

Section 2 – Defining What is “Affordable” Debt

The definition of what is “affordable” debt is at the foundation of this analysis.

The first step to defining what is affordable is defining the type of debt the City is considering. The City is considering “general obligation (GO) debt”. This debt is paid for by a dedicated property tax levy. Thus, the City **does not** have to pay for this debt out of its existing revenue streams. This means that taking on more general obligation debt **will not** have a **direct** impact on the City’s operating budget. There is **indirect** impact – for example, perhaps the higher tax bills faced by taxpayers would cause them to vote against future tax measures intended to support the operating budget. Or, maybe residents or businesses feel the impact of higher taxes in their businesses or personal finances and decide to move. These are important considerations, but are outside the scope of this analysis, which is focused on the **direct** impacts to City government. That said, the financial indicators we will examine do include measures of personal income and the size of the tax base relative to the size of the population, which do provide some insight into affordability to taxpayers. It is also worth remembering that, according to California law, debt like the City is considering must be approved by two-thirds of voters in an election. If approval is not obtained, the debt cannot be issued. Thus, taxpayers evaluate the affordability of the proposed debt themselves by choosing to approve it or not. However, affordability to the taxpayers might not be that simple. We’ll have more to say on this topic later in the report.

The impact of general obligation debt on the City government’s finances is to add to the City’s total debt burden. Generally, the more debt a City takes on the less attractive its debt becomes to investors, all else being equal.³ This is because, in theory, the more debt a City has, the less likely it is that it will be able to pay it all back. This is important because if the City’s debt becomes too unattractive, it will need to offer higher interest rates to investors. That would make it more expensive to borrow and, thus, more expensive for the City to make future investments in long-term assets. **Thus, we will define debt affordability as the extent to which issuing more debt in support of any City Council program might cause the City’s debt to cross a threshold point where the City has to offer a higher interest rate to attract investors.**

Threshold points where higher interest rates must be offered are known as bond ratings. There are three major agencies that issue bond ratings: Moody’s Investors Service, Standard and Poor’s, and Fitch Ratings. Each rating agency has its own approach, but there are broad similarities between all three. For purposes of this analysis, we will focus on Moody’s approach. This is because Moody’s method is: A) well documented; and B) makes use of quantitative financial information to help standardize the approach to issuing ratings. This means we can collect the same financial information Moody’s would collect and evaluate it in a similar, albeit much simplified, manner. By doing this, our Risk Model was able to essentially duplicate the City’s current rating, which is “Aa”, according to Moody’s. Aa is the second best rating on Moody’s scale (which is similar to the scales used by the other rating agencies). The complete scale is shown in the accompanying table. The reader should note that rating agencies also make finer grained distinctions within the rating tiers. For example, technically, the City’s rating is “Aa1”, which

³ Municipal governments might issue more debt, but their tax base and revenues might also continue to grow. In this case, all else has not remained equal so the debt of that municipality may not become less attractive.
