addition to the residential and theater project described above, the project is also subject to various City of Berkeley fees and mitigations, as well as state laws. These fees and mitigations include the:

- Affordable Housing Mitigation Fee (~$4,987,980),
- Street and Open Space Improvement Plan (SOSIP) Fee (~$302,370),
- Downtown Parking In-Lieu Fee (~$1,020,000),
- Berkeley Unified School District Fee (~$471,860),
- Transit Passes for residents (~$379,320 per year), and
- Public Art Fee (~$522,068) that will be used to construct the theater.

Density Bonus

The proposed project is eligible for the State Density Bonus because it:

a) Meets all objective development standards, and
b) Provides a sufficient number of Very Low-Income, deed-restricted units of affordable housing.

The base project that meets all objective standards included 146 dwelling units. For the proposed density bonus project, 15% of the base project (or 22 units) are designated as affordable for Very Low-Income households earning less than 50% AMI. Per State Density Bonus Law, that makes this project eligible for a 50% density bonus.

With this density bonus, the project is entitled to an unlimited number of waivers and up to three concessions for development standards that impede the project's ability to utilize the density bonus. The average unit size for the base project and density bonus project is 638 square feet. Tables 5 and 6 below shows the waivers that are being requested by the project. Without these waivers being granted, the proposed project could not be constructed as designed.

Table 5: Waivers Requested to Accommodate Density Bonus

Standard	Required	Proposed
Maximum Building Height	75 feet	203 feet and 4 inches
Residential Bicycle Parking – Short Term	7 spaces	0 - 7 spaces
Commercial Bicycle Parking	10 spaces	0 spaces

Table 6: Concessions Requested to Accommodate Density Bonus

Standard	Required	Proposed
Residential Useable Open Space	17,440 square feet	10,694 square feet
Landscaped Open Space	40%	14.5%
Residential Bicycle Parking – Long Term	98 spaces	49 -98 spaces

The project requests the waivers listed above to accommodate the density bonus provided to the project through State Density Bonus Law. By waiving the development standards for building height, commercial bicycle parking, and residential short-term bicycle parking, as well as granting concessions for residential useable open space, landscaped open space, and residential long-term bicycle parking, the project can provide the proposed density as allowed under SDBL. The tables below provide explanations of why each waiver and concession is needed to accommodate the density bonus units that the project is eligible for based on the inclusion of affordable housing units in the proposed project.

Table 7: Rationale for Waivers Requested

➢ **MAXIMUM BUILDING HEIGHT**
The proposed project has a base project that complies with the 75-foot maximum height limit. That code-compliant base project is 8 stories and takes up over 90% of the subject

lot. To incorporate the 50% density bonus, the building needs many additional floors to accommodate the extra residential floor area/ dwelling units allowed under SDBL. Because this site is a small downtown lot, there is no area to expand the building horizontally, so it had to expand vertically. Because the base project reached the maximum allowable height limit for the C-DMU Core zoning district, the proposed project would not be able to add any density bonus units without this waiver.

➢ **RESIDENTIAL BICYCLE PARKING – SHORT TERM**

The proposed project requests a waiver for this development standard because there is no publicly accessible space on the property to place outdoor bike racks, and the supportive spaces for the commercial and residential areas are already extremely constrained in the interior of the building. The streetscape along Kittredge in front of the project is quite physically constrained as well. The theater will need a loading zone for patrons, and underground vaults in the sidewalk take up the rest of the space. The project is amenable to providing outdoor bike parking, however there is no physical space that could accommodate the bike racks. The project intends to work with Public Works to see how many spaces can physically be accommodated and will install those that are feasible. However, all seven planned bike racks may not fit. As a result, the project requests a waiver for its short-term residential bicycle parking requirement.

➢ **COMMERCIAL BICYCLE PARKING**

The proposed project requests a waiver for this development standard because there is no publicly accessible space on the property to place outdoor bike racks, and the commercial theater space is extremely constrained. The project dedicates as much space as possible for the theater use and building a commercial bicycle storage room would take away valuable square footage from necessary theater amenities such as the green room or dressing rooms. As a result, the project requests a waiver for its commercial bicycle parking requirement.

Table 8: Rationale for Concessions Requested

➢ **RESIDENTIAL USEABLE OPEN SPACE**

The proposed project has a base project that complies with Residential Useable Open Space standard. That code-compliant base project provides 11,680 SF of Residential UOS. Because this site is a small downtown lot, there is very little space to dedicate to side yards for useable open space on the ground floor. The proposed project does provide UOS on the ground floor, but it is for the commercial theater use (as required). The project provides as many balconies as possible so that many units do have their own private open space.

To incorporate the 50% density bonus, the building needs many additional floors to accommodate the extra residential floor area/ dwelling units allowed under SDBL. To comply the amount of Residential Useable Open Space required, the project needs 17,440 square feet of UOS. Accommodating this much UOS would require dedicating an entire floor and a half of the building to open space. Instead, the project proposes the top three floors with large, west-facing rooftop decks that together provide 9,163 SF of useable open space. There is an additional 1,120 square feet of UOS in private balconies, for a total of 10,694 square feet of useable open space in the project.

➢ LANDSCAPED USEABLE OPEN SPACE

The project proposes to landscape 14.5% of the useable open space with a drought-tolerant and native planting palette. Because the size of the site is so constrained, most of the useable open space for the project is provided on the split-level rooftop deck. The rooftop decks are beautifully designed and nicely landscaped. However, to provide nice amenity zones where people can gather to socialize, have barbeques, use the hot tub spas, exercise, and more, it was not feasible to have 40% of the area landscaped. Meeting this minimum threshold for landscaped area – and meeting the requirements for drought tolerant landscaping (which precludes lawns) – would render much of the open space unusable if most of the deck was planted with vegetation.

By not planting and maintaining 40% of the rooftop decks as landscaped areas would not only reduce the utility of the space for residents but would also cost an additional ~$421,300 in landscaping, irrigation, and structural reinforcement. This cost savings figure is calculated by assuming that total landscaping cost amounts to approximately $110 per square foot. The top three floors of the building provide useable open space, and landscaping 40% of those spaces would require more structural strength to support that much wet soil on the 15th, 16th, and 17th stories.

➢ RESIDENTIAL BICYCLE PARKING – LONG TERM

The proposed project requests a concession for this development standard because the applicant would like to satisfy part of the bicycle parking requirement with scooter parking. The applicant has seen a shift away from bicycle use towards other micro-mobility devices such as scooters or skateboards. The project will still provide the required number of spaces for personal micro-mobility devices (98 spaces planned), but some of the spaces will be dedicated to scooter parking and charging stations for electric micro-mobility options.

As a result, the project requests a concession for its long-term residential bicycle parking requirement. Being able to provide a mix of bicycle spaces and scooter charging spaces is a better fit for the project to meet the needs of its future residents. Reducing the number of bike spaces and associated floor area would result in real and identifiable cost-savings for the project. Granting the concession would save the project money

instead of having to build out the full number of required bike racks, that may end up not being used.

Housing Affordability Statement

This project is also subject to the City of Berkeley's inclusionary housing requirement under Berkeley Municipal Code § 23C.12.030 that requires the project to provide at least 20% of the total number of dwelling units as inclusionary units with the option of paying an in-lieu fee instead of providing the units on-site per Berkeley Municipal Code Section 22.20.065.

This project proposes to provide 15% of the base project units onsite, 22 units, for very low-income households. The project will enter in a regulatory agreement with the City of Berkeley that ensures that these proposed affordable dwelling units remain deed-restricted for at least 55 years. The proposed project will also pay an Affordable Housing Mitigation Fee to the City of Berkeley of approximately $4,987,980.

Project Design

This proposed project transforms a vacant, non-operating movie theater in the heart of Downtown Berkeley into a mixed-use, 17 story building that will restore the live performing arts theater use to this site and add 218 units of housing. The proposed project will include ground floor performing arts space which will activate and enliven Kittredge Street just one-half block east of the Shattuck Avenue commercial corridor.

Figure 12: Southern façade of proposed project

The theater space will serve the general public and contribute to the downtown Berkeley's arts and culture offerings. From the pedestrian perspective, the California Theater façade and marquee will look the same as it has looked for decades. By preserving both the façade and marquee, the project will preserve the street-level context and the pedestrian experience that has existed for many decades.

The preservation and adaptive re-use of the existing landmarked theater façade and marquee serves as a natural base for the proposed new residential building, setback 5 feet, to rise vertically behind the art-deco facade. The new building is modern in its form, materials, and function, but borrows inspiration from the historical façade's architecture and ornamentation. The tower has subtle offsets in the facade, vertically accentuated ornamentation, and a trellis serving as the building's crown and cap. The three top stories will be set back progressively, creating a stepped effect, with glazed railings where rooftop decks occur.

The existing theater facade is uniform in material and minimal in articulation, allowing its bas-relief and other three-dimensional ornamentation to provide texture and depth. The Art Deco facade serves as a minimalist backdrop for the colorful and eye-catching neon of the existing theater marquee. Just as the existing theater façade provides a contrasting backdrop to its prominent marquee, the new 17-story tower seeks to provide a backdrop to the historical, Art Deco façade.

As the new building departs from the Art Deco façade, it decidedly embraces its modern materials and form. To offset the imposing, heavy massing of the existing concrete and stucco facade, the new building features elongated floor-to-ceiling window openings. The new tower mirrors the original façade's tripartite arrangement with color blocking, material choice, textures, and forms.

The primary south façade facing Kittredge Street extends vertically past the tripartite façade base. Both east and west corners feature tall and narrow punched window openings to accentuate the verticality of the proposed building. The center segment of the facade is recessed from the two corners with slate grey, slightly blue stucco material. There are vertically elongated floor-to-ceiling punched window openings with a different fenestration patter than the corner bays. The stucco is interrupted with seven vertical accent stripes comprised of smooth and grooved ceramic rainscreen cladding. This design element draws the eye upward, and diffused, low-lumen LED lighting will be installed along the vertical cladding. This lighting will provide a dramatic evening and night view of the building.

The east, west, and north facades are similar in their modern designs, using different rhythms of recessed and projecting bays to break up the massing of this 17-story building. The color-blocking with off-white/light grey stucco on the projecting bays and slate grey/blue stucco on the central recessed bays. The west elevation is unique in that is provides private balconies with glass railings on every other floor.

Figure 13: Western façade of proposed project

The west elevation also has the theater terrace at the ground level, which will feature a large bi-folding door system to allow the theater lobby to spill out into a new alley courtyard for theater patrons. A concessions area will be able to serve patrons both inside and out. Cafe tables, trees in planters, and festoon lighting will offer an inviting environment as well as a welcome glimpse of activity from the

pedestrian experience along Kittredge. The courtyard will be architecturally framed by a horizontal canopy that turns groundward in a dramatic sloping form. This element will serve as a partial light and noise screen to the residential units directly above as well as cover for the terrace during a light rain.

California Theater Consortium

The California Theater Consortium (CTC) is a coalition of local performing arts non-profits that is partnering on this development project with the applicant team. CTC's mission is to transform the non-residential space in the proposed project to be a multi-purpose creative arts hub. For years, Berkeley-based performing arts companies have been searching for an affordable, accessible, transit-friendly home in which to feature local talent, nurture young artists, and bind community together in ways only the arts can.

CTC is comprised of the Youth Musical Theater Company (YMTC), West Edge Opera, Berkeley Ballet Theater (BBT). This group will be the anchor tenants for the theater space and will be fundraising to construct the interior of the theater. CTC will fundraise to pay for all the "tenant improvements" for a live performing arts theater. This will include the core, shell, seating, stage, orchestra pit, fly area, dressing rooms, and rehearsal spaces.

The purpose of this space is to host all kinds of live performances such as theater, opera, music, and dance, as well as hosting community events such as literary events and film festivals. This space will add to the local creative arts scene in Berkeley and will be a destination in downtown Berkeley for people to engage with arts and cultural events. This community-oriented focus of the California Theater Consortium will restore the community use of this property, which historically hosted many different types of community events. This proposed theater project will create community between all the creative arts organizations who will use the space, as well as the broader Berkeley and Bay Area community who can come enjoy the performances and events in the re-constructed California Theater.

Figure 14: Street view of proposed project

Public Art

This project proposes to create a live performance theater and associated spaces to become a creative and performing arts hub in Downtown Berkeley. The proposed project will substantially exceed the required 1.75% of the Project's Value ($522,068) on Public Art by constructing the

'vanilla shell' of the theater space. The actual cost to construct the shell of the theater space is projected to be several million dollars in total. The theater space span from the first basement level to the 3rd floor. The historic box office and marquee will be preserved along with the historic façade.

CTC will then finish building out the theater, resulting in even more investment into the space to create a beautiful public arts space. Restoring the performing arts theater use to 2115 Kittredge Street will allow this project to help preserve the City of Berkeley's supply of Arts & Culture spaces. This proposed theater will become a destination for the Berkeley community and the broader Bay Area community, and it is exceptionally well-served by transit.

Community Meeting

On September 26, 2022, the project team held a community meeting to provide information about the project and request feedback from community members. The team invited all owners and occupants within 300 feet of the site, as well as neighborhood groups, based on a list provided by City staff. The meeting was held at 5:30pm virtually over Zoom. There was one attendee that joined the meeting, a Berkeley resident who lives next door to the proposed project. The project team provided an overview of the project proposal, design, and anticipated process and timeline. The attendee's main concern was that no vehicle parking would be provided in the project, and he also asked questions about the construction phase of the project would affect traffic flow on Kittredge Street, noise levels during sensitive hours, and electric scooters being ridden on sidewalks and blocking sidewalks. There is a Community Meeting Packet attached as part of this application which provides more detail.

Statement Regarding Natural Gas Prohibition, Berkeley Energy Code and Berkeley Green Code

The proposed new building will not include any natural gas infrastructure in compliance with BMC Chapter 12.80. The proposed project is designed to comply with the Berkeley Energy Code (BMC Chapter 19.36) and Berkeley Green Code (BMC Chapter 19.37), adopted by the City Council on December 3, 2019, including a solar PV system as well as energy and water efficiency measures in an all-electric building. The building will accommodate as much solar PV as is physically and financially feasible for the project, however the rooftop area is relatively small. The Applicant will not be requesting any exemptions to the natural gas prohibition under the Berkeley Municipal Code.

5. LANDMARK ALTERATION PERMIT REQUIREMENTS

This project is applying for a Landmark Alteration Permit to preserve, rehabilitate, and adaptively re-use the landmark façade, marquee and box office of the California Theater at 2115 Kittredge Street. The proposed theater use will be consistent with the historic use of the

building. The existing façade will be kept intact, with some alterations, and incorporated into design of the proposed development project. The marquee may have digital reader boards installed while preserving the framework and neon. None of these proposed alterations affect the character-defining features of the façade. The character-defining features and decorative elements of the historic façade and marquee will be preserved and restored to their original splendor.

The Landmark Preservation Commission's decision, LMIN2022-00, stated that,

"This designation shall apply to the subject property and the following distinguishing features of the main building shall be preserved, and missing features shall be restored to the extent possible:

FAÇADE:

- *Overall height and composition of the primary building facade*
- *Stucco façade*
- *Art Deco-style façade with five vertical piers & six ornamental bays*
- *Art Deco stepped design pattern of façade and roof parapets*
- *Four stepped roof parapets*
- *Main central bay and two flanking bays on upper 3/4th of street façade*
- *Angled fluted upper string course and Art Deco curved coping*
- *Zigzag saw-tooth pattern under the coping*
- *Banding trim divided into four strips above the entrance that visually separates the base and the upper part of the building*
- *Two slightly coved niches located on the widest, outer architectural bays*
- *Projecting corbels and zigzag ornaments*
- *Plaster bas-reliefs (frozen fountains motif)*

Figure 15: Existing and Proposed Façade Design

MARQUEE:

- *Two rectangular neon signs on a projecting prow with stylized lettering that each spell out CALIFORNIA*
- *Projecting prow/angled marquee, surrounded in neon tubing*
- *Lyre shaped center metal piece covered in neon tubing*

ENTRYWAY:

- *Leaf-patterned ceiling/soffit beneath the projecting marquee*
- *Recessed entry*
- *Stucco-and-glass box office*
- *Glass-and-aluminum entry doors."*

The proposed project will keep the historic theater façade, marquee, and box office, which are the locations of all the significant, character-defining Art Deco features and ornamentation. Though some new features like window openings and sashes, and a deck and glass railing on top of the marquee are proposed, the original elements such as the entry doors and decorative

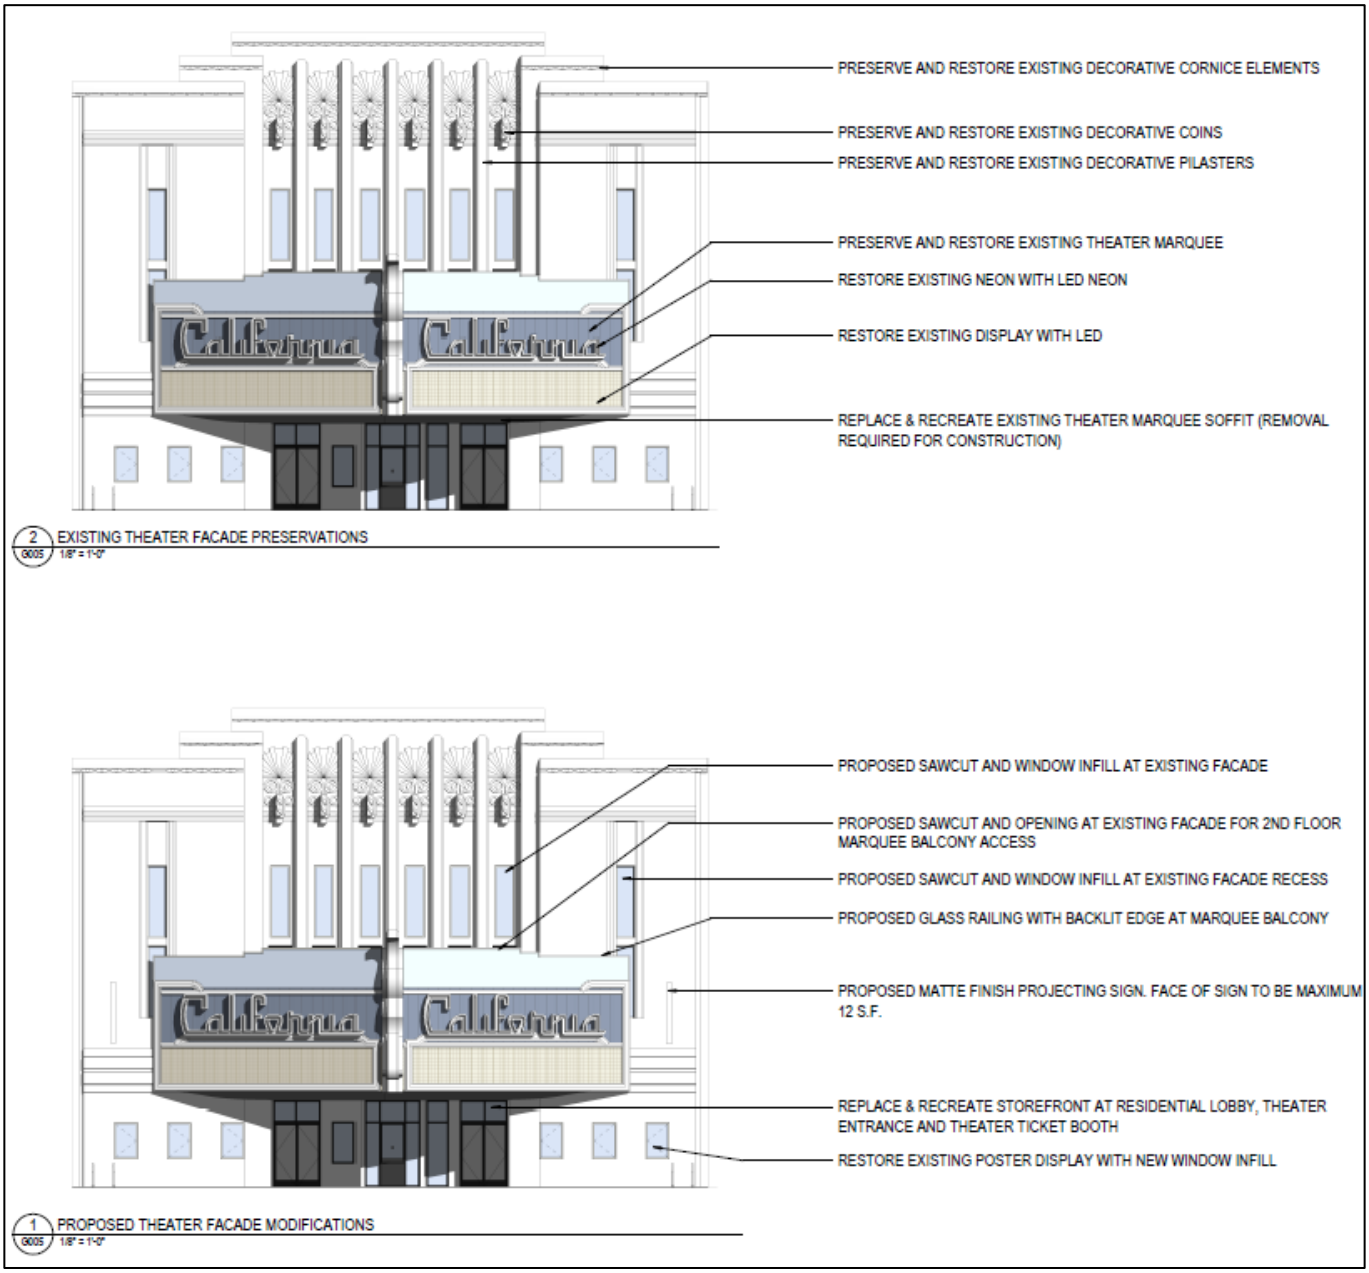

Figure 16: Existing and Proposed Façade Design

marquee soffit will be replaced in-kind. There were no spatial relationships identified as character-defining for the landmark facade; thus, the addition of the 17-story tower will not be detrimental.
The proposed alterations to the façade include punched openings to add a door for access to the marquee balcony and windows on the upper façade and ground floor. The project proposes to sawcut through the façade to create these openings but will otherwise keep the façade entirely intact. The window openings will be made on each of the three parts of the upper façade, as well as at the ground floor level.

The upper façade alteration will include 10 window infills, two in the east and west corner bays and six in the center bay. The windows in the corner bays will be arranged in vertical bands, while the window infill in the center bay will be arranged horizontally beneath the decorative coins. The vertically oriented will be inserted in between the piers, thus maintaining the character-defining arrangement of five vertical piers and six ornamental bays. The window infills at the ground level will replace the existing poster displays to create a transparent, storefront look for the residential lobby, theater lobby, and ticket booth location. In the entry vestibule, the existing ticket booth fenestration and glazed metal doors will be replaced in-kind, in the same configurations as the original California Theater.

The project also proposes to add a stepped glass railing at the marquee balcony and adding blade signs on either side of the marquee. The theater's marquee will be removed during demolition and construction for its protection and will include minor modifications to modernize it. Because the marquee will need to be removed, the marquee's soffit will need to be replaced and recreated. The marquee itself will be restored, as needed, to maintain its original features, and the neon will be swapped out for LED lights designed in a neon style. The marquee's sign board is currently analog, and it will be upgraded to a digital format.

The rationale for this proposed project is to re-develop and underutilized parcel in the downtown and adaptively re-use the historic theater façade. The California Theater has not been immune to the decline of the movie theater industry and had to shutter operates in early 2020 (pre-COVID-19 pandemic). The theater has sat vacant for 3 years now, and the ownership family has decided to sell the property and theater because they do not see a future for it. Based on the project's benefits described below, the Landmarks Preservation Commission should grant approval for this proposed project at 2115 Kittredge Street.

Project Benefits
The following benefits of the proposed project at 2115 Kittredge provide the basis for the Landmarks Preservation Commission's approval of this application. The proposed project requires a Landmark Alteration Permit for partial demolition of the existing building, and

structural alterations to the historic landmark façade. The proposed project will offer the following benefits to the City of Berkeley:

- Redevelop an underutilized parcel in the downtown core, and adaptively reuse the historic façade and marquee of the California Theater,
- Provide 218 dwelling units of dense, transit-oriented housing,
- Provide 22 units of Affordable Housing for Very Low-Income Households @ <50% AMI,
- Pay an Affordable Housing Mitigation Fee of approximately $4,987,980 to the City
- Project Will Spend 1.75% of the Project's Value (approximately $522,068) on Public Art by Constructing the Theater,
- Performing Arts Theater to Preserve Berkeley's Arts & Culture Spaces,
- No vehicle parking and 105 bicycle parking spaces (or other micro mobility device storage spaces),
- All electric building, LEED Gold or equivalent, with rooftop solar panels,
- Units will be equipped with energy efficient appliances and low flow fixtures, and the site will be planted with drought tolerant landscaping that supports the project's stormwater management plan,
- Pay other in-lieu or mitigation fees, such as the Streets and Open Space Improvement Plan (SOSIP) Fee (~$302,370), Downtown Parking In-Lieu Fee (~$1,020,000), Berkeley Unified School District Fee (~$471,860).

Figure 17: South Façade and Historic Marquee

The Landmark Preservation Commission considered an application put forth by the California Art Deco Society and the Berkeley Architectural Heritage Association (BAHA). The LPC rejected the application to landmark the entire theater building, instead opting to landmark the façade and marquee only, which is where the character-defining Art Deco features and ornamentation are located.

This application includes a Project Impacts Analysis (PIA) using the Secretary of the Interior's (SOI) Standards for the Treatment of Historic Properties. This PIA establishes that the proposed project will not conflict with the SOI Standards. The preserved façade and proposed 17-story tower do not conflict with the Secretary of Interior standards, and as such does not create a significant and unavoidable impact, per CEQA requirements. The Landmarks Preservation Commission's Notice of Decision on this property is also attached, which documents the findings that the proposed project will not conflict with provisions of the Berkeley Municipal Code Ch. 3.24.

Scale and Massing Studies for Historic Façade Preservation

The proposed project uses the following three projects in the City of Berkeley as precedent studies for incorporating a historic façade into a new development project. In response to the City's Structural Alteration Permit comment letter dated November 30, 2022, the project has provided massing studies that informed the project design. The following projects successfully integrated a lower-level historic façade into a new, larger development along the Shattuck Avenue corridor:

- Parker Place (2038 Parker Street),
- UC Press Building (2120 Berkeley Way),
- Acheson Commons (2133 University Avenue).

The proposed project would like to add to this collection of buildings in Downtown that are preserving Berkeley's history while providing space for future growth.

Figure 18: UC Press Building example

Figure 19: Parker Place example

Figure 20: Acheson Commons example (SW Corner)

Figure 21: Acheson Commons example (SE Corner)

Streetscape and Landscape Concepts

The proposed project's streetscape improvements include decorative and inviting pavement, landscaping, and two street trees framing the marquee (if feasible). The enhanced concrete pavement made of silica carbide and decorative jointing will visually relate to the marquee. The project does propose two street trees that are located so as not to obscure the marquee, however there are crowded conditions at the sidewalk in terms of vaults and underground lines. The location and feasibility of the project's proposed street trees will be confirmed by Public Works. The other planting will only reach a few feet in height so as not to block any views of the landmark façade. There will be bicycle racks between the sidewalk and the street in front of the theater's passenger loading zone.

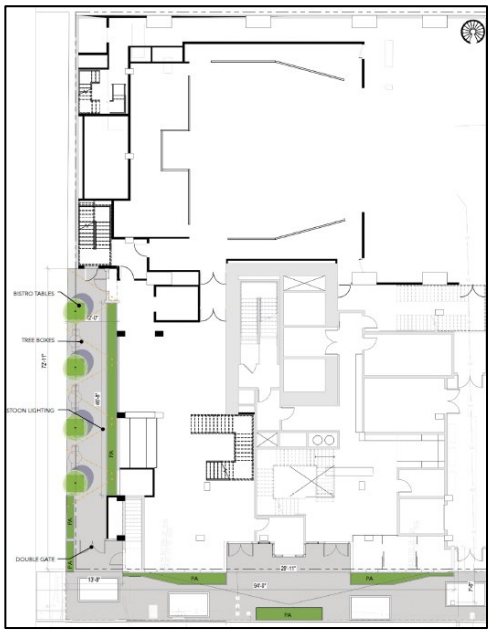

Figure 22: Ground Level Landscape Plan

The theater terrace will be semi-visible from the street when the gate is closed. The gate will be double height, with a fixed upper section that matches the scale of the buildings it's located between. This theater terrace gate will have a decorative, semi-porous design with backlighting to project light and shadows onto the sidewalk, creating visual interest along the Kittredge Street frontage. Festoon lighting and the backlit gate will make the theater terrace appealing at night, which will enliven the space on performance nights.

The trellis forms at the 16th and 17th level will provide opportunities for additional visible vegetation from the street level and surrounding buildings. The mechanical parapet above the 17th floor is functional in screening noise and sight of the mechanical equipment and provides a cap to the building form that reflects the tripartite design of the historic façade and proposed building.

Figure 23: View of Theater Terrace at night

The planting palette of the proposed project is primarily comprised of native plants, and all the species are drought tolerant. The planting palette includes blue fescue, common yarrow, olive trees, California fuchsia, California poppy, Hummingbird sage, purple needlegrass, and more.

6. CEQA Analysis and Legislative Context

The housing crisis continues to have a significant impact on Californians across the state. The Government Code sections discussed below are state legislative efforts that recognize the severity of California's housing crisis and the difficulties associated with developing new housing at appropriately zoned, transit-oriented, and urbanized locations. These pieces of legislation are applicable to the proposed project:

- California Environmental Quality Act Categorial Exemption (CEQA Guidelines § 15332)
- California Environmental Quality Act Categorical Exemption (CEQA Guidelines § 15061.b.3)
- State Density Bonus Law (Government Code § 65915)
- Housing Crisis Act of 2019 (Government Code § 66300).

CEQA

There were no potentially significant impacts identified in the traffic, historic resources, or Phase II analyses. Therefore, this project is eligible for a categorical exemption from CEQA. Because the proposed project is located in an urbanized area and because it is an infill development project, the CEQA Class 32 "Infill" Categorical Exemption applies. The project meets each of criteria A through E of that section. In terms of CEQA, this project is environmentally benign as it will not result in any significant traffic, noise, air quality, or water quality impacts. This proposed infill project is consistent with the City of Berkeley's objective design and development standards with the use of State Density Bonus Law, and the site does not appear on the California EPA's Cortese List, so this project is eligible for categorical exemption under CEQA.

Housing Crisis Act/SB 330

The Housing Crisis Act (Gov. Code § 66300) prohibits a local agency from disapproving, or conditioning approval in a manner that renders infeasible, a housing development project that provides affordable housing. The act also requires that a development project must comply with applicable, objective general plan and zoning standards and criteria that were in effect at the time the application was deemed to be complete. The law also requires the city or county to consider and either approve or disapprove the housing development project within the 5 allowable public hearings under HCA, and consistent with the applicable timelines under the Permit Streamlining Act. The proposed project is also subject to the provisions of SDBL, as described in the Project Analysis section above.

7. USE PERMIT REQUIRED FINDINGS

Conformance with General Plan Policies

SUSTAINABILITY

- Environmental Management Policy #5 – "Green" Buildings: Promote and encourage compliance with "green" building standards.
- Environmental Management Policy #35 – Energy-Efficient Design: Promote high-efficiency design and technologies that provide cost-effective methods to conserve energy and use renewable energy sources.
- Land Use Policy #3 – Infill Development: Encourage infill development that is architecturally and environmentally sensitive, embodies principles of sustainable planning and construction, and is compatible with neighboring land uses and architectural design and scale.

Response: This project proposed efficiently sized dwelling units outfitted with water & energy efficient appliances in a transit-oriented development. These factors, in additional to meeting the City of Berkeley's Green Building requirements, makes the proposed project a sustainable housing development. The building will be LEED Gold certified or equivalent, all-electric, and equipped with solar panels to power the building with clean energy. The dwelling units will have low-flow fixtures and the proposed landscaping will all be drought-tolerant and largely comprised of native vegetation. This proposed project is environmentally and architecturally sensitive and incorporates many principles of sustainable development.

This is a true infill development project, which will re-develop an underutilized parcel containing an aging, vacant theater space with no dwelling units. The theater ceased operations approximately two and a half years ago. The proposed project at 2115 Kittredge Street will transform this site into a vibrant residential address and attractive pedestrian atmosphere. The new theater at 2115 Kittredge will be re-established as a Downtown Berkeley arts & culture destination. This infill project is especially sustainable in its provision of housing adjacent to the Shattuck Commercial Corridor, which has excellent access to good and services as well as public transportation.

DOWNTOWN ARTS & CULTURE

- Economic Development Policy #10 – The Downtown Economy: Continue to diversify, revitalize and promote the Downtown as the civic, cultural, commercial, and entertainment center of Berkeley.
- Land Use Policy #20 – Downtown Pedestrian and Transit Orientation: Reinforce the pedestrian orientation of the Downtown.
- Economic Development Policy #11 – Arts and Culture: Promote Berkeley locally and internationally by taking actions to support the development of arts and culture in Berkeley.

- Urban Design Policy #34 – Public Art: Support, present, and encourage others to support or present works of public art.

Response: Firstly, this proposed project will add approximately 450-550 new residents to the downtown area who will support the downtown businesses. Adding more residents downtown will enliven the streets at all hours with more people on the streets, which can help increase safety by having more "eyes on the street". There will be more downtown residents to access the goods and services that downtown businesses offer. The 2115 Kittredge address and future housing development there will have an excellent walkability score of 99, i.e., "a walker's paradise". The California Theater has been a fixture on Kittredge Street and in downtown for generations and having been shuttered for three years has really affected that stretch of Kittredge. There are only a few other small businesses and restaurants on the block, but they do not generate much foot traffic.

Secondly, this project proposed to create a live performance theater and associated spaces to become a creative and performing arts hub in Downtown Berkeley. The proposed project will spend 1.75% of the Project's Value ($520,776) on Public Art by constructing the 'vanilla shell' of the theater space. Restoring the theater use to 2115 Kittredge Street will allow this project to help preserve the City of Berkeley's supply of Arts & Culture spaces. This proposed theater will become a destination for the Berkeley community and the broader Bay Area community. This future destination at 2115 Kittredge Street is exceptionally well served by transit.

The theater will not only host performances, screen movies, and hold community events, but it will also be a creative arts hub that draws people there during the day, evening, and night. The proposed theater will have offices, meeting rooms, and rehearsal spaces, so will be a very dynamic, active space with people coming and going at all hours. Along with the proposed streetscape redesign, this increased level of activity on Kittredge Street will activate this stretch of Kittredge, and hopefully add liveliness to the entire block.

ARCHITECTURE & PRESERVATION

- Urban Design Policy #5 – Architectural Features: Encourage, and where appropriate require, retention of ornaments and other architecturally interesting features in the course of seismic retrofit and other rehabilitation work.
- Land Use Policy #21 – Architectural Design in the Downtown: Require high-quality architectural design for all Downtown projects.
- Land Use Policy #2 – Preservation: Protect Berkeley's character by identifying, restoring, and preserving historic buildings.

Response: This proposed project aligns with the City of Berkeley General Plan's Land Use and Urban Design policies regarding high-quality architecture, preserving architecturally interesting features, and protecting Berkeley's character by restoring and preserving the historic theater façade. The preservation and adaptive re-use of the existing landmarked theater facade serves as a natural base for the proposed new residential building to rise vertically behind the art-deco facade. The façade will be rehabilitated, with features replaced in-kind if necessary, and the project proposes some structural alterations to add windows and balcony access.

The new building is modern in its form, materials, and function, but borrows inspiration from the historical façade's architecture and ornamentation. This project will protect Berkeley's historic character at the pedestrian level while adding residential density to the Downtown core. As the new building departs from the Art Deco façade, it decidedly embraces its modern materials and form. To offset the imposing, heavy massing of the existing concrete and stucco facade, the new building features elongated floor-to-ceiling window openings. The primary south façade facing Kittredge Street extends vertically past the tripartite façade base. The new tower mirrors the original façade's tripartite arrangement with color blocking, material choice, textures, and forms.

The firm that designed this project, StudioKDA, is a well-renowned local architecture firm located in Berkeley. With many multifamily projects all over the Bay Area, they provide high-quality architecture with impeccable attention to design details. The proposed project's 17-story tower design is compatible but distinctive from the historic façade, letting the historic architecture inform the design of the new building.

HOUSING NEEDS

- Housing Policy #1 – Extremely Low, Very Low, Low and Moderate-Income Housing: Increase the number of housing units affordable to Berkeley residents with lower income levels.
- Housing Policy #33 – Regional Housing Needs: Encourage adequate housing production to meet City needs and the City's share of regional housing needs.

Response: The project will construct 218 dwelling units that have a high-quality and sustainable designs. The efficient project design will offer 291 bedrooms to help meet the demand for downtown apartment living and student housing. The housing crisis is felt acutely here in Berkeley, with people paying extremely high rents to be able to live near campus or in the urban core because there housing supply is so constrained. The project at 2115 Kittredge Street

will be able to offer 22 of the proposed units as affordable housing for those who are very low income, earning less than 50% of AMI. This project will supply some of the desperately needed housing at market rate and below market rate, and offer amenities tailored to provide quality living for its residents.

The proposed project will help the City of Berkeley comply with its Regional Housing Needs Assessment (RHNA) targets for the 2023-2031 cycle. The City is required to approve a total of 8,934 units in the next eight years, meaning they need to approve approximately 1,117 per year to keep pace with their target. This project will contribute 218 dwelling units towards that goal. This project will help provide 196 market rate units and 22 affordable units for Very Low-Income households. The City has a total RHNA mandate of 3,664 market rate homes with rents that are Above Median Income, which would average out to about 458 units approved per year. The proposed project would help the City with this supply of market rate housing by providing 196 units rented at Above Median Income rates. The City also has an affordable housing target of 2,446 units for VLI households, meaning it will need to approve approximately 306 VLI units per year to keep pace with their RHNA mandate. The proposed project would supply 22 units towards meeting the City's VLI housing target and would also pay an Affordable Housing Mitigation Fee of approximately $4,987,980 in-lieu of meeting the City of Berkeley's affordable housing mandate.

Also, UC Berkeley has grown their student body by about 10,000 students in the last three years, bringing the total student population in Berkeley to almost 45,000. The proposed project will appeal to university students and will assist in housing Cal's growing student population and the increasing residential population in Downtown Berkeley.

TRANSIT ORIENTED DEVELOPMENT

- Housing Policy #12 – Transit-Oriented New Construction: Encourage construction of new medium and high-density housing on major transit corridors and in proximity to transit stations consistent with zoning, applicable area plans, design review guidelines, and the Climate Action Plan.
- Transportation Policy #18 – Transportation Impact Analysis and Vehicle Miles Traveled: When considering transportation impacts under the California Environmental Quality Act, the City shall consider how a plan or project affects all modes of transportation, including transit riders, bicyclists, pedestrians, and motorists, to determine the transportation impacts of a plan or project. Plans and projects shall be designed to deliver significant benefits to travel by pedestrians, bicycle, or transit, and/or reduced impacts on air quality, greenhouse gas emissions, and safety. For the purposes of CEQA,

Vehicle Miles Traveled (VMT) shall be the metric used to analyze the transportation impacts of a plan or project. (Reso. 69,618-NS (Exh. A), 2020)

- Land Use Policy #23 – Transit-Oriented Development: Encourage and maintain zoning that allows greater commercial and residential density and reduced residential parking requirements in areas with above-average transit service such as Downtown Berkeley.
- Land Use Policy #24 – Car-Free Housing in the Downtown: Encourage development of transit-oriented, low-cost housing in the Downtown.

Response: This project proposes to add 218 units of housing to Downtown Berkeley, which is a compact, walkable community with excellent transit access. The proposed project aligns with the goal of "Car-Free Housing in the Downtown" because it provides no residential vehicle parking spaces. This proposed project is designed to minimize vehicle trip generation by being transit-oriented and providing 105 total bicycle parking spaces. The project will also encourage alternate modes of transportation through its Transportation Demand Management (TDM) Program, and the proposal is included in this application. The project team anticipates that many future residents at 2115 Kittredge Street will be university students, who can walk or use vehicle-free transportation modes to travel to and from nearby campuses.

Because of the efficient unit design, the rents will be relatively low-cost, and it is likely that future residents will have a smaller carbon footprint than they would otherwise generate living in larger dwelling units. The project is in close proximity to a wide range of goods and services so future residents can rely on active modes of transportation for their daily needs.

The project will add a new performing arts space to the Downtown, at a location that is very convenient for theatergoers to access by public transit. The project will pay a Downtown Parking In-Lieu fee of approximately $1,020,000 to the City of Berkeley instead of providing commercial parking. The proposed project requests a Use Permit to reduce off-street parking requirements and will meet the objective standards of this Use Permit by paying the in-lieu fee.

Use Permits Requested

This section outlines the proposed project's compliance with the required findings for approval of the requested Use Permits for this project.

1. Use Permit, under BMC § 23.204.130(B)(1), Table 23.204-1 to allow a new mixed-use building in the C-DMU zone.

2. Use Permit, under BMC § 23.204.030(A), Table 23.204-2 to construct new floor area over 10,000 square feet.

3. Use Permit, under BMC § 23.204.130 (E)(6)(b) to pay a fee in lieu of providing privately owned public open space.

4. Administrative Use Permit, under BMC § 23.304.050 to allow rooftop equipment projections.
5. Use Permit, under BMC § 23.326.070(A), to demolish main buildings used for non-residential purposes.
6. Use Permit, under BMC § 23.204.130(E)(3)(b), Table 23.204-39 to modify the C-DMU setback standards.
7. Use Permit, under BMC § 23.322.030(J)(2), to reduce off-street parking in the C-DMU district.
8. Use Permit under BMC Section 23.204.020(A) to construct dwelling units.
9. Administrative Use Permit under BMC Section 23.204.020(A) to construct a theater (live).
10. Use Permit under BMC Section 23.204.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right).
11. Use Permit under BMC Section 23.322.050(A)(10) to reduce commercial parking requirement to zero.
12. Use Permit, under BMC Section 23.310.030(A) to allow Alcohol Beverage Service of distilled spirits.

Use Permit Findings

1. BMC § 23.204.130(B)(1) Table 23.204-1 to allow a new mixed-use building in the C-DMU zone.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Use Permit to allow construction of a new multi-family building. The construction, establishment, maintenance, and operation of the proposed project will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of the neighborhood or the City as a whole. Mixed-use housing projects are a permitted use in the C-DMU district, and the proposed structure is appropriate for the district in that it makes housing available in a convenient location proximate to downtown and campus.

   Surrounding land uses include other multi-family residential developments of similar scale to the proposed project, and mixed-use or commercial developments. The project location at 2115 Kittredge Street is a half block east of the Shattuck Commercial Corridor, which the City of Berkeley envisioned to support mixed use developments near regional transit, shops, and amenities that the Downtown and campus areas provide. This mixed-use residential

building is compatible with the purposes of the C-DMU district to support the residential and commercial needs of downtown residents and the University of California community.

2. BMC § 23.204.030(A), Table 23.204-2 to construct new floor area over 10,000 sq. ft.

"2. C-DMU Findings. To approve a Use Permit for new floor area in the C-DMU district, the ZAB must find that:

(a) The addition or new building is compatible with the visual character and form of the district; and

(b) No designated landmark structure, structure of merit, or historic district in the vicinity would be adversely affected by the appearance or design of the proposed addition."

Response: Because this Use Permit does not have any objective standards in the required findings for the C-DMU district, the proposed project assumes the Use Permit to allow construction of the new floor area ('compatible' and 'adversely' are not objective). Per the Housing Accountability Act and State Density Bonus Law, the City is required to approve the development project since it meets all applicable objective standards. The addition of a 17-story building to Berkeley's Downtown is compatible with the visual character and form of the district. There are some high-rise towers in the downtown already, and there are many approved development projects that will significantly increase the number of high-rise towers in the Downtown Core.

The primary south façade of this building is a landmarked structure, and as such, will be entirely preserved in the proposed project. The façade will be propped up and protected during the demolition and construction phases. The marquee will likely be detached from the façade and stored off-site for safe keeping. The marquee will be slightly renovated to have LED lights instead of neon tubing for the "California" lettering and likewise the analog sign board will be replaced by a digital LED screen. Every other aspect of the marquee will be perfectly preserved so it can be reattached to the façade when construction of the building is complete. In preserving these pieces of the theater and adaptively re-using them in the proposed project, we can maintain the street view of 2115 Kittredge. Multiple generations are very fond of this view, and are accustomed to it, so the applicant team is pleased that we will be able to keep the street frontage looking the same as it has for decades.

3. BMC § 23.204.130 (E)(6)(b) to pay a fee in lieu of providing privately owned public open space.

Response: The proposed project will meet the objective standards in the required findings for granting this Use Permit. The proposed project assumes this Use Permit to pay a SOSIP in-lieu fee of approximately $302,370 (at $2.23 for each of the 135,592 SF of residential) instead of providing a privately owned public open space. Future residents of 2115 Kittredge Street will have access to a reasonable amount of open space on the rooftop deck

and enjoy amenities designed for the urban lifestyle and the student lifestyle, such as study rooms, social spaces, and ample bike parking.

The project will be making streetscape improvements to enhance the pedestrian experience in front of the proposed project. The building design will continue the 'street wall' along Kittredge Street with its historic façade and the pedestrian-scaled entryway and theater marquee. The proposed project plans to have decorative paving that continues onto the sidewalk and demarcates the streetscape in front of 2115 Kittredge. Though it will technically be on the sidewalk in the public right of way, these design elements will help make the streetscape in front of the theater feel like a special and distinctive place for the public to enjoy. This streetscape concept that complements the theater design will add aesthetic value to the public realm here along Kittredge Street in the Downtown.

Though it will not be publicly accessible, there will be commercial useable open space that complements the theater space. Members of the public who come see a show at the future theater will be able to access the outdoor gathering space located along the western side of the proposed project. Theatergoers will be able to enjoy this well-designed outdoor space before and after the show, as well as during intermissions.

4. BMC § 23.304.050(A) to construct rooftop projections which exceed the maximum height limit for the district.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Administrative Use Permit to allow rooftop projections to exceed the district's height limit. Because the proposed building height exceeds the district's height limit, the rooftop projections will also exceed that limit.

5. BMC § 23.326.070(A), to demolish main buildings used for non-residential purposes.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Use Permit to demolish the non-residential building at 2115 Kittredge Street. This proposed project will adaptively reuse the façade of this non-residential building while demolishing the rest of the 1914. The aging building is a vacant, non-operating movie theater in the heart of Downtown Berkeley that has been shuttered for three years. The building itself has already undergone a seismic retrofit in 2002 and would likely need significant renovations to accommodate a change of use. The family who has owned this theater and property for over a century do not see a way forward to have the California Theater continue to operate as a movie theater. The ownership family fully supports the proposed project, which will also the historic theater use to continue. This proposed project will add 450-550 residents and a live performance theater to the downtown core, restoring 2115 Kittredge Street as an arts & culture destination.

6. BMC § 23.204.130(E)(3)(b), Table 23.204-39 to modify setback standards in the C-DMU zone.

   b. Modifications to Standards. The ZAB may modify the setback standards in Table 23.204-39 with a Use Permit upon finding that the modified setbacks will not unreasonably limit solar access or create significant increases in wind experienced on the public sidewalk.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Use Permit to modify setback standards for the proposed structure at 2115 Kittredge Street. The standards of "unreasonably" and "significant" are not objective, so this does not qualify as an objective standard that this SB 330 project is subject to. The findings for issuance of this Use Permit are not objective standards, pursuant to State Law. Therefore, these standards are not included in the base project consideration. The density bonus project considers these Use Permit as part of the project to reach the maximum allowable density (pursuant to the City of Berkeley Planning Department Memorandum dated August 2, 2021.

7. BMC § 23.322.030(J)(2), to reduce off-street parking in the C-DMU district.

   2. C-DMU District. Paying an in-lieu fee to reduce or waive required off-street parking in the C-DMU district requires a Use Permit. To approve the Use Permit, the ZAB must find that the applicant will pay an in-lieu fee to a fund established by the City that provides enhanced transit services.

   Response: The proposed project requests a Use Permit to reduce off-street parking requirements and will meet the objective standard of this Use Permit by paying the in-lieu fee. The project will pay a Downtown Parking In-Lieu fee of approximately $1,020,000 to the City of Berkeley instead of providing commercial parking.

   This project meets the General Plan goal of a "Car-Free Housing in Downtown" by providing no residential parking, but there is still a development standard for commercial parking in the C-DMU zone. The theater use triggers a commercial parking requirement of 1.5 space per 1,000 SF. The theater space is 23,201 SF, so 34 commercial parking spaces are required. The City's fee requires a payment of $30,000 per space in-lieu of providing commercial parking in the proposed T.O.D. project at 2115 Kittredge Street.

8. BMC Section 23.204.020(A), to construct dwelling units.

   Table 23.204-1: Allowed Uses in the Commercial Districts

   - *C-DMU: Multi-Family Dwellings = UP(PH)*

   Response: Because this Use Permit does not have any required findings, the proposed project assumes the Use Permit to construct dwelling units at 2115 Kittredge Street.

9. BMC Section 23.204.020(A) to construct a theater (live)

   Table 23.204-1: Allowed Uses in the Commercial Districts

- *C-DMU: Theater = AUP*
    - *Incidental Uses: Live Entertainment= AUP*

Response: Because this Administrative Use Permit does not have any required findings, the proposed project assumes the Use Permit to construct a Theater with Live Entertainment at 2115 Kittredge Street.

10. BMC Section 23.204.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right)

Table 23.204-37: C-DMU Height Limits

- *Sub-Area: Core Area*
    - *Maximum with Use Permit = 75 feet*

Response: Because this Use Permit does not have any required findings, the proposed project assumes the Use Permit for a maximum building height of 75 feet at 2115 Kittredge Street.

11. BMC Section 23.322.050(A)(10) to reduce commercial parking requirement to zero.

A. 10) Downtown Reduction/Waiver.

(a) Where Allowed: C-DMU district.

(b) Eligible Uses: All uses.

(c) Permit Required: Use Permit or modified with an AUP.

(d) Finding: The Zoning Officer must make the findings in Subsection B (Findings) below.

B. Findings. Required findings below are in addition to permit findings required in Section 23.406 (Specific Permit Requirements).

1. Commercial, R-S, and R-SMU Districts. When required by Subsection A (Allowed Reductions) above or elsewhere in the Zoning Ordinance, the review authority must make the following findings to approve a reduction in required off-street parking spaces in a Commercial District, the R-S district, or the R-SMU district:

(a) The reduction will not substantially reduce the availability of on-street parking in the vicinity of the use.

(b) One of the following is true:

i. ***The use is located one-third of a mile or less from a Bay Area Rapid Transit (BART) station, intercity rail station or rapid bus transit stops.***

ii. The use is located one-quarter of a mile or less from a public or private parking area, lot, or structure that is accessible by the employees of the use and sufficient parking supply is available therein to mitigate the reduction in parking for the use.

iii. A parking survey conducted under procedures set forth by the Planning Department finds that within 500 feet or less of the use, on non-residential district streets, at least two times the number of spaces requested for

reduction are available at on-street parking spaces during the peak hours of operation of the use.

(c) One of the following is true:

i. The parking requirement modification will meet the purposes of the district related to improvement and support for alternative transportation, pedestrian improvements, and activity, or similar policies.

ii. There are other factors, such as alternative transportation demand management strategies or policies in place, that will reduce the parking demand generated by the use.

Response: The proposed project complies with the objective standards in the required findings to grant this Use Permit. The proposed project is located in a Commercial District (C-DMU), so is eligible for this Use Permit. Because there is no existing vehicle parking onsite, the reduction would not affect the availability of on-street parking at all.

2115 Kittredge is just two blocks away from the Downtown Berkeley BART Station and numerous rapid bus transit stops. The proposed project will also fund a Transportation Demand Management (TDM) Program that will provide future residents with monthly transit passes upon request. The TDM Program will be available to residents for the life of the project.

12. BMC Section 23.310.030(A) to allow Alcohol Beverage Service of distilled spirits.

D. Findings of Public Convenience or Necessity. If the proposed use is within a 1,000-foot radius of the site of a use that is in the same category of alcoholic beverage sales or service, excluding food service establishments with incidental service of beer and/or wine, the Zoning Adjustments Board (ZAB) may approve the application only if it makes all of the following findings:

1. The proposed establishment will promote the City's economic health, contribute to General Plan or area plan policies, or further the district purpose.

2. The economic benefits associated with the establishment could not reasonably be achieved without the proposed alcohol sales or service.

3. If the applicant has operated a licensed establishment that has been the subject of violations regarding alcohol in the State of California, or violations of public safety or nuisance statutes or regulations in Berkeley as verified by the Police Department, such violations do not indicate a high likelihood of further violations and/or detrimental impacts from the proposed establishment. In making this finding, the ZAB may consider the number, frequency, and severity of prior violations, the time elapsed since the last violation, and other relevant factors.

4. If the proposed establishment is within 1,000 feet of any public park or public school, the ZAB has taken into consideration the effect of the proposed establishment upon such sensitive public uses.

5. The Police Department has reported that the proposed establishment would not be expected to add to crime in the area.

Response: The proposed project will promote the City's economic health, as described in the General Plan policy findings above. The economic benefits of the theater for the City of Berkeley would not be as large without a full bar that includes distilled spirit service. The applicant has not operated a licensed establishment that has been the subject of alcohol violations in the past. Because this project is located in Downtown Berkeley, there are a few parks or schools that may be just outside of the 1,000 feet radius, however this project will not have adverse effects on sensitive public uses. The project does not expect this theater to add crime in the area.

8. PROJECT TEAM

Geneva Hesner of Rhoades Planning Group is the project's primary point of contact.

2115 Kittredge Street Project

Applicant Statement

January 27, 2023~~October 11, 2022~~

Overview and Project Introduction

Figure 1: Rendering of Proposed Project

The applicant team is pleased to submit this application package for a new 218~~214~~-unit multifamily residential infill & adaptive reuse project at 2115 Kittredge Street in Berkeley. This applicant statement includes:

1. **Project Description**
2. **Project Background**
3. **Compliance with General Plan and Zoning Code**
4. **Project Analysis**
5. **Landmark Alteration Permit Requirements**
6. **CEQA Analysis and Legislative Context**
7. **Use Permit Required Findings**
8. **Project Team Contact Information**

1. PROJECT DESCRIPTION

Figure 2: Proposed Project Site

The proposed project includes the construction of a 17~~15~~-story mixed-use building and the adaptive reuse of the existing California Theater façade and marquee. The façade of the theater along Kittredge Street will be preserved, and the proposed project will redevelop the site to include a live performance theater and 218~~214~~ units of housing, including 22 affordable units. The California Theater was built in 1914 and has screened movies and held performances for the last century. This project will preserve the historic façade and marquee, maintain a creative arts presence at this site with the new theater, while adding desperately needed transit-oriented housing to Downtown Berkeley.

The proposed housing development project includes 218~~214~~ dwelling units in a ~~155,741~~158,793 square foot mixed-use building with 23,201~~19,108~~ square

feet of non-residential space dedicated to the live performance theater. The project will provide 22 units of
affordable housing for Very Low-Income (VLI) households earning not more than 50% of the Area Median Income (AMI). The inclusion of 22 Very Low-Income units entitles the project to a 50% density bonus, unlimited waivers, and three concessions, which together allow for the project's proposed 218~~214~~ dwelling units. The project is subject to the modifications and protections of State Density Bonus Law (Gov. Code § 65915) and the Housing Accountability Act (Gov. Code § 65589.5). A preliminary application was submitted pursuant to Senate Bill 330 (Gov. Code § 66300) on July 28, 2022, and the proposed development project is consistent with all the provisions of SB 330. An Affordable Housing Mitigation Fee will apply to the project and be paid to the City of Berkeley.

The project site is a 13,500 square foot lot that is zoned Downtown Mixed-Use Core (C-DMU), a designation that encourages the development of mixed commercial and high-density residential uses. The new residential development will include (145~~141~~) studios and (73) 2-bedroom units. The 22 affordable units will have the following unit mix: (14) studios and (8) 2-bedrooms. Because of its downtown location one half block west of campus, this project will likely appeal to students and young professionals alike. The proposed project will add 291~~287~~ bedrooms to Berkeley's housing stock, including 30 below market-rate (BMR) bedrooms, to help alleviate the housing affordability pressure near downtown and by the Cal campus.

~~***Table 1: Unit Mix***~~

~~Unit Type~~	~~Unit Count~~
~~Studio~~	~~145~~
~~1 Bedroom~~	~~0~~
~~2 Bedroom~~	~~73~~
~~Total~~	~~218~~

Ground Floor Residential

The ground floor plan is separated into a residential entry area on the eastern side of the building and non-residential space for the theater use on the western side. The ground floor residential area includes a lobby, reception desk, mail room, package room and two~~three~~ leasing offices. In the first basement level, the proposed project has a residential multi-purpose room~~, a package room,~~ and ~~residential~~ a lobby restroom~~s~~ for residents. On the second basement level, there is a bike room, trash/recycling room, and other back of house service areas. The ground floor lobby is connected to the first basement level and second-floor resident's lounge with a large, open staircase. This staircase will be an aesthetically pleasing focal point and design feature connecting the three residential common spaces.

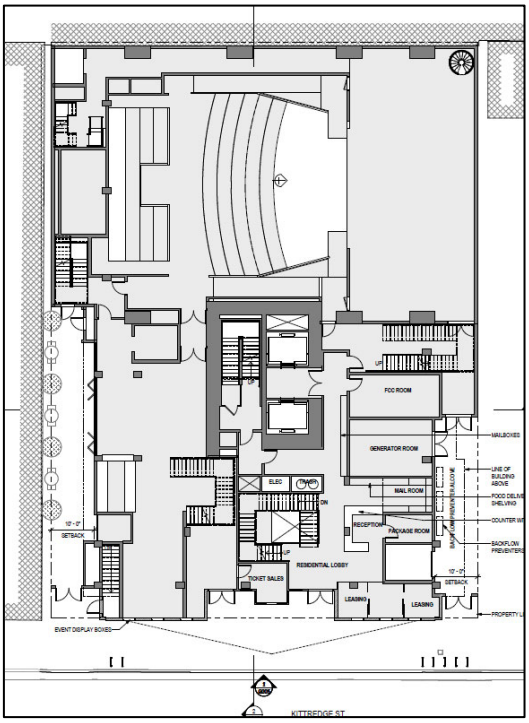

Figure 3: Ground Floor Plan

The residential lounge on the second floor leads to the residential balcony on top of the theater's marquee. The marquee balcony provides 411~~550~~ SF of residential useable open space. On Levels 2 and 3, there is a Music/Podcast Studio. There are a total of 53 study rooms in the project, distributed throughout the levels. On levels 5 through 8 and 10 through 13, there are 5 study rooms per floor, with fewer on the other floors. ~~On~~ Some of these study rooms/work lounges are smaller for individual work, and there are larger rooms meant for collaboration.

Level 2 has one studio unit and one 2-bedroom unit. Level 3 has four studios and three 2-bedroom units. Level 4 through 14 have 11 studios and six 2-bed units. ~~levels 2 through 13, there are two study rooms/work lounges per floor. There is one larger room for collaboration and one smaller room for private studying. On Level 2, there are eight studios and five 2-bedroom units. Levels 3 through 13 have 11 studios and six 2-bedroom units per floor.~~ The center two units on the western façade of Levels 3, 4, 6, 8, 10, 12 and 1~~2~~4 have private balconies. Some corner units also have balconies, however they do not meet the City's minimum dimensions of six feet by six feet, so do not qualify as useable open space.

Level 154 has ~~five~~ six studios and one 2-bedroom unit, along with the building's indoor/outdoor fitness space. The other amenities on the 154th floor include: a BBQ/Kitchenette area, TV Entertainment area, lawn game area, multi-sport simulator. There is ~~1,910~~3,873 SF of useable open space on the 154th floor, where future residents can enjoy the unobstructed west-facing views from the hammocks and fire pit seating areas. The 15~~5~~6th floor has ~~seven~~ eight studios and one 2-bedroom unit. There is ~~4,505~~2,625 SF of useable open space on the 165th floor with~~, and includes~~ hot tubs and cabanas.~~hot tub spas, cabanas.~~ There is also amphitheater seating in front of a vine wall where residents can enjoy the westerns views of sunsets and San Francisco. The top floor on Level 17 contains another 2,665 SF of useable open space with more beautiful, native landscaping for aesthetic appeal.

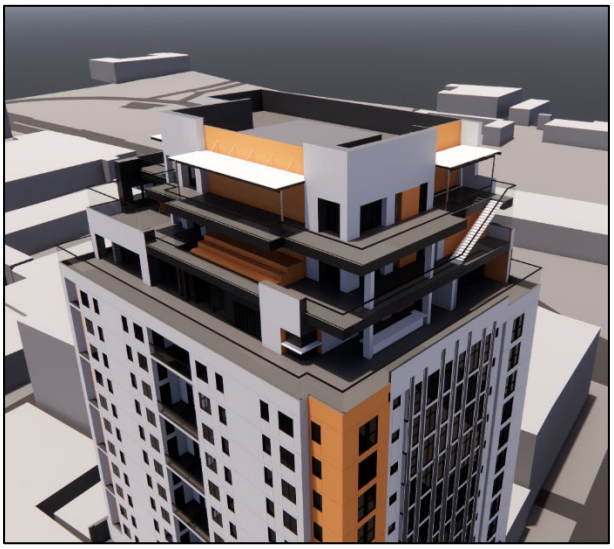

Figure 4: Aerial View of rooftop decks

Together, these three split-level rooftop decks and the second-floor marquee balcony provide ~~6,965~~9,574 SF of open space. Private balconies make up the rest of the residential open space, and all the project's open space areas~~ and~~ are designed to be breathtaking outdoor amenities for future residents.

Ground Floor Theater

The proposed project also includes a 357~~355~~-seat theater fully equipped for live performances. The California Theater Consortium is partnering on the proposed project and envisions a performing arts hub that serves anchor tenants as well as traveling performance groups. This future theater will be able to host community events, as has happened in the past at California Theater.

The new theater is approximately ~~19,108~~23,201 SF and spans the 3rd floor, 2nd floor, ground floor, and basement level one (B1)~~ and basement level two (B2)~~. The first basement level holds the facilities to support the performances, including the orchestra pit, green room, dressing

rooms, rehearsal space, performer restrooms, storage space, classroom space, and office/meeting space. The ground floor includes the large performance stage, 228 orchestra level seats (plus 4 accessible seats), the audio projection room, the theater lobby and the theater guest restrooms, as well as outdoor theater terrace, ticket booth, and concessions booth. The theater terrace contains 604 SF of commercial useable open space with direct access from the street. Level 2 contains~~includes~~ 123 seats on the balcony level (plus 2 accessible seats), and the fly area above the stage, ~~as well as the upper theater lobby, outdoor theater terrace, ticket booth, and indoor/outdoor concessions booth. The theater terrace contains 582 SF of commercial useable open space with direct access from the street. The first basement level contains~~ while Level 3 holds the theater's mechanical space. ~~the large performance stage, 232 orchestra level seats, the audio projection room, the lower theater lobby, and the theater guest restrooms. The second basement level holds the facilities to support the performances, including the orchestra pit, green room, dressing rooms, rehearsal space, performer restrooms, storage space, classroom space, and office/meeting space.~~

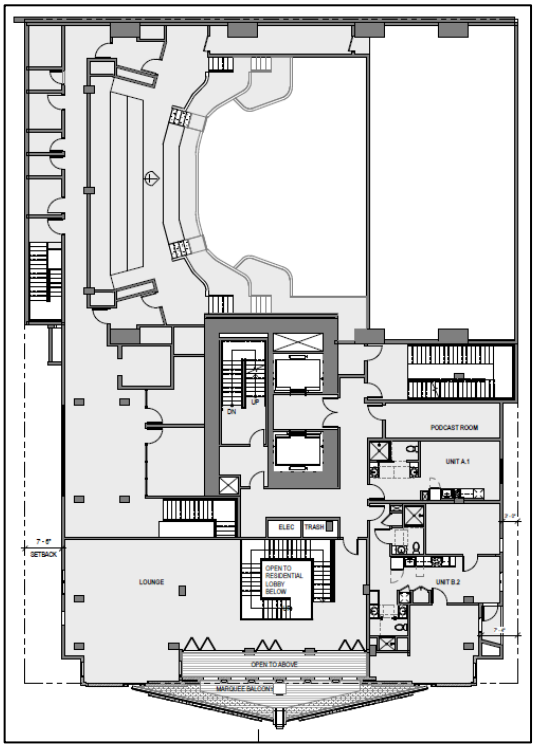

Figure 5: Level 2 – Balcony of

The project site is on the north side of Kittredge Street between Shattuck Avenue and Oxford Street. The proposed site is approximately 350 feet east of the University of California's Berkeley (UCB) campus. Kittredge Street is three blocks away from campus and 1 block away from a Downtown Berkeley BART station entrance. The location of this project will provide future residents with excellent access to the UCB campus, the downtown area, and regional transit opportunities.

The site is very accessible via public transit or active transit. It is well served by multiple bus routes and is less than 0.10 miles from a Downtown Berkeley BART station entrance. The project will not provide any vehicle parking because the site is so well served by transit, bicycle facilities, and nearby services and amenities. The project will provide ample bicycle parking with 98~~96~~ long term spaces for residents and 7 short term spaces for their guests. In addition, there will be 30~~20~~ spaces to store and charge personal scooters. This proposed urban infill project with 105~~103~~ total bike spaces and 30~~20~~ personal scooter spots is exceptionally well-suited for future residents

Figure 6: Vicinity Map of Site

to rely solely on sustainable modes of transportation. The building itself will be all-electric, powered sustainably, and will be LEED Gold (or equivalent) certified. Solar equipment will be housed on the roof to provide clean power to the future building at 2115 Kittredge Street.

Key elements of the project include:

- 218~~214~~ total units in 17~~15~~ stories, rooftop deck, amenity spaces, and study rooms/work lounges,
- 22 units affordable to Very Low-Income households @ <50% AMI,
- Live Performing Arts Theater with 357~~355~~ seats, full stage and full backstage, fly area, and practice support spaces,
- 105 ~~103~~ bicycle parking spaces, 30~~20~~ scooters spaces, 0 vehicle parking spaces, and
- Payment of Mitigation and In-Lieu Fees to the City of Berkeley:
    - Affordable Housing Mitigation Fee (~$~~4,803,240~~4,987,980),
    - Street and Open Space Improvement Plan (SOSIP) Fee (~$~~304,692~~302,370),
    - ~~Residential Open Space In-Lieu Fee (~$1,802,024)~~
    - Downtown Parking In-Lieu Fee (~$~~870,000~~1,020,000),
    - Berkeley Schools Fee (~$~~475,483~~471,860).

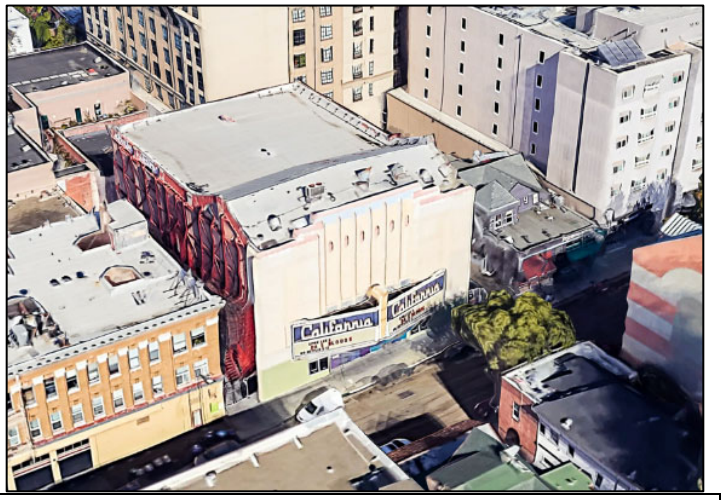
2. PROJECT BACKGROUND

Property Information

- APN: 057-2030-009
- Parcel Area: 13,500 SF/0.31 acres
- General Plan Designation: Downtown
- Zoning District: Downtown Mixed-Use District (C-DMU Core)

Existing Conditions

Known today as the California Theater, the theater at 2115 Kittredge has screened movies and held live performances for over a century. The move theater operated for 106 years before shutting down in early 2020 (pre-COVID-19 pandemic). This project will be able to retain the theater use by including a live performing arts theater on the 2nd floor, ground floor and the ~~two below-grade levels~~first basement level of the proposed project.



~~Table 2: Surrounding Uses~~ Figure ~~3~~1: Existing Conditions

The existing three-story building at 2115 Kittredge Street was built in 1914. There is a decorative front façade of the theater with a neon-enhanced marquee, which will be preserved as part of the proposed project. The rest of the building is made of exposed brick, and since 2002 the structure has been surrounded with a steel bracing for seismic purposes. The bracing is painted red and has a diagonal pattern. The side and rear facades will be demolished along with the interior of the structure. The historic façade and marquee will be kept intact and delicately restored and modified, with a 17~~15~~-story mixed use building constructed behind it.

Currently, there are no residential units onsite, so the project will not be eliminating any dwelling units from the City of Berkeley's housing stock. The proposed project seeks to increase

~~Direction~~	~~Uses~~	~~Zoning~~

the density of housing onsite by providing 218 units~~214~~ on a 0.31-acre parcel that is an effective density of 703~~690~~ dwelling units per acre.

History of Property[1]

This property has been held by the same family since the early 20th century when the City of Berkeley was in the midst of a development boom. The original California Theater owner was John Muldoon, who came to Berkeley after the 1906 earthquake like many others who migrated to the East Bay.

The heirs of John Muldoon still own the property. After more than a century of keeping the California Theater in the family, they are choosing to sell the property to the project applicant who will preserve the theater use while redeveloping the land to accommodate dense downtown housing for the next 100 years.

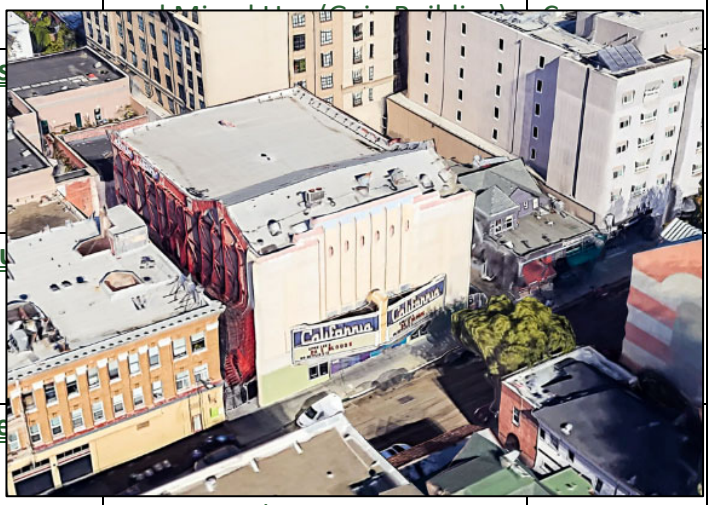

Figure 8: Existing Conditions

In 1906, John Muldoon purchased the subject property and moved his family into the Victorian house with the address of 2113 Kittredge Street, Berkeley. This home was demolished to construct the theater, which opened in 1914. John Muldoon partnered with local Berkeley businessman Frank M. Wilson to commission Albert W. Cornelius, a San Francisco architect, to design the theater and Kidder & McCullough of Berkeley to construct it. T & D Circuit was brought on as the operator of the newly constructed early motion picture theater. At the time, it was the largest theater in Alameda Country with 2,000 seats.

Figure ~~7~~8: Existing Conditions

The theater was built with a large stage and equipment for full theatrical productions,

[1] The source of the historical information for this site is the Landmark Preservation Commission's Notice of Decision and the Art Deco Society's Landmark Application.

including and orchestra pit and magnificent pipe organ. Early on, T& D held live performances as well as screening silent films for the first decade or so of the theater's history. One notable stage production of T&D is said to have had a cast of thousands. The applicant team for this project and our California Theater Consortium partner are very enthusiastic about the prospect of holding live performances at 2115 Kittredge Street once again.

In 1923, T&D Circuits sold operations of the theater to West Coast Theaters. The new West Coast Theater operators got involved in the Downtown Berkeley community and hosted family events, holiday parties, Parent-Teacher Association (PTA) events, fundraisers, and other community-oriented gatherings. Similarly, the proposed project hopes to restore this legacy to the California theater by holding community-oriented activities in the proposed creative arts hub and event space.

Renovations & Remodels:

In 1928, the theater operations were sold yet again to Fox Studios. This purchase triggered a massive renovation and significant remodel of the California Theater, and it re-opened as the Fox California in 1930. The newly upgraded theater stayed roughly the same size, but now had the modern technology for films with sound, featured a new proscenium archway above the stage. The architect of this transformative remodel was Clifford A. Balch, who used the Art Moderne style, one that was modern at the time and is now known as Art Deco. This Art Deco style is characterized by:

- simplified overall building form,
- linear massing and appearance,
- stepped outline,
- smooth wall surface,
- stylized, often geometric, ornamentation and detailing,
- fluting details, and
- bas-relief (low-relief sculpture) decorative elements.

Figure 9: Historic Façade – 1930 remodel

The California Theater was completely transformed by Balch's remodel, who replaced the original ornate Beaux-Arts façade into a modern, imposing façade with minimalist Art Moderne decorations. The new façade had a tripartite front, a stepped parapet and roofline, and a motif of frozen fountains with decorative coins. Balch applied this popular stepped, zigzag pattern of the façade on other theaters in the area, such as the Berkeley U.A. on Shattuck Avenue, completed during the same period. This 1930 remodel featured a new marquee as well, but that was replaced yet again in the 1952 remodel. The newly installed marquee was larger and

featured a new glowing neon sign that read 'California' on both sides of the wedge-shaped Midcentury marquee.

~~1976~~	~~Main Auditorium is split into 3 screening rooms~~
~~2002~~	~~Seismic Upgrade~~

Decline of Movie Theaters:

The first decline in the popularity of movie theaters resulted from the explosion of home televisions in the 1950's and 1960's. The 1970's brought shopping malls and megaplexes, adding more competition for smaller theater operators. In 1976 the California theater split their main auditorium into three screens to show more movies at a time to keep up with their megaplex competitors. Three screening rooms were created by enclosing the balcony area and splitting it into two smaller theaters.

In 1994, Landmark Theaters took over the operating lease and held it for over 15 years. The movie theater industry has further declined due to the advent of online streaming, as well as other factors, so the Landmark Theaters lease expired in early 2020 (pre-COVID-19 pandemic). Because of declining movie sales, the Landmark Theaters could only commit to paying a low rent, which was not a feasible arrangement for the ownership family. Facing the broader decline of the movie theater industry, the Muldoon heirs have chosen to sell their family property at 2115 Kittredge Street. With the proposed development project, we can keep the theater use alive at this historic Downtown Berkeley property.

Table 3: Timeline of Renovations and Remodels

Landmark Preservation Commission Hearing

The Landmark Preservation Commission held a public hearing on the California Theater at 2115 Kittredge Street to determine whether the building should be a designated as a City of Berkeley Landmark. The LPC determined that the front façade of the theater should be preserved for its historic value and designated that part of the California Theater as a City of Berkeley landmark. The landmark application (LMIN2022-00) was brought to the LPC by the Art Deco Society of California and Berkeley Architectural Heritage Associate (BAHA).

Although the application was to landmark the site, building, and use, the LPC determined that the site, building, and use were not landmark or structure of merit worthy. They did determine that the Kittredge façade and marquee do rise to landmark status and those elements were approved for landmark status on May 5, 2022, the date of the public hearing, with an effective date of decision of July 27, 2022.

In the Landmark Preservation Commission's Notice of Decision, the Environmental Review Status of 2115 Kittredge is a Categorical Exemption under Section 15061 of the Public Resources Code, Guidelines for Implementation of the California Environmental Quality Act (CEQA). The LPC's Notice of Determination states the following:

> *"CEQA FINDINGS*
>
> *1. The project is found to be exempt from the provisions of the California Environmental Quality Act (CEQA, Public Resources Code §21000, et seq.) pursuant to Section 15061.b.3 of the CEQA Guidelines (activities that can be seen with certainty to have no significant effect on the environment)."*

This development application includes an independent analysis of the historic façade and marquee elements, and the proposed project. The project's historic architecture consultant, Mark Hulbert, compiled a Projects Impact Analysis (PIA) to determine the compatibility of the historic resources and the architectural design of the proposed project using Secretary of the Interior's Standards. That report ~~will be forwarded when it is finalized, no later than October 27, 2022.~~was emailed to the project's City Planner on October 24, 2022. A revised Project Impact Analysis is attached as part of this resubmittal.

Environmental Conditions

The project site does not contain any hazardous materials onsite. The project does not appear on the California Environmental Protection Agency's (CalEPA) Cortese Lists. Refer to the Hazardous Waste and Substances Statement included as part of this project application packet. This application includes a Phase 1 Environmental Services Assessment. The project has entered into contract for a Phase II Report for the site, which will be submitted to the City as soon as it is completed.

The project site does not have any protected, culverted, or historic creek beds on the property. As such, the Creek Protection Documentation required as part of the City of Berkeley's Zoning Project Application is not applicable to this project.

3. COMPLIANCE WITH GENERAL PLAN AND ZONING ORDINANCE

The City of Berkeley General Plan designates this project site as Downtown Mixed-Use, a designation characterized by "high density commercial, office, arts, culture, and entertainment and residential development." (City of Berkeley General Plan) The Downtown is also intended to "encourage diverse uses and the highest building intensity in the City to promote a vibrant city-center by increasing housing, supporting retail and cultural uses, and capitalizing on exceptional access to transit." (BGP) This site is subject to the City of Berkeley's Downtown Area Plan (DAP), approved in 2012 and incorporated into the General Plan.

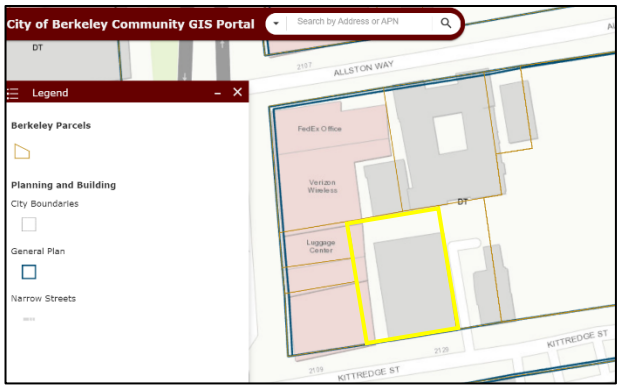

Figure 10: General Plan Map

The proposed project site is zoned as Downtown Mixed-Use (C-DMU) and is located in the Core of the downtown. This zoning designation is intended to implement the vision and goals of the Downtown Area Plan, which include Environmental Sustainability, Land Use, Access, Historic Preservation, Urban Design, Streets and Open Space, Housing and Community Health Services, and Economic Development.

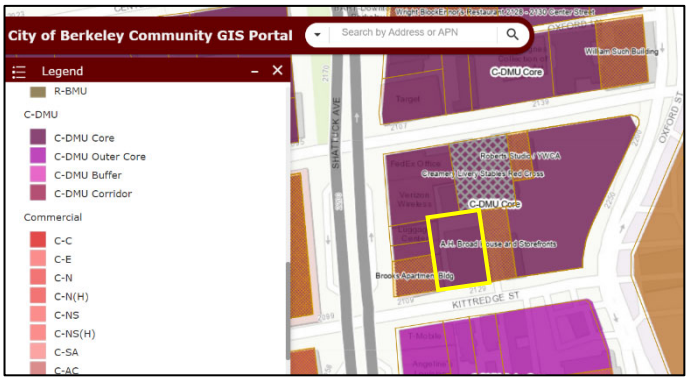

Figure 11: Zoning Map

The project will meet all the objective development standards for the C-DMU zoning district, except as modified pursuant to SDBL. Table 4 identifies the applicable development standards and how the proposed project complies with them. The C-DMU zoning district includes Use Permits that allow the reduction or waiving of setback and off-street parking requirements. The base project and proposed project both assume these two Use Permits are granted to the project. The Use Permit to modify off-street parking requirements has one objective standard for the findings for issuance, which is to pay the Downtown Parking In-Lieu Fee of ~~. The project will pay this fee (~~approximately $~~870,000~~1,020,000~~)~~. The proposed project will also pay a Downtown Public Open Space In-Lieu Fee of ~~$196 per SF. For a project of this size, 17,120 SF of residential open space is required. The project will comply with the development standard by providing 7,926 SF of open space for residents and paying the in-lieu fee for the remainder (~~approximately $~~1,802,024~~302,370~~)~~.

Table 4: Major Development Standards			
Development Standard	**C-DMU Requirement**	**Proposed**	**Compliance**
Maximum Allowed Stories	None	17~~15~~ stories	Compliant
Maximum Allowed Height	75 feet	203~~176~~ feet 4 inches	Compliant with SDBL Waiver
Setbacks			
Front	0 feet	0 feet	Compliant
Sides	0 – 20 feet of Building Height = 0’ 21 – 75 feet of Building Height (past 65’ from lot frontage) = 0’ – 5’	East/West Side: Minimum of 0 feet (varies) East/West Side: Minimum of 3 feet (varies) ~~East Side: Minimum of 3 feet (varies)~~	The findings for issuance of this Use Permit are not objective standards, pursuant to State Law. Therefore, these standards are not included in the base project consideration. The density bonus considers these Use Permit as part of the project to reach the maximum allowable density. [2]
Rear	0 – 20 feet of Building Height = 0’ 21 – 75 feet of Building Height (past 65’ from lot frontage) = 0’ – 5’	Minimum of 0 feet (varies) Minimum of 3 feet (varies)	The findings for issuance of this Use Permit are not objective standards, pursuant to State Law. Therefore, these standards are not included in the base project consideration. The density bonus considers these Use Permit as part of the project to reach the maximum allowable density. [2]
Parking			
Vehicles – Residential	0 spaces	0 spaces	Compliant
Vehicles – Commercial	1.5 spaces per 1,000 SF = 34~~29~~	0 spaces	Compliant with Use Permit 23.322.030(J)(2). The project meets the findings for

[2] Pursuant to City of Berkeley Planning Department Memorandum issued December 2, 2021.

			issuance of this Use Permit. The objective standard to grant this Use Permit is the pay the Downtown Parking In-Lieu fee. The project will pay approximately $~~870,000~~1,020,000 (@$30,000/space for 34~~29~~ spaces) in-lieu of providing commercial vehicle parking.
Bicycle – Residential Long Term	1 spaces per 3 bedrooms = 96	49-98~~96~~ spaces	Compliant through SDBL concession (for flexibility to provide some of the spaces for other types of micro-mobility devices).~~Compliant~~
Bicycle – Residential Short Term	2 or 1 per 40 bedrooms, whichever is greater = 7	0-7 spaces	Compliant through SDBL waiver (for flexibility on how many spaces are physically feasible).~~Compliant~~
Bicycle – Commercial	1 space per 2,000 SF = 10	0 spaces	Compliant through SDBL waiver
Open Space			
Residential Useable Open Space	80 SF per unit = ~~17,120~~17,440 SF	~~7,926~~10,694 SF	Compliant through SDBL concession~~Compliant through payment of in-lieu fee of approx. $1,802,024 (@ $196/SF for 9,194 SF)~~
Commercial Useable Open Space	1 SF/50 SF of commercial space = 456~~382~~ SF	604~~582~~ SF	Compliant
Privately Owned Public Open Space	1 SF of POPOS per 50 SF of commercial space = ~~382~~456	0 SF	Compliant through payment of SOSIP In-Lieu Fee of approx. $~~304,692~~302,370 (@$2.23/SF for ~~136,633~~135,592 SF of residential)
Landscaped Open Space	Minimum of 40%	14.5~~6.2~~14.7%	Compliant through SDBL ~~waiver~~concession

4. PROJECT ANALYSIS

In addition to the residential and theater project described above, the project is also subject to various City of Berkeley fees and mitigations, as well as state laws. These fees and mitigations include the:

- Affordable Housing Mitigation Fee (~$~~4,803,240~~4,987,980),
- Street and Open Space Improvement Plan (SOSIP) Fee (~$~~304,692~~302,370),
- ~~Residential Open Space In-Lieu Fee (~1,802,024)~~
- Downtown Parking In-Lieu Fee (~$~~870,000~~1,020,000),
- Berkeley Unified School District Fee (~$~~475,483~~471,860),
- Transit Passes for residents (~$379,320 ~~372,360~~ per year), and
- Public Art Fee (~$522,068~~564,000~~) that will be used to construct the theater.

Density Bonus

The proposed project is eligible for the State Density Bonus because it:

a) Meets all objective development standards, and
b) Provides a sufficient number of Very Low-Income, deed-restricted units of affordable housing.

The base project that meets all objective standards included 146 dwelling units. For the proposed density bonus project, 15% of the base project (or 22 units) are designated as affordable for Very Low-Income households earning less than 50% AMI. Per State Density Bonus Law, that makes this project eligible for a 50% density bonus.

With this density bonus, the project is entitled to an unlimited number of waivers and up to three concessions for development standards that impede the project's ability to utilize the density bonus. The average unit size for the base project and density bonus project is 638 square feet. Tables 5 and 6 below shows the waivers that are being requested by the project. Without these waivers being granted, the proposed project could not be constructed as designed.

Table 5: Waivers Requested to Accommodate Density Bonus

Standard	**Required**	**Proposed**
Maximum Building Height	75 feet	203~~176~~ feet and 4 inches
Residential Bicycle Parking – Short Term	7 spaces	0 - 7 spaces

~~Landscaped Open Space~~	~~40%~~	~~14.7%~~
Commercial Bicycle Parking	10 spaces	0 spaces

Table 6: Concessions Requested to Accommodate Density Bonus		
Standard	**Required**	**Proposed**
Residential Useable Open Space	17,440 square feet	10,694 square feet
Landscaped Open Space	40%	14.5%
Residential Bicycle Parking – Long Term	98 spaces	49 -98 spaces

The project requests the waivers listed above ~~in order to~~to accommodate the density bonus provided to the project through State Density Bonus Law. By waiving the development standards for building height~~, minimum landscaped open space, and~~ commercial bicycle ~~parking,~~ parking, and residential short-term bicycle parking, as well as granting concessions for residential useable open space, landscaped open space, and residential long-term bicycle parking, the project can provide the proposed density as allowed under SDBL. The tables below provide~~s~~ explanations of why each waiver and concession is needed to accommodate the density bonus units that the project is eligible for based on the inclusion of affordable housing units in the proposed project.

Table 7~~6~~: Rationale for Waivers Requested
➢ **MAXIMUM BUILDING HEIGHT**
The proposed project has a base project that complies with the 75-foot maximum height limit. That code-compliant base project is 8 stories and takes up over 90% of the subject lot. To incorporate the 50% density bonus, the building needs many additional floors to accommodate the extra residential floor area/ dwelling units allowed under SDBL. Because this site is a small downtown lot, there is no area to expand the building horizontally, so it had to expand vertically. Because the base project reached the maximum allowable height limit for the C-DMU Core zoning district, the proposed project would not be able to add any density bonus units without this waiver.
➢ **RESIDENTIAL BICYCLE PARKING – SHORT TERM**
The proposed project requests a waiver for this development standard because there is no publicly accessible space on the property to place outdoor bike racks, and the supportive spaces for the commercial and residential areas are already extremely

constrained in the interior of the building. The streetscape along Kittredge in front of the project is quite physically constrained as well. The theater will need a loading zone for patrons, and underground vaults in the sidewalk take up the rest of the space. The project is amenable to providing outdoor bike parking, however there is no physical space that could accommodate the bike racks. The project intends to work with Public Works to see how many spaces can physically be accommodated and will install those that are feasible. However, all seven planned bike racks may not fit. As a result, the project requests a waiver for its short-term residential bicycle parking requirement.

➢ ~~LANDSCAPED USEABLE OPEN SPACE~~

~~Because the size of the site is so constrained, most of the useable open space for the project is provided on the split-level rooftop deck. The rooftop decks are beautifully designed and nicely landscaped. However, to provide nice amenity zones where people can gather to socialize, have barbeques, use the hot tub spas, exercise, and more, it was not feasible to have 40% of the area landscaped. Meeting this minimum threshold for landscaped area – and meeting the requirements for drought tolerant landscaping (which precludes lawns) – would render much of the open space unusable if most of the deck was planted with vegetation. The project proposes to landscape 14.7% of the useable open space with a drought-tolerant and native planting palette.~~

➢ **COMMERCIAL BICYCLE PARKING**

The proposed project requests a waiver for this development standard because there is no publicly accessible space on the property to place outdoor bike racks, and the commercial theater space is extremely constrained. The project dedicates as much space as possible for the theater use and building a commercial bicycle storage room would take away valuable square footage from necessary theater amenities such as the green room or dressing rooms. ~~The project does provide six outdoor U-racks for bicycle parking; however, they are located in the public right-of-way between the street and the sidewalk.~~ As a result, the project requests a waiver for~~such, the project cannot count these bike racks towards~~ its commercial bicycle parking requirement~~, so a waiver is requested.~~ .

Table ~~7~~8: Rationale for Concessions Requested

➢ RESIDENTIAL USEABLE OPEN SPACE

The proposed project has a base project that complies with Residential Useable Open Space standard. That code-compliant base project provides 11,680 SF of Residential UOS. Because this site is a small downtown lot, there is very little space to dedicate to

side yards for useable open space on the ground floor. The proposed project does provide UOS on the ground floor, but it is for the commercial theater use (as required). The project provides as many balconies as possible so that many units do have their own private open space.

To incorporate the 50% density bonus, the building needs many additional floors to accommodate the extra residential floor area/ dwelling units allowed under SDBL. To comply the amount of Residential Useable Open Space required, the project needs 17,440 square feet of UOS. Accommodating this much UOS would require dedicating an entire floor and a half of the building to open space. Instead, the project proposes the top three floors with large, west-facing rooftop decks that together provide 9,163 SF of useable open space. There is an additional 1,120 square feet of UOS in private balconies, for a total of 10,694 square feet of useable open space in the project.

- **LANDSCAPED USEABLE OPEN SPACE**

The project proposes to landscape 14.5% of the useable open space with a drought-tolerant and native planting palette. Because the size of the site is so constrained, most of the useable open space for the project is provided on the split-level rooftop deck. The rooftop decks are beautifully designed and nicely landscaped. However, to provide nice amenity zones where people can gather to socialize, have barbeques, use the hot tub spas, exercise, and more, it was not feasible to have 40% of the area landscaped. Meeting this minimum threshold for landscaped area – and meeting the requirements for drought tolerant landscaping (which precludes lawns) – would render much of the open space unusable if most of the deck was planted with vegetation.

By not ~~P~~planting and maintaining 40% of the rooftop decks as landscaped areas would not only reduce the utility of the space for ~~residents, but~~residents but would also cost an additional ~$421,300~~XX,XXX~~ in landscaping, irrigation, and structural reinforcement. This cost savings figure is calculated by assuming that total landscaping cost amounts to approximately $110 per square foot. ~~be cost prohibitive to the project for multiple reasons.~~ The top three floors of the building provide useable open space, and landscaping 40% of those spaces would require more structural strength to support that much wet soil on the 15th, 16th, and 17th stories.

- **RESIDENTIAL BICYCLE PARKING – LONG TERM**

The proposed project requests a concession for this development standard because the applicant would like to satisfy part of the bicycle parking requirement with scooter parking. The applicant has seen a shift away from bicycle use towards other micro-mobility devices such as scooters or skateboards. The project will still provide the required number of spaces for personal micro-mobility devices (98 spaces planned), but

some of the spaces will be dedicated to scooter parking and charging stations for electric micro-mobility options.

As a result, the project requests a concession for its long-term residential bicycle parking requirement. Being able to provide a mix of bicycle spaces and scooter charging spaces is a better fit for the project to meet the needs of its future residents. Reducing the number of bike spaces and associated floor area would result in real and identifiable cost-savings for the project. Granting the concession would save the project money instead of having to build out the full number of required bike racks, that may end up not being used.

Housing Affordability Statement

This project is also subject to the City of Berkeley's inclusionary housing requirement under Berkeley Municipal Code § 23C.12.030 that requires the project to provide at least 20% of the total number of dwelling units as inclusionary units with the option of paying an in-lieu fee instead of providing the units on-site per Berkeley Municipal Code Section 22.20.065.

This project proposes to provide 15% of the base project units onsite, 22 units, for very low-income households. The project will enter in a regulatory agreement with the City of Berkeley that ensures that these proposed affordable dwelling units remain deed-restricted for at least 55 years. The proposed project will also pay an Affordable Housing Mitigation Fee to the City of Berkeley of approximately $4,987,980~~4,803,240~~.

Project Design

Figure 1~~3~~2: Southern façade of proposed project~~Sidewalk vie~~

This proposed project transforms a vacant, non-operating movie theater in the heart of Downtown Berkeley into a mixed-use, 17~~15~~ story building that will restore the live performing arts theater use to this site and add 218~~214~~ units of housing. The proposed project will include ground floor performing arts space which will activate and enliven Kittredge Street just one-half block east of the Shattuck Avenue commercial corridor.

The theater space will serve the general public and contribute to the downtown Berkeley's arts and culture offerings. From the pedestrian perspective, the California Theater façade and marquee will look the same as it has looked for decades. By preserving both the façade and marquee, the project will preserve the street-level context and the pedestrian experience that has existed for many decades.

The preservation and adaptive re-use of the existing landmarked theater façade and marquee serves as a natural base for the proposed new residential building, setback 5 feet, to rise vertically behind the art-deco facade. The new building is modern in its form, materials, and function, but borrows inspiration from the historical façade's architecture and ornamentation. The tower has subtle offsets in the facade, vertically accentuated ornamentation, and a trellis serving as the building's crown and cap. The three~~wo~~ top stories will be set back progressively, creating a stepped effect, with glazed railings where rooftop decks occur.

The existing theater facade is uniform in material and minimal in articulation, allowing its bas-relief and other three-dimensional ornamentation to provide texture and depth. The Art Deco facade serves as a minimalist backdrop for the colorful and eye-catching neon of the existing theater marquee. Just as the existing theater façade provides a contrasting backdrop to its prominent marquee, the new 17~~15~~-story tower seeks to provide a backdrop to the historical, Art Deco façade.

As the new building departs from the Art Deco façade, it decidedly embraces its modern materials and form. To offset the imposing, heavy massing of the existing concrete and stucco facade, the new building features elongated floor-to-ceiling window openings. The new tower mirrors the original façade's tripartite arrangement with color blocking, material choice, textures, and forms.

Figure 1~~2~~2: Street view of proposed project

The primary south façade facing Kittredge Street extends vertically past the tripartite façade base. Both east and west corners feature tall and narrow punched window openings to accentuate the verticality of the proposed building. The center segment of the facade is recessed from the two corners with slate grey, slightly blue stucco material. There are vertically elongated floor-to-ceiling punched window openings with a different fenestration patter than the corner bays. The stucco is interrupted with seven vertical accent stripes comprised of smooth and grooved ceramic rainscreen cladding. This design element draws the eye upward, and diffused, low-lumen LED lighting will be installed along the vertical cladding. This lighting will provide a dramatic evening and night view of the building.

The east, west, and north facades are similar in their modern designs, using different rhythms of recessed and projecting bays to break up the massing of this 17~~15~~-story building. The color-blocking with off-white/light grey stucco on the projecting bays and slate grey/blue stucco on the central recessed bays. The west elevation is unique in that is provides private balconies with glass railings on every other floor.

Figure 1~~3~~3: Western façade of proposed project~~Sidewalk view~~

The west elevation also has the theater terrace at the ground level, which will feature a large bi-folding door system to allow the theater lobby to spill out into a new alley courtyard for theater patrons. A concessions area will be able to serve patrons both inside and out. Cafe tables, trees in planters, and festoon lighting will offer an inviting environment as well as a welcome glimpse of activity from the pedestrian experience along Kittredge. The courtyard will be architecturally framed by a horizontal canopy that turns groundward in a dramatic sloping form. This element will serve as a partial light and noise screen to the residential units directly above as well as cover for the terrace during a light rain.

California Theater Consortium

The California Theater Consortium (CTC) is a coalition of local performing arts non-profits that is partnering on this development project with the applicant team. CTC's mission is to transform the non-residential space in the proposed project to be a multi-purpose creative arts hub. For years, Berkeley-based performing arts companies have been searching for an affordable, accessible, transit-friendly home in which to feature local talent, nurture young artists, and bind community together in ways only the arts can.

CTC is comprised of the Youth Musical Theater Company (YMTC), West Edge Opera, Berkeley Ballet Theater (BBT). This group will be the anchor tenants for the theater space and will be fundraising to construct the interior of the theater. CTC will fundraise to pay for all the "tenant improvements" for a live performing arts theater. This will include the core, shell, seating, stage, orchestra pit, fly area, dressing rooms, and rehearsal spaces.

The purpose of this space is to host all kinds of live performances such as theater, opera, music, and dance, as well as hosting community events such as literary events and film festivals. This space will add to the local creative arts scene in Berkeley and will be a destination in downtown Berkeley for people to engage with arts and cultural events. This community-oriented focus of the California Theater Consortium will restore the community use of this property, which historically hosted many different types of community events. This proposed theater project will create community between all the creative arts organizations who will use the space, as well as the broader Berkeley and Bay Area community who can come enjoy the performances and events in the re-constructed California Theater.

Figure 1~~2~~1: Street view of proposed project

Public Art

This project proposes to create a live performance theater and associated spaces to become a creative and performing arts hub in Downtown Berkeley. The proposed project will substantially exceed the required ~~spend~~ 1.75% of the Project's Value ($522,068) on Public Art by constructing the 'vanilla shell' of the theater space. The actual cost to construct the shell of the theater space is projected to be several million dollars in total.~~will likely end up being well above half a million dollars.~~ The theater space span from the first basement level to the 3rd floor. The historic box office and marquee will be preserved along with the historic façade.

CTC will then finish building out the theater, resulting in even more investment into the space to create a beautiful public arts space. Restoring the performing arts theater use to 2115 Kittredge Street will allow this project to help preserve the City of Berkeley's supply of Arts & Culture spaces. This proposed theater will become a destination for the Berkeley community and the broader Bay Area community, and it is exceptionally well-served by transit.

Community Meeting

On September 26, 2022, the project team held a community meeting to provide information about the project and request feedback from community members. The team invited all owners and occupants within 300 feet of the site, as well as neighborhood groups, based on a list provided by City staff. The meeting was held at 5:30pm virtually over Zoom. There was one

attendee that joined the meeting, a Berkeley resident who lives next door to the proposed project. The project team provided an overview of the project proposal, design, and anticipated process and timeline. The attendee's main concern was that no vehicle parking would be provided in the project, and he also asked questions about the construction phase of the project would affect traffic flow on Kittredge Street, noise levels during sensitive hours, and electric scooters being ridden on sidewalks and blocking sidewalks. There is a Community Meeting Packet attached as part of this application which provides more detail.

Statement Regarding Natural Gas Prohibition, Berkeley Energy Code and Berkeley Green Code
The proposed new building will not include any natural gas infrastructure in compliance with BMC Chapter 12.80. The proposed project is designed to comply with the Berkeley Energy Code (BMC Chapter 19.36) and Berkeley Green Code (BMC Chapter 19.37), adopted by the City Council on December 3, 2019, including a solar PV system as well as energy and water efficiency measures in an all-electric building. The building will accommodate as much solar PV as is physically and financially feasible for the project, however the rooftop area is relatively small. The Applicant will not be requesting any exemptions to the natural gas prohibition under the Berkeley Municipal Code.

5. LANDMARK ALTERATION PERMIT REQUIREMENTS

This project is applying for a Landmark Alteration Permit to preserve, rehabilitate, and adaptively re-use the landmark façade, marquee and box office of the California Theater at 2115 Kittredge Street. The proposed theater use will be consistent with the historic use of the building. The existing façade will be kept intact, with some alterations, and incorporated into design of the proposed development project. The marquee may have digital reader boards installed while preserving the framework and neon. None of these proposed alterations affect the character-defining features of the façade. The character-defining features and decorative elements of the historic façade and marquee will be preserved and restored to their original splendor.

The Landmark Preservation Commission's decision, LMIN2022-00, stated that,

> *"This designation shall apply to the subject property and the following distinguishing features of the main building shall be preserved, and missing features shall be restored to the extent possible:*
>
> ***FAÇADE:***
> - *Overall height and composition of the primary building facade*
> - *Stucco façade*

• Art Deco-style façade with five vertical piers & six ornamental bays
• Art Deco stepped design pattern of façade and roof parapets
• Four stepped roof parapets
• Main central bay and two flanking bays on upper 3/4th of street façade
• Angled fluted upper string course and Art Deco curved coping
• Zigzag saw-tooth pattern under the coping
• Banding trim divided into four strips above the entrance that visually separates the base and the upper part of the building
• Two slightly coved niches located on the widest, outer architectural bays
• Projecting corbels and zigzag ornaments
• Plaster bas-reliefs (frozen fountains motif)

Figure ~~14~~15: Existing and Proposed Façade Design

MARQUEE:

• Two rectangular neon signs on a projecting prow with stylized lettering that each spell out CALIFORNIA
• Projecting prow/angled marquee, surrounded in neon tubing
• Lyre shaped center metal piece covered in neon tubing

ENTRYWAY:

• Leaf-patterned ceiling/soffit beneath the projecting marquee
• Recessed entry
• Stucco-and-glass box office
• Glass-and-aluminum entry doors."

The proposed project will keep the historic theater façade, marquee, and box office, which are the locations of all the significant, character-defining Art Deco features and ornamentation. Though some new features like window openings and sashes, and a deck and glass railing on top of the marquee are proposed, the original elements such as the entry doors and decorative marquee soffit will be replaced in-kind. There were no spatial relationships identified as character-defining for the landmark facade; thus, the addition of the 17~~5~~-story tower will not be detrimental.

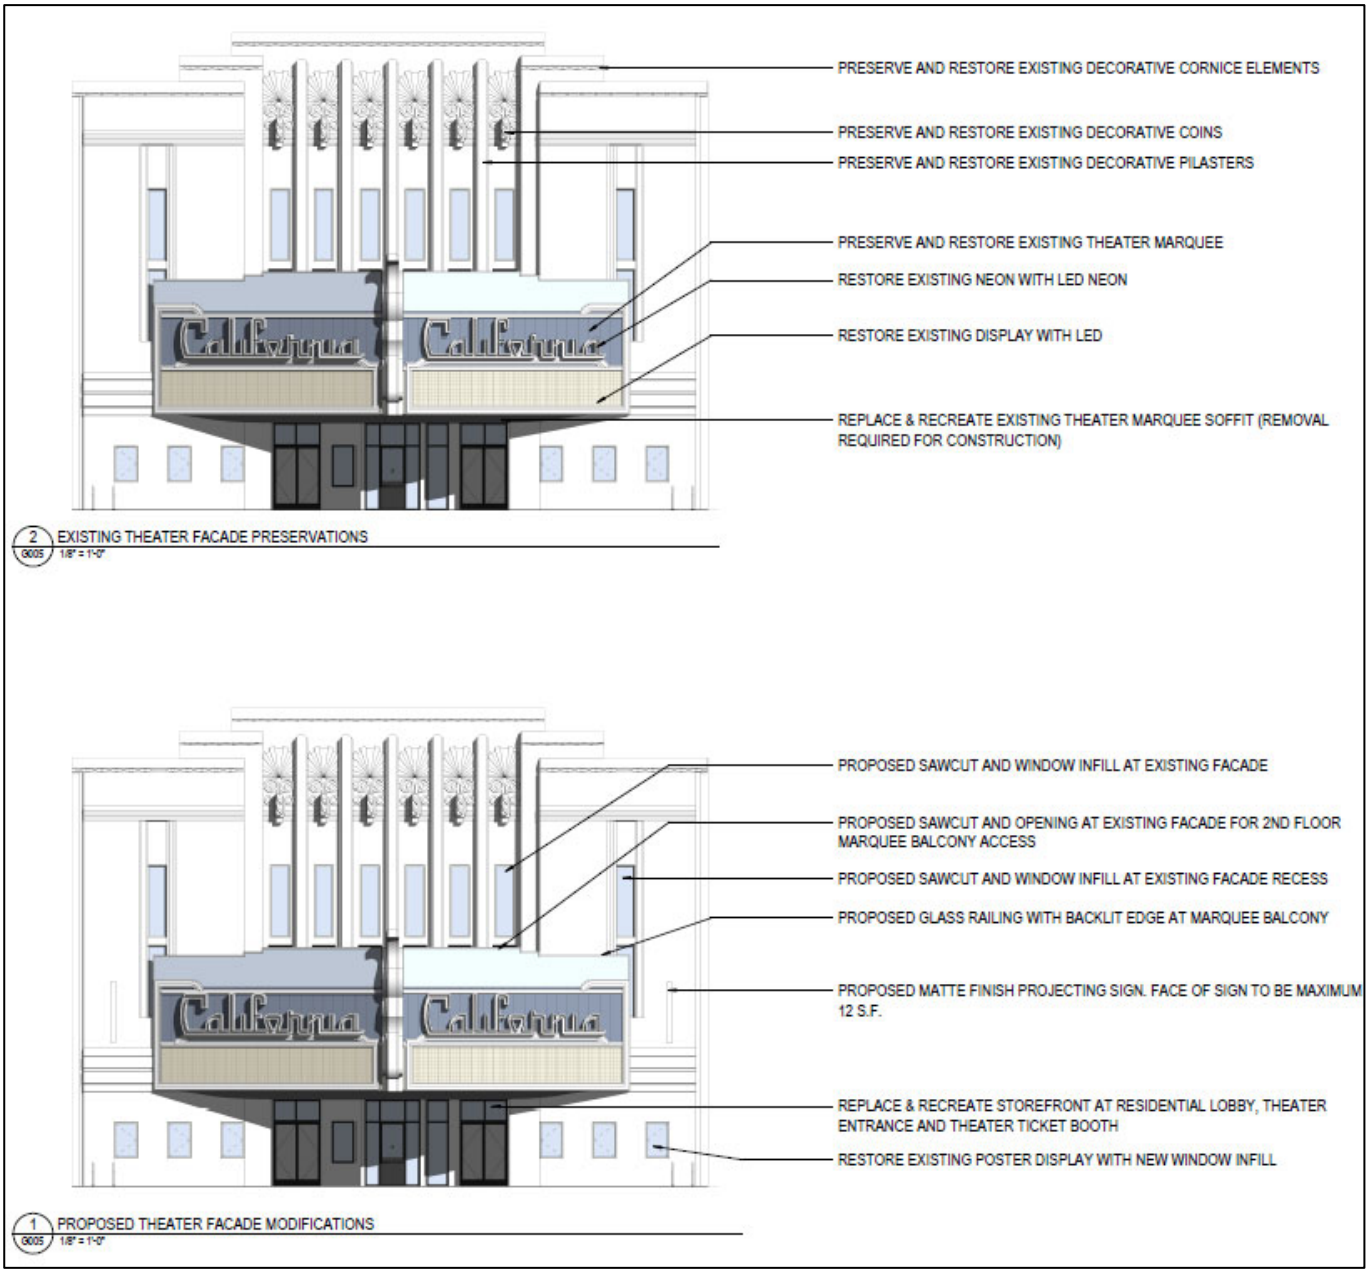

Figure 1~~5~~6: Existing and Proposed Façade Design

~~T~~The proposed alterations to the façade include punched openings to add a door for access to the marquee balcony and windows on the upper façade and ground floor. The project proposes to sawcut through the façade to create these openings but will otherwise keep the façade entirely intact. The window openings will be made on each of the three parts of the upper façade, as well as at the ground floor level.

The upper façade alteration will include 10~~12~~ window infills, ~~three~~ two in the east and west corner bays and six in the center bay. The windows in the corner bays will be arranged in vertical bands, while the window infill in the center bay will be arranged horizontally beneath the decorative coins. The vertically oriented will be inserted in between the piers, thus maintaining the character-defining arrangement of five vertical piers and six ornamental bays. The window infills at the ground level will replace the existing poster displays to create a transparent, storefront look for the residential lobby, theater lobby, and ticket booth location. In the entry vestibule, the existing ticket booth fenestration and glazed metal doors will be replaced in-kind, in the same configurations as the original California Theater.

The project also proposes to add a stepped glass railing at the marquee balcony and adding blade signs on either side of the marquee. The theater's marquee will be removed during demolition and construction for its protection and will include minor modifications to modernize it. Because the marquee will need to be removed, the marquee's soffit will need to be replaced and recreated. The marquee itself will be restored, as needed, to maintain its original features, and the neon will be swapped out for LED lights designed in a neon style. The marquee's sign board is currently analog, and it will be upgraded to a digital format.

The rationale for this proposed project is to re-develop and underutilized parcel in the downtown and adaptively re-use the historic theater façade. The California Theater has not been immune to the decline of the movie theater industry and had to shutter operates in early 2020 (pre-COVID-19 pandemic). The theater has sat vacant for ~~nearly~~ 3 years now, and the ownership family has decided to sell the property and theater because they do not see a future for it. Based on the project's benefits described below, the Landmarks Preservation Commission should grant approval for this proposed project at 2115 Kittredge Street.

Project Benefits~~:~~

The following benefits of the proposed project at 2115 Kittredge provide the basis for the Landmarks Preservation Commission's approval of this application. The proposed project requires a Landmark Alteration Permit for partial demolition of the existing building, and

structural alterations to the historic landmark façade. The proposed project will offer the following benefits to the City of Berkeley:

- Redevelop an underutilized parcel in the downtown core, and adaptively reuse the historic façade and marquee of the California Theater,
- Provide 218~~214~~ dwelling units of dense, transit-oriented housing,
- Provide 22 units of Affordable Housing for Very Low-Income Households @ <50% AMI,
- Pay an Affordable Housing Mitigation Fee of approximately $4,987,980~~4,803,240~~ to the City
- Project Will Spend 1.75% of the Project's Value (approximately $~~564,000~~522,068) on Public Art by Constructing the Theater,
- Performing Arts Theater to Preserve Berkeley's Arts & Culture Spaces,
- No vehicle parking and 105~~103~~ bicycle parking spaces (or other micro mobility device storage spaces),
- All electric building, LEED Gold or equivalent, with rooftop solar panels,
- Units will be equipped with energy efficient appliances and low flow fixtures, and the site will be planted with drought tolerant landscaping that supports the project's stormwater management plan,
- Pay other in-lieu or mitigation fees, such as the Streets and Open Space Improvement Plan (SOSIP) Fee (~$~~304,692~~302,370), Downtown Parking In-Lieu Fee (~$~~870,000~~1,020,000), Berkeley Unified School District Fee (~~$~~$471,860~~475,483~~).

Figure 17~~16~~: ~~Ground Level Landscape Plan~~South

The Landmark Preservation Commission considered an application put forth by the California Art Deco Society and the Berkeley Architectural Heritage Association (BAHA). The LPC rejected the application to landmark the entire theater building, instead opting to landmark the façade and marquee only, which is where the character-defining Art Deco features and ornamentation are located.

Figure 17~~16~~: ~~Ground Level Landscape Plan~~West

This application includes a Project Impacts Analysis (PIA) using the Secretary of the Interior's (SOI) Standards for the Treatment of Historic Properties. This PIA establishes that the proposed project will not conflict with the SOI Standards. The preserved façade and proposed 17~~15~~ - story tower ~~does~~do not conflict with the Secretary of Interior standards, and as such does not create a significant and unavoidable impact, per CEQA requirements. The Landmarks Preservation Commission's Notice of Decision on this property is also attached, which documents the findings that the proposed project will not conflict with provisions of the Berkeley Municipal Code Ch. 3.24.

Scale and Massing Studies for Historic Façade Preservation

The proposed project uses the following three projects in the City of Berkeley as precedent studies for incorporating a historic façade into a new development project. In response to the City's Structural Alteration Permit comment letter dated November 30, 2022, the project has provided massing studies that informed the project design. The following projects successfully integrated a lower-level historic façade into a new, larger development along the Shattuck Avenue corridor:

- Parker Place (2038 Parker Street),
- UC Press Building (2120 Berkeley Way),
- Acheson Commons (2133 University Avenue).

Figure 19~~16~~: ~~Ground Level Landscape Plan~~Parker

Street
ement
~~, 2022~~

The proposed project would like to add to this collection of buildings in Downtown that are preserving Berkeley's history while providing space for future growth.

Figure 20~~16~~: ~~Ground Level Landscape Plan~~Acheson

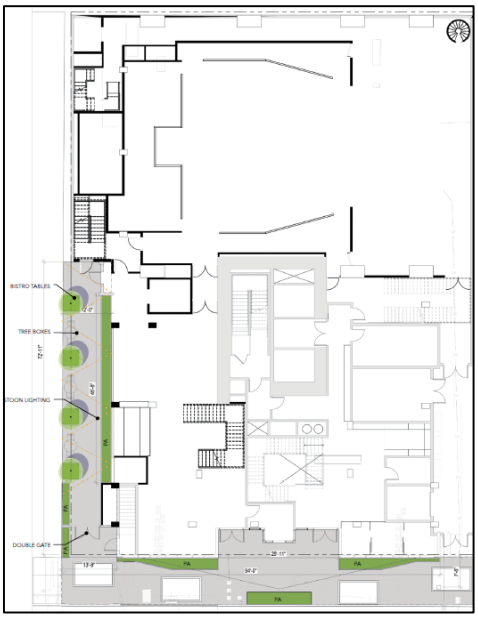

Figure 22~~16~~: Ground Level Landscape Plan

Streetscape and Landscape Concepts

The proposed project's streetscape improvements include decorative and inviting pavement, landscaping, and two street trees framing the marquee (if feasible). The enhanced concrete pavement made of silica carbide and decorative jointing will visually relate to the marquee. The project does propose two street trees that are located so as not to obscure the marquee, however there are crowded conditions at the sidewalk in terms of vaults and underground lines. The location and feasibility of the project's proposed street trees will be confirmed by Public Works. The other planting will only reach a few feet in height so as not to block any views of the landmark façade. There will be bicycle racks between the sidewalk and the street in front of the theater's passenger loading zone.

Figure 21~~16~~: ~~Ground Level Landscape Plan~~Acheson

The theater terrace will be semi-visible from the street when the gate is closed. The gate will be double height, with a fixed upper section that matches the scale of the

buildings it's located between. This theater terrace gate will have a decorative, semi-porous design with backlighting to project light and shadows onto the sidewalk, creating visual interest along the Kittredge Street frontage. Festoon lighting and the backlit gate will make the theater terrace appealing at night, which will enliven the space on performance nights.

The trellis forms at the 16~~14~~th and 17~~15~~th level will provide opportunities for additional visible vegetation from the street level and surrounding buildings. The mechanical parapet above the 17~~15~~th floor is functional in screening noise and sight of the mechanical equipment and provides a cap to the building form that reflects the tripartite design of the historic façade and proposed building.

Figure 23~~17~~: View of Theater Terrace at night

The planting palette of the proposed project is primarily comprised of native plants, and all the species are drought tolerant. The planting palette includes blue fescue, common yarrow, olive trees, California fuchsia, California poppy, Hummingbird sage, purple needlegrass, and more.

6. CEQA Analysis and Legislative Context

The housing crisis continues to have a significant impact on Californians across the state. The Government Code sections discussed below are state legislative efforts that recognize the severity of California's housing crisis and the difficulties associated with developing new housing at appropriately zoned, transit-oriented, and urbanized locations. These pieces of legislation are applicable to the proposed project:

- California Environmental Quality Act Categorial Exemption (CEQA Guidelines § 15332)
- California Environmental Quality Act Categorical Exemption (CEQA Guidelines § 15061.b.3)
- State Density Bonus Law (Government Code § 65915)
- Housing Crisis Act of 2019 (Government Code § 66300).

CEQA

There were no potentially significant impacts identified in the traffic, historic resources, or Phase II analyses. Therefore, this project is eligible for a categorical exemption from CEQA. Because the proposed project is located in an urbanized area and because it is an infill development project, the CEQA Class 32 "Infill" Categorical Exemption applies. The project

meets each of criteria A through E of that section. In terms of CEQA, this project is environmentally benign as it will not result in any significant traffic, noise, air quality, or water quality impacts. This proposed infill project is consistent with the City of Berkeley's objective design and development standards with the use of State Density Bonus Law, and the site does not appear on the California EPA's Cortese List, so this project is eligible for categorical exemption under CEQA.

Housing Crisis Act/SB 330

The Housing Crisis Act (Gov. Code § 66300) prohibits a local agency from disapproving, or conditioning approval in a manner that renders infeasible, a housing development project that provides affordable housing. The act also requires that a development project must comply with applicable, objective general plan and zoning standards and criteria that were in effect at the time the application was deemed to be complete. The law also requires the city or county to consider and either approve or disapprove the housing development project within the 5 allowable public hearings under HCA, and consistent with the applicable timelines under the Permit Streamlining Act. The proposed project is also subject to the provisions of SDBL, as described in the Project Analysis section above.

7. USE PERMIT REQUIRED FINDINGS

Conformance with General Plan Policies

SUSTAINABILITY

- Environmental Management Policy #5 – "Green" Buildings: Promote and encourage compliance with "green" building standards.
- Environmental Management Policy #35 – Energy-Efficient Design: Promote high-efficiency design and technologies that provide cost-effective methods to conserve energy and use renewable energy sources.
- Land Use Policy #3 – Infill Development: Encourage infill development that is architecturally and environmentally sensitive, embodies principles of sustainable planning and construction, and is compatible with neighboring land uses and architectural design and scale.

Response: This project proposed efficiently sized dwelling units outfitted with water & energy efficient appliances in a transit-oriented development. These factors, in additional to meeting the City of Berkeley's Green Building requirements, makes the proposed project a sustainable housing development. The building will be LEED Gold certified or equivalent, all-electric, and equipped with solar panels to power the building with clean energy. The dwelling units will have low-flow fixtures and the proposed landscaping will all be drought-tolerant and largely

comprised of native vegetation. This proposed project is environmentally and architecturally sensitive and incorporates many principles of sustainable development.

This is a true infill development project, which will re-develop an underutilized parcel containing an aging, vacant theater space with no dwelling units. The theater ceased operations approximately two and a half years ago. The proposed project at 2115 Kittredge Street will transform this site into a vibrant residential address and attractive pedestrian atmosphere. The new theater at 2115 Kittredge will be re-established as a Downtown Berkeley arts & culture destination. This infill project is especially sustainable in its provision of housing adjacent to the Shattuck Commercial Corridor, which has excellent access to good and services as well as public transportation.

DOWNTOWN ARTS & CULTURE

- Economic Development Policy #10 – The Downtown Economy: Continue to diversify, revitalize and promote the Downtown as the civic, cultural, commercial, and entertainment center of Berkeley.
- Land Use Policy #20 – Downtown Pedestrian and Transit Orientation: Reinforce the pedestrian orientation of the Downtown.
- Economic Development Policy #11 – Arts and Culture: Promote Berkeley locally and internationally by taking actions to support the development of arts and culture in Berkeley.
- Urban Design Policy #34 – Public Art: Support, present, and encourage others to support or present works of public art.

Response: Firstly, this proposed project will add approximately 450-550~~400-500~~ new residents to the downtown area who will support the downtown businesses. Adding more residents downtown will enliven the streets at all hours with more people on the streets, which can help increase safety by having more “eyes on the street”. There will be more downtown residents to access the goods and services that downtown businesses offer. The 2115 Kittredge address and future housing development there will have an excellent walkability score of 99, i.e., “a walker’s paradise”. The California Theater has been a fixture on Kittredge Street and in downtown for generations and having been shuttered for ~~more than two years~~three years has really affected that stretch of Kittredge. There are only a few other small businesses and restaurants on the block, but they do not generate much foot traffic.

Secondly, this project proposed to create a live performance theater and associated spaces to become a creative and performing arts hub in Downtown Berkeley. The proposed project will

spend 1.75% of the Project's Value ($~~564,000~~520,776) on Public Art by constructing the 'vanilla shell' of the theater space. Restoring the theater use to 2115 Kittredge Street will allow this project to help preserve the City of Berkeley's supply of Arts & Culture spaces. This proposed theater will become a destination for the Berkeley community and the broader Bay Area community. This future destination at 2115 Kittredge Street is exceptionally well served by transit.

The theater will not only host performances, screen movies, and hold community events, but it will also be a creative arts hub that draws people there during the day, evening, and night. The proposed theater will have offices, meeting rooms, and rehearsal spaces, so will be a very dynamic, active space with people coming and going at all hours. Along with the proposed streetscape redesign, this increased level of activity on Kittredge Street will activate this stretch of Kittredge, and hopefully add liveliness to the entire block.

ARCHITECTURE & PRESERVATION

- Urban Design Policy #5 – Architectural Features: Encourage, and where appropriate require, retention of ornaments and other architecturally interesting features in the course of seismic retrofit and other rehabilitation work.
- Land Use Policy #21 – Architectural Design in the Downtown: Require high-quality architectural design for all Downtown projects.
- Land Use Policy #2 – Preservation: Protect Berkeley's character by identifying, restoring, and preserving historic buildings.

Response: This proposed project aligns with the City of Berkeley General Plan's Land Use and Urban Design policies regarding high-quality architecture, preserving architecturally interesting features, and protecting Berkeley's character by restoring and preserving the historic theater façade. The preservation and adaptive re-use of the existing landmarked theater facade serves as a natural base for the proposed new residential building to rise vertically behind the art-deco facade. The façade will be rehabilitated, with features replaced in-kind if necessary, and the project proposes some structural alterations to add windows and balcony access.

The new building is modern in its form, materials, and function, but borrows inspiration from the historical façade's architecture and ornamentation. This project will protect Berkeley's historic character at the pedestrian level while adding residential density to the Downtown core. As the new building departs from the Art Deco façade, it decidedly embraces its modern materials and form. To offset the imposing, heavy massing of the existing concrete and stucco facade, the new building features elongated floor-to-ceiling window openings. The primary

south façade facing Kittredge Street extends vertically past the tripartite façade base. The new tower mirrors the original façade's tripartite arrangement with color blocking, material choice, textures, and forms.

The firm that designed this project, StudioKDA, is a well-renowned local architecture firm located in Berkeley. With many multifamily projects all over the Bay Area, they provide high-quality architecture with impeccable attention to design details. The proposed project's 17~~15~~-story tower design is compatible but distinctive from the historic façade, letting the historic architecture inform the design of the new building.

HOUSING NEEDS

- Housing Policy #1 – Extremely Low, Very Low, Low and Moderate-Income Housing: Increase the number of housing units affordable to Berkeley residents with lower income levels.
- Housing Policy #33 – Regional Housing Needs: Encourage adequate housing production to meet City needs and the City's share of regional housing needs.

Response: The project will construct 218~~214~~ dwelling units that have a high-quality and sustainable designs. The efficient project design will offer 291~~287~~ bedrooms to help meet the demand for downtown apartment living and student housing. The housing crisis is felt acutely here in Berkeley, with people paying extremely high rents to be able to live near campus or in the urban core because there housing supply is so constrained. The project at 2115 Kittredge Street will be able to offer 22 of the proposed units as affordable housing for those who are very low income, earning less than 50% of AMI. This project will supply some of the desperately needed housing at market rate and below market rate, and offer amenities tailored to provide quality living for its residents.

The proposed project will help the City of Berkeley comply with its Regional Housing Needs Assessment (RHNA) targets for the 2023-2031 cycle. The City is required to approve a total of 8,934 units in the next eight years, meaning they need to approve approximately 1,117 per year to keep pace with their target. This project will contribute 218~~214~~ dwelling units towards that goal. This project will help provide 196~~192~~ market rate units and 22 affordable units for Very Low-Income households. The City has a total RHNA mandate of 3,664 market rate homes with rents that are Above Median Income, which would average out to about 458 units approved per year. The proposed project would help the City with this supply of market rate housing by providing 196~~192~~ units rented at Above Median Income rates. The City also has an affordable housing target of 2,446 units for VLI households, meaning it will need to approve approximately

306 VLI units per year to keep pace with their RHNA mandate. The proposed project would supply 22 units towards meeting the City's VLI housing target and would also pay an Affordable Housing Mitigation Fee of approximately $~~4,803,240~~4,987,980 in-lieu of meeting the City of Berkeley's affordable housing mandate.

Also, UC Berkeley has grown their student body by about 10,000 students in the last three years, bringing the total student population in Berkeley to almost 45,000. The proposed project will appeal to university students and will assist in housing Cal's growing student population and the increasing residential population in Downtown Berkeley.

TRANSIT ORIENTED DEVELOPMENT

- Housing Policy #12 – Transit-Oriented New Construction: Encourage construction of new medium and high-density housing on major transit corridors and in proximity to transit stations consistent with zoning, applicable area plans, design review guidelines, and the Climate Action Plan.
- Transportation Policy #18 – Transportation Impact Analysis and Vehicle Miles Traveled: When considering transportation impacts under the California Environmental Quality Act, the City shall consider how a plan or project affects all modes of transportation, including transit riders, bicyclists, pedestrians, and motorists, to determine the transportation impacts of a plan or project. Plans and projects shall be designed to deliver significant benefits to travel by pedestrians, bicycle, or transit, and/or reduced impacts on air quality, greenhouse gas emissions, and safety. For the purposes of CEQA, Vehicle Miles Traveled (VMT) shall be the metric used to analyze the transportation impacts of a plan or project. (Reso. 69,618-NS (Exh. A), 2020)
- Land Use Policy #23 – Transit-Oriented Development: Encourage and maintain zoning that allows greater commercial and residential density and reduced residential parking requirements in areas with above-average transit service such as Downtown Berkeley.
- Land Use Policy #24 – Car-Free Housing in the Downtown: Encourage development of transit-oriented, low-cost housing in the Downtown.

Response: This project proposes to add 218~~214~~ units of housing to Downtown Berkeley, which is a compact, walkable community with excellent transit access. The proposed project aligns with the goal of "Car-Free Housing in the Downtown" because it provides no residential vehicle parking spaces. This proposed project is designed to minimize vehicle trip generation by being transit-oriented and providing 105~~103~~ total bicycle parking spaces. The project will also encourage alternate modes of transportation through its Transportation Demand Management (TDM) Program, and the proposal is included in this application. The project team anticipates

that many future residents at 2115 Kittredge Street will be university students, who can walk or use vehicle-free transportation modes to travel to and from nearby campuses.

Because of the efficient unit design, the rents will be relatively low-cost, and it is likely that future residents will have a smaller carbon footprint than they would otherwise generate living in larger dwelling units. The project is in close proximity to a wide range of goods and services so future residents can rely on active modes of transportation for their daily needs.

The project will add a new performing arts space to the Downtown, at a location that is very convenient for theatergoers to access by public transit. The project will pay a Downtown Parking In-Lieu fee of approximately $~~870,000~~1,020,000 to the City of Berkeley instead of providing commercial parking. The proposed project requests a Use Permit to reduce off-street parking requirements and will meet the objective standards of this Use Permit by paying the in-lieu fee.

Use Permits Requested

This section outlines the proposed project's compliance with the required findings for approval of the requested Use Permits for this project.

1. Use Permit, under BMC § 23.204.130(B)(1), Table 23.204-1 to allow a new mixed-use building in the C-DMU zone.
2. Use Permit, under BMC § 23.204.030(A), Table 23.204-2 to construct new floor area over 10,000 square feet.
3. Use Permit, under BMC § 23.204.130 (E)(6)(b) to pay a fee in lieu of providing privately owned public open space.
4. Administrative Use Permit, under BMC § 23.304.050 to allow rooftop equipment projections.
5. Use Permit, under BMC § 23.326.0~~3~~70(A)~~(2)(b)~~, to demolish main buildings used for non-residential purposes.
6. Use Permit, under BMC § 23.204.130(E)(3)(b), Table 23.204-39 to modify the C-DMU setback standards.
7. Use Permit, under BMC § 23.322.030(J)(2), to reduce off-street parking in the C-DMU district.
8. Use Permit under BMC Section 23.204.020(A) to construct dwelling units.
9. Administrative Use Permit under BMC Section 23.204.020(A) to construct a theater (live).

10. Use Permit under BMC Section 23.204.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right).

11. Use Permit under BMC Section 23.322.050(A)(10) to reduce commercial parking requirement to zero.

12. Use Permit, under BMC Section 23.310.030(A) to allow Alcohol Beverage Service of distilled spirits.

~~7.~~

Use Permit Findings

1. BMC § 23.204.130(B)(1) Table 23.204-1 to allow a new mixed-use building in the C-DMU zone.

Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Use Permit to allow construction of a new multi-family building. The construction, establishment, maintenance, and operation of the proposed project will not be detrimental to the health, safety, peace, morals, comfort, or general welfare of the neighborhood or the City as a whole. Mixed-use housing projects are a permitted use in the C-DMU district, and the proposed structure is appropriate for the district in that it makes housing available in a convenient location proximate to downtown and campus.

Surrounding land uses include other multi-family residential developments of similar scale to the proposed project, and mixed-use or commercial developments. The project location at 2115 Kittredge Street is a half block east of the Shattuck Commercial Corridor, which the City of Berkeley envisioned to support mixed use developments near regional transit, shops, and amenities that the Downtown and campus areas provide. This mixed-use residential building is compatible with the purposes of the C-DMU district to support the residential and commercial needs of downtown residents and the University of California community.

2. BMC § 23.204.030(A), Table 23.204-2 to construct new floor area over 10,000 sq. ft.

"2. C-DMU Findings. To approve a Use Permit for new floor area in the C-DMU district, the ZAB must find that:

(a) The addition or new building is compatible with the visual character and form of the district; and

(b) No designated landmark structure, structure of merit, or historic district in the vicinity would be adversely affected by the appearance or design of the proposed addition."

Response: Because this Use Permit does not have any objective standards in the required findings for the C-DMU district, the proposed project assumes the Use Permit to allow construction of the new floor area ('compatible' and 'adversely' are not objective). Per the Housing Accountability Act and State Density Bonus Law, the City is required to approve the

development project since it meets all applicable objective standards. The addition of a 17~~15~~-story building to Berkeley's Downtown is compatible with the visual character and form of the district. There are some high-rise towers in the downtown already, and there are many approved development projects that will significantly increase the number of high-rise towers in the Downtown Core.

The primary south façade of this building is a landmarked structure, and as such, will be entirely preserved in the proposed project. The façade will be propped up and protected during the demolition and construction phases. The marquee will likely be detached from the façade and stored off-site for safe keeping. The marquee will be slightly renovated to have LED lights instead of neon tubing for the "California" lettering and likewise the analog sign board will be replaced by a digital LED screen. Every other aspect of the marquee will be perfectly preserved so it can be reattached to the façade when construction of the building is complete. In preserving these pieces of the theater and adaptively re-using them in the proposed project, we can maintain the street view of 2115 Kittredge. Multiple generations are very fond of this view, and are accustomed to it, so the applicant team is pleased that we will be able to keep the street frontage looking the same as it has for decades.

3. BMC § 23.204.130 (E)(6)(b) to pay a fee in lieu of providing privately owned public open space.

Response: The proposed project will meet the objective standards in the required findings for granting this Use Permit. The proposed project assumes this Use Permit to pay a SOSIP in-lieu fee of approximately $302,370~~304,692~~ (at $2.23 for each of the ~~136,633~~135,592 SF of residential) instead of providing a privately owned public open space. Future residents of 2115 Kittredge Street will have access to a reasonable amount of open space on the rooftop deck and enjoy amenities designed for the urban lifestyle and the student lifestyle, such as study rooms, social spaces, and ample bike parking.

The project will be making streetscape improvements to enhance the pedestrian experience in front of the proposed project. The building design will continue the 'street wall' along Kittredge Street with its historic façade and the pedestrian-scaled entryway and theater marquee. The proposed project plans to have decorative paving that continues onto the sidewalk and demarcates the streetscape in front of 2115 Kittredge. Though it will technically be on the sidewalk in the public right of way, these design elements will help make the streetscape in front of the theater feel like a special and distinctive place for the public to enjoy. This streetscape concept that complements the theater design will add aesthetic value to the public realm here along Kittredge Street in the Downtown.

Though it will not be publicly accessible, there will be commercial useable open space that complements the theater space. Members of the public who come see a show at the future theater will be able to access the outdoor gathering space located along the western side of

the proposed project. Theatergoers will be able to enjoy this well-designed outdoor space before and after the show, as well as during intermissions.

4. BMC § 23.304.050(A) to construct rooftop projections which exceed the maximum height limit for the district.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Administrative Use Permit to allow rooftop projections to exceed the district's height limit. Because the proposed building height exceeds the district's height limit, the rooftop projections will also exceed that limit.

5. BMC § 23.326.07~~3~~0(A)~~(2)(b)~~, to demolish main buildings used for non-residential purposes.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Use Permit to demolish the non-residential building at 2115 Kittredge Street. This proposed project will adaptively reuse the façade of this non-residential building while demolishing the rest of the 1914. The aging building is a vacant, non-operating movie theater in the heart of Downtown Berkeley that has been shuttered for ~~almost~~ three years. The building itself has already undergone a seismic retrofit in 2002 and would likely need significant renovations to accommodate a change of use. The family who has owned this theater and property for over a century do not see a way forward to have the California Theater continue to operate as a movie theater. The ownership family fully supports the proposed project, which will also the historic theater use to continue. This proposed project will add 450-550~~400-500~~ residents and a live performance theater to the downtown core, restoring 2115 Kittredge Street as an arts & culture destination.

6. BMC § 23.204.130(E)(3)(b), Table 23.204-39 to modify setback standards in the C-DMU zone.
   b. Modifications to Standards. The ZAB may modify the setback standards in Table 23.204-39 with a Use Permit upon finding that the modified setbacks will not unreasonably limit solar access or create significant increases in wind experienced on the public sidewalk.

   Response: Because this Use Permit does not have any objective standards in the required findings, the proposed project assumes the Use Permit to modify setback standards for the proposed structure at 2115 Kittredge Street. The standards of "unreasonably" and "significant" are not objective, so this does not qualify as an objective standard that this SB 330 project is subject to. The findings for issuance of this Use Permit are not objective standards, pursuant to State Law. Therefore, these standards are not included in the base project consideration. The density bonus project considers these Use Permit as part of the project to reach the maximum allowable density (pursuant to the City of Berkeley Planning Department Memorandum dated August 2, 2021.

7. BMC § 23.322.030(J)(2), to reduce off-street parking in the C-DMU district.

   2. *C-DMU District. Paying an in-lieu fee to reduce or waive required off-street parking in the C-DMU district requires a Use Permit. To approve the Use Permit, the ZAB must find that the applicant will pay an in-lieu fee to a fund established by the City that provides enhanced transit services.*

   Response: The proposed project requests a Use Permit to reduce off-street parking requirements and will meet the objective standard of this Use Permit by paying the in-lieu fee. The project will pay a Downtown Parking In-Lieu fee of approximately $1,020,000~~870,000~~ to the City of Berkeley instead of providing commercial parking.

   This project meets the General Plan goal of a "Car-Free Housing in Downtown" by providing no residential parking, but there is still a development standard for commercial parking in the C-DMU zone. The theater use triggers a commercial parking requirement of 1.5 space per 1,000 SF. The theater space is ~~19,108~~23,201 SF, so 34~~29~~ commercial parking spaces are required. The City's fee requires a payment of $30,000 per space in-lieu of providing commercial parking in the proposed T.O.D. project at 2115 Kittredge Street.

8. BMC Section 23.204.020(A), to construct dwelling units.
   Table 23.204-1: Allowed Uses in the Commercial Districts
   - *C-DMU: Multi-Family Dwellings = UP(PH)*

   Response: Because this Use Permit does not have any required findings, the proposed project assumes the Use Permit to construct dwelling units at 2115 Kittredge Street.

9. BMC Section 23.204.020(A) to construct a theater (live)
   Table 23.204-1: Allowed Uses in the Commercial Districts
   - *C-DMU: Theater = AUP*
     - *Incidental Uses: Live Entertainment= AUP*

   Response: Because this Administrative Use Permit does not have any required findings, the proposed project assumes the Use Permit to construct a Theater with Live Entertainment at 2115 Kittredge Street.

10. BMC Section 23.204.130(E)(1) to increase the maximum building height limit to 75' (plus 5' parapet, by right)
    Table 23.204-37: C-DMU Height Limits
    - *Sub-Area: Core Area*
      - *Maximum with Use Permit = 75 feet*

    Response: Because this Use Permit does not have any required findings, the proposed project assumes the Use Permit for a maximum building height of 75 feet at 2115 Kittredge Street.

11. BMC Section 23.322.050(A)(10) to reduce commercial parking requirement to zero.

A. 10) Downtown Reduction/Waiver.

(a) Where Allowed: C-DMU district.

(b) Eligible Uses: All uses.

(c) Permit Required: Use Permit or modified with an AUP.

(d) Finding: The Zoning Officer must make the findings in Subsection B (Findings) below.

B. Findings. Required findings below are in addition to permit findings required in Section 23.406 (Specific Permit Requirements).

1. Commercial, R-S, and R-SMU Districts. When required by Subsection A (Allowed Reductions) above or elsewhere in the Zoning Ordinance, the review authority must make the following findings to approve a reduction in required off-street parking spaces in a Commercial District, the R-S district, or the R-SMU district:

(a) The reduction will not substantially reduce the availability of on-street parking in the vicinity of the use.

(b) One of the following is true:

i. ***The use is located one-third of a mile or less from a Bay Area Rapid Transit (BART) station, intercity rail station or rapid bus transit stops.***

ii. The use is located one-quarter of a mile or less from a public or private parking area, lot, or structure that is accessible by the employees of the use and sufficient parking supply is available therein to mitigate the reduction in parking for the use.

iii. A parking survey conducted under procedures set forth by the Planning Department finds that within 500 feet or less of the use, on non-residential district streets, at least two times the number of spaces requested for reduction are available at on-street parking spaces during the peak hours of operation of the use.

(c) One of the following is true:

i. The parking requirement modification will meet the purposes of the district related to improvement and support for alternative transportation, pedestrian improvements, and activity, or similar policies.

ii. ***There are other factors, such as alternative transportation demand management strategies or policies in place, that will reduce the parking demand generated by the use.***

Response: The proposed project complies with the objective standards in the required findings to grant this Use Permit. The proposed project is located in a Commercial District (C-DMU), so is eligible for this Use Permit. Because there is no existing vehicle parking onsite, the reduction would not affect the availability of on-street parking at all.

2115 Kittredge is just two blocks away from the Downtown Berkeley BART Station and numerous rapid bus transit stops. The proposed project will also fund a Transportation Demand Management (TDM) Program that will provide future residents with monthly transit passes upon request. The TDM Program will be available to residents for the life of the project.

12. BMC Section 23.310.030(A) to allow Alcohol Beverage Service of distilled spirits.

D. Findings of Public Convenience or Necessity. If the proposed use is within a 1,000-foot radius of the site of a use that is in the same category of alcoholic beverage sales or service, excluding food service establishments with incidental service of beer and/or wine, the Zoning Adjustments Board (ZAB) may approve the application only if it makes all of the following findings:

1. The proposed establishment will promote the City's economic health, contribute to General Plan or area plan policies, or further the district purpose.

2. The economic benefits associated with the establishment could not reasonably be achieved without the proposed alcohol sales or service.

3. If the applicant has operated a licensed establishment that has been the subject of violations regarding alcohol in the State of California, or violations of public safety or nuisance statutes or regulations in Berkeley as verified by the Police Department, such violations do not indicate a high likelihood of further violations and/or detrimental impacts from the proposed establishment. In making this finding, the ZAB may consider the number, frequency, and severity of prior violations, the time elapsed since the last violation, and other relevant factors.

4. If the proposed establishment is within 1,000 feet of any public park or public school, the ZAB has taken into consideration the effect of the proposed establishment upon such sensitive public uses.

5. The Police Department has reported that the proposed establishment would not be expected to add to crime in the area.

Response: The proposed project will promote the City's economic health, as described in the General Plan policy findings above. The economic benefits of the theater for the City of Berkeley would not be as large without a full bar that includes distilled spirit service. The applicant has not operated a licensed establishment that has been the subject of alcohol violations in the past. Because this project is located in Downtown Berkeley, there are a few parks or schools that may be just outside of the 1,000 feet radius, however this project will not have adverse effects on sensitive public uses. The project does not expect this theater to add crime in the area.

1" = 30'-0" ON 24X36 (1"=60'-0" ON 12X18)

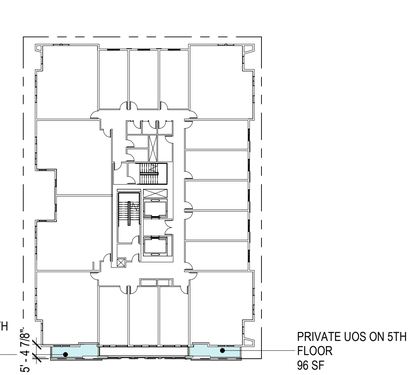
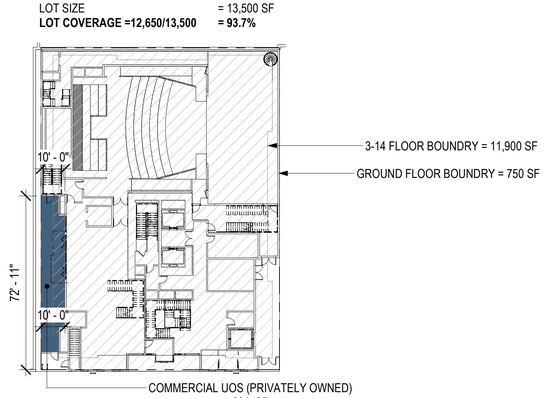
5 G003 — 15 - 15TH FLOOR
1" = 30'-0" ON 24X36 (1"=60'-0" ON 12X18)



3 G003 — 5TH, 7TH, 9TH, 11TH & 13TH FLOOR
1" = 30'-0" ON 24X36 (1"=60'-0" ON 12X18)

LOT COVERAGE
MAX. BLDG. BOUNDRY AREA
11,900 SF + 750 SF =12,650 SF
LOT SIZE = 13,500 SF
LOT COVERAGE =12,650/13,500 = 93.7%



1 G003 — GROUND FLOOR
1" = 30'-0" ON 24X36 (1"=60'-0" ON 12X18)

UOS REQUIREMENTS:

NON-RESIDENTIAL USES:
1 sq. ft. of privately-owned public open space per 50 sq. ft. of commercial floor area.
*Each square foot of usable open space provided as privately-owned public open space is counted as two square feet of required on-site open space.

RESIDENTIAL:
80 FT PER UNIT

UOS CALCS:

NON-RESIDENTIAL USES:
22,808 SF / 50 = 456 SF UOS
PROPOSED COMMERCIAL = **604 SF**

RESIDENTIAL:
218 UNITS x 80 SF = 17,440 SF
PROPOSED COMMON = 9,574 SF
PROPOSED PRIVATE 160 SF X 7 = 1,120 SF
RESIDENTIAL TOTAL = **10,694 SF**

LANDSCAPED UOS (RESIDENTIAL):
40% OF COMMON UOS
REQUIRED: 40% OF 10,694 (COMMON) = 4,278
PROPOSED:14.5% OF 10,694 (COMMON) = 1,556

LOT COVERAGE CALCUALTIONS
MAX. BLDG. BOUNDRY AREA
11,900 SF + 750 SF =12,650 SF
LOT SIZE = 13,500 SF
LOT COVERAGE =12,650/13,500 = 93.7%
